Dashpot Adjustment (Merc-O-Matic Cars): Adjust engine idle speed to correct setting and turn engine off. Loosen dashpot adjusting screw locknut. Hold throttle in closed position and turn dashpot adjusting screw out (counter-clockwise) until head of adjusting screw pushes dashpot up to the end of its travel. Turn dashpot screw in 1½2 turns to obtain .045-.064" clearance. Tighten locknut.

Throttle Linkage Adjustment (Merc-O-Matic Cars): Adjust engine idle speed to 425-440 RPM, with engine at normal operating temperature and selector lever in *"Dr" position. Adjust anti-stall dashpot (see above),* then turn ignition off. Disconnect carburetor-to-control shaft rod at carburetor. Remove clevis pin securing transmission control rod to transmission control shaft. Insert Gauge Pin 77230-MB through control rod and bracket (on left side of bracket). With carburetor throttle at slow idle position, adjust carburetor-to-control shaft rod so that it enters hole in carburetor throttle lever freely, and remove gauge pin. While holding carburetor throttle in slow idle position, hold transmission throttle control rod up against its stop and adjust length of rod to allow free entry of clevis pin in hole in shaft and hole in clevis at upper end of rod, **then lengthen rod by turning clevis three full** *turns counter-clockwise. Install clevis pin and secure* with cotter pin. Tighten clevis locknut. *NOTE—If band or clutch slippage is evident, the rod can be*

1955 MODELS

CONTINUED FROM PRECEDING PAGE

lengthened another complete turn. Total lengthening of rod must not exceed 4 turns from STOP position.

►*OTHER DATA: See "Ford, Lincoln, Mercury Centri-Quad" in Carburetion Section.*

Fuel Pump Pressure: 4-5 lbs.

1955 MODELS

►*CARBURETOR PRODUCTION CHANGES: Different carburetors used as follows:*

Transmission	Mercury Carb. No.
1954 (Std. & O.D.)	EBY-9510-A
1954 (Merc-o-matic)	EBY-9510-H
1955 Early (Std. & O.D.)	① ECK-9510-C
1955 Late (Std. & O.D.)	ECK-9510-G
1955 Early (Merc-o-matic)	② ECL-9510-B
1955 Early (Merc-o-matic)	③ ECK-9510-D
1955 Late (Merc-o-matic)	ECK-9510-H
1955 Late	ECK-9510-S,T

① —Use Serv. Part No. B5A-9510-G for replacement.
② —Identical with ECK 9510-D (Part No. Change only).
③ —Use Serv. Part No. B5A-9510-H for replacement.

►*CARBURETOR INSTALLATION CAUTION (First Cars with Choke Inlet Air Tube Washer in Throttle Body): See "Lincoln & Mercury Centri-Quad" in Carburetor Section.*

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyl. 2-3-5-8, LEFT barrels 1-4-6-7.*

►*ACCELERATOR ROD CLIP STICKING IN WIDE OPEN POSITION CORRECTION:* On some early 1955 Merc-O-Matic equipped cars accelerator rod clip will not freely clear transmission splash pan when accelerator fully depressed. To correct, bend top corner of splash pan forward approximately 3/4" or remove approximately 3/8" of top edge of pan. Be sure to provide adequate clearance for spark plug wires running to left bank and for the lead wire to oil pressure gauge.

►*AUTOMATIC CHOKE ROD ADJUSTMENT: Must be correct for proper starting and automatic choke operation. See "Ford-Lincoln-Mercury Centri-Quad" Carburetor in Carburetor Section.*

Idle Setting—Preliminary setting 1-1/2 turns open (set both screws alike). With engine at normal operating temperature, turn one screw at a time out until engine begins to roll from richness, then turn screw in just enough to provide smoothest idle performance.

Idle Speed—(Std. & O.D.) 475-500 RPM, (Merc-O-Matic Cars) 425-500 RPM in "Drive" range.

Dashpot Adjustment (Merc-O-Matic Cars): Hold dashpot piston in to limit of travel, turn adjusting screw in or out until clearance between screw and dashpot piston rod is .045-.064".

Automatic Throttle Control Adjustment (Air-Conditioned Cars): With engine adjusted to normal idle speed (see above), and engine at normal operating temperature,

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

turn air-conditioner "ON" and place transmission selector lever in "N" (Neutral) position. Loosen adjusting screw locknut on end of operating rod and adjust knurled adjusting nut to provide an idle speed of 800 RPM. Tighten locknut. Check operation of Automatic Throttle Control to make sure idle speed returns to normal idle when transmission is shifted out of "N" (Neutral), or air-conditioner is turned off.

Throttle Linkage Adjustment (Merc-O-Matic Cars): Disconnect carburetor-to-control shaft rod at carburetor. Adjust engine idle speed to 425-450 RPM in "Dr" position, turn ignition off. Adjust dashpot (see above). Remove clevis pin that secures transmission control rod to transmission control shaft. Insert gauge pin, Tool 77230-MB, through control rod and shaft bracket. With engine at operating temperature and on slow idle, adjust carburetor-to-control shaft rod so that it enters hole in carburetor freely, **then lengthen two full turns.** Remove positioning gauge pin. While holding carburetor throttle in the slow idle position, hold control shaft-to-transmission rod up against its stop and adjust length of rod to allow free entry of clevis pin in hole in shaft of transmission control shaft. **Lengthen rod by turning clevis three complete turns in a counter-clockwise direction.** If it is not possible to obtain a forced downshift with this adjustment, control shaft-to-transmission rod assembly should be lengthened an additional 1½ turns. Install clevis pin and secure with cotter pin. Tighten clevis locknut.

►*OTHER DATA: See "Lincoln & Mercury Centri-Quad" in Carburetor Section.*

Fuel Pump Pressure: 4-5 lbs. at 900 RPM.

CARB. EQUIPMENT

►*1954 CARBURETOR AIR CLEANER INSTALLATION CAUTION:* Two types of air cleaners being used in production and should be installed as follows: "Oval" type installed with overhang portion of cleaner facing rear of engine. "Round" type installed with indentation at bottom edge and word "Front" stamped on side of cleaner facing front of engine.

►*1954 AIR CLEANER GASKET & HOLD-DOWN WING SCREW PRODUCTION-CHANGE (To correct air cleaner "flexing" and wing screw breakage):* The paper gasket and wing screw have been replaced in production and for service by a neoprene gasket, Part No. 354534-S8B (oval type air cleaner). Gasket, Part No. EAD-99654-B, wing screw, Part No. 354535-S8B (round type air cleaner). When installing the neoprene gasket, apply a coat of cement to both surfaces before inserting in air cleaner.

►*FUEL GAUGE PRODUCTION CHANGE (1955) & REPLACEMENT PARTS CAUTION (1954-55):* New tank units used on late 1955 cars as listed below will minimize inaccuracies in gauge readings and can be used for service replacement on 1954 and early 1955 cars.

NOTE–Later type tank units must not be used on cars prior to 1954.

Fuel Pump: Mercury No. EBY-9350-A (1954); B5A-9350-A (1955). Fuel & vacuum.
Pressure–4-5 lbs. at 1000 RPM (1954), at 900 RPM (1955).
See "Fuel Pumps" in Carburetion Section.

Gasoline Gauges: King-Seeley Electric type.
Dash Unit–Mercury No. FDC-9280-A (1954); FDK-9280-B (1955).
Tank Unit–*See Production Change Note (above) for replacement of 1954 and early 1955 units.*

Model	First Type ①	Second Type
Exc. Sta. Wgn.	FAA-9275-A	B5A-9275-A
Station Wagon	FAA-9275-B	B5A-9275-B

①–1954 & Early 1955 Models.
See "Fuel Gauges" in Carburetion Section.

BATTERY

Mercury No. FAD-10655-C. 6 volt, 19 plate, 120 ampere hour capacity (20 hr. rate).
Location–In engine compartment on right side.
Battery Ground–Positive, to cylinder head bolt.
Engine Ground–Engine left cylinder head to dash panel.

STARTER

Mercury No. FAC-11002-G. Armature FAC-11005-B.
Drive–Mercury No. 1CM-11350-C. Bendix "Folo-Thru".
Rotation–Counter-clockwise at commutator end.
Brush Spring Tension–48-56 ozs.
Cranking Speed–115-125 RPM.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	①	6.0	70
14 ft. lbs.	Lock	3.5	700

①–With starter on engine and engine running.

Removal: Remove battery-to-starter cable. Remove attaching bolts holding steering idler arm support to frame lower support and remove idler arm assembly. Remove capscrews holding endplate to converter housing and remove starter by pulling out and down until starter drive clears housing.

Starting Switch: Mercury No. B5A-11450-A. *(NOTE–This relay is a sealed type and replaces the relay formerly used).* Mounted on frame side rail adjacent to starter and controlled by Ignition Switch and Automatic Transmission Switch.

Neutral Safety & Back-up Light Switch (1954): Mercury No. 1M-15812-B. Mounted on lower end of steering column.

Neutral Safety & Back-up Light Switch (1955): Mercury No. FDK-15825-B (Switch Terminal). Located on steering column inside passenger compartment. Supersedes previous switch location.
Adjustment–*See "Fordomatic & Merc-O-Matic" in Transmission Section.*

GENERATOR

Mercury B5C-10002-A. Armature FBC-10005-A.

Performance Data

Generator	Amperes	RPM
B5C-10002-A	40 ①	1750

①–See Regulator for maximum charging rate.
Brush Spring Tension–30 ozs.
Field Current–2.50-2.80 amps. at 6.0 volts.
Rotation–Counter-clockwise at commutator end.
Removal: Remove front splash pan to rear of front frame cross member and remove generator from below car.
Belt Adjustment: 1/2" belt deflection midway between generator and water pump pulleys with normal thumb pressure.

REGULATOR

Mercury No. FAD-10505-A.

►*SETTING NOTE:* Settings below are for regulator at NORMAL OPERATING TEMPERATURE (after 1/2 hour operation) with room temperature at 70-80°.

Cutout Relay

Cuts In–6.0-6.6 volts.

Voltage Regulator

Setting–7.4-7.8 volts.
Checking & Adjusting–*See Electrical Equip. Section.*

Current Regulator

Setting–38-42 amperes.
Checking & Adjusting–*See Electrical Equip. Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Equip. Section.*
Direction Signal: *See Electrical Equipment Section.*
Automatic Headlight Dimmer: *See "Lincoln-Mercury Headlight Control" in Electrical Equipment Section.*
Lighting Switch Removal: With control knob in the "OFF" position, press the spring release button on switch housing, turn shaft slightly and pull it out of switch.
Stop Light Switch Location: Forward end of brake master cylinder (Conventional & Power Brakes). Master cylinder located on firewall in engine compartment.

FUSES: Turn Signal–14 amps. (1954); 9 amps. (1955).
Dome & Courtesy Lights–14 amps. (1954); 9 amps. (1955).
Glove Box–14 amps.
Cigar Lighter–Special fuse-in lighter base.
Clock–3 amps. (in clock lead), except 1955 Montclair.
Heater–20 amps.
Spotlight–14 amps.
Windshield Washer–14 amps. (or special 3 amps.).

CIRCUIT BREAKERS (1954): Two circuit breakers (30 amps. for headlights, 15 amps. for auxiliary) mounted on single panel located behind instrument panel.

CIRCUIT BREAKERS (1955): On headlight switch. One circuit breaker protects headlight circuit and second

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

circuit breaker protects instrument panel lights, parking lights, and stop and tail light circuits.

HORNS: Mercury No. B5A-13832-C (High Pitch), B5A-13833-C (Low Pitch). Dual horns operated by relay.

Horn Relay—Mercury No. FAA-13853-A.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: 90° V8 Valve-in head.

Engine	Bore	Stroke	Displacement
1954	3.62"	3.10"	256 cu. ins.
1955 (All)	3.75"	3.30"	292 cu. ins.

Engine	Compr. Ratio	Rated HP	Developed HP
1954	7.5-1	42.05	161 at 4400 RPM
1955 (ECK)	7.6-1	45.00	188 at 4400 RPM
1955 (ECL)	8.5-1	45.00	198 at 4400 RPM

Compression & Vacuum Reading—See *TUNE-UP.*

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Mercury Special Data.*

►*1954 REPLACEMENT CYLINDER HEAD NOTE:* One head, Part No. EBY-6049-D is used for replacement on on both engine banks. Install plug, EAN-6052-A in rear water passage hole if used for right bank, or *adapter, B4A-10911-A for heat indicator bulb in rear* passage hole if used for left bank.

►*1954 EXHAUST MANIFOLD PRODUCTION CHANGE:* Later type exhaust manifolds, Part Nos. EBY-9430-B (right hand), and EBY-9431-A (left hand), used in production and for service replacement. Bolt holes are larger and flanges are heavier to prevent breakage in service.

►*INTAKE MANIFOLD-TO-CYLINDER HEAD BOLT CAUTION:* The two bolt holes located at No. 2 and No. 10 valve push rod holes are not tapped deep enough to permit tightening the 3" bolts to correct torque specification without mutilating the two bottom threads. For this reason, only the 3/8"-16 x 2-3/4" bolts, Part No. 45528-S8, should be used at the No. 2 and No. 10 push-rod hole positions.

►*CYLINDER HEAD GASKET INSTALLATION CAUTION:* Gaskets are stamped on one side with the work "FRONT". When installing gasket on **right hand** side of cylinder block wording should be **upward** and toward front of engine. When installing on **left hand** side, wording should be **downward** and toward front of engine.

TIGHTENING TORQUES: *See "Tightening Specifications" in Mercury Special Data.*

ENGINE REMOVAL: *See "Engine" in Mercury Special Data.*

OIL PAN REMOVAL: Turn crankshaft so that rear counterweights on crankshaft are upward, remove necessary splash pans and remove oil pan.

PISTONS

Aluminum alloy, autothermic solid skirt type with three rings above pin.

Removal—Rod and piston assemblies removed from above.

Fitting New Pistons: Use 1/2" wide feeler gauge inserted between piston and cylinder wall at right angles to pin on thrust side. Feeler thickness as follows:

New Piston in New Bore—.0015" feeler. 5-10 los. pull.

New Piston in Used Bore—.002" feeler. 5-10 lbs. pull.

Used Piston in Used Bore—.0025" feeler. 5-10 lbs. pull.

Replacement Pistons: Standard size, .020", .030", .040" Oversize. Pistons furnished only with fitted pins.

Installing Pistons: Install piston with "F" (embossed on piston) and dimple on head toward front of engine.

PISTON PINS

Floating type with lock ring at each end.

Diameter—.9120-.9123".

Pin Fit in Piston—.0001-.0003" loose.

Pin Fit in Rod—.0001-.0003" loose.

Replacement Pins: Standard size, .001", .002" Oversize.

PISTON RINGS

1954 Models

Ring	Width	End Gap	Side Clearance
Compr. #1	.0930-.0935"	.010-.027"	.0025-.0030"
Compr. #2	.0930-.0935"	.010-.027"	.0015-.0030"
Oil ①	.1860-.1865"	.010-.027"	.0015-.0030"

①—Expander type ring.

1955 Models

Ring	Width	End Gap	Side Clearance
Compr. #1	.0775-.0780"	.010-.027"	.002-.0035"
Compr. #2	.0775-.0780"	.010-.027"	.002-.0035"
Oil	.1860-.1865"	.010-.027"	②

②—Side sealing type ring, and side clearance is not evident.

Replacement Rings: Standard size, .020", .030", .040" Oversize.

►*1955 OIL RING INSTALLATION NOTE:* Install spring spacer in oil ring groove directly above pin hole. Butt ends together and hold in this position while installing top steel rail and bottom steel rail. Make sure top ring ends are at least 1" to **left** of spring spacer gap, and bottom rail ends at least 1" to **right.**

CONNECTING RODS

►*1955 CONNECTING ROD & BEARING PRODUCTION CHANGE:* Squirt hole in crankshaft end of rod has been moved to opposite side of rod. New service bearings have two holes drilled in them (may be used with either old or new rod hole location). *CAUTION—Bearings with one hole in them should not be used to service 1955 type rods.*

Length—6.320-6.324". **Weight**—24.05 ozs.

Crankpin Journal Diameter—2.1880-2.1888".

Lower Bearing—Steel backed, babbitt lead alloy lined type. Upper and lower halves interchangeable.

Clearance—.0005-.0025" (1954); .0008-.0027" (1955).

Side Clearance—.006-.016" (two rods).

Replacement Bearings: *Standard (two sizes marked* **red** and **blue** for selective fitting) and .010", .020", .030" Undersize.

Installing Rods: Oil squirt hole in rod **away from** camshaft side of bore on all rods. Numbers on rods and bearing caps should be together and installed in same *numbered cylinder.*

CRANKSHAFT

Journal Diameters—2.4980-2.4988".

Maximum Wear Limits—.0005". **Taper**—.0005".

Bearings—Steel backed copper lead alloy lined.

Replacement Bearings: Standard size (2 sizes marked **red** and **blue** for selective fitting) and .010", .020", .030" Undersize.

End Thrust: Taken by #3 main bearing. Replace bearing if endplay excessive.

Thrust Bearing Alignment—See *"Crankshaft & Main Bearings" in Mercury Special Data.*

Endplay—.002-.006".

Crankshaft Front Oil Seal Installation: *See "Engine Front Cover" in Mercury Special Data.*

Crankshaft Rear Oil Seal Installation: See *"Crankshaft & Main Bearings" in Mercury Special Data.*

►*1954 CRANKSHAFT REAR MAIN BEARING OIL SEAL PRODUCTION CHANGE:* New type seal and oil seal retainer used in later production and is not interchangeable with early type seal. See *"Crankshaft & Main Bearings" in Mercury Special Data.*

CAMSHAFT

►*CAMSHAFT IDENTIFICATION NOTE: Camshafts used in 1954-55 production and for service replacement are as follows:*

1954 (All)—B4T-6250-A (ECE-6250-A). "ECE" cast between No. 1 cam bearing and No. cam lobe.

1955 (Early)—B5A-6250-A (ECB-6250-A). "ECB" cast between No. 1 cam bearing and No. 1 cam lobe.

1955 (Late)—ECK-6250-A. "ECK" cast between No. 1 cam bearing and No. 1 cam lobe. Also, a letter "C" with one dimple on each side is cast between No. 15 & 16 cam lobes.

►*1955 SERVICE REPLACEMENT CAMSHAFT CHANGE* (To provide better wear characteristics): Type of material has been changed in later type camshaft, Part No. ECK-6250-A. Other dimensions and specifications remain the same.

Journal Diameter—1.9255-1.9265".

Clearance—.001-.003".

End Thrust: Taken by thrust plate on forward end block (between camshaft sprocket and shoulder on block).

Endplay—.003-.007".

Replacement Camshaft Bearings: Finished bearings furnished Standard size, .015" Undersize. *CAUTION—Oil holes in bearings must be lined up correctly.* See *"Camshaft & Bearings" in Mercury Special Data.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Camshaft Bearing Removal & Installation: See *"Camshaft & Bearings" in Mercury Special Data.*

Timing Chain: Side-guide type. Length 56 links.

►*REPLACEMENT NOTE:* Replace timing chain and sprockets when deflection on shaft side exceeds 1/2" (take up all slack on driving side, measure slack on opposite side). Remove and install chain "endless" as a unit with both sprockets.

Camshaft Setting: Timing marks on camshaft and crankshaft sprockets adjacent to timing marks on timing chain, when installed toward left side of engine as *viewed from drivers seat.*

Timing Chain Cover Seal Installation (Crankshaft Front Seal): *See "Engine Front Cover" in Mercury Special Data.*

VALVES

►*EXHAUST VALVE STEM DIAMETER CHANGE (Production & Service Replacement Valves): Stem diameter decreased .0005" for greater stem clearance in guide. See "Valve System" in Mercury Special Data.*

►*1954 VALVE TAPPET ADJUSTING SCREW LOCKNUT CAUTION:* If adjusting screw is found not to extend up through rocker arm sufficiently to provide full thread engagement with locknut, replace pushrods with Part No. EBU-9565-A and locknuts, Part No. EAA-6549-B.

Tappet Clearance: .019" (Intake & Exhaust), with engine at normal operating temperature.
Initial Valve Tappet Clearance—*See "Valve System" in Mercury Special Data.*

Valve	Head Diam.	①②Stem Diam.	Length
Intake	1.775-1.785"	.3415-.3425"	5.02"
Exhaust	1.505-1.515"	.3405-.3415"	5.02"

Valve	Seat Angle	Lift	Stem Clearance
Intake	45°	③	⑤.001-.002"
Exhaust	45°	④	⑥.002-.003"

①—Exhaust valve stems (service replacement) decreased .0005" in diameter. See Exhaust Valve Change above.
②—Valves furnished with .003", .015", .030" oversize stems for service replacement.
③—.350" (1954). .377" (1955).
④—.350" (1954). .375" (1955).
⑤—.004" service maximum. ⑥—.004" service maximum.

Valve Seat Width—(1954) .060-.070" (Intake), .070-.080" (Exhaust). **(1955)** .070-.090" (Intake), .060-.080" (Exhaust).

►*ROTATABLE VALVE NOTE: All valves are rotatable type. See "Valve System" in Mercury Special Data.*

Valve Stem Oil Seals—"Umbrella" type oil seals used on all valves. Seals are installed with cupped side down on valve stem at guide boss on cylinder head. *Install new seals whenever valves removed or when seals become loose on valve stems.*

►*1955 VALVE STEM OIL SEAL PRODUCTION CHANGE & SERVICE REPLACEMENT NOTE:* Valve Stem Oil Seal, Part No. B5A-6571-A, with a .100" longer skirt than used previously, has been released for production and service replacement.

►*1954 VALVE STEM OIL SEAL REPLACEMENT NOTE:* Valve Stem Oil Seal, Part No. B5A-6571-A must be used when servicing 1954 models having service cylinder head, Part No. B4A-6049-F.

Valve Springs: Free Length—2.12".

Valve Spring Specifications

	Pressure	Length
Valve Closed	54-62 lbs.	1.821"
Valve Open	124-140 lbs.	1.505"

Valve Guides: Integral with cylinder head. When stem-to-guide clearance exceeds maximum (.004" Intake, .005" Exhaust), ream guides and install oversize valves. *See "Valve System" in Mercury Special Data.*

Valve Lifters: Mushroom type. Removed from below with camshaft removed.

Rocker Arm Assembly: *See "Valve System" in Mercury Special Data.*

►*ROCKER ARM COVER INSTALLATION CAUTION:* Covers manufactured prior to February 1, 1955 were manufactured without an inner retainer for holding cover gasket in place. When replacing gasket it will be necessary to seat gasket firmly against outside flange and secure in place with fast drying cement.

►*1954 ROCKER ARM SHAFT OIL OUTLET TUBE NOTE:* A new oil outlet tube, Part No. B4A-6588-B has *been released for service. The new tube directs overflow oil from rocker arm shaft to No .1 pushrod hole in right cylinder head, and to No. 16 hole in left cylinder head.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

►*VALVE TIMING NOTE: The following valve opening and closing points are with a camlift as indicated.*

1954 Models

Intake Valves—Open 8° ① BTDC. Close 44° ② ALDC.
Exhaust Valves—Open 47° ① BLDC. Close 5°② ATDC.

1955 Models

Intake Valves—Open 12° ① BTDC. Close 54° ② ALDC.
Exhaust Valves—Open 58° ③ BLDC. Close 8° ④ ATDC.
Camlift—①—.016". ②—.019". ③—.015". ④—.017".

Valve Timing Check—Slide rocker arm to one side and install a dial indicator so reading can be taken from end of valve push rod (use an indicator that will read .300" or more). Install a quadrant (reading in degrees) on crankshaft pulley to check amount of crankshaft rotation. Rotate engine slowly until dial indicator reading for valve being checked is same as indicated in table above. Amount of crankshaft rotation should be the same as shown in valve timing table. As an example, check intake valve opening by rotating engine *until dial indicator reads .026" cam lift. Quadrant on crankshaft should read 8° (1954). 12° (1955).* Continue to rotate engine to check valve closing in degrees. Dial indicator should read .019", and quadrant 44° (1954), 54° (1955).

OILING SYSTEM

►*1954-55 HIGH ENGINE OIL LEVEL CORRECTION:* Install Oil Level Indicator (bayonet), Part No. B5A-6750-A. The new oil level indicator has the markings raised 5/32" to correct complaints of high engine oil level readings.

Crankcase Capacity: 5 qts. (refill). 6 qts. (when filter changed).

Normal Oil Pressure: 45-55 lbs., at 30-40 MPH.
Pressure Regulator Valve—In pump body, not adjustable.
Oil Pressure Indicator—King-Seeley Electric.

Dash Unit (1954)—Mercury No. FDC-9273-A.
Dash Unit (1955)—Mercury No. FDK-9273-B.
***Engine Unit (1954-55)**—Mercury No. 41A-9278 (Use with FAA-13875-A Clip).*
See "Oil Pressure Gauges" in Miscellaneous Section.

Oil Pump: Gear type pump located on left side of engine crankcase and driven by distributor drive gear.

Pump Overhaul—*See "Oiling System" in Mercury Special Data.*

Oil Filter: Full-flow type with pressure relief valve in center filler bolt. Replace filter element at 4000-5000 miles or when oil becomes dirty or polluted. *See "Oiling System" in Mercury Special Data.*

Replacement Filter Element—Mercury No. HCK-6731-A (Kit includes new gaskets).

►*CAUTION: Special "full-flow" filter element must be used for service replacement (use of by-pass type filter element will restrict engine oil flow and result in insufficient engine lubrication).*

Crankcase Ventilation: Filter in oil filler cap (inlet) and road draft tube. Clean and oil every 2,000 miles or more often in dusty areas.

COOLING

Water Capacity: 19 qts. (without heater). 20 qts. (with heater).

Pressure Valve: Mercury No. LA-8100-A3 (14 lbs.), LA-8100-A4 (13 lbs.). Radiator filler cap, stamped with figure "14" or "13".

Thermostat: Mercury No. B4A-8575-A (157-162°F.), B4A-8575-B (177-182°F.—used with permanent anti-freeze). Mounted in water outlet housing at front of intake manifold.

►*THERMOSTAT INSTALLATION NOTE: When installing the later type thermostat, be sure that the word "Top" is in the uppermost position to avoid foreign material settling under valve.*

Water Pump: Packless, sealed ball bearing type.
See "Mercury" in Water Pump Section.

Temperature Gauge: King-Seeley Electric.

Dash Unit (1954)—Mercury No. FDC-10883-A.
Dash Unit (1955)—Mercury No. FDK-10883-B.
Engine Unit (1954-55)—Mercury No. 1A-10884-A.
See "Temperature Gauges" in Miscellaneous Section.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

CLUTCH

Borg & Beck Model 10A6. Mercury No. MB-7563-A (1954). MC-7563-B (1955).
See "Borg & Beck" in Clutch Section.
Clutch Disc No.—Mercury No. MB-7550-B (1954). MC-7550-A (1955).

►*1955 CLUTCH RELEASE RETRACTING SPRING & BRACKET PRODUCTION CHANGE:* **Retracting spring bracket has been eliminated. A longer spring, Part No. MB-7523-B replaces the spring formerly used (later spring is 1" longer). Use bolt, Part No. 354390-S8 when using the later type spring.**

Pedal Adjustment: If pedal free travle is not 1 to 1-1/4", loosen clutch pedal release rod locknut (lower end) and turn adjusting nut for correct free travel, tighten locknut.

Removal: Remove transmission (see Transmission Removal below), and disengage clutch pedal retracting spring and release rod from clutch release lever. Disengage equalizer bar tension spring and remove two capscrews retaining equalizer bracket assembly to flywheel housing. Remove flywheel housing. Mark position of flywheel and pressure plate so parts may be installed in original position. Compress clutch pressure plate assembly with Tool 17563. Remove capscrews and remove pressure plate.

SYNCHRO-MESH TRANSMISSION

Own. Helical gear, constant mesh synchro-mesh (second & high), sliding gear (low & reverse).
See "Mercury Synchro-mesh" in Transmission Section.

Transmission Control: *See "Transmission Controls" in Transmission Section.*

Removal: If equipped with overdrive, remove kickdown switch retainer nut and push switch through floor. Raise car and drain transmission. On overdrive cars remove governor, solenoid, and control cable. Disconnect speedometer cable and remove speedometer drive gear. Remove transmission shift rods at transmission. Remove bolts retaining rear universal joint to companion flange and remove drive shaft. Support rear of engine and remove the detachable cross-member of the frame. Remove two top capscrews retaining transmission to flywheel housing and install a couple of studs to act as guide pins. Remove lower capscrews and slide transmission to rear as far as possible and lower front end. Remove from below car.

OVERDRIVE

Warner Model AS1-R10F. Solenoid operated type, with governor control and throttle operated kickdown. Lock-out Switch not used on this model.
See "Warner R10 Overdrive" in Transmission Section.

►*1955 OVERDRIVE SOLENOID FAILURE CORRECTION: If necessary to replace original solenoid, additional wires required. See "Warner R10 Overdrive" in Transmission Section.*

Removal: Same as for Synchro-mesh Transmission (above) after disconnecting control cable and wiring.

MERC-O-MATIC TRANSMISSION

Torque converter and three speed automatic transmission with hydraulic control and mechanical parking lock.
See "Fordomatic & Mercomatic" in Transmission Section.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Fordomatic & Mercomatic" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Fordomatic & Mercomatic" in Transmission Section.*

Lubrication—Check transmission oil level every 1000 miles and maintain oil level at "Full" mark on dipstick. Drain & refill every 15,000 miles. **Use only Automatic Transmission Fluid Type A.**

Checking Fluid Level—Apply parking brakes, place transmission selector lever in "N" (Neutral) position, run engine at idle speed for approximately four minutes. With parking brake applied and engine running at slow idle, move selector lever to "P" (Parking) position. When engine and transmission have reached normal operating temperature, move selector lever through all positions to assure fluid distribution throughout transmission. Return selector lever to "P" position. Raise hood, clean dirt away from fluid level cap, remove indicator, wipe clean and insert in tube (make sure indicator is pushed all the way down). Remove indicator and read level. Add sufficient fluid to raise level to "Full" mark on indicator. Replace indicator.

THROTTLE LINKAGE ADJUSTMENT: *See CARBURETOR above.*

►*OTHER MERCOMATIC SERVICE DATA: See "Fordomatic & Mercomatic" in Transmission Section.*

UNIVERSALS

Mechanics. Roller bearing type.

REAR AXLE

1954 (EXC. STATION WAGON)

►***REAR AXLE "CLINK" CORRECTION: See "Ford & Mercury (Separate Carrier)" in Rear Axle Section.***

►*INTERFERENCE BETWEEN REAR WHEEL & FENDER CORRECTION:* If difficulty is encountered in removing rear wheel, with tire inflated, the cause may be due to incorrect combination of rear springs and shock absorbers. See "Shock Absorbers" below.
Own. Separate Carrier, semi-floating hypoid, with Hotchkiss drive.

NOTE: Different type rear axle used on Station Wagon. See "Ford & Mercury (Separate Carrier)" in Rear Axle Section.

Ratios
Standard Transmission—3.90-1 (39-10) Std. ①.
Overdrive Transmission—4.10-1 (41-10) Std. ②.
Mercomatic Transmission—3.54-1 (39-11) Std. ③.
①—4.10-1 (41-10) Optional.
②—3.90-1 (39-10) Optional.
③—3.31-1 (43-13) Optional.

►*AXLE CARRIER & GEAR RATIO IDENTIFICATION: Carrier housing stamped with ring gear & pinion gear ratio (10/39 for 3.90-1 ratio, etc.).*
Backlash—.003-.008".

Axle Shaft Removal: Remove wheel and brake drum. Remove axle shaft retainer locking type nuts (work through opening in axle shaft flange). Use Puller and pull shaft (do not disturb brake backing plate or damage wheel bearing oil seal). Replace one nut to secure brake backing plate.

Carrier Assembly Removal: Disconnect rear universal. Remove axle shaft (see above). Remove carrier from housing.

Wheel Bearing Adjustment: None required.

1954 STATION WAGON
1955 ALL MODELS

Own. Integral Carrier. Semi-floating hypoid with Hotchkiss drive.

Model	Ratio
1954 Sta. Wgn. (Conventional)	①3.91-1
1954 Sta. Wgn. (Overdrive)	②4.09-1
1954 Sta. Wgn. (Merc-O-Matic)	③3.54-1
1955 Exc. Sta. Wgn. (Conventional)	①3.73-1
1955 Exc. Sta. Wgn. (Overdrive)	②4.09-1
1955 Exc. Sta. Wgn. (Merc-O-Matic)	⑤3.15-1
1955 Sta. Wgn. (Exc. Merc-O-Matic)	②4.09-1
1955 Sta. Wgn. (Merc-O-Matic)	⑥3.54-1

①—4.09-1 Optl. ②—3.91-1 Optl. ③—3.31-1 Optl. ②—3.73-1 Optl. ⑤—3.54-1 Optl. ⑥—3.15-1 Optl.

Axle Shaft Removal: Remove wheel and brake drum. Remove axle shaft retainer locking type nuts (work through opening in axle shaft flange). Use Puller and pull shaft (do not disturb brake backing plate or damage wheel bearing oil seal). Replace one nut to secure brake backing plate.

Rear Axle Assembly Removal: Raise rear end of car and disconnect rear universal. Remove axle shafts. Disconnect brake lines at "T" on left side of axle housing. Disconnect hand brake cable, shock absorbers, spring U-bolts and shackles. Remove axle housing assembly from car.

SHOCK ABSORBERS

►*INTERFERENCE BETWEEN REAR WHEEL & FENDER CORRECTION: If difficulty is encountered in removing rear wheel, with tire inflated, the cause may be due to incorrect combination of rear springs and shock absorbers. See table below for correct application.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Shock Absorbers: Direct acting, non-adjustable. Service by replacement.

1954 Front Shock Absorbers

Model	Std.	Hvy. Duty
All (Exc. Sta. Wgn.)	MB-18045-B	MB-18045-K
Station Wagon	MB-18045-D	MB-18045-K

1955 Front Shock Absorbers

Model	Std ①	Hvy. Duty
All (Exc. Sta. Wgn.)	MC-18045-F	MC-18045-B
Station Wagon	MC-18045-E	MC-18045-C

①—Use MC-18045-G with Air Conditioning.

►*REAR SHOCK ABSORBER APPLICATION CAUTION: To avoid interference between rear wheels and fenders, springs and shock absorbers must be used in following combinations.*

1954 Rear Shock Absorbers & Springs

Model	①Shock No.	②Spring No.
All (Exc. Following)	MB-18080-A,B,E	MA-5560-F③
Convertible	MB-18080-A,B,E	MA-5560-A④
Station Wagon	MB-18080-C,D,F	MA-5560-B⑤

①—Use MB-18080-G,H (Hvy. Duty), when heavy duty springs used.
②—Spring number stamped on lower spring leaf.
③—Heavy Duty Spring No. MA-5560-H.
④—Heavy Duty Spring No. MA-5560-J
⑤—No Heavy Duty Spring supplied.

1955 Rear Shock Absorbers & Springs

Model	①②Shock No.	③Spring No.
All (Exc. Following)	MC-18080-F	MC-5560-G⑤
Convertible	MC-18080-F	MC-5560-F⑥
Station Wagon	MC-18080-E④	MC-5560-J

①—Use MC-18080-G (Exc. Sta. Wgn.) when heavy duty springs used.
②—Use MC-18080-H on Air Conditioned Cars.
③—Use MC-18080-C for heavy duty use. Heavy duty springs not furnished.
④—Spring number stamped on lower leaf.
⑤—Heavy Duty Spring No. MC-5560-H,K.
⑥—Heavy Duty Spring No. MC-5560-L.

FRONT SUSPENSION

Independent. "Ball-Joint" suspension with direct acting shock absorbers mounted within front coil springs.

See "Lincoln, Mercury, Ford (Ball-Joint)" in Front Suspension Section.

Kingpin Inclination—7° with Pos. 3/4° camber.
Caster—0° to Neg. 1-1/2°. Maximum variation between wheels is 1/2°.
Camber—0° to Pos. 3/4°. Maximum variation between wheels is 1/4°.
Toe-In—3/32" to 5/32".
Toe-Out on Turns—With outer wheel at 20°, inner wheel should be 24° (1954), 24°9' (1955).

STEERING

Manual: Own (Gemmer 305 Design). Worm & Roller type.
See "Gemmer Worm & Roller (Type 305)" in Steering Section.

Power Steering: Ford-Mercury Linkage type. Used in conjunction with standard type steering gear.
See "Ford & Mercury Power Unit" in Steering Section.

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Gemmer Worm & Roller (Type 305)" in Steering Section.*

Steering Gear Removal: *See "Gemmer Worm & Roller (Type 305)" in Steering Section.*

BRAKES

►*1955 FRONT BRAKE PRODUCTION CHANGE: Front brake eccentric adjustment has been eliminated on Late 1955 cars.*

Bendix Hydraulic (Single Anchor). With Eccentric (Front Wheels—See 1955 Production Change above). **Without Eccentric (Rear Wheels).** Parking lever applies rear wheel service brakes.
See "Ford-Bendix (Ford, Lincoln, Mercury)" in Brake Section.
Drums—11"
Wheel Cylinder Diameter—1 1/8" (Front), 15/16" (Rear).
Lining—Molded type riveted to shoe.
Width (Front Wheels)—2" (1954); 2½" (1955). **Rear Wheels**—1¾" (1954); 2" (1955).
Length—9.28" (All Primary Shoes), 11.94" (All Secdary Shoes).
Clearance—.010" at each end of both primary and secondary shoes (.003" maximum variation).

►*1955 BRAKE ADJUSTMENT CHANGE:* Adjustment procedure on 1955 Models are affected in that eccentric cam is now spring loaded which eliminates need for locknut to retain it in position. See Production Change above also.

Braking Power—62% (Front Whls.), 38% (Rear Whls.).

Brake Pedal Free Play Adjustment: 1/4—7/16". If play not correct after brake adjustment, loosen lock nut on the eccentric bolt attaching brake pedal to master cylinder pushrod, rotate eccentric bolt for desired clearance.

Standard Master Cylinder: Located on engine side of firewall.
Checking Fluid—Maintain fluid level to within ¼" of top of reservoir.
Removal—Disconnect brake line from master cylinder and depress brake pedal a few times to force out fluid. Disconnect wires leading to stop light switch, and remove eccentric bolt attaching master cylinder pushrod to brake pedal. Remove capscrews and lock washers attaching master cylinder to firewall.

Power Brakes: Bendix Vacuum Power Unit (combination vacuum power unit and master cylinder). Unit mounted on engine side of firewall and replaces regular master cylinder.
See "Bendix Power Unit" in Brake Section.

Checking Fluid Level—Same as for regular master cylinder.

Removal of Power Unit—Disconnect valve pushrod from brake pedal assembly in drivers compartment. Remove master cylinder outlet fitting bolt from master cylinder. (*NOTE*—It is not necessary to remove stop light switch, wires or hose assembly from outlet fitting. Do not disturb outlet fitting in master cylinder). Loosen clamp securing manifold vacuum hose to check valve on power unit. Remove hose from valve. Loosen clamp securing vacuum reserve tank hose to fitting on check valve. Remove four capscrews securing power brake assembly to bracket on dash panel and remove power brake assembly.

MISC. MECHANICAL

Air Conditioning: Own. *See "Mercury Air-Conditioning" in Miscellaneous Section.*

Windshield Wipers: Vacuum, Link & Crank Arm type.
See "Windshield Wipers" in Miscellaneous Section.

Power Window Regulators: Electric. Reversible motor in each window. Controlled by door switch and master control switch. *See "Window Regulators" in Miscellaneous Section.*

Power Top Control: Reversible type motor (mounted under seat) drives two screw type jacks (one on each side) through flexible cables. Controlled by relay and two-way switch. *See "Power Top Controls" in Miscellaneous Section.*

Power Seat Adjusters: Electric type. Individual motor for vertical and horizontal adjustment. *See "Power Seat Adjusters" in Miscellaneous Section.*

TIGHTENING SPECIFICATIONS

	Ft. Lbs. (Dry Thds.)
Spark Plugs	30
Cylinder Head Nuts	40
Main Bearing Cap Nuts	70
Con. Rod Bearing Capscrews	33
Flywheel Stud Nuts	32

ENGINE

►*ENGINE REMOVAL NOTE:* Engine assembly (with clutch and transmission) *can be removed from* below, or engine only (less transmission) can be removed from above. This latter method is recommended for engine replacement.

ENGINE ASSEMBLY REMOVAL (From below): Drain engine oil pan, transmission case, and radiator and block. Then proceed as follows:

(1) Remove hood top, radiator, air cleaner and cylinder head cover.

(2) Disconnect all lines, hoses, and electrical connections at engine, and cables and controls at transmission.

(3) Disconnect exhaust pipe at engine and muffler, remove pipe, wire muffler to left side of underbody.

(4) Disconnect and remove propeller shaft (disconnect shaft at rear universal companion flange, pull shaft out and off transmission shaft splines).

(5) Attach Engine Lifting Fixture (see Note below), support engine weight, remove all Front and Rear Cross-member attaching bolts at body side sills.

(6) Lower engine assembly and remove from beneath car.

ENGINE REMOVAL (From above): Drain engine oil pan, radiator, and block. Then proceed as follows:

(1) Remove top hood, radiator, air cleaner, and cylinder head cover.

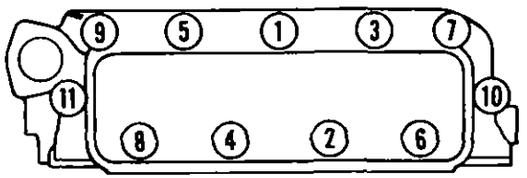
(2) Disconnect all lines, hoses, and electrical connections at engine, disconnect exhaust pipe at exhaust manifold.

(3) Remove starter from right side of engine.

(4) Attach Engine Lifting Fixture (see Note below), remove engine support bracket-to-front cross-member bolts (4 on each side), support engine weight with lifting fixture.

(5) Remove all clutch housing-to-engine rear plate attaching bolts. Move engine forward to disengage transmission drive shaft from pilot bearing, then lift engine up and maneuver it out of engine compartment.

► **Engine Lifting Fixture Note**—Fixture can be made up from two pieces of channel with hole in each end of each piece to fit the end cylinder head studs on each side of head. Lifting holes in channel should be centered between the cylinder head stud holes (for engine removal only), 3 3/8" to rear of center point (for engine and transmission assembly removal).



CYLINDER HEAD & MANIFOLD

REMOVAL: Remove head as complete assembly with rocker arms and shaft after loosening tappet adjusting screws and removing pushrods. *See Pushrod Removal under VALVES below.* Inspect cylinder head studs for tightness in block. If studs removed, use sealing compound on studs when replacing.

INSTALLATION: Install head (see Gasket Note below), tighten all stud nuts finger-tight, install Pushrods, tighten cylinder head nuts, adjust valve clearance. *NOTE*—Recheck cylinder head nut torque and recheck valve tappet clearance after approximately 100 miles of operation.

Tightening Cylinder Head Nuts—Tighten nuts in order as shown in cylinder head diagram to recommended torque of 40 ft. lbs. with dry threads.

Cylinder Head Gasket Note—Use non-hardening gasket paste and install gasket with "Top" mark upward.

CYLINDER HEAD

CRANKSHAFT & MAIN BEARINGS

FRONT & REAR MAIN BEARING CAPS: Removal—Remove front and rear end plates, then use tool J-5559 to pull bearing caps from recesses in block. *NOTE*—This tool is combination Main Bearing Cap and Pinion Bearing Remover.

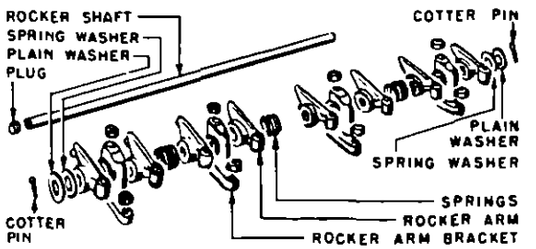
Installation—Install caps with punchmark toward camshaft side of engine. Transverse groove for oil seal should be on outer edge of bearing cap.

Oil Seal Installation: Install cork strip in transverse groove in front and rear main bearing caps.

FLYWHEEL

FLYWHEEL REPLACEMENT: With engine removed, flywheel can be removed by taking off nuts on flywheel mounting studs. When installing flywheel, tighten mounting stud nuts to 32 ft. lbs. torque.

CAMSHAFT & BEARINGS



CAMSHAFT REMOVAL: With engine removed from car, remove pushrods, remove valve side covers, remove all valve lifters through side openings. Pull crankshaft pulley, remove timing cover and oil shedder, remove camshaft sprocket capscrews, pull both sprockets and timing chain as a unit. Remove camshaft retaining and thrust plate (*CAUTION*—note location of oil hole for timing chain lubrication). Remove oil pump and distributor drive gear shaft. Slide camshaft out through front of engine.

CAMSHAFT BEARING REPLACEMENT: Punch old bearings out, tap new bearings into position (*CAUTION*—line up oil holes in bearings and block). Line-ream new bearings for correct clearance of .001-.002".

VALVE SYSTEM

PUSHROD REMOVAL: Loosen tappet clearance adjusting screws in rocker arms completely, depress valve spring until pushrod socket end is free from ball end of adjusting screw, push rocker arm to one side. Remove pushrod (*CAUTION*—maintain side pressure on pushrod to insure lower end snapping out of lifter without pulling lifter up and out of its bore in the block). When removing end pushrods (front and rear), take out cotter pin in end of rocker shaft and slide rocker arm off shaft.

ROCKER ARM ASSEMBLY: Removal—Remove nuts from all rocker arm support brackets (left hand nuts are on cylinder head studs), lift entire unit off as an assembly. To disassemble unit, remove cotter pins from ends of shaft, slide rocker arms, spacing springs, and support brackets off shaft. *NOTE*—Remove plug from end of rocker arm shaft and clean sludge accumulations from hollow shaft.

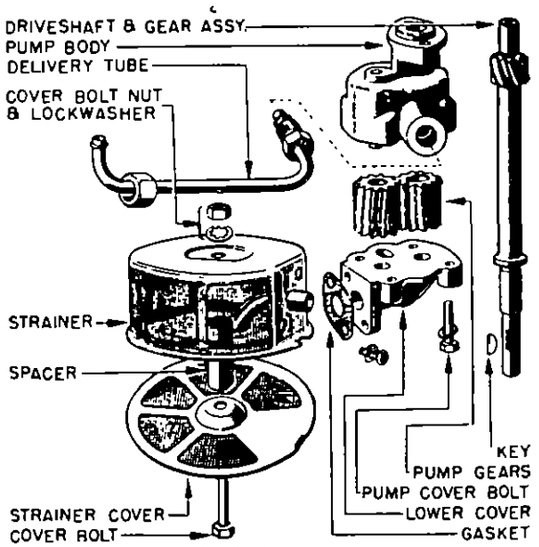
TYPICAL ROCKER ARM ASSEMBLY

Rocker Arm Specifications

Rocker Arm Shaft Diameter	.624-.625"
Rocker Arm Bushing Inside Diameter	.6255-.626"
Shaft Clearance	.0005-.004"

►*SERIES "B" ROCKER ARM ASSEMBLY NOTE: Rocker arm center spring spacer not used (see illustration).*

Installation—All rocker arms are the same. Install arm on each side of each support bracket with spacing spring between adjacent rocker arms (no spring for end rocker arms which are assembled on each end of shaft and retained by cotter pin). When installing assembly, make certain that oil lead in FRONT support bracket lines up with oil lead in cylinder head at support bracket mounting pad. *CAUTION*—This oil lead in front bracket supplies oil for rocker arm assembly (feeds into hollow rocker arm shaft through front support bracket).



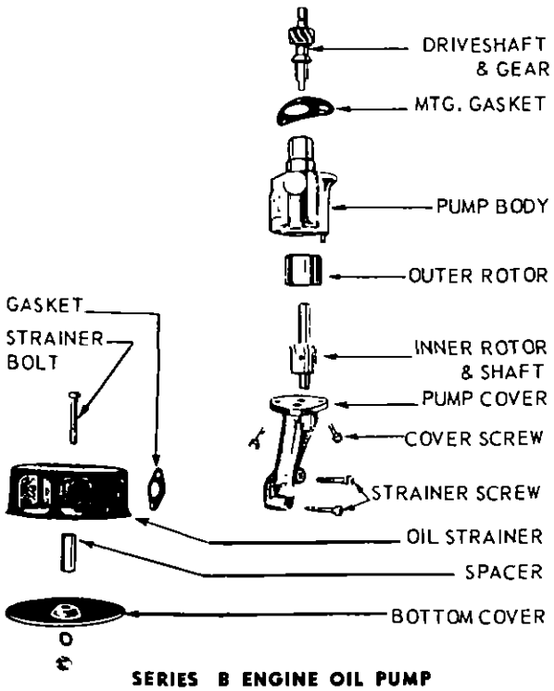
CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

OIL PUMP

OIL PUMP REMOVAL & INSTALLATION: With oil pan off, remove nuts from oil pump mounting studs, slide pump down off mounting studs (*CAUTION*–Pump drive shaft and gear assembly may remain in engine and can be removed by pulling it down to disengage drive gear). Install pump by reversing this procedure. Make certain that holes in pump mounting gasket line up with holes in block (*CAUTION*–Pump delivery is through oil channel in pump body and block), and that drive gear tang engages slot in upper end of pump shaft.

PUMP OVERHAUL: Disassembly (Series "A" Engine)– Remove oil strainer assembly from side of pump lower cover. Take out pump cover attaching screws, lift off cover and remove pump gears (driving gear is keyed to pump shaft and may have to be tapped off), remove key from shaft, withdraw shaft through top of pump body.



SERIES A ENGINE OIL PUMP

Disassembly (Series "B" Engine)–Remove oil strainer assembly from side of pump lower cover. Take out two pump cover attaching screws, lift off cover and remove inner and outer pump rotors and pump shaft. Inner rotor is pinned to shaft.

Reassembly–Reverse disassembly procedure above. After assembly completed and with lower cover tight, make certain that shaft can be turned freely by hand without binding.

IGNITION NOTES

DRIVESHAFT NOTE: This shaft and gear assembly is installed in the cylinder block and has a slot in the flanged upper end for distributor shaft drive. The assembly need not be disturbed unless replacement is required or camshaft is being removed. *CAUTION–Remove and install assembly exactly as detailed below to insure correct ignition timing.*

SERIES B ENGINE OIL PUMP

Removal–Use a tool made up from a piece of rod with threaded end (5/16" - 24 N.F. THD.) as a remover and installer tool. With distributor and drive bushing removed, insert threaded end of rod into upper end of the driveshaft and remove the shaft with a turning motion which will prevent the shaft disengaging from the rod and dropping into the crankcase while it is being removed.

Installation–Turn crankshaft until #1 piston is on TDC. of compression stroke. Install driveshaft in engine (using threaded rod in upper end of shaft) so that offset slot is slightly off the vertical (approximately equal to 12:30 - 6:30 of a clock face) and large portion of offset is toward REAR of engine with drive gear fully meshed with camshaft gear and driveshaft assembly fully seated in cylinder block.

RESONANCE CORRECTION

1954 MODELS

►*NOTE:* If resonance noise noted in front compartment under certain driving conditions, following procedure will correct this resonance:

Accelerator Pedal–May be noted as a buzz when foot pressure removed. Remove pedal roller and apply light coating of heavy fibrous wheel bearing lubricant to pedal arm before replacing roller.

Air Cleaner–May be noted at 45-50 MPH. or on deceleration. Remove top gasket from element section and replace with correct length piece of 3/8" clothes line OR make up an insulator (use waffle pad insulation or equivalent of 1/8" thickness) to conform to top flat section of air cleaner with a circular opening for air intake, install this insulator with Part No. 4340429 cement.

Choke Cable–May be noted as cable oscillation under same conditions as air cleaner noise. Install 12" section of windshield wiper hose (3/16" I.D.) over choke control cable so that 2/3" of tubing is over the cable conduit.

MODEL IDENTIFICATION

NOTE: Electrical system is 12 volt type.

Convertible Model.....541 Hardtop Model 542

SERIAL NUMBER: Stamped on plate on right side of dash panel in engine compartment and on upper flange of right dash-to-front wheelhouse panel brace near top corner of brace (below serial number plate).

Starting Serial Number

Series	Serial Number
"A"	E-1001
"B"	B-11001

ENGINE NUMBER: Stamped on plate on upper edge of cylinder block on right side at center.

Starting Engine Number—IG-881459 (Start of 1954 production).

►*SERIES "A" & "B" ENGINE NOTE: These engines are different. Specifications and service procedures are the same except where noted.*

TUNE-UP

►*1954 RESONANCE CORRECTION (When caused by Accelerator Pedal, Choke Control, or Air Cleaner): See "Resonance Correction" in Metropolitan Special Data.*

COMPRESSION PRESSURE: 120-135 lbs. at cranking speed of 300-350 RPM.

VALVE TAPPET CLEARANCE: .015" All Valves. At room temperature.

MANIFOLD HEAT CONTROL: "Hot Spot" plate located between intake manifold and exhaust manifold with baffle to direct exhaust gas to center of plate. No moving parts or external controls.

IGNITION

FIRING ORDER: 1-3-4-2.

SPARK PLUG GAP: .023-.025".

Spark Plug—Champion N-8. 14mm. (Long Reach). *Tighten plugs to 30 ft. lbs. torque.*

COIL: Lucas Q-12. *12 Volt.* On generator.

DISTRIBUTOR: Lucas DM-2, No. 40427E ("A" Series). DM-2 P4, No. 40284D ("B" Series). Distributor has "micrometer" adjuster for fine timing adjustments.

Condenser-Lucas. Metropolitan No. 8111099.
Capacity—.2 microfarad.
Contact Point Set—Metropolitan No. 8111098.
Breaker Gap—.014-.016"
Cam Angle—60°±3° (closed).
Breaker Arm Spring Tension—20-24 ozs. (at contacts).
Rotation—Counter-clockwise viewed from above.

Automatic Advance—No. 40427E

Degrees Distr.	RPM	Degrees Eng.	RPM
0-1	500	0-2	1000
14-16	1900	28-32	3800

Automatic Advance—No. 40284D

Degrees Distr.	RPM	Degrees Eng.	RPM
0-1	380	0-2	760
8-10	1500	16-20	3000

Vacuum Spark Control—Part of distributor assembly.

Vacuum Advance—No. 40427E

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
1-3	2-6	6.5
9-11	18-22	17

Vacuum Advance—40284D

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
1-3	2-6	6.04
10-12	20-24	20.8

Distributor Removal & Installation: Distributor assembly (including mounting clamp) can be lifted out after hold-down screw removed from drive bushing flange (under mounting clamp plate). Drive tang in lower end of shaft is offset and distributor can only be installed in correct position.

Distributor Drive Shaft & Gear Removal & Installation—*See "Ignition Notes" in Metropolitan Special Data.*

IGNITION TIMING

Setting (Series "A" Engine)—7° BTDC.

Setting (Series "B" Engine)—11° BTDC.

Timing Mark—Series "A" & Early Series "B" Engines (Before Serial No. 14668)—Pointer on timing chain cover and notch in crankshaft pulley. Indicates TDC when pointer and notch aligned.

Timing Mark—Later Series "B" Engines (After Serial No. 14668)—Three pointers on lower part of timing chain cover and notch in crankshaft pulley. Pointers indicate 0°, 5°, 10° when aligned with notch in pulley.

Timing (Series "A" Engine)—7° BTDC point is 5/16" before TDC notch in pulley (measured on outside diameter).

Timing (Series "B" Engine before Serial No. 14668)—11° BTDC point is ½" before TDC notch in pulley (measured on outside diameter).

Timing (Series "B" Engine after Serial No. 14668)—11° BTDC point is slightly to right of 10° pointer on timing chain cover when viewed from below.

TIMING ADJUSTMENT NOTE—Timing should be set by loosening mounting clamp bolt and rotating distributor within mounting clamp. The "micrometer" adjuster nut (knurled nut on opposite side of distributor housing from vacuum spark control mounting stud) can be used for fine timing adjustments to compensate for operating conditions and fuel.

CARBURETOR

Zenith Model 30. VIG-8 (Series "A" Engine). VIG-10 (Series "B" Engine). Single barrel downdraft type with manual choke control.

Idle Setting—0-1 turn open. Turn screw in for richer mixture. Adjusting screw controls idle air bleed.

Idle Speed—500 RPM. at normal operating temperature.

Float Level—No adjustment (float is free in bowl and bears directly against intake needle in cover).

Accelerating Pump—Two holes in throttle lever. Upper Hole—long stroke. Lower Hole—short stroke

Fast Idle—1/32" throttle valve opening with choke valve closed. Adjust by loosening setscrew and changing connector rod position in choke shaft swivel.

Choke Control: Manual (cable) control.

►*OTHER DATA: See "Zenith Model 30" in Carburetion Section.*

Fuel Pump Pressure: 1.5-2.5 lbs. at carburetor inlet.

►*NOTE: Fuel pump has priming handle at side of sediment bowl for manual operation.*

CARB. EQUIPMENT

Fuel Pump: AC. Type T. Pump has "Priming Handle" at side of sediment bowl for manual operation.
Replacement Pump—Metropolitan No. 8110897.
Pressure—1.5-2.5 lbs. at carburetor inlet.
See "Fuel Pumps" in Carburetion Equipment Section.

Gasoline Gauge: Electric.
Dash Unit—Metropolitan No. 8110706.
Tank Unit—Metropolitan No. 8110398.
See "Gasoline Gauges" in Carburetion Equipment Section.

BATTERY

Lucas GTW-9A. *12 Volt.* 9 plate, 58 ampere hour (20 hour rate). Local battery may be installed. (Delco or Auto-Lite).
Grounded Terminal—Positive (+) terminal.
Engine Ground—Cable from flywheel housing to frame on right side.
Location—Under rear seat on right side (lift seat pad for access to battery box cover).

STARTER

Lucas M-35-G-1. *12 Volt.*
Armature—Metropolitan No. 8111090.
Drive—Bendix Barrel Type.
Brush Spring Tension—15-25 ozs.
Rotation—Counter-clockwise at commutator end.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	5800	12.0	45
4.9 "	1000	8.9-9.3	250-270
9.3 "	Lock	7.3-7.7	370-390

Starting Switch: ST-19/1. On dash in engine compartment with cable actuation by button on instrument panel.

GENERATOR

Lucas C-39-PV-2. *12 Volt.* Two brush type.
Armature—Metropolitan No. 8111074.

Performance Data

Amperes	Volts	RPM.
0	13.0	1050-1200
19	13.5	2000-2150

Brush Spring Tension—22-25 ozs. (new brushes).
Field Current—Field resistance 6.2 ohms.
Rotation—Counter-clockwise at commutator end.

Belt Adjustment: 1" deflection with light finger pressure midway between generator and crankshaft pulleys.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

REGULATOR

Lucas RB-106-1. *12 Volt.* Two unit type with combined voltage-current regulator. Compensated.
See "Lucas Regulator" in Electrical Equipment Section.

Cutout Relay

Cuts In—12.7-13.3 volts (1050-1200 Gen. RPM.).
Cuts Out—9-10 volts with 3-5 amperes discharge current.
Contact Gap—.002-.006" (with .025" air gap).
Air Gap-.011-.015" with .008" feeler between armature bar and regulator frame. *NOTE*—Clearance between stop arm and armature should be .030-.034" with above gauges in place.

Voltage & Current Regulator

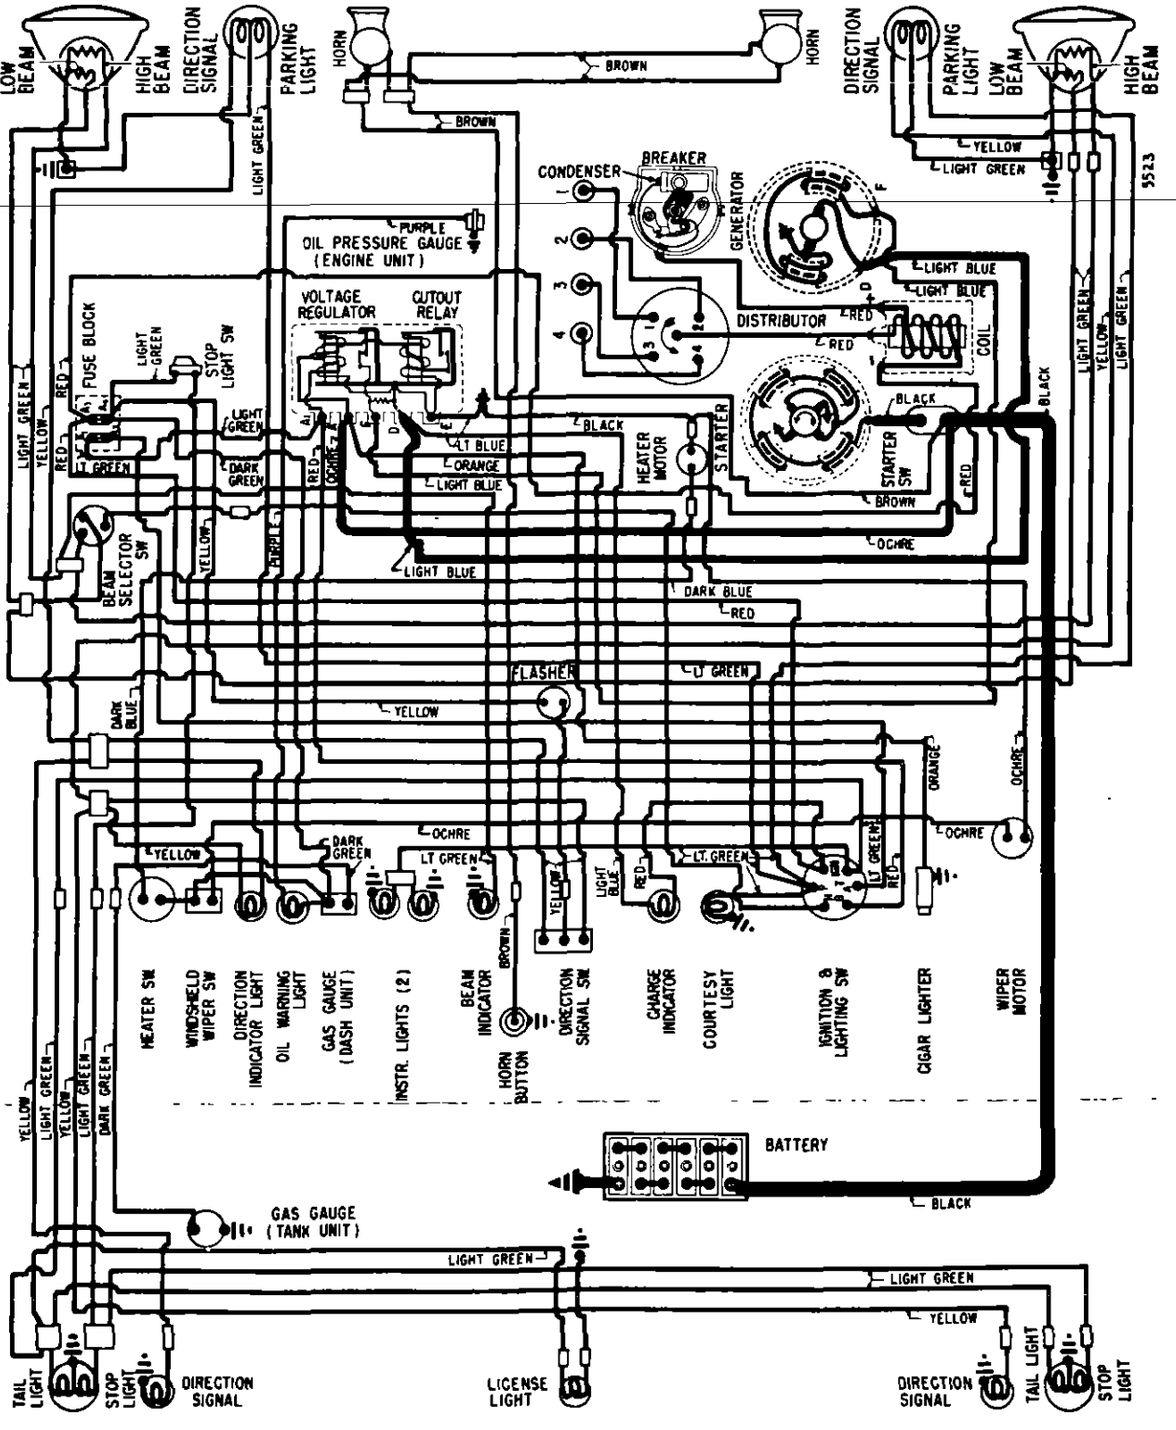
Voltage Setting—15.8 volts at 68°F. (Generator RPM. 1000 RPM. minimum).
Current Setting—19 amperes at 13.5 volts (At 2000-2150 Generator RPM.).
Air Gap—.012-.020" (adjust with .018" feeler between armature and regulator frame).
Contact Gap—.006-.017" (armature against core).

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Equip. Section.*
Direction Signal: *See Electrical Equip. Section*
Lighting & Ignition Switch: Combination switch (ignition lock cylinder located in light switch knob).
Removal—Remove spring clamp screw and clamp behind instrument panel, pull switch assembly out. *NOTE*—Ignition lock cylinder can be removed by rotating light switch knob until cylinder retaining pin lines up with access hole in side of switch case, insert key, use rod to depress retaining pin, withdraw lock cylinder.
Stop Light Switch: In front brake line fitting on inside of left front wheelhouse panel.

Lamp Bulbs: *12 Volt.*	**Bulb No.**
Head lamps	4430
Park & Dir. Sig., Tail & Stop	1016
Rear Dir. Sig.	1141
Ind.(High Beam, Oil, Gen. Chg.)	ℂ Lucas 987
Instrument	ℂ Lucas 987
Dir. Sig. Indicator	Lucas 970
License, Courtesy	57

ℂ—Mazda-No.-1446 (Toy Train-Headlight) bulb can be used in emergency.



FUSES: Two fuses on fuse block on firewall adjacent to Regulator. Spare fuse provided for each circuit. **Lighting**—30 amperes. **Ignition**—30 amperes.

HORNS: Lucas WT-614. *12 Volt.* Twin horns (no relay). **Horn Current**—6.5 amperes at 12 volts (each horn).

ENGINE

►*SERIES "A" & "B" ENGINE NOTE: These engines are different. Specifications and service procedures are the same except where noted.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

ENGINE SPECIFICATIONS: Austin A40. 4 Cylinder, Valve in head.
Bore—2 37/64". **Stroke**—3 1/2".
Displacement—73.17 cu. ins. **Rated HP.**—10.63
Developed Horsepower—42 at 4500 RPM.
Compression Ratio—7.2-1.
Compression & Vacuum Reading—*See TUNE-UP.*

OIL PAN REMOVAL: No obstructions.

ENGINE REMOVAL: *See "Engine" in Metropolitan Special Data.*

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Metropolitan Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Metropolitan Special Data.*

PISTONS

Aluminum alloy, cam ground, split skirt, 4-ring.
Removal—Pistons and rods removed from above.
Fitting New Pistons: Clearance .0009-.0015" measured at bottom of skirt at right angles to piston pin. Check fit by inverting piston in clean dry bore. Piston should just support its own weight.
Replacement Pistons: Furnished with pins in Standard size and .010", .020" Oversize.

PISTON PINS

Pin is locked in rod by a clampscrew.
Diameter—.6425". **Length**—2.276"
Clearance in Piston—.0003" maximum Fit pin to palm push fit in piston bosses at 70°F.
Replacement Pins: Standard & .001", .003" Oversize.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr.(#1,2,3)	.077-.078"	.008-.012"	.001-.003"
Oil (#4)	.1552-.1562"	.008-.012"	.0025-.003"

Replacement Rings: Standard and .020" Oversize.
Installing Rings: Plain compression ring in top groove, taper-faced rings in #2 & #3 grooves, oil ring in bottom groove. All rings are oxidized-coated.

CONNECTING RODS

Rods have lower end split at an angle (to permit removal through cylinder bore), lower bearing is offset toward camshaft side of engine, and bearing has "narrow side" toward main bearing journal.

Crankpin Journal Diameter—1.7499-1.7504" (Series "A" Engine). 1.8759-1.8764" (Series "B" Engine).

Bearings—Steel backed, babbitt-lined, precision type.

Clearance—.00025-.0015".

Sideplay—.0085-.0125".

Replacement Bearings: Standard & .002", .010" Undersize.

Installing Rods: Rods are stamped for cylinder location. Install rods in numbered cylinder with bearing offset and shorter side of rod toward left or camshaft side (oil spray hole in lower end of rod will be toward right side of engine). *NOTE*—"Narrow" side of lower bearing must be toward nearest main bearing (#1 & #3 forward, #2 & #4 toward rear).

CRANKSHAFT

Journal Diameter—1.8749-1.8754" (Series "A" Engine). 2.0005-2.001" (Series "B" Engine).

Bearings—Steel-backed, babbitt precision type.

►*BEARING NOTE: Upper bearing halves can be rotated in and out.*

Clearance—.00075-.002".
Replacement Bearings: Standard & .002", .010" Undersize.
End Thrust: Taken by split thrustwashers at center main bearing (upper washers retained in recesses in bearing support in crankcase, lower washers retained by tabs fitting in recesses in bearing cap).
Endplay—.003-.007".
Front & Rear Bearing Caps & Oil Seal Installation: *See Metropolitan Special Data.*

►*MAIN BEARING REMOVAL NOTE:* Engine assembly, engine end plates, oil pump and strainer assembly must be removed to remove main bearing caps.

FLYWHEEL REPLACEMENT: *See "Flywheel" in Metropolitan Special Data.*

CAMSHAFT

Journal Diameters—(1) 1.78875-1.78925", (2) 1.72875-1.72925", (3) 1.62275-1.62325".
Bearings—Steel-backed, babbitt bushings.
Clearance—.001-.002".
End Thrust: Taken by thrust plate on front end plate behind camshaft sprocket. **Endplay**—.002-.008".
Camshaft Removal & Bearing Replacement: *See "Camshaft" in Metropolitan Special Data.*

Timing Chain—Double Roller. Metropolitan No. 8110131.
NOTE—Camshaft sprocket has rubber Tensioner Ring (installed in groove in outer rim) for quiet operation.

Camshaft Setting: Mesh sprockets in chain (on the bench) with marks on sprockets adjacent and line with a straightedge across shaft centers. Turn crankshaft until #1 & #4 pistons are at TDC., turn camshaft so that #1 & #2 valves are in overlap position (exhaust valve closing, intake valve opening), install chain and sprockets as an assembly.

VALVES

Tappet Clearance: .015" All Valves. At room temperature.

Valve	Head Diameter	Stem Diameter
Intake	1 3/8"	.3089-.3094"
Exhaust	1 3/16"	.3089-.3094"

Seat Angle	Lift	Stem Clearance
45°	.312"	©.001-.003"

©—Replace guides if I.D. greater than .314".
Valve Seat Width—1/16" (3/32" maximum).
Valve Stem Seals: Used on all valves. Seal washer installed between Seal Retainer and Spring Retainer on upper end of valve stem. Use NEW seals when installing valves.
Valve Springs: Free length 1 13/16".

Valve Spring Specifications

	Lbs. Pressure	Length
Valve Closed	53-57	1 15/32"
Valve Open	103-107	1 5/32"

►*VALVE LOCK INSTALLATION CAUTION*—Safety pin (hairpin spring) must be installed in groove in locks.

Valve Guides: Drive old guides out from top of head. Use Driver J-5564 to install new guides from combustion chamber side, drive guides in until they extend 11/16" beyond machined spring seat surface on head.
Valve Lifters: Two-piece barrel type (pushrod cup is pressed in main body). Remove from above (through side opening of block) after side covers and pushrods removed. *CAUTION*—Re-install lifters in same bore.
Rocker Arm Assembly: *See "Valve System" in Metropolitan Special Data for removal and assembly.*
Rocker Arm Clearance—.0005-.004"

VALVE TIMING

See CAMSHAFT SETTING above.
Intake Valves—Open 5° BTDC. Close 45° ALDC.
Exhaust Valves—Open 40° BLDC. Close 10° ATDC.
NOTE—These specifications apply with .020" tappet clearance.
Valve Timing Check—Turn crankshaft so that #1 & #4 piston on top dead center with #4 piston entering power stroke. At this point, #1 & #2 valves should be in "overlap" position (exhaust valve closing and intake valve opening).

OILING SYSTEM

Crankcase Capacity: 4 quarts (refill).
Normal Oil Pressure: 40-45 lbs. at 30 MPH.
Pressure Regulator Valve—Located under plug on left side at the rear of engine.
Oil Pressure Indicator—Warning light on lower left face of speedometer controlled by Pressure Switch on right side of engine block. Lamp should light when ignition turned on and should go out when engine oil pressure exceeds 7 lbs.
Oil Pressure Switch—Metropolitan No. 3134704.
Oil Pump: Rotor type. In crankcase on left side.
Pump Removal & Installation—*See "Oil Pump" in in Metropolitan Special Data.*

Oil Filter: Accessory.
Replacement Filter Element—Metropolitan No. 8990183.
Crankcase Ventilation: Air intake in rocker arm cover (hose connection to air cleaner), outlet pipe on left side of engine at rear.

COOLING

Water Capacity: 8 qts. (with heater).
Pressure Valve: Metropolitan No. 8111524 Radiator Filler Cap 3.5-4.5 lbs.
Thermostat: In water outlet elbow on cylinder head. **(Std.)** Metropolitan No. 8110247. Opens at 158-167°F. **(Permanent Anti-freeze)** Metropolitan No. 8111202. Opens at 180°F.
Water Pump: Packless. *NOTE*—Pump has oil plug on top of body (lubricate with light engine oil at 10,000 mile intervals).
See "Metropolitan" in Water Pump Section.
Pump Removal—Remove radiator core first, then remove pump from block.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

CLUTCH

Borg & Beck Type A–Single plate.

See "Borg & Beck Type A" in Clutch Section.

Clutch Disc–Metropolitan No. 8110511 (Series "A" Engine). No. 8111732 (Series "B" Engine).

Pedal Adjustment: Freeplay ½-¾". Adjust length of rod between clutch pedal and clutch master cylinder.

Hydraulic Clutch Control: Consists of standard master cylinder located adjacent to brake master cylinder, attached to clutch cover. Adjusting link between clutch pedal and master cylinder, connecting rod only between clutch operating cylinder and clutch throwout lever.

Filling Master Cylinder: Filler cap accessible through hole in floor pan. Maintain level to mark on cylinder. Bleed hole in clutch operating cylinder permits bleeding procedure the same as for brake system.

►*MASTER CYLINDER VENT CAUTION:* Floor pan hole cover gasket may block off air vent hole. Cut 2" diameter holes in gasket directly over both clutch and brake master cylinder.

Removal: Remove transmission and integral bell housing (see below), mark clutch cover, pressure plate, and flywheel (to insure re-installation in same position), relieve spring pressure by turning out all cover screws evenly.

SYNCHRO-MESH TRANSMISSION

Own. Three-speed, helical gear, constant mesh gears.
See Transmission Section for complete data.

Transmission Control: See "Transmission Controls" in *Transmission Section.*

Removal: Remove four top transmission to engine mounting bolts (from engine compartment). Raise & support car securely. Drain transmission. Install engine support fixture Tool J-5565. Disconnect propellor shaft at the rear axle companion flange and pull the shaft from the transmission main shaft splines. Remove rear crossmember from rear transmission supports and side sill members. Disconnect speedometer cable and shift rods from transmission levers. Disconnect clutch operating cylinder rod from clutch throwout lever, remove two capscrews holding cylinder to transmission but DO NOT disturb hydraulic lines. Remove four remaining lower transmission to engine bolts and remove starter. Lower the engine support fixture approximately 1¼" and lift transmission toward the rear, while supporting weight to eliminate possible damage to clutch drive plate.

UNIVERSALS

Cross type. Two used.

REAR AXLE

Own. 3/4-Floating, Hypoid Gear, Hotchkiss Drive, with separate differential gear carrier.
See Rear Axle Section for complete data.

Ratio–4.55-1 (9-41), standard after Serial No. E-11944. Prior to this Serial No, some 4.625 to 1 (8-37) ratios were installed.

Backlash–.005-.008". Shim adjustment.

Axle Shaft Removal: Remove rear wheel, drain axle housing. Remove drum locating screw, tap brake drum off hub. Remove axle shaft retaining screw (in shaft flange–exposed when drum removed), pull axle shaft straight out (if flange tight, pry flange loose from studs).

►*INSTALLATION CAUTION–Always use NEW gasket between axle shaft flange and hub when installing shaft.*

Rear Axle Removal: *Carrier Assembly can be removed separately, or complete Axle Assembly can be removed as follows:*

Carrier Removal–Raise rear end of car, drain axle housing, remove axle shafts (see above). Disconnect propeller shaft at rear universal companion flange and remove shaft. Remove nuts on differential carrier studs and lift assembly out of housing.

Axle Assembly Removal– Disconnect brake cable at balance lever and brake hose at "Tee" fitting. Disconnect propeller shaft at rear universal companion flange and remove shaft. Disconnect rear springs by removing "U" bolts at spring seats. Remove axle assembly from beneath car.

Wheel Bearing Adjustment: None. Bearing nuts on outer end of axle housing should be kept tight.

SHOCK ABSORBERS

Direct acting, hydraulic (front & rear). Service by replacement.
Front–Metropolitan No. 8111425.
Rear–Metropolitan No. 8111426.

FRONT SUSPENSION

Independent. Parallelogram type with coil springs mounted above knuckle pin and independent direct acting shock absorbers.
See Front Suspension Section for complete data.

Kingpin Inclination–6½° crosswise.
Caster–Pos. 2° to Pos. 3°. No adjustment.
Camber–Pos. ½° to Pos. 1½°. No adjustment.
Toe-In–0-1/16". Adjust center tie-rod (between steering gear pitman arm and idler arm).
Toe-Out on Turns–With outer wheel turned 20°, inner wheel should be 24½°+½°-0°.

STEERING

Ross. Cam-and-Lever type.
See "Ross Cam-and-Lever" in Steering Section.

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Ross Cam-and-Lever" in Steering Section.*

Steering Gear Removal: *See "Ross Cam-and-Lever" in Steering Section.*

BRAKES

Girling Hydraulic. Front Wheels–Twin Cylinder, floating shoes (single acting cylinder actuating one shoe and serving as anchor for other shoe). Rear Wheels–Single cylinder, floating, non-servo lever (shoes anchored at adjuster bracket, piston actuates one shoe, lateral movement of cylinder actuates opposite shoe). Parking lever applies rear wheel service brakes.
See "Girling Hydraulic" in Brake Section.

►*MASTER CYLINDER VENT CAUTION:* Floor pan hole cover gasket may block off air vent hole. Cut 2" diameter holes in gasket directly over both clutch and brake master cylinder.

Drums–Diameter 8".
Wheel Cylinders– ¾" diameter (all whls.).
Replacement Lined Shoes–Shoes with bonded or riveted lining furnished for replacement as follows:

Metropolitan No.	Front Whl.	Rear Whl.
Shoe & Lining Set	8110986	8111002

Lining Width–1.25". **Length**–7.68".

Clearance–Shoes just free of drag (eccentric adjuster for each front wheel shoe, single wedge adjuster on backing plate for both rear wheel shoes).

Master Cylinder: Under front compartment floor on left side.
Checking Fluid–Filler access hole in front floor pan on left side. Check fluid level at 1000 mile intervals.
Removal–Remove from beneath car after disconnecting brake line fitting, pedal pushrod, and return spring.

MISC. MECHANICAL

Windshield Wiper: Lucas Model CRT-14. Electric.
See "Lucas Electric Windshield Wiper" in Miscellaneous Section.

TIGHTENING SPECIFICATIONS

1946-55 6 CYL. MODELS

	Foot Lbs. Stsm.	Amb. 6
Cylinder Head	57-60	65-70
Main Bearing Caps	66-70	①66-70
Flywheel	100-110	100-110

①—Fuel pump eccentric retaining screw.

ENGINE

1946-48 MODELS

ENGINE REMOVAL: Remove hood. Drain cooling system, remove radiator and hose connections from engine. Disconnect fuel line at fuel pump, and exhaust pipe at manifold flange. Disconnect throttle controls and remove linkage from engine. Disconnect oil pressure and temperature gauge lines at engine units. Disconnect wiring at ignition coil and generator. Remove crankcase ventilator. Take out front and rear engine mounting bolts. Disconnect clutch linkage (under car), disconnect transmission (see Transmission Removal on car model page for complete instructions). Lift engine out of car using care not to damage engine accessories.

1952-53 STATESMAN & AMBASSADOR

ENGINE REMOVAL: Remove front bumper assembly and remove front end sheet metal (see Front End Sheet Metal Removal), including radiator. Engine assembly, with or without transmission attached, can be removed from its mountings after removing "K" brace assembly.

ENGINE MOUNTINGS

1946-48 "600" MODELS

Front Engine Mounting: Consist of shackles insulated with rubber bushings (upper end attached to engine support plate by bushing welded to support, lower end attached to bracket bolted to front frame cross-member) with rubber bumper between frame bracket and bushing to limit movement of shackle mounting.

Installation & Adjustment—Tighten retaining nuts on shackle studs securely. NOTE—Studs provided with shoulders to limit compression of rubber bushings.

Rear Engine Mounting: Consists of rubber and steel support cushion (upper and lower channel sections with live rubber cushion vulcanized to both parts) bolted to transmission case (upper channel), and to body frame cross-member (lower channel). Oil shield is installed on top of support to protect support cushion. Clutch housing is also insulated from engine block (see Clutch Housing Insulator).

Installation—See that oil seal installed with depressed edge forward (to clear transmission case), tighten mounting bolts securely.

Clutch Housing Insulator: Consists of a live rubber pad installed between clutch housing and engine block (upper) and additional pad between engine block and adapter plate (lower). Upper mounting studs (3) provided with limiting sleeves to prevent excessive compression of the rubber pad. Tighten stud nuts securely and lock with palnuts. NOTE—No bolt used in hole on right hand side of housing just above dowel bolt (omitted to permit proper functioning of insulators).

1946-47 AMBASSADOR MODELS

REPLACEMENT (1948 TYPE) ENGINE NOTE: ***When installing 1948 engines in these models, see Replacement Engine Mounting data (following original mounting data).***

Front Engine Mounting (Original Type): Consists of rubber cushion in retainer mounted on frame cross-member by four studs and nuts. Cushion has steel insert (for engine support capscrew) and loose rubber insert plug in lower face of cushion to stabilize cushion action. Cushion block has rectangular projection to control engine torque which must be installed toward left side and square projection of steel insert must register with locating washer welded on front engine support.

Installation & Adjustment—See that loose rubber insert in place in cushion and that torque reaction projection on cushion toward left side, align square projection on steel insert with locating washer on engine support, install capscrew and lockwasher, shift retainer until it just contacts torque projection on cushion, tighten retainer stud nuts securely.

Rear Engine Mounting (Original Type): Consists of upper and lower rubber cushions assembled on stud welded to frame cross-member and support bracket bolted to flywheel housing at each side. Mounting stud has shoulder to limit compression of rubber cushions.

Installation & Adjustment—Install lower (larger) cushion on stud under engine support bracket with steel face down and upper end piloted in steel retainer on lower face of bracket, install upper cushion on stud above bracket with steel face up and small end seated in counterbore in bracket, install lockwasher and nut on stud, tighten nut securely (shoulder on stud limits compression of cushions).

1946-47 AMBASSADOR MODELS

REPLACEMENT ENGINE MOUNTINGS: When installing 1948 Series Engines in these cars, 1948 type engine mountings must be used (see 1948 Mounting data), and front support must be modified as follows:

Installing 1948 Mountings on 1946-47 Cars—Cut off two front original retainer mounting studs to height of 7/32" (to serve as alignment dowels) or install two No. 3125208 dowel studs in these holes. Install new Support Brackets (No. 3124614 L.H. & 3124615 R.H.), piloting bracket on dowel studs, using original rear mounting studs, or two No. SC-3430 capscrews in bracket rear holes. Weld bracket to front of frame cross-member across entire 2" front width (CAUTION—Rubber cushions must be removed from bracket to avoid damage from heat of welding). Lower engine until cushion studs project through slots in chain cover spacer, tighten cushion-to-bracket stud nuts securely, install reinforcing plates No. 3124598 on cushion studs, install lockwasher and nut, tighten nut securely.

1948 AMBASSADOR MODELS

Front Engine Mounting: New type cushion assembly consisting of outer "U" shaped steel section with integral stud (bolts to engine support plate), and inner plate with separate stud (bolts to bracket on cross-member) with rubber insulator bonded to both parts.

Installation & Adjustment—With cushion assembled on frame bracket, lower engine until cushion studs project through slots in engine support plate, tighten cushion-to-bracket stud nuts, then install reinforcing plates on cushion studs and tighten stud nuts.

Rear Engine Mounting: Consist of similar rubber cushions on angular brackets welded to frame cross-member and attached to clutch housing by bolts. NOTE—1948 type engine has new clutch housing and frame cross-member for this new mounting.

OIL PAN

1949-51 MODELS

OIL PAN REMOVAL: Oil pan is removed in a conventional manner except as indicated below:

Statesman—Lift front of engine sufficiently so pan bolts under generator can be removed without difficulty.

Ambassador—Engine must be lifted approximately 4" so oil pan will clear #1 & #2 crank throws.

1952-53 MODELS

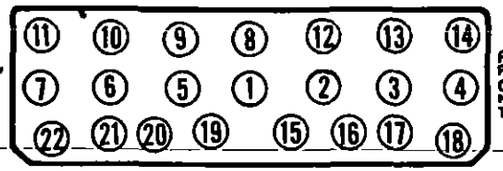
OIL PAN REMOVAL: Remove steering linkage cross tie rod and front suspension pivot bar brace to permit removal of engine oil pan.

CYLINDER HEAD & MANIFOLD

1946-55 6 CYL. MODELS

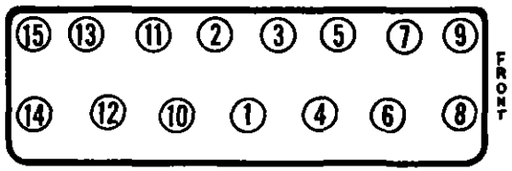
INSTALLING CYLINDER HEAD: Use torque indicating wrench to tighten cylinder head stud nuts in sequence shown in cylinder head diagram.

Cast Iron Heads—Torque to specifications with engine at normal operating temperature.



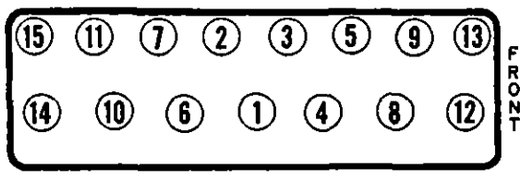
Aluminum Heads—Torque to specifications with engine cold or at room temperature.

Cylinder Head Gasket—Always use new gasket. Coat gasket with non-hardening gasket paste.



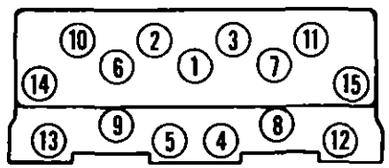
Tightening Torque—See Tightening (Torque Wrench) Specifications above.

CONTINUED ON NEXT PAGE



CONTINUED FROM PRECEDING PAGE

"600" & STATESMAN



AMBASSADOR 6 (1949 & EARLIER)

AMBASSADOR 6 (1950 & LATER)

AMBASSADOR V8

CYLINDER HEAD INSTALLATION: Cylinder block has two sleeve locating dowels to assist in lining up and holding position of cylinder head and gasket during installation. Coat gasket with a non-hardening gasket compound. Install Cylinder Head Lifter J-4159 in the front and rear spark plug holes and install head over dowels (dowels are drilled for oil return from rocker arm chamber). Install pushrods, rocker arm assembly, and the cylinder head capscrews. Tighten all head bolts in the sequence indicated in diagram.

AMBASSADOR V8 CYLINDER HEAD

ORIGINAL BORE & PISTONS

1946-55 6 CYL. MODELS

ORIGINAL BEARING LETTER CODE: A three letter code stamped adjacent to engine number indicates as follows:

Letter Sequence Code

First letter ..... Size of Bore
Second letter ..... Size of Main Bearings
Third letter ..... Size of Con Rod Bearings

Letter Size Code

Letter "A" ..... Standard
Letter "B" ..... .010" Undersize
Letter "C" ..... .010" Oversize
Letter "D" ..... .001" Undersize

► *ENGINES MARKED "AAA" OR UNMARKED ARE STANDARD.*

PISTON PINS

AMBASSADOR V8

PISTON PIN BUSHING (IN CONNECTING ROD) INSTALLATION: After pressing old bushing out with an arbor press, install new bushing so that it is flush with both sides of rod. Position Burnisher Tool J-6055 *in bushing, then applying plate of tool under rod,* push burnisher through bushing with an arbor press. Make sure oil hole in bushing lines up with oil hole in rod. *NOTE*—If bushing not drilled for an oil hole, drill a 3/16" hole before reaming bushing.

ORIGINAL BEARING SIZES

1946-55 6 CYL. MODELS

ORIGINAL BEARING LETTER CODE: A three letter code stamped adjacent to engine number indicates as follows:

First letter ..... Size of Bore
Second letter ..... Size of Main Bearings
Third letter ..... Size of Con Rod Bearings

Letter Size Code

Letter "A" ..... Standard
Letter "B" ..... .010" Undersize
Letter "C" ..... .010" Oversize
Letter "D" ..... .001" Undersize

ENGINES MARKED "AAA" OR UNMARKED ARE STANDARD.

CRANKSHAFT & MAIN BEARINGS

1946-55 6 CYL. MODELS

MAIN BEARING REMOVAL & INSTALLING: Upper bearing halve may be 'rotated' out by inserting pin in oil hole in crankshaft and turning shaft in the direction of locating tongue on bearing. Bearings can be installed by reversing removal procedure.

Replacement Bearings—Finished bearings which require no reaming or scraping are furnished standard size and .002", .010" undersize.

Fitting Bearings—To check bearing clearance, insert short piece of .002" feeler stock, ½" wide, lengthwise to crank pin between bearing and crankshaft, tighten cap. Bearing fit correct when a definite drag is felt when rotating crankshaft (CAUTION—Do not rotate crankshaft more than 1" in either direction). If no drag felt, replace bearings with proper undersize (as listed above) until bearing fit correct. Do not shim bearings or file caps. NOTE—If filing of caps necessary, car manufacturer recommends that this be done carefully without removing too much metal.

1946-48 MODELS

REPLACEMENT MAIN BEARING CAPS: In extreme emergencies, replacement main bearing caps can be installed if fitted as directed below. Bearing caps are line-bored in production and original bearing caps should be retained if possible.

Replacement Main Bearing Caps—On 6 cyl. engines replace caps as follows: Align bore in cap with bore in crankcase by filing sides of cap (caps fit in recess in block). To assure correct alignment, cap retaining screws should be tightened, then backed off slightly and crankshaft rotated allowing cap to be properly positioned, tighten retaining screws to 66-70 ft. lbs. tension with tension wrench.

1946-48 "600" MODELS

1949-55 STATESMAN

CRANKSHAFT END THRUST PLATE: Crankshaft end thrust taken by flanged edges of front bearing. A steel thrust plate is assembled between rear face of timing chain sprocket and flanged face of front bearing. Plate keyed to shaft by Woodruff key which also secures sprocket on shaft. When plate installed, chamfered edge on inner diameter should face toward the rear for tight fit against bearing journal.

1946-48 "600" MODELS

1949-55 STATESMAN

CRANKSHAFT REAR MAIN BEARING OIL SEAL: Packing in groove in block and cap behind oil slinger on crankshaft. Cap sealed with rubber plugs in groove on each side where cap fitted in recess in block. Use Tool J-1610 to install packing in groove in block and cap. Place packing in groove (with bearing shell removed), place small diameter of tool over packing, hit end of tool with lead hammer to seat packing, cut ends of packing flush with bearing cap seat, remove tool. Repeat *operation for groove in block. Install rubber seal* plugs on each side of bearing cap (where angle seal used, make certain that seal also seated in horizontal groove in block).

1946-47 AMBASSAD R

CRANKSHAFT REAR MAIN BEARING OIL SEAL: Reverse threaded oil slinger formed on crankshaft rotates in line with cored groove in block and cap. No seal installed in this groove. Groove in cap provided with two 13/32" diameter oil return holes. Cap sealed *with wood seals installed in groove on each* side of cap where cap fitted in recess in block. With bearing cap off, check clearance between oil slinger threads and bore in block and cap. Clearance must be .006-.008" uniformly around shaft to provide eccentric oil thread. If clearance too small, file crankshaft thread *(CAUTION—Do* not alter bore in block and cap for clearance adjustment). Clean plug grooves in cap to provide flat and smooth surfaces. After bearing cap installed, place gasket compound on inner end of plug, tap plug carefully in place in groove *on each side of cap, cut off ends of plug flush.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

1948-55 AMBASSADOR (EXC. V8)

CRANKSHAFT REAR MAIN BEARING OIL SEAL: Steel backed synthetic rubber seal. Install upper half in block, lower half in bearing cap, make certain that seal fits snugly over edge of rear bearing oil return groove. See that surface on crankshaft to rear of oil slinger (on which seal rides) is rough. **NOTE**–Manufacturer now recommends roughing seal position on crankshaft with No. 240 grit emery cloth. **DO NOT** create spiral scratches which may conduct oil against and under seal lip. Check depth of bearing cap seal groove (.050-.055"). Insufficient depth will prevent crankshaft seal from contacting crankshaft. Install rubber seal strips on either side of bearing cap (three strips overlap bearing cap and seal sides and end surfaces of bearing cap in crankcase).

AMBASSADOR V8

►*CRANKSHAFT REAR MAIN BEARING OIL LEAK CORRECTION (Cars before Engine No. P-15629):* If seepage of oil exists between milled surface of rear main bearing cap and crankcase, file a notch approximately 3/32" deep, with a three cornered file, on the top outer edge of each side of the bearing cap approximately 1/8" forward of the oil pan gasket seal groove. Install a new oil seal as indicated below.

CRANKSHAFT REAR MAIN BEARING OIL SEAL: Apply Lubriplate to groove in bearing cap and install oil seal, using Oil Seal Installer J-3048-A and a hammer, drive seal into place. With seal installed and tool still in place, trim ends of seal flush with surface of cap. To install upper half of seal in crankcase, remove crankshaft and install seal in same manner as for bearing cap. **NOTE**–At time of pan installation, place a generous bead of non-hardening Permatex along edge of bearing cap and crankcase to insure a perfect seal.

1946-55 6 CYL. MODELS

CRANKSHAFT FRONT OIL SEAL: A felt seal is fitted in the timing chain cover which bears against vibration dampener hub. Seal seat in hub has inner edge turned up to form a shedder on inside of cover. An oil slinger is assembled behind vibration dampener hub which extends over outer edge of oil shedder. Use Tool J-1430 installed on end of crankshaft when tightening timing chain cover screws to align seal properly. NOTE—On Statesman, "600", & Rambler Models, a cork seal and rubber seal ring is assembled behind vibration dampener to seal front end of crankshaft. See Vibration Dampener below for data

VIBRATION DAMPENER

1946-55 6 CYL. MODELS

INSTALLATION: Non-adjustable, rubber cushioned type. To install hub assembly, install large lockwasher with notches on inner edge, cork seal ring, rubber seal ring and hub retainer in recess in hub, install hex head lock screw with helical lockwasher under it, in screw hole in end of crankshaft and tighten screw securely. On Ambassador 6 models, dampener hub retained by a special nut shake-proof lockwasher (no seal installed behind hub). On both models, rubber block retaining bolt nuts on front face of dampener hub must be drawn up tight. *CAUTION*–When installing vibration dampener on hub, timing marks must be aligned with hub key-way and on same side.

AMBASSADOR V8

VIBRATION DAMPENER: Removal–Drain cooling system. Remove radiator core and fan assembly. Remove vibration dampener retainer screw and lockwasher and if car is equipped with Power Steering or Air Conditioning, remove the drive pulleys by prying them off dampener assembly. Install center adapter J-5992-2 in threads of crankshaft. Install screw assembly J-5992-3 in remover body J-5992-1 and remove dampener.

Installation: Lubricate oil seal in engine front cover and position dampener over crankshaft and tap it into place with a rawhide hammer. Assemble Vibration Dampener Installer J-5992 by placing the ¾" nut on screw assembly J-5992-3 and slide spacer J-5992-4 over screw assembly. Start screw in end of crankshaft and tighten until it bottoms in the threads. With one end of spacer against dampener, turn nut on screw until dampener hub bottoms the crankshaft oil slinger against a shoulder on crankshaft. Install Power Steering and/or Air Conditioning pulleys, retainer washer, and screw. Tighten retainer screw to 130-150 ft. lbs.

ENGINE FRONT COVER

1946-55 6 CYL. MODELS

CRANKSHAFT FRONT OIL SEAL: A felt oil seal is fitted in the timing chain cover which bears against vibration dampener hub. Seal seat in hub has inner edge turned up to form a shedder on inside of cover. An oil slinger is assembled behind vibration dampener hub which extends over outer edge of oil shedder. Use Tool J-1430 installed on end of crankshaft when tightening timing chain cover screws to align seal properly. **NOTE**–On Statesman a cork seal and rubber seal is assembled behind vibration dampener to seal front end of crankshaft. See Vibration Dampener above.

AMBASSADOR V8

ENGINE FRONT COVER: Removal–Remove vibration dampener (see above), and water pump manifold assembly. Disconnect and remove fuel pump. Remove screws attaching front cover to block and remove cover.

Installation: Using a new gasket, install engine front cover in place and start capscrews in threads, **but do not tighten.** Lubricate oil seal in cover and install vibration dampener assembly, using hub on dampener as a pilot to align front cover. Complete installation by reversing removal procedure.

AMBASSADOR V8

ENGINE FRONT COVER OIL SEAL (CRANKSHAFT FRONT SEAL) INSTALLATION: Remove engine front cover (see above), drive out old seal with a hammer and punch, being careful not to damage cover. Install a new seal using tool J-5983, pressing seal into place with an arbor press.

FLYWHEEL

1946-55 6 CYL. MODELS

►*FLYWHEEL REPLACEMENT CAUTION (Std. & Overdrive Trans.):* Flywheel on which starter ring gear is installed is balanced as an assembly with crankshaft and vibration dampener. When flywheel is replaced, it is important that balance holes be duplicated as to size, depth, and angular location. After replacing flywheel, tighten crankshaft to flywheel stud nuts with torque wrench.

CAMSHAFT & BEARINGS

1946-48 "600" MODELS
1949-55 STATESMAN

CAMSHAFT REMOVAL NOTE: Special valve tappet retaining clips supplied in sets of 16 (Tool No. J-1612). Clips should be installed on upper ends of valve lifters to hold lifters up out of the way while the camshaft is being removed.

1946-55 AMBASSADOR (EXC. V8)

CAMSHAFT REMOVAL: Remove pushrods. Remove valve cover on side of engine, lift up each valve lifter and use rubber bands to hold lifters up out of the way while camshaft is being withdrawn.

AMBASSADOR V8

CAMSHAFT: Removal–Remove cylinder head covers, ignition wires, rocker arm assemblies, intake manifold, and carburetor. Remove water pump and manifold assembly. Remove upper oil breather and tappet assembly cover. Remove inner oil baffle cover. Remove pushrods, keeping them in their relative operational positions. Remove hydraulic tappets and keep in their relative operational positions. Remove fuel pump, vibration dampener, and engine front cover. Crank engine until timing marks on camshaft and crankshaft sprockets line up with shaft centers. Remove oil shedder from crankshaft and fuel pump eccentric from camshaft. Timing chain, camshaft, and crankshaft sprockets can be pried off. Remove camshaft retainer and thrust plate and end plate thrust spacer. Remove camshaft.

Installation: Reverse removal procedure and note the following: Install camshaft gear about 1/16" beyond a position flush with camshaft end to allow mounting of fuel pump eccentric.

TIMING CHAIN

AMBASSADOR V8

TIMING CHAIN: Removal–Remove engine front cover (see above). Pry off oil slinger from end of crankshaft and remove fuel pump eccentric. Rotate engine to line up marks on sprockets with marks adjacent and in line across shaft centers. Remove sprockets by alternately prying on them and slide chain and sprocket assembly off the shafts.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

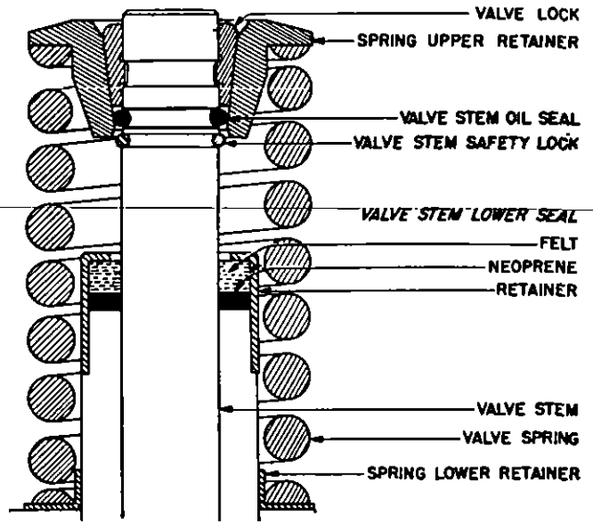
Installation: Install camshaft and crankshaft sprocket keys being sure that they are properly seated in keyways. Rotate engine or crankshaft to bring No. 1 cylinder to firing position. Slide crankshaft sprocket part way on the crankshaft and assemble camshaft sprocket in chain, locating and lining up the "O" marks on the sprockets in line with camshaft and crankshaft centers. Position chain on crankshaft sprocket and start camshaft sprocket on camshaft. Using a rawhide hammer, alternately tap both sprockets into proper position. Camshaft gear must be installed about 1/16" beyond a position flush with end of camshaft for installation of fuel pump eccentric. Complete installation by reversing removal procedure.

VALVE SYSTEM

1946-48 "600" MODELS
1949-55 STATESMAN

SELF-LOCKING TAPPET SCREWS: No locknuts are used on tappet adjusting screw. Threaded bushing welded to top of tappet with threads out of index with threads in tappet which locks tappet screw in position. Screw tension should be 50 inch lbs. minimum to retain tappet adjustment. Check with tension wrench. Tappet screws supplied separately, however car manufacturer recommends replacement of complete tappet assembly.

VALVE TAPPET ADJUSTMENT
AMBASSADOR V8



VALVE TAPPET ADJUSTMENT: *(NOTE–Checking must be done with no oil in compression chamber of tappet and plunger completely bottomed, with tappet on base circle of cam).* With piston on compression stroke and both valves closed, press downward on the push-rod end of rocker arm to compress plunger spring and force plunger to bottom position. While still holding down on rocker arm, measure the lash. The clearance between valve stem end and rocker arm tip should be .050" to .210".

VALVE STEM SEALS
1950-55 AMBASSADOR (EXC. V8)

►*1955 AMBASSADOR 6 INTAKE & EXHAUST VALVE PRODUCTION CHANGE:* Starting with Engine No. R-744962, the safety lock-ring has been eliminated as the rubber "O" ring seal prevents the valve from dropping into the cylinder bore. When using the later type valve, the "O" ring seal must be used.

VALVE STEM OIL SEAL: Consists of a neoprene valve stem seal and a felt seal under metal retainer, which is mounted over top of valve guide. The neoprene seal prevents excessive oil passage past valve stem while felt seal provides initial starting lubrication. An upper seal is also provided in the form of a neoprene ring installed below valve locks.

NOTE–A safety lock is mounted below upper seal on valve stem to prevent valve from dropping below top of valve guide during assembly.

AMBASSADOR 6 VALVE SEAL ASSEMBLY

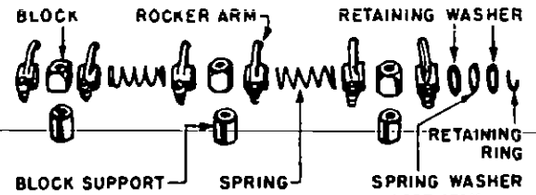
VALVE SEAT INSERTS
1952-54 AMBASSADOR

VALVE SEAT REMOVAL & INSTALLATION (ALUMINUM CYLINDER HEAD): To remove the valve seat inserts, file or grind away peened metal from seat, then drill two holes 180° apart, using a drill slightly smaller than valve seat width. Cut through balance of insert with a chisel and remove insert in two pieces.

Installation—Heat cylinder head uniformly to approximately 350° F., and cool valve seat inserts in dry ice for approximately 15 minutes. Install cooled insert in cylinder head and peen metal of head adjacent to insert, over edge of insert, as a means to prevent dislodging of seat. Grind seat concentric with valve guide.

VALVE GUIDES
AMBASSADOR V8

CHECKING VALVE STEM CLEARANCE: After valves have been removed from head, and with valve stems and guides clean, install valve in respective guide bore and measure side-to-side play crosswise to the cylinder head using a dial indicator or thin strips of feeler gauge material placed between stem and guide bore. If clearance is excessive, guides should be reamed and valves with oversize stems installed.



AMBASSADOR V8

VALVE GUIDE REAMING: Four oversize reamers are available in Valve Guide Set J-6042 which will provide the desired clearance of .001-.002" (Intake), and .002-.003" (Exhaust) between stem and guide. After checking clearance, select the proper oversize reamer and pilot for the oversize valve to be installed.

ROCKER ARMS
1946-55 AMBASSAD R 6

ROCKER ARM ASSEMBLY: See illustration for sequence of assembly.

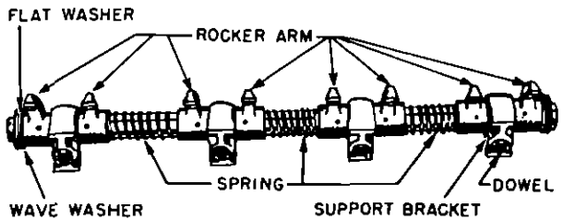
►*ROCKER ARM & LUBRICATION CAUTION:* Hollow bolt must be in front mounting bolt hole of rocker arm assembly for proper lubrication.

AMBASSADOR 6 ROCKER ARM ASSEMBLY

AMBASSAD R V8

►*IMPROVED OIL CONTROL ROCKER ARM SHAFT PRODUCTION CHANGE & CORRECTION ON EARLY CARS:* For improved oil control at the intake valve stems, THREE types of rocker arm shafts have been used in production with different number and size of rocker arm oil holes as follows:

1) First Cars before Engine No. P-9038–All oil holes in shafts were .094" diameter. On some cars, the eight holes in each shaft **toward the pushrod** were plugged in the field with 3/32" x 9/16" pins made from brass welding rod and swedged in place. If trouble experienced on these cars, install third type rocker shaft (below).



2) Cars from Engine No. P-9038 to P-17288–Rocker arm shafts did not have the eight holes **toward the pushrod** (holes omitted in production). If trouble experienced on these cars, *install third type rocker shaft* (following).

3) Cars beginning Engine No. P-17288–Rocker arm shafts have the eight holes **toward the pushrod** but these holes are .062" diameter (reduced from .094" diameter size used on first type shaft). All other holes in shaft were .094" prior to Engine No. P-17830 when ALL holes in shaft were changed to .062" diameter. *This latest type shaft is furnished for service on all cars and should be installed if trouble experienced with either previous type shaft.*

►*ROCKER ARM SQUEAK CORRECTION (Caused by insufficient oil reaching rocker arm shafts):* Determine if sufficient oil is getting to the rocker arm shaft by removing rocker arm covers and examining shaft for presence of oil while engine is running. If no oil is found it will be necessary to remove the cylinder head and drill out the oil passages as follows: Remove the 1/8" pipe plug at rear end of right hand cylinder head (or oil filter connection at front of left hand cylinder head). Using a 21/64" drill, drill out the oil passage to intersect the rocker shaft support bracket **rear** attaching bolt hole **(right hand head)**, or the rocker shaft support bracket **front** attaching bolt hole **(left hand head)**. Make sure that all chips are removed from holes and passages.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

AMBASSADOR V8 ROCKER ARM ASSEMBLY

ROCKER ARM AND SHAFT DISASSEMBLY: Remove rocker arm and shaft assembly from cylinder head. Remove pins and wave washers from end of shaft. Remove rocker arms, springs and supports, keeping all parts in order so they can be reassembled in original position.

Inspection: Clean and inspect all parts for wear. Inspect rocker arm radius at valve stem ends, and if worn replace the rocker arm. Inspect plugs at each end of shaft for tightness.

Reassembly: Reverse disassembly procedure and note the following: Rocker arm shaft must be assembled with the grooved oil hole in the downward position, or facing the cylinder head.

►*CAUTION: There is a right and left rocker arm and if reversed in assembly they will not contact the valve stem properly.*

HYDRAULIC LIFTERS

AMBASSADOR V8

HYDRAULIC VALVE LIFTERS: Removal—Remove valve rocker covers and rocker arm shaft mounting bracket bolts and lift off rocker arm assembly. Remove upper valve tappet cover and breather tube and then remove lower tappet cover. Remove pushrods and hydraulic valve lifters keeping pushrods and lifters in sequence so they can be replaced in same relative position.

Disassembly: Press down on valve pushrod socket and use a pair of needle nose pliers to remove the lock ring. Remove pushrod socket, plunger, and plunger spring. Remove check valve assembly from plunger being careful not to lose the small flat valve and coil spring. *(CAUTION—Disassemble one lifter at a time to avoid mixing plungers and bodies. These parts are selectively fitted and must not be interchanged).* Use clean solvent and thoroughly wash all parts. Remove all varnish and gum deposits.

Inspection: Inspect the plunger and wall of body for scratches (if plunger or body is scratched, replace complete unit). Try the plunger for fit in body. If check valve removed from plunger, inspect flat disc valve, spring and seat.

Reassembly: Reverse disassembly procedure. See illustration for correct sequence.

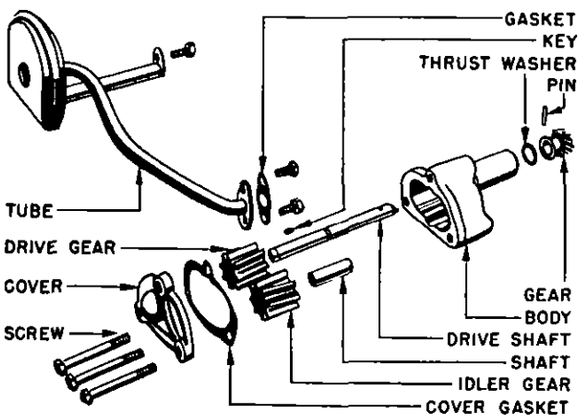
Testing: Use a clean container deep enough to cover the lifter assembly (in an upright position). Fill container with clean kerosene. Remove the pushrod socket and place lifter in kerosene in an upright position, allowing it to fill up. Remove lifter and replace pushrod socket. Place lifter assembly between jaws of checking tool J-5978. Check leakdown by depressing the tool. A decided resistance should be felt. If plunger collapses immediately, the lifter should be checked again. Replace if no resistance felt.

OILING SYSTEM

OIL PUMP

LATE 1947 MODELS

►**OIL PUMP PRODUCTION CHANGE:** A larger capacity, higher-pressure pumps used beginning with late 1947 cars as follows: "600" Series 40—Serial No. K-182791, Eng. No. KE-34134 Up; Amb. Series 60—Serial No. R-457798, Eng. No. RE-20512 Up.



►***CAUTION—Pump parts not interchangeable (parts furnished for both early and later type pumps).***

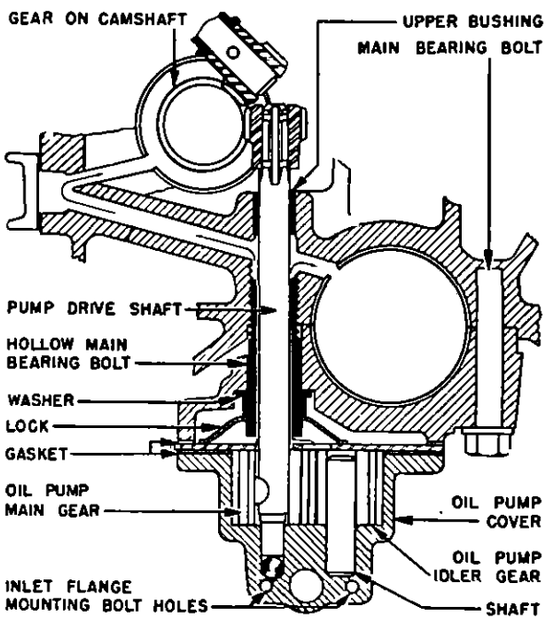
Pump Identification—Pumps can be distinguished by length of pump gears as follows: First Type—1¼", Later Type—1⅜". Later type pump also has shaft undercut to provide for the greater oil delivery flow.

1946-48 "600" & 1949-55 STATESMAN

REMOVAL: Note position of pump drive gear keyway before removing oil pump and install in same position to retain distributor timing. Engine is properly timed when No. 1 cylinder is at TDC in firing position and the oil pump drive gear keyway is approximately at three-thirty o'clock position when viewed from lower section of pump body.

OVERHAUL: Remove capscrews, cover and gasket, then drive gear (in pump) and idler gear and their shafts. Remove key from keyway on drive shaft. Remove drive shaft and drive gear (camshaft end) assembly from pump body. (NOTE—Drive gear (camshaft end) is held on drive shaft by a pin). Remove thrust washer from drive shaft. To assemble, reverse disassembly procedures.

NASH "600," STATESMAN OIL PUMP



1946-55 AMBASSADOR 6

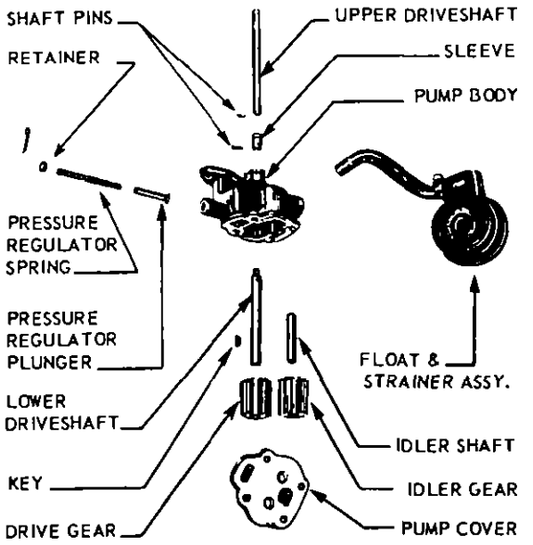
OIL PUMP: Removal—Pump is mounted on center main bearing cap and must be dismantled for removal as follows: Take out pump mounting screws, withdraw pump body and idler gear assembly (shaft will remain in engine) Withdraw shaft from below disengaging drive gear from splines on upper end of shaft as shaft is withdrawn. Gear is free fit on shaft splines and can be lifted out after it is freed from the shaft. Pump shaft operates in thin wall bushing pressed in block (upper), in pump body (lower). Remove and replace bushing from beneath with pump and shaft out of engine. Ream bushing to diameter of .500" after installation.

►*CAUTION: Excessive clearance of shaft in bushing will result in low oil pressure (pump oil delivery is up along shaft to oil channel in block—upper bushing prevents oil leakage from channel).*

Installation: Make certain that loose thrust ball is installed in pump body at lower end of pump shaft. Install pump in reverse order of disassembly and removal above

CAUTION—Maintain a tight connection between inlet flange and pump body.

AMBASSADOR 6 OIL PUMP



AMBASSADOR V8

OIL PUMP: Removal—Remove engine oil pan and remove the two screws attaching oil pump to rear main bearing cap and remove oil pump and strainer assembly.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Disassembly: Remove screws attaching pump cover to pump and remove the cover. Remove idler gear. Remove pin from shaft and drive off sleeve. Remove upper and lower oil pump driving shafts and gear. If necessary, press shaft out of gear. If necessary to remove the float assembly, the tube can be unscrewed from pump.

AMBASSADOR V8 OIL PUMP

Inspection: Wash all parts in clean solvent and blow dry with air. Inspect float for leaks. Inspect strainer. Inspect pump shaft for wear, scores or pits. Check clearance between pump housing and gears (opposite point of gear mesh). This clearance should not be greater than .008". Check gear endplay using a straightedge across gears and housing. Endplay should not exceed .004". Inspect relief valve piston for scores.

Reassembly & Installation: Reverse disassembly and removal procedure indicated above.

FUEL SYSTEM NOTES

1953 STATESMAN

AIR CLEANER NOISE (STATESMAN): The standard "dry" type air cleaner may amplify engine noises that may be diagnosed as loose pistons. Check this condition by idling engine and grasping air cleaner with both hands, which will eliminate the noise. To correct this condition, apply a deadening material (Underseal) over the entire bottom surface of the air cleaner.

1953-55 STATESMAN

OIL BATH AIR CLEANER INSTALLATION (STATESMAN): ***Install air cleaner as follows to prevent distortion or breakage of the carburetor.***

1) Make certain that carburetor air horn and mounting surface of air cleaner are clean and dry to insure firm mounting.

2) Align threaded hole in air cleaner with hole in support bracket. Install spacing washers, as necessary if bracket contacts flange on cleaner.

3) Make certain that support bracket firmly attached to coil bracket so that no movement of bracket is possible.

4) Tighten air cleaner clamp by hand only.

CLUTCH NOTES

1946-48 "600" MODELS

1949-55 STATESMAN

1949-55 AMBASSADOR (EXC. V8)

CLUTCH LINKAGE: Linkage consists of a beam lever, with a support mounted at one end in a hook plate on engine (later models use a flexible link) and the other end held in position by a fulcrum plate and guide fastened to a steering gear housing boss bolt which also bolts steering gear to frame. The outer end of the beam lever connects to the clutch pedal with a rod, and the inner end connected by rod to the release bearing fork arm. Both rods are adjustable. Only the latter rod must be used when making clutch pedal free play adjustments. The fulcrum plate guide centers the beam support. If the beam support is not centered it will climb out of the hook and cause chattering. The beam is held in position by the beam anchor spring, and the pedal return spring.

►***CAUTION—Do not disturb the length of the pedal to beam rod (All Models).***

Beam Fulcrum Plate Adjustment (to centralize beam) 1946-48 Models—Install spacing washers as required, between the steering gear boss and the fulcrum plate on bolt so that the beam support is centered on the support points. See that pull of beam anchor spring is parallel to beam anchor plate.

Clutch Linkage Adjustment (1949-53 Models—Pedal free play adjustment is made by lengthening or shortening the beam to release bearing fork arm rod. Do not disturb the pedal to beam rod setting. In the event it is necessary to adjust the pedal to beam rod the adjustment is made so that the outer end of the beam lever projects (1/2" on "Statesman" and 5/16" on "Ambassador") from the beam, toward the rear, with the clutch pedal against the floorboard. No provision is made for adjustment of this rod on "Rambler" (solid rod used).

BRAKE NOTES

1955 ALL M DELS

►*SPONGY BRAKE PEDAL CORRECTION (EXCEPT POWER BRAKES):* The small hole of the keyhole slot in master cylinder-to-pedal shaft brace may not fully engage groove at outer end of pedal shaft allowing the pedal shaft to flex within the keyhole. Correct as follows: Remove master cylinder-to-pedal shaft brace and elongate the master cylinder attaching hole as necessary to provide a full engagement of small hole of keyhole slot to groove in outer end of pedal shaft. Replace brace using two "bite" washers in place of the regular lockwashers on the master cylinder attaching screws.

▷**1948 ELECTRICAL EQUIPMENT NOTE:** Both Auto-Lite and Delco-Remy electrical units are used.

HOOD LOCK: Alligator hood. Release instrument panel button and safety catch under hood nose.

MODEL IDENTIFICATION

SERIAL NUMBER: On plate on right body sill brace under engine hood.
1946 Numbers—K-77701 Up.
1947 Numbers—K-136001 Up.
1948 Numbers—K-196901 Up.

Service Serial Number (4640 only): N4-78001 Up. On plate on left front door hinge pillar post.

ENGINE NUMBER: Stamped on left side of engine block at front end.
1947 Numbers—KE-136001 Up.
1948 Numbers—KE-55001 Up.

TUNE-UP

COMPRESSION PRESSURE: 120 lbs. at 350 RPM.

VACUUM READING: Steady 18-21" idling at 7 to 9 MPH. or 400-500 RPM.

FIRING ORDER: 1-5-3-6-2-4.

SPARK PLUG GAPS: .025".
Plug Type—Auto-Lite Type A5. 14 mm. Metric.

IGNITION: *See Coil, Condenser, and Distributor.*
Breaker Gap—.020" Limits .018-.022" (Auto-Lite), .018-.024" (Delco-Remy).
Cam Angle or Dwell—35° Closed, 25° Open (Auto-Lite & Delco-Remy).
Breaker Arm Spring Tension—17-20 ozs. (Auto-Lite), 17-21 ozs. (Delco-Remy).
Automatic & Vacuum Advance—*See Distributor.*

IGNITION TIMING: TDC. (At top dead center).
Timing Procedure—*See Ignition Timing.*
Timing Mark—"IGN/DC" mark on vibration dampener in line with pointer screw on timing case cover.
Octane Selector—Set to give slight ping when accelerating with wide open throttle at 10-15 MPH.

CARBURETION: *See Carburetor & Carb. Equipment.*
Idle Setting—Idle screw ('46-47) 1¼-2¼, ('48) ¾-1¾ turns open. One screw—turning screw out gives richer mixture.
Idle Speed—7-10 MPH.
Float Level—½" from top of projection on underside of bowl cover to top of seam on free end of float (invert bowl cover and float to check level).
Accelerating Pump—('46-47) No seasonal adjus'mt. ('48) Medium stroke (lower, outer hole) Normal.
Fuel Pump Pressure—3½ lbs. maximum.

VALVE TAPPET CLEARANCE: .015" All Valves, Hot. NOTE—Tappet adjusting screws self-locking type.
Valve Timing Check—See Valve Timing.

STARTING: *See Battery, Starter, Generator, Regulator.*

IGNITION
DELCO-REMY

IGNITION SWITCH: Delco-Remy No. 1116460. No armored cable.
Ignition Lock—Briggs & Stratton No. 85853.
Key Series—5 digits. Groove—No. 1.

COIL: Delco-Remy No. 1115328. Mounted on engine.
Ignition Current—2 amperes idling, 5 stopped.

CONDENSER: *Delco-Remy Part No. 1869704.*
Capacity—.18-.23 microfarad.

DISTRIBUTOR: Delco-Remy No. 1112351. Full automatic advance type with separate vacuum spark control and octane selector adjustment.
Breaker Gap—.020". Limits .018-.024".
Cam Angle—35° closed, 25° open.
Breaker Arm Spring Tension—17-21 ounces.
Rotation—Counter-clockwise viewed from above.

Automatic Advance (Delco-Remy)

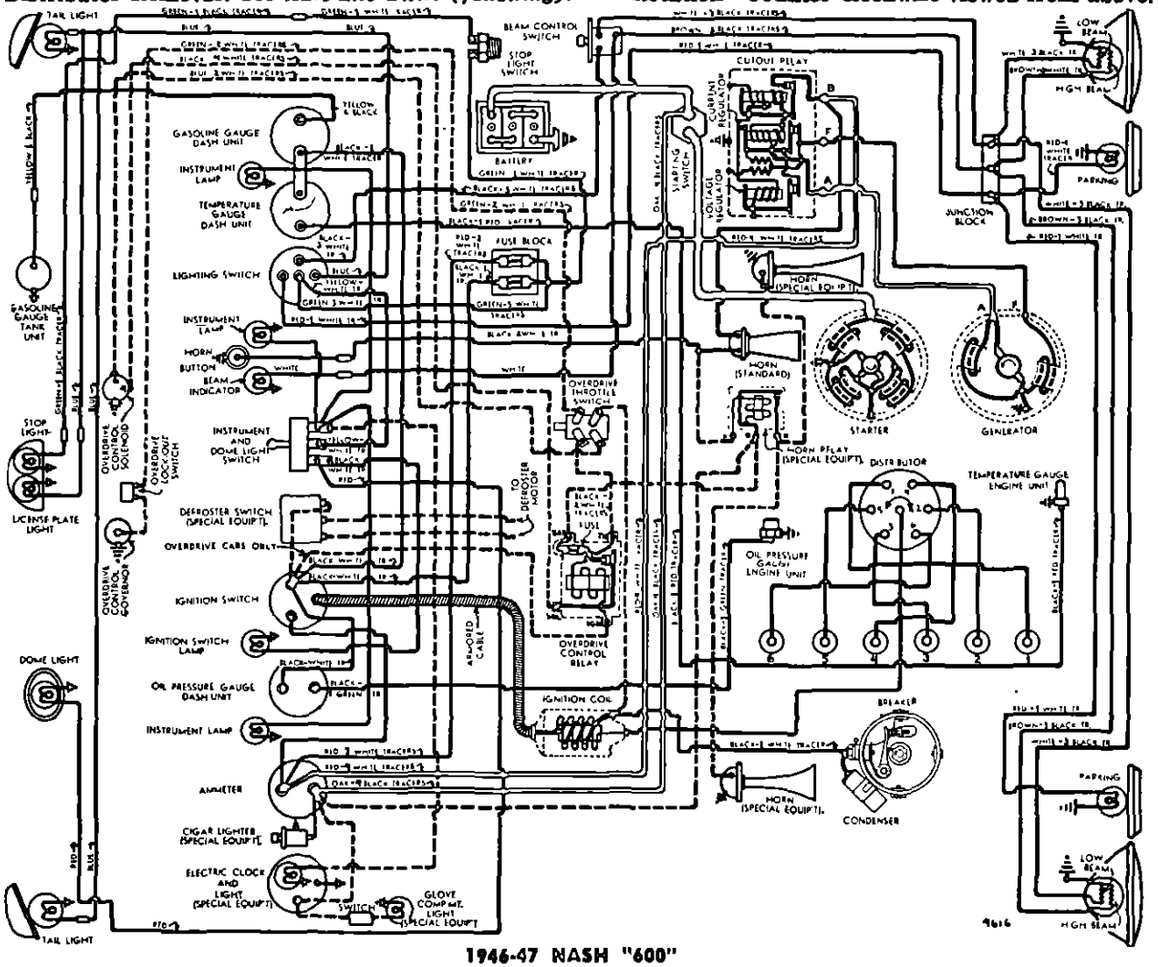
Degress	Distr. R.P.M.	Degress	Eng. R.P.M.
Start	300	2	600
5½	400	11	800
12	1400	24	2800

Vacuum Spark Control: Delco-Remy No. 1116045. Separate unit mounted on hold-down plate and linked to advance arm. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit. Plunger Travel 23/64".

Vacuum Advance (Delco-Remy)

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	3-5"
8½°	17°	13-17"

Distributor Removal: *See Auto-Lite Distr. (following).*



IGNITION
AUTO-LITE

IGNITION SWITCH: Mitchellock Type 24-B, No. E-10230. Connected to coil by armored cable.

COIL: 1946-47 Auto-Lite No. IG-4677. Service Coil (less switch & cable) IG-3224JS. On dash.
1948—Auto-Lite No. CE-6001. Mounted on engine.
Ignition Current—2 amperes idling, 5 stopped.

CONDENSER: Auto-Lite (1946-47) IGB-1025J (IGW distr.). (1948) IG-2671 (IGC distributor).
Capacity—.20-.25 microfarad.

DISTRIBUTOR: 1946-47 Auto-Lite IGW-4184 or 4184A, 1948 Auto-Lite IGC-4512. Full automatic advance type with vacuum spark control and octane selector adjustment.
Breaker Gap—.020". Limits .018-.022".
Cam Angle or Dwell—35° closed, 25° open.
Breaker Arm Spring Tension—17-20 ounces.
Rotation—Counter-clockwise viewed from above.

1946-47 NASH "600"

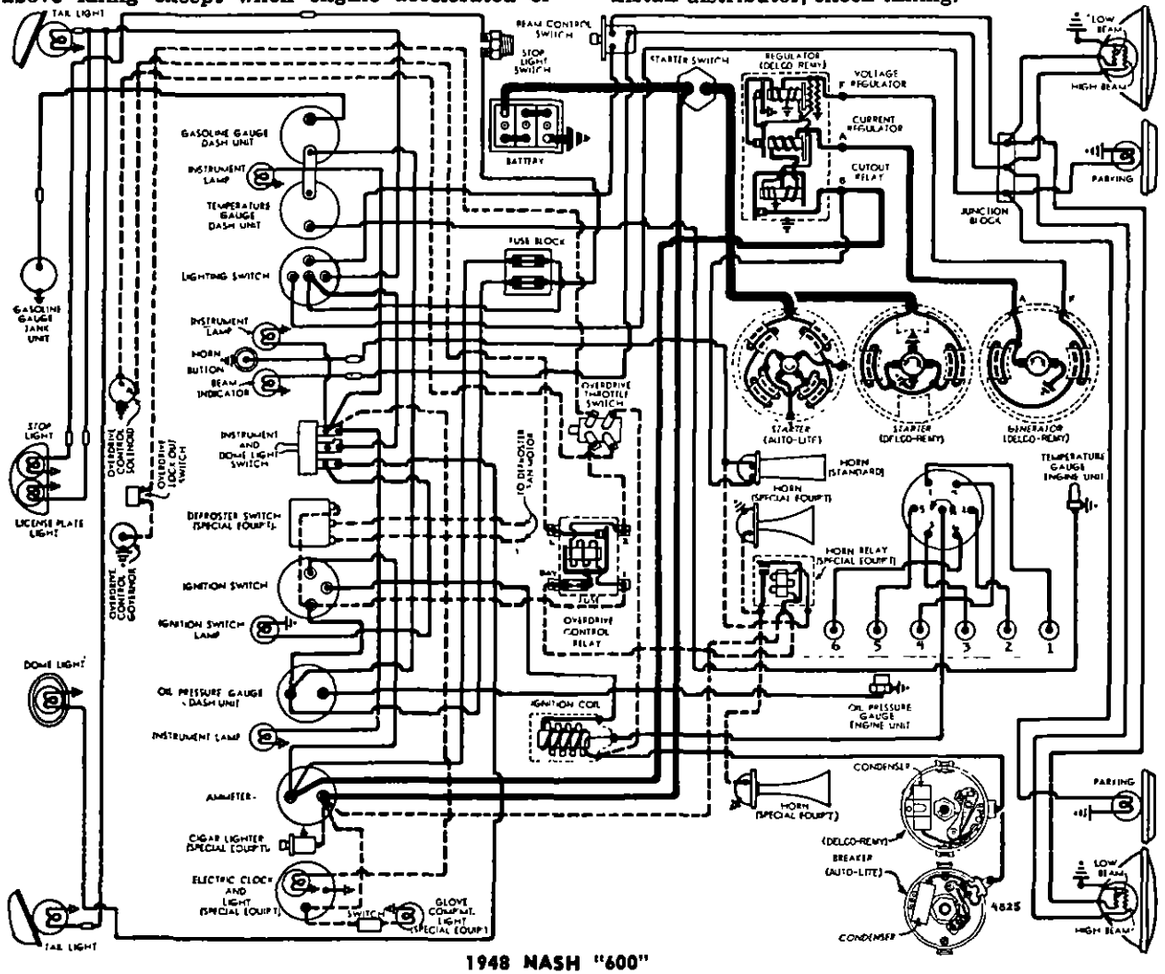
Automatic Advance (Auto-Lite IGW-4184, A)

Distributor Degrees	R.P.M.	Engine Degrees	R.P.M.
Start	275	0	550
2	330	4	660
4.5	400	9	800
8	940	16	1880
11	1400	22	2800

Automatic Advance (Auto-Lite IGC-4512)

Degrees Distr.	R.P.M.	Degrees Eng.	R.P.M.
Start	300	0	600
1	325	2	650
4	410	8	820
10	1290	20	2580
11	1450	22	2900

Octane Selector—Hold-down plate marked with scale for timing variation dependent on fuel regularly used.



Vacuum Spark Control: A-L No. VC-4015. Separate unit mounted on hold-down plate and linked to advance arm. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by spring within unit.

Vacuum Advance (Auto-Lite)

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	4"
2°	4°	6⅛"
4.5°	9°	9"
6°	12°	12"
7.5°	15°	15"

Distributor Removal: On left side of engine. To remove, disconnect vacuum line, take out hold-down screw, lift distributor off.

Installation Note—When installing distributor, crank engine to firing position for #1 cylinder (piston at TDC), see that oil pump drive gear meshed with shaft tongue on 1946-47 in vertical or straight-across-engine position, or on 1948 two teeth forward of vertical position, and on all engines wide half of shaft should be toward rear (offset shaft), turn distributor to #1 segment in distributor cap, install distributor, check timing.

1948 NASH "600"

IGNITI N TIMING

Std. Setting ..... At TDC.

NOTE—Car manufacturer recommends using Synchroscope or Timing Light to set Ignition Timing.

Timing (Using Synchroscope)—Loosen distributor hold-down screw, center octane selector scale, tighten screw. Fill in "IGN/DC" mark on vibration dampener with chalk. Clip synchroscope to #1 spark plug, direct light on vibration dampener at timing-case-cover-pointer. Idle engine at 400-500 RPM., loosen advance arm clamp bolt, rotate distributor until "IGN/DC" vibration dampener mark aligned with pointer, tighten clamp bolt, check Octane Selector Setting given below.

Timing (Using Timing Light)—Connect timing light, adjust distributor as directed above. Crank engine by placing in high gear and moving car ahead slowly.

Octane Selector Setting—Loosen hold-down screw in distributor, adjust scale so that slight ping secured when accelerating with wide open throttle at 10-15 MPH.

CARBURET R

Carter WA1, No. 611S (1946-47), 662S (Early 1948), 662SA (Late 1948). 1¼" Single Barrel downdraft type with Carter Climatic Control.
See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump Setting): *See Tune-Up data.*
Metering Rods & Jets—*See Carter Jet Table in the Carburetor Section.*

Fast Idle: Carter Single Barrel Carburetor type.
See Carburetion Equipment Section for complete data.
Setting—⅝" clearance between choke valve and air horn (Gauge T109-85) with throttle valve closed and stopscrew against (not on) first step of fast idle cam. Adjust by bending connector link at lower offset (Tool T109-41).

Automatic Choke: Carter Climatic Control (Single Barrel Carburetor).
See Carburetion Equipment Section for complete data.
►**Setting**—*CAUTION—Two settings used.*
(611S, 662S) 2 points Lean, (662SA) Centered.

CARB. EQUIPMENT

Air Cleaner: AC No. 1542037 Oil-wetted type (Std.), Filter Element AC #1. Oil-bath Cleaner Optl.
Servicing Oil-wetted type)—Wash filter element and re-oil with heavy engine oil every 2000 miles.
Servicing (Oil-bath type)—Wash filter element, clean out and refill oil reservoir with 1 pint SAE No. 50 engine oil (summer), No. 20 (winter) every 5000 miles.

Fuel Pump (Std.): AC Type W, No. 1537398.
(Optl. & Overdrive Cars)—AC Type AJ, No. 1537406 combination fuel-and-vacuum pump.
Replacement Pumps—AC 532 (for W), 7406 (for AJ).
►*CAUTION—Install pumps with rocker arm ABOVE (W), or UNDER (AJ) eccentric on camshaft.*
See Carburetion Equipment Section for complete data.
Pressure—3½ lbs. max. ("W"), 4 lbs. ("AJ").

Gasoline Gauge: King-Seeley electric type. K-S Nos. 40152 (dash unit), 40170 (tank unit).
See Carburetion Equipment Section for complete data.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

BATTERY

Auto-Lite Type 1H-90 (old CT-1-13). 6 volt, 13 plate, 90 Ampere Hour capacity (20 hour rate).
Starting Capacity—114 amperes for 20 minutes.
Zero Capacity—300 amperes for 3.0 minutes. Five second voltage—4.10 volts.
Dimensions—Lght. 9 1/16". W. 7 1/16". Hght. 9".
Grounded Terminal—Positive (+) to body floor to rear of battery. Engine ground from right rear side of engine flywheel housing to rear engine support.
Location—Left side under front seat.

STARTER
DELCO-REMY

Delco-Remy Model 1109451. Armature No. 1882547.
Drive—Barrel type Bendix Drive No. A-2033.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—24-28 ounces.

Performance Data

Torque		R.P.M.	Volts	Amperes
0	ft. lbs.	6000	5.7	60
11.5	"	Lock	3.3	540

Starting Switch: Delco-Remy No. 1996478. Mounted on toeboard, actuated by fully depressing clutch pedal.
Removal: *See Auto-Lite Starter (following).*

STARTER
AUTO-LITE

Auto-Lite Model MZ-4103. Armature No. MZ-2154.
Drive—Barrel type Bendix No. A-2033.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—42-53 ozs. (new brushes).
Cranking Engine—150-175 amperes, 5 volts min.

Performance Data

Torque		R.P.M.	Volts	Amperes
0	ft. lbs.	4300	5.5	70
.65	"	2500	5.5	100
2.55	"	1325	5.0	200
4.95	"	750	4.5	300
7.65	"	220	4.0	400
7.8	"	Lock	3.0	420
11.8	"	Lock	4.0	560

Starting Switch: Auto-Lite No. SW-4012. Mounted on toeboard and operated by fully depressing clutch pedal.
Removal: Flange mounted on left front face of flywheel housing. To remove, disconnect cable take out flange mounting screws.

GENERATOR
DELCO-REMY

Delco-Remy Model 1102702. Armature No. 1911454. Two-brush with voltage and current regulation.
Maximum Charging Rate—30 amperes, 8.0 volts.
Charging Rate Adjustment—None (see Regulator).

Performance Data

	Amperes	Volts	R.P.M.
Cold	30①	8.0	1750

①—Not maximum output. See Current Regulator.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—25 ounces.
Field Current—1.75-1.9 amperes at 6.0 volts.
Removal & Belt Adjustment: *See Auto-Lite Generator (following).*

GENERATOR
AUTO-LITE

Auto-Lite Model GDZ-4806A. Armature GDZ-2079F. Two brush (shunt) type with voltage and current regulation. Ventilated.
Maximum Charging Rate—35 amperes, 8.0 volts, 1900 RPM.
Charging Rate Adjustment—None (see Regulator).

Performance Data

Cold Amperes	Volts	R.P.M.	Hot Amperes	Volts	R.P.M.
0	6.4	925	0	6.4	1000
5	6.65	1060	5	6.65	1150
10	6.85	1200	10	6.85	1290
15	7.05	1340	15	7.05	1430
20	7.3	1480	20	7.3	1590
25	7.55	1620	25	7.55	1750
30	7.8	1760	30	7.8	1980
35①	8.0	1900	35	8.0	2250

①—Current regulator setting. See Regulator data.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—35-53 ozs. (new brushes).
Field Current—1.60-1.78 amperes at 6.0 volts.
Motoring Current—4.16-4.60 amperes at 6.0 volts.
Removal: Generator cradle mounted at left side of engine with fan belt drive (water pump driven by flexible coupling from generator). To remove, disconnect water pump, loosen fan belt, remove generator clamp band, lift out generator.
Belt Adjustment: Adjust whenever belt deflection exceeds ½" either way between the fan and generator shaft pulleys. To adjust, loosen fan mounting bracket screws (pivots on one screw, other screw hole slotted), raise fan, tighten screws. Belt misalignment can be corrected by installing shims behind fan bracket.

REGULATOR
DELCO-REMY

Delco-Remy Model 1118202. Single Core Type. Voltage and current regulator on left sill brace under hood.
See Electrical Equipment Section for complete data.
CAUTION—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

Cutout Relay
Cuts In—6.2-6.7 volts hot (operating temperature).
Cuts Out—0-4.0 amperes discharge current.
Contact Gap—.020" (same for both sets).
Air Gap—.020" (with contacts just closed).

Voltage Regulator
Setting—7.2-7.4 volts Hot (operating temperature). Regulator over-compensated for temperature. Check with cover in place and at operating temp.
Checking & Adjustment—*See Electrical Equipment Section.*
Air Gap—.070" between center of core and armature with contacts just closing.

Current Regulator
Setting—34-36 amps hot (operating temperature).
Checking & Adjustment—*See Electrical Equipment Section.*
Air Gap—.080" between center of core and armature with contacts just closing.

REGULATOR
AUTO-LITE

Auto-Lite Model VRP-4004-F. Vibrating type voltage and current regulators (with cutout relay) in case on left body sill brace under hood.
See Electrical Equipment Section for complete data.
NOTE—Regulator cover sealed. Warranty void if seals broken.

Cutout Relay
Cuts In—6.4-7.0 volts (set to 6.4-6.6 volts).
Cuts Out—4.1-4.8 volts (approx. 4-6 amps. disch.).
Contact Gap—.015" minimum.
Air Gap—.031-.034" with contacts open (check at hinge end of core).

Voltage Regulator
Setting—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.
Checking (without breaking seal) & Adjustment—*See Electrical Equipment Section.*
Contact Gap—.012" min. (armature against stop pin).
Air Gap—.048-.052" with contacts just opening.

Current Regulator
Setting—34-36 amperes (marked '35' on the cover).
Checking (without breaking seal) & Adjustment—*See Electrical Equipment Section.*
Contact Gap—.012" min. (armature against stop pin).
Air Gap—.048-.052" with contacts just opening.

LIGHTING

Headlamps: Hall "Sealed Beam" type. Upper and lower beams controlled by beam selector switch on toeboard.
See Electrical Equipment Section for complete data.
Adjustment—Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.).
Beam Indicator—Red jewel above speedometer dial. Lighted when upper (country beam) in use.

Switches
Lighting—Douglas.
Beam Selector—Douglas.
Instrument—Douglas.

Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	4030
Parking, Speedometer	1½	55
Dash Instruments	1	51
Stop	21	1129
Rear License, Tail	3	63
Dome	6	81

MISC. ELECTRICAL

FUSES: Lighting—30 ampere. On fuse block on left body sill brace under hood.
Accessory—30 ampere. On fuse block.
Overdrive (Warner R10B)—20 amp. On overdrive relay.
HORNS: Auto-Lite. Model HT-4009 (low note), HT-4010 (high note). Twin horns.
Horn Current—14-16 amperes (each).
Horn Relay: Auto-Lite Model HRC-4001.
Contact Gap—.026".
Air Gap—.016-.020" with contacts closed but not sealed. .015-.018" air gap between armature leg and yoke with armature sealed to core.
Contacts Close—1.5-3.0 volts. Armature seals to core at 4.0 volts maximum.
Contacts Open—.5 volt minimum (open from seal).

ENGINE

ENGINE SPECIFICATIONS: 6 cylinder, "L" head type. Cylinders cast Enbloc with intake manifold cast in block (Iso-thermal fuel intake system).

Bore—3⅛". Stroke—3¾".

Displacement—172.6 cu. ins. Rated H.P.—23.44.

Developed Horsepower—82 at 3800 RPM.

Compression Ratio—7.0-1 Std. cast iron head. 7.5-1 ratio optional.

Compression & Vacuum Reading—*See Tune-up data.*

ORIGINAL BORE & BEARING SIZES: ***See "Original Bore & Pistons" and "Original Bearing Sizes" in Nash Shop Notes.***

TIGHTENING TORQUES: ***See Nash Shop Notes.***

CYLINDER HEAD INSTALLATION: ***See Nash Shop Notes***

ENGINE REMOVAL (For Servicing): ***See Nash Shop Notes.***

ENGINE MOUNTINGS: ***See Nash Special Data.***

PISTONS: Aluminum alloy, split skirt, strut, oval, tin-plated type. **Length—3⅜".**

NOTE—Cylinder out-of-round limits .003" (in service), .0005" (when reconditioned). Taper limits .009" (in service).

Clearance—.001-.002". See Fitting New Pistons.

NOTE—Piston out-of-round and taper limits .004" in service.

Removal—Pistons and rods removed from above.

Fitting New Pistons: Do not use feeler gauge. New pistons should hold own weight approximately ⅓ down from top of bore but must be free enough to work up and down by hand (bore clean and free from oil).

Replacement Pistons: Furnished std. and .001", .002". .003", .005", .010", .012", .015", .020", .040" oversize.

Installing Pistons: Piston slot toward left side (opposite side from oil squirt hole in rod).

PISTON RINGS: 2 compression, 1 oil ring per piston, all above pin. Drilled oil drain holes in oil ring groove.

Ring	Width	End Gap	Side Clearance
Compression	.0932"	.010-.015"	.002-.004"
Oil Control	.1862"	.010-.015"	.002-.004"

PISTON PIN: Diameter .812". Length 2.632". Floating type with lock ring at each end.

Pin Fit in Piston—Palm push fit with piston heated (heat piston in boiling water).

Pin Fit in Rod Bushing—Light thumb push fit at room temperature.

Replacement Pins: Standard, .001", .003" oversize.

CONNECTING ROD: Length—6¾". Weight—24 ozs.

NOTE—Pin hole in rod bronze bushed.

Crankpin Journal Diameter—1.875". ***See "Original Bearing Sizes" in Nash Shop Notes.***

Lower Bearing—Removable steel-backed, babbitt lined type. No shims.

Clearance—.0015-.002". Sideplay—.006-012".

Bearing Adjustment: None. Replace bearings. ***See "Connecting Rods & Bearings" in Nash Shop Notes.***

NOTE—Tangs on bearing shells must engage slots in rod and cap. Palnuts used on rod bolt nuts.

Replacement Bearings: Std., .002", .010" Undersize.

Installing Rods: Oil squirt hole in lower end of rod toward right (camshaft side) of engine.

NOTE—Rods and bearing caps should be marked before removal and replaced in same cylinder and in same relative positions.

CRANKSHAFT: Four bearing, counterweighted type with vibration dampener mounted on front end.

Vibration Dampener Servicing—*See Nash Shop Notes.*

Journal Diameters—2.479" (2 31/64"). ***See Engine Code Note in Nash Special Data for original sizes.***

►**Bearings—*CAUTION—Bearings changed, two types used as follows:***

Before Serial No. K-196901, Eng. No. KE-55001. Replaceable precision, steel-backed, thin babbitt lined. No shims. Used with first type oil pump.

Beginning Serial No. K-196901, Eng. No. KE-55001. Bearings have 360° oil groove. Used with later type larger-capacity, higher-pressure oil pump.

CAUTION—These 360° oil groove bearings used only when new larger capacity oil pump used. See Oil Pump.

Clearance—.002".

Bearing Adjustment: None (no shims). Replace bearings. ***See "Crankshaft & Main Bearings" in Nash Shop Notes.***

Replacement Main Bearing Caps: ***See "Crankshaft & Main Bearings" in Nash Special Data.***

Replacement Bearings: Standard, .002", .010" undersize.

Crankshaft Oil Seal: ***See "Crankshaft & Main Bearings" in Nash Shop Notes.***

End Thrust: Taken by front (#1) bearing (thrust plate on shaft ahead of flanged bearing).

Endplay Adjustment—*See "Crankshaft & Main Bearings" in Nash Shop Notes.*

Endplay—.006-.008".

CAMSHAFT: 4 bearing. Non-adjustable chain drive.

Camshaft Removal—*See Nash Shop Notes.*

Bearings—Steel-backed, babbitted bushings.

Clearance—.002".

End Thrust: Thrust plate assembled on front face of engine between #1 bearing and camshaft sprocket. Endplay controlled by position of timing chain sprocket (press fit on shaft).

Endplay—.004-.006".

CAUTION—Thrust plate has long oil groove on rear face which provides valve tappet lubrication from #1 camshaft bearing. Short groove on front face of plate lubricates timing chain and sprockets.

Timing Chain: Non-adjustable type. **Width 9/16". Pitch ⅜". Length 22½"** or 60 links.

Camshaft Setting: Mesh chain with camshaft and crankshaft sprockets turned so that marked tooth on each gear is 45° past (to right—as viewed facing front of engine) top vertical position. With sprockets in this position there should be 9½ links or 19 pins between tooth marks.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 15/32"	.3412"	4 25/32"
Exhaust	1 9/32"	.3412"	4 25/32"

	Seat Angle	Lift	Stem Clearance
All Valves	45°	5/16"	.002-.003"

NOTE—Valve face angle 44°.

Valve Guides: Top of guides 27/32" below top face of block. Press guides in place and ream for correct stem clearance.

Valve Springs: Install springs with closed-coil end up against cylinder block and seated in counterbore in block. Spring free length 2 3/32".

►***CAUTION—Excessive wear of valve stems and guides will result if springs not properly seated in counterbore.***

	Spring Pressure	Length
Valve Closed	37-41 lbs.	1 3/4"
Valve Open	80-88 lbs.	1 7/16"

Valve Lifters: Mushroom type operating in reamed holes in block. Lifters removed from below with camshaft out of engine. ***See "Camshaft & Bearings" in Nash Shop Notes for Camshaft Removal.***

VALVE TIMIN

Tappet Clearance: .015" Hot, running clearance. Tappet adjusting screws self-locking (no locknuts). NOTE—Replace lifter and adjusting screw assembly if torque required to turn screw less than 50 in. lbs.

Valve Timing: See Camshaft Setting above.

Intake Valves—Open 6° BTDC. Close 50° ALDC.

Exhaust Valves—Open 46° BLDC. Close 10° ATDC.

Valve Timing Check—With tappet clearance set at .019", #1 exhaust valve should close with piston 10° after top dead center and "DC" mark on vibration dampener ⅝" past pointer on timing chain cover. Reset tappet clearance at .015" Hot.

LUBRICATION

Engine Oiling System: Pressure to main, connecting rod, and camshaft bearings, piston pins, valve tappets, and timing chain. Oil pump mounted on right side of crankcase.

Crankcase Capacity—5 quarts.

Normal Oil Pressure—30 lbs. at 20 MPH.

Oil Pressure Regulator—Spring-loaded release valve under plug to rear of oil pump on lower edge of crankcase. Non-adjustable. Opens at 30 lbs. (first type spring—before Eng. No. KE-18015), 50-58 lbs. (later type spring—after Eng. No. KE-18015).

►**Oil Pump:** ***CAUTION—Pump changed, two types used:***

Oil Pump (Before Serial No. K-182791, Eng. No. KE-34134)—Gear type with gears 1¼" long. Pump parts not interchangeable with later type.

Oil Pump (Beginning Serial No. K-182791, Eng. No. KE-34134)—Gear type with longer 1⅜" gears. Has increased volume and pressure. Parts not interchangeable with first type pump.

►***CAUTION—This larger capacity pump must be used when new 360° oil groove main bearings used (see Crankshaft Bearings).***

Oil Pump Installation—See Distributor Removal Installation Note for correct meshing of oil pump gears.

Oil Filter: Optional. Replace cartridge at 8000 mile intervals or more often if necessary.

Oil Pressure Gauge: King-Seeley Electric. K-8 Nos. 40161 (dash unit), No. 40790 (engine unit).

See Miscellaneous Section for complete data.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

C LING

Cooling System: Pressure type with pressure valve in filler cap, and positive circulation with water pump

Capacity—14 quarts (15 with heater).

Pressure Valve—AC #850501 Filler Cap. Opens 4 lbs.

Water Pump: Centrifugal, adjustable packing type with oiler for bearing lubrication. Driven by flexible coupling from generator.
See Water Pump Section for complete data.

Belt Adjustment—*See Generator Belt Adjustment.*

Removal—Drain cooling system, disconnect pump drive coupling (remove rear bolt), disconnect inlet hose, remove two pump mounting capscrews.

Thermostat: Fulton. In cylinder head water outlet.

Setting—Starts to open 157-162°F. and should be fully open 20° above starting point.

Temperature Gauge: King-Seeley Electric. K-8 Nos. 40154 (dash unit), No. 41085 (engine unit).
See Miscellaneous Section for complete data.

CLUTCH

Borg & Beck Model 8A7. Single plate, dry disc type.

►**Clutch Assembly Change**—No. 975 through July 1947, No. 360987 starting August 1947.

►*CAUTION—Driven members are NOT INTERCHANGEABLE.*
See Clutch Section for complete data.

Facings—Woven (flywheel side). Moulded (pressure plate side). I.D. 5⅜". O.D. 8". Thickness ⅛".

Adjustment: Pedal free travel ½-¾". Adjust by loosening locknut and turning adjusting nut on connector link at clutch fork.

►*CAUTION—Do not disturb adjustment of clutch beam lever-to-pedal rod.*

►**Clutch Linkage Change**—Beam type linkage used starting 1946 Service Serial No. N4-125727. *For linkage adjustment, see "Clutch Notes" in Nash Shop Notes.*

Removal:—Remove transmission (see below), disconnect clutch pedal linkage, remove clutch housing and pan, punchmark flywheel, clutch cover and pressure plate (reassemble to same marks), take out clutch fork and mounting screws in cover flange. Remove clutch assembly.

TRANSMISSION

Own Make. Constant-mesh, synchro-mesh (second & high), sliding gear (low & reverse), all helical gear.
See Transmission Section for complete data.

►**1946-47 Transmission Shifter Shaft & Fork Change to correct Gear Disengagement**—*See 1946-47 Nash "600" in Transmission Section.*

Transmission Control: Mech. steering column shift.
See Transmission Section for complete data.

Removal: Remove Rear Axle (see REAR AXLE below), disconnect transmission shift rods at levers on left side of case and speedometer cable. Support engine at rear, free rear engine mounting, take out transmission upper mounting bolts, install special guide bolts, J-1434, in these holes, remove lower mounting bolts, slide transmission back on guide bolts, remove from below.

VERDRIVE

Warner Type AS1-R10B. Optional. New governor controlled type with electrical solenoid operation and throttle operated "kick-down" switch.
See Transmission Section for complete data.

Overdrive Solenoid—Nash No. 3123433. Warner Part No. 3AR-10B-62.

Control Governor—Auto-Lite Model TGE-4005.

Control Relay—Auto-Lite Model HRT-4101.

Removal: Remove as a unit with transmission after disconnecting control cable and all wiring on overdrive case. See Transmission Removal (above).

UNIVERSALS

Mechanics 1½CR. Needle bearing, 1 used (in torque tube adapter at rear of transmission). Tapered coil spring is installed ahead of joint to properly locate joint on driveshaft. NOTE—Universal is slip fit on transmission end, slight press fit on driveshaft.

Propeller Shaft: One piece. Universal joint is light press fit on forward end, pinion coupling tight press fit on rear end.

►*CAUTION—Propeller Shaft Center Bearing Lubrication. Do not turn propeller shaft or rear wheels with bearing locating screw out (Bearing will move out of place).*
See Nash "600" Rear Axle data in Rear Axle Section for complete data.

►*PROPELLER SHAFT COUPLING SERVICE REPLACEMENT: New "Slip Type" coupling replaces former coupling & nut. See "Nash Hypoid Rear Axle" in Rear Axle Section for complete data.*

REAR AXLE

Own Make. Semi-floating, hypoid gear type with Torque Tube Drive.
See Rear Axle Section for complete data.

Ratio (No Overdrive)—Std. ('46-47) 4.1-1, ('48) 4.4-1. Optional ('46-47) 4.4-1, ('48) 4.9-1.
(With Overdrive)—Std. ('48) 4.9-1.
NOTE—Tag stamped with ratio attached by cover bolt.

Backlash—.004-.006". Shim adjustment.

Removal:—Raise rear end of car and support car at body frame (not frame flange) or at bumper brackets. Disconnect brake cables at equalizer and remove brake tube connections. Disconnect stabilizer bar and rear springs and shock absorber mounting brackets from axle (allow springs and shock absorber to hang from body—do not bend shock absorber rod or bayonet). Disconnect torque tube by removing nuts on forward ends of trunnion bracket mounting studs, move tube and axle back to clear studs, pry universal joint off drive shaft, pull axle assembly out of car. *See "Nash '600' Rear Axle Article" in Rear Axle Section for Trunnion Bracket installation and adjustment, and shaft bearing data.*

Axle Shaft Removal—Remove wheel & drum, disconnect brake line and cable, remove backing plate mounting bolt nuts, oil seal retainer, backing plate, and bearing adjusting shims. Withdraw shaft and bearing, using care not to drag shaft on oil seal.

Wheel Bearing Adjustment—Shims located between backing plate and flanged end of housing. To adjust, remove wheel and backing plate (above), add or remove shims for endplay. **Endplay .002-.004".**

Rear Suspension: Coil spring type with conventional rear axle.
See Rear Axle Section for complete data.

SHOCK ABSORBERS

Delco. Model 1018-E (Front), 1029-CC (Rear).
Direct acting, hydraulic type.

FRONT SUSPENSION

Front Suspension: New design, parallelogram type with coil springs and direct acting shock absorbers.
NOTE—Entire assembly mounted on box-section pressed steel cross-member attached to frame and body through 4 rubber-bushed bolts.
See Front Suspension Section for complete data.

Kingpin Inclination—7½° crosswise.

Caster—¼° to ¾°. Shims as for Camber.

Camber—¼° to ¾°. Shim adjustment at upper control arm shaft mounting.

Toe In—1/8-3/16". Adjust tubes at inner end of each tie rod. Clamp bolts must be on front end of rod and vertical to ground when tightened.

STEERING GEAR

Gemmer Model 305. Worm-and-Roller type with "push-pull" adjustments.
See Steering Gear Section for complete data.

BRAKES

1946-47 "600" 4640, 4740 SERIES

Service Brakes: Lockheed hydraulic, double anchor type. Hand lever applies rear wheel service brakes.
See Brake Section for complete data.

Drums—Cast-iron. Diameter 9".

Lining—Moulded type. Width 1¾". Thickness 3/16". Length per wheel 20½".

Clearance—.010" toe, .004" heel, for each shoe.

Hand Brake: See Service Brake data (above).
Adjustment—Same as for 1948 given below.

BRAKES

1948 "600" 4840 SERIES

Service Brakes: Lockheed Hydraulic "Floating Shoe" (self-centralizing) type. Hand lever applies rear wheel service brakes. NOTE—No anchor pin adjustment required.
See Brake Section for complete data.

Drums—Cast iron. Diameter 9".

►**Lining**—*CAUTION—Different width and length used on each shoe in each wheel as follows:*

1948 Brake Lining Specifications

Brake Shoe	Width	Length	Thickness
Forward (Primary)	2"	10"	3/16"
Rear (Secondary)	1¾"	7½"	3/16"

Lining is moulded type.

Clearance—.010" at toe & heel of each shoe.

Hand Brake: See Service Brakes (above).

Adjustment—Pull hand lever "on" two notches. Loosen locknut at wheel cable equalizer under car, remove all slack from cables, tighten locknut. Release hand lever, check rear brakes for drag.

►**1948 ELECTRICAL EQUIPMENT NOTE:** Both Auto-Lite and Delco-Remy electrical units are used.

HOOD LOCK: Alligator hood. To raise hood, pull out on lock button under left side of instrument panel, reach under front edge of hood and release safety catch, raise hood.

MODEL IDENTIFICATION

SERIAL NUMBER: On plate attached to top right frame side rail to rear of front shock absorber.
1946 Numbers—R-393101 Up.
1947 Numbers—R-429201 Up.
1948 Numbers—R-468501 Up.

Service Serial Number (4660 only): N6-86001 Up. On plate on left front door hinge pillar post.

ENGINE NUMBER: Stamped on pad on right side of engine block at upper front corner.

TUNE-UP

COMPRESSION PRESSURE: 125 lbs. at 350 RPM. for Std. 7.02-1 Head.

VACUUM READING: Steady 18-20" idling at 7 MPH.

FIRING ORDER: 1-5-3-6-2-4.

SPARK PLUG GAPS: .025".
Plug Type—AC No. 45. 14 mm. Metric type.

IGNITION: *See Coil, Condenser, and Distributor.*
Breaker Gap—.020" Limits .018-.022" (Auto-Lite), .018-.024" (Delco-Remy).
Cam Angle or Dwell (A-L)—38° Closed, 22° Open.
Cam Angle or Dwell (D-R)—35° Closed, 25° Open.
Breaker Arm Spring Tension—17-20 ozs. (Auto-Lite), 17-21 ozs. (Delco-Remy).
***Automatic & Vacuum Advance**—See Distributor.*

IGNITION TIMING: 4° BTDC ('46), TDC ('47-48).
Timing Procedure—*See Ignition Timing.*
Timing Mark—"IGN" ('46), "IGN/DC" ('47-48) dampener mark in line with pointer on timing chain cover.

CARBURETION: *See Carburetor & Carb. Equipment.*
Idle Setting—Set idle adjusting screw ½-1½ turns open. Adjust for smooth idle. Idle speed 7 MPH.
Float Level—⅜" from top of projection on underside of bowl cover to top of seam on free end of float (invert bowl cover and float to check level).
***Accelerating Pump**—Inner Hole (med. stroke) Normal, Lower hole (max.) winter, Upper (min.) Summer.*
Fuel Pump Pressure: 3½ lbs. maximum.

VALVE TAPPET CLEARANCE: .015" Int., .018" Exh. Hot.
Valve Timing Check—*See Valve Timing.*
►*CAUTION—Valve timing changed during 1946 production. See Valve Timing.*

STARTING: *See Battery, Starter, Generator, Regulator.*

IGNITION
DELCO-REMY

IGNITION SWITCH: Delco-Remy No. 1116460. No armored cable.
Ignition Lock—Briggs & Stratton No. 85853.
Key Series—5 digits. **Groove**—No. 1.

COIL: Delco-Remy No. 1115380. Mounted on engine.
Ignition Current—2 amperes idling, 5 stopped.

CONDENSER: Delco-Remy Part No. 1869704.
Capacity—.18-.25 microfarad.

DISTRIBUTOR: Delco-Remy No. 1110216. Full automatic advance type with auxiliary vacuum spark control.
Breaker Gap—.020". Limits .018-.024".
Cam Angle—35° Closed, 25° Open.
Breaker Arm Spring Tension—17-21 ozs.
Rotation—Clockwise viewed from above.

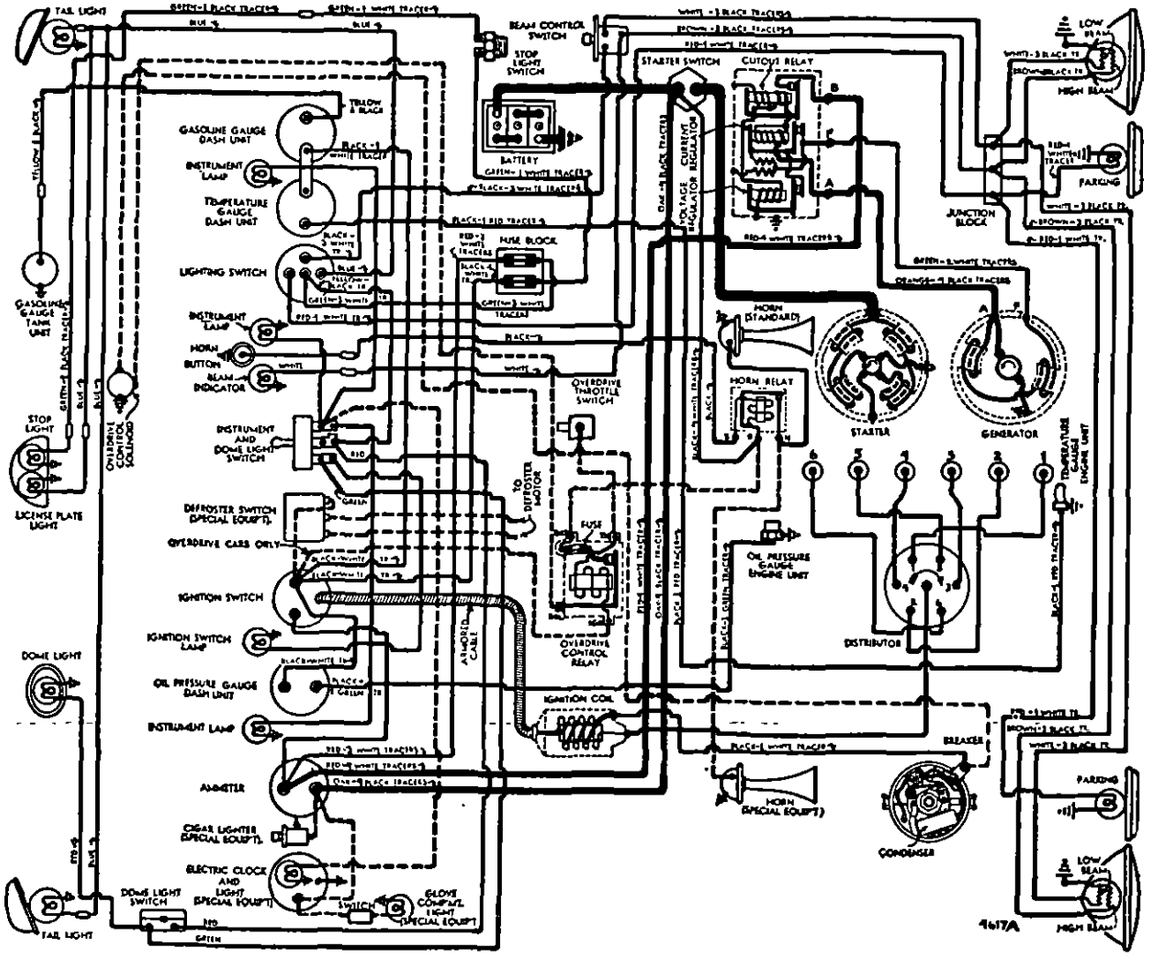
Automatic Advance (Delco-Remy)

Degress Start	Distr. R.P.M.	Degress	Eng. R.P.M.
	300	2	600
8	650	16	1300
15	1350	30	2700

Vacuum Spark Control: Delco-Remy (integral type). Linked directly to breaker plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit. Total plunger travel 7/64".

Vacuum Advance (Delco-Remy)

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	4-8"
6°	12°	14-16"



Distributor Removal: *See Auto-Lite Distr. (following).*

IGNITION
AUTO-LITE

IGNITION SWITCH: Mitchellock Type 24-B, No. E-10231. Connected to coil by armored cable.

COIL: 1946-47 Auto-Lite CE-4662. Service Coil (less switch & cable) *CE-3224JS.* On dash.

1946-47 NASH AMBASSADOR SIX

►**R7 OVERDRIVE CIRCUIT WITH AUTO-LITE CONTROLS SHOWN ABOVE**

►***FOR R10 GOVERNOR CONTROLLED OVERDRIVE, SEE 1948 DIAGRAM***

CONTINUED FROM PRECEDING PAGE

1948—Auto-Lite IG-6001. Mounted on engine.
Ignition Current—2 amperes idling, 5 stopped.

CONDENSER: Auto-Lite Part No. IG-2671F.
Capacity—.20-.25 microfarad.

DISTRIBUTOR: 4660 below Service Serial No. N6-115-794 Auto-Lite IGS-4205A. 4660 starting Service Serial No. N6-115794 and 4760, 4860—Auto-Lite IGS-4502B. Full automatic advance types with auxiliary vacuum spark control.

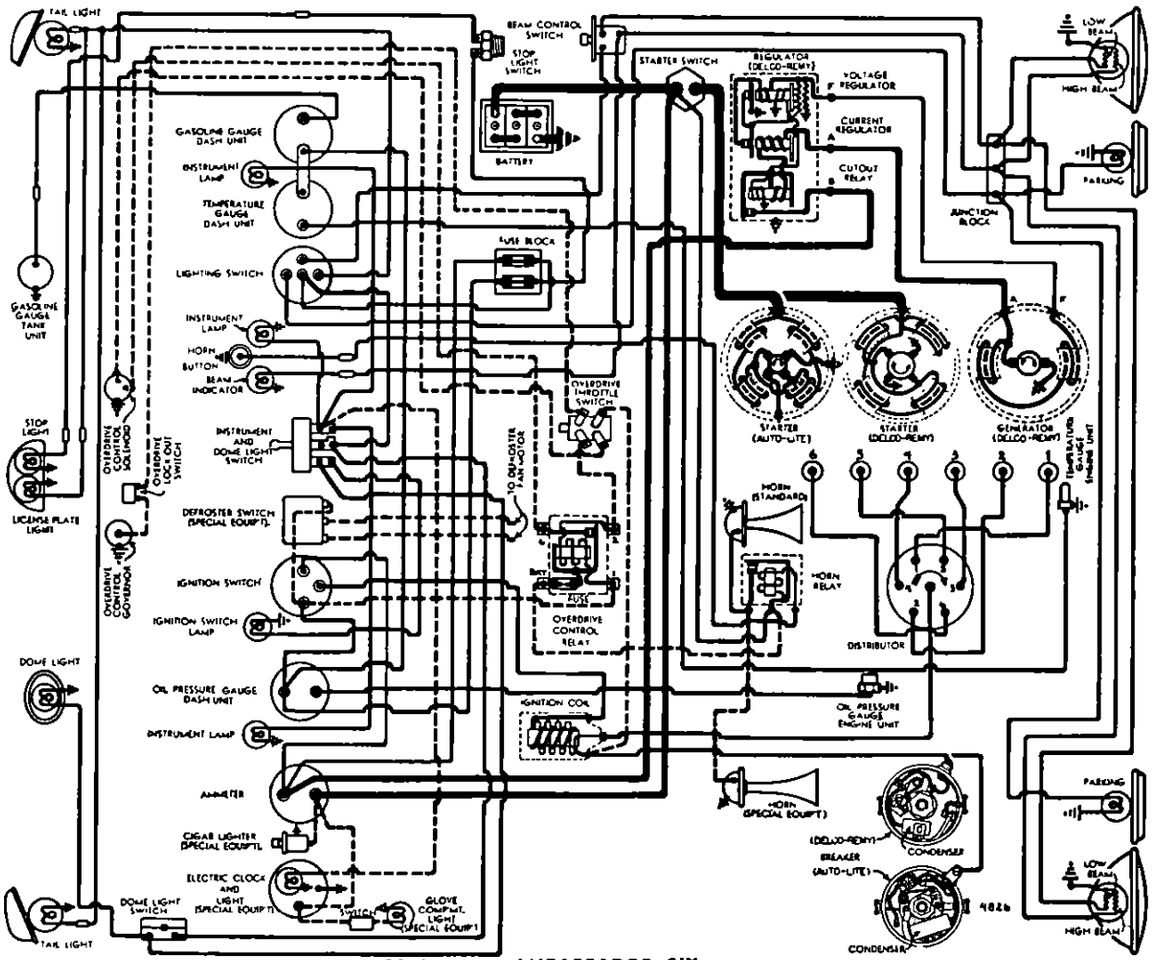
Breaker Plate Identification—Maximum vacuum advance limited by slot. Plate marked #6.

Breaker Gap—.020" (.018-.022").

Cam Angle or Dwell—38° Closed, 22° Open.

Breaker Arm Spring Tension—17-20 ounces.

Rotation—Clockwise viewed from above.



Automatic Advance (Auto-Lite IGS-4205A)

Distributor Degrees	R.P.M.	Engine Degrees	R.P.M.
Start	350	0	700
1	385	2	770
3	450	6	900
7	850	14	1700
12	1350	24	2700

Automatic Advance (Auto-Lite IGS-4205B)

Start	300	0	600
3	450	6	900
7	650	14	1300
10	950	20	1900
14	1350	28	2700

Vacuum Spark Control: Auto-Lite (integral type). Linked directly to breaker plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring in unit.

1948 NASH AMBASSADOR SIX

►FOR AUTO-LITE GENERATOR & REGULATOR CIRCUITS, SEE 1946-47 DIAGRAM

Vacuum Advance (Auto-Lite)

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5"
1°	2°	6⅝"
3°	6°	10"
5°	10°	13⅜"
6°	12°	15"

Distributor Removal: On right side of engine. To remove, disconnect vacuum line, take out hold-down screw, lift distributor off engine.

IGNITION TIMING

4660.....4° BTDC.
4760, 4860.....At TDC.
NOTE—Car manufacturer recommends using Synchroscope or Timing Light to set Ignition Timing.
Timing (Using Synchroscope)—Clip synchroscope to #1 spark plug, fill in vibration dampener "IGN" mark with white chalk, direct light on vibration dampener at timing case cover pointer. Idle engine at 400-500 RPM., loosen advance arm clamp bolt, rotate distributor until "IGN" vibration dampener mark aligned with pointer, tighten clamp bolt.
Timing (Using Timing Light)—Connect timing light, adjust distributor as directed above. Crank engine by placing in high gear and moving car ahead slowly.

CARBURETOR

Carter Type WA-1, Model 464-S. 1¼" Single Barrel, downdraft type with Fast Idle and Climatic Control.
NOTE—Carries Casting No. 290 on face of flange.
See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up data.*
Metering Rods & Jets—*See Carter Jet Table in the Carburetor Section.*

Fast Idle: Carter Single Barrel Carburetor type.
See Carburetion Equipment Section for complete data.
Setting—⅝" clearance between choke valve and air horn (Gauge T109-85) with throttle valve closed and stopscrew against (not on) first step of fast idle cam. Adjust by bending connector link at lower offset (Tool T109-41).

Automatic Choke: Carter Climatic Control (Single Barrel Carburetor).
See Carburetion Equipment Section for complete data.
Setting—Centered (coil housing at index).

CARB. EQUIPMENT

Air Cleaner: AC No. 1529112 Oil-wetted type (Std.), Filter Element AC 1528179. Oil-bath Cleaner Optl.
Servicing (Oil-wetted type)—Wash filter element and re-oil with heavy engine oil every 2000 miles.
Servicing (Oil-bath type)—Wash filter element, clean out and refill oil reservoir with 1 pint SAE No. 50 engine oil (summer), No. 20 (winter) every 5000 miles.

Fuel Pump (Std.): AC Type W, No. 1537389.
(Optl. & Overdrive Cars)—AC Type AD, No. 1538780 (1946), AJ, No. 1539216 (1948-49) combination fuel-and-vacuum pump.
Replacement Pump—AC No. 533 (for W), 585 (for AD).
See Carburetion Equipment Section for complete data.
Pressure—3½ lbs. max. ("W"), 4 lbs. (No. 8780).

Gasoline Gauge: King-Seeley electric type. K-S Nos. 40152 (dash unit), No. 40170 (tank unit).
See Carburetion Equipment Section for complete data.

BATTERY

Auto-Lite Type 1H-105 (old CT-1-15). 6 volt, 15 Plate, 105 Ampere Hour Capacity (20 hour rate).
Starting Capacity—133 amperes for 20 minutes.
Zero Capacity—300 amperes for 3.5 minutes. Five second voltage—4.2 volts.
Dimensions—L. 9 1/16". W. 7 1/16". H. 9 1/16".
Grounded Terminal—Positive (+) to body floor to rear of battery. Separate engine to frame ground.
Location—Right side under front seat.

STARTER

DELCO-REMY

Delco-Remy No. 1107949. Armature No. 1911763.
Drive—Inboard Bendix No. A-1584.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—24-28 ozs.

Performance Data (Delco-Remy)

Torque	R.P.M.	Volts	Amperes
0 ft. lbs	6000	5.0	60
16 "	Lock	3.0	600

Starting Switch: Delco-Remy No. 1998478. Mounted on toeboard, actuated by fully depressing clutch pedal.
Removal: *See Auto-Lite Starter (following).*

STARTER

AUTO-LITE

4660, 4760.....Auto-Lite MAB-4076. Arm. MAB-2057
4860.....Auto-Lite MCL-6008. Arm. MCH-2038
Drive—Inboard Bendix No. A-1660.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—42-53 ozs. (new brushes).
Cranking Engine—160 RPM, 150-160 amps., 5.2 v.

Performance Data (Auto-Lite MAB-4076)

Torque	R.P.M.	Volts	Amperes
0 ft. lbs	3700	5.5	60
0.6 "	1910	5.5	100
3.4 "	1100	5.0	200
6.6 "	695	4.5	300
10.15 "	420	4.0	400
15.8 "	Lock	3.0	582
22.5 "	Lock	4.0	775

Performance Data (Auto-Lite MCL-6008)

Torque	R.P.M.	Volts	Amperes
0 ft. lbs	5300	5.5	65
8 "	Lock	2.0	410

Removal: Flange mounted on left front face of flywheel housing. To remove, disconnect cable, take out flange mounting screws.
Starting Switch: Auto-Lite No. SW-4012. Mounted on toeboard and operated by fully depressing clutch pedal.

GENERATOR

DELCO-REMY

Delco-Remy Model 1102702. Armature No. 1911454.
Two-brush with voltage and current regulation.
Maximum Charging Rate—30 amperes, 8.0 volts.
Charging Rate Adjustment—None (see Regulator).

Performance Data (Delco-Remy)

	Amperes	Volts	R.P.M.
Cold	30①	8.0	1750

①—Not maximum output. See Current Regulator.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—25 ounces.
Field Current—1.75-1.9 amperes at 6.0 volts.
Removal & Belt Adjustment: *See Auto-Lite Generator (following).*

ENERATOR

AUTO-LITE

Auto-Lite Model GDZ-4806A. Armature GDZ-2079F. Two brush (shunt) type with voltage and current regulation. Ventilated.
Maximum Charging Rate—35 amperes, 8.0 volts, 1900 RPM.
Charging Rate Adjustment—None (see Regulator).

Performance Data (Auto-Lite)

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	925	0	6.4	1000
5	6.65	1060	5	6.65	1150
10	6.85	1200	10	6.85	1290
15	7.05	1340	15	7.05	1430
20	7.3	1480	20	7.3	1590
25	7.55	1620	25	7.55	1750
30	7.8	1760	30	7.8	1980
35①	8.0	1900	35	8.0	2250

①—Current regulator setting. See Regulator data.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—35-53 ozs. (new brushes).
Field Current—1.60-1.78 amperes at 6.0 volts.
Motoring Current—4.16-4.60 amperes at 6.0 volts.
Removal: Generator cradle mounted at left side of engine with fan belt drive (water pump driven by flexible coupling from generator). To remove, disconnect water pump, loosen fan belt, remove generator clamp band, lift out generator.
Belt Adjustment: Adjust whenever belt deflection exceeds ½" either way between the fan and generator shaft pulleys. To adjust, loosen fan mounting bracket screws (pivots on one screw, other screw hole slotted), raise fan, tighten screws. Belt misalignment can be corrected by installing shims behind fan bracket.

REGULATOR

DELCO-REMY

Delco-Remy Model 1118202. Single Core Type. Voltage and current regulator on left sill brace under hood.
See Electrical Equipment Section for complete data.
CAUTION—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

Cutout Relay
Cuts In—6.2-6.7 volts hot (operating temperature).
Cuts Out—0-4.0 amperes discharge current.
Contact Gap—.020" (same for both sets).
Air Gap—.020" (with contacts just closed).

Voltage Regulator
Setting—7.2-7.4 volts Hot (operating temperature). Regulator over-compensated for temperature. Check with cover in place and at operating temp.
Checking & Adjustment—*See Electrical Equipment Section.*
Air Gap—.070" between center of core and armature with contacts just closing.

Current Regulator
Setting—34-36 amps hot (operating temperature).
Checking & Adjustment—*See Electrical Equipment Section.*
Air Gap—.080" between center of core and armature with contacts just closing.

REGULATOR

AUTO-LITE

Auto-Lite Model VRP-4004-F. Vibrating type voltage and current regulators (with cutout relay) in case on left body sill brace under hood.
See Electrical Equipment Section for complete data.
NOTE—Regulator cover sealed. Warranty void if seals broken.

Cutout Relay
Cuts In—6.4-7.0 volts (set to 6.4-6.6 volts).
Cuts Out—4.1-4.8 volts (approx. 4-6 amps. disch.).
Contact Gap—.015" minimum.
Air Gap—.031-.034" with contacts open (check at hinge end of core).

Voltage Regulator
Setting—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.
Checking (without breaking seal) & Adjustment—*See Electrical Equipment Section.*
Contact Gap—.012" min. (armature against stop pin).
Air Gap—.048-.052" with contacts just opening.

Current Regulator
Setting—34-36 amperes (marked '35' on the cover).
Checking (without breaking seal) & Adjustment—*See Electrical Equipment Section.*
Contact Gap—.012" min. (armature against stop pin).
Air Gap—.048-.052" with contacts just opening.

LIGHTING

Headlamps: Hall "Sealed Beam" type. Upper and lower beams controlled by beam selector switch on toeboard.
See Electrical Equipment Section for complete data.
Adjustment—Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.).
Beam Indicator—Red jewel above speedometer dial. Lighted when upper (country beam) in use.

Switches
Lighting—Douglas.
Beam Selector—Douglas.
Instrument—Douglas.

Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	4030
Parking, Speedometer	1½	55
Dash Instruments	1	51
Stop	21	1129
Rear License, Tail	3	63
Dome	6	81

MISC. ELECTRICAL

FUSES: Lighting—30 ampere. On fuse block on left body sill brace under hood.
Accessory—30 ampere. On fuse block.
Overdrive (Auto-Lite Relays only)—20 ampere.
HORNS: Auto-Lite. Model HT-4009 (low note), HT-4010 (high note). Twin horns operated by relay
NOTE—Single horn with relay standard.
Horn Current—14-16 amperes (each).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Horn Relay: Auto-Lite Model HRC-4001.

Contact Gap—.026".

Air Gap—.016-.020" with contacts closed but not sealed. .015-.018" air gap between armature leg and yoke with armature sealed to core.

Contacts Close—1.5-3.0 volts. Armature seals to core at 4.0 volts maximum.

Contacts Open—.5 volt minimum (open from seal).

ENGINE

ENGINE SPECIFICATIONS: 6 cylinder, valve-in-head type. Cylinders cast Enbloc with intake manifold cast in block. (Iso-thermal fuel intake system).

Bore—3⅜". **Stroke**—4⅜".

Displacement—234.8 cu. ins. **Rated H.P.**—27.34.

Developed Horsepower—112 at 3400 RPM.

Compression Ratio—7.02-1 Std. cast-iron head. 7.52-1 ratio optional.

Compression & Vacuum Reading—*See Tune-up data.*

▷**1948 ENGINE NEW PARTS:** *New Cylinder Block, Crankshaft, & Rear Bearing used—not interchangeable with previous parts except as complete assembly due to new type Rear Oil Seal—See Crankshaft Oil Seals.*

ENGINE MOUNTS (1948 Type Installation on Previous Car Models): *See Nash Shop Notes.*

ORIGINAL BORE & BEARING SIZES: *See "Original Bore & Pistons" and "Original Bearing Sizes" in Nash Shop Notes.*

TIGHTENING TORQUES: *See Nash Shop Notes.*

CYLINDER HEAD INSTALLATION: *See Nash Shop Notes*

ENGINE REMOVAL (For Servicing): *See Nash Shop Notes.*

PISTONS: Aluminum alloy, split skirt, strut, oval, tin-plated type. **Length**—3⅞".

NOTE—Cylinder out-of-round limits .003" (in service), .0005" (when reconditioned). Taper limits .009" (in service).

Clearance—.001-.002". See Fitting New Pistons.

NOTE—Piston out-of-round and taper limits .004" in service.

Removal—Pistons and rods removed from above.

Fitting New Pistons: Do not use feeler gauge. New pistons should hold own weight approximately ⅓ down from top of bore but must be free enough to work up and down by hand (bore clean and free from oil).

Replacement Pistons: Furnished std. and .001", .002", .003", .005", .010", .012", .015", .020", .040" oversize.

Installing Pistons: Piston slot toward left side (opposite side from oil squirt hole in rod).

PISTON RINGS: 2 compression, 2 oil rings per piston, all above pin. Drilled oil drain holes in oil ring grooves.

Ring	Width	End Gap	Side Clearance
Compression	.0932"	.010-.015"	.002-.004"
Oil Control	.1547"	.010-.015"	.002-.004"

PISTON PIN: Diameter—.8746". **Length**—2.824". Floating type, with lock ring at each end.

NOTE—Pin hole in piston offset toward camshaft.

Pin Fit in Piston—Palm push fit with piston heated (heat piston in boiling water).

Pin Fit in Rod Bushing—Light thumb push fit at room temperature.

Replacement Pins: Standard, .001", .003" oversize.

CONNECTING ROD: Length—8¾". **Weight**—36¼ ozs.

NOTE—Pin hole in rod bronze-bushed.

Crankpin Journal Diameters—2.000". *See Engine Code Note in Nash Special Data for original sizes.*

Lower Bearing—Removable steel-backed, babbitt lined type. No shims.

Clearance—.0015-.0025". **Sideplay**—.006-.014".

Bearing Adjustment: None. Replace bearings. *See "Connecting Rods & Bearings" in Nash Shop Notes.*

Installing Rods: Oil spray hole in lower end of rod must be toward camshaft (right) side of engine.

NOTE—Rods and bearing caps should be marked before removal and replaced in same cylinder and in same relative position.

CRANKSHAFT: Seven bearing, counterweighted type with vibration dampener mounted on front end.

Vibration Dampener Servicing—*See Nash Shop Notes.*

Journal Diameters—2.479" (2 31/64"). *See Engine Code Note in Nash Special Data for original sizes.*

▷**Bearings**—*CAUTION—Bearings changed, two types used as follows:*

Before Serial No. R-459542, Eng. No. RE-022227. Replaceable precision, steel-backed, thin babbitt lined. No shims. Used with first type oil pump.

Beginning Serial No. R-459542, Eng. No. RE-022227. Bearings have 360° oil groove. Used with later type larger-capacity, higher-pressure oil pump.

▷*CAUTION—These 360° oil groove bearings used only when new larger capacity oil pump used. See Oil Pump.*

Clearance—.0015-.0025".

Replacement Main Bearing Caps: *See "Crankshaft & Main Bearings" in Nash Special Data.*

Bearing Adjustment: None (no shims). Replace bearings.
See "Crankshaft & Main Bearings" in Nash Shop Notes.

Replacement Bearings: Standard .002", .010" undersize.

Crankshaft Oil Seal: Rear oil seal new type steel-backed synthetic rubber seal fitted in crankcase and rear bearing cap. Bears directly on crankshaft.

▷*CAUTION—This type oil seal used only with 1948 Cylinder Block and Crankshaft (no oil return threads).*

Oil Seal Servicing—*See "Crankshaft & Main Bearings" in Nash Shop Notes.*

End Thrust: Taken by Center (#4) bearing.

Endplay—.006-.008".

CAMSHAFT: Non-adjustable 2 sprocket chain drive.

Camshaft Removal—*See Nash Shop Notes.*

Bearings—Steel-backed, babbitted bushings.

Clearance—.002".

End Thrust: Taken by front bearing, controlled by position of timing chain sprocket (press fit on shaft).

Endplay—.004-.006".

Timing Chain: Non-adjustable type. Width 9/16". Pitch ⅜". Length 22½" or 60 links.

Camshaft Setting: Mesh chain with camshaft and crankshaft sprockets turned so that marked tooth on each gear is at 45° past (to right—as viewed facing front of engine) top vertical position. With sprockets in this position there should be 9½ links or 19 pins between tooth marks.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 3/4"	.3725"	5 17/32"
Exhaust	1 15/32"	.3725"	5 17/32"

	Seat Angle	Lift	Side Clearance
All Valves	45°	11/32"	.002-.004"

NOTE—Valve face angle 44°.

Valve Guides: Press fit in head (positioned by shoulder on guide). Tops of guides should be ⅛" from face of cylinder head. Ream new guides for correct stem clearance.

Valve Springs: Free length 2 3/32". NOTE—Single spring now used (double springs formerly used).

	Spring Pressure	Length
Valve Closed	53 lbs.	1 11/16"
Valve Open	146 lbs.	1 11/32"

Valve Lifters: Mushroom type. Lifter guide holes in block. Remove from below with camshaft out.

VALVE TIMING

Tappet Clearance: .015" Int., .018" Exh., Hot.

Valve Timing: See Camshaft Setting above.

▷*CAUTION—Valve Timing changed during 1946.*

Exhaust Valve Closing Point

Early 4660—6° ATDC.

Late 4660, 4760 & 4860—16° ATDC.

Valve Timing Check—With .0225" tappet clearance, #1 exhaust valve should close with piston on Early 4660 6° after top dead center, or on Late 4660 and 4760, 4860 16° after top dead center, and "DC" mark on vibration dampener 3/8" (Early 4660), 1" (Late 4660, 4760 & 4860) past pointer on timing chain cover. Reset tappet clearance at .015" Hot.

LUBRICATION

Engine Oiling System: Pressure to main, connecting rod, and camshaft bearings, piston pins, valve tappets, and timing chain. Oil pump mounted on center (#4) main bearing cap in crankcase.

Crankcase Capacity—6 quarts.

Normal Oil Pressure—30 lbs. at 20 MPH.

Oil Pressure Regulator—On oil pump cover. Opens at 30 lbs. (first type spring—before Eng. No. 11514), 50-58 lbs. (later type spring—Beginning Eng. No. RE-11514). Not adjustable.

►**Oil Pump:** *CAUTION—Pump changed—two types used.*

Oil Pump (Before Serial No. R-457798, Eng. No. RE-20512)—Gear type with gears 1¼" long. Pump parts not interchangeable with later type.

Oil Pump (Beginning Serial No. R-457798, Eng. No. RE-20512)—Gear type with longer 1⅜" gears and undercut shaft to provide additional oil flow. Parts not interchangeable with first type pump.

►*CAUTION—This larger capacity pump must be used when new 360° oil groove main bearings used (see Crankshaft Bearings).*

Oil Pump Servicing—*See Nash Shop Notes.*

Cylinder Cover Vent: Vent located on front of cover just behind water outlet elbow to allow escape of vapors inside cover. Turn to open position at all times, especially winter, except for hot dusty driving.

Oil Filter: Replace cartridge at 8000 mile intervals or more often if necessary.

Oil Pressure Gauge: King-Seeley Electric. K-S Nos. 40161 (dash unit), No. 40790 (engine unit).

See Miscellaneous Section for complete data.

COOLING

Cooling System: Pressure type with pressure valve in filler cap, and positive circulation with water pump on left side of engine with thermostat control.

Capacity—17 quarts (18 with heater).

Pressure Valve—AC 850501 (Filler Cap). Opens at 4 lbs.

Water Pump: Centrifugal, adjustable packing type with oiler for bearing lubrication. Driven by flexible coupling from generator.

See Water Pump Section for complete data.

Removal—Drain cooling system, disconnect pump drive coupling (remove rear bolt), disconnect inlet hose, remove pump mounting capscrews.

Belt Adjustment—*See Generator Belt Adjustment.*

Thermostat: Fulton. In water outlet on cylinder head.

Setting—Starts to open at 157-162°F. and should be fully open 20° above starting point.

Temperature Gauge: King-Seeley Electric. K-S Nos. 40154 (dash unit), No. 41085 (engine unit).

See Miscellaneous Section for complete data.

CLUTCH

Borg & Beck Model 10A7. Assembly No. 950 stamped on cover. Single plate, dry disc type.

See Clutch Section for complete data.

Facings—Woven type, 2 used. Inside Diameter 7". Outside Diameter 10". Thickness ⅛".

Adjustment: Pedal free travel setting must be ½". To adjust, install Aligning Pin J-1390 in end of helper spring lever (right end of clutch release shaft), loosen helper spring lever screw on end of clutch release shaft. Loosen locknut and adjust nut on clutch release shaft end of pedal connector link for correct ½" pedal free travel. Use pipe wrench or pliers to turn clutch release shaft to rear to take up all play, see that aligning pin in helper spring lever is against pivot bracket at rear of engine, tighten helper spring lever screw securely.

CAUTION—Pedal adjustment must be made exactly as outlined above to insure correct pedal travel and helper spring operation.

Removal:—Remove transmission (see below). Disconnect clutch pedal linkage, support engine at rear and free rear engine mounting, remove clutch housing and pan. Punchmark flywheel, clutch cover and pressure plate (reassemble to same marks), remove clutch mounting screws, take out clutch.

TRANSMISSION

Own Make. Constant-mesh, synchro-mesh (second & high), sliding gear (low & reverse), all helical gear.

See Transmission Section for complete data.

►**1947 Transmission Shifter Shaft & Fork Change and 1946-47 Replacement Shifter Shaft & Fork Assemblies**—*See 1946-47 Nash Ambassador Six in Transmission Section.*

Transmission Control: Mechanical steering col. shift.

See Transmission Section for complete data.

Removal:—Disconnect shift rods, speedometer cable, and front universal. Remove 2 upper transmission mounting screws and install pilot studs (to support transmission during removal), remove remaining mounting screws, pull transmission straight back and remove.

OVERDRIVE

►**4660 TO SERVICE SERIAL NO. N6-95333 "R7" WITH DELCO-REMY RELAY & SOLENOID**

Warner Type R7C (Warner No. AS1-R7C) with Delco-Remy Relay and Solenoid. Centrifugal pawl type with throttle controlled "kick-down". Optl. equipment.

►**Delco-Remy Solenoid has one-terminal only.**

See Transmission Section for complete data.

Overdrive Solenoid—Delco-Remy No. 1118004.

Overdrive Relay—Delco-Remy No. 1116798.

Removal: Same as for R10 type below.

►**4660 SERVICE SER. NO. N6-95333 TO 120026 "R7" WITH AUTO-LITE RELAY & SOLENOID**

Warner Type R7C (Warner No. AS1-R7C) with Auto-Lite Relay and Solenoid. Centrifugal pawl type with throttle controlled "kick-down". Optl. equip.

►**Auto-Lite Solenoid has two terminals.**

See Transmission Section for complete data.

Overdrive Solenoid—Auto-Lite No. SSB-4002.

Overdrive Relay—Auto-Lite No. HRT-4001.

Fuse—20 ampere. On O. D. Relay under hood.

Removal: Same as for R10 type below.

►**STARTING 4660 SERVICE SERIAL NO. N6-120026 "R10" GOVERNOR CONTROLLED OVERDRIVE**

Warner Type R10B (Warner Number AS2-R10B) Governor controlled. Electric solenoid operation and throttle controlled "kick-down". Optl. equipment.

See Transmission Section for complete data.

Overdrive Solenoid—Nash No. 3123433, Warner Part No. 3AR10B-62.

Control Governor—Auto-Lite Model TGE-4001.

Control Relay—Auto-Lite Model HRT-4101.

Throttle Kickdown Switch—Nash No. 3122959.

Lockout Switch—Nash No. 3123432.

Fuse—20 ampere. On Control Relay under hood.

Removal: Same as for Std. Transmission (above) except that overdrive control cable and wires must first be removed. Then remove overdrive as a unit with transmission.

UNIVERSALS

Mechanics Type 2CR. Roller bearing type, 2 used.

REAR AXLE

Own Make. Semi-floating, hypoid gear type with Hotchkiss drive.

See Rear Axle Section for complete data.

Ratio—4.1-1 Standard. 4.4-1 with Overdrive.

Backlash—.004-.006". Shim adjustment.

Removal:—Hoist rear end of car, disconnect brake cables at rear clevises. Remove brake tubes. Disconnect rear universal. Remove rear spring U-bolts and withdraw axle from car.

Axle Shaft Removal—Remove wheel & drum, disconnect brake line and cable, remove backing plate mounting bolt nuts, oil seal retainer, backing plate, and bearing adjusting shims. Withdraw shaft and bearing, using care not to drag shaft on oil seal.

Wheel Bearing Adjustment—Shims located between backing plate and flanged end of housing. To adjust, remove wheel and backing plate (above), add or remove shims for endplay. **Endplay** .002-.004".

SHOCK ABSORBERS

Monroe Model K-11431 (Front), K-11432 (Rear). Direct acting, hydraulic type.

NOTE—Shock absorbers are sealed (non-refillable).

FRONT SUSPENSI N

Front Suspension: Independent, linked parallelogram type with coil springs and direct acting shock absorbers.

See Front Suspension Section for complete data.

Kingpin Inclination—4½°.

Caster—0° to Negative ½°. "C" washer adjustment.

Camber—Pos. ¼° to ¾°. "C" washer adjustment.

Toe In—1/16-3/16".

STEERIN EAR

Gemmer Model 305. Worm-and-roller type with "push-pull" adjustments.

See Steering Gear Section for complete data.

BRAKES

Service Brakes: Bendix hydraulic, duo-servo, single anchor type without Eccentric Adjustment. Hand lever applies rear wheel service brakes.

See Brake Section for complete data.

Drums—Cast-iron. Diameter 10".

Lining—Moulded type. Width 2". Thickness 3/16". Length 22" per wheel.

Clearance—.015" at each end of secondary (rear) shoes with primary shoes forced out against drum.

Hand Brakes: See Service Brake data above.

Adjustment—With hand lever set two notches 'on', loosen two clamp bolts at wheel cable equalizer under car, remove all cable slack, tighten clamp bolts. See that wheels free of drag with lever 'off'.

MODEL IDENTIFICATION

SERIAL NUMBER: On plate on right side of dash under engine hood.

Starting Serial Numbers

Model	Kenosha	El Segundo
1949	K-26051	KC-1001
1950	K-340001	KC-9501
1951	K-438001	KC-23501

ENGINE NUMBER: Stamped on right side of engine block above exhaust pipe. Starting numbers as follows:
1949 Numbers—S-1001.
1950 Numbers—S-92001.
1951 Numbers—S-207001.

TUNE-UP

COMPRESSION PRESSURE: 120 lbs. at cranking spd.
VACUUM READING: Steady 18-21", 450-500 RPM idle.
FIRING ORDER: 1-5-3-6-2-4. See diagram.
SPARK PLUG GAPS: .030" ± .002".
Plugs—Auto-Lite A-5 (1949), A-7 (1950-51). 14 mm.
DISTRIBUTOR: Breaker Gap—.018-.024".
Cam Angle—35°. Test limits with .022" gap 31-37°.
Breaker Arm Spring Tension—17-21 ozs.
Automatic & Vacuum Advance—*See Ignition.*
Condenser Capacity—.18-.23 microfarad.
IGNITION TIMING: TDC. (At Top Dead Center).
Timing Procedure—*See Ignition Timing.*
Timing Mark—"/" mark on dampener aligned with pointer on chain cover above dampener.
Octane Selector—Set to give slight ping when accelerating with wide open throttle at 10-15 MPH.
CARBURETION: Carter 694S (1949 & Early 1950); 780S (Late 1950).
Idle Setting—Idle screw ¾-1¾ turns open. One screw—turning screw out gives richer mixture.
Idle Speed—450-500 RPM.
Float Level—½" from top of projection on underside of bowl cover to top of seam on free end of float (invert bowl cover and float to check level).
Accelerating Pump—Medium stroke (lower, outer hole) Normal. Inner hole (min.). Upper (max.).
Choke Setting—(694S) 2 points rich; (780S) Centered.
▷*780S NOTE—"Centered" Choke Setting supersedes previous setting of 2 points rich.*
Fuel Pump Pressure: 3-4½ lbs. (5 lbs. maximum).
CARBURETION: (Early 1951) Carter 824S, SA, SB. (Late 1951) Carter 877S, SA.
▷*CARBURETOR RECOMMENDED CHANGE FOR SMOOTHER ENGINE PERFORMANCE—See Carburetor Section for complete data.*
Idle Setting—(824S, SA, SB) 1 to 2 turns open. (877S, SA) ½ to 1½ turns open. For richer mixture, turn screws out.
Idle Speed—(Std. Trans.) 500 RPM. (Hydra-Matic) 375 RPM. with Selector Lever in "N" position.
Float Level—(824S, SA, SB) 1/2", (877S) 5/16". (877SA) ½". Measure from under side of bowl cover to top of float with bowl cover inverted and weight of float on needle valve.
▷*FLOAT NEEDLE & SEAT ASSEMBLY CHANGE—Solid type needle valve (877SA), Spring type needle valve (877S).*
Accelerating Pump—No seasonal adjustment provided and no pump stroke setting required.
Choke Setting—(824S, SA, SB) Center on index. (877S, SA) Set 1 point lean.
Fuel Pump Pressure—3-4½ lbs. (5 lbs. maximum).
VALVE TAPPET CLEARANCE: .015" All Valves, Hot.
NOTE—Tappet adjusting screws self-locking type.
STARTING: *See Battery, Starter, Generator, Regulator.*

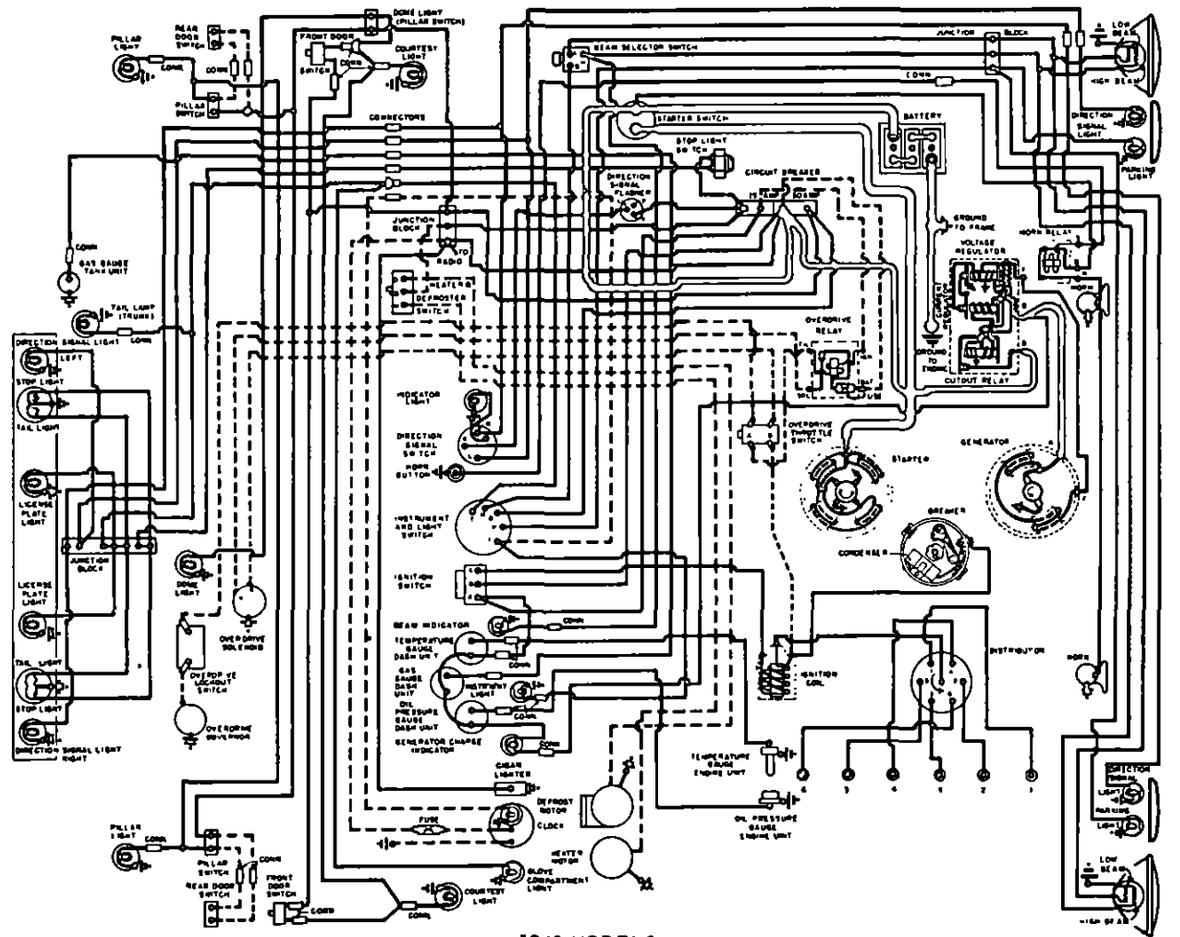
IGNITION

IGNITION SWITCH: Nash No. 3125645 (1949); 3128822 (1950); 3131343 (1951).
COIL: Delco-Remy 1115328 (1949-50); 1115380 (1951). Mounted on engine.
Ignition Current—2 amperes idling, 5 stopped.
CONDENSER: Delco-Remy Part No. 1869704.
Capacity—.18-.23 microfarad.
DISTRIBUTOR: Delco-Remy No. 1112351, Full automatic advance type with separate vacuum spark control and octane selector adjustment.
Breaker Gap—.018-.024".
Cam Angle—35°. Test limits with .022" gap 31-37°.
See "Delco-Remy Cam Angle" in Electrical Equipment Section.
Breaker Arm Spring Tension—17-21 ozs.
Rotation—Counter-clockwise viewed from above.

Automatic Advance

Degrees Distr.	R.P.M.	Degrees Eng.	R.P.M.
Start	300	2	600
5½	400	11	800
12	1400	24	2800

Vacuum Spark Control: Delco-Remy No. 1116045. Plunger Travel 23/64".



Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	3.5"
8½°	17°	13-17"

IGNITION TIMING

Std. Setting ..... At TDC.
Timing (Using Neon Timing Light)—Align ⅛" holes in clamp arm and distributor support and insert pin. *Loosen distributor hold-down screw and center octane selector scale, tighten screw. Clip Neon Timing*

CONTINUED ON NEXT PAGE

1949 MODELS

CONTINUED FROM PRECEDING PAGE

Light to #1 spark plug, direct light at vibration dampener at timing chain cover pointer. Idle engine at 450-500 RPM., loosen clamp arm bolt, rotate distributor until "/" mark on dampener aligned with pointer, tighten clamp bolt, remove ⅛" pin in support. Check Octane Selector Setting.

Octane Selector Setting—Loosen hold-down screw in distributor, adjust scale so that slight ping secured at 10-15 MPH. with wide open throttle.

CARBURETOR

1949-50 CARTER WA1.

Carter No. 694S (1949 & Early 1950); 780S (Late 1950). Downdraft type with Climatic Control.
Casting No. on Flange (694S)—298, (780S)—779.
See Carburetor Section for complete data.
Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up data.*
►**694S Accelerating Pump Setting Change**—To improve acceleration performance. *See "Carter WA-1" in Carburetor Section.*
Metering Rods & Jets—*See Carter Jet Table in the Carburetor Section.*
Fast Idle: Carter Single Barrel Carburetor type.
Setting—⅝" clearance between choke valve and air horn (Gauge T109-85) with throttle valve closed and stopscrew against (not on) first step of fast idle cam. Adjust by bending connector link.
See Carburetion Equipment Section for complete data.
Automatic Choke: Carter Climatic Control (Single Barrel Carburetor).
See Carburetion Equipment Section for complete data.
Setting—(694S) 2 points rich; (780S) Centered *(This setting supersedes previous setting of 2 points rich.)*

1951 CARTER YF

Carter No. (Early 1951) 824S, SA, SB. (Late 1951) 877S, SA. 1¼" Single barrel downdraft type with Climatic Control.
See Carburetor Section for complete data.
Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up Data.*
►*CARBURETOR RECOMMENDED CHANGE FOR SMOOTHER ENGINE PERFORMANCE—See Carburetor Section for complete data.*
Metering Rods & Jets—*See Carter Jet Table in the Carburetor Section.*
Fast Idle: .054" between throttle valve and bore of carburetor (side opposite port). Remove thermostatic coil housing and baffle plate, adjust by bending connector link at lower bend.
See Carburetion Equipment Section for complete data.
Automatic Choke: Carter Climatic Control (Single Barrel Carburetor).
Setting—(824S, SA, SB) Centered on index. (877S, SA) Set 1 point lean.
See Carburetion Equipment Section for complete data.

CARB. EQUIPMENT

Air Cleaner: Oil Wetted type (std.), Oil Bath type (optional).
Fuel Pump: Carter No. M797S or AC Type W, No. 1537398 or 1539413 fuel only. AC Type AJ, No. 1537406 combination fuel & vacuum.
Replacement Pumps—AC 532 (for W), 7406 (for AJ).
►*CAUTION: Install pumps with rocker arm ABOVE (W), or UNDER (AJ) eccentric on camshaft.*
Pressure—3-4½ lbs. (5 lbs. maximum).
See "Fuel Pumps" in Carburetion Section.
Gasoline Gauge: Auto-Lite Electric.
Dash Unit—Auto-Lite No. 11578A (1949); 11982A (1950); 12268A (1951).
Tank Unit—Auto-Lite No. 11529A (1949-50); 12203A (1951).
See "Fuel Gauges" in Carburetion Section.

BATTERY

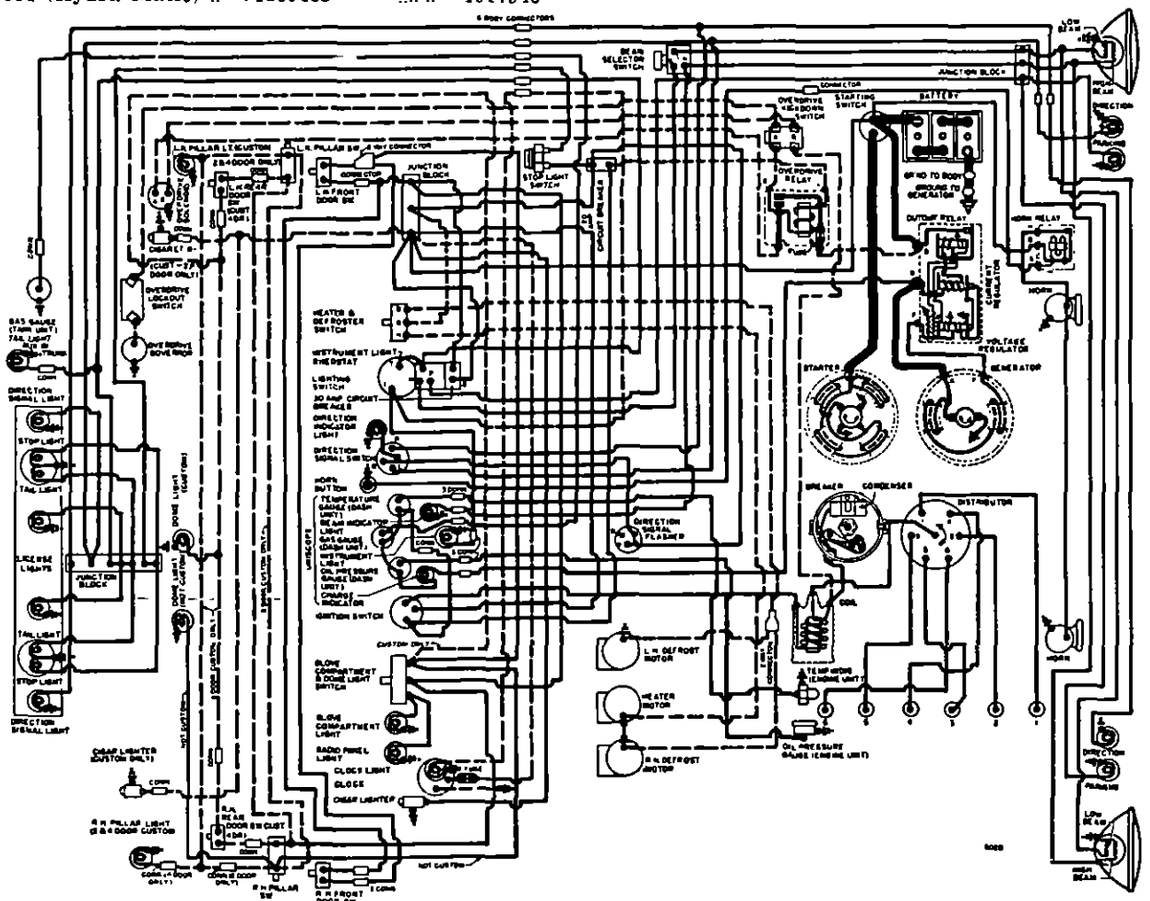
Auto-Lite Type CT-1-13—6 volt, 13 plate, 90 Ampere Hour capacity (20 hour rate).
Grounded Terminal—Positive (+) grounded to wheelhouse (engine grounded at same point).
Location—Under hood at left side of engine.

STARTER

Delco-Remy Models—As follows:

Model	Starter No.	Armature No.
1949 (All)	1109451	1882547
1950 (Early)	1109451	1882547
1950 (Late)	1109459	1915056
1951 (Std. & O.D.)	1109463	1917887
1951 (Hydra-Matic)	1109465	1917946

Drive—(1949-50) Barrel type, Bendix No. A2033.
Drive—(1951) Delco-Remy Automatic type. No. 1917888 (Std. Trans.), No. 1917948 (Hydra-Matic).
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—24-28 ounces.



Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	6000	5.7	60
11.5 "	Lock	3.3	540

Starting Switch: (Std. Trans.) Delco-Remy No. 1996478. Mounted on toeboard, actuated by fully depressing clutch pedal.

Starting Switch: (Hydra-Matic Trans.) Delco-Remy No. 1465. Magnetic type. Control switch (Delco-Remy No. 1996044) mounted on steering column and controlled by Hydra-Matic selector lever. Operative by lifting the lever in "N" position.

CONTINUED ON NEXT PAGE

1950 MODELS

CONTINUED FROM PRECEDING PAGE

GENERATOR

Delco-Remy Models—As follows:

Model	Generator No.	Armature No.
1949 (Std.)	1102702	1911454
1949 (Std.)	1102712	1913597
1950 (Std.)	1102712 & 1102730	1913597
1951 (Std.)	1102730	1913597
1951 (Optl.)	1102748	1917175

Maximum Charging Rate—See Regulator (below).

Performance Data
(Exc. Gen. No. 1102748)

	Amperes	Volts	R.P.M.
Cold	30①	8.0	1750

Performance Data
(Gen. No. 1102748)

Cold	40	8.0	1950

①—Not maximum output. See Current Regulator.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—28 ozs.

Field Current—1.75-1.9 amps. (Exc. 1102748); 1.90-2.05 amps. (1102748). All at 6.0 volts.

Belt Adjustment: Adjust belt so that 25 lbs. pressure midway between fan and generator shaft pulley will deflect belt ½". To adjust, loosen fan mounting bracket screws, raise fan, tighten screws. Belt misalignment corrected by shims back of fan bracket.

REGULATOR

Delco-Remy No. 1118302 (Use with Gen. Nos. 1102702, 712, 730). No. 1118382 (Use with Gen. No. 1102748). Voltage & Current type.

"1118300 SERIES" regulators have screw adjustment for settings and single regulator springs.
See Electrical Equipment Section for complete data.
CAUTION—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

Cutout Relay

Cuts In—5.9-6.8 volts hot (set to 6.4 volts hot).
Contact Gap—.020" (same for both sets).
Air Gap—.020" (with contacts just closed).

Voltage Regulator

Setting—7.0-7.7 volts hot (set to 7.4 volts hot). Regulator is over-compensated for temperature. Should be checked with cover in place and hot.
Air Gap—.075" with armature pressed down to point where contacts are just touching.
Checking & Adjustment—***See Elec. Equip. Section.***

Current Regulator

Setting—(1118302) 32-40 amperes hot (set to 36).
Setting—(1118382) 40-46 amperes hot (set to 42).
Air Gap—.075" with armature pressed down to point where contacts are just touching.
Checking & Adjustment—***See Elec. Equip. Section.***

LIGHTING

Headlamps: Hall "Sealed Beam". Upper and lower beams controlled by selector switch on toeboard.
See Electrical Equipment Section for complete data.
Beam Indicator—Red jewel located on right side of instrument cluster face.

Switches

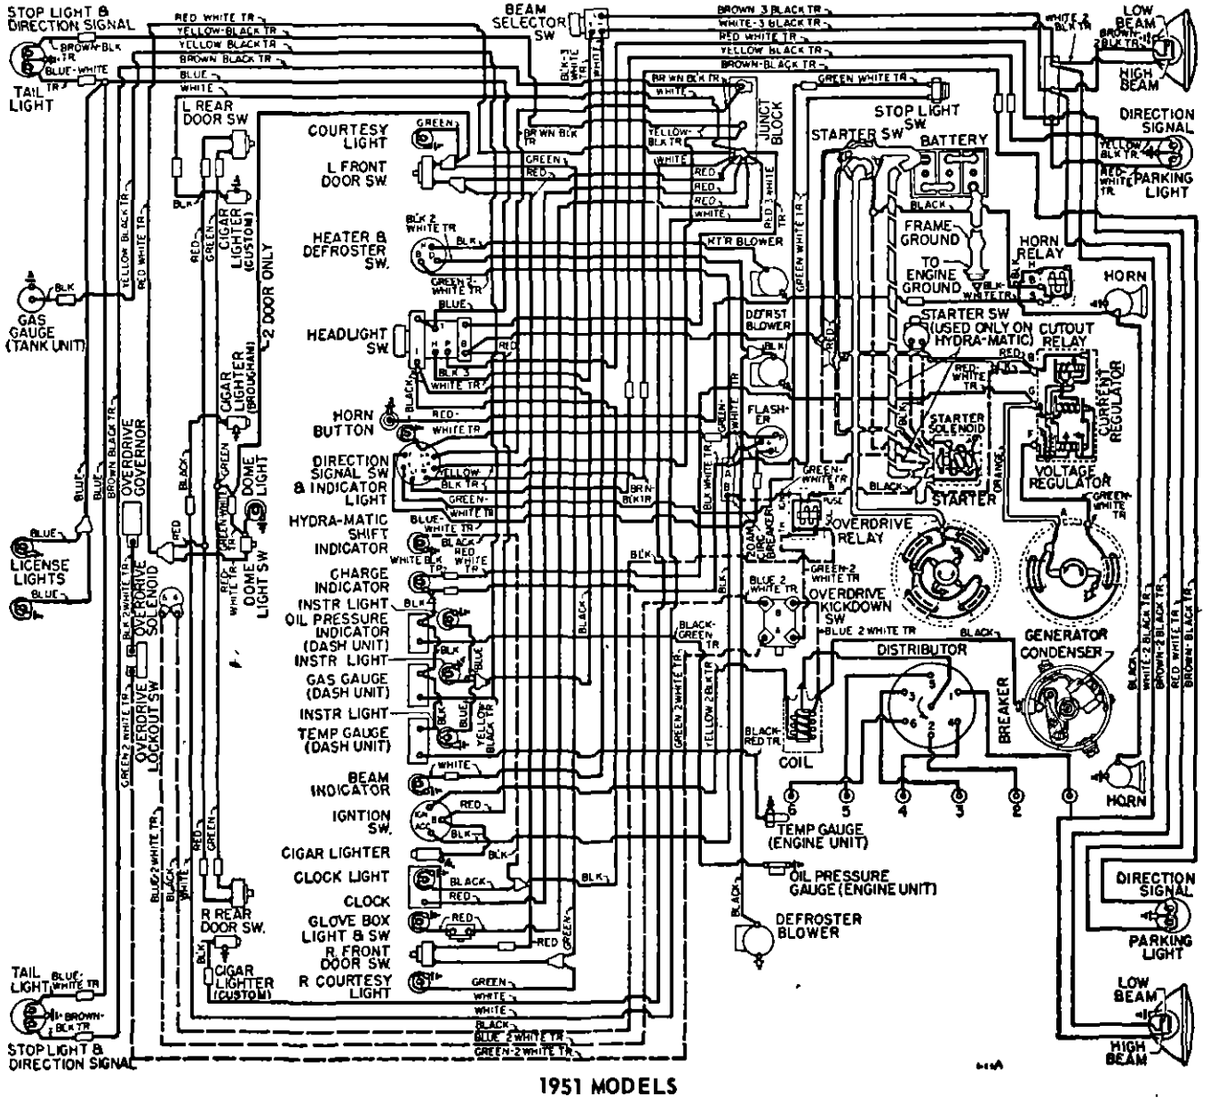
Lighting—Rotary type (1949). Push-pull type, Nash Part No. 3128824 (1950-51).

Beam Selector—Nash No. 3104105.

MISC. ELECTRICAL

GENERATOR CHARGE INDICATOR: Indicator light in instrument cluster. Lights when ignition turned on, should go out when generator begins to charge.

CIRCUIT BREAKERS: Two used;
20 ampere Circuit Breaker protects Stop Light Switch, Heater and Defroster Switch, and Directional Signal Flasher. On left body sill brace.
30 ampere Circuit Breaker protects Dome Light, Pillar Light, Courtesy Light, and Main Lighting Switches. Mounted on switch.



FUSES: Electric Clock. 3 ampere in clock feed. Overdrive—30 ampere. On Overdrive Relay.

HORNS (1949): Auto-Lite No. HW-4013 or HW-4025 (Low Pitch). HW-4014 or HW-4026 (High Pitch).

HORNS (1950): Auto-Lite No. HW-4025 (Low Pitch), HW-4026 (High Pitch).

HORNS (1951): Delco-Remy No. 1999657 (Low Pitch), No. 1999658 (High Pitch).
Horn Current—15 amps. at 6.2 volts.
Horn Relay: Nash No. 3125879.

CONTINUED ON NEXT PAGE

1951 MODELS

CONTINUED FROM PRECEDING PAGE

ENGINE

ENGINE SPECIFICATIONS: 6 cyl. "L" head type.

Model	Bore	Stroke	Displacement
1949	3 1/8"	3 3/4"	172.6 cu. ins.
1950-51	3 1/8"	4"	184 cu. ins.

Model	Compr. Ratio	Rated HP	Developed HP
1949	7.0-1	23.44	82 at 3800 RPM
1950-51	7.0-1①	23.44	②85 at 3800 RPM

①—7.35-1 with Optional head.
②—With 7.0-1 compression ratio.

Compression & Vacuum Reading—*See Tune-Up.*

CYLINDER HEAD & TIGHTENING TORQUES: *See Nash Special Data.*

OIL PAN REMOVAL—*See Nash Special Data.*

PISTONS: Aluminum alloy, Cam Ground, Tin plated, strut type with solid skirt. **Length—3 3/8".**
Original Bore and Pistons—*See Nash Special Data.*
Weight—13½ ozs. stripped.
Removal—Pistons and rods removed from above.
Clearance—.001-.002". See Fitting New Pistons.
NOTE—Cylinder out-of-round and taper limits .004"

Fitting New Pistons: With all parts clean and dry, fit pistons so that piston will support its own weight in any portion of cylinder. If feeler gauge used, insert .002" x ½" feeler at right angles to pin bosses, pull to withdraw feeler must be 12-18 lbs.

Replacement Pistons: Furnished Std., and .002", .005", .010", .020" and Semi-finished.

Piston Installation: Pin hole in piston offset 1/16" from center-line. Install piston with heavy side away from camshaft (pin offset toward camshaft).

PISTON RINGS: 2 compression, 1 slotted oil and 1 Thompson U-Flex oil ring, (U-Flex ring in #4 groove), per piston. All rings above pin. Oil grooves drilled with oil drain holes.

Ring	Width	End Gap	Side Clearance
Compression	3/32"①	.015 ± .005"	.002-.004"
Oil Control	5/32"②	.015 ± .005"③	.002-.004"

①—.0930" ± .0005". ②—.15475" ± .00025".
③—No end gap on Thompson U-Flex ring.
Installing Rings—Stepped inner edge of both compression rings must be UP.

PISTON PIN: Diameter—.8593-.8595". **Length**—2¾". Locked in rod.
Pin Fit in Piston—Thumb press fit or .0003" max. loose fit at room temperature (70°F.).
Replacement Pins: Standard & .001", .003" oversize.

CONNECTING ROD: Length—6⅝" (6.623-6.627").
Weight—25 ozs.
Original Bearing Sizes—*See Nash Special Data.*
Crankpin Journal Diameter—2 3/32" (2.094-2.095").
Lower Bearing—Removable steel-backed, babbitt lined type. No shims.
Clearance—.001-.0025". **Sideplay**—.006-.014".

Bearing Adjustment: None. Replace bearings. *See "Connecting Rods & Bearings" in Nash Special Data.*
Replacement Bearings: Std. & .002", .010" Undersize.
Installing Rods: Oil squirt hole in lower end of rod toward right (camshaft side) of engine.
NOTE—Rods and bearing caps should be marked before removal and replaced in same cylinder and in same relative positions.

CRANKSHAFT: Four bearing, counterweighted type with vibration dampener mounted on front end.
Vibration Dampener—*See Nash Special Data.*
Original Bearing Sizes—*See Nash Special Data.*
Journal Diameters—2 31/64" (2.479").
Bearings—Removable, steel-backed, micro-babbitt.
Clearance—.002".

Bearing Adjustment: None. Replace bearings. *See "Crankshaft & Main Bearings" in Nash Special Data.*
Replacement Bearings: Std. & .002", .010" Undersize.
Crankshaft Oil Seal: *See "Crankshaft & Main Bearings" in Nash Special Data.*

End Thrust: Taken by front (#1) bearing (thrust plate on shaft ahead of flanged bearing).
Endplay Adjustment—*See "Crankshaft & Main Bearings" in Nash Special Data.*
Endplay—.006-.008".
►*FLYWHEEL REPLACEMENT CAUTION (Std. & Overdrive Cars)*—*See "Flywheel" in Nash Special Data.*

CAMSHAFT: 4 bearing. Non-adjustable chain drive.
Camshaft Removal—*See Nash Special Data.*
Bearings—Steel-backed, babbitted bushings.
Clearance—.002".

End Thrust: Thrust plate assembled on front face of engine between #1 bearing and camshaft sprocket.
Endplay—.004-.006".
CAUTION—Thrust plate has long oil groove on rear face which provides valve tappet lubrication from #1 camshaft bearing. Short groove on front face of plate lubricates timing chain and sprockets.

Timing Chain: Morse. Non-adjustable type. Width 1". Pitch ⅜". Length 22½" or 60 links.

Camshaft Setting: Install chain with punch mark on camshaft sprocket and inverted "V" mark on crankshaft sprocket adjacent and in line with straight-edge across shaft centers. Check setting as follows: turn engine over until punch mark on camshaft sprocket at one o'clock position with crankshaft sprocket mark just beginning to mesh with chain—there should be 9½ links or 19 pins (2 pins to each link) between marks.

VALVES:	Head Diam.	Stem Diam.	Length
Intake	1 15/32"	.3407-.3412"	4 25/32"
Exhaust	1 9/32"	.3407-.3412"	4 25/32"

	Seat Angle	Lift	Stem Clearance
All Valves	①	5/16"	.002-.003"

①—Valve face angle 44°. Valve angle in block 45°.

Valve Guides: Pressed in block. Remove guides using Tool J-2814. Install guides using Tool J-1429-A with adapter J-1429-4.

Valve Springs: Install springs with closed-coil end up against cylinder block and **seated in counterbore** in block. Spring free length 2 3/32".
►***CAUTION*—Excessive wear of valve stems and guides will result if springs not properly seated in counterbore.**

	Spring Pressure	Length
Valve Closed	37-41 lbs.	1 3/4"
Valve Open	①	1 7/16"

①—(1949-50) 80-86 lbs. (1951) 75-82 lbs.

Valve Lifters: Mushroom type operating in reamed holes in block. Lifters removed from below with camshaft out of engine. *See "Camshaft & Bearing" in Nash Special Data for Camshaft Removal.*

VALVE TIMING

Tappet Clearance: .015" Hot, running clearance.
NOTE—Tappet adjusting screws are self-locking.

Valve Timing: See Camshaft Setting above.
Intake Valves—Open 6° BTDC. Close 50° ALDC.
Exhaust Valves—Open 46° BLDC. Close 10° ATDC.
Valve Timing Check—With tappet clearance set at .019", #1 exhaust valve should close with piston 10° after top dead center and "DC" mark on vibration dampener ⅝" past pointer on timing chain cover. Reset tappet clearance at .015" Hot.

LUBRICATI N

Engine Oiling System: Pressure to main, connecting rod, and camshaft bearings, valve tappets, and timing chain.
Crankcase Capacity—5 quarts.
Normal Oil Pressure—50 lbs. at 30 MPH.
Oil Pressure Regulator—Spring-loaded release valve under plug to rear of oil pump on lower edge of crankcase. Non-adjustable. Opens at 50-58 lbs.

OIL PAN REMOVAL—*See Nash Special Data.*

Oil Pump: Gear type pump mounted on right side of engine, driven by inclined shaft.

Oil Filter: Optional. Replace cartridge at 8000 mile intervals or more often if necessary.

Oil Pressure Gauge: Auto-Lite Electric.
Dash Unit—Auto-Lite No. 11577A (1949); 11981A (1950); 12267A (1951).
Engine Unit—Auto-Lite No. 11527A.
See "Oil Gauges" in Miscellaneous Section.

COOLIN

Cooling System: Pressure type with pressure valve and vacuum valve (relief valves) in filler cap, and positive circulation with water pump.
Capacity—14 quarts (15 quarts with heater).
Pressure Valve—AC #850501 Filler Cap. Opens 4 lbs.
►*PRESSURE VALVE CHANGE NOTE*—Effective at car serial No. K-48207, a 7 lb. pressure radiator cap entered production.

Water Pump: New sealed-in, non-adjustable seal assembly. Grease fitting for bushing lubrication. Centrifugal pump driven by flexible coupling from generator.
See Water Pump Section for complete data.
Belt Adjustment—*See Generator Belt Adjustment.*
Removal—Drain cooling system, disconnect pump drive coupling (remove rear bolt), disconnect inlet hose, remove two pump mounting capscrews.

Thermostat: Dole. In cylinder head water outlet.
Setting—Starts to open 162-168°F. and should be fully open 20° above opening point.

Temperature Gauge: Auto-Lite Electric.
Dash Unit—Auto-Lite No. 11579A (1949); 11983A (1950); 12269A (1951).
Engine Unit—Auto-Lite No. 11528A.
See "Temperature Gauges" in Miscellaneous Section.

CLUTCH

Borg & Beck Model 8A7—(Std. & O.D. Trans. Cars). Single plate dry disc type.
Identification Note—Cover stamped "987".
See Clutch Section for complete data.
Facings—Woven. 2 used. I.D. 5⅜". O.D. 8". Thickness ⅛".

Adjustment: Pedal free travel ½-¾". Adjust by loosening locknut and turning adjusting nut on connector link at clutch fork.
►***CAUTION*—Do not disturb adjustment of clutch beam lever-to-pedal rod.**

Removal: Remove transmission (see below), disconnect clutch pedal linkage, remove clutch housing and pan, punchmark flywheel, clutch cover and pressure plate (reassemble to same marks), take out clutch fork and mounting screws in cover flange. Remove clutch assembly.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

TRANSMISSION

Own Make. Constant-mesh, synchro-mesh (second & high), sliding gear (low & reverse), all helical gear.
See Transmission Section for complete data.
Transmission Control: Mech. steering column shift.
See Transmission Section for complete data.
Removal: Remove Rear Axle (see REAR AXLE below), disconnect transmission shift rods at levers on left side of case and speedometer cable. Support engine at rear, free rear engine mounting, take out transmission upper mounting bolts, install special guide bolts in these holes, remove lower mounting bolts, slide transmission back on guide bolts, remove from below.

VERDRIVE

Warner Type AS6-R10B (1949); AS8-R10B (1950-51). *(NOTE*—1950-51 Overdrive unit has "Centered Ring Gear). Optional (with Nash Transmission). Governor controlled type with electric solenoid operation and throttle operated kick-down switch.

See Transmission Section for complete data.
Overdrive Solenoid—Delco-Remy No. 1118132.
Governor—Warner No. AR10B-72E.
Control Relay—Auto-Lite No. HRT-4101.
Overdrive Fuse—30 ampere. On BAT terminal of overdrive relay (on left body sill under hood).
Removal: Remove as a unit with transmission after disconnecting control cable and all wiring on overdrive case. See Transmission Removal (above).

HYDRA-MATIC TRANSMISSION

See Nash Ambassador for Nash Hydra-Matic Data.

UNIVERSALS

Mechanics 1½CR or Saginaw. One used (in torque tube adapter at rear of transmission). Tapered coil spring is installed ahead of joint to properly locate joint on driveshaft. NOTE—Universal is slip fit on transmission end, slight press fit on driveshaft.

►*PROPELLER SHAFT COUPLING SERVICE REPLACEMENT: New "Slip Type" coupling replaces former type coupling & nut. See "Nash Hypoid Rear Axle" in Rear Axle Section for complete data.*
Propeller Shaft (Std. & Overdrive Cars): Steel shaft with pre-lubricated, rubber mounted center bearing installed in torque tube. Shaft splined at both ends, universal light press fit on forward end, coupling at rear end is a tight press fit.
►*PROPELLER SHAFT CENTER BEARING PRODUCTION CHANGE (1951)—Two center bearings used on cars equipped with 4.4-1 ratio rear axle assembly. Installation of second bearing is same as for single bearing type.*
Propeller Shaft (Hydra-Matic Drive): One piece tubular steel shaft with one universal at forward end and companion flange at rear. No center bearing.
See Nash Rear Axle in the Rear Axle Section for Propellor Shaft Data.

REAR AXLE

Own Make. Semi-floating, hypoid gear type with Torque Tube Drive.
See Rear Axle Section for complete data.

Ratio—(Std.) 4.4-1 (8-35). **(Overdrive)** 4.9-1 (8-39). **(Hydra-Matic)** 3.8-1 (9-34).
Backlash—.004-.006". Shim adjustment.
Removal: Jack up and support rear end of body. Disconnect rear brake cable at equalizer, torque tube at rear of transmission, brake hose and shock absorbers at axle end (allow shocks and brake hose to hang from body). Roll axle assembly out from under car. *For Torque Tube Trunnion Bracket Adjustment, see Nash Rear Axle in Rear Axle Section.*
Axle Shaft Removal—Remove wheel, pull drum (use hub puller J-1644). Disconnect brake line and cable. Remove backing plate mounting bolts nuts, take off oil seal retainer, backing plate, and wheel bearing adjusting shims. Withdraw axle shaft using Puller J-2498, do not drag shaft on inner oil seal.
Wheel Bearing Adjustment—Shims located between backing plate and flanged end of housing. To adjust, remove wheel and backing plate (above), add or remove shims for endplay. **Endplay**—.002-.004".
Rear Suspension: Coil spring type with conventional rear axle. *See Rear Axle Section for complete data.*

SHOCK ABSORBERS

Delco or Monroe. Direct acting, Hydraulic.

FRONT SUSPENSION

Front Suspension: Independent, parallelogram type. with coil springs and direct acting shock absorbers. NOTE—Entire assembly mounted on box-section pressed steel cross-member attached to frame and body through 4 rubber-bushed bolts.
See Front Suspension Section for complete data.
Kingpin Inclination—8½° crosswise.
Caster—0° desired. Limits 0° to Pos. ½°. Shim adjustment ("C" washers) between upper control arm inner pivot and frame bracket.
Camber—0° desired. Limits Neg. ¼° to Pos. ¼°. Shim adjustment as for Caster (above).
Toe-In—1/16" to 3/16". Loosen clamp at both ends of adjustable tubes in each tie rod. Turn tubes
Steering Geometry—Inner wheel 23½° + ½° — 0°. Outer wheel 20°.

STEERING GEAR

Gemmer Model 305. Worm-and-roller type with "push-pull" adjustments.
See Steering Gear Section for complete data.

BRAKES

Service Brakes: Bendix (Lockheed) Hydraulic, self-centering (floating shoe) type. Hand lever applies rear wheel service brakes.
NOTE—No anchor pin adjustment on these brakes.
See Brake Section for complete data.
Wheel Cylinders—Diam.: Front wheels 1", Rear ⅞".
Drums—Cast-iron. Diameter 9".
►*Lining—CAUTION—Different width and length used on each shoe in each wheel as follows:*

Brake Shoe	Width	Length	Thickness
Forward (Primary)	2"	10"	3/16"
Rear (Secondary)	1 3/4"	7½"	3/16"

Lining is moulded type.
Clearance—.015" heel and toe. Eccentric adjustment for each shoe.
Braking Power—57.6% front wheels, 43.4% rear.
Hand Brake: See Service Brakes (above).

MISC. MECHANICAL

Windshield Wiper: Cable Operated—vacuum type.
See Miscellaneous Section for complete data.

MODEL IDENTIFICATION

SERIAL NUMBER: On plate on right side of dash under engine hood.

Starting Serial Numbers

Model	Kenosha	El Segundo
1949	R-515501	RC-1001
1950	R-556001	RC-3501
1951	R-600501	RC-8701

ENGINE NUMBER: Stamped on pad on right side of engine block at upper front corner. Starting numbers as follows:

1949 Numbers—A-1001 Up (All plants).
1950 Numbers—A-46001 Up (All plants).
1951 Numbers—A-97001 Up (All plants).

TUNE-UP

COMPRESSION PRESSURE: 125 lbs. (1949), 130 lbs. (1950-51), at cranking speed.

VACUUM READING: Steady 18-21", 450-500 RPM. Idle. (375 RPM. on Hydra-Matic Drive cars).

FIRING ORDER: 1-5-3-6-2-4. See diagram.

SPARK PLUG GAP: .030" ± .002".
Plugs—Auto-Lite A-5 (1949); A-7 (1950-51). 14 mm.

DISTRIBUTOR: Breaker Gap—.018-.024".
Cam Angle—35°. Test limits with .022" gap 31-37°. *See "Delco-Remy Cam Angle" in Electrical Equipment Section.*
Breaker Arm Spring Tension—17-21 ozs.
Automatic & Vacuum Advance—*See Ignition.*
Condenser Capacity—.18-.23 microfarad.

IGNITION TIMING: TDC. (At Top Dead Center).
Timing Procedure—*See Ignition Timing.*
Timing Mark—"/" mark on dampener aligned with pointer on chain cover above dampener.

CARBURETION:
Idle Setting—Set idle adjusting screw ½-1½ turns open. Turn out for richer mixture.
Idle Speed (standard)—450-500 RPM.
Idle Speed—(Hydra-Matic) 375 RPM. with Selector Lever in "N" position.
Float Level—½" from top of projection on underside of bowl cover to top of seam on free end of float (invert bowl cover and float to check level).
Accelerating Pump—Inner Hole (med. stroke) Normal, Lower Hole (max.) winter, Upper (min.) Summer.

Choke Setting: Centered (coil housing at index).

Fuel Pump Pressure: 3-4½ lbs. 5 lbs. Maximum.

VALVE TAPPET CLEARANCE: (1949)—.015" (Intake), .018" (Exhaust). (1950-51)—.012" (Intake), .018" (Exhaust).

►*1950-51 NOTE: This clearance supersedes previous setting on 1950-51 cars only.*

IGNITION

IGNITION SWITCH: Nash No. 3125645 (1949); 3128822 (1950); 3131343 (1951).

COIL: Delco-Remy No. 1115380. Mounted on engine.
Ignition Current—2 amperes idling, 5 stopped.

CONDENSER: Delco-Remy Part No. 1869704.
Capacity—.18-.23 microfarad.

DISTRIBUTOR: Delco-Remy 1110216 (1949); 1110216 or 1110223 (1951); 1110223, 1110225, 1110227 (1951). Full automatic advance type with separate vacuum spark control.

Breaker Gap—.018-.024".
Cam Angle—35°. Test limits with .022" gap 31-37°. *See "Delco-Remy Cam Angle" in Electrical Equipment Section.*
Breaker Arm Spring Tension—17-21 ozs.
Rotation—Clockwise viewed from above.

Automatic Advance

Degrees Distr.	R.P.M.	Degrees Eng.	R.P.M.
Start	300	2	600
8	650	16	1300
15	1350	30	2700

Vacuum Spark Control: Delco-Remy No. 1116044.

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	4-6"
6°	12°	14-16"

IGNITION TIMING

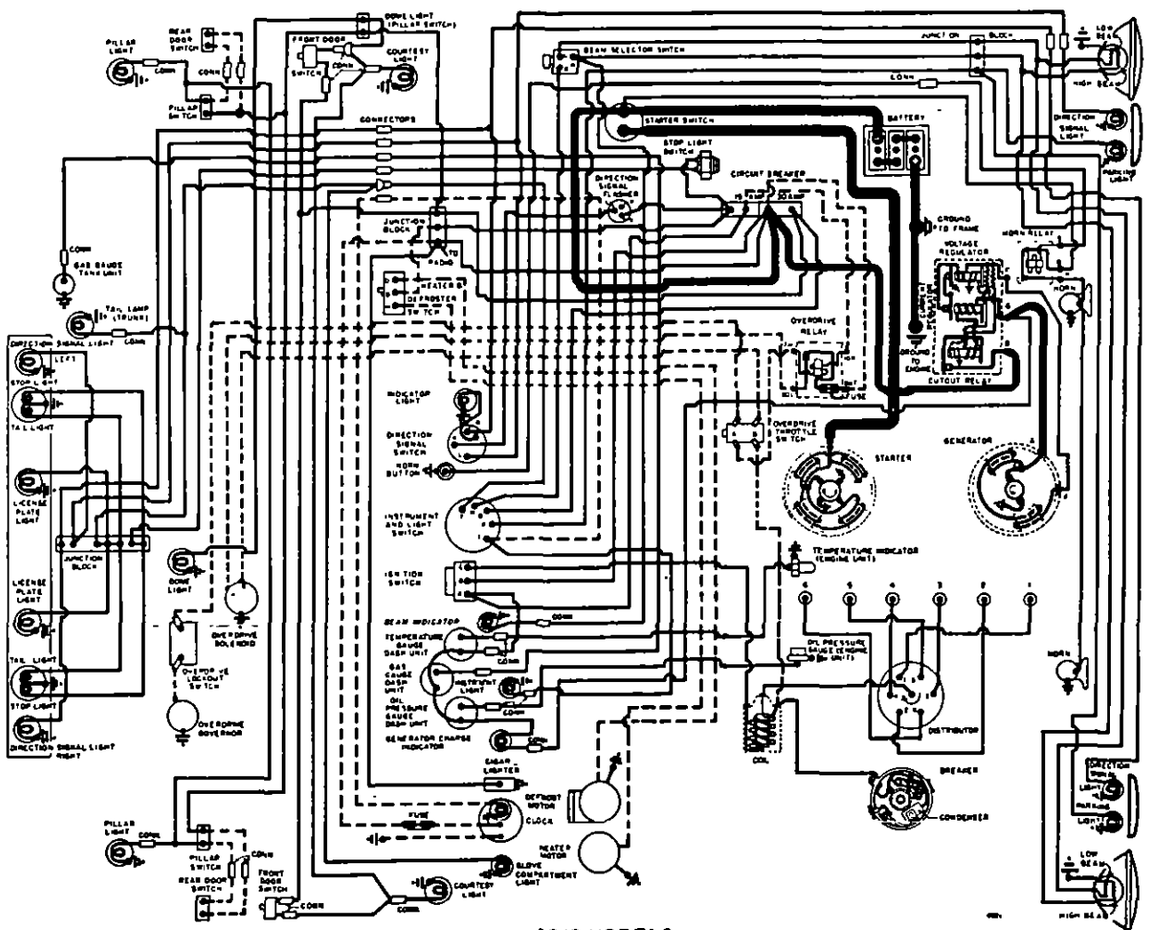
Std. Setting ..... **At TDC.**
NOTE—Car manufacturer recommends using Neon Timing Light to set Ignition Timing.
Timing—Clip Neon Timing Light to #1 spark plug, direct light at vibration dampener at timing chain cover pointer. Idle engine at 450-500 RPM., loosen clamp arm bolt, rotate distributor until "/" mark on dampener aligned with pointer, tighten clamp bolt.

CARBURETOR

Carter No. 683S (1949 & Early 1950): 746S (Late 1950 & 1951). 1¼" single barrel downdraft type with Climatic Control.

Casting No. on Flange—(683S) 290, (764S) 679.
See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up data.*



Metering Rods & Jets—*See Carter Jet Table in the Carburetor Section.*

►**683S Metering Rod Production Change**—*See "Carter WA-1" in Carburetor Section.*

Hydra-Matic Throttle Linkage Adjustment: *See Nash Hydra-Matic Drive in Transmission Section.*

Fast Idle: Carter Single Barrel Carburetor type.

CONTINUED ON NEXT PAGE

1949 MODELS

CONTINUED FROM PRECEDING PAGE

Setting—5/8" clearance between choke valve and air horn (Gauge T109-85) with throttle valve closed and stopscrew against (not on) first step of fast idle cam. Adjust by bending connector link at lower offset (Tool T109-41).

See Carburetion Equipment Section for complete data.

Automatic Choke: Carter Climatic Control (Single Barrel Carburetor).

Setting—Centered (coil housing at index).

See Carburetion Equipment Section for complete data.

CARB. EQUIPMENT

Air Cleaner: AC No. 1544443 Oil-wetted type (Std.), Filter Element #3. Oil-bath Cleaner AC No. 1544393, Element #7-S.

Fuel Pump: (Std.) AC Type W, No. 1537389 or 1539412, Carter No. M-816-S.
(Optional, Overdrive & Hydra-Matic Cars) AC Type AJ, No. 1539216 or Carter No. M-798-S.

▷*CAUTION—Install pumps with rocker arm ABOVE (W), or UNDER (AJ) eccentric on camshaft.*

See Carburetion Equipment Section for complete data.

Pressure—3-4½ lbs. (5 lbs. maximum).

Gasoline Gauge: Auto-Lite electric type.

Dash Unit—Auto-Lite No. 11578A (1949); 11982A (1950); 12268A (1951).

Tank Unit—Auto-Lite No. 11529A (1949-50); 12203A (1951).

See "Fuel Gauges" in Carburetion Section.

BATTERY

Auto-Lite Type CT-1-15—6 volt, 15 plate, 105 Ampere Hour Capacity (20 hour rate).

Starting Capacity—133 amperes for 20 minutes.

Zero Capacity—300 amperes for 3.5 minutes. Five second voltage—4.2 volts.

Grounded Terminal—Positive (+) grounded to wheelhouse (engine grounded at same point).

Location—Left side of engine compartment under hood.

STARTER

Delco-Remy Models. As follows:

Model	Starter No.	Armature No.
Synchro-mesh & O.D.	1107950	1911832
Hydra-Matic	1107965	1911832
R.H.D. Cars	1107959	1867897

Drive (1107950 & 959)—Bendix No. A-2033.
Drive (1107965)—Delco-Remy No. 1873789. Overrunning clutch with solenoid pinion shift.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—24-28 ozs.

Performance Data—1107950 & 959

Torque		R.P.M.	Volts	Amperes
0	ft. lbs.	5500	5.7	65
16	"	Lock	3.0	600

Performance Data—1107965

0	ft. lbs.	5500	5.7	80①
14	"	Lock	3.0	600

①—Includes current draw of starter switch.

Starting Switch (Std.): Delco-Remy No. 1996478. On toeboard, actuated by fully depressing clutch pedal.

Starting Switch (Hydra-Matic): Delco-Remy Solenoid No. 1118136 (no relay) used mounted on starter. Control Switch (Delco-Remy No. 1996044) mounted on steering column and controlled by Hydra-Matic selector lever. Operative only with lever in "N."

▷*CAUTION*—Overrunning clutch pinion clearance must be adjusted whenever solenoid removed from starter.

See Electrical Equipment Section for complete data.

Starter Switch Adjustment—*See Nash Hydra-Matic Drive in Transmission Section.*

GENERATOR

Delco-Remy Models. As follows:

Model	Generator No.	Armature No.
1949 (Std.)	1102702	1911454
1949 (Std.)	1102712	1913597
1950 (Std.)	1102712 & 1102730	1913597
1951 (Std.)	1102730	1913597
1951 (Optl.)	1102748	1917175

Maximum Charging Rate—See Regulator (below).

Performance Data
(Exc. Gen. No. 1102748)

	Amperes	Volts	R.P.M.
Cold	30①	8.0	1750

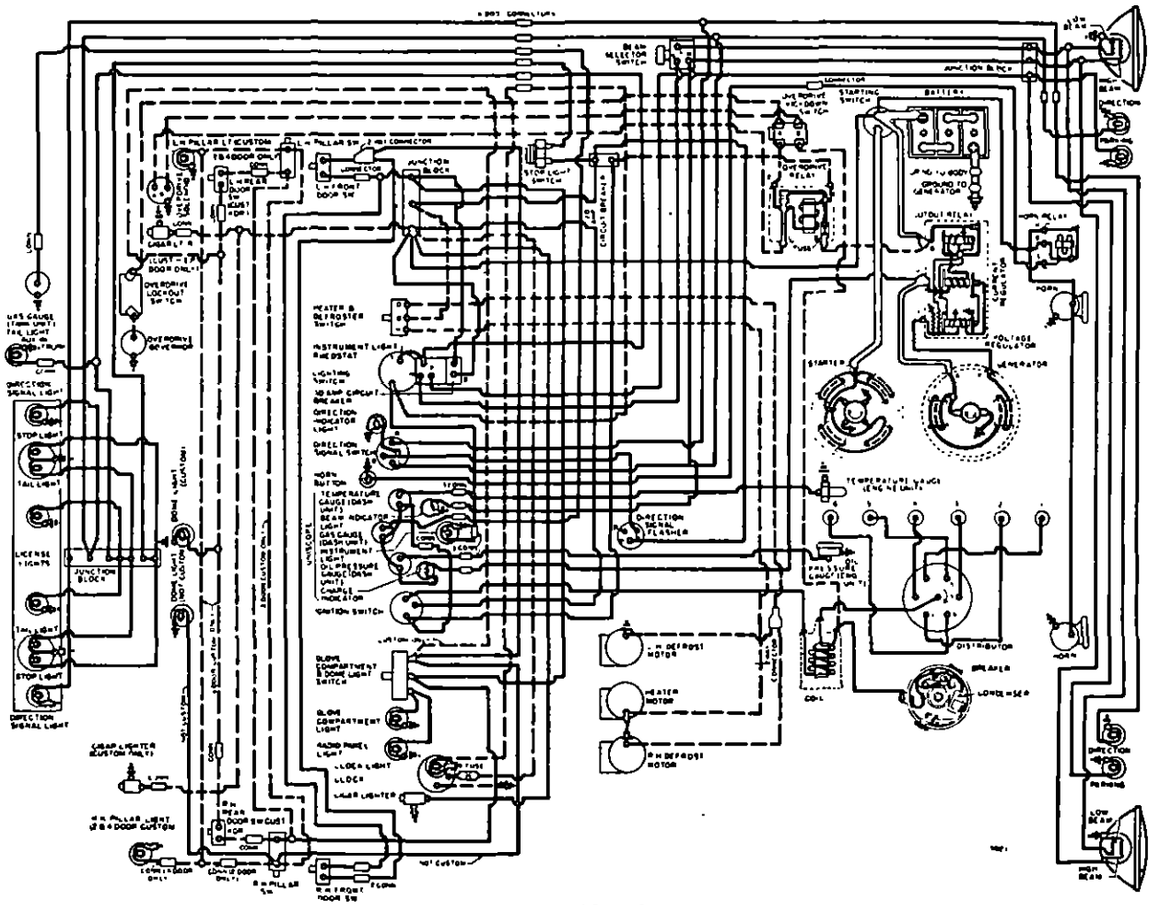
Performance Data
(Gen. No. 1102748)

	Amperes	Volts	R.P.M.
Cold	40	8.0	1950

①—Not maximum output. See Current Regulator.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—28 ozs.



Field Current—1.75-1.9 amps. (Exc. 1102748); 1.90-2.05 amps. (1102748). All at 6.0 volts.

Belt Adjustment: Adjust belt so that 25 lbs. pressure midway between fan and generator shaft pulley will deflect belt ½". To adjust, loosen fan mounting bracket screws, raise fan, tighten screws. Belt misalignment corrected by shims back of fan bracket.

REGULATOR

Delco-Remy No. 1118302 (Use with Gen. Nos. 1102702, 712, 730). No. 1118382 (Use with Gen. No. 1102748). Voltage & Current type.

CONTINUED ON NEXT PAGE

1950 MODELS

CONTINUED FROM PRECEDING PAGE

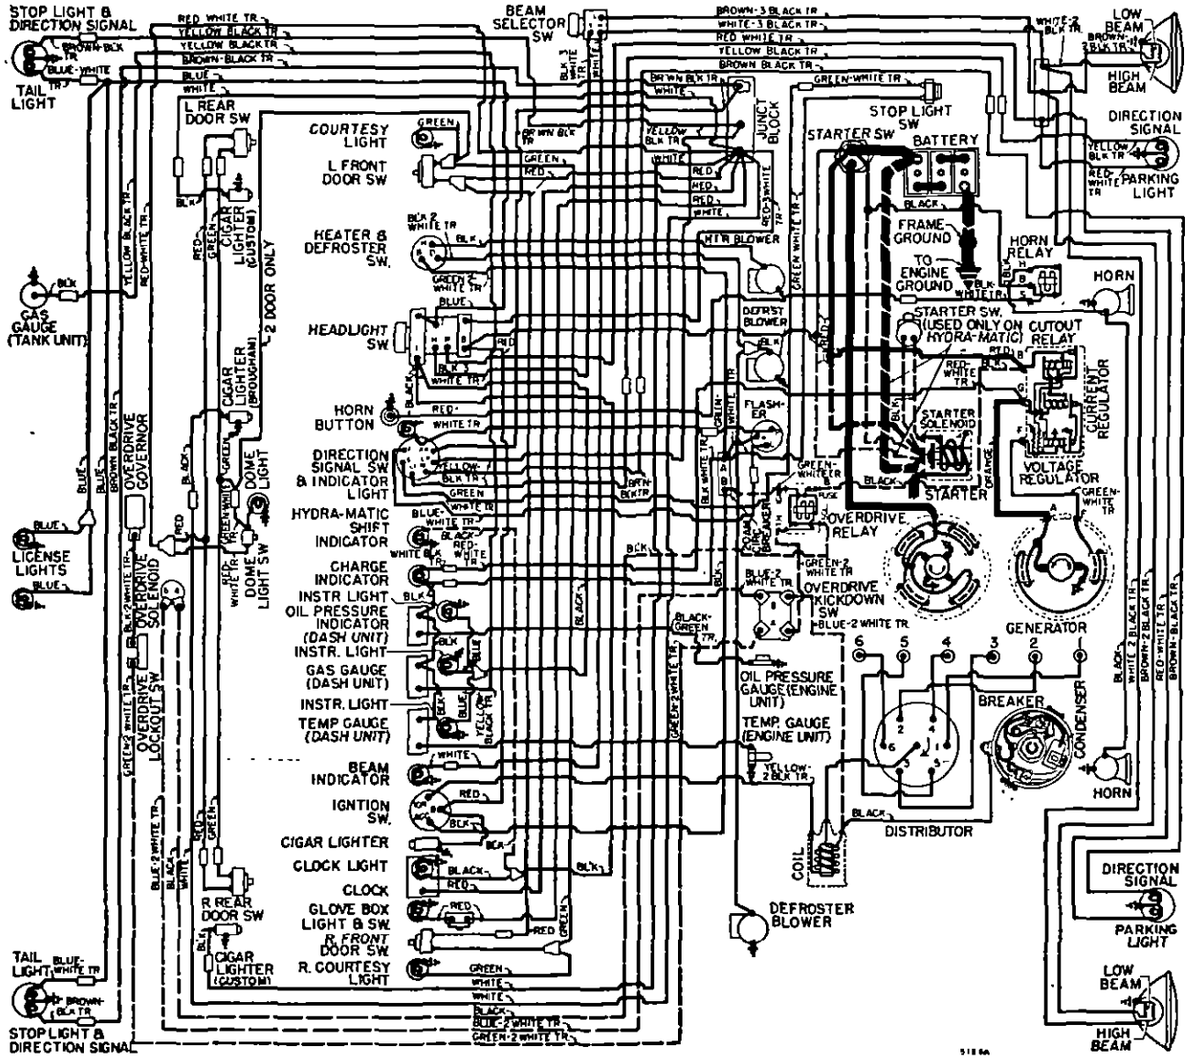
►*"1118300 SERIES"* regulators have screw adjustment for settings and single regulator springs. ***See Electrical Equipment Section for complete data.***

CAUTION—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

Cutout Relay

Cuts In—5.9-6.8 volts hot (set to 6.4 volts hot).
Contact Gap—.020" (same for both sets).
Air Gap—.020" (with contacts just closed).

Voltage Regulator



Setting—7.0-7.7 volts hot (set to 7.4 volts hot). Regulator is over-compensated for temperature. Should be checked with cover in place and hot.
Air Gap—.075" with armature pressed down to point where contacts are just touching.
Checking & Adjustment—*See Electrical Equipment Section.*

Current Regulator

Setting (1118302)—32-40 amperes hot (set to 36).
Setting (1118382)—40-46 amperes hot (set to 42).
Air Gap—.075" with armature pressed down to point where contacts are just touching.
Checking & Adjustment—*See Electrical Equipment Section.*

LIGHTING

Headlamps: Hall "Sealed Beam" type.
See Electrical Equipment Section for complete data.
Beam Indicator—Red jewel located on right side of instrument cluster face.

1951 MODELS

Switches

Lighting—Rotary type (1949). Push-pull type, Nash *Part No. 3128824* (1950-51).

Beam Selector—Nash No. 3104105.

MISC. ELECTRICAL

GENERATOR CHARGE INDICATOR: Indicator light in instrument cluster. Lights when ignition turned on should go out when generator begins to charge.

CIRCUIT BREAKERS: Two used, one mounted on Lighting Switch (30 amp.), and one mounted on left body sill brace under hood (20 amp.).

20 ampere Circuit Breaker protects Stop Light Switch, Heater and Defroster Switch, and Directional Signal Flasher.

30 ampere Circuit Breaker protects Dome Light, Pillar Light, Courtesy Light, and Main Lighting Switches.

FUSES: Electric Clock. 3 ampere in clock feed.

Overdrive—30 ampere. On overdrive Relay on left body sill brace under hood.

HORNS (1949): *Auto-Lite No. HW-4013 or HW-4025* (Low Pitch). HW-4014 or HW-4026 (High Pitch).

HORNS (1950): Auto-Lite No. HW-4025 (Low Pitch), HW-4026 (High Pitch).

HORNS (1951): Delco-Remy No. 1999657 (Low Pitch), No. *1999658* (High Pitch).

Horn Relay: Nash No. 3125879.
Contact Gap—.028".
Air Gap—.016-.020" with contacts closed.
Contacts Close—1.5-3.0 volts.
***Contacts Open**—.5 volts minimum (open from seal).*

ENGINE

ENGINE SPECIFICATIONS: 6 cyl. Valve-in-head.

Model	Bore	Stroke	Displacement
All	3⅜"	4⅜"	234.8 cu. ins.

Model	Compr. Ratio	Rated HP	Developed HP
1949	7.02-1	27.34	112 at 3400 RPM
1950-51	7.3-1①	27.34	②115 at 3400 RPM

①—7.5-1 ratio with optional head.
②—With 7.3-1 ratio head.

Compression & Vacuum Reading—*See Tune-up.*

CYLINDER HEAD & TIGHTENING TORQUES: *See Nash Special Data.*

OIL PAN REMOVAL—*See Nash Special Data.*

PISTONS: Aluminum alloy, Cam Ground, Tin plated, strut type with split skirt. **Length**—3⅞".

Weight—12½ ozs. (stripped).
Clearance—.001-.002". See Fitting New Pistons.
NOTE—Cylinder out-of-round and taper limits .004".
Removal—Pistons and rods removed from above.

Original Piston & Bore Sizes: *See Nash Special Data.*

Fitting New Pistons: With all parts clean and dry, fit pistons so that piston will support its own weight in any portion of cylinder. If feeler gauge used, insert .002" x ½" feeler at right angles to pin bosses on side opposite slot, 12-18 lbs. pull to withdraw.

Replacement Pistons: Furnished Std., and .002", .005", .010", .020" and Semi-finished.

Installing Pistons: Piston slot toward left side (opposite side from oil squirt hole in rod).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

PISTON RINGS: 2 compression, 1 slotted oil and 1 Thompson U-Flex oil ring, (U-Flex ring in #4 groove), per piston. All rings above pin. Oil ring grooves drilled with oil drain holes.

Ring	Width	End Gap	Side Clearance
Comp.	.0930 ± .0005"	.015 ± .005"	.002-.004"
Oil Control	.15475"	.015 ± .005"①	.002-.004"

①—No end gap on Thompson U-Flex oil rings.

Replacement Piston Rings: Furnished Std., .020", .030" oversize.

Installing Rings—Top compression ring inner groove up, lower compr. ring outer groove down.

PISTON PIN: Diameter—.8746". Length—2.824". Floating type, with lock ring at each end.

NOTE—Pin hole in piston offset toward camshaft.

Pin Fit in Piston—Palm push fit with piston heated (heat piston in boiling water).

Pin Fit in Rod Bushing—Light thumb push fit at room temperature.

Replacement Pins: Standard & .001", .003" oversize.

CONNECTING ROD: Length—8¾". Weight—36¼ ozs.

Crankpin Journal Diameter—2.000-2.001". *See "Original Bearing Sizes" in Nash Special Data.*

Lower Bearing—Removable steel-backed, babbitt lined type. No shims.

Clearance—.001-.002". **Sideplay**—.008-.014".

Bearing Adjustment: None. Replace bearings. *See "Connecting Rods & Bearings" in Nash Special Data.*

Replacement Bearings: Std. & .002", .010" Undersize.

Installing Rods: Oil spray hole in lower end of rod must be toward camshaft (right) side of engine.

CRANKSHAFT: Seven bearing, counterweighted type with vibration dampener mounted on front end.

Vibration Dampener—*See Nash Special Data.*

Journal Diameters—2 31/64" (2.479"). *See "Original Bearing Sizes" in Nash Special Data.*

Bearings—Removable, steel-backed, micro-babbitt.

Clearance—.0018".

▷*CENTER MAIN BEARING REMOVAL NOTE*—Oil pump must be removed before removing center bearing cap. *See "Oil Pump" in Nash Special Data.*

Bearing Adjustment: None. Replace bearings. *See "Crankshaft & Main Bearings" in Nash Special Data.*

Replacement Bearings: Std. & .002", .010" Undersize.

Crankshaft Rear Oil Seal: *See Nash Special Data.*

End Thrust: Taken by Center (#4) bearing.

Endplay—.0055 ± .002".

▷*FLYWHEEL REPLACEMENT CAUTION (Std. & Overdrive Cars)*—*See "Flywheel" in Nash Special Data.*

CAMSHAFT: Non-adjustable 2 sprocket chain drive.

▷*1951 CAMSHAFT PRODUCTION CHANGE*—Cast iron replaces forged steel shaft in production and for service replacement. (CAUTION—*Cast iron type oil pump drive gear and steel or chilled cast iron tappets must be used with cast iron type camshaft).* Camshaft identified by machined area between cams (steel camshaft), not machined between cams (cast iron type).

Camshaft Removal—*See Nash Special Data.*

Bearings—Steel-backed, babbitted bushings.

Clearance—.002".

End Thrust: Taken by front bearing, controlled by position of chain sprocket (press fit on shaft).

Endplay—.004-.006".

Timing Chain: Morse. Non-adjustable type. Width 1". Pitch ⅜". Length 22½" or 60 links.

Camshaft Setting: Install chain with punch mark on camshaft sprocket and inverted "V" mark on crankshaft sprocket adjacent and in line with straightedge across shaft centers. Check setting as follows: turn engine over until punch mark on camshaft sprocket at one o'clock position with crankshaft sprocket mark just beginning to mesh with chain—there should be 9½ links or 19 pins (2 pins to each link) between marks.

VALVES:	Head Diam.	Stem Diam.	Length
Intake	①.	.3725-.3740"	②
Exhaust	1 15/32"	.3725-.3740"	②
1949-50—	**Seat Angle**	**Lift**	**Stem Clearance**
Intake	③.	11/32"	⑤
Exhaust	③.	④	⑥
1951—	**Seat Angle**	**Lift**	**Stem Clearance**
Intake	⑦.	.365"	.002-.004"
Exhaust	③.	.3635"	.002-.004"

①—1¾" (1949-50); 1 25/32" (1951).
②—5 17/32" (1949); 5 31/32" (1950-51).
③—Valve face angle 44°. Valve seat angle 45°.
④—11/32" (1949); 3/8" (1950).
⑤—.0015-.003" (1949); .002-.004" (1950).
⑥—.002-.0035" (1949); .002-.004" (1950).
⑦—Valve face angle 29°. Valve seat angle 30°.

ROCKER ARM & VALVE LUBRICATION: *CAUTION*—Hollow bolt must be used in front mounting bolt hole of rocker arm assembly for proper lubrication.

▷*1951 VALVE STEM OIL SEAL ASSEMBLY CAUTION*—*See "Valve Stem Oil Seal Assembly" in Nash Special Data.*

Valve Guides: *1950 PRODUCTION CHANGE—Two different settings used.* Early 1950 cars, install valve guides to a height of 11/16" above boss. Late 1950 & 1951, install guides to a height of 25/32". *CAUTION—Check height of original guide and install new guide to same height.*

Valve Springs: Single springs used.

Free Length—2 3/32" (1949); 2 1/16" (1950-51).

1949 Valve Spring Specifications

Valve	Spring Pressure	Spring Length
Closed	.53 ± 5 lbs.	1 11/16"
Open	146 ± 5 lbs.	1 11/32"

1950-51 Valve Spring Specifications

Valve	Spring Pressure	Spring Length
Closed	53-58 lbs.	1 13/16"
Open	①.	1 7/16"

①—141-151 lbs. (1950); 144-154 lbs. (1951).

Installing Springs—Closely coiled end of springs should be installed toward the valve seat.

Valve Lifters: Mushroom type. Lifter guide holes in block. Remove from below with camshaft out.

VALVE TIMING

Tappet Clearance: (1949)—.015" (Intake), .018" (Exhaust). (1950-51)—.012" (Intake), .016" (Exhaust). *(NOTE—1950-51 Tappet Setting supersedes previous setting on 1950-51 cars only).*

Valve Timing: *See Camshaft Setting above.*

1949 Valve Timing

Intake Valves—Open 4°32' BTDC. Close 61°28' ALDC.

Exhaust Valves—Open 49°28' BLDC. Close 16°32' ATDC.

1950-51 Valve Timing

Intake Valves—Open 8°30' BTDC. Close 55°30' ALDC.

Exhaust Valves—Open 53°30' BLDC. Close 10°30' ATDC.

Valve Timing Check (1949)—With tappet clearance set at .0225", #1 exhaust valve should close with #1 piston 16½° after top dead center and "DC" mark on vibration dampener slightly past pointer on timing chain cover. Reset tappet clearance to correct setting.

Valve Timing Check (1950-51—Set #6 piston on TDC in firing position, then set valves on #1 cylinder to .003" clearance. Slowly rock crankshaft back and forth. If timing is set correctly, the exhaust valve should open before the "DC" mark on vibration dampener lines up with pointer. **Note the amount of opening.** Now the intake valve should open an equal distance after the "DC" mark passes the pointer.

LUBRICATION

Engine Oiling System: Pressure to main, connecting rod, and camshaft bearings, piston pins, and timing chain.

Crankcase Capacity—6 quarts.

Normal Oil Pressure—50 lbs. at 30 MPH.

Oil Pressure Regulator—Located in body of pump. Not adjustable. Opens at 50-58 lbs.

Oil Pump: Gear type in crankcase mounted on center main bearing cap.
See "Oil Pump" in Nash Special Data.

Cylinder Cover Vent: Vent located on front of cover just behind water outlet elbow to allow escape of vapors inside cover. Turn to open position at all times, especially winter, except for hot dusty driving.

Oil Filter: Replace cartridge at 8000 mile intervals or more often if necessary.

Oil Pressure Gauge: Auto-Lite Electric.

Dash Unit—Auto-Lite No. 11577A (1949); 11981A (1950); 12267A (1951).

Engine Unit—Auto-Lite No. 11527A.
See "Oil Gauges" in Miscellaneous Section.

COOLING

Cooling System: Pressure type with pressure valve and vacuum valve (relief valves) in filler cap, and positive circulation with water pump.

Capacity—17 quarts (18 quarts heater).

Pressure Valve—AC 850501 (Filler Cap). Opens at 4 lbs.

▷*PRESSURE VALVE CHANGE NOTE*—Effective at car serial No. R-633937, a 7 lb. pressure radiator cap entered production.

Water Pump: New sealed-in, non-adjustable type.
See Water Pump Section for complete data.

Removal—Drain cooling system, disconnect pump drive coupling (remove rear bolt), disconnect inlet hose, remove pump mounting capscrews.

Belt Adjustment: *See Generator Belt Adjustment.*

Thermostat: Dole. In water outlet on cylinder head.

Setting—Starts to open at 162-168°F. and should be fully open 20° above starting point.

Temperature Gauge: Auto-Lite Electric.

Dash Unit—Auto-Lite No. 11579A (1949); 11983A (1950); 12269A (1951).

Engine Unit—Auto-Lite No. 11528A.
See "Temperature Gauges" in Miscellaneous Section.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

CLUTCH

Borg & Beck Model 10A7—Assembly No. 950 stamped on cover. Single plate, dry disc type.
See Clutch Section for complete data.
Facings—Woven type, 2 used. Inside Diameter 7". Outside Diameter 10". Thickness 1/8".
Adjustment: Pedal free travel 1/2-3/4". Adjust by loosening locknut and turning adjusting nut on connector link at clutch fork.
►*CAUTION—Do not disturb adjustment of clutch beam lever-to-pedal rod.*
Removal: Remove transmission (see below), disconnect clutch pedal linkage, remove clutch housing and pan, punchmark flywheel, clutch cover and pressure plate (reassemble to same marks), take out clutch fork and mounting screws in cover flange.

TRANSMISSION

Warner Model AS25-T86E (Std. Trans. without Overdrive). AS26-T86E (1949 & Early 1950 with Overdrive). AS46-T86E (Late 1950 & 1951 with Overdrive). Constant mesh, synchro-mesh (second & high), sliding gear (low & reverse).
See Transmission Section for complete data.
Transmission Control: Mechanical steering col. shift.
See Transmission Section for complete data.
Removal: Remove Rear Axle (see REAR AXLE below), disconnect transmission shift rods at levers on left side of case and speedometer cable. Support engine at rear, free rear engine mounting, take out transmission upper mounting bolts, install special guide bolts in these holes, remove lower mounting bolts, slide transmission back, remove from below.

OVERDRIVE

Warner Type R10 (part of AS26-T86E & AS46-T86E Transmission). Optl. Governor controlled type with electrical solenoid operation and throttle operated kick-down switch. Overdrive in AS46-T86E assembly is new "centered ring gear" type.
See Transmission Section for complete data.
Overdrive Solenoid—Delco-Remy No. 1118132.
Governor—Auto-Lite No. TGE-4005.
Control Relay—Auto-Lite No. HRT-4101.
Overdrive Fuse—30 amperes. On BAT terminal of overdrive relay (on left body sill under hood).
Removal: Remove as a unit with transmission after disconnecting control cable and all wiring on overdrive case. See Transmission Removal (above).

HYDRA-MATIC DRIVE

OPTIONAL EQUIPMENT

Description—Four-speed planetary type automatic transmission and fluid coupling. *NOTE*—1951 Type has hydraulically operated "Cone Type Clutch" Reverse mechanism.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Hydra-Matic Drive" in Transmission Section.*
►*TESTING & TROUBLE SHOOTING: See "Hydra-Matic Drive" in Transmission Section.*
Lubrication—Check fluid level every 1000 miles. Add fluid, as required, to maintain level at "F" mark on dip stick. Drain and refill every 25,000 miles. Use Hydra-Matic Fluid (Automatic Transmission Fluid Type "A") as furnished in containers marked with approval symbol "AQ-ATF".
Capacity—Approx. 11 qts. (refilling after draining). **12 qts.** (when transmission disassembled).
Checking Fluid Level—Set hand brake, place selector lever in "N" position, start engine and idle for a minimum of two minutes after transmission has reached operating temperature. Roll back front floor mat on right side, remove inspection cover in floor pan, clean all dirt and lint from floor and around oil level indicator on right side of transmission case. Place selector lever in "N" position and idle engine with lever in this position while checking fluid level. Fluid level should be at "F" mark on dip stick, add fluid to bring level up to "F" mark.
►*OTHER HYDRA-MATIC DRIVE DATA: See "Hydra-Matic Drive" in Transmission Section.*

UNIVERSALS

Mechanics or Saginaw—Roller bearing type, 1 used.

Propeller Shaft: (Synchro-mesh Trans.) One piece steel shaft with pre-lubricated, rubber mounted center bearing installed in torque tube.
(1950 Hydra-Matic Drive) Two shafts used. Front shaft is tubular and is splined to rear solid steel shaft which is supported in the center with a pre-lubricated, rubber mounted bearing installed in the torque tube.
(1951 Hydra-Matic Drive) One piece shaft.
See Nash Rear Axle in the Rear Axle Section for Propeller Shaft Data.

REAR AXLE

Own Make. Semi-floating, hypoid gear type with torque tube drive.
See Rear Axle Section for complete data.
Ratio—(Std.) 4.1-1 (10-41). **(Overdrive)** 4.4-1 (9-40). **(Hydra-Matic)** 3.5-1 (11-39).
Backlash—.004-.006". Shim adjustment.
Removal: Raise and support rear end of car. Disconnect rear brake cable at center equalizer. Disconnect torque tube at rear of transmission. Disconnect brake hose and shock absorbers at the axle end, (will hang from the body). Roll axle free from car.
Axle Shaft Removal—Remove wheel, pull drum (use hub puller J-1644). Disconnect brake line and cable. Remove backing plate mounting bolts nuts, take off oil seal retainer, backing plate, and wheel bearing adjusting shims (check thickness of shims, replace same amount when re-assembling). Withdraw axle shaft using Puller J-2498, do not drag on inner seal.
Wheel Bearing Adjustment—Shims located between backing plate and flanged end of housing. To adjust, remove wheel and backing plate (above), add or remove shims for endplay. **Endplay**—.002-.004".

SHOCK ABSORBERS

Delco or Monroe—Direct acting, hydraulic type.

FRONT SUSPENSION

Front Suspension: Independent, linked parallelogram type with coil springs and direct acting shocks.
See Front Suspension for complete data.
Kingpin Inclination—8 1/2° crosswise.
Caster—0° desired. Limits 0° to Pos. 1/2°. Shim adjustment ("C" washers) at upper control arms.
Camber—0° desired. Limits Neg. 1/4° to Pos. 1/4°. Shim adjustment as for Caster (above).
Toe-In—1/16" to 3/16". Loosen clamp at both ends of adjustable tubes in each tie rod. Turn tubes equally.
Steering Geometry—Inner wheel 23° plus 1/2°, minus 0°. Outer wheel 20°.

STEERING GEAR

Gemmer Model 305—Worm-and-roller type with "push-pull" adjustments.
See Steering Gear Section for complete data.

BRAKES

Service Brakes: Bendix hydraulic, duo-servo, single anchor type without Eccentric Adjustment. Hand lever applies rear wheel service brakes.
See Brake Section for complete data.
Drums—Cast-iron. Diameter 10".
Lining—Moulded type. Width 2". Thickness 3/16". Length 22" per wheel.
Clearance—.015" heel and toe.
Braking Power—53% front wheels, 47% rear.
Hand Brakes: See Service Brake data (above).

MISC. MECHANICAL

Windshield Wiper: Cable Operated—vacuum type.
See Miscellaneous Section for complete data.

M DEL IDENTIFICATION

SERIAL NUMBER: On plate on right side of dash under hood.

Starting Serial Number—	1952	1953
Kenosha	K-519001	K-563501
El Segundo	KC-37001	KC-43001
Toronto	KT-6101	KT-6901

ENGINE NUMBER: Stamped on right side of engine block above exhaust pipe.

Starting Engine Number—	1952	1953
All	S-308001	S-365001

TUNE-UP

►*1953 CARS STALLING AT ABRUPT STOP (HOT WEATHER): Split type floats can be installed to correct this condition. See "Carter WCD Carburetor" in Carburetor Section for complete data.*

►*1953 STUMBLE ON LIGHT ACCELERATION CARBURETOR CHANGE*—To correct condition on cars before Engine No. S-378530 (Carburetors prior to B3), install parts furnished in Carter Unitized Pkg. 75-900U, Nash No. 3116455. *NOTE*—Cars after above engine number (Carburetors dated "B3" and later) have this change. *See "Carter WCD" in Carburetor Section for complete data.*

►*1953 ENGINE CUTTING OUT ON EXTREME RIGHT TURN*—If engine cuts out on extreme right turn, install 5° angular spacer plate, Nash No. 3138063, under carburetor so that it is inclined 5° toward right side of engine. NOTE—This spacer installed in production beginning Engine No. K-568401 (Kenosha), No. KC-43798 (El Segundo).

COMPRESSION PRESSURE: 120 lbs. at cranking spd.

VACUUM READING: Steady 18-21", 500-550 RPM idle.

FIRING ORDER: 1-5-3-6-2-4.

SPARK PLUG GAPS: .030".
Plugs—Auto-Lite A-7 or AN-7. 14mm. Tighten to 30 ft. lbs.

DISTRIBUTOR: Delco-Remy No. 1112382. Full automatic advance type with separate vacuum spark control and octane selector adjustment.
Breaker Gap—.018-.024". (Set to .022").
Cam Angle—31-37°. DO NOT exceed Breaker Gap limits of .018-.024" to obtain dwell.
Breaker Arm Spring Tension—17-21 ozs. *NOTE*—Tension for high speed points 19-23 ozs.
Rotation—Counter-clockwise viewed from above.
Automatic & Vacuum Advance—*See Ignition.*

►*DISTRIBUTOR REMOVAL CAUTION (STATESMAN)*—Align Timing Mark on crankshaft vibration damper with indicator on timing chain cover before removing distributor. Damage to No. 3 & 4 piston may result if this is not done.

COIL: Delco-Remy No. 1115380. Mounted on engine.
Ignition Current—2.3 amperes idling. 5 amperes stopped.

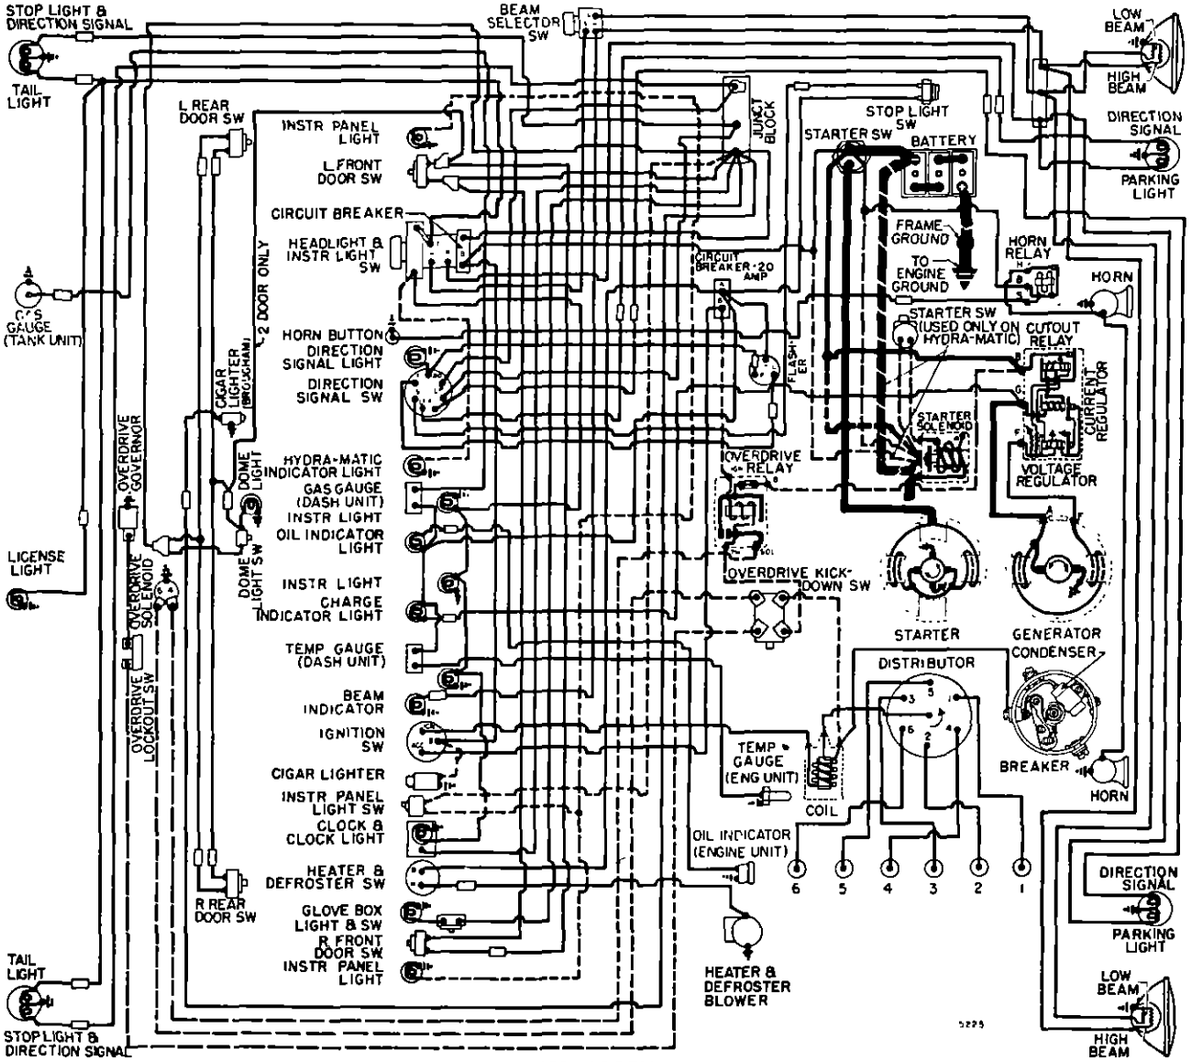
CONDENSER: Delco-Remy No. 1869704.
Capacity—.18-.23 microfarad.

IGNITION TIMING: (1952) TDC. (1953) 4° ATDC.
Timing Mark—Groove on damper aligned with pointer on chain cover above damper.

►*EARLY 1952 TIMING MARK CHANGE*—On all cars before Engine No. S-310696, change original timing mark on vibration dampener to ¼" to the left (viewed from front of engine). Mark new location with white lead or file a new mark in dampener. *CAUTION—Make sure that this correction has not already been made.* Engines after above number were changed in production.

Timing Procedure—*See Ignition Timing.*

CARBURETION (1952): Carter 877SA. 1¼" single barrel downdraft type with Climatic Control.
Idle Setting—½ to 1½ turns open. For richer mixture, turn screws out.
Idle Speed—500-550 RPM. (Std. & O.D. Trans. Cars), 375 RPM. with selector lever in Neutral "N" position (Hydra-Matic Cars).
Float Level—½". Measure from under side of bowl cover to top of float with bowl cover inverted and weight of float on needle valve.



Fast Idle: .054" between throttle valve and bore of carburetor (side opposite port). Remove thermostatic coil housing and baffle plate. Adjust by bending connector link at lower end.

Choke Adjustment: Set one point lean.

Fuel Pump Pressure: 3-4½ lbs.

CARBURETION (1953): Carter WCD 2034S. Dual downdraft type with Climatic Control.
Idle Setting—1/2 to 1 1/8 turns open. For richer mixture turn screws out.
Idle Speed—(Std. & O.D. Trans. Cars) 550 RPM. (Hydra-Matic Cars) 375 RPM. with selector lever in Neutral "N" position.
Float Level—5/32". With bowl cover inverted and

CONTINUED ON NEXT PAGE

1952 MODELS

CONTINUED FROM PRECEDING PAGE

weight of float on needle valve, measure from top of float to machined surface of casting.

►*SPLIT TYPE FLOAT CAUTION—Both floats must be set EXACTLY alike. See "Carter WCD Carburetor" in Carburetor Section for complete data.*

Hydra-Matic Throttle Linkage Adjustment: *See "Hydra-Matic Drive" in Transmission Section for complete data.*

Fast Idle: .026" between throttle valve and bore of carburetor (side opposite idle port). With choke valve tightly closed, and fast idle adjusting screw on high step of cam, tighten screw until proper throttle valve opening secured.

Choke Adjustment: Set on index.

Fuel Pump Pressure: 3-4½ lbs.

VALVE TAPPET CLEARANCE: Hot Setting—.015" All valves. **Cold Setting**—.016" Intake, .018" Exhaust. NOTE—Tappet screws are self-locking type.

IGNITION

IGNITION SWITCH: Nash No. 3131343.

COIL: Delco-Remy No. 1115380. Mounted on engine. **Ignition Current**—2.3 amperes idling. 5 amperes stopped.

CONDENSER: Delco-Remy No. 1869704. Capacity—.18-.23 microfarad.

DISTRIBUTOR: Delco-Remy No. 1112382. Full automatic advance type, with separate vacuum spark control and octane selector adjustment.
Breaker Gap—.018-.024" (*set to .022"*).
Cam Angle—31-37°. DO NOT exceed Breaker Gap limits of .018-.024" to obtain dwell.
Breaker Arm Spring Tension—17-21 ozs. *NOTE*—Tension for high speed points 19-23 ozs.
Rotation—Counter-clockwise viewed from above.

Automatic Advance

Degrees Distr.	RPM	Degrees Eng.	RPM
0-2	325	0-4	650
3.5-5.5	400	7-11	800
7-9	950	14-18	1900
10-12	1400	20-24	2800

Vacuum Spark Control: *(CAUTION—Two different Vacuum Spark Control Units used on 1952 Cars. Vacuum Advance Specifications are different)*—**Delco-Remy No. 1116045 (1952); Delco-Remy No. 1116072** (1952-53). Separate unit mounted on hold-down plate and linked to advance arm.
Plunger Travel—(1116045) 11/32-⅜". (1116072) 13/64-¼".

Vacuum Advance—1116045

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	3-5"
8.5°	17°	13-17"

Vacuum Advance—1116072

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	4-6"
5.5°	11°	11"

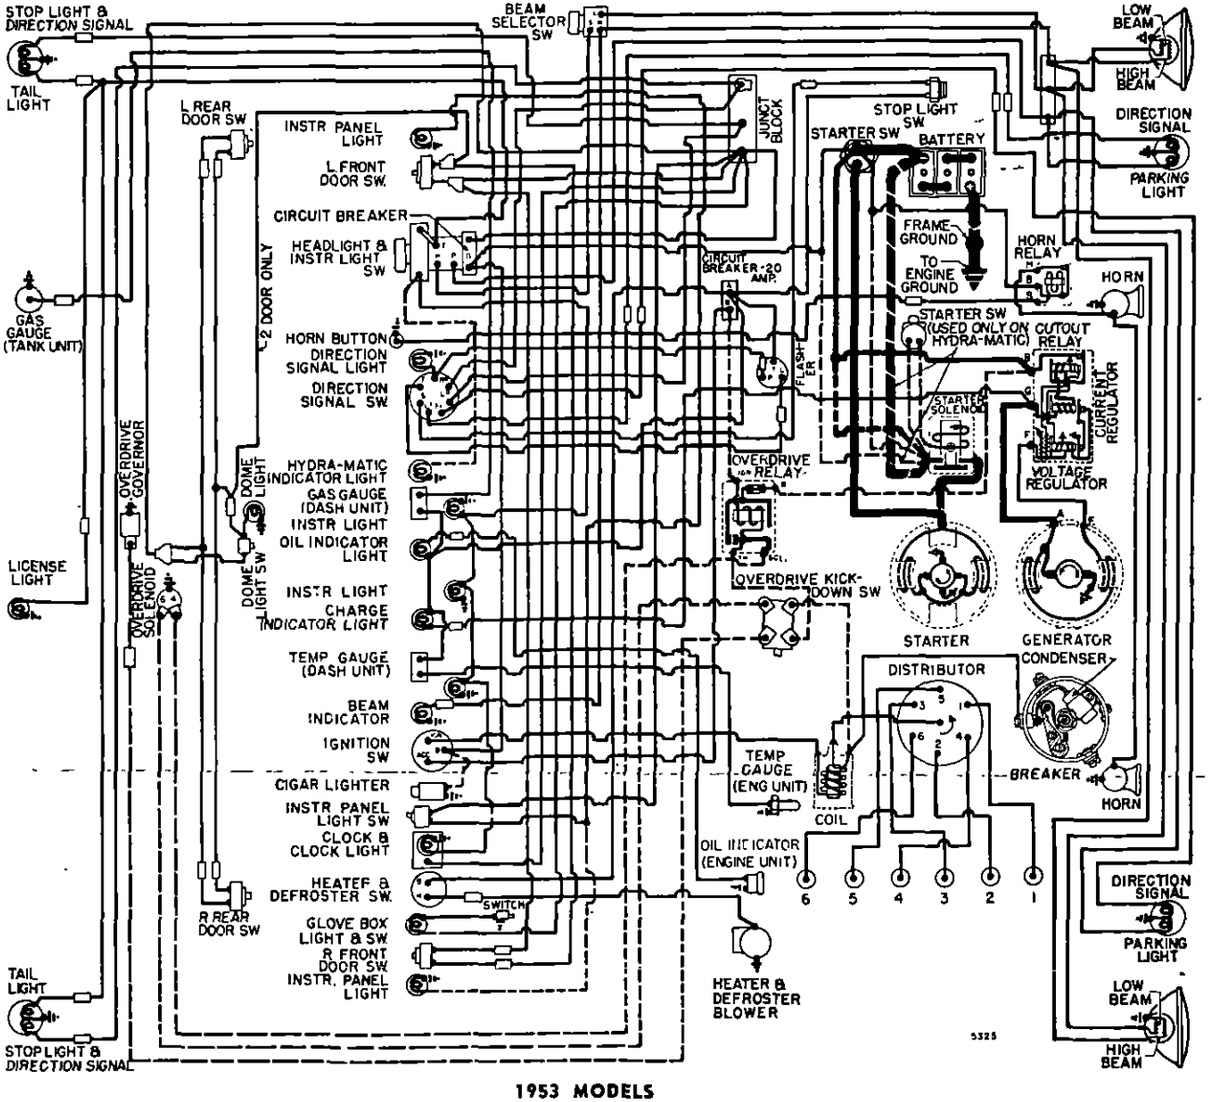
►*DISTRIBUTOR REMOVAL CAUTION*—Allgn Timing Mark on crankcase vibration damper with indicator on timing chain cover before removing distributor. Damage to No. 3 & 4 pistons may result if this is not done.

IGNITION TIMING

Standard Setting (1952) . . . . . **TDC**
Standard Setting (1953) . . . . . 4° **ATDC**
Timing Mark—Groove on damper aligned with pointer on chain cover above damper.

►*EARLY 1952 TIMING MARK CHANGE*—On all cars before Engine No. S-310696, change original timing mark on vibration dampener to ¼" to the left (viewed from front of engine). Mark new location with white lead or file a new mark in dampener.

CAUTION—Make sure that this correction has not already been made. Engines after above number were changed in production.



Timing (Using Timing Light)—Align ⅛" holes in clamp arm and distributor support and insert pin. Loosen distributor hold-down screw and center octane selector scale, tighten screw. Clip neon timing light to #1 spark plug, direct light at vibration damper at timing chain cover pointer. Idle engine at 450-500 RPM, loosen clamp arm bolt, rotate distributor until "/" mark on damper aligned with pointer, tighten clamp arm bolt, remove ⅛" pin in support. Check Octane Selector Setting.
Octane Selector Setting—Loosen hold-down screw in distributor, adjust scale so that slight ping secured at 10-15 MPH, with wide open throttle.

CARBURETOR

1952 MODELS

Carter YF, No. 877SA. 1¼" single barrel down-draft type with Climatic Control.
See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up.*

1953 MODELS

Metering Rods & Jets—*See Carter Jet Tables in Carburetor Section.*

Hydra-Matic Throttle Linkage Adjustment: *See Nash Hydra-Matic Drive in Transmission Section.*

Fast Idle—.054" between throttle valve and bore of carburetor (side opposite port). Remove thermostatic coil housing and baffle plate, adjust by bending connector link at lower end.
See Carburetion Equipment Section for complete data.

Automatic Choke: Carter Climatic Control (Single Barrel Carburetor).
Setting—Set 1 point lean.
See Carburetion Equipment Section for complete data.

1953 MODELS

Carter WCD No. 2034S. Dual (2-barrel) downdraft type with Climatic Control.

▷*1953 CARS STALLING ON ABRUPT STOP (HOT WEATHER): Split type floats can be installed to correct this condition. See "Carter WCD Carburetor" in Carburetor Section for complete data.*
STUMBLE ON LIGHT ACCELERATION (First Cars): See "Carter WCD" in Carburetor Section for installation of parts furnished in Unitized Pkg. Carter No. 75-900U, Nash No. S-378530.
ENGINE CUTTING OUT ON EXTREME RIGHT TURNS (First Cars): See Tune-Up data for installation of wedge spacer plate under carburetor.

Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up.*
Metering Rods & Jets—*See Carter Jet Tables in Carburetor Section.*

Hydra-Matic Throttle Linkage Adjustment: *See Nash Hydra-Matic Drive in Transmission Section.*

Fast Idle: .026" between throttle valve and bore of carburetor (side opposite idle port). With choke valve tightly closed, and fast idle adjusting screw on high step of fast idle cam, tighten screw until proper throttle valve opening secured.
See Carburetion Equipment Section for complete data.

Automatic Choke: Carter Climatic Control.
Setting—Set on index.
See Carburetion Equipment Section for complete data.

CARB. EQUIPMENT

Air Cleaner: AC Oil-wetted type Std., Oil-bath type Optl. Filter Element—AC No. 6 (oil-wetted type).

▷*OIL BATH AIR CLEANER CAUTION—To avoid carburetor damage, care must be taken when installing Oil Bath Air Cleaner. See "Air Cleaner" in Nash Special Data.*

Fuel Pump: Carter & AC types used as follows:
Carter Type—No. M-797S (All except Std. Trans. Cars). Combination fuel & vacuum.
AC Type—Fuel Pump No. 532 (with glass sediment bowl), No. 9801 (without bowl). Combination Fuel and Vacuum Pump No. 9800.
See Carburetion Equipment Section for complete data.
Pressure—3-4½ lbs.

Gasoline Gauge: Auto-Lite Electric type.
Dash Unit—Auto-Lite No. 12710-A.
Tank Unit—Auto-Lite No. 12642-A.
See Carburetion Equipment Section for complete data.

BATTERY

Auto-Lite Type 1M-100. 6 volt, 15 plate, 100 amp. hr. capacity.
Grounded Terminal—Positive (+) terminal.

▷*1953 BATTERY GROUND CABLE PRODUCTION CHANGE: See "Late 1953 Cars" following:*

1952 & Early 1953 Cars—Battery grounded to cylinder head with small ground strap extending from this point to body at wheel housing.

Late 1953 Cars—Body ground strap (above) discontinued and SEPARATE ground strap connected between transmission and rear engine cross-member.

▷*CAUTION—Whenever new type battery ground cable installed on first cars, ground strap at transmission (Nash No. 3137307) MUST ALSO BE INSTALLED.*
Location—Under hood on left side of engine.

STARTER

▷*STARTER PRODUCTION CHANGE CAUTION—Two different starters used on Hydra-Matic Drive Cars.*

Delco-Remy Numbers—	Starter	Armature
Std. Trans. (LHD)	1107119	1923018
Std. Trans. (RHD)	1107120	1923018
Hydra-Matic Trans.①	1107121	1923040
Hydra-Matic Trans.②	1107136	1925939

①—Early Hydra-Matic Transmission with 12" Torus, Trans. Serial No. E-52-1 or higher, or EA-53-1 or higher.
②—Later Hydra-Matic Transmission with 11" Torus, Trans. Serial E-53-1 or higher.

Drive (Standard)—Delco-Remy Automatic type. Delco-Remy No. 1923008.
Drive (Hydra-Matic)—Delco-Remy Automatic type. Delco-Remy No. 1925942 (1107121 Starter), No. 1923043 (1107136 Starter).
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—24-28 ozs.

Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5.65	70
11 "	Lock	3.25	550

Starting Switch: (Std. Trans.) Delco-Remy No. 1996478. Mounted on toe-board, actuated by fully depressing clutch.

Starting Switch (Hydra-Matic Cars): Switch, Nash No. 3134517 (Early cars with 12" torus), No. 3137292 (Later cars with 11" torus), mounted on left fender apron controlled by Control Switch mounted on steering column and operated by Hydra-Matic selector lever (operative in "N" by lifting lever).
Control Switch—Two types used (See Starter Change above). Early Cars—Delco-Remy No. 1996074 (with Vacuum Unit). Later Cars—Delco-Remy No. 1996077 (without Vacuum Unit).
Starter Switch Removal—Disconnect battery and remove vacuum hose from switch. Raise front end of car and disconnect both wires from starter switch and place gear shift operating lever in reverse position. Remove switch from bracket using a 1/4" drive ratchet handle and socket on threaded bushing retaining switch to bracket.

GENERATOR

Delco-Remy No. 1102777. Two brush type with voltage and current regulation.
Armature—Delco-Remy No. 1921981.
Maximum Charging Rate—45 amperes, 8.0 volts.
Charging-Rate Adjustment—None. See Regulator.

Performance Data

	Amperes	Volts	R.P.M.
Cold	45①	8.0	2450

①—Max. output controlled by current regulator.
①—Maximum output controlled by current regulator.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—28 ozs.
Field Current—1.90-2.05 amps., at 6 volts.
Belt Adjustment: ½" deflection in belt midway between fan and generator pulley with an application of 25 lbs. pressure.

REGULATOR

Delco-Remy No. 1118732. Voltage and current regulator.
See Electrical Equipment Section for complete data.

▷*TEST NOTE—To obtain operating temperature, run regulator at least 15 min. charging at 8-10 amps.*
CAUTION—Check generator for grounded field coils and leads before changing regulator settings to correct high charging rate or high voltage.

Cutout Relay
Cuts In—5.9-6.7 volts hot (set to 6.4 volts hot).
Contact Gap—.020" (same for both sets).
Air Gap—.020" (with contacts just closed).

Voltage Regulator
Setting—7.0-7.7 volts hot (set to 6.4 volts hot). Regulator is overcompensated for temperature. Should be checked with cover in place and hot.
Air Gap—.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator
Setting—45-51 amperes hot (set to 47 hot).
Air Gap—.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting—*See Electrical Equip. Section.*

LIGHTING

Headlamps: "Sealed Beam" type. Upper and lower beam controlled by selector switch on floor.
See Electrical Equipment Section for complete data.
Beam Indicator—Red jewel located on speedometer face below the numeral "5."

Direction Signal: Optl. *See Electrical Equip. Section.*
Direction Indicator—Bulb in direction signal switch handle, lights when signals flashing.

Switches
Lighting—Nash No. 3128824.
Beam Selector—Nash No. 3130120.
Instrument Lights—Controlled by turning lighting switch.
Directional Signal—Nash No. 3131527.
Heater & Defroster—Nash No. 3134340.
Stop Light—Nash No. 99469.

MISC. ELECTRICAL

GENERATOR CHARGE INDICATOR: Indicator light in instrument cluster. Lights when ignition turned on, should go out when generator begins to charge.

Low Oil Pressure Indicator: *See "Oil Pressure Gauge" under "Lubrication" below.*

CIRCUIT BREAKERS: Thermostatic type. Contacts remain closed under normal conditions, and open the circuit under an excessive load. Not adjustable.
30 Ampere—Located on main lighting switch. Protects headlights, tail, instrument panel, and interior lights. See Wiring diagram.
20 Ampere—Located on rear side of dash just forward of steering column. Protects stoplights, Oil Level Indicator, Temp. Indicator, Gas Gauge, Charge Indicator, Heater & Defroster, and Directional Signal Flasher. See Wiring diagram.

FUSES: Electric Clock. 3 amp., in clock lead.
Radio—14 amperes (located under control panel to right of steering column).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Overdrive—30 amperes (located in engine compartment at left side on overdrive relay).

HORNS: Delco-Remy No. 1999641 (Low Note). No. 1999642 (High Note).

Horn Relay: Nash No. 3127787.
Contact Gap—*.026".*
Air Gap—.016-.020" with contacts closed.
Contacts Close—1.5-3.0 volts.
Contacts Open—.5 volts minimum (open from seal).

ENGINE

►*ENGINE NOISE CAUTION—An engine sound similar to a loose piston may be caused by the standard dry type air cleaner. See "Air Cleaner Noise Correction" in Nash Special Data.*

►*RAMBLER (HYDRA-MATIC DRIVE) ENGINE CAUTION—The Statesman Engine (With Different Cylinder Head) used on Rambler Cars with Hydra-Matic Drive. See Rambler Car Pages for Developed Horsepower and Compression Ratio.*

ENGINE SPECIFICATIONS: 6 cylinder "L" head type. Intake manifold cast in block, (Iso-thermal fuel intake system).
Bore—3⅛". **Stroke**—4¼".
Displacement—195.6 cu. ins.

Model	Comp. Ratio	Rated HP.	①Dev. HP.
1952	7.1-1	123.44	88
1953	7.35-1	123.44	100

①—At 3800 RPM.
Compression & Vacuum Reading—*See Tune-Up.*

CYLINDER HEAD & TIGHTENING TORQUES: *See Nash Special Data.*

ENGINE & OIL PAN REMOVAL: *See Nash Special Data.*

PISTONS: Cam ground aluminum alloy, tin plated with steel strut and solid skirt.

►*PISTON NOTE*—Piston pin is offset in piston and piston is marked with a notch that should be toward front of engine when installed.

Original Piston & Bore Sizes: *See Nash Special Data.*
Removal—Pistons and rods removed from above.
Clearance—.001-.002". See Fitting Pistons.
Cylinder Out-of-Round & Taper Limits—.004". Rebore cylinder if taper exceeds .009".

Fitting New Pistons: With all parts clean and dry, fit pistons so that piston will support its own weight in any portion of cylinder. If feeler gauge used, insert .002" x ½" feeler at right angles to pin bosses, pull to withdraw feeler must be 12-18 lbs.

Replacement Pistons: Furnished Standard, .002", .005", .010", .020" and Semi-finished.

Installing Pistons: Notch in top edge of piston must be toward front of engine. *See Connecting Rod Installation.*

PISTON RINGS: 2 compression, 1 slotted oil ring and 1 Thompson U-Flex ring, (U-Flex ring in No. 4 groove), per piston. All rings above pin. Oil ring grooves drilled with oil drain holes.

Ring	Width	End Gap
Top Compression	.0930-.0935"	.010-.020"
Lower Compression	.0930-.0935"	.010-.020"
Upper Oil	.1545-.1550"	.010-.020"
Lower Oil	.154-.155"	①

①—No end gap with U-Flex rings.
Ring Side Clearance—.002-.004" (all rings).

Replacement Rings: Furnished Std. & .020" oversize.

Installing Rings: Stepped inner edge of both compression rings must be UP.

PISTON PINS: Diameter—.8593-.8595". **Length**—2¾". Locked in rod.
Pin Fit in Piston—Thumb press fit or .0003" maximum loose fit at room temperature (70°F.).

Replacement Pins: Standard, .001", .003" oversize.

CONNECTING ROD: Length—6⅝" (6.623-6.627").
Weight—25 ozs.
Crankpin Journal Diameter—2 3/32" (2.094-2.095"). *See "Original Bearing Sizes" in Nash Special Data.*
Lower Bearing—Steel backed babbitt lined type. No shims.
Clearance—.001-.002". **Sideplay**—.005-.015".

Bearing Adjustment: None. Replace bearings. *See "Connecting Rods & Bearings" in Nash Special Data.*
NOTE—Tangs on bearing shells must engage slots in rods and caps. Palnuts used on rod bolt nuts. Replace with new Palnuts each time nuts are removed.

Replacement Bearings: Furnished Standard, .002", .010", .012" undersize.

Installing Rods: Numbers on rod and bearing cap should be together and rod installed in same numbered cylinder with numbers toward camshaft side of engine. *See Piston Installation above.*

CRANKSHAFT: Four bearing counter-weighted type with vibration damper mounted on front end.
Vibration Dampener Removal & Installation—*See Nash Special Data.*

►*CRANKSHAFT REPLACEMENT NOTE—Replacement crankshaft furnished complete with vibration damper and flywheel. Assembly is balanced as a unit.*
Journal Diameters—2 31/64" (2.479").
See "Original Bearing Sizes" in Nash Special Data.
Bearings—Removable steel backed, micro-babbitt.
Clearance—.0007-.0029".

Bearing Adjustment: None. Replace bearings. *See "Crankshaft & Main Bearings" in Nash Special Data.*
NOTE—Upper bearing halves can be rotated in and out without removing crankshaft.

Replacement Bearings: Furnished Standard, .002", .010", .012" undersize.

Crankshaft Oil Seal: *See "Crankshaft & Main Bearing" in Nash Special Data.*

End Thrust: Taken by front (No. 1) bearing. (Thrust plate ahead of bearing). **Endplay**—.006-.008".
Endplay Adjustment—*See "Crankshaft & Main Bearings" in Nash Special Data.*

CAMSHAFT: 4 bearing. Non-adjustable chain drive.
Camshaft Removal—*See Nash Special Data.*
Bearings—Steel backed babbitted bushing.
Clearance—.002".

End Thrust: Thrust plate assembled on front face of engine between No. 1 bearing and camshaft sprocket. **Endplay**—.004-.006".
CAUTION—Thrust plate has long groove on rear face which provides valve tappet lubrication from No. 1 crankshaft bearing. Short groove on front face of plate lubricates timing chain and sprockets.

Timing Chain: Morse. Non-adjustable type. Width 1", Pitch ⅜". Length 22½" or 60 links.

Camshaft Setting: Install chain with the marked teeth of camshaft and crankshaft sprockets adjacent and in line with a straightedge across shaft centers. Check setting as follows: Turn engine over until punch mark on camshaft at 1 o'clock position, with mark on crankshaft sprocket just beginning to mesh with chain. There should be 9½ links or 19 pins (2 pins to each link) between marks.

VALVES:

	Head Diam. 1952	Head Diam. 1953	Stem. Diam. 1952-53	Seat Angle 1952-53
Intake	1.469"	1.594"	3.407-3.412"	①
Exhaust	1.281"	1.343"	3.407-3.412"	①

	Lift 1952	Lift 1953	Stem Clearance 1952	Stem Clearance 1953
Intake	.300"	.340"	.0013-.0047".	.002-.003"
Exhaust	.300"	.300"	.0013-.0047"	.002-.003"

①—Valve Face Angle 44°. Seat Angle in Block 45°.

Valve Guides: Pressed in block. Remove guides using Tool J-2814. Install guides using Tool J-1429-A

Valve Springs: Install springs with closed coil end up against cylinder block and seated in counter-bore in block. **Spring Free Length**—2 5/32".

►*CAUTION—Excessive wear of valve stem and guide will result if springs not properly seated in counter-bore.*

	Spring Pressure	Length
Valve Closed	37-41 lbs.	1 3/4"
Valve Open	75-82 lbs.	1 7/16"

Valve Lifters: Mushroom type operating in reamed holes in block. Lifters removed from below with camshaft out of engine. *See "Camshaft & Bearings" in Nash Special Data, for camshaft removal.*

VALVE TIMING

Tappet Clearance: Hot Setting—.015" All Valves.
Cold Setting—*.016" Intake, .018" Exhaust.*
NOTE—Tappet adjusting screws are self locking.

Valve Timing: See Camshaft Setting above.

1952 Models
Intake Valves—Open 6° BTDC. Close 50° ALDC
Exhaust Valves—Open 46° BLDC. Close 10° ATDC.

1953 Models
Intake Valves—Open 10° BTDC. Close 58° ALDC.
Exhaust Valves—Open 46° BLDC. Close 10° ATDC.
Valve Timing Check—Set No. 6 piston on TDC in firing position, then set valves on No. 1 cylinder to .003" clearance. Slowly rock crankshaft back and forth. If timing is set correctly, the exhaust valve should open before the "DC" mark on vibration damper lines up with the pointer. Note this distance. Intake valve should open an equal distance after the "DC" mark passes the pointer.

LUBRICATION

Engine Oiling System: Pressure to main, connecting rod, and camshaft bearings, valve tappets, and timing chain.
Crankcase Capacity—4 qts.

►*1952 CRANKCASE CAPACITY PRODUCTION CHANGE—Cars before Engine No. S-318073 require 5 quarts of oil to bring level to "F" mark on dipstick. See "Oiling System" in Nash Special Data.*
Normal Oil Pressure—50 lbs. at 30 MPH.
Oil Pressure Regulator—Spring loaded release valve under plug to rear of oil pump on lower edge of crankcase. Non-adjustable, opens at 50-58 lbs.

Oil Pump: Gear type pump mounted on right side of engine, driven by inclined shaft.

Oil Filter: Optional. Replace cartridge at 8000 miles or more often if necessary.

Oil Pressure Gauge: Carter pressure switch on engine controlling warning light on instrument panel.
Dash Unit—Warning light on instrument panel. Lights when ignition on, goes out when oil pressure sufficient to open engine unit contacts.
Engine Unit—Carter Pressure Switch No. A-954S. Nash No. 3134704.

COOLING

Cooling System: Pressure type with pressure valve and vacuum valve located in filler cap, and positive circulation with water pump.
Capacity—14 qts. (15 qts. with heater).
Pressure Valve—Nash No. (1952) 3112649, (1953) 3136627. In filler cap, opens at 7 lbs.

Water Pump: Sealed packing and bushing type.
See Water Pump Section for complete data.
Removal—Drain cooling system, remove distributor, disconnect pump drive coupling (remove rear bolt), disconnect inlet hose, remove mounting screws.

Belt Adjustment: *See Generator Belt Adjustment.*

Thermostat: Dole. In water outlet on cylinder head.
Setting—Starts to open at 167-173°, and should be fully open 20° above starting point.

Temperature Gauge: Auto-Lite Electric type.
Dash Unit—Auto-Lite No. 12711-A.
Engine Unit—Auto-Lite No. 11528-A.
See Miscellaneous Section for complete data.

CLUTCH

Borg & Beck Model 8A7—(Std. & O.D. Cars). Single plate dry disc type. Cover Assy. No. 987.
See Clutch Section for complete data.
Facings—Inside Diameter—5⅜". Outside Diameter —8". Thickness—⅛".

Adjustment: Pedal free travel ½-¾". Adjust by loosening locknut and turning adjusting nut on connector link at clutch fork.
►*CAUTION—Do not disturb adjustment of clutch beam lever-to-pedal rod.*

Removal: Remove transmission (see below), disconnect clutch pedal linkage, remove clutch housing and pan, punchmark flywheel, clutch cover, and pressure plate (reassemble to same marks), take out clutch fork and mounting screws in cover flange. Remove clutch assembly.

SYNCHRO-MESH TRANSMISSION

Own Make. Constant mesh, synchro-mesh (second & high), sliding gear (low & reverse), all helical gear.
►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Warner Transmission" in Transmission Section.*

Transmission Control: Steering column shift.
See Transmission Section for complete data.

Removal: Remove rear axle (see REAR AXLE below), disconnect transmission shift rods at levers on left side of case, and speedometer cable. Support engine at rear, free rear engine mounting, take out transmission upper mounting bolts, install special guide bolts in these holes, remove lower mounting bolts, slide transmission back on guide bolts, remove from below.

OVERDRIVE

Warner Type AS8-R10B—With centered ring gear. Optional (with Nash Transmission). Governor controlled type with electric solenoid operation and throttle operated kick-down switch.
►*LOCKOUT SWITCH ELIMINATION:* Switch not used on later cars (switch mounting hole on transmission closed by plate, and two switch leads connected together). *NOTE*—If switch inoperative on early cars, cut switch out of circuit by connecting both switch leads to same terminal.
See Transmission Section for complete data.
Overdrive Solenoid—Delco-Remy No. 1118155.
Governor—Auto-Lite No. TGE-4004.
Control Relay—Nash No. 3123721.
Overdrive Fuse—30 amp. On BAT terminal of overdrive relay.

Removal: Remove as a unit with transmission after disconnecting control cable and all wiring on overdrive case. See Transmission Removal above.

HYDRA-MATIC TRANSMISSION

"Dual Range", Four-Speed Planetary type automatic transmission and fluid coupling, Modulated Throttle Pressure, and hydraulically operated reverse mechanism.
►*HYDRA-MATIC PRODUCTION CHANGE CAUTION—The following Hydra-Matic Transmissions were used in 1952-1953 production. TRANSMISSIONS AND TRANSMISSION PARTS NOT INTERCHANGEABLE.*
Series E-52—Used prior to ENGINE NO. S-375274.
Series E-53-1 to E-53-50 & EA-53-1000 and Higher—Used prior to SERIAL NO. K-582900 (Kenosha), KC-46185 (El Segundo). This transmission has a 12" torus and front & rear flywheel housing.
Series E-53-1000 and Higher—Used beginning SERIAL NO. K-582900 (Kenosha), KC-46185 (El Segundo). This transmission has an 11" torus and one piece flywheel housing.
►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTIONS: See "Hydra-Matic Drive" in Trans. Sect.*
►*TESTING & TROUBLE SHOOTING: See Trans. Sect.*
Lubrication—Check fluid every 1000 miles. Add fluid as required to maintain level at "F" mark on dipstick. Drain and refill every 25,000 miles. Use Hydra-Matic Fluid (Auto. Trans. Fluid type "A").
Checking Fluid Level—Set hand brake, place selector lever in "N" position, start engine and idle for a minimum of two minutes after transmission has reached normal operating temperature. With selector lever in "N," remove dipstick and check fluid level (dipstick located under right front floor plate). Add the necessary amount of fluid to bring fluid level to "F" mark. *CAUTION—Use care not to allow dirt or lint to enter transmission.*
►*CAUTION—Do not fill above "F" mark on dipstick.*

Capacity	(Drain-&-Refill)	(After Overhaul)
First (12" Torus)	11 qts.	12 qts.
Later (11" Torus)	8½ qts.	9½ qts.

OTHER HYDRA-MATIC SERVICE DATA—See "Hydra-Matic Drive" in Transmission Section.

UNIVERSALS

Mechanics 1½ CR or Saginaw. One used (in torque tube adapter at rear of transmission). Tapered coil spring is installed ahead of joint to properly locate joint on driveshaft. NOTE—Universal is slip fit on transmission end and slight press fit on driveshaft.

Propeller Shaft (Std. & Overdrive Cars): Steel shaft with pre-lubricated rubber mounted center bearing, **(1 bearing used with 4.4-1 rear axle); (2 bearings used with 4.9-1 rear axle),** installed in torque tube. Propeller shaft is machined .003" undersize on front end to facilitate installation and removal.

Propeller Shaft (Hydra-Matic Drive): One piece tubular steel shaft with one universal at forward end and companion flange at rear. No center bearing.
►*PROPELLER SHAFT COUPLING PRODUCTION CHANGE:* New "slip type" coupling (replacing former type coupling and nut) used on cars beginning Serial No. K-604703 (Kenosha). *See "Nash Hypoid Rear Axle" in Rear Axle Section for installation of both types of couplings and use of later type to replace former coupling-and-nut type.*
►*CAUTION:* When connecting first type shaft coupling to pinion shaft, coupling must be tightened to 300 ft.lbs. to prevent loosening in service.

REAR AXLE

Own Make. Semi-floating, hypoid gear type with torque tube drive.
See Rear Axle Section for complete data.

Transmission	Axle Ratios	Ratio
Std. Trans.	4.4-1 (8-35)	Std. 4.1-1 (9-37) Optl.
Overdrive	4.9-1 (8-39)	Std. 4.4-1 (8-35) Optl.
Hydra-Matic		3.3-1 (13-43)

Backlash—.002-.006". Shim adjustment.

Removal: Jack up and support rear end of body. Disconnect rear brake cable at equalizer, torque tube at rear of transmission, brake hose and shock absorbers at rear axle end (allow shocks and brake hose to hang from body). Roll axle assembly out from under car. *See Nash Rear Axle in Rear Axle Section for Torque Tube Bracket Adjustment.*
Axle Shaft Removal—Remove wheel, pull drum (use hub puller J-1644). Disconnect brake line and cable. Remove backing plate mounting bolt nuts, take off oil seal retainer, backing plate, and wheel bearing adjusting shims. Withdraw axle shaft using puller J-2498, do not drag shaft on inner oil seal.
Endplay—.002-.004".

Rear Suspension: Coil spring type with conventional rear axle. *See Rear Axle Section for complete data.*

SHOCK ABSORBERS

Delco or Monroe. Direct acting hydraulic type. Serviced by replacement.
Front—Nash No. 3133914. **Rear**—Nash No. 3135354.

FRONT SUSPENSION

Front Suspension: Independent type with coil springs located between upper ends of steering knuckle pin and seat in outer wheelhouse panel.
►*1952 PRODUCTION CHANGES & ADJUSTMENT CAUTIONS—See Front Suspension Section.*
Kingpin Inclination—6½°.
Caster—0° to Pos. ½° (Pos. ½° preferred).
Camber—¼° Neg. to ¼° Pos. (0° preferred).
Toe-In—1/16" to 3/16".
Toe-Out on Turns—Outer wheel turned 20°, inner wheel should be turned 23½°.

STEERING GEAR

Gemmer Model 305—Worm-and-Roller type with "push-pull" adjustments.
See Steering Gear Section for complete data.

BRAKES

Service Brakes: Bendix (Lockheed) Hydraulic, self-centering (floating shoe) type. Hand lever applies rear wheel service brakes.
NOTE—No anchor pin adjustment on these brakes.
See Brake Section for complete data.
Wheel Cylinders—(Diameter) Front 1". Rear ⅞".
Drums—Cast-Iron. Diameter 9".
Lining—Molded type. *CAUTION*—Different width and length used on each shoe, as follows:

Brake Shoe	Width	Length	Thickness
Primary	2"	9⅞"	.214"
Secondary	1¾"	7⅝"	.214"

Clearance—Eccentric adjustment for each shoe. Shoes should just be free of drag *(CAUTION*—make hard brake application to centralize shoes and release brakes before making adjustments).

Hand Brake: See Service Brakes (above).

MISC. MECHANICAL

Windshield Wiper: Vacuum, Link-and-Arm type.
See Miscellaneous Section for complete data.

MODEL IDENTIFICATI N

SERIAL NUMBER: On plate attached to center of cowl under engine hood.

Starting Serial Number—	1952	1953
Kenosha	R-656001	RC-14501
El Segundo	R-692101	RC-19001

ENGINE NUMBER: On upper right hand corner of the engine block.

Starting Engine Number—	1952	1953
All	A-165001	A-210001

TUNE-UP

COMPRESSION PRESSURE: 120 lbs. (Jetfire); 130 lbs. (Dual Jetfire) at cranking speed.

VACUUM READING: 18-21" idling at 500-550 RPM.

FIRING ORDER: 1-5-3-6-2-4.

SPARK PLUG GAP: .030".
Plugs—Auto-Lite A-7 or AN-7. 14mm. Tighten to 30 ft. lbs.

►*DUAL JETFIRE SPARK PLUG NOTE—"Heli-Coil" thread inserts used in spark plug holes on engines with aluminum cylinder heads beginning with Engine No. LMA-221152.*

DISTRIBUTOR: Delco-Remy No. 1110227. Full automatic advance type with auxiliary vacuum spark control.
Breaker Gap—.018-.024" (Set to .022").
Cam Angle—31-37°. DO NOT exceed Breaker Gap limits of .018-.024" to obtain dwell.
Breaker Arm Spring Tension—17-21 ozs.
Rotation—Clockwise viewed from above.
Automatic & Vacuum Advance—*See Ignition.*

COIL: Delco-Remy No. 1115380. Mounted on right front fender apron.
Ignition Current—2.3 amperes idling, 5 stopped.

CONDENSER: Delco-Remy No. 1869704.
Capacity—.18-.23 microfarad.

IGNITION TIMING: TDC.
Timing Mark—Groove on damper aligned with pointer on chain cover above damper.
Timing Procedure—*See Ignition Timing.*

CARBURETION (Jetfire): Carter YH, No. (1952) 895S, SA, (1953) 895SA. "Horizontal" type with Climatic Control.
Idle Setting—1-1½ turns open. For richer mixture, turn screw out.
Idle Speed—(Std. Trans. & Overdrive) 500-550 RPM. (Hydra-Matic Cars) 375 RPM. with selector lever in Neutral "N" position.
Float Level—3/8" from bowl cover to top of float with bowl cover assembly inverted and float resting on pin in needle seat.

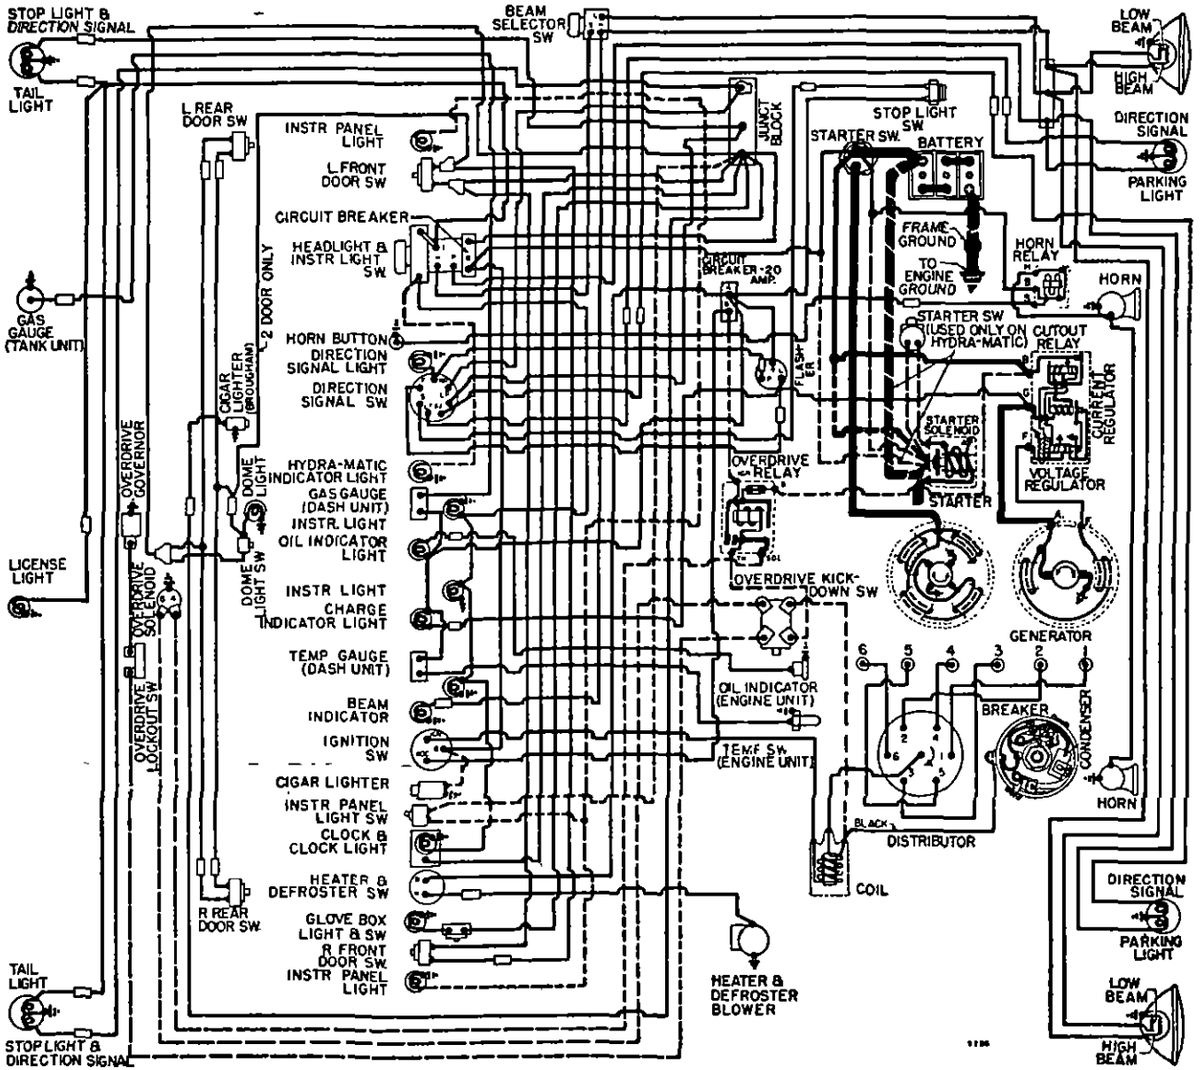
►*CAUTION—Do not compress spring in intake needle which would cause incorrect setting.*

Hydra-Matic Throttle Linkage Adjustment: *See "Hydra-Matic Drive" in Transmission Section for data.*

Fast Idle: .030" between throttle valve and bore of carburetor (side opposite idle port) with choke valve closed. Remove thermostatic coil housing and baffle plate. Adjust by bending connector arm.

Choke Adjustment: With one-piece choke piston (Carter No. 160-35), **set one point lean.** With two-piece choke piston (Carter No. 160-116S), **set one point rich.**

Fuel Pump Pressure: 3-4½ lbs.



CARBURETION (Dual Jetfire): Carter YH, No. 973S (front), No. 974S (rear). "Horizontal" type with Climatic Control.

►*AUTOMATIC CHOKE THERMOSTATIC COIL ASSY. & SETTING CHANGES FOR IMPROVED HOT STARTING PERFORMANCE: See Automatic Choke and Fast Ide Settings below and "Carter YH Horizontal Carburetor" In Carburetor Section for complete data.*

Idle Setting—See Adjustment Procedure below.

Idle Speed—(Std. Trans. & Overdrive) 550-650 RPM. (Hydra-Matic Cars) 375 RPM. with selector lever in Neutral "N" position.

Dual Jetfire Idle Adjustment Procedure—
1) Remove air cleaner boots and "Tee" from carburetor air horns.
2) Adjust throttle stopscrew on rear carburetor as follows: Hold choke valve open, back off throttle stopscrew until throttle valve is just closed, then turn stopscrew in approximately 2 turns to crack throttle valve slightly. Adjust **front** carburetor similarly.
3) Start engine and allow it to idle until normal temperature reached. Attach Tachometer.
4) Adjust rear carburetor stopscrew for minimum idle speed of 550 RPM.
5) While noting idle speed, synchronize front carburetor by adjusting connecting throttle linkage between carburetors, opening front carburetor throttle just to the joint where a further opening begins to increase engine speed. At this point, air suction noises in both carburetors should be identical.
6) Replace air cleaner boots and "Tee" connections.

1952 MODELS

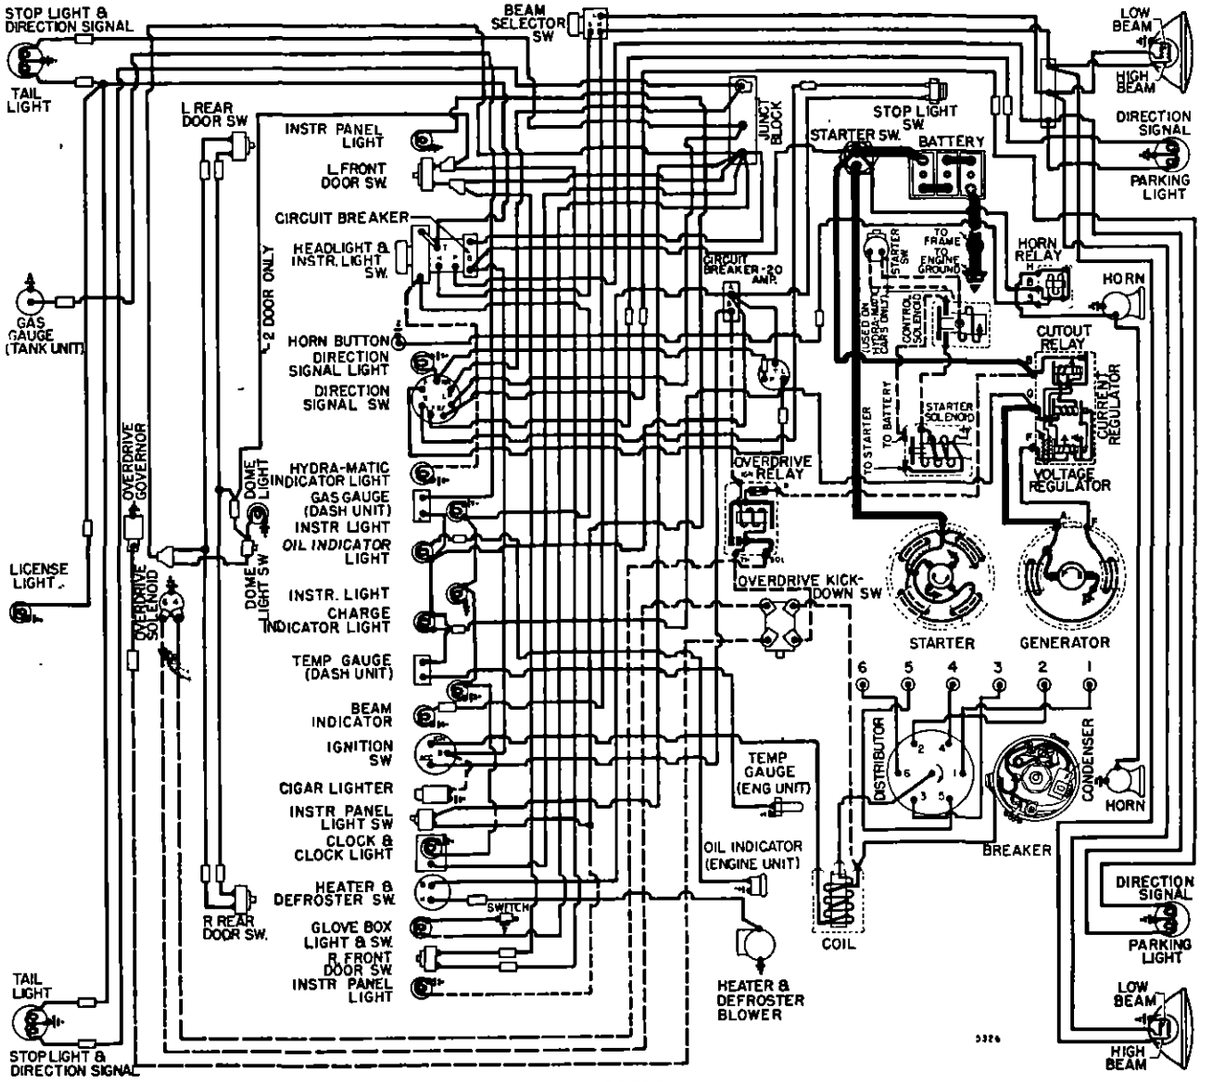
7) Adjust idle mixture on rear carburetor by turning adjusting screw in (to lean mixture) until engine begins to be rough, then turn screw out ¼ turn. Adjust idle mixture for front carburetor similarly. 8) Recheck idle speed. If not within limits of 550-650 RPM., repeat throttle synchronization (1 thru 5)
Float Level—7/16" from bowl cover to top of float with bowl cover assembly inverted and float resting on pin in seated needle.

►***CAUTION—Do not compress spring in intake needle which would cause incorrect setting.***

Hydra-Matic Throttle Linkage Adjustment: ***See "Hydra-Matic Drive" in Transmission Section for data.***

Fast Idle: .015" (Gauge T109-44) between throttle valve and bore of carburetor (side opposite idle port) with choke valve closed. Remove thermostatic coil housing and baffle plate, adjust by bending connector arm. ***CAUTION—Above setting supersedes .030" setting originally specified.***

Choke Setting: CAUTION—Different setting required for each type Thermostatic Coil Assembly:
First "N" Type—No. 170N-250S—1 Point Lean.
Later "P" Type—No. 170P-250S—2 Points Lean.



Fuel Pump Pressure: 3-4½ lbs.

VALVE TAPPET CLEARANCE: .012" **Intake**, .016" **Exhaust** (Engine at normal operating temperature).

IGNITION

IGNITION SWITCH: Nash No. 3131343.

COIL: Delco-Remy No. 1115380. Mounted on right front fender apron.

1953 MODELS

Ignition Current—2.3 amperes idling, 5 stopped.

CONDENSER: Delco-Remy No. 1869704.
Capacity—.18-.23 microfarad.

DISTRIBUTOR: Delco-Remy No. 1110227. Full automatic advance type with auxiliary vacuum control.
Breaker Gap—.018-.024" (set to .022").
Cam Angle—35°. Test limits with .022" gap 31-37°.
Breaker Arm Spring Tension—17-21 ozs.
Rotation—Clockwise viewed from above.

Automatic Advance

Degrees Distr.	R.P.M.	Degrees Eng.	R.P.M.
0-2	350	0-4	700
6-8	650	12-16	1300
10-12	1050	20-24	2100
13-15	1350	26-30	2700

Vacuum Spark Control: Delco-Remy No. 1116044. Separate unit mounted on hold down plate and linked to advance arm. **Plunger Travel**—7/64".

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	4-6"
6°	12°	14-16"

IGNITION TIMING

Standard Setting ..... **TDC**
Timing Mark—Groove on damper at front of engine aligned with pointer on chain case cover.
NOTE—Car manufacturer recommends that Neon Timing Light be used to set timing.
Timing (with Neon Timing Light)—Connect timing light to #1 spark plug, direct light at vibration damper, idle engine, loosen clamp bolt and adjust distributor until groove on damper appears in line with pointer on chain case cover, tighten clamp bolt.

CARBURETOR

Carter YH (Jetfire) No. 895S, SA. (Dual-Jetfire) No. 973S (front), 974S (rear). "Horizontal" type with Climatic Control.

►***DUAL JETFIRE (973S, 974S) CARBURETOR AUTOMATIC CHOKE THERMOSTATIC COIL ASSY. & SETTING CHANGES FOR IMPROVED HOT STARTING PERFORMANCE: See Automatic Choke and Fast Idle Settings below and "Carter YH Horizontal Carburetor" in Carburetor Section for complete data.***

Settings (Idle Setting, Float Level, and Accelerating Pump): ***See Tune-Up.***
Metering Rods & Jets—***See Carter Jet Table in Carburetor Section.***

Hydra-Matic Throttle Linkage Adjustment: ***See "Hydra-Matic Drive" in Transmission Section for data.***

Fast Idle: (895S, SA) .030" (Gauge T109-29), (973S, 974S) .015" (Gauge T109-44) throttle valve opening or clearance between valve and bore of carburetor (side opposite idle port) with choke valve closed. Remove thermostatic coil and baffle plate, adjust by bending connector arm.

►***CAUTION—Above setting on 973S & 974S supersedes .030" setting originally specified.***
See Carburetion Equipment Section for complete data.

Automatic Choke: Carter Climatic Control.

►***CAUTION—DIFFERENT SETTINGS used as follows:*** **895S, SA** (With one-piece Choke Piston)—**1 point lean.** (With two-piece Choke Piston)—**1 point rich.** **973S & 974S**—(with First "N" type No. 170N-250S Coil) 1 Point Lean, (With Later "P" type No. 170P-250S Coil) 2 Points Lean.
See Carburetion Equipment Section for complete data.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

CARB. EQUIPMENT

Air Cleaner: AC Oil-wetted type Std., Oil-bath type Optl. Filter Element AC No. 6 (Std.), No. 22 (Optl. Oil-bath).

Fuel Pump: Carter & AC type used as follows:
Carter Type—No. M-798S (All except Std. Trans. Cars). Combination fuel & vacuum.
AC Type—Fuel pump only. Replacement Pump No. 533 (with glass bowl) or 9802 (without bowl). No. 9799 is replacement combination fuel and vacuum.
See Carburetion Equipment Section for complete data.
Pressure—3-4½ lbs.

Gasoline Gauge: Auto-Lite Electric type.
Dash Unit—Auto-Lite No. 12710-A.
Tank Unit—Auto-Lite No. 12642-A.
See Carburetion Equipment Section for complete data.

BATTERY

Auto-Lite CT-1-15. 6 volt, 15 plate, 105 amp. hr.
Grounded Terminal—Positive (+) terminal.

►***1953 BATTERY GROUND CABLE PRODUCTION CHANGE: See "Late 1953 Cars" following:***

1952 & Early 1953 Cars—Battery ground to cylinder head with small ground strap extending from this point to body at wheel housing.

Late 1953 Cars—Body ground strap (above) discontinued and SEPARATE ground strap connected between transmission and rear engine cross-member.

►***CAUTION—Whenever new type battery ground cable installed on first cars, ground strap at transmission (Nash No. 3137307) MUST ALSO BE INSTALLED.***
Location—Under hood, left side of engine.

STARTER

Delco-Remy No.—	Starter	Armature
Std. Trans. (LHD)	1107950	1911832
Std. Trans. (RHD)	1107959	1911832
Hydra-Matic Cars (Early)	1107965	1867897
Hydra-Matic Cars (Later)	1108007	1917855

►***STARTING SWITCH CONTROL PRODUCTION CHANGE (Hydra-Matic Cars): See Starting Switch***
Drive (Std.)—Delco-Remy 1882549 automatic type.
Drive (Hydra-Matic)—Delco-Remy No. 1873789. Overrunning clutch with solenoid pinion shift.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—24-28 ozs.

Performance Data—1107950

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5.65	70
14 ft. lbs.	Lock	3.15	570

Performance Data—1107959

Torque	R.P.M.	Volts	Amperes
0 ft.lbs.	5500	5.0	65
16 "	Lock	3.0	600

Performance Data—1107965

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	6000	5.0	60
15 ft. lbs.	Lock	3.0	600

Performance Data—1108007

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5.65	70
11 ft. lbs.	Lock	3.25	550

Starting Switch (Standard): Delco-Remy No. 1996478. On toe-board, actuated by fully depressing clutch.

Starting Switch (Hydra-Matic Cars): Delco-Remy No. 1118136 Solenoid (pinion shift and starting switch solenoid) on starter and controlled as follows:
Control Switch (First Cars)—D-R No. 1996074 on steering column, operated by Hydra-Matic selector lever (operative in "N" position by lifting lever).
Control Switch (Later Cars)—Starter solenoid (on starter) controlled by second solenoid, Nash No. 3137326, which is controlled by regular control Switch, D-R No. 1996074 (same as on first cars).
Starter Switch Removal—Disconnect battery and remove vacuum hose from switch. Raise front end of car and disconnect both wires from starter switch and place gear shift operating lever in reverse position. Remove switch from bracket, using a ¼" drive ratchet handle and socket on threaded bushing that retains switch to bracket.
Starter Switch Adjustment—***See "Hydra-Matic Drive" (Nash Linkage Adjustment) in Transmission Section.***

GENERATOR

Delco-Remy No. 1102777. Two brush type with current & voltage regulation.
Armature—Delco-Remy No. 1921981.
Maximum Charging Rate—45 amperes, 8.0 volts.
Charging Rate Adjustment—None. See Regulator.

Performance Data

	Amperes	Volts	R.P.M.
Cold	45①	8.0	2450

①—Max. output controlled by current regulator.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—28 ozs.
Field Current—1.90-2.05 amps. at 6 volts.

Belt Adjustment: ½" deflection in belt midway between fan and generator pulleys with an application of 25 lbs. pressure.

REGULATOR

Delco-Remy No. 1118732. Voltage and current regulator. Test units at full operating temperature.
See Electrical Equipment Section for complete data.

►***TEST NOTE—To obtain operating temperature, run regulator at least 15 min. charging at 8-10 amps.***

►***CAUTION***—Check generator for grounded field coils and leads before changing regulator settings to correct for high voltage or high charging rate.

Cutout Relay
Cuts In—5.9-6.7 volts hot (set to 6.4 volts hot).
Contact Gap—.020" (same for both sets).
Air Gap—.020" (with contacts just closed).

Voltage Regulator
Setting—7.0-7.7 volts hot (set to 7.4 volts hot). Regulator is over-compensated for temperature. Should be checked with cover in place and hot.
Air Gap—.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting—***See Electrical Equip. Section.***

Current Regulator
Setting—45-51 amperes hot (set to 47 hot).
Air Gap—.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting—***See Electrical Equip. Section.***

LIGHTING

Headlamps: "Sealed Beam" type. Upper and lower beam controlled by selector switch on floor.
See Electrical Equipment Section for complete data.
Beam Indicator—Red jewel located on speedometer face below the numeral "5".

Switches
Lighting—Nash No. 3128824.
Beam Selector—Nash No. 3130120.
Instrument Lights—Controlled by turning lighting switch.
Directional Signal—Nash No. 3131527.
Heater & Defroster—Nash No. 3134340.
Stop Light—Nash No. 99469.

MISC. ELECTRICAL

GENERATOR CHARGE INDICATOR: Indicator light in instrument cluster. Lights when ignition turned on, should go out when generator begins to charge.

LOW OIL PRESSURE INDICATOR: ***See "Oil Pressure Warning Light" under LUBRICATION.***

CIRCUIT BREAKERS: Thermostatic type. Contacts remain closed under normal conditions, and open the circuit under an excessive load. Not adjustable.
30 Ampere—Located on main lighting switch. Protects headlights, tail, instrument panel, and interior lights. See Wiring diagram.
20 Ampere—Located on rear side of dash just forward of steering column. Protects stoplights, Oil Level Indicator, Temp. Indicator, Gas Gauge, Charge Indicator, Heater & Defroster, and Direction Signal Flasher.

FUSES: Electric Clock. 3 amp. in clock feed.
Overdrive—30 amp. On Overdrive Relay.
Radio—14 amperes (located under control panel to right of steering column).

HORNS: Delco-Remy No. 1999641 (Low Note). No. 1999642 (High Note).

Horn Relay: Nash No. 3127787.
Contact Gap—.026".
Air Gap—.016-.020" with contacts closed.
Contacts Close—1.5-3.0 volts.
Contacts Open—.5 volts minimum (open from seal).

ENGINE

ENGINE SPECIFICATIONS: 6 cylinder valve-in-head type. Cylinders cast enbloc, with intake manifold cast in block, (Iso-thermal intake system).
Bore—3½". **Stroke**—4⅜".
Displacement—252.6 cu. in.
Rated Horsepower—29.4.
Developed Horsepower—(Jetfire) 120 at 3700 RPM. (Dual Jetfire) 140 at 4000 RPM.
Compression Ratio—(Jetfire) 7.3-1, (Dual Jetfire) 8.0-1. *NOTE*—Dual Jetfire head is Aluminum.
Compression & Vacuum Reading—***See Tune-Up.***

CYLINDER HEAD & TIGHTENING TORQUES: ***See Nash Special Data.***

►***CYLINDER HEAD NOTE—Aluminum Cylinder Head used on Dual Jetfire and Cast Iron Cylinder Head used on Jetfire engines. Heads are interchangeable.***

ENGINE & OIL PAN REMOVAL: ***See Nash Special Data.***

PISTONS: Aluminum alloy, cam ground, tin plated, strut type with split skirt.

►***1953 PISTON PRODUCTION CHANGE—Three different type pistons used in production. CAUTION—it is important that when replacing less than complete sets that the same type pistons be used.***

Original Piston & Bore Sizes: ***See Nash Special Data.***
Removal—Pistons and rods removed from above.
Clearance—.002". See Fitting Pistons.
Fitting Piston—With all parts clean and dry, fit pistons so that piston will support its own weight

ENGINE

CONTINUED FROM PRECEDING PAGE

in any portion of cylinder. If feeler gauge used, insert .002" x ½" feeler at right angles to pin bosses, pull to withdraw feeler must be 12-18 lbs.
NOTE—Cylinder out-of-round & taper limits .004".

Replacement Pistons: Furnished Standard, .002", .005", .010", .020" and Semi finished.

Installing Pistons: Notch in top edge of piston must be toward front of engine. See Connecting Rod Installation.

PISTON RINGS: 2 compression, 1 slotted oil and 1 Thompson U-Flex ring, (U-Flex ring in No. 4 groove), per piston. All rings above pin. Oil ring grooves drilled with oil drain holes.

Ring	Width	End Gap
Top Compression	.0930-.0935"	.007-.015"
Lower Compression	.0930-.0935"	.007-.014"
Upper Oil	.1545-.1550"	.007-.017"
Lower Oil	.154-.155"	①

①—No end gap with U-Flex Ring.
Ring Side Clearance—.002-.004" (all rings).

Replacement Piston Rings: Furnished Std., .020" oversize.

Installing Rings: Inner groove on compression rings must be installed toward top of piston.

PISTON PINS: Floating type with lock rings.

▷*1953 PISTON PIN PRODUCTION CHANGE—Two types used as follows:*
First—Diameter—⅞". Length—2.824".
Later (Beginning with 2nd type Piston). Diameter 15/16". Length—3.000".
NOTE—Pin hole in piston offset toward camshaft.
Pin Fit in Piston—Palm push fit with piston heated (in water).
Pin Fit in Rod Bushing—Light thumb push fit at room temperature.

Replacement Pins: Standard & .001", .003" oversize.

CONNECTING ROD: Length—8¾". **Weight**—36¼ ozs.
Crankpin Journal Diameter—2.000"-2.001".
See "Original Bearing Sizes" in Nash Special Data.
Lower Bearings—Removable steel backed, babbitt lined type. No shims required.
Clearance—.001-.002". **Sideplay**—.005-.015".

▷*CENTER MAIN BEARING REMOVAL NOTE—Oil pump must be removed before removing center main bearing cap. See "Oil Pump" in Nash Special Data.*

Bearing Adjustment: None. Replace bearings. *See "Connecting Rods & Bearings" in Nash Special Data.*
NOTE—Tangs on bearing shells must engage slots in rods and caps. Palnuts used on connecting rod bolt nuts. Replace with new Palnuts each time nuts are removed.

Replacement Bearings: Furnished Standard, .002", .010", .012" undersize.

Installing Rods: Oil spray hole in lower end of rod and identification marks on rod must be toward camshaft side of engine. See Installing Pistons (above). *NOTE*—Rod and bearing cap should be marked before removal to insure replacement in same cylinder and in same relative position.

CRANKSHAFT: Seven bearing, counterweighted type
CRANKSHAFT REPLACEMENT NOTE—Replacement crankshaft furnished complete with vibration damper and flywheel. Assembly is balanced as a unit.
Vibration Dampener Removal & Installation: *See Nash Special Data.*
Journal Diameters—2 31/64" (2.479").
See "Original Bearing Sizes" in Nash Special Data.
Bearings—Removable, steel backed babbitt lined.
Clearance—.001-.002".

Bearing Adjustment: None. Replace bearings. See *"Crankshaft & Main Bearings" in Nash Special Data.*

Replacement Bearings: Furnished Standard, .002", .010", .012" undersize.

Crankshaft Rear Main Oil Seal: *See Nash Special Data.*

End Thrust: Taken by center (No. 4) main bearing.
Endplay—.006-.008".

CAMSHAFT: Cast-iron. Non-adjustable chain drive.
Camshaft Removal—*See Nash Special Data.*
Bearings—Steel backed babbitted bushings, (except No. 1 which is cast iron).
Clearance—.002".

End Thrust: Taken by front bearing, controlled by position of chain sprocket (press fit on shaft).
Endplay—.004-.006" clearance between camshaft front bearing and camshaft sprocket.

Timing Chain: Morse. Non-adjustable type. Width 1", Pitch ⅜". Length 22½" or 60 links.

Camshaft Setting: Install chain with the marked teeth of camshaft and crankshaft sprockets adjacent and in line with a straightedge across shaft centers. Check setting as follows: Turn engine over until punch mark on camshaft at one o'clock position, with crankshaft sprocket mark just beginning to mesh with chain. There should be 9½ links or 19 pins (2 pins to each link) between marks.

VALVES:	Head Diam.	Stem Diam.	Length
Intake	1.787"	.3720-.3730"	5 31/64"
Exhaust	1.468"	.3725-.3735"	5 31/64"

	Seat Angle	Lift	Stem Clearance
Intake	30°①	.393"	.002-.004"
Exhaust	45°②	.3945"	.0025-.0035"

①—Valve Face Angle 29°. ②—Valve Face Angle 44°.

▷*ROCKER ARM & VALVE LUBRICATION CAUTION—Hollow bolt must be used in front mounting bolt hole of rocker arm assembly for proper lubrication.*

▷*VALVE STEM OIL SEAL ASSEMBLY NOTE—See "Valve System" in Nash Special Data.*

▷*VALVE SEAT (ALUMINUM CYLINDER HEAD) REMOVAL & INSTALLATION—See "Valve System" in Nash Special Data.*

Valve Guides: Pressed in cylinder head. Valve stem seal on upper end. *See "Valve System" in Nash Special Data.*

▷*VALVE GUIDE CAUTION—Guides used for Cast Iron & Aluminum Cylinder heads are different. Aluminum cylinder head valve guides have lock ring which seats in a counterbore in cylinder head.*
Valve Guide Removal (Aluminum Cylinder Head)—Drive guide upward from combustion chamber to release valve guide lock rings seated in cylinder head counterbore.
Valve Guide Installation—Replace guide with Tool J-4687. IF TOOL NOT AVAILABLE INSTALL TO A DEPTH WHICH PERMITS 25/32" PROTRUSION ABOVE BLOCK. *CAUTION—Install valve guide locks on all guides installed in ALUMINUM cylinder heads.*

Valve Springs: Single springs on all valves.
Free Length—2 1/16".

Valve Spring Specifications

	Pressure	Length
Valve Closed	53-58 lbs.	1 13/16"
Valve Open	144-154 lbs.	1 7/16"

Installing Springs—Closely coiled end of spring should be installed toward valve seat.

Valve Lifters: Mushroom type. Camshaft must be removed to remove lifters.

▷*REPLACEMENT VALVE LIFTER CAUTION*—Original type lifters No. 3133042 (used with Cast Iron Camshaft) were superseded by No. 3136395 CHILLED FACE CAST IRON LIFTERS beginning with Engine No. A-196646. These special Chilled Face cast iron lifters are satisfactory for use with Cast Iron Camshaft and complete set of 12 should be installed when replacement camshaft installed (this recommendation supersedes former recommendation that cast iron lifters should not be used with cast iron camshaft).

VALVE TIMING

Tappet Clearance: .012" Intake, .016" Exhaust, HOT.
Valve Timing: *See Camshaft Setting above.*
Intake Valves—Open 12½° BTDC. Close 51½° ALDC.
Exh. Valves—Open 53½° BLDC. Close 10½° ATDC.
Valve Timing Check—Set No. 6 piston on TDC in firing position, then set valves on No. 1 cylinder to .003" clearance. Slowly rock crankshaft back and forth. If timing set correctly, the exhaust valve should open before the D.C. mark on vibration damper lines up with the pointer. **Note this distance.** Intake valve should open an equal distance after the DC mark passes the pointer.

LUBRICATION

Engine Oiling System: Pressure to main, connecting rod, and camshaft bearings, piston pins and timing chain.
Crankcase Capacity—6 quarts.
Normal Oil Pressure—50 lbs. at 30 MPH.
Oil Pressure Regulator—Located in body of pump. Not adjustable. Opens at 50-58 lbs.

Oil Pump: Gear type. Mounted on center main bearing cap in crankcase.
See "Oil Pump" in Nash Special Data.

▷*OIL PUMP DRIVE GEAR CAUTION*—Steel type oil pump drive gear should not be used with CAST IRON Camshaft. To replace, use No. 3105452 Gear.

Cylinder Cover Vent: Vent located on cover just behind water outlet elbow. Turn to open at all times, except for hot dusty driving.

Oil Filter: Replace cartridge at 8000 miles, or more often if necessary.

Oil Pressure Warning Light: Carter type pressure switch controlling light on instrument panel.
Dash Unit—Warning light on instrument panel. Lights when ignition on, goes out when oil pressure sufficient to open engine unit contacts.
Engine Unit—Carter Pressure Switch No. A-954-S. Nash No. 3134704. Open at 5-8 lbs. No adjustment.

COOLING

Cooling System: Pressure type with pressure and vacuum valves in filler cap. Positive circulation
Capacity—18 qts. with heater.
Pressure Valve—Nash No. (1952) 3112649, (1953) 3136627. In filler cap, opens at 7 lbs.

Water Pump: Sealed packing and bushing type.
See Water Pump Section for complete data.
Removal—Drain cooling system, disconnect pump drive coupling (remove rear bolt), disconnect inlet hose, remove pump mounting screws.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Belt Adjustment: *See Generator Belt Adjustment.*

Thermostat: Dole. In water outlet on cylinder head.
Setting—Starts to open at 167-173°, and should be fully open 20° above starting point.

Temperature Gauge: Auto-Lite Electric type.
Dash Unit—Auto-Lite No. 12711-A.
Engine Unit—Auto-Lite No. 11528-A.
See Miscellaneous Section for complete data.

CLUTCH

Borg & Beck Model 10A7—Assembly No. 950 stamped on cover. Single plate. dry disc type.
See Clutch Section for complete data.

Facings—I.D.—7". O.D.—10". Thickness—⅛".

Adjustment—Pedal free travel ½-¾". To adjust, turn adjusting nut on connector link at clutch fork.

►*CAUTION—Do not disturb adjustment of clutch beam lever-to-pedal rod.*

Removal: Remove transmission (see below), disconnect clutch linkage, remove clutch housing and pan. Punch mark flywheel, clutch cover and pressure plate (reassemble to same marks), take out clutch fork and mounting screws in cover flange.

SYNCHRO-MESH TRANSMISSION

Warner Model (Std. without Overdrive) AS25-T86E. (Optional with Overdrive) AS46-T86E. Constant mesh, synchro-mesh (second & high), sliding gear (low & reverse).
See Transmission Section for complete data.

Transmission Control: Steering column shift.
See Transmission Section for complete data.

Removal: Remove Rear Axle (See REAR AXLE below), disconnect transmission shift rods at levers on left side of case, and speedometer cable. Support engine at rear engine mounting, take out transmission upper mounting bolts, install special guide bolts in these holes, remove lower mounting bolts, slide transmission back, remove from below.

OVERDRIVE

Warner Type R10 (part of AS46-T86E Transmission). Optional equipment. Governor controlled type with electric solenoid operation and throttle operated kick-down switch (Jetfire); pushbutton kick-down switch (Dual Jetfire). Overdrive is "centered ring gear" type.

►*LOCKOUT SWITCH ELIMINATION:* Switch not used on later cars (switch mounting hole on transmission closed by plate, and two switch leads connected together). *NOTE*—If switch inoperative on early cars, cut switch out of circuit by connecting both switch leads to same terminal.
See Transmission Section for complete data.

Overdrive Solenoid—Delco-Remy No. 1118155.
Governor—Auto-Lite No. TGE-4005.
Control Relay—Nash No. 3123721.
Overdrive Fuse—30 amp. On overdrive relay.

Removal: Remove as a unit with transmission after disconnecting control cable and all wiring on overdrive case. See Transmission Removal above.

HYDRA-MATIC TRANSMISSION

"Dual Range," Four-Speed Planetary type automatic transmission and fluid coupling, Modulated Throttle Pressure, and hydraulically operated reverse mechanism.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTIONS: See "Hydra-Matic Drive" in Trans. Sect.*

►*TESTING & TROUBLE SHOOTING: See Trans. Sect.*

Lubrication—Check fluid every 1000 miles. Add fluid as required, to maintain level at "F" mark on dipstick. Drain and refill every 25,000 miles. Use Hydra-Matic Fluid (Auto. Trans. Fluid type "A").
Checking Fluid Level—Set hand brake, place selector lever in "N" position, start engine and idle for a minimum of two minutes after transmission has reached normal operating temperature. With selector lever in "N," remove dipstick and check fluid level (dipstick located under right front floor plate). Add fluid to bring level to "F" mark.

►*CAUTION—Do not fill above "F" mark on dipstick.*

Capacity—Approximately 11 qts. (refill), 12 qts. (after transmission disassembled).

►*OTHER HYDRA-MATIC SERVICE DATA—See "Hydra-Matic Drive" in Transmission Section.*

UNIVERSALS

Mechanics or Saginaw—Roller bearing type. 1 used.

Propeller Shaft: One piece steel shaft with pre-lubricated rubber mounted center bearing.
See Nash Rear Axle in Rear Axle Section for data.

REAR AXLE

Own Make. Semi-floating hypoid gear type with torque tube drive.
See Rear Axle Section for complete data.

Axle Ratios

Std. Trans.	4.1-1 (41-10)
Overdrive	4.4-1 (40-9)
Hydra-Matic	3.2-1 (41-13)

Backlash—.002-.006". Shim adjustment.

Removal: Raise and support rear of car. Disconnect rear brake cables at center equalizer. Disconnect torque tube at rear of transmission. Disconnect brake hose and shock absorbers at the axle end, (let hang from body). Roll axle free from car.
Axle Shaft Removal—Remove wheel, pull drum (use hub puller J-1644). Disconnect brake line and cable. Remove backing plate mounting bolt nuts, take off oil seal retainer, backing plate and wheel bearing adjusting shims (check thickness of shims, and replace same amount when reassembling). Withdraw shaft using puller J-2498, do not drag on inner seal.
Wheel Bearing Adjustment—Shims located between backing plate and flanged end of housing. To adjust, remove wheel and backing plate (see above), add or remove shims. **Endplay**—.002-.004".

SHOCK ABSORBERS

Delco or Monroe—Direct acting, hydraulic type. Serviced by replacement.
Front—Nash No. 3134914. **Rear**—No. 3135354.

FRONT SUSPENSI N

Front Suspension: Independent type with coil springs located between upper ends of steering knuckle pin and seat in outer wheelhouse panel.
See Front Suspension Section for complete data.

Kingpin Inclination—6½°.
Caster—0° to ½° Pos. (½° Pos. preferred).
Camber—¼° Neg. to ¼° Pos. (0° preferred).
Toe-In—1/16" to 3/16".
Toe-Out on Turns—Outer wheel turned 20°, inner wheel should be turned 23°.

STEERING GEAR

Standard: Gemmer Model 305. Worm & Roller type with "push-pull" adjustment.
See Steering Gear Section for complete data.

Power Steering (1953 Optl.): Bendix hydraulic "Linkage Type" used with standard steering gear.
See "Bendix Power Steering" in Steering Gear Section

BRAKES

Service Brakes: Bendix hydraulic, duo-servo, single anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.
See Brake Section for complete data.

Drums—Diameter 10".

Wheel Cyl. Diameter—(Frt.) 1 1/16", (Rear) 15/16".

Lining—Molded type. Riveted to shoe.

Shoe	Width	Length	Thickness
Primary (Front & Rear)	2"	9"	.214"
Secondary (Front)	2½"	11 3/32"	.214"
Secondary (Rear)	2"	11 3/32"	.214"

Clearance—.015" heel and toe of secondary shoe with primary shoe out against drum.

Hand Brake: See Service Brakes (above).

MISC. MECHANICAL

Windshield Wiper: Vacuum, Link-and-Arm type.
See Miscellaneous Section for complete data.

►*AIR CONDITICNED CAR SERVICE CAUTICN: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

MODEL IDENTIFICATION

SERIAL NUMBER: Stamped on plate located under hood, right side, body cowl.

ENGINE NUMBER: Stamped on machined surface on right side, at center of block.

►*MODEL IDENTIFICATION NOTE: Powerflyte Models have one carburetor. Dual Powerflyte Models have two carburetors.*

SERIAL NUMBER: Stamped on plate located under hood on cowl panel.

Starting Serial Number

Model	Kenosha	El Segundo
1954	K-615501	KC-47201
1955	K-635001	KC-48101

ENGINE NUMBER: Stamped on machined surface on right side of cylinder block above exhaust pipe.

Starting Engine Numbers

Model	Powerflyte	Dual Powerflyte
1954	©S-430001	J-1001
1955	S-440001	②J-30001

©—Canadian cars with single carburetor.
②—"JJ" prefix used on later cars.

►*ENGINE NUMBER SUFFIX CODE NOTE: A three letter code stamped adjacent to engine number indicates as follows:*

Letter Sequence Code

First Letter	Size of Bore
Second Letter	Size of Main Bearings
Third Letter	Size of Con Rod Bearings

Letter Size Code

Letter "A"	Standard
Letter "B"	.010" Undersize
Letter "C"	.010" Oversize
Letter "D"	.001" Undersize

ENGINES MARKED "AAA" OR UNMARKED ARE STANDARD.

TUNE-UP

COMPRESSION PRESSURE: At cranking speed, as follows:

Model	Powerflyte	Dual Powerflyte
1954	150 lbs.	
1955	120 lbs.	130 lbs.

VACUUM READING: Steady 18-21" at idling speed.

VALVE TAPPET CLEARANCE: All, .015" hot.

MANIFOLD HEAT CONTROL: None used.

IGNITION

FIRING ORDER: 1-5-3-6-2-4.

SPARK PLUG GAP: .030".

Spark Plug—Auto-Lite. A-7 (1954-55 Powerflyte); AL-5 (1954 Dual Powerflyte); AL-7 (1955 Dual Powerflyte). Tighten to 30 ft. lbs. (Powerflyte); 25 ft. lbs. (Dual Powerflyte).

COIL: Delco-Remy 1115380.
Ignition Current—2.3 amps. idling, 5 amps. stopped.

DISTRIBUTOR: Delco-Remy 1112401 (1954 Dual Powerflyte); 1112382 (1955 Powerflyte); 1112409 (Dual Powerflyte).
Condenser—Delco-Remy 1869704 (Distr. 1112401 & 1112382); No. 1928111 (Distr. 1112409).
Capacity—.18-.23 mfd.
Contact Point Set—1855720 (Distr. 1112401 & 1112382); No. 1924571 (Distr. 1112409).
Breaker Gap—.018-.024".
Cam Angle—31-37° at .022" gap.
Breaker Arm Spring Tension—17-21 ozs.
Rotation—Counter-clockwise viewed from above.

Automatic Advance—1112382

Degrees Distr.	RPM	Degrees Eng.	RPM
0-2	325	0-4	650
3.5-5.5	400	7-11	800
7-9	950	14-18	1900
10-12	1400	20-24	2800

Automatic Advance—1112401 & 1112409

Degrees Distr.	RPM	Degrees Eng.	RPM
0-2	375	0-4	750
1-3	400	2-6	800
5.5-7.5	1100	11-15	2200
10-12	1800	20-24	3600

Vacuum Spark Control: Delco-Remy 1116072 (All).
Plunger Travel—13/64-¼".

Vacuum Advance—All

Distr. Degrees	Engine Degrees	Vacuum (" of Hg.)
Start	0	4-6
5.5	11	11

IGNITION TIMING

Setting—4° ATDC at idling speed.
Timing Mark—Groove on damper aligned with pointer on timing chain cover above damper.

CARBURETOR

►*CARBURETOR APPLICATION NOTE: One carburetor used on Powerflyte models, two carburetors used on Dual Powerflyte models.*

►*1955 CARBURETOR FLOODING CORRECTION & PRODUCTION CHANGE: Changes were made in production and can be incorporated in earlier production cars to eliminate flooding. See "Carter YF" in Carburetion Section.*

Hydra-Matic Throttle Linkage Adjustment: Adjust engine to correct idle speed (see Idle Speed Settings below) with engine at normal operating temperature. Disconnect throttle rod at transmission throttle lever. Clean machined surface at back of transmission case and place Throttle Lever Checking Gauge J-2545-C flush with surface with edge of gauge against side cover. The throttle lever stud should fit freely in notch in gauge. If gauge does not pass over throttle lever stud freely, use bending tool J-3310 and bend to proper location. Gauge notch must slide freely on stud pin. Adjust transmission throttle rod (which is threaded into upper throttle rod yoke) to fit freely on throttle lever stud; **then shorten rod approximately 2 turns.** Install rod on stud and replace wave washer, flat washer and cotter pin.

CARTER WCD
(1955 Powerflyte)

Carter No. 2061S. Dual downdraft type with automatic choke control.
Idle Setting—½-1½ turns open. Turn screw out for richer mixture.
Idle Speed (Without Air Conditioning)—500-550 RPM (standard & overdrive transmissions). 450 RPM (Hydra-Matic in neutral).
Idle Speed (With Air Conditioning)—500 RPM with compressor operating. (All transmissions, Hydra-Matic in neutral).
Float Level—5/32". With bowl cover inverted and weight of float on needle valve, measure from top of float to machined surface of casting.
Accelerating Pump—No seasonal adjustment.

Fast Idle: .026" between throttle valve and bore of carburetor (side opposite idle port). With choke valve tightly closed and fast idle adjusting screw on high step of cam, tighten screw until proper throttle valve opening secured.

Automatic Choke Setting: Set at index.

Hydra-Matic Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Carter WCD Carburetors" in Carburetion Section.*

Fuel Pump Pressure: 3½-5¼ lbs. at 500 RPM.

CARTER YF (Two Carbs.)
(1954-55 Dual Powerflyte)

Carter No.	Starting Engine No.
2098S (1954)	J-1001
2137S (1954)	J-4697
2137SA (1954)	J-7511
2163S (1954)	J-11186
2258S (1955)	J-30001

►*CARBURETOR INSTALLATION CAUTION: Both carburetors must be same part number to eliminate any differences in specifications.*

Idle Setting—½-1¾ turns open. Turn screw out for richer mixture.
Idle Speed (1954 Without Air Conditioning)—550 RPM (Synchro-mesh); 475 RPM (Hydra-Matic—In "N"). *See "Throttle Synchronization" below.*
Idle Speed (1955 Without Air Conditioning)—500-550 RPM (Synchro-mesh); 450 RPM (Hydra-Matic—In "N"). *See "Throttle Synchronization" below.*
Idle Speed (Air Conditioned Cars)—500 RPM with compressor operating (All Models). *See "Throttle Synchronization" below.*
Float Level (1954)—*CAUTION—Different setting required for each type Needle Valve (See "Flooding Correction" above).* 3/8" (Solid needle). 1/4" (spring loaded needle). Measured from bowl cover to top of float at free end with gasket removed and bowl cover inverted. Use Gauge T109-80 (3/8"); T109-31 (1/4").
Float Level (1955)—5/16" measured from bowl cover to top of float at free end with gasket removed and bowl cover inverted. Use Gauge T109-220.
Accelerating Pump—No seasonal adjustment.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Fast Idle: .024" throttle opening with choke valve closed and fast idle screw on high step of fast idle cam. Adjust by turning fast idle screw.

Automatic Choke Setting: Two points lean.

Throttle Synchronization (Dual Powerflyte Models): To insure correct synchronization, make idle adjustments in following sequence:

1)-Remove-air-cleaner-assemblies-from-carburetor air horns.

2) Start with rear carburetor and adjust throttle stop screw until valve is seated in closed position. While doing this, the choke valve must be held in the open position to insure throttle stop screw contacting low speed stop in the fast idle cam mechanism. Turn throttle stop screws about two turns to crack valves slightly.

3) Start engine and run to obtain operating temperature. Attach tachometer to engine and observe RPM. Adjust rear carburetor to maintain correct idle speed. See above.

4) By means of the connecting throttle linkage between carburetors adjust front carburetor to synchronize with rear, maintaining rear carburetor throttle on idle stop position while checking.

5) During adjustment, reference must be made to the tachometer because it will indicate when front carburetor throttle is opened beyond rear throttle. Point at which further opening of the front carburetor throttle would cause an increase in RPM is the point of throttle synchronization. At this time, the air inlet noise of each carburetor will be identical.

6) To make idle mixture adjustment, replace air cleaner. Turn rear carburetor mixture adjustment screw in (lean) until engine operation becomes rough, then open ¼ turn out (rich). Repeat this on front carburetor.

7) Another idle speed throttle synchronization adjustment may be required because of improved idle mixture. Adjust to correct idle speed. See above.

Hydra-Matic Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Carter YF Carburetor" in Carburetion Section.*

Fuel Pump Pressure: 3½-5¼ lbs. at 500 RPM.

CARB. EQUIPMENT

Fuel Pump: Fuel only (Std.) Fuel & Vacuum (OD. & Hydra-Matic).

Replacement Pump-(Fuel) AC No. 532 (with glass bowl) or No. 9801 (without glass bowl). **(Fuel & Vacuum)** AC No. 9800 or Carter M-797SA.

Pressure-3-1/2-5-1/4 lbs. at 500 RPM.

See "Fuel Pumps" in Carburetion Equipment Section.

Gasoline Gauge: Auto-Lite Electric type.

Dash Unit-Auto-Lite 13520A (1954); No. 13380A (1955).

Tank Unit-Auto-Lite 12642A.

See "Fuel Gauges" in Carburetion Section.

BATTERY

Auto-Lite 1M-100. 6 Volt, 15 Plate, 100 Ampere Hour Capacity (20 hour rate).

Grounded Terminal-Positive (+) grounded to engine.

Engine Ground-From transmission to rear cross-member.

STARTER

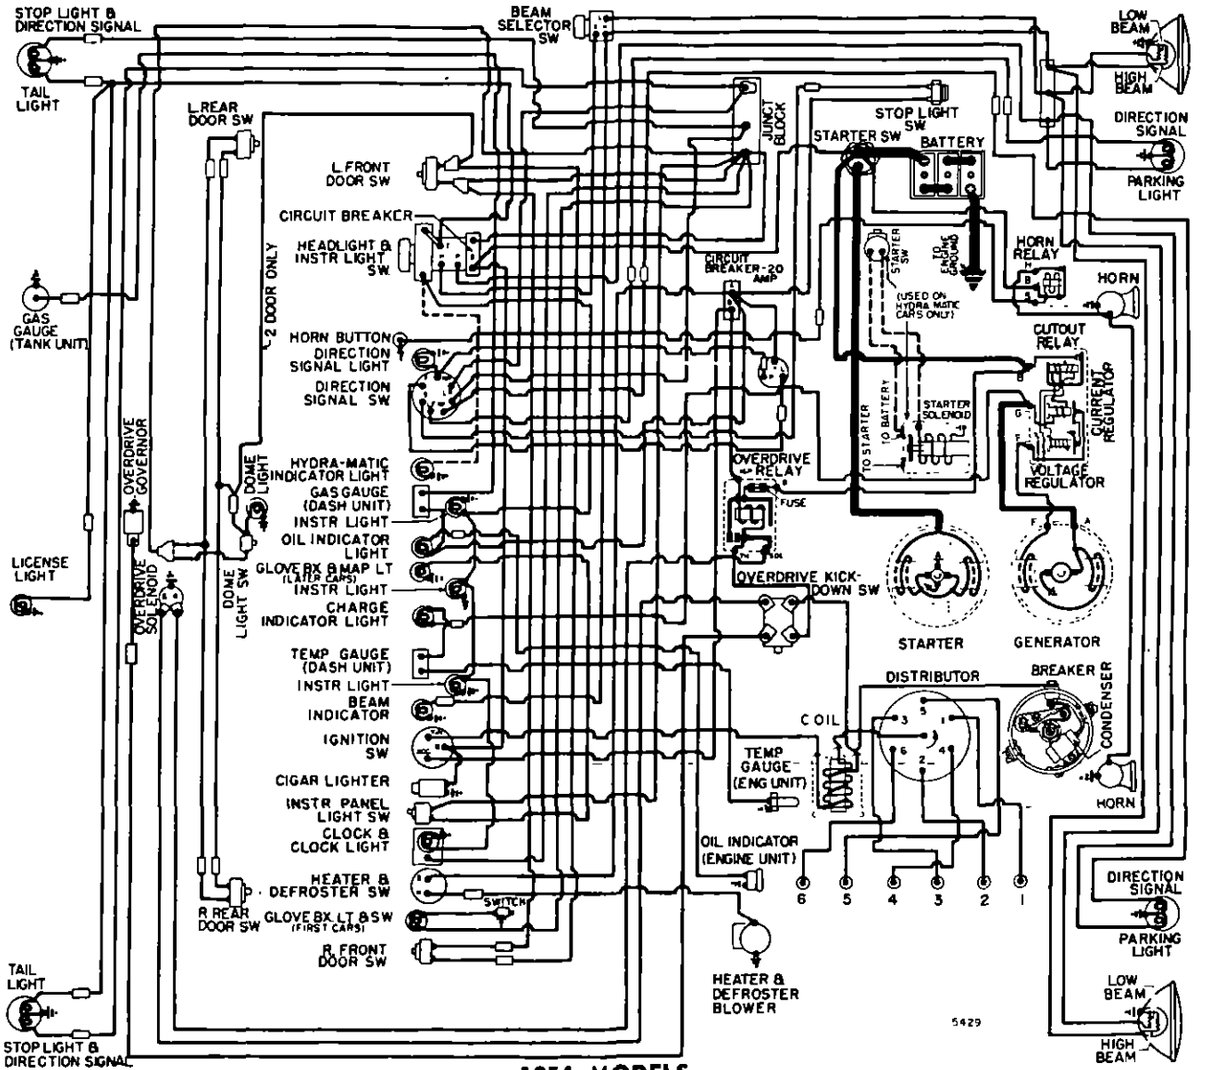
Delco-Remy Numbers:	Starter	Armature
Synchro-mesh & O.D. (LHD)..	1107119	1923018
Hydra-Matic Drive.	1107136	1925939
RHD. Cars	1107120	1923018

Drive-Delco-Remy Automatic Drive or Bendix "Folo-thru" type. **Synchro-mesh & OD. Cars**-Delco-Remy 1923008 or Bendix A3283. **Hydra-Matic Cars**-Delco-Remy 1923043 or Bendix A3338.

Rotation-Counter-clockwise at commutator end.

Brush Spring Tension-24-28 ozs.

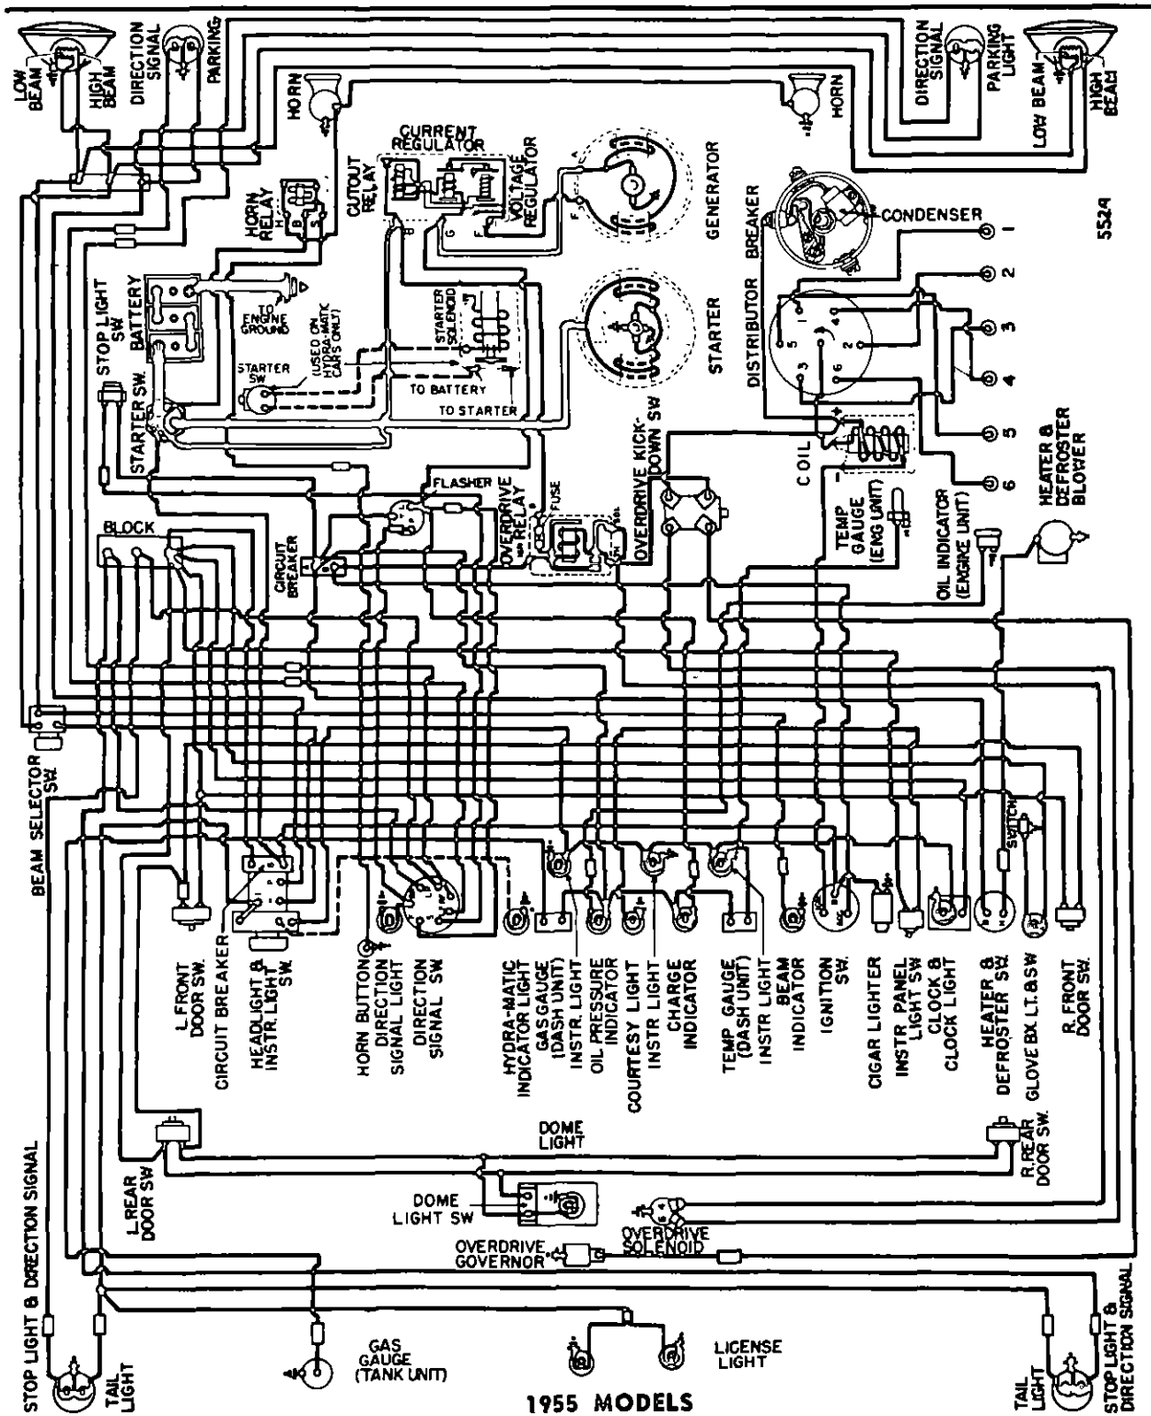
Performance Data



Torque	RPM	Volts	Amperes
0 ft. lbs.	5500	5.65	70
11.0 ft. lbs.	Lock	3.25	550

Starting Switch: Two types used.

Synchro-mesh & Overdrive Cars-Delco-Remy 1996478. Mounted on toeboard, actuated by fully depressing clutch pedal.



Hydra-Matic Drive Cars-Nash 3137292 Magnetic Switch on left front fender apron and Delco-Remy 1996077 Control Switch mounted on steering column. Actuated by lifting Hydra-Matic selector lever in Neutral "N" position.

Control Switch Adjustment: *See "Hydra-Matic Linkage Adjustment" in Transmission Section.*

1954 MODELS

CONTINUED ON NEXT PAGE

1955 MODELS

SEE NASH AMBASSADOR FOR "PUSHBUTTON" OVERDRIVE CONTROL (STD. TYPE SHOWN)

CONTINUED FROM PRECEDING PAGE

GENERATOR

Delco-Remy No.	Generator	Armature
Without Air Cond.	1102777	1921981
With Air Cond.	1102815	1921981

Performance Data Cold (1102777 & 1102815)

Amperes	Volts	R.P.M.
45 ①	8.0	2450

①—Not maximum. See Regulator Data.

Brush Spring Tension—28 ozs.

Field Current—1.87-2.0 Amperes at 6 volts.

Rotation—Counter-clockwise at commutator end.

Belt Adjustment: 1/2" deflection in belt midway between fan and generator pulleys with an application of 25 lbs. pressure.

REGULATOR

Delco-Remy 1118828. *NOTE—Regulator is "1118825 Series". Specifications below are "Normal" Settings.*

Cutout Relay

Cuts In—6.4 volts (hot).

Contact Gap—.020".

Air Gap—.020" (With contacts just closed).

Voltage Regulator

Setting—7.3 volts (hot).

Air Gap—.075" (With armature pressed down to point where contacts just touching).

Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator

Setting—47 Amperes.

Air Gap—.075" (with armature pressed down to point where contacts just touching).

Checking & Adjusting—*See Electrical Equip. Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Equip. Section*

Directional Signals: *See Electrical Equip. Section.*

Light Switch Removal: Loosen Allen screw and remove knob. Remove retaining nut. Push switch back and lower to remove wires.

Stop Light Switch: Located at tee fitting in line to front brakes.

FUSES: Located as follows:

Radio—SFE-14 in line.

Overdrive Relay—AGC-30 on Overdrive Relay.

CIRCUIT BREAKERS: Two used as follows:

30 ampere on light switch (main lighting).

20 ampere behind dash panel on left side of cowl (Ignition, heater motors and stop light).

HORNS (1954): Delco-Remy 1999641 (low note), 1999642 (high note).

HORNS (1955): Nash No. 3141323 (low note), 3141324 (high note).

Horn Relay: Nash No. 3135335 (1954), 3141308 (1955).

CONTINUED FROM PRECEDING PAGE

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: 6 cyl. "L" Head.

Bore	Stroke	Displ.	Rated HP
3-1/8"	4-1/4"	195.6 cu. ins.	23.44

Engine	Compr. Ratio	Dev. HP
Powerflyte	7.45-1 ①	100 at 3800
Dual Powerflyte (1954)	8.5-1 ②	110 at 4000
Dual Powerflyte (1955)	8.0-1 ②	110 at 4000

①—Cast Iron head. ②—Aluminum head.

Compression & Vacuum Reading—*See TUNE-UP.*

OIL PAN REMOVAL: Remove steering linkage cross tie-rod before removing pan.

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Nash Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Nash Special Data.*

PISTONS

Cam ground, aluminum alloy, tin plated with steel strut and solid skirt.

►*CYLINDER BORE OVERSIZE CAUTION: Code letter adjacent to engine number indicates cylinders bored .010" oversize. See "Original Bore & Pistons" in Nash Special Data.*

Weight—13.59 ozs.

Removal—Remove from above.

Fitting New Pistons: Clearance .0006-.0012". Pistons should just support own weight at any point in cylinder bore (piston and bore dry and clean).

Replacement Pistons: Standard, .002", .005", .010", .020", .030", .040" Oversize.

Installing Pistons: Piston pin is offset in piston. Piston is marked with notch that should face front of engine when installed. *See Rod Installation.*

PISTON PINS

Locked in rod by means of a locking bolt.

Diameter—55/64". **Length**—2.750".

Clearance in Piston—.0003" Maximum loose at 70°F. Thumb push fit.

Replacement Pins: Standard, .001" & .003" Oversize.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr	.0930-.0935" ①	.010-.020"	.002-.004"
Oil #3	.1545-.1550"	.010-.020"	.002-.004"
Oil #4	.1545-.1550"	②	.002-.004"

①—1955 Dual Powerflyte..07750-.07800", ②—U-flex.

Replacement Rings: Standard & .020" Oversize in sets.

Installing Rings: Stepped inner edge of both compression rings must be UP.

CONNECTING RODS

►*1954 OIL CLEARANCE PRODUCTION CHANGE:* Crankpin journal diameter changed on later engines to decrease clearance. See Journal Diameter below.

►*CONNECTING ROD JOURNAL UNDERSIZE CAUTION: Code letter adjacent to engine number indicates journals are undersize. See "Original Bearing Sizes" in Nash Special Data.*

Length—6.625" center-to-center. **Weight**—25 ozs.

Crankpin Journal Diameter—*NOTE—Journal diameter increased during 1954 production.* 2.0943-2.095" (Before 1954 Engine No. J-10765). 2.0948-2.0955" (After 1954 Engine No. J-10765, and 1955 models).

Original Bearing Sizes—*See "Original Bearing Sizes" in Nash Special Data.*

Bearings—Steel-backed babbitt. No shims.

Clearance—.0010-.0015". **Sideplay**—.005-.015".

Replacement Bearings: Std. & .001", .002", .010" and .012" Undersize.

Installing Rods: Identification marks (raised section on center of rod and bearing cap) toward front of engine.

CRANKSHAFT

►*CRANKSHAFT JOURNAL UNDERSIZE CAUTION: Code letter adjacent to engine number indicates main and connecting journals undersize. See "Original Bearing Sizes" in Nash Special Data.*

►*1954 CRANKSHAFT PRODUCTION CHANGE:* Crankpin journal diameter increased .0005" on later engines to reduce connecting rod oil clearance. See CONNECTING RODS above.

Journal Diameter—2.4791-2.4798". Four bearing.

Original Bearing Sizes—*See "Original Bearing Sizes" in Nash Special Data.*

Bearings—Steel-backed babbitt. No shims.

Clearance—.001-.0015".

Replacement Bearings: Std. & .002", .010", .012" Undersize.

End Thrust: Taken by front main bearing. *See "Crankshaft & Main Bearings" in Nash Special Data.*

Endplay—.003-.008".

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Nash Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Nash Special Data.*

FLYWHEEL REPLACEMENT: *See "Flywheel" in Nash Special Data.*

VIBRATION DAMPENER REMOVAL: *See "Vibration Dampener" in Nash Special Data.*

CAMSHAFT

Bearings—Steel backed babbitt bushings.

Clearance—.002".

Camshaft Removal—*See "Camshaft & Bearings" in Nash Special Data.*

End Thrust: Thrust plate on front of engine between No. 1 bearing and camshaft sprocket. End play controlled by position of sprocket on shaft (press fit on shaft).

Endplay—.004-.006".

Timing Chain: Morse. **Width** 1". **Pitch** 3/8". **Length** 22-1/2" or 60 links.

Camshaft Setting: Install chain with punch mark on camshaft sprocket and mark on crankshaft sprocket adjacent and in line with each other across center line of sprockets.

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Nash Special Data.*

VALVES

Tappet Clearance: .015" All Valves Hot (with engine running) or .016" Intake, .018" Exhaust Cold.

Valve	Head Diam.	Stem Diam.	Length
Intake	1.594"	.3407-.3412"	4 25/32"
Exhaust	1.343"	.3407-.3412"	4 25/32"

Valve	Seat Angle	Lift	Stem Clearance
Intake	45° ①	.340"	.0018-.0033"
Exhaust	45° ①	.340"	.0018-.0033"

① Valve Face Angle 44° (Intake & Exhaust).

►*VALVE GRINDING CAUTION:* Replace valve when refacing reduces distance from top of valve face to top of valve to 1/32".

Valve Springs: Install springs with closed coil end up against cylinder block and seated in counter-bore in block.

Free Length—2-5/32".

Valve Spring Specifications

Valve	Lbs. Pressure	Length
Closed	37-41	1-3/4"
Open	75-82	1-7/16"

Valve Guides: Use Tool J-2814 to remove guides and Tool J-1429-A to replace guides. Drive guides flush with the guide bore opening in the block.

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

Intake Valves—Open 10° BTDC, Close 58° ALDC.

Exhaust Valves—Open 49° BLDC, Close 19° ATDC.

NOTE—Above readings with .019" valve lash.

Valve Timing Check—Set valves on No. 1 cylinder at .003" lash. With No. 6 piston at TDC in firing position, timing will be correct if exhaust valve opens the same abount before DC on vibration dampener as intake valve opens after DC as engine is rocked back and forth over DC.

OILING SYSTEM

Crankcase Capacity: 4 qts. refill.

Normal Oil Pressure: 30 lbs. at 20 MPH. 12 lbs. minimum at 600 RPM.

Pressure Regulator Valve—Non-adjustable spring loaded valve located under plug near oil pump.

Oil Pressure Indicator—Light goes on when Ignition switch is turned on, goes out as oil pressure reaches 5-8 lbs. Carter Switch A-954S, Nash 3134704, located on right side of crankcase.

Oil Pump: Gear type mounted on right side of engine, driven by inclined shaft.

Oil Filter: Partial Flow type. Replace element every 8000 miles or less as needed.

Replacement Filter Unit—Nash No. 3113312.

Crankcase Ventilation: Breather pipe in Valve Cover and filter in crankcase filler cap.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

C OLING

Water Capacity: 15 qts. (with heater).
Pressure Valve: (Exc. Air Conditioned Cars)—Radiator cap, Nash No. 3136627, 7 lb. (1954). No. 3142965, 7 lb. (1955). **Air Conditioned Cars**—Nash No. 3141371, 14 lb. (1954-55).

Thermostat: Choke type, Nash No. 3131817 (167-173°). Use 3131985 (177-182°) for permanent anti-freeze.
Water Pump: Sealed packing and bushing type. *See "Nash" in Water Pump Section.*

Pump Removal—Drain cooling system, remove distributor, disconnect pump drive coupling (remove rear bolt), disconnect inlet hose, remove pump mounting screws.

►*1955 WATER PUMP LUBRICATION CHANGE:* Starting with Engine No. S-440115, the water pump lubrication fitting was eliminated and a prelubricated water seal cartridge used.
Temperature Gauge: Auto-Lite. Electric type.
Dash Unit—Auto-Lite No. 13521A (1954); No. 13881A (1955).
Engine Unit—Auto-Lite No. 11528A (1954-55).
See "Temperature Gauges" in Miscellaneous Section.

CLUTCH

Borg & Beck 8A7. Assy. No. 987. Single plate.
See "Borg & Beck" in Clutch Section.
Pedal Adjustment: Pedal free play 1/2-3/4". Adjust by loosening locknut and turning adjusting nut on connector link **at clutch fork.**
►*CAUTION: The pedal to beam rod should never be disturbed in service.* With pedal against floor board, outer end of beam lever should project 1/2" from beam toward the rear.
Clutch Linkage—*See "Clutch Notes" in Nash Special Data.*
Removal: Remove transmission (see below), disconnect clutch pedal linkage, remove clutch housing and pan, punch mark flywheel, clutch cover and pressure plate. (Reassemble to same marks), take out clutch fork and mounting screws in cover flange.

SYNCHRO-MESH TRANSMISSION

Own. 3 speed, all helical gear type.
See "Nash Transmission" in Transmission Section.
Transmission Controls: *See "Transmission Controls" in Transmission Section.*
Removal: Disconnect brake tube bracket at body, and torque tube at rear of transmission. Disconnect brake cable at bell crank and cable housing at bell crank bracket. Move rear axle assembly to rear off transmission main shaft splines. Disconnect speedometer cable and shifter rods, (if overdrive equipped, disconnect wires at solenoid and overdrive cable at lever). Use guide pins, Tool J-1434, in two upper cap screw positions and slide transmission free of pilot bearing and clutch disc.

OVERDRIVE

Warner R10. Used with Nash transmission.
See "Warner R10 Overdrive" in Transmission Section.
Overdrive Control: *Two types used.*
Super (With Accelerator Pedal Kickdown)—*See "Warner R10 & R11 Overdrive Control" in Transmission Section.*
Custom (With Steering Wheel Button Kickdown)—*See "Warner Pushbutton Type Overdrive Control" in Transmission Section.*

HYDRA-MATIC DRIVE

Dual Range. Four speed automatic transmission with fluid coupling.

►*1955 HYDRA-MATIC ROUGH 2-3 UPSHIFT CORRECTION:* If rough 2-3 upshift cannot be eliminated by proper linkage and internal band adjustment, install Service Spring, Part No. 3119206 in front servo body 4-3 downshift valve. *See "Hydra-Matic Drive" in Transmission Section.*

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Hydra-Matic Drive" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Hydra-Matic Drive" in Transmission Section.*
Lubrication—Check fluid every 1,000 miles, drain and refill at 25,000 mile intervals.
Capacity—8-1/2 qts. (9-1/2 qts. after overhaul).
Checking Fluid Level—Set hand brake, place selector lever in "N" position, start engine and idle for a minimum of 2 minutes after transmission has reached normal operating temperature. With selector lever in "N" position, remove dipstick and check fluid level (dipstick located under right front floor plate). Add fluid to bring level up to "F" mark.
▲*CAUTION:* Do not check oil level when transmission is excessively hot and do not fill above the "F" mark on dipstick.
►*OTHER HYDRA-MATIC SERVICE DATA: See "Hydra-Matic Drive" in Transmission Section.*

UNIVERSALS

Detroit—Cross type. One used at forward end of propeller shaft.

REAR AXLE

Own. Semi-floating, hypoid gear type with torque tube drive.
See "Nash Rear Axles" in Rear Axle Section.

Rear Axle Ratios

Model	Standard	Optional
1954-55 Synchro-mesh	4.4-1 (8-25)	4.1-1 (9-37)
1954-55 Overdrive	4.9-1 (8-39)	4.4-1 (8-35)
1954-55 Hydra-Matic ℂ	3.58-1 (12-43)	

ℂ—Rear axle ratio used in 1954 production for a short period.

Backlash—.002-.006". Shim adjustment.
Axle Shaft Removal: Remove wheel, pull drum (use hub puller J-1644). Disconnect brake line and cable. Remove backing plate mounting bolt nuts, take off oil seal retainer, backing plate, and wheel bearing adjusting shims. Withdraw axle shaft using puller J-2498. Do not drag shaft on inner oil seal.
Rear Axle Assembly Removal: Jack up and support rear end of body. Disconnect rear brake cable at equalizer, torque tube at rear of transmission, brake hose and shock absorbers at rear axle end (allow shocks and brake hose to hang from body). Roll axle assembly out from under car.
Wheel Bearing Adjustment: Shims behind brake backing plate.
Rear Suspension: *See "Nash Rear Suspension" in Rear Axle Section.*

SHOCK ABSORBERS

Delco or Monroe. Direct acting type. Serviced by replacement.

Shock Absorber Application

Model	Front	Rear
1954 (Std.)	3117363	3117371
1954 (Heavy Duty)	ℂ 3117364	
1955	3118500	3117364

ℂ—Use with Continental Kit, and Heavy Duty rear spring Part No. 3140400.

FRONT SUSPENSION

►*FRONT SUSPENSION ADJUSTMENT NOTE: Camber & Caster adjusted by shims between lower control pivot arm and support (1954 Models), and by lower control arm eccentric bolts (1955 Models).*

►*1955 FRONT CROSSMEMBER INSTALLATION CAUTION:* When installing front crossmember, distance between centers of either front or rear mounting bracket bolt holes must be 19½" to insure maintaining front wheel alignment.
►*1955 CASTER & CAMBER LOSS OF ADJUSTMENT CORRECTION:* Beginning with Engine No. 635286, improved eccentric bolt nut (deeper counter-bore) provides more positive locking of eccentric adjusting bolt. If necessary a 5/8" L.D. washer may be installed between nut and eccentric washer to insure locking of bolt and eccentric washer.

Independent. Linked parallelogram type with coil springs located between upper ends of steering knuckle pin and seat in outer wheel house panel.
See "Nash" in Front Suspension Section.
King Pin Inclination—6-1/2°.
Caster (Manual Steering)—Pos. 1/2° desired (limits 0° to Pos. 1/2°). **(Power Steering)** Pos. 1° desired (limits Pos. 1/2° to Pos. 1°).

Camber—0° desired (limits Neg. 1/4° to Pos. 1/4°).
Toe-In—1/16"-3/16".
Toe-Out on Turns—Outer wheel 20-3/4°, Inner wheel 25°.

STEERING

Manual: Gemmer. Worm & Roller with "push-pull" adjustments.
See "Gemmer Worm & Roller" in Steering Section.
Power Steering: Monroe "Power Guide". Linkage type.
See "Monroe Power Guide" in Steering Section.
Steering Linkage: *See "Steering Linkage" in Steering Section.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Steering Wheel & Horn Button Removal: *See "Gemmer Steering Gears" in Steering Section.*
Steering Gear Removal: *See "Gemmer Steering Gears" in Steering Section.*

BRAKES

1954 MODELS

Bendix (Lockheed) Self-Centering. Hydraulic type with floating self-centering shoes (no anchor pin adjustment). Hand lever applies rear wheel service brakes.
See "Bendix (Lockheed) Self-Centering" in Brake Section.
Drums—Diameter 9" (front & rear).
Wheel Cylinder Diameter—1 1/16" (front), 7/8" (rear).

Lining Width & Length

Brake Shoe	Front Wheel	Rear Wheel
Primary	2¼" x 9 7/8"	2" x 9 7/8"
Secondary	2" x 7 11/16"	1¾" x 7 11/16"

Thickness—.314" (All Shoes).
Braking Power—55.5% (front), 44.5% (rear).
Clearance—All shoes free of drag with brakes centralized (by hard application and releasing pedal). Eccentric adjustment for each shoe.

1955 MODELS

►*BRAKE CHATTER CORRECTION (Caused by Uneven Wheel to Hub Contact Ledges): See "Bendix Hydraulic Single Anchor" in Brake Section.*
Bendix Hydraulic, Single Anchor. Hand lever applies rear wheel service brakes.
See "Bendix Hydraulic, Single Anchor" in Brake Section.
Drums—Diameter 10" (front & rear).
Wheel Cylinder Diameter—1-1/8" (Front), 15/16" (Rear).

Lining Width & Thickness

	Front Wheel	Rear Wheel
Primary Shoes	2-1/4" x 8-1/2"	1-3/4" x 8-1/2"
Secondary Shoes	2-1/4" x 11"	1-3/4" x 11"

Clearance—.015" heel & toe of secondary shoe with primary out against drum, or adjusting screw backed off 14 notches or clicks from point where wheel can just be turned by hand.

1954-55 MODELS

Power Brakes: Bendix Power Unit. Replaces standard master cylinder.
See "Bendix Power Unit" in Brake Section.
Checking Fluid—Same as for standard master cylinder.
Removal—Same as for standard master cylinder.

MISC. MECHANICAL

Windshield Wipers: Vacuum Link & Arm type. *See "Windshield Wipers" in Miscellaneous Section.*
Air Conditioning: *Nash-Hudson Air Conditioning.* Thermostatic control with magnetic clutch on compressor unit.
See "Nash-Hudson Air Conditioning" in Miscellaneous Section.
Window Regulators: Electric with reversible motor. *See "Nash Window Regulators" in Miscellaneous Section.*

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, See "Air Conditioning Service Cautions" in Miscellaneous Section.*

MODEL IDENTIFICATION

►*MODEL IDENTIFICATION NOTE: Super Jetfire Models have one carburetor. LeMans Dual Jetfire Models have two carburetors.*

SERIAL NUMBER: Stamped on plate located under hood on cowl panel.

Starting Serial Number

Model	Kenosha	El Segundo
1954	R-722501	RC-22001
1955	R-742901	RC-23001

ENGINE NUMBER: Stamped on machined surface on right side at front of block.

Starting Engine Number

Model	Super Jetfire	LeMans Dual Jetfire
1954	A-246001	LMA-246001
1955	A-270001	LMA-270001

►*ENGINE NUMBER SUFFIX CODE NOTE: A three letter code stamped adjacent to engine number indicates as follows:*

Letter Sequence Code

First Letter ..... Size of Bore
Second Letter ..... Size of Main Bearings
Third Letter ..... Size of Con Rod Bearings

Letter Size Code

Letter "A" ..... Standard
Letter "B" ..... .010" Undersize
Letter "C" ..... .010" Oversize
Letter "D" ..... .001" Undersize

ENGINES MARKED "AAA" OR UNMARKED ARE STANDARD.

TUNE-UP

COMPRESSION PRESSURE: 120 lbs. (Exc. 1954 Dual Jetfire). 130 lbs. (1954 Dual Jetfire). All at cranking speed.

VACUUM READING: 18-21" at idling speed.

VALVE TAPPET CLEARANCE: Intake .012" hot, Exhaust .016" hot.

MANIFOLD HEAT CONTROL: None used.

IGNITION

FIRING ORDER: 1-5-3-6-2-4.

SPARK PLUG GAP: .030".

Spark Plug–Auto-Lite A-7 (Exc. 1954 Dual Jetfire). Auto-Lite AL-5 (1954 Dual Jetfire). Tighten to 30 ft. lbs. (Cast Iron Head); 25 ft. lbs. (Aluminum Head).

COIL: Delco-Remy 1115380.

Ignition Current–2.5 amps. idling, 4.5 amps. stopped.

DISTRIBUTOR: Delco-Remy 1110227 (1954); No. 1110241 (1955).

Condenser–Delco-Remy 1869704. **Capacity**–. 18-.23 mfd.

Contact Point Set–Delco-Remy 1916636 (Distr. 1110227); No. 1924499 (Distr. 1110241).

Breaker Gap–.018-.024".

Cam Angle (Distr. 1110227)–31-37° (with .022" Gap).

Cam Angle (Distr. 1110241)–38-45° (with .016" Gap).

Breaker Arm Spring Tension–17-21 ozs. (1110227); 19-23 ozs. (1110241).

Rotation–Clockwise viewed from above.

Automatic Advance

Degrees	Distr.	RPM	Degrees	Eng.	RPM
0-2		350	0-4		700
6-8		650	12-16		1300
10-12		1050	20-24		2100
13-15		1350	26-30		2700

Vacuum Spark Control: Delco-Remy 1116044 (1954); 1116092 (1955).

Plunger Travel–7/64".

Vacuum Advance

Distr. Degrees	Engine Degrees	Vacuum (" of HG)
Start	0	4-6
5-7	10-14	15

IGNITION TIMING

Setting–TDC (1954); 4° ATDC (1955).

Timing Mark–Groove on dampener aligns with pointer on timing chain cover.

CARBURETOR

►*CARBURETOR APPLICATION NOTE: One carburetor used on Super Jetfire, two carburetors used on LeMans Dual Jetfire.*

►*1954 HARD STARTING OR PERCOLATION CORRECTION:* Heat Deflector, Insulated Fuel Line, and Drain Tube & Hole provided in production. These parts may be installed on earlier cars. *See "Carter YH Carburetor" in Carburetion Section.*

Throttle Linkage Adjustment (Hydra-Matic): Adjust engine idle speed at 450 RPM (with air conditioning, 500 RPM compressor running) with engine temperature at 150-160° F., transmission warm and selector lever in neutral. Disconnect throttle rod, at throttle lever at side of transmission. Clean machined surface at back of transmission case and place throttle lever checking gauge J-2545-C flush against surface with edge of gauge against transmission side cover. The throttle lever stud should fit freely in notch of gauge. If gauge does not pass over throttle lever stud freely, use bending Tool J-3310 and bend to proper location. Gauge notch must slide freely on stud pin. Adjust transmission throttle rod (which is threaded into upper throttle rod yoke) to fit freely on throttle lever stud; **then shorten rod approximately two turns (Exc. 1954 Dual Jetfire); 3 turns (1954 Dual Jetfire).** Install rod on stud and replace wave washer, flat washer and cotter pin.

CARTER YH (Super Jetfire)
(895SA)

Idle Setting–½-1½ turns open. Turn screw out for richer mixture.

Idle Speed (Without Air Conditioning)–550 RPM (1954 Std. & O.D. Trans.). 500-550 RPM (1955 Std. & O.D.). 450 RPM (1954-55 Hydra-Matic, in "N").

Idle Speed (With Air Conditioning)– 500 RPM with compressor operating. (All transmissions, Hydra-Matic in neutral).

Float Level–3/8". With bowl cover inverted and weight of float on needle valve, measure distance from bowl cover (gasket removed) to top of float.

Accelerating Pump–No seasonal adjustment.

Fast Idle: .030" clearance between throttle valve and bore of carburetor (side opposite idle port) with choke valve closed and fast idle adjusting screw on high step of cam.

Unloader Adjustment: After fast idle adjusted, hold throttle valve wide open, close choke valve as far as possible. Clearance between lower edge of choke valve and air horn wall should be 5/8" (Gauge T109-85).

Automatic Choke Setting: 1 point rich. *NOTE–On Early 1954 Models with one-piece choke piston, set choke 1 point lean.*

Hydra-Matic Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Carter YH Carburetor" in Carburetion Section.*

Fuel Pump Pressure: 3½-5¼ lbs. at 500 RPM.

CARTER YH (LeMans Dual Jetfire)
(973S Front, 974S Rear)

Idle Setting– ¾-1¾ turns open. Turn screw out for richer mixture.

Idle Speed (1954 All Models)–550-650 RPM. *(NOTE–* Selector lever in "N" on Hydra-Matic Models). *See "Throttle Synchronization" below.*

Idle Speed (1955 Models Without Air Conditioning)– 500-550 RPM (Std. & O.D.); 450 RPM (Hydra-Matic, in "N"). *See "Throttle Synchronization" below.*

Idle Speed (1955 Models With Air Conditioning)– 500 RPM with compressor operating (All transmissions. Selector lever in "N" on Hydra-Matic). *See "Throttle Synchronization" below.*

Float Level–7/16". Distance from bowl cover (gasket removed) and top of float at free end. Use Gauge T-109-81.

Accelerating Pump–No seasonal adjustment.

Fast Idle: .015" clearance between throttle valve and bore of carburetor (side opposite idle ports) with choke valve closed and idle screw on high step of fast idle cam.

Unloader Adjustment: After fast idle adjusted, hold throttle valve wide open, close choke valve as far as possible. Clearance between lower edge of choke valve and air horn should be 5/8" (Gauge T-109-85). Adjust by bending shaft unloader arm using tool T109-105.

Automatic Choke Setting: Set two points lean.

Throttle Synchronization (LeMans Dual Jetfire Models)..

To insure correct synchronization, make idle adjustments in following sequence:

1) Remove air cleaner boots and "Tee" from carburetor airhorns.

2) Adjust throttle stop screw on rear carburetor as follows: Hold choke valve open, back off throttle stop screw until throttle valve is just closed, then turn screw in approximately 2 turns to crack throttle valve slightly. Adjust front carburetor similarly.

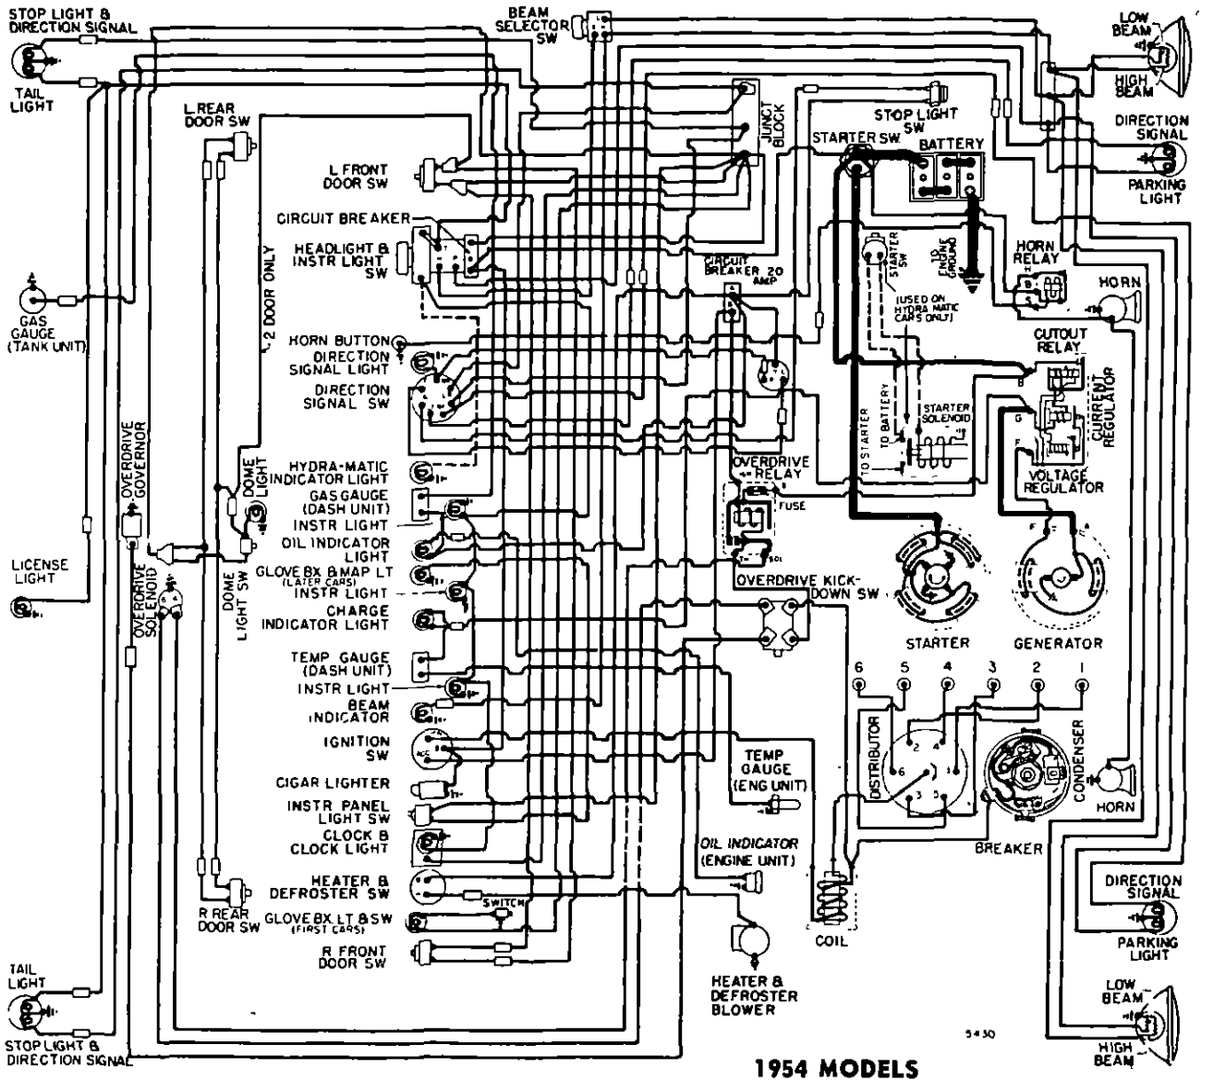
3) Start engine and allow it to idle until normal temperature reached. Attach Tachometer.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

4) Adjust rear carburetor stop screw for minimum idle speed (See above).
5) While noting idle speed, synchronize front carburetor by adjusting connecting throttle linkage between carburetors, opening front carburetor throttle just to the point where further opening begins to increase engine speed. At this point, air suction noise in both carburetors should be identical.
6) Replace air cleaner boots and "Tee" connections.
7) Adjust idle mixture on rear carburetor by turning adjusting screw in (to lean mixture) until engine begins to be rough, then turn screw out ¼ turn. Adjust idle mixture for front carburetor similarly.
8) Recheck idle speed. If not within limits (see above) repeat synchronization (1 thru 5).

Hydra-Matic Throttle Linkage Adjustment: See *CARBURETOR above.*



►*OTHER DATA:* See *"Carter YH Carburetor" in Carburetion Section.*

Fuel Pump Pressure: 3½-5¼ lbs. at 500 RPM.

CARB. EQUIPMENT

Fuel Pump: Fuel only (Std.), Fuel & Vacuum (OD. & Hydra-Matic).
Replacement Pump (Fuel)—*AC No. 533 (with glass bowl) or 9802 (without bowl).*
Fuel & Vacuum—AC No. 9799 or Carter M798S.
Pressure—3-1/2—5-1/4 lbs. at 500 RPM.
See "Fuel Pumps" in Carburetion Equip. Section.

Gasoline Gauge: Auto-Lite Electric Type.
Dash Unit—Auto-Lite 13520A (1954); No. 13380A (1955).
Tank Unit—Auto-Lite 12642A.
See "Fuel Gauges" in Carburetion Section.

1954 MODELS

BATTERY

Auto-Lite 1H-105D. 6 volt, 15 plate, 105 Ampere hour capacity (20 hr. rate).
Grounded Terminal—Positive (+).
Engine Ground—Battery to engine with body ground from transmission to rear cross member.

STARTER

Delco-Remy No.	Starter	Armature
Std. Trans. LHD	1107950	1911832
Std. Trans. RHD	1107959	1911832
Hydra-Matic	1108029	1878077

Drive—Delco-Remy Automatic Drive or Bendix "Folo-thru" type. **Synchro-mesh & OD. Cars**—Delco-Remy 1882549 or Bendix A2033. **Hydra-Matic Cars**—Delco-Remy 1922266 or Bendix A3281.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—24-28 ozs.

Performance Data

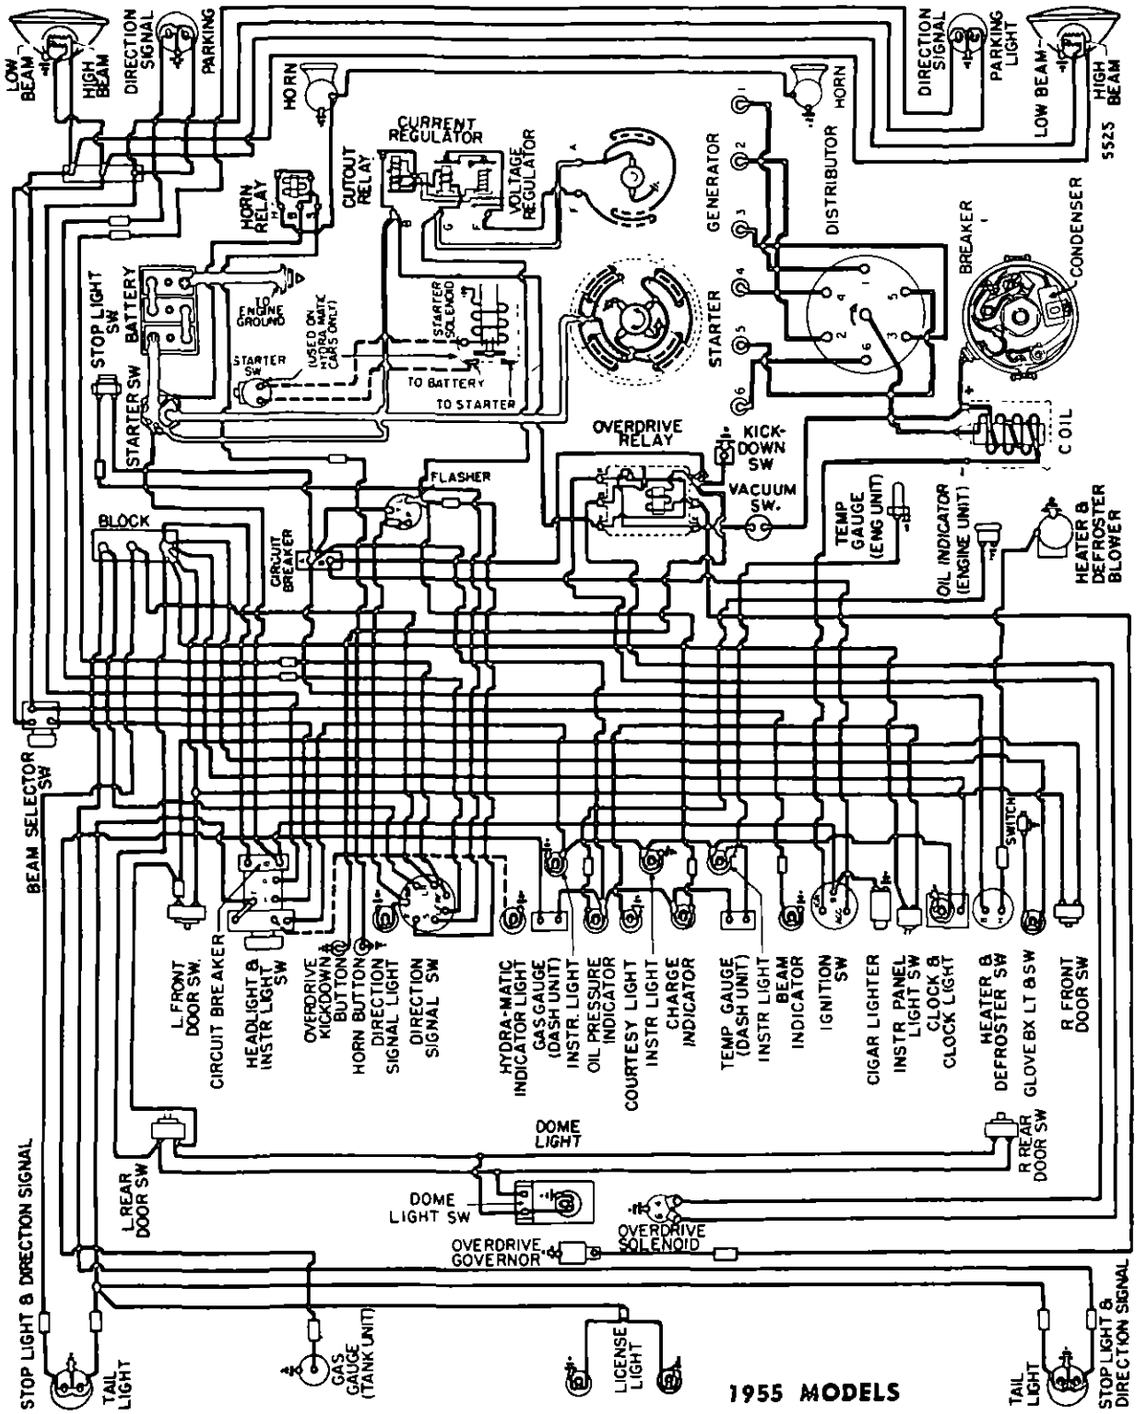
(1107950)

Torque	RPM	Volts	Amperes
0 ft. lbs.	5500	5.65	70
13.5 ft. lbs.	Lock	3.15	570

(1107959)

Torque	RPM	Volts	Amperes
0 ft. lbs.	5500	5.67	80
15 ft. lbs.	Lock	3.0	600

(1108029)



Torque	RPM	Volts	Amperes
0 ft. lbs.	5500	5.67	80
14 ft. lbs.	Lock	3.0	600

Starting Switch: Two types used.
Std. & Overdrive Transmissions—Delco-Remy 1996478. Mounted on floor board, actuated by fully depressing clutch pedal.
Hydra-Matic Transmission—Nash No. 3137292. Mounted on left front fender apron, controlled by Control Switch Delco-Remy 1996074. Control switch mounted on steering column and operated by Hydra-Matic selector lever (operative in "N" by lifting lever).
Control Switch Adjustment—*See "Hydra-Matic Linkage Adjustment" in Transmission Section.*

GENERATOR

Delco-Remy No.	Generator	Armature
Without Air Cond.	1102777	1921981
With Air Cond.	1102815	1921981

CONTINUED ON NEXT PAGE

1955 MODELS

SEE NASH STATESMAN FOR STD. OVERDRIVE CONTROL ("PUSHBUTTON" TYPE SHOWN)

CONTINUED FROM PRECEDING PAGE

Performance Data Cold (1102777 & 1102815)

Amperes	Volts	RPM
45 ①	8.0	2450

① Not maximum. See Regulator data.

Brush Spring Tension–28 ozs.
Field Current–1.87-2.00 amperes (at 80°F) at 6 volts.
Rotation–Counter-clockwise at commutator end.
Belt Adjustment: 1/2" deflection in belt halfway between fan and generator pulleys with an application of 25 lbs.

REGULATOR

Delco-Remy 1118828. *NOTE–Regulator is "1118825 Series". Specifications are for "Normal" settings.*

Cutout Relay

Cuts In–6.4 volts, hot.
Contact Gap–.020".
Air Gap–.020" (with contacts just closed).

Voltage Regulator

Setting–7.3 volts, hot.
Air Gap–.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting–*See Electrical Equip. Section.*

Current Regulator

Setting–47 Amperes.
Air Gap–.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting–*See Electrical Equip. Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Equip. Section.*
Directional Signals: *See Electrical Equip. Section.*
Light Switch Removal: Loosen Allen screw and remove knob. Remove retaining nut. Push switch back and lower to remove wires.
Stop Light Switch Location: At tee fitting in line to front brakes.
FUSES: Located as follows:
Radio–14 ampere. Located under cowl to right of steering column. Remove storage bin for access.
Overdrive–30 ampere. Under hood on left side on relay.
CIRCUIT BREAKERS: Two used as follows:
30 ampere on light switch (main lighting).
20 ampere behind dash panel on left side of cowl (Ignition, heater motors and stop light).
HORNS (1954): Delco-Remy 1999641 (low note), 1999642 (high note).
HORNS (1955): *Nash No. 3141323 (low note), 3141324* (high note).
Horn Relay– Nash No. 3135335 (1954), 3141308 (1955).

ENGINE

▷*AIR CONDITIONING CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: 6 cyl. valve in head.

	Bore	Stroke	Displacement
All engines	3-1/2"	4-3/8"	252.6 cu. ins.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

	Comp. Ratio	Rated HP	Developed HP
Super Jetfire	7.6-1	29.4	130 at 3700 RPM
Lemans Dual Jetfire	7.6-1	29.4	140 at 4000 RPM

Compression & Vacuum Reading–*See TUNE-UP.*

OIL PAN REMOVAL: Remove steering linkage cross tie-rod before removing pan.

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Nash Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Nash Special Data.*

PISTONS

Cam ground, aluminum alloy, tin plated with steel strut and solid skirt.

►*CYLINDER BORE OVERSIZE CAUTION: Code letter adjacent to engine number indicates cylinders bored .010" oversize. See "Original Bore & Pistons" in Nash Special Data.*

Weight–19.57 ozs.
Removal–Remove from above.

Fitting New Pistons: Clearance .0009-.0015". Fit piston so that it will support itself in any part of cylinder bore (dry piston & bore).

Replacement Pistons: Std., .002", .005", .010", .020", .030" & .040" Oversize.

Installing Pistons: Notch on front edge of piston must be toward front of engine. *See Rod Installation.*

PISTON PINS

1954 Models–Floating type pin used before Engine No. A-254478. Locked in rod after above engine number.

1955 Models–Locked in rod (same as Late 1954 Models).

Diameter–15/16". **Length**–3.000".
Clearance in Piston–.0002" max.
Clearance in Rod (Floating Type Pin)–.0002".

Replacement Pins: (Floating Type)–Std., .001", .003", .005" Oversize. (Locked-in-Rod Type)–Std., .001", .003" Oversize.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr.	.0930-.0935"	.007"	.002-.004"
Oil #3	.1545-.1550"	.007"	.002-.004"
Oil #4	.1545-.1550"	②	.002-.004"

② No end gap with U-flex ring.

Replacement Rings: Std. & .020" Oversize. In sets.
Installing Rings: Stepped inner edges of both compression rings must be up.

CONNECTING RODS

►*CONNECTING ROD JOURNAL UNDERSIZE CAUTION: Code letter adjacent to engine number indicates journals are undersize. See "Original Bearing Sizes" in Nash Special Data.*

Length–8.750" center to center. **Weight**–29 ozs.
Crankpin Journal Diameter–2.0010-2.0003".
Original Bearing Sizes–*See "Original Bearing Sizes" in Nash Special Data.*
Bearings–Steel backed babbitt. No shims.
Clearance–.001-.015". **Side Play**–.005-.015".
Replacement Bearings: Std., .001", .002", .010", .012" Undersize.
Installing Rods: The identification boss on center of rod is installed to front of engine.

CRANKSHAFT

►*CRANKSHAFT JOURNAL DIAMETER CAUTION: Code letter adjacent to engine number indicates main and connecting rod journals undersize. See "Original Bearing Sizes" in Nash Special Data.*

Journal Diameter–2.4791-2.4798". Seven main bearings.
Original Bearing Sizes–*See "Original Bearing Sizes" in Nash Special Data.*
Bearings–Steel backed babbitt.
Clearance–.001-.0015".
Replacement Bearings: Std., .002", .010", .012" Undersize.
End Thrust: Taken on center No. 4 main bearing.
End Play–.003-.008".
Rear Bearing Oil Seal Installation: *See "Crankshaft & Main Bearings" in Nash Special Data.*
Crankshaft Front Oil Seal: *See "Engine Front Cover" in Nash Special Data.*

FLYWHEEL REPLACEMENT: *See "Flywheel" in Nash Special Data.*

VIBRATION DAMPENER REMOVAL & INSTALLATION: *See "Vibration Dampener" in Nash Special Data.*

CAMSHAFT

Bearings–Steel-backed babbitt bushings (except #1 Cast Iron with babbitt lining).
Clearance–.002".
Camshaft Removal–*See "Camshaft & Bearings" in Nash Special Data.*
End Thrust: Controlled by position of chain sprocket & No. 1 bearing.
End Play–.004-.006".
Timing Chain: Morse. **Width**–1". **Pitch**–3/8". **Length**–22-1/2" or 60 links.
Camshaft Setting: Install chain with punch mark on camshaft sprocket and mark on crankshaft sprocket adjacent and in line with each other across center line of sprockets.

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Nash Special Data.*

VALVES

►*1955 INTAKE & EXHAUST VALVE PRODUCTION CHANGE:* Starting with Serial No. R-744962, the safety lock ring has been eliminated as the rubber "O" ring seal prevents the valve from dropping into cylinder bore. When using the later type valve, the "O" ring seal must be used.

Tappet Clearance: Intake .012" Hot. Exhaust .016" Hot.

Valve	Head Diameter	Stem Diameter	Length
Intake	1.787"	.3720-.3730"	5-31/64"
Exhaust	1.468"	.3725-.3735"	5-31/64"

Valve	Seat Angle	Lift	Stem Clearance
Intake	30° ①	.393"	.002-.004"
Exhaust	45° ②	.3945"	.002-.004"

① –Valve face 29°. ② –Valve face 44°.

►*VALVE GRINDING CAUTION:* Replace valve when refacing reduces distance from top of valve face to top of valve to 1/32".

Valve Stem Oil Seal: *See "Valve System" in Nash Special Data.*

Valve Springs: Install springs with closed-coil end toward valve seat. **Free Length**–2-1/16".

Valve Spring Specifications

Valve	Lbs. Press.	Length
Closed	53-58	1-13/16"
Open	144-154	1-7/16"

Valve Guides: Pressed in. Use Tool J-4687 to replace guides. *NOTE*–Before removing guides, check height of guide and install guide to same height.
Rocker Arm Assembly: *See "Valve System" in Nash Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.
Intake Valves–Open 12-1/2° BTDC. Close 51-1/2° ALDC.
Exhaust Valves–Open 53-1/2° BLDC. Close 10-1/2° ATDC.
Valve Timing Check–With No. 6 piston on TDC in firing position, set tappet clearance on No. 1 Intake & Exhaust at .003". Rock engine back and forth over TDC. Timing is correct if the Exhaust valve opens before TDC same amount that the Intake opens after the TDC mark.

OILING SYSTEM

Crankcase Capacity: 6 qts.
Normal Oil Pressure: 30 lbs. at 20 MPH, 12 lbs. minimum at 600 RPM.
Pressure Regulator Valve–Non adjustable, located in pump body. Opens at 50-58 lbs.
Oil Pressure Indicator–Light goes on when Ignition Switch is turned on, goes out as oil pressure reaches 5-8 lbs. Carter Switch A 954S, Nash No. 3134704 located on right side of crankcase.
Oil Pump: Gear type, driven off camshaft, mounted on center main bearing cap.
Oil Pump Removal Note–Pump must be dismantled for removal.
Pump Overhaul–*See "Oiling System" in Nash Special Data.*
Oil Filter–Partial Flow type. Replace element every 8000 miles or less as needed.
Replacement Filter Element–Nash No. 3113750.
Crankcase Ventilation: Breather pipe in valve cover and filter in crankcase filler cap.

COOLING

Water Capacity: 17 qts. Add 1 qt. for heater.
Pressure Valve: 7 lb. Radiator Filler Cap Nash No. 3142965 (less Air Conditioning), 14 lb. No. 3141371 (with Air Conditioning).
Thermostat: Choke type, Nash No. 3131817 (167-173°), Use 3131985 (177-182°) for permanent anti-freeze.
Water Pump: Sealed packing and bushing type.
See "Nash" in Water Pump Section.
Pump Removal–Drain cooling system, disconnect pump drive coupling (remove rear bolt), disconnect inlet hose, remove pump mounting screws.
►*1955 WATER PUMP LUBRICATION CHANGE:* Starting with Engine Number A-270049, water pump lubrication

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

fitting was eliminated and a prelubricated pump seal cartridge was used.

Temperature Gauge: Auto-Lite Electric.

Dash Unit—Auto-Lite No. 13521A (1954); No. 13881A (1955).

Engine Unit—Auto-Lite No. 11528A (1954-55).

See "Temperature Gauges" in Miscellaneous Section.

CLUTCH

Borg & Beck 10A7 Assy. No. 950. Single plate.

See "Borg & Beck" in Clutch Section.

Clutch Disc No.—Borg & Beck CD 752. Nash No. 3125822.

Pedal Adjustment: Pedal free travel 1/2-3/4". Adjust by loosening locknut and turning adjusting nut on control link at clutch fork.

►*CAUTION: The pedal to beam rod should never be disturbed in service.* With pedal against floor board, outer end of beam lever should project 5/16" from beam toward the rear, to provide proper leverage.

Clutch Linkage—*See "Clutch Notes" in Nash Special Data.*

Removal: Remove transmission (see below), disconnect clutch pedal linkage, remove clutch housing and pan. Punch mark flywheel-clutch cover and pressure plate (reassemble to same marks), take out clutch fork and mounting screws in cover flange.

SYNCHRO-MESH TRANSMISSION

Warner AS25-T86E (Standard), AS46-T86E (With Overdrive). Three speed, helical gear type.

See "Warner Transmissions" in Transmission Section.

Transmission Controls: *See "Transmission Controls" in Transmission Section.*

Removal: Move rear axle back (see Universals for procedure) to slip front universal joint off transmission. Disconnect shift levers and speedometer cable, remove two upper transmission to bell housing bolts, and install special guide bolts in their place. Remove lower bolts slide transmission out.

OVERDRIVE

Warner R10. *See "Warner R10 Overdrive" in Transmission Section.*

Overdrive Control: *Two types used.*

Super (With Accelerator Pedal Kickdown)—*See "Warner R10 & R11 Overdrive Control" in Transmission Section.*

Custom (With Steering Wheel Button Kickdown)—*See "Warner Pushbutton Type Overdrive Control" in Transmission Section.*

HYDRA-MATIC DRIVE

Dual Range. Four speed automatic transmission with fluid coupling.

►*1955 HYDRA-MATIC ROUGH 2-3 UPSHIFT CORRECTION:* If rough 2-3 upshift cannot be eliminated by proper linkage and internal band adjustment, install Service Spring, Part No. 3119206 in front servo body 4-3 downshift valve. *See "Hydra-Matic Drive" in Transmission Section.*

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Hydra-Matic Drive" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Hydra-Matic Drive" in Transmission Section.*

Lubrication—Check fluid every 1,000 miles, drain and refill at 25,000 mile intervals.

Capacity—11 qts. 12 qts. after disassembly.

Checking Fluid Level—Set hand brake, place selector lever in "N" position, start engine and idle for a minimum of 2 minutes after transmission has reached normal operating temperature. With selector lever in "N" position remove dipstick and check fluid level (dipstick located under right front floor plate). Add fluid to bring level up to "F" mark.

►*OTHER HYDRA-MATIC SERVICE DATA: See "Hydra-Matic Drive" in Transmission Section.*

UNIVERSALS

Detroit—Cross type. One used at rear of transmission.

REAR AXLE

Own. Semi-floating, hypoid gear type with torque tube drive.

See "Nash Hypoid" in Transmission Section.

Axle Ratio—4.1-1 (10-41) Std., 4.4-1 (9-40) with Overdrive, 3.2-1 (13-41) with Hydra-Matic.

Backlash—.002-.006" shim adjusted.

Axle Shaft Removal: Remove wheel, pull drum (use Hub Puller J-1644). Disconnect brake line and cable. Remove backing plate mounting bolt nuts, take off oil seal retainer, backing plate and wheel bearing adjusting shims (check thickness of shims, and replace same amount when reassembling). Withdraw shaft using puller J-2498, do not drag on inner seal.

Rear Axle Assembly Removal: Raise and support rear end of car. Disconnect rear brake cables at center equalizer. Disconnect torque tube at rear of transmission. Disconnect brake hose and shock absorbers at axle end (let hang from body). Roll axle free.

Wheel Bearing Adjustment: Shims behind brake backing plate.

Rear Suspension: *See "Nash Rear Suspension" in Rear Axle Section.*

SHOCK ABSORBERS

Delco or Monroe. Direct acting type. Serviced by replacement.

Shock Absorber Application

Model	Front	Rear
1954 (Std.)	3117363	3117371
1954 (Heavy Duty)	©3117364	
1955	3118500	3117364

©—Use with Continental Kit, and Heavy Duty Rear Spring, Part No. 3140400.

FRONT SUSPENSION

►*FRONT SUSPENSION ADJUSTMENT NOTE: Camber & Caster adjusted by shims between lower control pivot arm and support (1954 Models), and by lower control arm eccentric bolts (1955 Models).*

►*1955 FRONT CROSSMEMBER INSTALLATION CAUTION:* When installing front crossmember, distance between centers of either front or rear mounting bracket holes must be 19½" to insure maintaining front wheel alignment.

►*1955 CASTER & CAMBER LOSS OF ADJUSTMENT CORRECTION:* Beginning with Engine No. R-743047, improved eccentric bolt (deeper bore) provides more positive locking of eccentric adjusting bolt. If necessary, a 5/8" I.D. washer may be installed between nut and eccentric washer to insure locking of bolt.

Independent. With coil springs located between upper ends of steering knuckle pin and seat in outer wheelhouse panel.

See "Nash" in Front Suspension Section.

King Pin Inclination—6-1/2°.

Caster—**(Std.)** Pos. ½° desired (limits 0° to Pos. ½°). **(Power Steering)** Pos. 1° desired (limits Pos. ½° to Pos 1°).

Camber—0° desired with 1/4° Neg. to 1/4° Pos. Limit.

Toe-In—1/16-3/16".

Toe-Out on Turns—Outer wheel 20-1/4°. Inner 25°.

STEERING

Manual: Gemmer Model 305. Worm & Roller with "push-pull" adjustments.

See "Gemmer Steering Gears" in Steering Section.

Power Steering: Bendix Linkage type.

See "Bendix Linkage Type" in Steering Section.

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Gemmer Steering Gears" in Steering Section.*

Steering Gear Removal: *See "Gemmer Steering Gears" in Steering Section.*

BRAKES

Bendix Hydraulic Single Anchor. Hand lever applies rear wheel service brakes.

See "Bendix Hydraulic, Single Anchor" in Brake Section.

Drums—10" (1954); 11" (1955). Front & Rear.

Wheel Cylinder Diameter—Front 1 1/8". Rear 15/16".

1954 Lining Width & Length

Shoe	Front	Rear
Primary	2" x 9"	2" x 9"
Secondary	2½" x 11 3/32"	2" x 11 3/32"

1955 Lining Width & Length

Shoe	Front	Rear
Primary	2½" x 9 3/8"	2" x 9 3/8"
Secondary	2½" x 12"	2" x 12"

Thickness—7/32" (1954-55).

Braking Power—52.8% Front, 47.2% Rear (1954). 56% Front, 44% Rear (1955).

Clearance—.015" heel & toe of secondary shoe with primary out against drum, or adjusting screw backed off 14 notches or clicks from point where wheel can just be turned by hand.

Standard Master Cylinder: Mounted on support under floor pan to left of transmission.

Checking Fluid—Roll back floor mat, remove access hole cover, maintain fluid 1/2-1" below filler opening.

Removal—Remove from below without disturbing other parts.

Power Brakes: Bendix Power Unit. Replaces standard master cylinder.

See "Bendix Power Unit" in Brake Section.

Checking Fluid—Same as for standard master cylinder.

Removal—Same as for standard master cylinder.

MISC. MECHANICAL

Windshield Wipers: Vacuum Link & Arm type. *See "Windshield Wipers" in Miscellaneous Section.*

Air Conditioning: Nash-Hudson Air Conditioning.

See "Nash-Hudson Air Conditioning" in Miscellaneous Section.

Power Window Regulators: Electric with reversible motor. *See "Nash Window Regulators" in Miscellaneous Section.*

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

MODEL IDENTIFICATION

SERIAL NUMBER: Stamped on plate attached to center of cowl panel under hood.

Starting Serial Number—(Kenosha) V-1001, El Segundo VC-1001, (Unassembled Export) 8KD-1001.

ENGINE NUMBER: Below right exhaust manifold.

Starting Engine Number—P-1001.

TUNE-UP

►*HARD STARTING CORRECTION (CARS BEFORE ENGINE NO. P-14763) & CARBURETOR PRODUCTION CHANGE: See "Carter WGD" in Carburetion Section for installation of Atmospheric Vent.*

►*POOR WARM-UP CORRECTION & CARBURETOR PRODUCTION CHANGE: See "Carter WGD" in Carburetion Section for recommended changes on carburetors date-coded before tag date "M-5" or Engine No. P-24900.*

►*SLOW COLD STARTING CORRECTION:* Check spark plugs, breaker points, all electrical connections, and ignition timing. See that carburetor choke valve has .005" clearance in all positions and that choke valve and shaft operate freely. Choke vacuum piston must operate freely in cylinder and there must be no bind between unloader arm on choke lever and fast idle link. *NOTE*—Automatic choke may be set one point rich or lean from standard setting to improve starting and warming up performance.

COMPRESSION PRESSURE: 140 lbs., at cranking speed (150 RPM), with wide open throttle.

VACUUM READING: 19" at 1500 RPM. 17.25" at 425 RPM.

VALVE TAPPET CLEARANCE: None in service (hydraulic).

MANIFOLD HEAT CONTROL: Thermostatic type. Located at left manifold outlet.

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2.

Cylinders—RIGHT BANK 2-4-6-8, LEFT BANK 1-3-5-7.

SPARK PLUG GAP: .035".

Spark Plug—(Before Engine No. P-6001) Champion H-10 or Auto-Lite AL-7. (After Engine No. P-6001) Champion N-8 or Auto-Lite AG-5. Tighten plugs to 30 ft. lbs.

COIL: Auto-Lite CR-6001.

Ignition Current—2.30 amps. (idling).

DISTRIBUTOR: (Before Engine No. P-6001) Auto-Lite IBK-4001. (After Engine No. P-6001) Auto-Lite IBK-4001-B.

Condenser—Auto-Lite IBB-2015L. **Capacity** .25-.28 mfd.

Contact Point Set—Auto-Lite IGW-3028JS.

Breaker Gap—.017"±.002".

Cam Angle—33°-39°.

Breaker Arm Spring Tension—17-20 ozs.

Rotation—Counter-clockwise viewed from above.

Automatic Advance—IBK-4001

Degrees	Distr. RPM	Degrees	Eng. RPM
Start	300	0	600
1	325	2	650
11	600	22	1200
19	1135	38	2270
20	1200	40	2400

Automatic Advance-IBK-4001-B

Degrees	Distr. RPM	Degrees	Eng. RPM
Start	300	0	600
1	375	2	750
8	850	16	1700
15	1650	30	3300
16	1750	32	3500

Vacuum Spark Control: Auto-Lite. Integral type.

Vacuum Advance—IBK-4001

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	6"
1	2	6 3/4"
3	6	8 1/4"
4	8	8 7/8"
5.5	11	10

Vacuum Advance—IBK-4001-B

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	6 1/4"
1	2	6 5/8"
6	12	9"
11	22	12 1/8"
12	24	13"

IGNITION TIMING

Setting—5° BTDC.

Timing Mark—Timing indicator on chain cover marked 0 - 5 - 10 - 15. Align groove in vibration dampener with correct mark on indicator.

CARBURETOR

Carter WGD, No. 2231S (Early), 2231SA (Later). Dual downdraft type with automatic choke.

►*HARD STARTING CORRECTION (CARS BEFORE ENGINE NO. P-14763) & CARBURETOR PRODUCTION CHANGE:* An atmospheric vent has been incorporated in later carburetors and can be installed on early cars to correct a hard starting condition. *See "Carter WGD Carburetor" in Carburetor Section.*

►*POOR WARM-UP CORRECTION & CARBURETOR PRODUCTION CHANGE: See "Carter WGD" in Carburetion Section for recommended changes on carburetors date-coded before tag date "M-5" or Engine No. P-24900.*

►*SLOW COLD STARTING CORRECTION: See TUNE-UP (above).*

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyl. 2-3-5-8, LEFT barrel 1-4-6-7.*

Idle Setting—½-1½ turns open. Turn screws out for richer mixture.

Idle Speed—425 RPM with transmission in "N". (Air Conditioning turned on).

Float Level—¼" from underside of bowl cover to top of float at center with needle valve seated. Measure with bowl cover and float assembly inverted. *NOTE—This ¼" setting supersedes original specification of 3/16". See also "Hard Starting Correction" above.*

Fast Idle: .030" throttle opening or clearance between valve and wall on side opposite idle ports with choke valve tightly closed. Adjust by bending choke rod at lower angle.

Unloader Adjustment—With fast idle adjustment completed, hold throttle valve wide open and close choke valve as far as possible. **Do not force choke valve closed.** Clearance between upper edge of choke valve and inner wall of air horn should be 3/16" (Gauge T109-28). Adjust by bending choke shaft unloader arm.

Automatic Choke: 1 point rich.

►*OTHER DATA: See "Carter WGD Carburetor" in Carburetor Section.*

THROTTLE LINKAGE ADJUSTMENT: *CAUTION—Control rod dimensions should be checked and length adjusted before linkage adjustment is made.*

Control Rod Dimensions: Check and adjust each rod as follows:

Carburetor Throttle Rod (from carburetor throttle lever to accelerator pedal lever)—Over-all length of rod from center of ball pivot at carburetor end to "L" bend at rear end of rod must be 15½". Adjust by loosening locknut near forward end and turning end fitting in or out of rod.

Adjuster Rod (Upper throttle rod from carburetor throttle rod to cross-shaft lever)—Over-all length between centers of rod ends must be 6 9/16". Adjust by bending rod at existing bend near center.

Throttle Valve Rod (Lower throttle rod from cross-shaft to control lever on transmission case)—Length between center of pins at ends of rod must be 26 1/8" (measured in straight line). Adjust by bending rod.

Throttle Linkage Adjustment: Adjust engine idle speed to 400 RPM with engine at normal operating temperature. Block carburetor choke valve in the wide open position and disconnect throttle rod at throttle valve shaft outer lever at transmission. Move transmission throttle lever to the rear against its stop and hold a straight edge across milled surface at rear of transmission case. The taper on end of lever should just contact straight edge. If necessary to adjust, loosen lever clamp screw nut and turn shaft counter-clockwise until valve has reached its stop. Hold shaft in this position and rotate lever on shaft so that taper on lever lines up with milled surface on rear of case. Reconnect rod to lever. Remove carburetor air cleaner and disconnect the upper throttle rod from center hole of throttle cross shaft. Lightly hold cross shaft lever forward so that throttle valve in transmission is against its stop (*CAUTION*—Do not spring linkage). Loosen locknut at each end of adjuster (rod connector) on carburetor throttle rod so that upper throttle rod can be connected in center hole of cross-shaft lever without disturbing linkage, tighten locknuts against adjuster and make certain that rod fits freely in lever. Reset engine idle speed (see Idle Speed Setting above).

Fuel Pump Pressure: 3½-5 lbs. max. at 500 RPM.

CARB. EQUIPMENT

Fuel Pump: Carter M2256S (Fuel & Vacuum).

Pressure—3½-5 lbs. at 500 RPM.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

See "Fuel Pumps" in Carburetion Equipment Section.

Gasoline Gauge: Auto-Lite Electric type.

Dash Unit—Auto-Lite 13380A.

Tank Unit—Auto-Lite 12642A

See "Fuel Gauges" in Carburetion Equipment Section.

BATTERY

Auto-Lite 1H-105D. 6 volt, 105 ampere hour capacity (20 amp. rate).

Battery Ground—Positive.

Engine Ground—Battery to engine with body ground from transmission to rear crossmember.

STARTER

Auto-Lite MCL-6132. Armature—MCH-2122.

Drive—Overrunning clutch (solenoid pinion shift).

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—42-53 ozs.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	4900	5.0	65
8.0 ft. lbs.	Lock	2.0	410

Starting Switch: Auto-Lite Solenoid SSX-4003 mounted on starter with SEPARATE relay (Magnetic Switch). Nash No. 3118899, of left fender apron. Controlled by selector lever operated switch, No. 3143978, located on steering column. Starter operative only with selector lever in "P" or "N" position.

See "Auto-Lite Solenoid Starter Switch (No Relay)" in Electrical Section.

GENERATOR

Auto-Lite GGW-4801F. Armature—GGW-2006F.

Maximum Charging Rate—*See Voltage Regulator.*

Performance Data

Amperes	Volts	Cold — RPM — Hot
0	6.4	870-970 . . 950-1050
45	8.0	1925-2125 . . 2350-2550

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—35-53 ozs.

Field Current—1.6-1.7 amps at 5.0 volts.

Belt Adjustment: ½" belt deflection midway between water pump and generator pulleys.

REGULATOR

Auto-Lite VBE-6101-A

Cutout Relay

Cuts In—6.3-6.8 volts.

Cuts Out—4.1-4.8 volts.

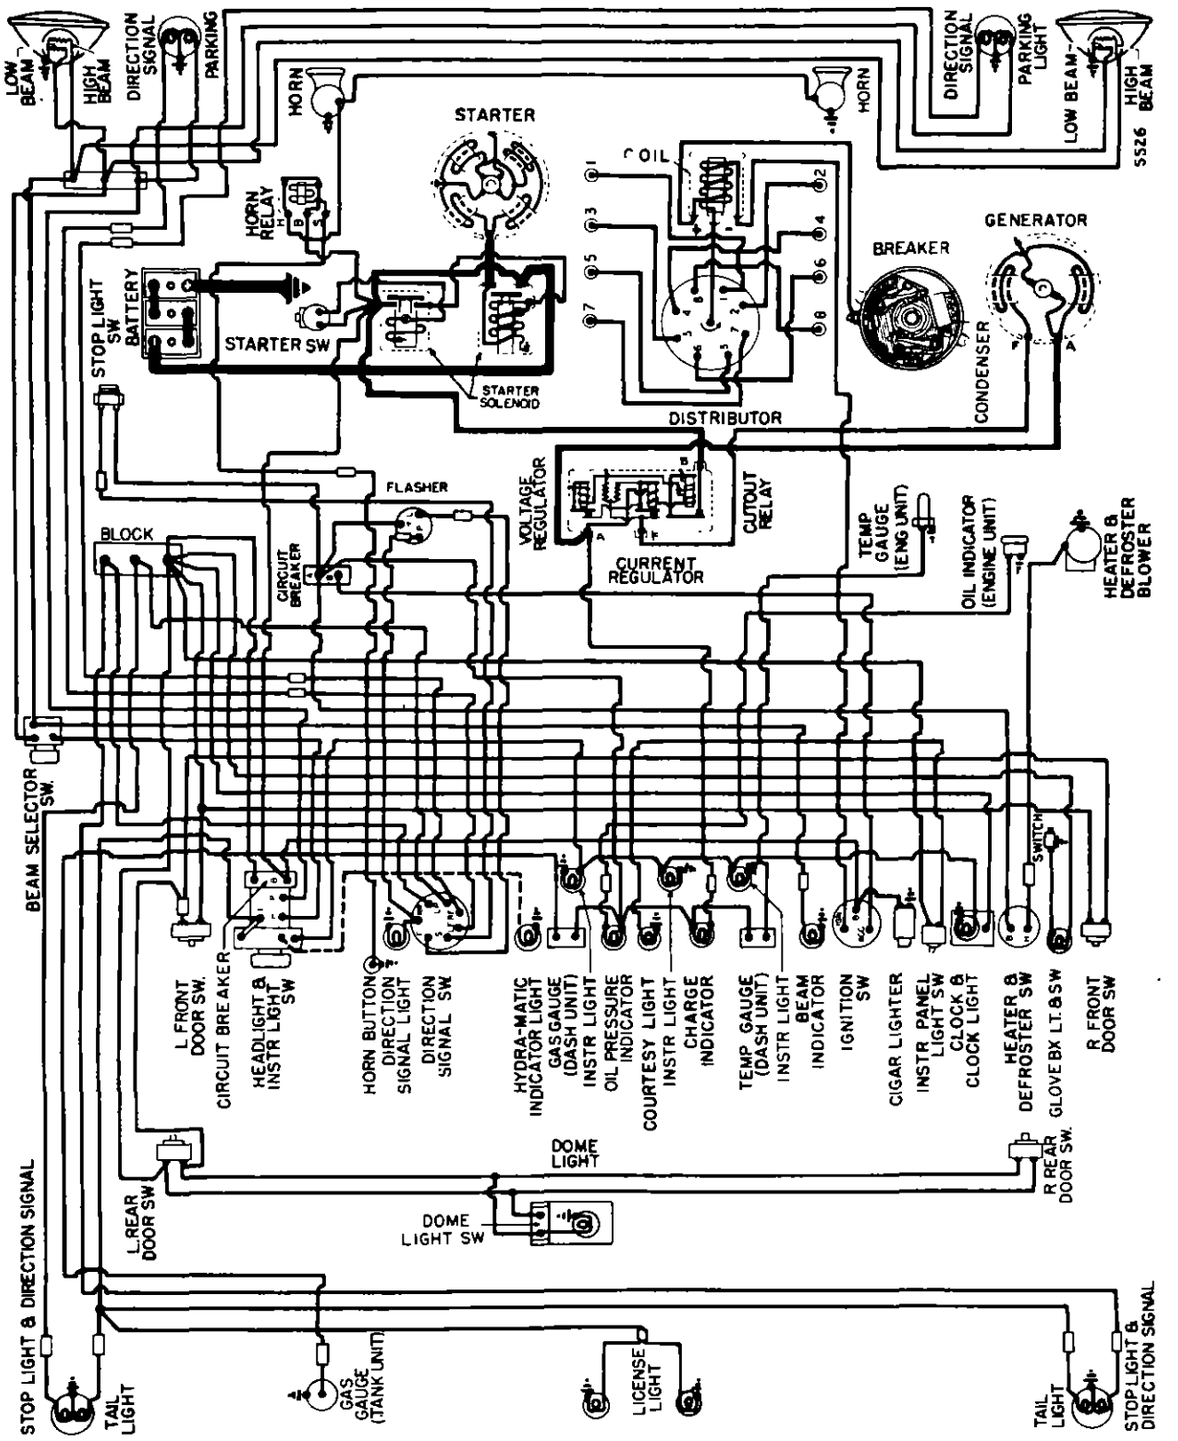
Contact Gap—.015" minimum.

Air Gap—.031-.034" with contact open (check at hinge end of core).

Voltage Regulator

Setting—7.2-7.5 volts at 70°F. After 15 minutes operation charging at one-half maximum rate.

Air Gap—.048-.052" with contacts opening.



Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator

►*SETTING CAUTION: "Temperature Compensated" type. Set to following specifications at 70°F.*

Test A	Operating Amperes	Test B
52		45 (43-47)

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Test A–After 15 minutes operation charging at ½ maximum rate.

Test B–After additional 15 minutes operation with current regulator operating (load applied to hold voltage down to 6.7-6.9 volts).

Air Gap–.048-.052" with contacts just opening.

Checking & Adjusting–*See Electrical Equip. Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Equip. Section.*

Direction Signals: *See Electrical Equipment Section.*

Light Switch Removal: Loosen Allen screw and remove retaining nut. Push switch back and remove from dash.

Stop Light Switch: Located at tee fitting in line to front brakes.

FUSES: **Radio**–SFE-14 (14 amp.) in lead wire to radio.

CIRCUIT BREAKERS: Two used. 30 amp. in main light switch protects headlights, tail, instrument and interior lights. 20 amp. located on rear side of dash just forward of steering column protects stoplights, direction signal, Weather Eye blowers and accessory lights.

HORNS: Sparton. Nash No. 3141323 (Low Note). 3141324 (High Note).

Horn Relay: Nash No. 3141308.

Current Draw–13-17 amps. (low note), 12-16 amps. (high note), at 5-7 volts.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

►*IMPROVED OIL CONTROL PRODUCTION CHANGES & CORRECTION ON EARLY CARS:* For improved oil control at the intake valve stems, THREE types of rocker arm shafts have been used in production and latest type should be installed whenever trouble experienced on cars with previous type shafts (before Engine No. P-17288). *See Rocker Arms under "Valve System" in Nash Special Data for complete details.*

►*INTAKE VALVE STEM OIL DEFLECTOR PRODUCTION CHANGE: See VALVES below.*

ENGINE SPECIFICATIONS: V8 valve-in-head.

Bore	Stroke	Displacement
3 13/16"	3½"	320 cu. ins.

Compression Ratio	Developed HP	Rated HP
8.25-1①	208 at 4200 RPM	46.5

①–After Engine No. P-6001. 7.8-1, before Engine No. P-6001.

Compression & Vacuum Reading: *See TUNE-UP.*

OIL PAN REMOVAL: Remove steering idler arm attaching bolts and drop steering linkage. Remove exhaust crossover pipe.

CYLINDER HEAD INSTALLATION: *See "Cylinder Head & Manifolds" in Nash Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Nash Special Data.*

PISTONS

Aluminum alloy, slipper type, tapered skirt, cam ground with steel reinforcement. Piston pin offset toward thrust side of piston.

Removal–Pistons and rods removed from above.

Clearance–.001-.0015" (top of skirt), .000-.0015" (bottom of skirt).

Replacement Pistons: Furnished Std. size, .010", .020", .030" oversize.

Installing Pistons: Install with "F" cast in piston strut and notch in piston head toward front of engine.

PISTON PINS

Full floating type. Retained in piston by lock rings at each end. **Diameter**–.9803".

Pin Fit in Piston–Palm press fit with piston heated in water to 200°F.

Pin Fit in Connecting Rod–Palm press fit at room temperature.

Replacement Pins: Std. size, .003", .006" oversize.

Piston Pin Bushing (In Connecting Rod) Installation: *See "Piston Pins" in Nash Special Data.*

PISTON RINGS

Three rings (two compression & one oil) used. Upper compression ring is chrome plated.

Ring	Width	End Gap	Side Clearance
Compr.	.078"	.010-.018"	.0015-.005"
Oil	.186"	.010-.018"	.0015-.005"

Installing Rings: Install upper compression ring and oil ring with gap toward camshaft side of engine. Install lower compression ring with gap toward opposite side from camshaft. All gaps should be midway between piston pin bosses.

CONNECTING RODS

Length–6 25/32" (center-to-center).

Crankpin Journal Diameter–2.250".

Lower Bearing–Replaceable precision type.

Clearance–.0005-.0025". **Sideplay** .003-.011".

Replacement Bearings: Std. size, .001", .002", .020" undersize.

Installing Rods: Install odd numbered rods in left bank and even numbered rods in right bank, with numbers on rods facing down and away from block and milled oil groove in connecting rod cap upward and toward crankshaft.

CRANKSHAFT

Journal Diameter–2.500". Five bearings.

Bearings–Precision type. The four front crankshaft bearings are interchangeable.

Clearance–.0005-.0025".

Replacement Bearings: Std. size, .001", .002", .020" undersize.

End Thrust: Taken by No. 5 (rear) main bearing.

Endplay–.0035-.0085".

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Nash Special Data.*

►*CRANKSHAFT REAR MAIN BEARING OIL LEAK CORRECTION: See "Crankshaft & Main Bearings" in Nash Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Nash Special Data.*

Vibration Dampener: *See "Vibration Dampener" in Nash Special Data.*

CAMSHAFT

Bearings–Five, steel-backed babbitt lined precision bearings.

Clearance–.0005-.0045".

End Thrust: Taken by thrust plate behind camshaft sprocket.

Endplay–.004-.006".

Camshaft Removal & Installation: *See "Camshaft & Bearings" in Nash Special Data.*

Timing Chain: Morse. **Width**–1". **Pitch**–.375". **Length**–64 links.

Timing Chain & Sprocket Removal–*See "Timing Chain" in Nash Special Data.*

Engine Front Cover Removal: *See "Engine Front Cover" in Nash Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Nash Special Data.*

Camshaft Setting: Both sprockets marked "0". Mesh chain with sprockets turned so that marks are adjacent and in line with straight edge across shaft centers.

VALVES

►*INTAKE VALVE STEM OIL DEFLECTOR PRODUCTION CHANGE:* Starting with Engine No. P-13644, Intake Valve Stem Oil Deflector, Part No. 6476056, entered production. The deflector, a rubber cap, is located over valve stem and installed on top section of cast valve guide. This deflector can be installed on all earlier engines for improved oil control.

Tappet Clearance: Hydraulic lifters. Adjustment not required unless cylinder head removed or valve lifters replaced. *See "Valve Tappet Adjustment" in Nash Special Data.*

Valve	Head Diam.	Stem Diam.	Length
Intake	1.937"	.3725"	5.712"
Exhaust	1.687"	.3715"	5.690"

Valve	Seat Angle	Lift	Stem Clearance
Intake	30°	.374"	.001-.002"
Exhaust	45°	.374"	.002-.003"

Valve Seat Width–3/64" (Intake), 5/64" (Exhaust).

Valve Springs: Single springs used. Install springs with two closely wound coils against cylinder head.

Valve Spring Specifications

Valves	Spring Pressure	Spring Length
Closed	78-86 lbs.	1¾"
Open	158-172 lbs.	1 3/8"

Valve Guides: Integral with cylinder head. Ream valve guide holes for oversize valves if valve stem clearance excessive. Valves are furnished with .003", .010", .020", .030" oversize stems.

Checking Valve Stem Clearance and Reaming Guides for Oversize Valve Stems: *See "Valve System" in Nash Special Data.*

Valve Lifters: Hydraulic type.

Hydraulic Valve Lifter Removal, Overhaul & Testing–*See "Valve System" in Nash Special Data.*

Rocker Arm Assembly: *See "Valve System" in Nash Special Data.*

►*ROCKER ARM SHAFT PRODUCTION CHANGES (For Improved Oil Control): See "Valve System" in Nash Special Data.*

►*ROCKER ARM SQUEAK CORRECTION (Caused by insufficient oil reaching rocker arm shafts): See "Valve System" in Nash Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

Intake Valves–Open 14° BTDC. Close 56° ALDC.

Exhaust Valves–Open 52° BLDC. Close 18° ATDC.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Valve Timing Check: Remove cylinder head cover and spark plugs. Crank engine until No. 6 piston in right bank is on TDC (on compression stroke). This places No. 1 piston on TDC on the exhaust stroke overlap position. Rotate crankshaft 90°. Install a dial indicator on No. 1 intake rocker arm pushrod end. Crank engine slowly in direction of rotation (clockwise) until dial indicator indicates pushrod movement, (the hydraulic lifter should be fully charged for this check). At the time dial indicator moves, the ignition timing mark on vibration dampener should align with the 14° (approximately) position on the degree quadrant section of the timing assembly cover. *NOTE–If more than ½" variance in either direction is evident, remove engine front cover and inspect timing chain installation.*

• OILING SYSTEM

Crankcase Capacity: 5 qts. (refill).

Normal Oil Pressure: 45 lbs. at 40 MPH. 10 lbs. at idle speed.

Pressure Regulator–In oil pump. Not adjustable.

Oil Pressure Indicator: Red light on instrument panel. Lighted when engine oil pressure low.

Oil Pressure Switch–King-Seeley 47195.

Oil Pump: Gear type. On rear main bearing cap, driven through distributor drive and camshaft gear.

Oil Pump Removal, Overhaul and Installation–*See "Oiling System" in Nash Special Data.*

Crankcase Ventilation: Filter element in oil filler cap (air intake). Outlet pipe in valve tappet cover.

COOLING

Water Capacity: 21 qts. (with heater), 20 qts. (without heater).

Pressure Valve: Radiator filler cap. 7 lbs. (Std.) 14 lbs. (With Air Conditioning).

Thermostat: 170°. Starts to open at 167°-173°F.

Water Pump: Packless type with sealed ball bearing. *See "Nash V8" in Water Pump Section.*

Temperature Gauge: Dash Unit is Auto-Lite, Engine Unit is King-Seeley as indicated below.

Dash Unit–Auto-Lite 13881A.

Engine Unit–King-Seeley 44215.

See "Temperature Gauges" in Miscellaneous Section.

ULTRAMATIC DRIVE

Packard "Twin-Ultramatic". Torque converter (with hydraulic operated direct speed clutch) and hydraulic operated planetary unit.

►*ULTRAMATIC HIGH RANGE CLUTCH AND LOW RANGE BAND FAILURE CORRECTION: See "Twin-Ultramatic Transmission" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Twin-Ultramatic Transmission" in Transmission Section.*

Lubrication: Check fluid level every 1000 miles, drain and refill every 25,000 miles.

Checking Fluid Level–*(CAUTION–Fluid level must be checked at normal operating temperature and after engine has been idling at 800 RPM for at least one minute to completely fill system).* Run engine at low idle speed while fluid level is being checked, using dipstick located in engine compartment. Add fluid as required to bring level to "Full" mark on dipstick.

Capacity–22 pints. Use only Automatic Transmission Fluid Type A having an AQ-ATF number on can.

Linkage Adjustment: *See CARBURETOR above.*

►*OTHER TWIN-ULTRAMATIC DATA: See "Twin-Ultramatic" in Transmission Section.*

UNIVERSALS

Mechanics or Saginaw. One universal joint used at front end of propeller shaft.

REAR AXLE

►*PROPELLER DRIVE SHAFT NOISE CORRECTION & PRODUCTION CHANGE:* A noise developing at 58-62 MPH under light throttle pressure, either pull or coast (similar to rear axle gear noise) may be caused by drive shaft and can be corrected by installing a two-piece shaft, Part No. 3145400. The later two-piece shaft replaced the former one-piece shaft in production at Car Serial V-8235.

►*REAR AXLE RATIO PRODUCTION CHANGE:* Beginning with Car Serial No. V-8235, the rear axle ratio has been changed from 3.54-1 (11-39), to 3.2-1 (13-41). When installing a new service axle having the 3.2-1 ratio, speedometer gear, Part No. 6450318 (18 teeth), and adaptor, Part No. 6450518 is required.

Own. Semi-floating, Hypoid Gear with Torque Tube drive. *See "Nash Hypoid" in Rear Axle Section.*

Axle Ratio–3.54-1 (11-39) before Car Serial V-8235. 3.2-1(13-41)after Car Serial V8235.**Backlash**–.002-.006"

Rear Axle Assembly Removal: Raise rear of body. Disconnect hand brake cable at bellcrank and the housing at bracket. Disconnect torque tube from transmission, rear brake hose at bracket on body floor pan, rear springs, shock absorbers and rear axle stabilizer bar at axle tube. Roll axle from under car and remove truss rods, torque tube and propeller shaft

Axle Shaft Removal: Remove wheel, pull drum (use Hub Puller J-1644-B). Disconnect brake line and cable. Remove backing plate mounting bolt nuts, take off oil seal retainer, backing plate and wheel bearing adjusting shims (check thickness of shims and replace same amount when reassembling). Withdraw shaft using Puller J-2498, do not drag on inner seal.

Rear Suspension: *See "Nash Rear Suspension" in Rear Axle Section.*

SHOCK ABSORBERS

Delco or Monroe. Direct acting type. Serviced by replacement.

Front Shocks–Nash Part No. 3118500 (Set of 2).

Rear Shocks–Nash Part No. 3117364 (Set of 2).

FRONT SUSPENSION

►*CAMBER & CASTER ECCENTRIC BOLT NUT BOTTOMING ON SHOULDER OF ECCENTRIC BOLT CORRECTION & PARTS PRODUCTION CHANGE:* (Eccentric bolt nut will not tighten sufficiently to prevent eccentric bolt from turning). On early cars install a 5/8" I.D. washer between nut and eccentric washer. At Car Serial V-1511 the counter-bore of the eccentric nut has been increased to 3/16".

Independent. With coil springs located between upper ends of steering knuckle pin and seat in outer wheelhouse panel.

See "Nash" in Front Suspension Section.

Kingpin Inclination–6½°.

Caster (Manual Steering)–½° Pos. desired, with 0-½° Pos. limit **(Power Steering)** 1° Pos. desired with ½-1° Pos. limits.

Camber–0° desired with ¼° Neg to ¼° Pos. limit.

Toe-In–1/16-3/16".

Toe-Out on Turns (Manual Steering)– Inner wheel 25°, Outer wheel 20¼° **(Power Steering)** Inner wheel 25°, Outer wheel 21¾°.

STEERING

►*POWER STEERING PUMP VIBRATION CORRECTION & PUMP BRACE PRODUCTION CHANGE (AIR CONDITIONED CARS):* Install Power Steering Pump Brace, Part No. 3146406, between cover cap screw and engine cylinder head. Cars after Serial No. V-9917 have the brace installed in production.

Manual: Gemmer Model 305. Worm & Roller with "push-pull" adjustments.

See "Gemmer Steering Gears" in Steering Section.

Power Steering: Monroe "Linkage Type". *See "Monroe Power Steering" in Steering Section.*

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Gemmer Steering Gears" in Steering Section.*

Steering Gear Removal: *See "Gemmer Steering Gears" in Steering Section.*

BRAKES

►*SPONGY BRAKE PEDAL CORRECTION (EXCEPT POWER BRAKES): See "Brake Notes" in Nash Special Data.*

Bendix. Hydraulic duo-servo single anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes *See "Bendix Hydraulic" in Brake Section.*

Drum Diameter–11".

Wheel Cyl. Diameter–1 1/8" (Front), 15/16" (Rear).

Lining Width–2½" (Front Wheels), 2" (Rear Wheels).

Lining Length–9 3/8" (Primary Shoes), 12" (Secondary Shoes).

Clearance–Back off adjusting screw 14 notches from point where wheel can just be turned by hand.

Standard Master Cylinder: Mounted on support under floor pan to left of transmission.

Checking Fluid–Remove access cover under floor mat on left side. Maintain level ½-1" below filler top.

Removal–Remove from below without disturbing other parts.

Power Brakes: Bendix Power Unit. Replaces standard cylinder.

See "Bendix Power Unit" in Brake Section.

Removal of Power Unit–Remove vacuum and air cleaner hoses at inlet tubes. Remove hydraulic line. Disconnect pushrod from brake pedal linkage. Remove unit from mounting brackets.

MISC. MECHANICAL

Windshield Wipers: Vacuum Link & Arm type. *See "Windshield Wipers" in Miscellaneous Section.*

Air Conditioning: Own. Compressor clutch controlled magnetically. Inoperative unless control knob turned "ON". *See "Nash Air Conditioning" in Miscellaneous Section.*

►*AIR CONDITIONER COMPRESSOR VIBRATION CORRECTION & COMPRESSOR BRACE PRODUCTION CHANGE (Cars before Serial No. V-10150): See "Nash Air Conditioning" in Miscellaneous Section,*

Power Window Regulators: Electric. Individual motors in each window. *See "Power Window Regulators" in Miscellaneous Section.*

TIGHTENING SPECIFICATIONS

1946-48 MODELS

	Ft. Lbs.	In. Lbs.
Spark Plugs (14 MM. Type)	28-35	336-420
Cylinder Head Capscrews	60-70	720-840
Main Bearing Bolts:		
All (except Rear)	100	1200
Rear Only	140	1680
Connect. Rod Nuts (slotted lock)	50-55	600-660
Piston Pin Lockscrews	9-11	108-132
Flywheel to Crankshaft Bolts	55-60	660-720
" " " (Hydra-Matic)	60	720
Front Engine Mounting to Frame	25-30	300-360
Rear Eng. Mtg. to Clutch Hous'g	45-50	540-600
Exh. to Int. Manifold Bolts	22-26	264-312
Manifold to Block Nuts	11-14	132-168
Crankshaft Front End Bolt	130-140	1560-1680
Clutch Cover Mounting Bolts	22-26	264-312
Transmission to Housing	60-70	720-840

1949-55 MODELS

	Ft. Lbs.
Cylinder Head	60-70
Intake Manifold (Bolts & Nuts)	22-26
Exhaust Manifold (Bolts & Nuts)	22-26
Oil Pan	9-11
Main Bearing Caps (except Rear)	100
Main Bearing Caps (Rear)	140
Flywheel	85-95
Crankshaft Pulley	45-50
Con Rod Caps	40-50
Camshaft Sprocket & Pump Eccentric	14-17
Rocker Arm Support Brackets	14-17
Engine Front Cover (3/8 & 7/16" Bolts)	30-35
Water Manifold	22-26
Oil Pump Mounting	11-14
Oil Filter to Cylinder Block	30-35
Oil Filter Housing to Base	40-45
Oil Filter Pad Cover	30-35
Flywheel Lower Housing	50-55
Transmission Mounting	60-70

ENGINE MOUNTING

1949-55 MODELS

FRONT ENGINE MOUNT INSTALLATION: Cap screws fastening mounting to frame or bracket should first be screwed finger tight, then tightened alternately, one turn at a time. DO NOT TIGHTEN ONE CAP SCREW IN POSITION INDEPENDENTLY OF THE OTHER, since lower portion of asssembly would not seat evenly in upper portion. Front mounting must be properly positioned and tightened, otherwise mounting will not function properly as an insulator.

OIL PAN

1946-47 MODELS
1948 DYNAMIC MODELS

OIL PAN REMOVAL: Oil pan can be removed as follows: Disconnect idler arm support from frame dropping steering relay rod assembly. On 8 cylinder only, remove flywheel lower pan. For access to bolts at front end of pan, unhook splash guard fasteners and work through openings in front frame cross-member. Third bolt from front on each side requires use of end wrench to clear front suspension cross-member. Remove right and left filler plates (rotate left plate out). With all pan bolts removed, turn crankshaft to place counterweights up out of the way, take off pan.

Installation—Use new gaskets and allow them to dry before installing so as to prevent gasket moving when pan installed on engine.

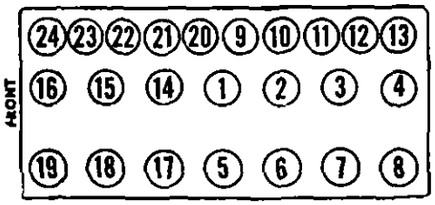
1949-50 SIX CYLINDER

OIL PAN REMOVAL: Disconnect steering idler arm from frame and drop steering relay assembly. Drain radiator, disconnect radiator hoses. Remove two front engine mounting-to-frame bolts, raise engine approx. 3/4". For access to pan bolts at front end, unhook fasteners on splash guard between cross-member and radiator baffle and work through openings in cross-member. Front bolts on each side of pan must be removed with an end wrench. With pan bolts removed, rotate crankshaft to place counterweights up for clearance, remove oil pan.

Installation—Use new gasket coated with cement. Allow cement to dry for easier installation.

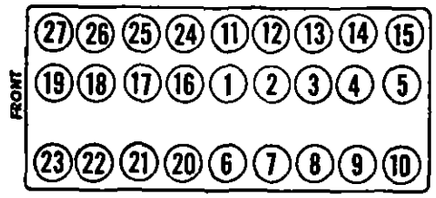
1949-55 V8 MODELS

OIL PAN REMOVAL: Remove starter and exhaust cross-over pipe. Disconnect idler arm from frame and drop steering relay rod. Remove oil pan cap-screws and withdraw pan.



Installation: Cement new cork gaskets to pan, assemble front and rear synthetic seals to pan. Place coat of graphite grease on exposed surface of seals to insure that seal maintain their proper position in pan and do not hang up on front cover and main bearing sealing surfaces during oil pan installation.

CYLINDER HEAD & MANIFOLD



1946-50 MODELS (EXC. V8)

CYLINDER HEAD SERVICING: Steel-asbestos cylinder head gasket used. This gasket cannot be reused. When installing new gasket, coat both sides with thin coat of P.O.B. Perfect Gasket Seal at room temperature (approx. 70°F.). Edges at cylinder bore holes must be wiped clean of all sealer. To prevent leakage, a plain washer is used under bolt heads.
1941-47 Note. Install gasket with 3/16" flange next to cyl. block (flange on upper side 3/32" wide).
1939-41 8 cyl. Engine Note—Install new neoprene grommet in pump by-pass hole on front of head.

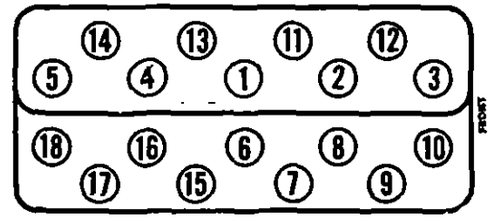
INSTALLING CYLINDER HEAD: Use a Torque Indicating Wrench to tighten cylinder head capscrews, tighten in correct sequence as shown in the diagram. Cast Iron heads should be tightened cold and rechecked after engine has been run sufficiently to bring all parts to normal operating temperature.

OLDSMOBILE SIX CYLINDER HEAD

OLDSMOBILE EIGHT (1946-48)
CYLINDER HEAD

Tightening Torque—See Tightening (Torque Wrench) Specifications.

1949-55 V8 MODELS



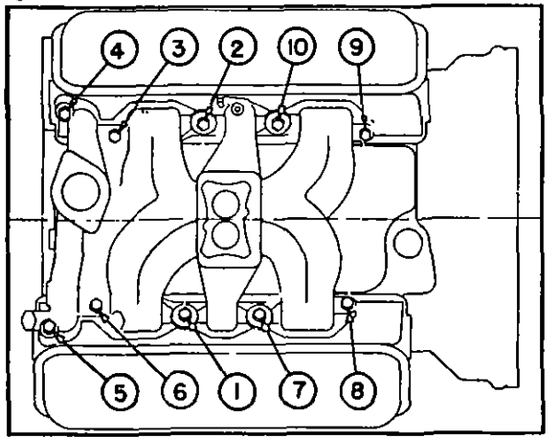
CYLINDER HEAD REMOVAL: Drain cooling system, disconnect upper radiator hose from water outlet. Remove air cleaner, generator, and spark plug wire retainers (name plates on valve covers). Disconnect wires at spark plugs, throttle linkage, and spark plug wire and air cleaner supports from cyl. heads. Take off distributor cap, lift off cap, high tension wire assembly and supports off engine as an assembly. Remove carburetor fuel and vacuum lines, external water by-pass (tube around lower end of oil filler pipe), valve covers, intake manifold with coil and carburetor attached. Disconnect exhaust pipe from exhaust manifold. Remove rocker arm shaft assembly, push rods. Remove cylinder head with exhaust manifold by taking out 14 cylinder head bolts.

1949-55 V8 M DELS

CYLINDER HEAD INSTALLATION: Reverse removal instructions given above and note following:

Gaskets. Use all new gaskets. Use POB No. 3 sealer and coat both sides of head and intake gaskets. Cement cover gaskets to valve covers. ***Install head gaskets with crimped side UP.***

Cylinder Head Bolts. 7/16" bolts used as follows: Four 6" bolts at rocker arm supports. Ten 4½" bolts through center of head. Four 2½" bolts at bottom. Use a Torque Wrench (see Tightening Specifications) and tighten in order shown in head diagram.



OLDSMOBILE V8 CYLINDER HEAD

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

1949-55 V8 MODELS

Intake Manifold. ***CAUTION—Manifold must be centered between cylinder heads.*** Dip threads of six manifold bolts (two 3/8" x 1 7/8" at front, and four 3/8" x 1½" at sides) in POB No. 3 sealer. Use large flat washers under manifold nuts, small flat washers on bolts. Use a Torque Wrench (see Tightening Specifications) and tighten in order shown below.

ROCKET V8 INTAKE MANIFOLD

PISTON PINS

1946-48 MODELS (WITH ALUMINUM PISTONS)

PISTON PINS: Only standard size pins furnished for service. Pin bosses in pistons are electrolite and must not be reamed. Replacement pistons (standard and oversize) furnished with pins fitted.

Removal: To remove pin, take out lock screw, place assembly in boiling water one minute. With Tool HM-535 push pin out through plain boss end.

Fitting:—Pin fit in piston .0001" loose to .0002" tight (plain boss), .0002-.0005" tight (lock screw boss). Pin fit in rod bushing .0003-.0006". If rod bushing worn, press new bushing in place (align oil hole in bushing and rod), burnish with Tool HM-587E and line ream with Reamer HM-586 to .8558-.8562".

Installing:—To install pin, heat piston and pin (as for Removal above), dip pin in hot light engine oil, start pin through plain boss end of piston and through rod (make sure lock screw hole in pin and boss will be aligned), then with Tool HM-535 lightly push pin in place until hole in pin and boss aligned (use punch in hole to correct slight mis-alignment).

IMPORTANT—Pin must not be forced (if heavy push required, indicates piston has cooled, disassemble and reheat piston and pin). After pin in place, coat lock screw with graphite and tighten to 9-11 lbs. ft. tension with a torque wrench.

1949-50 SIX CYLINDER

PISTON PIN: Removal. Take out lockscrew, use Tool HM-535 and tap pin out (hold piston in hand). **Replacement Pins**—Std. and .001", .003" oversize. **Installing Pins.** Fit pins to specifications listed on car page. If reaming required to fit oversize pins, use Reamer HM-536 for piston bosses and rod bushing. Rod bushing can be removed and replaced with Tool J-1674 and Support Tool J-1649. **To install piston pin,** heat piston (not pin) in boiling water, coat inside of pin boss with graphite, insert split end of pin in piston boss (mark "V-S" on piston head and oil spit hole in lower end of rod must be on same side), use Tool HM-535 and tap pin in place, install lockscrew and tighten to 9-11 ft. lbs.

CRANKSHAFT & MAIN BEARINGS

1946-50 SIX CYLINDER

MAIN BEARING REMOVAL: With bearing cap removed upper half of bearing can be removed by inserting Tool HM-J-173 in oil hole in shaft, and with tang on tool engaging plain edge of bearing, rotate crankshaft in usual direction and turn bearing out. Crankshaft will not have to be removed.

Installation—Remove sharp edge from plain end of bearing, insert this end at indented side of support and rotate in place using pin in oil hole in shaft.

1946-48 8 CYL. MODELS

MAIN BEARING CAPS (8 CYL.): "Snap-In" type on all bearings except No. 1 which is doweled type. "Snap-In" caps are ¼" heavier and have machined edges which must not be filed, and must be pressed in block with slight pressure. Caps bored 1/16" offset and must be installed with notch in cap (for bearing tongue) on the same side and next to notch in block.

1946-50 MODELS (EXC. V8)

CRANKSHAFT END THRUST: Taken through front (#1) main bearing. Bronze thrust plate assembled on each end of bearing with a steel thrust collar between front bronze thrust plate and sprocket. **Endplay Note**—Rear bronze thrust plate .124" thick. Front bronze thrust plate (behind steel collar) is a selective fit to obtain proper endplay (.124" thick or one of two other thicknesses).

Hydra-Matic Cars—Steel thrust collar (Part No. 414229) has a more highly polished finish than that used on synchro-mesh transmission equipped cars. Can be identified by finish and part no. which is etched on collar. This collar only furnished for service (can be used to service synchro-mesh transmission equipped cars also). Front bronze thrust washer has eight grooves in face of plate and must be assembled with these grooves next to steel thrust collar. A plain bronze thrust washer is used at rear.

1946-55 MODELS

REAR MAIN BEARING OIL SEAL: Asbestos covered wiper seal installed in rear groove in bearing cap and block (oil slinger operates in front groove). **Note**—Cork strips used to seal vertical joints between bearing cap and block on "L" head engines.

Oil Seal Installation—With crankshaft out of engine and bearing cap off, use new seal coated with graphite grease, crowd seal by hand into rear groove in cap and block. Use Compressor Tool No. J-955 (for "L" Hd. Engines), No. BT-12 (for Rocket V8 Engine), and drive seal into place. With tool resting on seal, cut ends flush at each end (for both cap and block). ***Seal must entirely fill groove and be trimmed flush to prevent oil leaks.*** When installing cap on all but Rocket V8 Engines, seal vertical joints with new cork seals.

1949-55 V8 MODELS

CRANKSHAFT FRONT OIL SEAL REMOVAL AND INSTALLATION: (Without removal of engine front cover).

Removal—Remove crankshaft pulley and replace large capscrew in crankshaft end. Place fingers of Tool J-4176 over end of crankshaft and turn tool fingers so that hooks will pass through clearance between crankshaft end and inner diameter of front oil seal (a few light taps on tool center screw will force fingers behind rubber ring of oil seal). Use an end wrench on fixed nuts below puller plate and rotate each finger outward 90° to engage the finger hooks with ring of oil seal, then tighten nuts on upper plate fo puller to hold fingers in position. Rotate puller center screw against crankshaft screw and remove seal.

Installation—Use Tool J-4177 to replace seal in cover by first positioning seal in cover and then assembling adapter ring and driver so slot in driver will clear crankshaft key. Drive seal into place until adapter bottoms on cover face.

ENGINE FRONT COVER

1949-55 V8 MODELS

ENGINE FRONT COVER (Removal): Disconnect lower radiator hose and heater hose from front cover and disconnect generator link at generator. Remove oil pan and remove the two bolts attaching front engine mount to frame. Support engine with Special Tool BT-29 (engine must clear front cross member). Remove radiator assembly, fan blades and pulley and crankshaft pulley. Remove fuel and vacuum pump assembly. Remove front cover attaching bolts and front cover. Reverse removal sequence to install cover, using a new gasket coated on one side with gasket cement. Lubricate sealing surface of front oil seal and fuel pump operating arm. Dip attaching cover bolts in POB No. 3 sealer.

Engine Front Cover Oil Seal (Crankshaft Front Oil Seal) Replacement: ***(NOTE—Front cover oil seal can be replaced without removing front cover by using Tool J-4176).*** Remove crankshaft pulley and replace large capscrew in crankshaft end. Place fingers of Tool J-4176 over end of crankshaft and turn tool

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

fingers so that hooks will pass through clearance between crankshaft end and inner diameter of front oil seal, (some light taps on tool center screw will force fingers behind rubber ring of oil seal). Use an end wrench on fixed nuts below puller plate and rotate each finger outward 90° to engage the finger hooks with ring of oil seal, then tighten nuts on upper plate for puller to hold fingers in position. Rotate puller center screw against crankshaft screw and remove seal.

Installation—Use Tool J-4177 to replace seal in cover by first placing seal in cover and then assembling adapter ring and driver so slot in driver will clear crankshaft key. Drive seal into place until adapter bottoms on cover face.

FLYWHEEL

1949-50 SIX CYLINDER

FLYWHEEL INSTALLATION: Cast-iron flywheel used on cars with synchro-mesh transmission, pressed steel flywheel on Hydra-Matic. Ring gear shrunk on both flywheels. Replacement flywheels supplied with only two mounting holes requiring reaming of four additional holes (7/16") after flywheel attached to crankshaft.

FLYWHEEL HOUSING

1949-55 V8 MODELS

LOWER FLYWHEEL HOUSING ALIGNMENT: It will always be necessary to carefully check alignment of block and lower bell housing whenever original housing is replaced. Misalignment will be evident in one or both of two conditions; step between rear surfaces of block and lower housing resulting from location of housing too far forward or rearward on block, or a non-parallel condition resulting from either block or lower housing being slightly out-of-square. To insure proper alignment on replacement, proceed as follows:

1) Remove two dowels which serve to align original lower housing with block, install and tighten clutch (flywheel bell) housing to block, place lower flywheel housing in its proper position so that it is flat against clutch housing and contacting cylinder block; then tighten bolts securing lower flywheel housing to clutch housing.

2) Using feeler gauge, check to see if lower housing and block are square with each other, and if not, install proper thickness shims (as near bolts as possible) to properly align parts. If more than .010" of shims required, use different flywheel housing. Tighten lower flywheel housing-to-cylinder block bolts. If all bolts properly tightened it will not be necessary to re-dowel between block and lower housing

3) If dowels not used to maintain alignment, foregoing procedure will have to be followed when lower housing is removed and replaced.

4) Lower housing to cylinder block alignment can be checked after assembly by removing clutch (flywheel) housing and laying straight-edge along rear surface of block and lower housing. NOTE—Use care not to disturb lower housing when clutch housing removed and replaced.

1949-55 V8 M DELS

CLUTCH (FLYWHEEL BELL) HOUSING ALIGNMENT: Mark flywheel and crankshaft for identification during assembly. Proceed as follows:

1) Support engine by oil pan flanges for alignment of flywheel housing. NOTE—When using engine stand, engine can be supported at front and rear of block. **Do not support on flywheel housing.**

2) With flywheel and crankshaft assembled in place, assemble clutch (flywheel bell) housing onto engine block and tighten housing attaching bolts sufficiently so housing can be shifted by tapping with lead hammer.

3) Install lower flywheel housing and tighten in place CAUTION—Lower flywheel housing **must be in place when aligning clutch housing.** Install dial indicator pilot shaft and strap.

4) With dial indicator stem positioned against rear face of clutch housing at approximately 2¼" radius from center line of crankshaft, revolve flywheel 360°. If reading exceeds limits, shim as necessary between housing and engine block to bring within limits. CAUTION—Be sure indicator button is kept clear of oil groove in housing.

5) Assemble dial indicator to pilot shaft using attachment, check radial runout of housing bore, attach flywheel turning tool J-4772 to lower housing to turn flywheel.

6) Shift housing as necessary with lead hammer to bring within limits. Tighten housing to block bolts to 50-55 ft. lbs. torque. recheck limits.

7) Using reamer J-4832-3 and ratchet wrench J-808-6 ream two engine block-to-clutch housing dowel pins, Part No. 557754 After dowel pins installed check to see that dowel pins do not protrude inside housing and interfere with flywheel. Clean all cutting from housing.

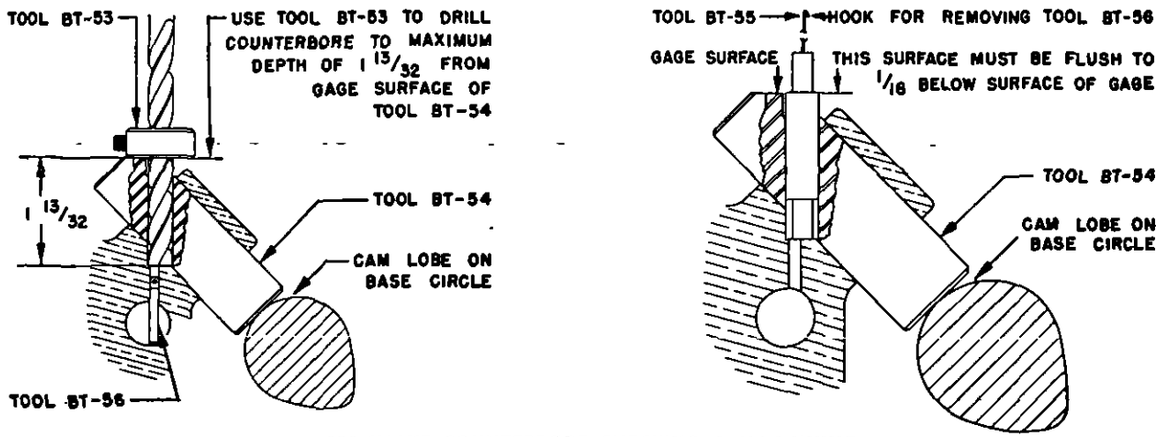
CAMSHAFT & BEARINGS

1949-55 V8 MODELS

CAMSHAFT REMOVAL: Drain radiator. Remove radiator hoses, heater hoses, air cleaner, fuel and vacuum lines, distributor, throttle linkage from carburetor, fan, fan pulleys, fan belts, generator, generator belt, generator bracket, spark plug wire support, external water by-pass tube, valve covers, rocker arm assembly, push rods, intake manifold, cylinder block cover, valve lifters (keep clean and in order for re-installation in same position), upper radiator baffle, radiator core, harmonic balancer and pulley as an assembly, fuel pump, exhaust pipe cross-over, steering idler arm, oil pan, front engine mounting (use Tool Set BT-29 to support engine), engine front cover, fuel pump eccentric, timing chain and sprocket, thrust plate, and camshaft.

►*CAUTION*—Withdraw camshaft carefully to prevent bearing damage as follows: Slide camshaft through each bearing while slowly rotating shaft, hold shaft at front end and guide it from the rear.

VALVE SYSTEM



1952 V8 M DELS

VALVE LIFTER COUNTERBORE (CHECKING AND DEEPENING): ***CAUTION—Do not attempt to check or correct counterbores without the following tools: BT-53, 54, 55, 56, and special flat end magnetized drill.***

Checking Counterbore: Rotate camshaft so drill guide Tool BT-54 rests on low side of cam lobe. Place handle of Tool BT-55 through hole of Tool BT-54 to rest on base of counterbore. Shoulder of Tool BT-55 must be flush to 1/16" below gauge surface of Tool BT-54. If shoulder of tool is **higher,** counterbore must be deepened as follows.

Deepening Counterbore: Remove Tool BT-54, and apply hard oil to Tool BT-56 (⅛" plug), and drop it into oil hole in lifter boss so it rests on bottom of oil gallery. Replace BT-54 (drill guide). Set collar on BT-53 on special magnetized drill to 1 13/32", and apply hard oil to flutes, drill counterbore as shown in illustration, (take out a small amount at a time, removing the drill frequently and wiping clean. Apply hard oil each time drill is removed). Proceed in this manner until specified depth is reached. Remove tools (except plug) and clean area around lifter with a magnetized rod to pick up all bits of metal. Remove Tool BT-56 with hook on end of tool BT-55.

1952 VALVE COUNTERBORE CHECKING & MACHINING

CONTINUED FROM PRECEDING PAGE

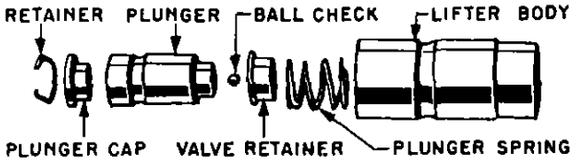
R CKER ARMS

1949-55 V8 MODELS

ROCKER ARM SHAFT ASSEMBLIES: Identical hollow steel tube shafts (ends plugged) are used. Four removable supports for each shaft, one support doweled to shaft for oil feed (at oil line from #2 camshaft bearing on left side, from #4 camshaft bearing on right side). Three springs used to position center rocker arms against supports. End rocker arms retained by wave washer, flat washer, and cotter key.

Rocker Arm Shaft Disassembly: With assembly off engine, remove cotter key and washers from end of shaft. Remove rocker arms, supports (except doweled support which should not be removed from shaft), and springs.

►*CAUTION—Rocker arms should be stored so that they can be reassembled in their original position.*



Rocker Arm Shaft Reassembly: Assemble supports in proper position as to doweled support (oil supply). Push rod end of rocker arms must be on same side as large cylinder head bolt hole in each support.

HYDRAULIC LIFTERS

1949-55 V8 MODELS

VALVE LIFTERS: Hydraulic, Barrel Type. Consisting of plunger and valve assembly operating within a cylinder formed by valve lifter tappet body (See illustration). Oil is introduced to this unit from main oil gallery through hole in side of lifter plunger and body.

Removal: Remove intake manifold, cylinder block cover, valve covers, rocker arm shaft assemblies, push rods and valve lifters.

OLDSMOBILE HYDRAULIC VALVE LIFTER

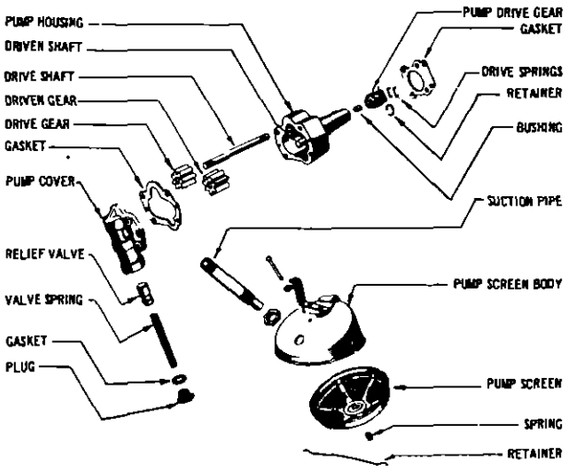
►*CAUTION*—Valve lifters must be installed in same bores from which they were removed.

Disassembly: Remove plunger retainer with Lock Spring Tool, BT-31. Remove push rod seat, plunger, ball check valve, ball retainer and spring. If plunger is stuck in lifter body, remove plunger by engaging Remover Tool BT-38, in plunger oil hole, and while holding tool lug in vise, turn "T" handle counterclockwise until plunger in drawn from lifter body. NOTE—Soak heavily varnished lifters in solvent before disassembling.

Cleaning & Inspection: Wash all parts in a suitable cargon solvent and remove all trace of carbon and varnish. Inspect plunger and lifter body for scoring or other damage that would prevent free movement. Inspect lower end of lifter body for nicks or indentations. If any exist, replace complete lifter assembly. Dry lifter parts with air, then install plunger in lifter body without other parts and check for free movement. Plunger should drop of own weight into body bore .

Reassembly: *(NOTE—Body and plunger are selectively fit and must not be interchanged, or replaced individually).* Place plunger over push rod seat and then turn plunger over holding push rod seat in place, and install ball on its seat in plunger. Place ball check valve retainer over ball and then place valve retainer spring over retainer. Carefully assemble valve lifter body over complete assembly. Turn assembly over and while holding push rod seat down, install retaining lock spring, using Tool BT-31.

Identification Note—It is important when replacing lifters that the correct oversize lifter be used. An identification number is etched on all lifter bodies except standard. Lifters are furnished in Std., size and the following oversizes: .001", .002", .003", .005". The cylinder block is marked 1, 2, 3, or 5 for lifter size on rail under engine top cover.



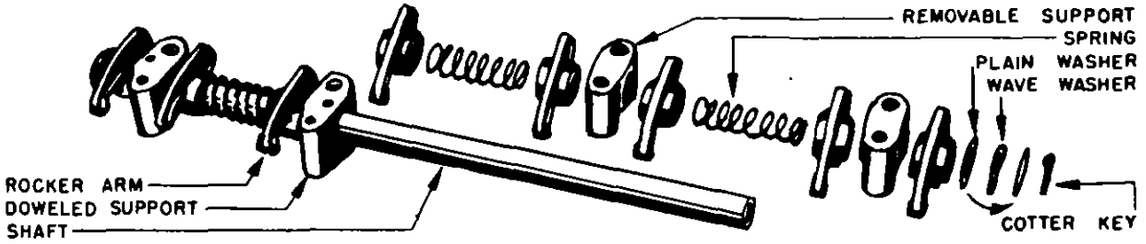
OILING SYSTEM

OIL PUMP

1946-48 MODELS

OIL PUMP: Gear type pump. Six and Eight pump identical except for gear faces which are ¼" wider on Eight. When assembling pump gear on shaft, press shaft on gear flush with outer end of gear (Six), with gear extending ¼" beyond end of shaft (Eight—Use Tool J-954 which properly positions gear on shaft). Pump drive gear must be assembled with Feeler Gauge J-954-1 between inner face of gear hub and pump body to give proper end clearance for pump shaft. Use new pump body gasket.

Installation—Set engine in firing position for #1 cylinder with rotor opposite #1 segment in distributor cap. Note position of distributor shaft tongue for proper oil pump drive gear mesh, then raise distributor and mesh pump drive gear with camshaft gear. Replace distributor in position and reset ignition timing.



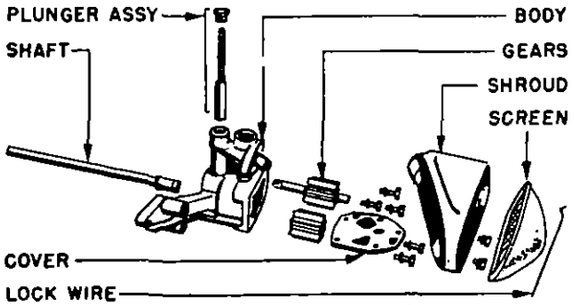
OLDSMOBILE 6 CYL. OIL PUMP

1949-50 SIX CYLINDER

OIL PUMP: Disassembly. With pump off engine, use an arbor press and Tool J-959 and press drive gear off shaft and take out woodruff key. Disassemble pump, take off cover, oil pump gears and shaft.

Assembling Pump. With pump gear on flat surface and woodruff key in place on shaft, press shaft through gear until flush with outer end of gear. Put idler gear on stub shaft in pump body, slide pump shaft and gear assembly into place in pump housing. Place woodruff key on upper end of shaft and press pump drive gear on shaft with Tool J-954-1 between inner face of gear hub and pump body (gives proper end clearance of pump shaft assembly). Install piston, relief spring and nut in pump cover, bolt cover to body. Use new gaskets between pump cover and body, and between pump body and cylinder block.

Installation. Set engine in firing position for #1 cylinder with rotor opposite #1 segment in distributor cap. Note position of distributor shaft tongue for proper oil pump drive gear mesh, then raise distributor and mesh pump drive gear with camshaft gear. Replace distributor in position and reset ignition timing.



OLDSMOBILE V8 ROCKER ARM ASSEMBLY

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

1949-55 V8 MODELS

OIL PUMP: Removal & Disassembly—Remove oil pan, then remove pump. Remove oil screen lock wire and screen, and oil screen shroud. Remove extension shaft and coupling by removing lower snap ring from coupling. Remove oil pump cover, oil pump gears and pressure regulator nut, spring and valve.

OLDSMOBILE V8 OIL PUMP

Reassembly & Installation: Reverse removal & disassembly procedures outlined above.

COOLING SYSTEM

1946-47 EIGHT CYL. MODELS

RADIATOR SHROUD #555107 FOR 1946-47 EIGHT CYLINDER: This assembly used on 1948 Eight Cylinder Series 68 and 78 to maintain proper water temperatures for high altitude and extremely high outside temperatures. This shroud can be installed on 1946-47 Eight Cylinder Series 68, 78, and 98.

Radiator Shroud Installation on 1946-47 Eight Cylinder Series 68, 78, and 98—Drain radiator just enough to permit disconnecting upper end of top hose. Remove radiator baffle cover and take off hood latch as an assembly. Remove radiator baffle. Disconnect radiator support from radiator by taking out 1 bolt and 3 screws on each side. Free wiring harness from clips at upper radiator tank. Loosen upper end of top radiator hose. Pull radiator forward just enough to slide shroud in place between core and support. Re-assemble all parts and fill radiator.

1946-48 MODELS

RADIATOR CORE REMOVAL: To remove radiator core, raise hood, drain cooling system, detach upper and lower radiator hoses, take out four radiator core-to-core support bolts at each side, lift out core (rotate fan as required).

1949-50 6 CYL. M DELS

RADIATOR CORE REMOVAL: Drain radiator, disconnect radiator hoses and hood latch cable. Take off upper radiator baffle. At each side, remove one shroud-to-core self-tapping screw and four core-to-core support self-tapping screws. Lift core out (rotate fan as required).

1949-53 V8 M DELS

RADIATOR CORE REMOVAL: Drain radiator, disconnect radiator hoses. Remove radiator upper baffle, radiator shroud and lift core out.

FRONT END SHEET METAL REMOVAL: *See Oldsmobile Special Data.*

MODEL IDENTIFICATION

SERIAL NUMBER: On plate ('46-47) on upper left front corner of dash under hood, (1948) on left front door hinge post.
1946-47-48 Numbers—First numbers as follows:

Series	Lansing Mich.	Linden N. J.	South Gate, Cal.	Wilmington, Del.
66 ('46)	66-112001	66L-14001	66C-12001	
66 ('47)	66-132001	66L-19001	66C-15001	66W-1001
66 ('48)	66-165001	66L31001	66C21001	66W3001
76 ('46)	76- 92001	76L-13001	76C- 9001	
76 ('47)	76-134001	76L-20001	76C-13001	76W-1001
76 ('48)	76-164001	76L31001	76C18001	76W3001

Series	Atlanta, Ga.	Framingham, Mass.	Kansas City, Kans.
66 ('47)	66A-1001	66B-1001	66K-1001
66 ('48)	66A2001	66B1001	66K9001
76 ('47)	76A-1001	76B-1001	76K-1001
76 ('48)	76A2001	76B1001	76K9001

ENGINE NUMBER: Stamped on pad on front left top corner of cylinder block above generator.
1946 Numbers—6-1001 Up (LHD), 6R-1001 (RHD).
1948 Numbers—6-18801 Up (LHD), 6R7001 (RHD).
Hydra-Matic Cars—Engine Number marked with letter "H" following number: 6-1001H.

TUNE-UP

COMPRESSION: Pressure—112 lbs. at cranking speed of 100 RPM.

VACUUM READING: Steady 17" min. at idling speed.

FIRING ORDER: 1-5-3-6-2-4. See diagram.

SPARK PLUG GAPS: .040".
Plug Type—AC No. 45. 14 mm.

IGNITION: *See Coil, Condenser, and Distributor.*
Breaker Gap—.020".
Cam Angle or Dwell—35° Closed, 25° Open.
Breaker Arm Spring Tension—17-21 ounces.
Automatic & Vacuum Advance—*See Distributor.*

IGNITION TIMING: Synchro-Mesh Trans.....TDC.
Hydra-Matic Drive Cars..... .001" BTDC.
Timing Procedure—*See Ignition Timing.*
Timing Mark—Steel ball insert in flywheel lined up with pointer in inspection hole in left front face of flywheel housing beside starter.
Octane Selector—Set to give slight ping accelerating with wide open throttle below 15 MPH.

CARBURETION: *See Carburetor & Carb. Equipment.*
Idle Setting—½-1½ turns open. One screw—turn screw out for richer mixture.
Idle Speed (Standard)—425 RPM. or 6 MPH.
Idle Speed (Hydra-Matic)—375 RPM.
Float Level—½" from machined projection on cover to top of soldered seam at free end (invert to check).
Accelerating Pump—Lower hole Normal setting. Upper hole (max.) winter. Inner hole (min.) summer.

Fuel Pump Pressure: 5 lbs. maximum.

MANIFOLD HEAT CONTROL: Thermostatic coil type. Setting—Coil wind-up should be 125° (approx. ½ turn) at room temperature. NOTE—To check valve for correct position on shaft, use feeler gauge in slot on rear end of valve shaft. With valve closed, gauge should contact stop pin (slot 6° to left or toward engine from up-and-down position) with ⅛" clearance between valve tip and manifold. Valve welded to shaft in this position.

VALVE TAPPET CLEARANCE: .008" Int., .011" Exh. Hot.
Valve Timing Check—*See Valve Timing.*

STARTING: *See Battery, Starter, Generator, Regulator.*

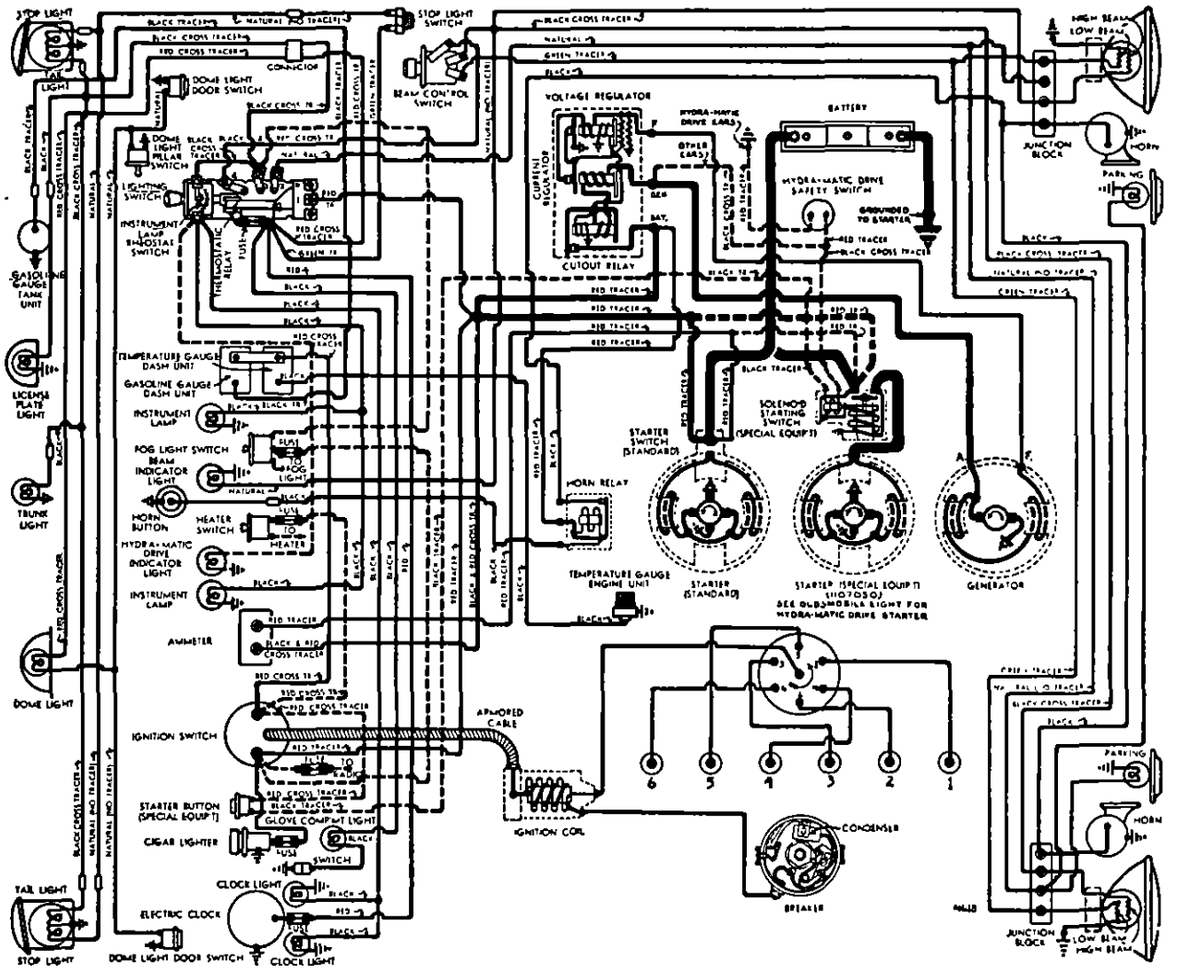
IGNITION

IGNITION SWITCHES: Delco-Remy Nos. as follows: 1946-47—1116353 (66), 1116351 (76), 1116331 (76 RHD). These are used with armored cable. 1948—1116458 (66, 76), 1116459 (76 RHD). Armored cable not used.

Ignition Lock Cylinder: Briggs and Stratton Numbers ('46-47) 45792, ('48) 85373.
Key Series—8000 to 9499. Groove—No. 15.

COIL: Delco-Remy ('46-47) 1115126 or 1115129, (1948) 1115380. ('46-47) on dash, ('48) on engine.
Ignition Current—2.0 amperes idling, 4.5 stopped.

CONDENSER: Delco-Remy 1869704.
Capacity—.18-.25 microfarad.



DISTRIBUTOR: Delco-Remy Model No. ('46) 1110213, ('47-48) 1110214. Automatic advance with Vacuum Spark Control and Octane Selector.
Breaker Gap—.020". Limits .018-.024".
Cam Angle or Dwell—35° closed, 25° open.
Breaker Arm Spring Tension—17-21 ounces.
Rotation—Counter-clockwise viewed from above.

Automatic Advance—1110213

Distributor Degrees	Distributor R.P.M.	Engine Degrees	Engine R.P.M.
Start	250	3.0	500
3.0	450	6.0	900
12.0	1600	24.0	3200

Automatic Advance—1110214

Start	250	3.25	500
13.0	1300	26.0	2600

1946-47 OLDSMOBILE SIX

Vacuum Spark Control: Delco-Remy No. 1116035—Integral type linked directly to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit. **Plunger Travel—7/64".**

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	7.5-9.5"
6°	12°	14.6-16.6"①

①—At .103" travel.

Octane Selector—Adjustment permits 10° advance or retard from center '0' position. See Ign. Timing.

Removal:—Distributor mounted on left side of engine. To remove, disconnect vacuum line, take out hold-down screw in advance arm.

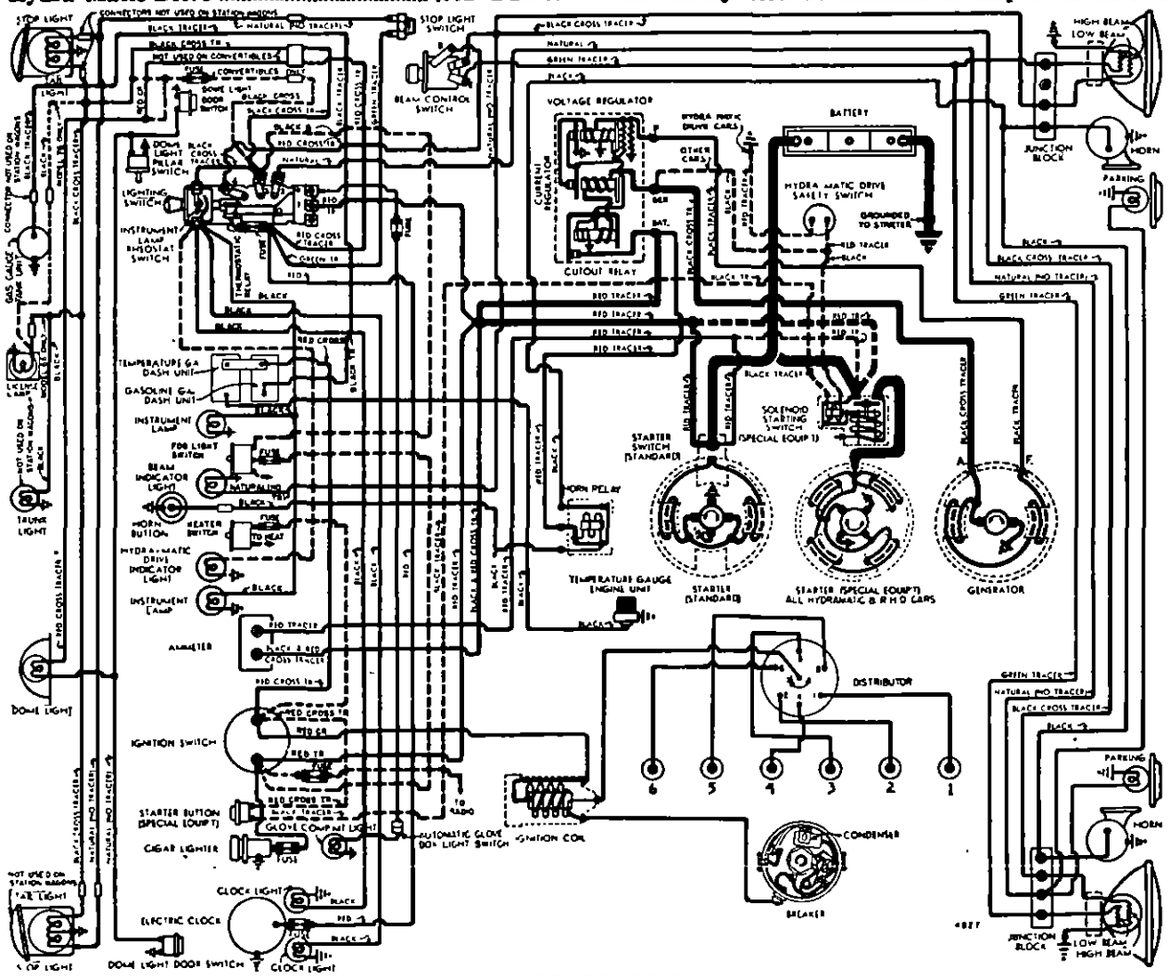
IGNITION TIMING

Std. Setting — **Piston Position**

Synchro-Mesh Transmission ..... **TDC.**

Hydra-Matic Drive ..... **.001" BTDC.**

NOTE—Modify this setting for special fuel and altitude conditions. See Octane Selector Setting.



Flywheel Mark—Steel ball on flywheel (#1 and #6 piston top dead center position). Inspection hole in left front face of flywheel housing above starter.

Timing (With Synchroscope)—Recommended method. Loosen hold-down screw in advance arm, center Octane Selector scale ('0' at indicator line), tighten hold-down screw. Clip synchroscope lead to #1 spark plug, direct synchroscope light on flywheel through inspection hole in left front face of housing above starter. Idle engine, loosen advance arm clamp bolt, rotate distributor until ignition mark (steel ball insert) on flywheel lines up with indicator on housing, tighten clamp bolt, check Octane Selector setting (below).

Hydra-Matic Drive Car Note—Set distributor so contacts open with piston .001" before top dead center.

Timing (Without Synchroscope)—Turn engine over to firing position for #1 piston with steel ball insert in flywheel at indicator in inspection hole in left front face of flywheel housing (or with piston .001" BTDC. on cars with Hydra-Matic drive). Loosen hold-down screw in advance arm, center pointer on scale ('0' mark at indicator), tighten hold-down screw. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt and check Octane Selector setting.

Octane Selector Setting: Set for a slight ping when accelerating engine with wide open throttle at speeds below 15 MPH. To adjust, loosen distributor hold-down screw, rotate distributor clockwise toward 'Adv' end of scale (if no ping noted), counter-clockwise toward 'Ret' end of scale (if ping too severe) by steps until performance correct.

1948 OLDSMOBILE SIX

CARBURET R

1946-47-48 Synchro-Mesh Tr.. Carter WA-1, No. 504S
1946-47 Hydra-Matic..... Carter WA-1, No. 481S
1948 Hydra-Matic..... Carter WA-1, No. 651S
1½" single barrel downdraft with Carter Climatic Control.

Casting No. on Flange—(481S, 504S) 340, (651S) 538. *See Carburetor Section for complete data.*

Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up data.*
Metering Rods & Jets—*See Carter Downdraft Jet Specification Table in Carburetor Section.*

Hydra-Matic Throttle Adjustment: *See Hydra-Matic Drive article in Transmission Section.*

Throttle Cracker Adjustment: .0625" to .0851" (1/16") clearance between throttle stopscrew and highest step of fast idle cam with starting pedal fully depressed (starter pinion fully meshed). Adjust by loosening locknut and turning adjusting screw on accelerator bellcrank (screw contacts lug on lever linked to starter pinion shift lever).
CAUTION—Engine will not start properly if this adjustment not correctly made.

Fast Idle: Carter Single Barrel Carburetor type.
See Carburetion Equipment Section for complete data.
Setting—⅝" clearance between choke valve and air horn (Gauge T109-85) with throttle valve closed and stopscrew against (not on) first step of fast idle cam. Adjust by bending connector link at lower offset (T109-41).

Automatic Choke: Carter Climatic Control (single carbs.).
See Carburetion Equipment Section for complete data.
Setting—Centered (coil housing at index mark).

CARB. EQUIPMENT

Air Cleaner: AC No. 1529861 Oil-wetted type Std. Filter Element AC 1528064. Oil-bath Cleaner Opt'l.
Servicing—Wash and re-oil oil-wetted type every 2000 miles (500 to 1000 miles for dusty conditions) For Oil bath types, wash element and re-fill with 1 pint S.A.E. 50 oil (S.A.E. 40 for winter temperatures) every 5000 miles (2500 miles or oftener as required by local conditions in dusty areas).

Fuel Pump: AC Type "AJ" No. 1537358. AC Replacement Exchange No. 536. Fuel-and-vacuum type.
See Carburetion Equipment Section for complete data.
Pressure—5 lbs. maximum.

Gasoline Gauge: AC Electric type.
Dash Unit—AC No. ('46-47) 1516809, ('48) 1517091.
Tank Unit—AC No. ('46-47) 1516285, ('48) 1517068.
See Carburetion Equipment Section for complete data.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

BATTERY

Delco Type 15E-2. 6 Volt, 15 Plate, 100 Ampere Hour Capacity (20 hour rate).

Starting Capacity—120 amperes for 20 minutes.

Zero Capacity—300 amperes for 3.5 minutes. Five second voltage 4.25 volts.

Grounded Terminal—Negative (—) to Starter.

Location—On left side in engine compartment.

Police Battery Delco Model 19E-1. 6 volt, 19 plate, 130 Ampere Hour Capacity (20 hour rate).
Grounded Terminal and Location—Same as above.

STARTER

Delco-Remy Nos.	Type
1107034 ('46), 1107066 ('47-48)	Foot Operated
1107930 (Hydra-Matic & RHD Cars)	Pushbutton
1107050 ('46-47 Optional)	Pushbutton

Armature No.—Delco-Remy No. 1867897 (all mod.).

Drive—Overrunning clutch type, with pinion shift, manual (1107034, 66), solenoid (1107050, 930).

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—24-28 ounces each.

Cranking Engine—100 RPM., 125-135 amperes, 5 volts (for Summer Temperatures).

Performance Data—1107034, 50, 66

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5000	5.0	65
12 "	Lock	3.37	525

Performance Data—1107930

0	ft. lbs.	6000	5.0	60
15	"	Lock	3.0	600

Removal:—Flange mounted on left front face of flywheel housing. To remove, take out mounting screws.

Starting Switch (1107034, 66): Delco-Remy No. 820052. On starter. Operated by pedal pionion shift lever. (1107050, 1107930)—Delco-Remy Solenoid Switch No. 1118021. On starter. Controlled by Pushbutton Switch No. 1996009 on instrument panel (and Neutral Safety Switch No. 1997761 on Hydra-Matic Cars).
See Electrical Equipment Section for complete data.
Safety Switch Adjustment—Place Selector Lever in "N" (neutral) position, loosen safety switch bracket locking screw, adjust switch so clearance between lever and stop is 1/16-3/32".

GENERATOR

Delco-Remy 1102664 (Std.), 1102680 (Hydra-Matic). Armature No. 1879002. Two brush (shunt) types with voltage and current regulation. Ventilated by fan.

Pulley Note—Cars with Std. Trans. (1102664 Gen.) have regular 3 9/16" pulley. Hydra-Matic Drive cars (1102680 Gen.) have smaller 3 1/16" pulley to compensate for lower engine speed (max. output reached at approx. 110 Eng. RPM. less). NOTE—This pulley can be installed on cars with 3.9-1 Axle ratio

Charging Rate Adjustment—None. Charging rate controlled by Voltage Regulator, maximum output by Current Regulator. See Regulator data below.

Maximum Charging Rate—33 amperes, 7¾ volts, 2400 RPM (hot operating tem.) at 21 MPH car speed and above (Current Regulator setting) with load or discharged battery. Actual charging rate controlled by Voltage Regulator (dependent on battery).

Performance Data—Cold

	Amperes①	Volts	R.P.M.
1102664, 80	30	8.0	1750

①—Not maximum output. See Current Regulator.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—25 ozs. each.
Field Current—1.75-1.9 amperes at 6.0 volts.

Removal:—Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

Belt Adjustment:—Check with straightedge across pulleys. Belt deflection should be ¾" inward.

REGULATOR

Delco-Remy Model 1118242. Single Core Type. Vibrating type Voltage and Current Regulators in a single case with Cutout Relay.
See Electrical Equipment Section for complete data.
CAUTION—Check generator for grounded field coils and leads before changing regulator settings

Cutout Relay

Cuts In—6.2-6.7 volts hot.
Cuts Out—0-4.0 ampere discharge current.
Contact Gap—.020" (same for both sets).
Air Gap—.020" (with contacts just closed).

Voltage Regulator

Setting—7.2-7.4 volts hot (at operating temp.). Regulator over-compensated for temperature. Should be checked with cover in place and hot.
Checking & Adjusting—*See Electrical Equip. Section.*
Air Gap—.070" between center of core and armature with contacts just closing (press down on armature to open contacts, release pressure, check gap at point where contacts just close).

Current Regulator

Setting—34-36 amperes hot (at operating temp.).
Checking & Adjusting—*See Electrical Equip. Section.*
Air Gap—.080" (check same as Voltage Regulator).

LIGHTING

Headlamps: Guide "Sealed Beam" type.
See Electrical Equipment Section for complete data.
Headlamp Adjustment—Aim upper beam straight ahead (hot spot center 3" below lamp center height).
Beam Indicator—Small red indicator in upper edge of speedometer. Lighted when Upper Beams in use.

Direction Signal: *See Electrical Equipment Section.*

Switches

Lighting—(1946—66, 1946-47—76) Delco-Remy Nos. 1995026 (1995027 for RHD cars).
(1947—66) Delco-Remy 1995033 (1995034 for RHD).
(1948—66) Delco-Remy 1995036 (1995037 for RHD).
(1948—76) Delco-Remy 1995038 (1995039 for RHD).
Instrument—Part of Lighting Switch. Rheostat operated by turning lighting switch knob.
Beam Selector—Delco-Remy No. 1997008.
Stop Light—Delco-Remy No. 1997725.

Bulb Specifications

Position	Candlepower	Mazda No.

MISC. ELECTRICAL

THERMOSTATIC RELAY: On lighting switch. Contacts remain closed with 30 ampere current, open in 3 minutes with 42 amps. current@70°F. Limits current to 18 amps. with dead short-circuit. Not adj

FUSES: Dome & Stop Lights—On lighting switch. ('46-47) SFE 9 ampere. ('48) SFE 14 ampere.
Dome & Tail (1948 Convertible)—3AG 20 ampere. In body feed wire to tail and dome lights.
Glove Box & Under-hood light—1AG 5 ampere.
Direction Signal—SFE 9 ampere. In Flasher to Ignition Switch wire.
Electric Clock—1AG 2 ampere. In feed wire.
Cigar Lighter—1AG 30 and 3AG 30 ampere.
Radio—3AG 15 ampere.
Back Up Light—SFE 9 ampere.

HORNS: Delco-Remy No. Low Note: (1946-47) 1999607, (1948) 1999617, High Note: (1946-47) 1999608, (1948) 1999618. Vibrator type operated by relay.

Type	Current (at 6 volts)	Air Gap
1999607, 617 (Low)	19-21 amperes	.047-.052"
1999608, 618 (High)	18-20 amperes	.039-.044"

Horn Relay:—Delco-Remy No. 1116775.
Contact Gap—.025". **Air Gap**—.015" (closed).
Contacts Close—2.75-4.0 volts.

ENGINE

ENGINE SPECIFICATIONS: 6 cylinder, "L" head type.
Bore—3½". **Stroke**—4⅛".
Displacement—238.1 cubic ins. **Rated HP**—29.4.
Developed Horsepower—100 at 3400 RPM.
Compression Ratio—6.5-1 cast-iron head.
Compression & Vacuum Reading—*See Tune-up data.*

OIL PAN REMOVAL: *See Oldsmobile Shop Notes.*

TIGHTENING TORQUES (Torque Indicating Wrench Data)—*See Oldsmobile Shop Notes.*

CYLINDER HEAD: Tightening Torque & Cylinder Head Diagram—*See Oldsmobile Shop Notes.*

PISTONS: Aluminum alloy, T-slot, cam ground, electro-plated type.
Weight—17.37 ozs. **Length**—4 1/32".
Removal—Pistons and rods removed from above.
Clearance—Top land .023-.028". Skirt clearance Top .0025", Bottom .00075". Fitted for .0005-.0010" clearance on thrust surface. See Fitting New Pistons.

Replacement Pistons: Finished pistons (pins fitted) .003", .005", .010", .015", .030" oversize.

Fitting New Pistons: Check piston for size with micrometer (pin removed) 90° from pin bosses ⅜" below lower ring groove and ⅜" from bottom of skirt. Insert .002" x ½" feeler between piston (pin removed) and cylinder wall on valve side with piston inverted and T-slot on opposite side from feeler. Pull to withdraw, feeler must be 4 to 11 lbs. (piston and block at 70°—low limit below 70°, high above).

Installing Pistons: Mark "V-S" on head toward valves (slot away from valves). Pin hole offset 3/32" to left.

PISTON RINGS: 2 coated compression (install with mark TOP up), 2 oil control rings, all above pin.

Ring	Width	End Gap	Side Clearance
Compr.	.0925-.0935"	.008-.018"	.001-.003"
Oil Contr.	.1860-.1865"	.007-.015"	.001-.0025"

Replacement Rings: .010", .020", .030" oversize.

CONTINUED FROM PRECEDING PAGE

ENGINE

PISTON PIN: Diameter—.8554-.8557". **Lgth.**—3 5/32". Pin locked in one piston boss by lockscrew (opposite end slotted). Pin bosses are plated and must not be reamed. Standard size pins only serviced.
Pin Fit in Piston—.0001" tight to .0002" loose (plain boss end), .0003-.0006" tight (lock boss end).
Pin Fit in Rod Bushing—.0003-.0006" clearance.
Pin Fitting, Removal, and Installation—*See "Piston Pins" in Oldsmobile Shop Notes.*

CONNECTING ROD: Length 7 13/16". Weight 29 ozs.
Crankpin Journal Diameter—2.123-2.124".
Lower Bearing Diameter—2.1245-2.1255".
Lower Bearing—Removable steel-backed, Durex-babbitt overlay bearing shells.
Clearance—.0005-.0025". **Sideplay**—.0055-.0105".

Bearing Adjustment: None (no shims). Replace bearings.

Installing Rods: Oil spit hole at lower end toward valves and grooves on rod and cap bolt boss (part number side) matched. Special ground cap bolts with self-locking nuts used. Tighten to 45-50 ft. lbs.

CRANKSHAFT: 4 bearing, 7 integral counterweights.
Journal Diameters—#1, 2.478-2.479"; #2, 2.5405-2.5415"; #3, 2.6655-2.6665"; #4, 2.6855-2.6865".
Bearings—Removable steel-backed, Durex-babbitt overlay bearing shells. Front bearing has oil groove (to front) for thrust plate lubrication.
Clearance—.0005-.002" (rear), .001-.003" (all others).

Bearing Adjustment:—None (no shims). Replace bearings. Do not file caps. NOTE—9/16" cap bolts used on rear bearing, ½" on others (heads alike).
Bearing Removal—*See "Crankshaft & Main Bearings" in Oldsmobile Shop Notes.*

End Thrust:—At #1 bearing. **Endplay**—.004-.008". *See "Crankshaft & Main Bearings" in Oldsmobile Shop Notes.*

Rear Main Bearing Oil Seal Installation: *See "Crankshaft & Main Bearings" in Oldsmobile Shop Notes.*

Flywheel Installation: *See "Flywheel" in Oldsmobile Special Data.*

CAMSHAFT: 4 bearing. Non-adjustable chain drive.
Journal Diameters—#1, 1.9975-1.9980"; #2, 1.9350-1.9355"; #3, 1.8725-1.8730"; #4, 1.8100-1.8105".
Reamed Bushing Diameters—#1, 1.9995-2.001", #2, 1.937-1.9385"; #3, 1.8745-1.876"; #4, 1.812-1.8135".
Bearings—Bronze bushings. **Clearance** .0015-.0035".

End Thrust:—Forward thrust taken by flange on front engine support plate, rear thrust by flange on shaft bearing against front of engine block.

Timing Chain: Link-Belt. Width 1". Pitch .500". Length 47 links or 23½".

Camshaft Setting—Mesh chain with sprocket marks adjacent and in line with a straightedge across the shaft centers (or use Tool HM-408-0).

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 9/16"	.3415-.3425"	5 51/64"
Exhaust	1 27/64"	.3410-.3418"	5 51/64"

	Seat Angle	Lift	Stem Clearance
Intake	30°	.303"	.00175-.00375"
Exhaust	45°	.298"	.00245-.00425"

Valve Guides:—Intake and exhaust guides same. Press guides in so top end ⅞" below top of block. (Tool J-1042 positions guide correctly in block). Ream to .34425-.34525" inside diam. (not tapered). **Length**—3 7/32".

Valve Springs:—Same spring used on both valves and on 6&8 engines. Damper on top of each spring. Free length 2⅜".

	Spring Pressure	Spring Length
Valve Closed	55 lbs.	2¼"
Valve Open	100 lbs.	1 15/16"

Valve Lifters:—Mushroom type. Diam. .6235-.6240". Lifter holes in block have bearing-ized finish (if worn, fit oversize lifter without reaming hole when possible, to preserve finish). Furn. .001", .002", .005", .010" OS. Clearance .0005-.0008". NOTE—Use only 1⅛" diam. face lifter (to clear fuel pump eccentric).

VALVE TIMING

Tappet Clearance:—.008" Int., .011" Exh. Hot & idling. NOTE—Self-locking tappet screws used.

Valve Timing:—See Camshaft Setting above.
Intake Valves—Open 5° BTDC. Close 45° ALDC.
Exhaust Valves—Open 45° BLDC. Close 5° ATDC.
Valve Timing Check—With .0124" tappet clearance, #1 intake valve should open with piston 5° (.0163") BTDC with flywheel TDC mark (steel ball insert) approx. 2 teeth before indicator (hole on left front face of housing). Reset tappet clearance at .008" hot.

LUBRICATION

Engine Oiling System: Pressure to main, connecting rod, and camshaft bearings, piston pins, and timing chain. Oil pump mounted externally on right side of engine.
Crankcase Capacity—5 quarts.
Normal Oil Pressure—30 lbs.
Oil Pressure Regulator—On oil pump. Opens at 30 lbs. Non-adjustable type.

Oil Pump: Gear type on right side of crankcase.
Oil Pump Assembly & Installation—*See "Oil Pump" in Oldsmobile Shop Notes.*

Oil Pressure Gauge: AC No. ('46-47) 1506797, ('48) 1507034.

Crankcase Ventilation: Filter element in oil filler cap (inlet breather). Outlet pipe on right side of engine. Servicing—Wash and re-oil filter element every 2000 miles or oftener as required in dusty areas.

COOLING

Cooling System: Positive circulation with water pump on front of engine and water distributing tube in cylinder block. Pressure valve (relief valve) used in filler cap on 1947-48.
Capacity—18½ quarts.
Pressure Valve—AC No. 850501. Filler Cap Opens at 4 lbs. (3¼-4¼ lbs.).

Radiator Core Removal: *See Oldsmobile Shop Notes.*

Water Pump: Packless, sealed ball-bearing shaft. *See Water Pump Section for complete data.*

Thermostat:—Harrison. In cylinder head outlet.
Setting—Starts to open 152°F. Fully open 173°F.

Temperature Gauge: AC Electric type.
Dash Unit—('46-47) 1511652, ('48) 1512059.
Engine Unit—('46-47) 1510772, ('48) 1512015.
See Miscellaneous Section for complete data.

CLUTCH

Borg & Beck Model 9A7 with Borglite driven member. Single plate, dry disc type with steel and asbestos composition pressure plate oil baffle and clutch release bearing lubrication fitting. Cover No. 924. *See Clutch Section for complete data.*

Release Bearing Lubrication:—*See Oldsmobile Special Data.*
Facings—Spiral wound (spirally grooved) molded woven, 2 used. Inside Diam. 6", O.D. 9¼". ⅛" thick.
Pedal Adjustment:—Free travel 1-1¼". Turn link at fork in or out of clevis on auxiliary shaft.
Removal:—Remove transmission (see data below), clutch underpan and take out 6 mounting screws in clutch cover (when installing, use 2 long shank mounting screws in 2nd hole on each side of locating dowel), lower clutch assembly out.

TRANSMISSION

STANDARD

Own Make. All helical gear. Constant-mesh, synchro-mesh (second & high), sliding gear (low & reverse).
See Transmission Section for complete data.

Transmission Control:—Oldsmobile 'Handi-shift' type.
See Transmission Section for complete data.

Removal:—Disconnect shift and selector rods from levers at transmission, speedometer cable, rear universal and slide slip yoke and propeller shaft to rear. Remove four transmission mounting capscrews, pull transmission straight back and remove.

HYDRA-MATIC DRIVE

OPTIONAL EQUIPMENT

Own Make. Consists of fluid coupling and 4 speed automatic transmission.
See Transmission Section for complete data including Testing & Trouble Shooting.
Lubrication—Check fluid level in transmission at each 1000 mile lubrication period or every 2000 miles. Drain and refill every 25,000 miles. Use only Oldsmobile Hydra-Matic Drive Fluid.
Capacity—11 qts. (when drained and refilled with unit in car). **Approximately 12 qts.** (when refilling after the unit has been removed and completely rebuilt).
Checking Fluid Level—Engine must be running at slow idle. Raise floor mat, take off cover in floor above transmission, lift out combination filler cap and dip stick. Add fluid until level is at "FULL" mark with engine idling.
►*CAUTION—Engine must be running at slow idle speed when checking Hydra-Matic Drive Fluid Level.*
Hydra-Matic Linkage Adjustment—*See Hydra-Matic Drive article in Transmission Section.*
Removal: *See Hydra-Matic Drive article in Transmission Section.*

UNIVERSALS

Mechanics 2C or 2CR types. Roller bearing types.

NOTE—Slip joint formed at rear of transmission ahead of front U-joint (driveshaft 1 piece type).
►**1947-48 CAUTION**—Rear universal companion nut controls rear axle pinion bearing "pre-load" (must be adjusted whenever nut is loosened). *See 1947-48 Oldsmobile in Rear Axle Section.*

REAR AXLE

1946 Type—Same as 1942. Hypoid gear, semi-floating type. This type axle has three setscrews equally spaced around pinion housing.
See Rear Axle Section for complete data.
1947-48—New hypoid gear, semi-floating type. Design similar to 1946 type except that pinion is mounted on two taper roller bearings and com-

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

panion flange nut controls pinion bearing "pre-load." No setscrews are used.
See Rear Axle Section for complete data.

1946-47 Rear Axle Ratios

Std.: (66) 4.1-1, (76 '46) 4.3-1, (76 '47) 4.55-1.
Hydra-Matic— (66) 3.42-1, (Std. 76, Optl. 66) 3.9-1.
Optional: 3.9-1 or 4.55-1.

1948 Standard Ratios

66—43:10 (4.3).
76 (& 66 Station Wagon)—41:9 (4.55).
66 Convertible (Optl. Hilly Ratio)—41:9 (4.55).

1948 Hydra-Matic Ratios

66—40:11 (3.64).
76 (& 66 Sta. Wag. & Convertible)—39:10 (3.9).
66 (Optional Hilly Ratio)—39:10 (3.9).
All Export (Optl. Ratio)—41:10 (4.1).

►**Rear Axle Ratio Marking**—Ring and pinion gear ratio (43:10, etc.) and date, stamped on underside of carrier casting, right horizontal rib.
Backlash—('46) .004-.008", ('47-48) .004-.006". Screw adjustment.

Removal:—Disconnect drive shaft at rear universal (do not disengage spline joint at transmission), remove axle shafts and carrier flange capscrews.

►**1947-48 CAUTION**—Rear universal companion flange nut controls pinion bearing "pre-load" (must be adjusted whenever nut is loosened).

Axle Shaft Removal: Hoist rear end, remove wheel, brake drum, backing plate mounting nuts, static collector and loosen bearing retainer (do not move backing plate or brake line may be damaged). Pull shaft and bearing with puller J-942 (do not allow shaft to drag on oil seal), replace 1 backing plate nut.
Wheel Bearing Adjustment—None.

Rear Suspension: Coil spring type with support arms.
See Rear Axle Section for complete data.

SHOCK ABSORBERS

Delco. Two types are used. FRONT—Model 1947-C (right), D (left). RIGHT REAR—2105-E (76), G (66). LEFT REAR—2105-F (76), H (66). Double acting (parallel cylinder type rear), hydraulic.

FRONT SUSPENSION

Front Suspension:—Independent, linked parallelogram type with coil springs.
See Front Suspension Section for complete data.
Kingpin Inclination—4° 51' 10".
Caster—0-¾° Negative. Adjustable.
Camber—Negative ¼° to Positive ¾°. Adjustable.
Toe In—1/16-⅛". Adjust each tie rod equally.
Steering Geometry—Inner wh'l 23° ± ½°. Outer 20°.

STEERING GEAR

Steering Gear—Saginaw Worm-and-Roller type.
See Steering Gear Section for complete data.

BRAKES

Service Brakes: Bendix Hydraulic, duo-servo, single anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.
See Brake Section for complete data.
Wheel Cylinder Bore—Front wheel 1⅛". Rear 1".
Drums—Cast-iron lined steel. Diameter 11".
Lining—Moulded. Width 2" (front wheels), 1¾" (rear). Thickness 3/16". Length per shoe: 9 11/32" (primary), 11 31/32" (secondary).
Clearance—.015" at both ends of secondary (rear) shoe with primary shoe forced out against drum.
Braking Power—56% front wheels, 44% rear.

Hand Brake:—See Service Brakes above.

MISC. MECHANICAL

Convertible Top Control: Hydro-lectric type (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders).
See Miscellaneous Section for complete data.

MODEL IDENTIFICATION

SERIAL NUMBER: On plate ('46-47) on upper left front corner of dash under hood, (1948) on left front door hinge post.

1946-47-48 Numbers—First numbers as follows:

Series	Lansing Mich.	Linden N. J.	South Gate, Cal.	Wilmington, Del.
68 ('47)	68-13001	68L- 4001	68C-4001	68W-1001
68 ('48)	68-25001	68L8001	68C6001	68W2001
78 ('46)	78-33001	78L- 5001	78C-5001	
78 ('47)	78-50001	78L- 8001	78C-7001	78W-1001

98 ('46)	98-32001	98L- 7001	98C-5001	
98 ('47)	98-43001	98L-10001	98C-7001	98W-1001
98 ('48)	98-65001	98L20001	98C11001	98W1001

	Atlanta Ga.	Framingham Mass.	Kansas City Kans.
68 ('47)	68A-1001	68B-1001	68K-1001
68 ('48)	68A2001	68B1001	68K3001
78 ('47)	78A-1001	78B-1001	78K-3001
78 ('48)	78A2001	78B1001	78K7001
98 ('47)	98A-1001	98B-1001	98K-2001
98 ('48)	98A1001	98B1001	98K6001

ENGINE NUMBER: Stamped on pad on front left top corner of cylinder block above generator.
1946 Numbers—8-1001 Up.
1948 Numbers—Models 68 & 78, 8-127001 Up.
1948 Numbers—Model 98 First No. 9-1001 (LHD).
Hydra-Matic Cars—Engine Number marked with letter "H" following number: 8-1001H.

TUNE-UP

COMPRESSION: Pressure—115 lbs. at cranking speed of 100 RPM. (All Exc. Futuramic), 182 lbs. at 1000 RPM. (Futuramic 98 1948).

VACUUM READING: Steady 17" min. at idling speed.

FIRING ORDER: 1-6-2-5-8-3-7-4. See diagram.

SPARK PLUG GAPS: .030".
Plug Type—AC No. 45, 14 mm.

IGNITION—*See Coil, Condenser, and Distributor.*
Breaker Gap—.015".
Cam Angle or Dwell—31° Closed, 14° Open.
Breaker Arm Spring Tension—19-23 ounces.
Automatic & Vacuum Advance—*See Distributor.*

IGNITION TIMING: Synchro-Mesh Trans.....2° BTDC
Hydra-Matic Drive Cars .....001" BTDC
Timing Procedure—*See Ignition Timing.*
Timing Mark—Steel ball insert (2° BTDC.) in flywheel lined up with pointer in inspection hole in left front face of flywheel housing beside starter.
Octane Selector—Set to give slight ping accelerating wide open throttle, high gear, below 15 MPH.

CARBURETION: *See Carburetor & Carb. Equipment.*
Idle Setting—(480S, SA; 503S, SA) ½-2¼, (665S) ¾-1¾, (650S, SA) ½-1½ turns open. Two screws—turning screws out gives richer mixture.
Idle Speed (Standard)—425 RPM. or 6 MPH.
Idle Speed (Hydra-Matic)—375 RPM.
Float Level (WDO Carburetors)—3/16" ("S" carburetors with 25-100S Needle & Seat Assembly), 15/64" ("SA" carburetors with later 25-164S Needle & Seat Assembly) from top of float to machined surface of cover (remove gasket and invert to check).
Float Level (WCD 665S carburetor)—3/16" from top of float to gasket seat on bowl cover (Gauge T109-162). Sides of floats should barely touch vertical uprights on gauge (to prevent floats binding on sides of bowl).
Accelerating Pump—Seasonal adjustment on WCD 665S only: Top hole (max.) normal, Lower hole if less charge required.

Fuel Pump Pressure: 5 lbs. maximum.

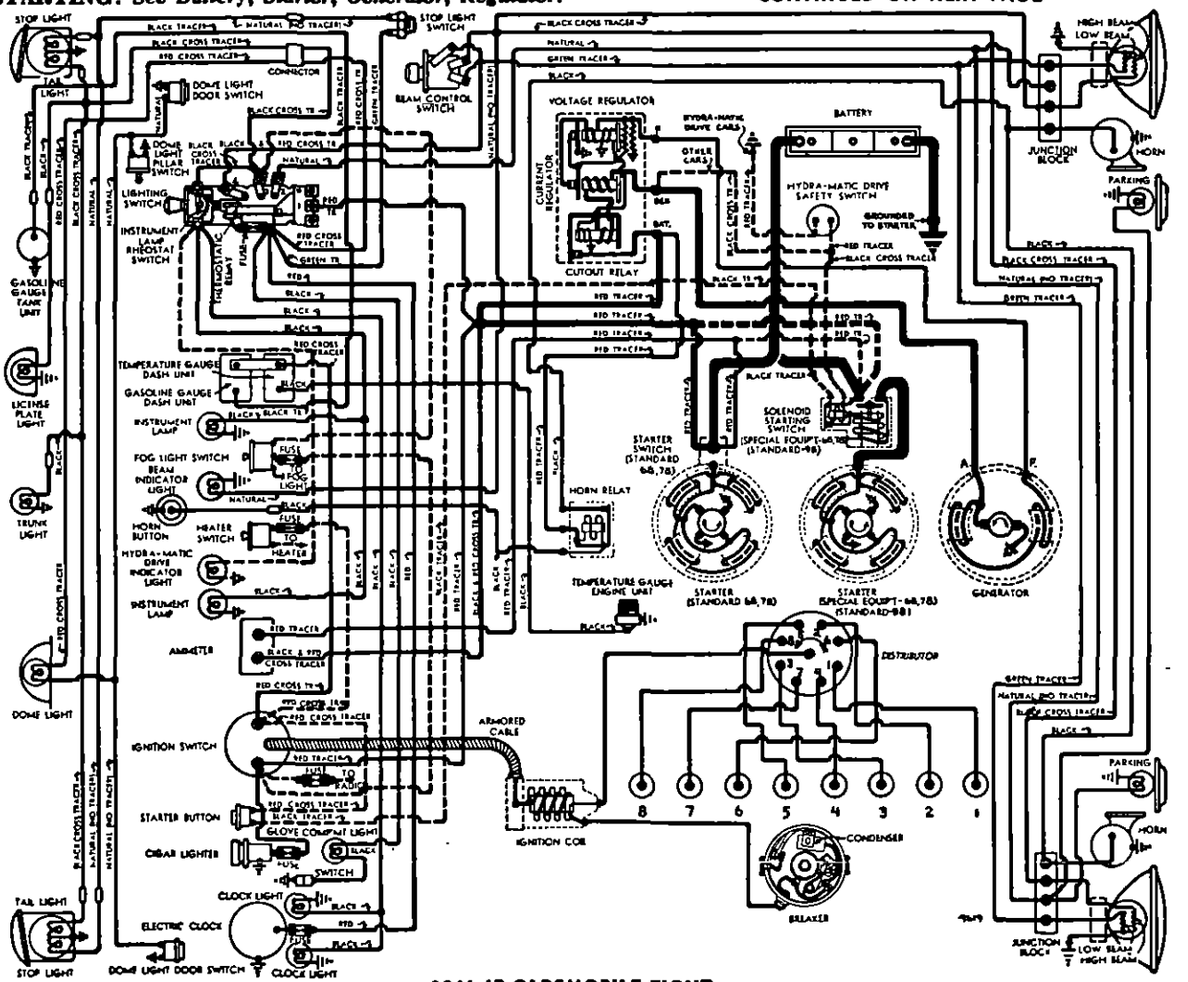
MANIFOLD HEAT CONTROL: Thermostatic coil type. **Setting**—Coil wind-up should be 160° (approx. ½ turn) at room temperature. NOTE—To check valve for correct position on shaft, use feeler gauge in slot on rear end of valve shaft. With valve closed, gauge should contact stop pin (slot 6° to left or toward engine from up-and-down position) with ⅛" clearance between valve tip and manifold.

VALVE TAPPET CLEARANCE: .008" Int., .011" Exh. hot. Valve Timing Check—*See Valve Timing.*

STARTING: *See Battery, Starter, Generator, Regulator.*

IGNITION

IGNITION SWITCHES: Delco-Remy Nos. as follows:
1946-47—1116351 (78), 1116353 (98). These are used with armored cable.
1948—1116458 (68, 78), 1116453 (98). Armored cable not used.



Ignition Lock Cylinder: Briggs and Stratton Numbers ('46-47) 45792, ('48) 85373.
Key Series—8000 to 9499. Groove—No. 15.

COIL: Delco-Remy ('46-47) 1115126 or 1115129, (1948) 1115380. ('46-47) on dash, ('48) on engine.
Ignition Current—2.0 amperes idling, 4.5 stopped.

CONDENSER: Delco-Remy No. 1968704.
Capacity—.18-.25 microfarad.

DISTRIBUTOR: Delco-Remy 1110808 with Vacuum Control 1116036. Single breaker, 8 lobe cam, full automatic advance type with Octane Selector.
Breaker Gap—.015". Limits .0125-.0175".
Cam Angle or Dwell—31° closed, 14° open.
Breaker Arm Spring Tension—19-23 ounces.

CONTINUED ON NEXT PAGE

1946-47 OLDSMOBILE EIGHT

CONTINUED FROM PRECEDING PAGE

Rotation—Counter-clockwise viewed from above.

Distr. Degrees	Automatic Advance R.P.M.	Eng. Degrees	R.P.M.
Start	250	3.0	500
3.5	500	7.0	1000
12.0	1600	24.0	3200

Vacuum Spark Control: Delco-Remy No. 1116036—Integral type linked directly to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit. **Plunger Travel**—9/64".

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	6.5-8.5"
6°	12°	14.0-16"①

①—At .125" travel.

Octane Selector—Adjustment permits 10° advance or retard from center '0' position. See Ign. Timing.

Removal:—Distributor mounted on left side of engine. To remove, disconnect vacuum line, take out hold-down screw in advance arm.

I NITI N TIMING

Std. Setting	Flywheel Degrees	Piston Position
Std. Trans. Cars	2° BTDC	.002" BTDC.
Hydra-Matic Trans.		.001" BTDC.

NOTE—Modify this setting for special fuel and altitude conditions. See Octane Selector Setting.

Timing (With Synchroscope)—Recommended method. Loosen hold-down screw in advance arm, center Octane Selector scale ('0' at indicator line), tighten hold-down screw. Clip synchroscope lead to #1 spark plug, direct synschroscope light on flywheel through inspection hole in left front face of housing above starter. Idle engine, loosen advance arm clamp bolt, rotate distributor until ignition mark (steel ball insert) on flywheel lines up with indicator on housing, tighten clamp bolt, check Octane Selector setting (below).

NOTE—On cars with Hydra-Matic drive, use dial indicator and set distributor so contacts open with piston .001" before top dead center.

Timing (Without Synchroscope)—Turn engine over to firing position for #1 piston with steel ball insert in flywheel at indicator in inspection hole in left front face of flywheel housing (or with piston .001" BTDC. on cars with Hydra-Matic drive). Loosen hold-down screw in advance arm, center pointer on scale ('0' mark at indicator), tighten hold-down screw. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt and check Octane Selector setting.

Octane Selector Setting: Set for a slight ping when accelerating engine with wide open throttle at speeds below 15 MPH. To adjust, loosen distributor hold-down screw, rotate distributor clockwise toward 'Adv' end of scale (if no ping noted), counter-clockwise toward 'Ret' end of scale (if ping too severe) by steps until performance correct.

CARBURETOR

CARTER WDO

Car Model	Carter WDO No.
'46-48 Synchro-Mesh Tr.	503S, SA
'46-Part '47 Hydra-Matic	480S, SA
'48 Hydra-Matic	650S, SA

1⅛" Dual barrel downdraft type with Carter Climatic Control.

Casting No. on Flange—(480S, SA; 503S, SA) 342, (650S, SA) 540.

See Carburetor Section for complete data.

►480S, 503S, 650S **Carburetor Change to improve Warm Engine Starting**—*See 1946-47-48 Oldsmobile Eight (Carter WDO carburetors) in Carburetor Section.*

Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up data.*

Metering Rods & Jets—*See Carter Downdraft Jet Specification Table in Carburetor Section.*

Hydra-Matic Throttle Adjustment: *See Hydra-Matic Drive article in Transmission Section.*

Throttle Cracker Adjustment: Must be set for correct throttle opening for starting. To adjust, disconnect starter cable at starter switch (for foot operated starters), disconnect coil lead to distributor (for solenoid operated starters), depress starter pedal or pushbutton to full down position (engine will be turning over on solenoid starter cars) to fully mesh starter pinion, loosen locknut and turn adjusting screw on accelerator bell-crank (screw contacts lug on lever linked to starter pinion shift lever) so that clearance between throttle stopscrew and highest step of fast idle cam is .105-.125" (⅛").

Fast Idle: Carter Dual (WDO) Carburetor type.

See Carburetion Equipment Section for complete data.

Setting—.015" opening between edge of throttle valve and bore of carburetor (side opposite port) with choke valve tightly closed.

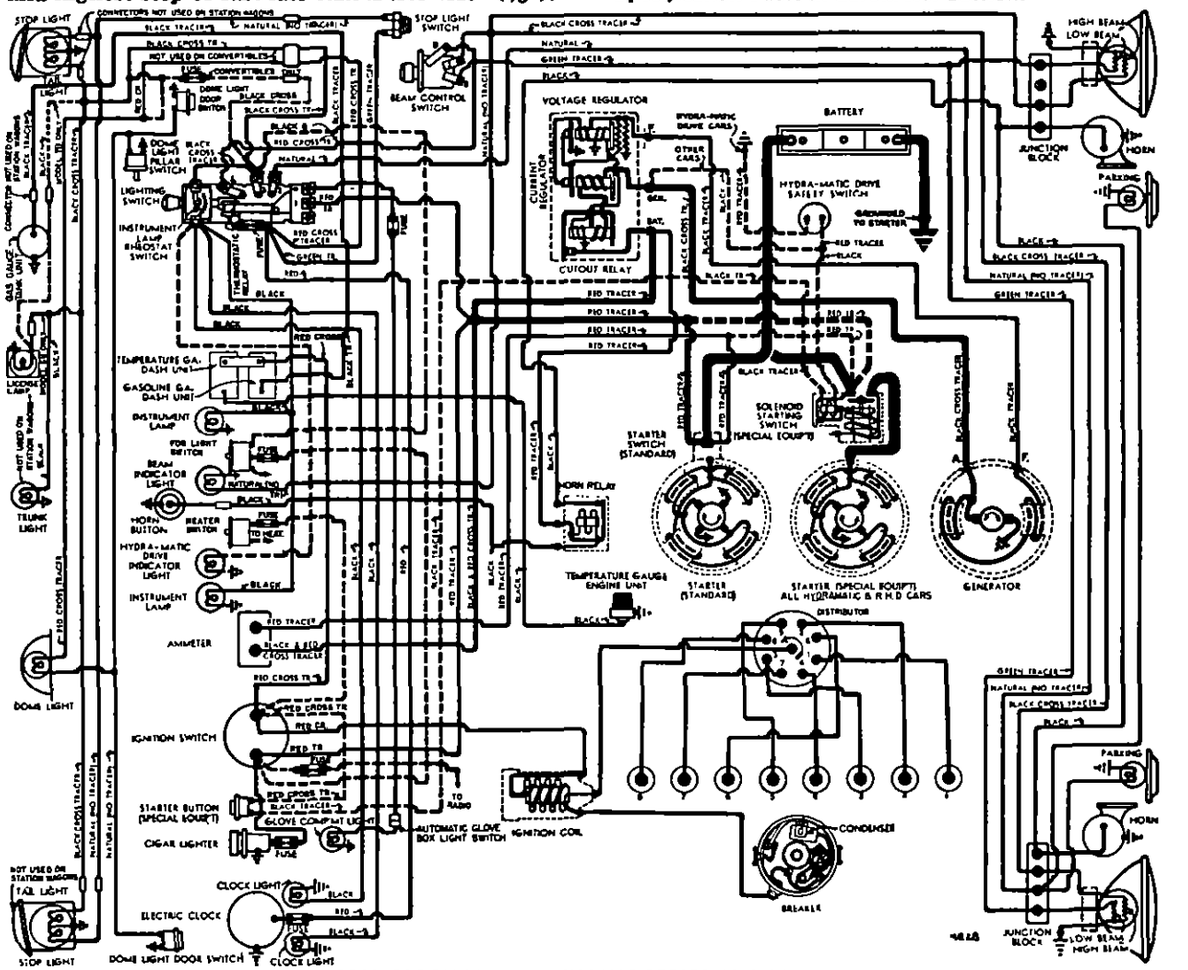
Automatic Choke: Carter Climatic Control (Dual carbs.).

See Carburetion Equipment Section for complete data.

Setting—Mark on thermostat case centered on housing scale (503S, SA), 2 Notches Rich (480S, SA; 650S, SA).

CARBURETOR

CARTER WCD



►PART PRODUCTION 1947 HYDRA-MATIC

Carter WCD, No. 665S. 1¼" dual barrel downdraft type with Carter Climatic Control.

See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up data.*

Metering Rods & Jets—*See Carter Downdraft Jet Specification Table in Carburetor Section.*

1948 OLDSMOBILE 8 DYNAMIC SERIES 68 & 78

Hydra-Matic Throttle Adjustment: *See Hydra-Matic Drive article in Transmission Section.*

Fast Idle: Carter Dual (WCD) Carburetor type.
See Carburetion Equipment Section for complete data.
Setting—With choke valve tightly closed, and fast idle adjusting screw on highest step of fast idle cam, adjust fast idle screw for .018" throttle opening (use Gauge T109-44 between edge of throttle valve and carburetor wall on side opposite idle ports).

Automatic Choke: Carter Climatic Control (dual carburetor type).
See Carburetion Equipment Section for complete data.
Setting—One point Rich.

CARB. EQUIPMENT

Air Cleaner: AC No. 1544128 Oil-wetted type Std. Filter Element AC #6. Oil-bath Cleaner Optl.
Servicing—Wash and re-oil oil-wetted type every 2000 miles (500 to 1000 miles for dusty conditions). For Oil bath types, wash element and re-fill with 1 pint S.A.E. 50 oil (S.A.E. 40 for winter temperatures every 5000 miles (more often if necessary).

Fuel Pump: AC Type "AJ" No. 1537330. AC Replacement Exchange No. 535. Fuel-and-vacuum type.
See Carburetion Equipment Section for complete data.
Pressure—5 lbs. maximum.

Gasoline Gauge: AC Electric type.
Dash Unit (1946-47)—AC No. 1516809.
Dash Unit ('48)—AC (68, 78) 1517091, (98) 1517011.
Tank Unit—AC No. ('46-47) 1516285, ('48) 1517068.
See Carburetion Equipment Section for complete data.

BATTERY

***1946-47: Delco 17E-2.** 6 Volt, 17 Plate, 100 Ampere Hr. Capacity (20 hour rate).*
Starting Capacity—140 amperes for 20 minutes.
Zero Capacity—300 amperes for 4.5 minutes. Five second voltage 4.4 volts.
Grounded Terminal & Location—Same as for 1948.

1948: Delco 15E-2. 6 Volt, 15 Plate, 100 Ampere Hour Capacity (20 hour rate).
Starting Capacity—120 amperes for 20 minutes.
Zero Capacity—300 amperes for 3.5 minutes.
Five second voltage—4.25 volts.
Grounded Terminal—Negative (—) to Starter.
Location—On left side in engine compartment.

Police Battery Delco Model 19E-1. 6 volt, 19 plate, 130 Ampere Hour Capacity (20 hour rate).
Grounded Terminal and Location—Same as above.

STARTER

Delco-Remy Nos.	Type
1107922 ('46), 1107941 ('46-48)	Foot Operated
1107930 (Hydra-Matic & RHD)	Push button

Armature No.—Delco-Remy No. 1867897 (all mods.).
Drive—Overrunning clutch type with pinion shift, manual (1107922, 41), solenoid (1107930).
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—24-28 ounces each.
Cranking Engine—100 RPM. 140-150 amperes, 5 volts (for Summer Temperatures).

Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	6000	5.0	60
15 "	Lock	3.0	600

Removal:—Flange mounted on left front face of flywheel housing. To remove, take out mounting screws.
Starting Switch (1107922, 41): Delco-Remy No. 820052. On starter. Operated by pedal shift lever. (1107930)—Solenoid Switch D-R No. 1118021. On starter. Controlled by Pushbutton Switch No. 1996033 (Futuramic), 1996009 (Others) on the instr. panel (and Neutral Safety Switch No. 1997761 on Hydra-Matic Drive Cars).
See Electrical Equipment Section for complete data.
Safety Switch Adjustment—Place Selector Lever in "N" (neutral) position, loosen safety switch bracket locking screw, adjust switch so clearance between lever and stop is 1/16-3/32", tighten lock screw.

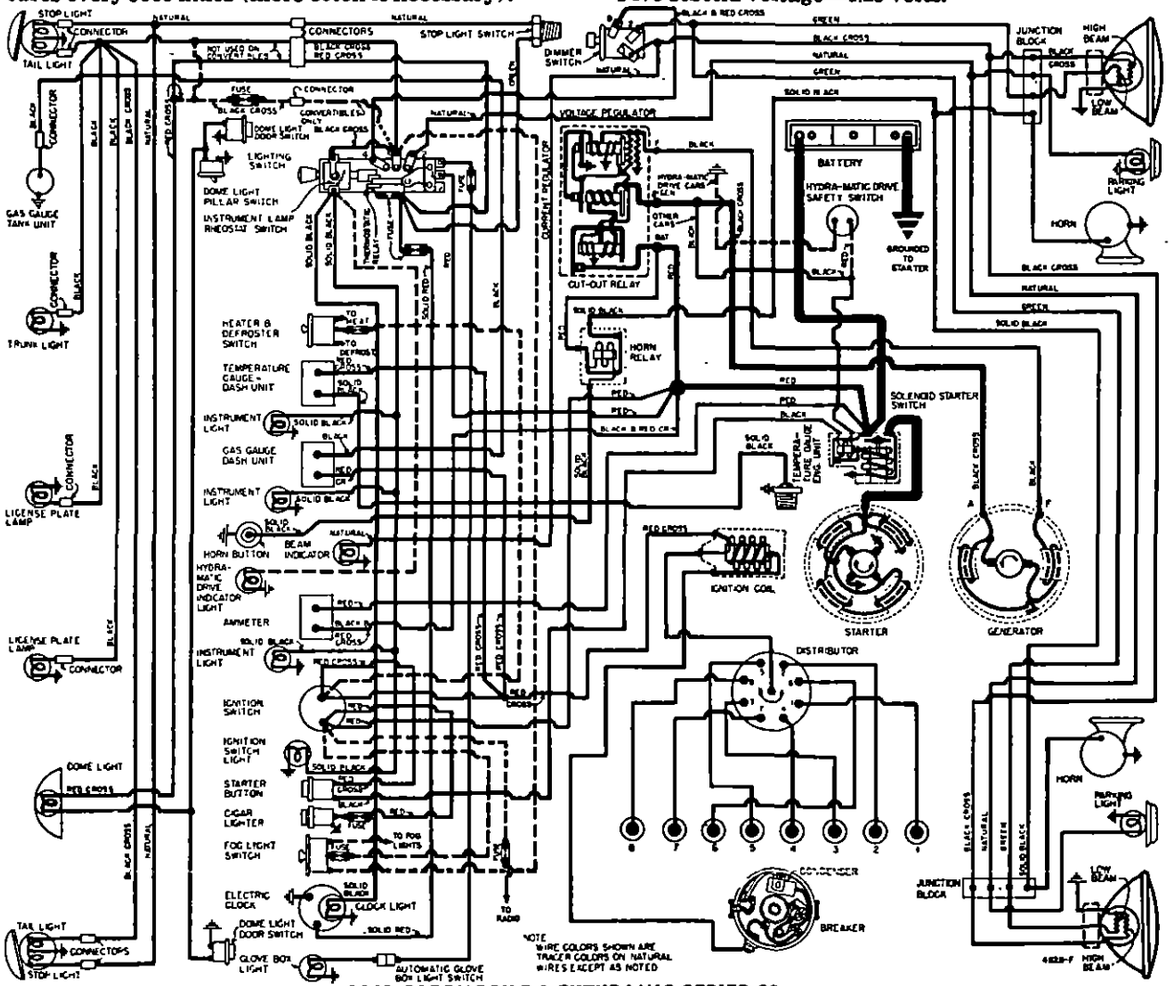
GENERAT R

Delco-Remy 1102664 (Std.), 1102680 (Hydra-Matic). Armature No. 1879002. Two brush (shunt) types with voltage and current regulation. Ventilated by fan.
Pulley Note—*See Oldsmobile 6 page for standard and optional pulley data.*
Charging Rate Adjustment—None. Charging rate controlled by Voltage Regulator, maximum output by Current Regulator. See Regulator data below.
Maximum Charging Rate—33 amperes, 7¾ volts, 2400 RPM (hot operating tem.) at 21 MPH car speed

Performance Data—Cold

	Amperes①	Volts	R.P.M.
1102664, 80	30	8.0	1750

①—Not maximum output. See Current Regulator.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—25 ozs. each.
Field Current—1.75-1.9 amperes at 6.0 volts.
Removal:—Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.
Belt Adjustment:—Check with straightedge across pulleys. Belt deflection should be ¾" inward.



REGULAT R

Delco-Remy Model 1118242. Single Core Type. Vibrating type Voltage and Current Regulators in a single case with Cutout Relay.
See Electrical Equipment Section for complete data.
CAUTION—Check generator for grounded field coils and leads before changing regulator settings

Cutout Relay

Cuts In—6.2-6.7 volts hot.
Cuts Out—0-4.0 ampere discharge current.
Contact Gap—.020" (same for both sets).
Air Gap—.020" (with contacts just closed).

CONTINUED ON NEXT PAGE

1948 OLDSMOBILE 8 FUTURAMIC SERIES 98

CONTINUED FROM PRECEDING PAGE

Voltage Regulator

Setting—7.2-7.4 volts hot (at operating temp.). Regulator over-compensated for temperature. Should be checked with cover in place and hot.

Checking & Adjustment—*See Electrical Equipment Section.*

Air Gap—.070" between center of core and armature with contacts just closing (press down on armature to open contacts, release pressure, check gap at point where contacts just close).

Current Regulator

Setting—34-36 amperes hot (at operating temp.).

Checking & Adjustment—*See Electrical Equipment Section.*

Air Gap—.030" (check same as Voltage Regulator).

LIGHTING

Headlamps: Guide "Sealed Beam" type.

See Electrical Equipment Section for complete data.

Headlamp Adjustment—Aim upper beam straight ahead (hot spot center 3" below lamp center height).

Beam Indicator—Small red indicator in upper edge of speedometer. Lighted when Upper Beams in use.

Direction Signal: *See Electrical Equipment Section.*

Switches

Lighting—(1946-47—68, 78) D-R No. 1995026.
(1946-47—98) Delco-Remy No. 1995025.
(1948—68, 78) Delco-Remy No. 1995036.
(1948—98) Delco-Remy No. 1995030.

Instrument—Part of Lighting Switch. Rheostat operated by turning Lighting Switch Knob.

Beam Selector—Delco-Remy No. 1997008.

Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	4030
Parking, Rear License	3	63
Dir. Signal & Parking	21-3	1154
All Indicators	1	51
Instrument (Dynamic)	1½	55
Instrument (Futuramic)	1	51
Ign. Key (Futuramic Conv.)	1	51
Glove Compt., Clock	1½	55
Stop & Tail	21-3	1154
Dome (exc. Sta. Wg. & Conv.)	15	88
Dome (Station Wagon)	6	81
Dome (Convertible)	1½	55
Trunk & Under-hood	6	81
Back-Up	32	1133L

MISC. ELECTRICAL

THERMOSTATIC RELAY: On lighting switch. Contacts remain closed with 30 ampere current, open in 3 minutes with 42 amps. current@70°F. Limits current to 18 amps. with dead short-circuit. Not adj

FUSES: Dome & Stop Lights—On lighting switch. ('46-47) SFE 9 ampere. ('48) SFE 14 ampere.
Dome & Tail (1948 Convertible)—3AG 20 ampere. In body feed wire to tail and dome lights.
Glove Box & Under-hood Light—1AG 5 ampere.
Direction Signal—SFE 9 ampere. In Flasher to Ignition Switch wire.
Electric Clock—1AG 2 ampere. In feed wire.
Cigar Lighter—1AG 30 and 3AG 30 ampere.

HORNS: Delco-Remy No. Low Note: (1946-47) 1999607, (1948) 1999617, High Note: (1946-47) 1999608, (1948) 1999618. Vibrator type operated by relay.

Type	Current (at 6 volts)	Air Gap
1999607, 617 (Low)	19-21 amperes	.047-.052"
1999608, 618 (High)	18-20 amperes	.039-.044"

Horn Relay:—Delco-Remy No. 1116775.
Contact Gap—.025". **Air Gap**—.015" (closed).
Contacts Close—2.75-4.0 volts.

ENGINE

ENGINE SPECIFICATIONS: 8 cylinder, "L" head type.
Bore—3¼". **Stroke**—3⅞".
Displacement—257.1 cubic ins. **Rated HP**—33.8.
Developed Horsepower—(Dynamic) 110 at 3600 RPM. (Futuramic)—115 at 3600 RPM.
Compression Ratio—(Dynamic) 6.5-1, (Futuramic) 7.0-1. Std. Cast iron heads.
Compression & Vacuum Reading—*See Tune-up data.*

OIL PAN REMOVAL: *See Oldsmobile Shop Notes.*

TIGHTENING TORQUES: *See Oldsmobile Shop Notes.*

CYLINDER HEAD: Tightening Torque & Cylinder Head Diagram—*See Oldsmobile Shop Notes.*

PISTONS: Aluminum alloy, T-slot, cam ground, electro-plated type.
Weight—16 ozs. (stripped). **Length**—3 15/16".
Removal—Pistons and rods removed from above.
Clearance—Top land .023-.028". Skirt clearance Top .00205", Bottom .00155". Fitted for .0013-.0018" clearance on thrust surface. See Fitting New Pistons.

Replacement Pistons: Finished pistons (pins fitted) .003", .005", .010", .015", .030" oversize.

Fitting New Pistons: Check piston for size with micrometer (pin removed) 90° from pin bosses ⅜" below lower ring groove and ⅜" from bottom of skirt. Insert .002" x ½" feeler between piston (pin removed) and cylinder wall on valve side with piston inverted and T-slot on opposite side from feeler. Pull to withdraw feeler must be 4 to 11 lbs. (piston and block at 70°—low limit below 70°, high above).

Installing Pistons: Mark "V-8" on head toward valves (slot away from valves). Pin hole offset 3/32" to left.

PISTON RINGS: 2 compression (coated type—install with mark TOP up), 2 oil control, all above pin.

Ring	Width	End Gap	Side Clearance
Compr.	.0925-.0935"	.009-.014"	.001-.0025"
Oil Contr.	.1860-.1865"	.009-.014"	.001-.0025"

Replacement Rings:—.010", .020", .030" oversize.

PISTON PIN: Diameter—.8554-.8557". **Lgth.**—2 31/32". Pin locked in one piston boss by lockscrew (opposite end slotted). Pin bosses are plated and must not be reamed. Standard size pins only serviced.
Pin Fit in Piston—.0001" tight to .0002" loose (plain boss end), .0003-.0006" tight (lock boss end).
Pin Fit in Rod Bushing—.0003-.0006" clearance.
Pin Fitting, Removal and Installation—*See "Piston Pins" in Oldsmobile Shop Notes.*

CONNECTING ROD: Length 7 13/16". Weight 28 ozs.
Crankpin Journal Diameter—2.123-2.124".
Lower Bearing Diameter—2.1245-2.1255".
Lower Bearing—Removable steel-backed, Durex-babbitt overlay bearing shells.
Clearance—.0005-.0025". **Sideplay**—.0055-.0105".

Bearing Adjustment: None (no shims). Replace bearings.

Installing Rods: Oil spit hole at lower end toward valves and grooves on rod and cap bolt boss (part number side) matched. Special ground cap bolts with self-locking nuts used. Tighten to 45-50 ft. lbs.

CRANKSHAFT: 5 bearing, 8 integral counterweights.
Journal Diameters—#1, 2.478-2.479"; #2, 2.5405-2.5415"; #3, 2.603-2.604"; #4, 2.6655-2.6665"; #5, 2.6855-2.6865".
Bearings—Removable steel-backed, Durex-babbitt overlay bearing shells. Front bearing has oil groove (to front) for thrust plate lubrication.
Clearance—.0005-.002" (rear), .001-.003" (all others).

Bearing Adjustment:—None (no shims). Replace bearings. Do not file caps. NOTE—9/16" cap bolts used on rear bearing, ½" on others (heads alike).

End Thrust:—At #1 bearing. **Endplay**—.004-.008". *See "Crankshaft & Main Bearings" in Oldsmobile Shop Notes.*

Rear Main Bearing Oil Seal Installation: *See "Crankshaft & Main Bearings" in Oldsmobile Shop Notes.*

CAMSHAFT: 5 bearing. Non-adjustable chain drive.
Journal Diameters—#1, 2.0600-2.0605"; #2, 1.9975-1.9980"; #3, 1.9350-1.9355"; #4, 1.8725-1.8730"; #5, 1.8100-1.8105".
Reamed Bushing Diameters—#1, 2.0620-2.0635"; #2, 1.9995-2.001"; #3, 1.9370-1.9385; #4, 1.8745-1.876"; #5, 1.812-1.8135".
Bearings—Bronze bushings. **Clearance** .0015-.0035".

End Thrust:—Forward thrust taken by flange on front engine support plate, rear thrust by flange on shaft bearing against front of engine block.

Timing Chain:—Link-Belt. Width 11/16". Pitch .500". Length 47 links or 23½".

Camshaft Setting—Mesh chain with sprocket marks adjacent and in line with a straightedge across the shaft centers (or use Tool HM-408-0).

VALVES:

	Head Diameter	Stem Diameter	Length
Intake	1 9/16"	.3415-.3425"	.5 51/64"
Exhaust	1 27/64"	.3410-.3418"	.5 51/64"

	Seat Angle	Lift	Stem Clearance
Intake	30°	.286"	.00175-.00375"
Exhaust	45°	.314"	.00245-.00425"

Valve Guides:—Intake and exhaust guides same. Press guides in so top end ⅞" below top of block. (Tool J-1042 positions guide correctly in block). Ream to .34425-.34525" inside diam. (not tapered).

Valve Springs:—Same spring used on both valves and on 6&8 engines. Damper on top of each spring. Free length 2⅝".

	Spring Pressure	Spring Length
Valve Closed	55 lbs.	2¼"
Valve Open	100 lbs.	1 15/16"

Valve Lifters:—Mushroom type. Diam. .6235-.6240". Lifter holes in block have bearing-ized finish (if worn, fit oversize lifter without reaming hole when possible, to preserve finish). Furn. .001", .002", .005", .010" OS. Clearance .0005-.0008". NOTE—Use only 1⅛" diam. face lifter (to clear fuel pump eccentric).

VALVE TIMING

Tappet Clearance:—.008" Int., .011" Exh. Hot & idling. NOTE—Self-locking tappet screws used.

Valve Timing:—See Camshaft Setting above.
Intake Valves—Open at TDC. Close 35° ALDC.
Exhaust Valves—Open 45° BLDC. Close 10° ATDC.
Valve Timing Check—With .0124" tappet clearance #1 intake valve should open with piston at top dead center (flywheel mark "TDC/"—NOT STEEL BALL INSERT) aligned with pointer in housing above starter. Reset tappet cl. at .008" hot & idling.

LUBRICATION

Engine Oiling System: Pressure to main, connecting rod, and camshaft bearings, piston pins, and timing chain. Oil pump mounted externally on right side
Crankcase Capacity—6 quarts.
Normal Oil Pressure—30 lbs.
Oil Pressure Regulator—On oil pump. Opens at 30 lbs. Non-adjustable type.

Oil Pump: Gear type on right side of crankcase.
Oil Pump Assembly & Installation—*See "Oil Pump" in Oldsmobile Shop Notes.*

Oil Pressure Gauge: (1946-47) AC No. 1506797.
(1948)—AC No. 1507304 (68, 78), 1507124 (98).

Crankcase Ventilation: Filter element in oil filler cap (inlet breather). Outlet pipe on right side of engine.

COOLING

Cooling System: Positive circulation with water pump on front of engine and water distributing tube in cylinder block and ('47-48) pressure valve in filler cap.

►**1948 Radiator Shroud**—Used on all Eight cylinder models to maintain proper water temperature for high altitude and extreme hot weather driving.

►**Radiator Shroud #555107 for Installation on the 1946-47 Eights**—This 1948 68 & 78 type shroud can be installed. *See "Cooling System" in Oldsmobile Shop Notes.*

Capacity—20½ quarts.
Pressure Valve—AC No. 850501. Radiator filler cap. Opens at 4 lbs. (3¼-4¼ lbs.).

Radiator Core Removal: *See Oldsmobile Shop Notes.*

Water Pump: Packless, sealed ball-bearing shaft.
See Water Pump Section for complete data.
Futuramic Note—Water pump on these engines has been lowered.

Thermostat:—Harrison. In cylinder head outlet.
Setting—Starts to open 152°F. Fully open 173°F.

Temperature Gauge: AC Electric type.
Dash Unit—(1946-47) AC No. 1511652.
(1948) AC No. 1512059 (68, 78), 1511943 (98).
Engine Unit—AC ('46-47) 1510772, ('48) 1512015.
See Miscellaneous Section for complete data.

CLUTCH

Borg & Beck Model 10A7 with Borglite driven member. Cover marked #927. Single plate, dry disc type
See Clutch Section for complete data.

Release Bearing Lubrication:—*See Oldsmobile Special Data.*
Facings—Spiral wound (spirally grooved) molded woven, 2 used. Inside Diam. 7". O.D. 10". ⅛" thick.

Pedal Adjustment:—Free travel 1-1¼". Turn link at fork in or out of clevis on auxiliary shaft.

Removal:—Remove transmission (see below), clutch underpan and reinforcing plate. Take out 6 mounting screws in clutch cover (when installing, use 2 long shank mounting screws in 2nd hole on each side of locating dowel), remove clutch. *For Clutch Housing Re-inforcing Plate data refer Olds Shop Notes.*

TRANSMISSION

STANDARD

Own Make. All helical gear. Constant-mesh, synchro-mesh (second & high), sliding gear (low & reverse).
See Transmission Section for complete data.

Transmission Control:—Oldsmobile 'Handi-shift' type.
See Transmission Section for complete data.

Removal: Disconnect shift and selector rods from levers at transmission, speedometer cable, rear universal and slide slip yoke and propeller shaft to rear. Remove four transmission mounting capscrews, pull transmission straight back and remove.

HYDRA-MATIC DRIVE

OPTIONAL EQUIPMENT

Own Make. Consists of fluid coupling and 4 speed automatic transmission.
See Transmission Section for complete data including Testing & Trouble Shooting.
Lubrication—Check fluid level in transmission at each 1000 mile lubrication period or every 2000 miles. Drain and refill every 25,000 miles. Use only Oldsmobile Hydra-Matic Drive Fluid.
Capacity—11qts. (when drained and refilled with unit in car). **Approximately 12 qts.** (when refilling after unit removed and completely rebuilt.
Checking Fluid Level—Engine must be running at slow idle. Raise floor mat, take off cover in floor above transmission, lift out combination filler cap & stick, fill to "FULL" mark (engine idling).
►*CAUTION—Engine must be running at slow idle speed when checking Hydra-Matic Drive Fluid Level.*
Hydra-Matic Linkage Adjustment—*See Hydra-Matic Drive article in Transmission Section.*

Removal: *See Hydra-Matic Drive article in Transmission Section.*

UNIVERSALS

Mechanics 2C or 2CR types. Roller bearing types.

NOTE—Slip joint formed at rear of transmission ahead of front U-joint (driveshaft 1 piece type).

►**1947-48 CAUTION**—Rear universal companion nut controls rear axle pinion bearing "pre-load" (must be adjusted whenever nut is loosened). *See 1947-48 Oldsmobile in Rear Axle Section.*

REAR AXLE

1946 Type—Same as 1942. Hypoid gear, semi-floating type. This type axle has three setscrews equally spaced around pinion housing.
See Rear Axle Section for complete data.
1947-48—New hypoid gear, semi-floating type. Design similar to 1946 type except that pinion is mounted on two taper roller bearings and companion flange nut controls pinion bearing "pre-load." No setscrews are used.
See Rear Axle Section for complete data.

1946-47 Rear Axle Ratios
Ratio—Std.: 4.55-1 (98), 4.3-1 (for 68 and 78).
Hydra-Matic: 3.42-1 (68), 3.63-1 (78), 3.9-1 (98).
Optional: 3.9-1 or 4.55-1.

1948 Rear Axle Ratios
Ratios (Std. Trans.)—(68, 78, 98) 43:10 (4.3-1), (68 Sta. Wgn & Optl. on 68 Conv.) 41:9 (4.55-1).
Ratios (With Hydra-Matic Drive)—(68, 78) 40:11 (3.64-1), (98) 39:10 (3.9-1), (68 Sta. Wgn & Conv. & Optl. on 68, 78) 39:10 (3.9-1).

►**Rear Axle Ratio Marking**—Ratio (43:10 etc.) and date stamped on right lower side of carrier.
Backlash—('46) .004-.008", ('47-48) .004-.006". Screw adjustment.

Removal: Disconnect drive shaft at rear universal (do not disengage spline joint at transmission), remove axle shafts and carrier flange capscrews.

►**1947-48 CAUTION**—Rear universal companion flange nut controls pinion bearing "pre-load" (must be adjusted whenever nut is loosened).

Axle Shaft Removal: Hoist rear end, remove wheel, brake drum, backing plate mounting nuts, static collector and loosen bearing retainer (do not move backing plate or brake line may be damaged). Pull shaft and bearing with puller J-942 (do not allow shaft to drag on oil seal), replace 1 backing plate nut.
Wheel Bearing Adjustment—None.

Rear Suspension: Coil spring type with support arms.
See Rear Axle Section for complete data.

SHOCK ABSORBERS

Delco. Two types are used. FRONT—Model 1947-C (right), D (left). RIGHT REAR—2105-E (78, 98), G (68). LEFT REAR—2105-F (78, 98), H (68). Double acting (parallel cylinder type rear), hydraulic.

FRONT SUSPENSION

Front Suspension:—Independent, linked parallelogram type with coil springs.
See Front Suspension Section for complete data.
Kingpin Inclination—4° 51' 10".
Caster—0-¾° Negative. Adjustable.
Camber—Negative ¼° to Positive ¾°. Adjustable.
Toe In—1/16-⅛". Adjust each tie rod equally.
Steering Geometry—Inner wh'l 23°±½°. Outer 20°.

STEERING GEAR

Steering Gear—Saginaw Worm-and-Roller type.
See Steering Gear Section for complete data.

BRAKES

Service Brakes: Bendix Hydraulic, duo-servo, single anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.
See Brake Section for complete data.
Wheel Cylinder Bore—Front wheel 1⅛". Rear 1".
Drums—Cast-iron lined steel. Diameter 11".
Lining—Molded. Width: Front wheel 2" (68), 2¼" (78, 98). Rear 1¾" (68), 2" (78, 98). Thick. 3/16". Length 9 11/32" (primary), 11 31/32" (secondary).
Clearance—.015" at both ends of secondary (rear) shoe with primary shoe forced out against drum.

Hand Brake:—See Service Brakes above.

MISC. MECHANICAL

Power Operated Convertible Tops, Windows, & Front Seat: Hydro-Lectric type (motor driven pump).
Futuramic Note—Power operated windows and front seat adjustment optional on 2-Door & 4-Door
See Miscellaneous Section for complete data.

MODEL IDENTIFICATION

SERIAL NUMBER: On left front door hinge post.
1949 Numbers—First number 1001 with prefix 496M, A, etc. as follows:
1950 Numbers—First number 1001 with prefix 506M, A, etc. as follows:
Serial No. Prefix Identification. First two numbers 49 (1949), 50 (1950) —indicate year, third number 6 indicates 76 Series, letter indicates assembly plant: **M**—Lansing, **A**—Atlanta, **B**—Framingham, **K**—Kansas City, **L**—Linden, **C**—South Gate, **W**—Wilmington.

ENGINE NUMBER: On left front top corner of block.
1949 Numbers—6A1001 up.
1950 Numbers—6A97001 up.
Hydra-Matic Cars. Engine number marked with letter "H" following number: **6A1001H.**

TUNE-UP

COMPRESSION PRESSURE: 125 lbs. at cranking speed.

VACUUM READING: Steady 17" min. at idling speed.

FIRING ORDER: 1-5-3-6-2-4. See diagram.

SPARK PLUG GAPS: .040".
Plugs—AC No. 45, 14 mm.

DISTRIBUTOR: Breaker Gap—.021-.026" (new). .018-.024" or .020" preferred (used points).

▷*CAUTION—Set new points at .021-.026" to allow for wearing in of rubbing block.*
Cam Angle—35°. Test limits with .022" gap 31-37°.
See "Delco-Remy Cam Angle" in Electrical Equipment Section.
Breaker Arm Spring Tension—17-21 ozs.
Automatic & Vacuum Advance—*See Ignition.*
Condenser Capacity—.18-.23 microfarad.

IGNITION TIMING: TDC (At Top Dead Center).
Timing Procedure—*See Ignition Timing.*
Flywheel Mark—Steel ball insert aligned with pointer in inspection hole in housing beside starter.
Octane Selector—Set to give slight ping accelerating with wide open throttle below 15 MPH.

CARBURETION:
Idle Setting—(1949) ½-2 turns open. (1950) ½-1½ turns open. Turning screw out gives richer mixture.
Idle Speed (Standard)—425 RPM, or 6 MPH.
Idle Speed (Hydra-Matic)—375 RPM (3-Speed Hydra-Matic); 400 RPM (4-Speed Hydra-Matic) with selector lever in "Dr" position.
Float Level—½" from machined projection on cover to top of soldered seam at free end (invert to check).
Accelerating Pump—No seasonal adjustment.

Choke Setting: Centered (housing centered on scale).

Fuel Pump Pressure: 4-5 lbs.

MANIFOLD HEAT CONTROL: Thermostatic coil type.
Setting—Coil wind-up should be 125° (approx. 1/3 turn) at room temperature. NOTE—To check valve for correct position on shaft, use feeler gauge in slot on rear end of shaft. With valve closed, gauge should contact stop pin (slot 6° to left or toward engine from up-and-down position) with 1/8" clearance between valve tip and manifold. Valve welded to shaft in this position.

VALVE TAPPET CLEARANCE: Intake Valves .008", Exhaust Valves .011", HOT.
Valve Timing Check—*See Valve Timing.*

IGNITION

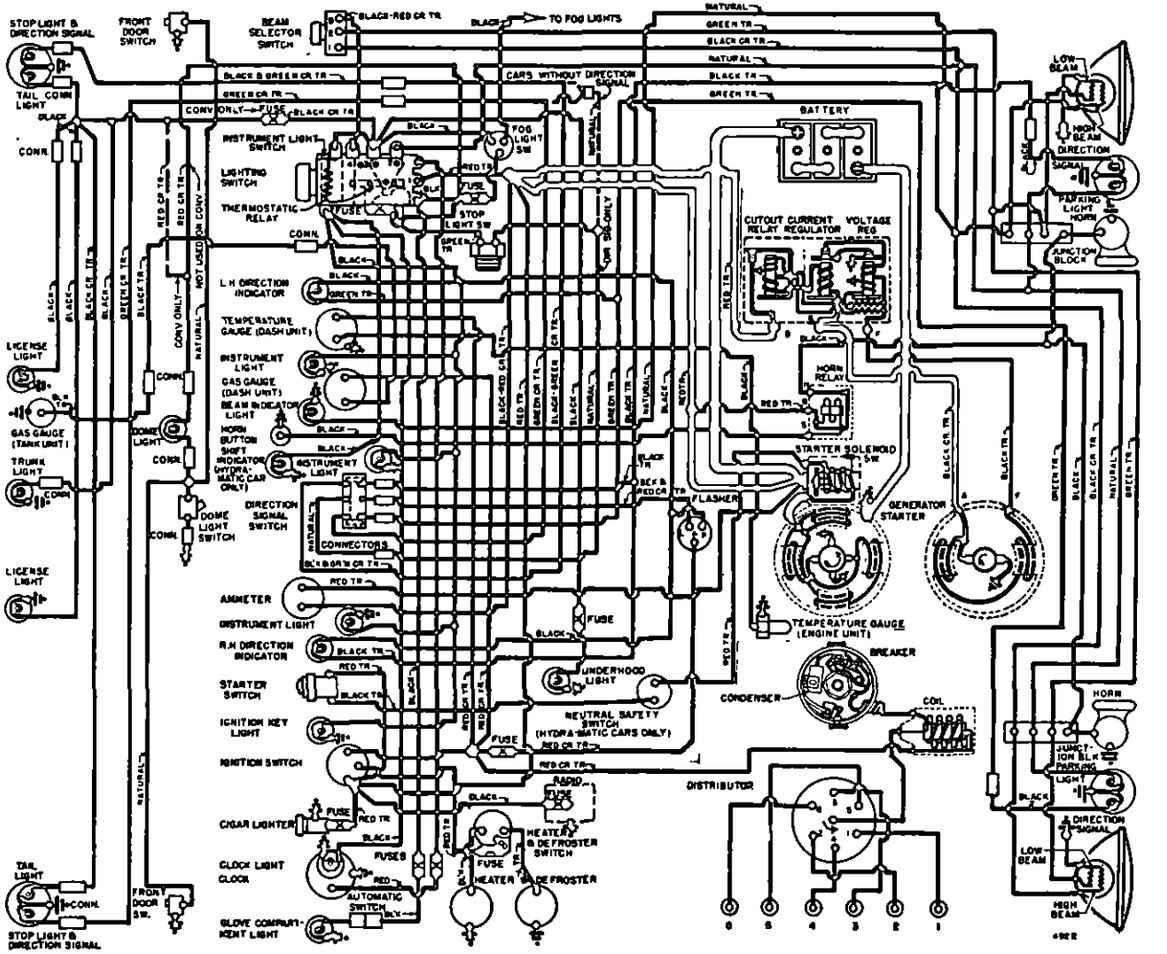
IGNITION SWITCH: Delco-Remy No. 1116453.
Ignition Lock—Briggs & Stratton or Delco.

COIL: Delco-Remy 1115380. On side of engine.
Ignition Current—2.0 amperes idling, 4.5 stopped.

CONDENSER: Delco-Remy Part No. 1869704.
Capacity—.18-.23 microfarad.

DISTRIBUTOR: Delco-Remy 1110214 or 1110221. Automatic and vacuum advance with Octane Selector.
1110221 Note—Has new "center-bearing" breaker plate.

▷**Breaker Plate Bearing Assembly**—Plate rotates on 3 bakelite buttons on support plate with spring tension adjustment (shim washers) on underside of support plate. Pull required to move plate should be 8 oz. min., 16 oz. max. with breaker plate assembly out of housing.
See "Delco-Remy Center-Bearing Breaker Plate Distributor" in Electrical Equipment Section.



Breaker Gap—.021-.026" (new points), .018-.024" or .020" preferred (used points).

▷*CAUTION—Set new points at .021-.026" to allow for wearing in of rubbing block.*
Cam Angle—35°. Test limits with .022" gap 31-37°.
See "Delco-Remy Cam Angle" in Electrical Equipment Section.
Breaker Arm Spring Tension—17-21 ozs.
Rotation—Counter-clockwise viewed from above.

Distributor Automatic Advance		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	250	2.0	500
12.0	1600	24.0	3200

Vacuum Spark Control: Delco-Remy No. 1116039 (for 1110214 distributor), **1116053** (for 1110221). Integral type linked directly to breaker plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring.

Plunger Travel—5/32".

1949 MODELS

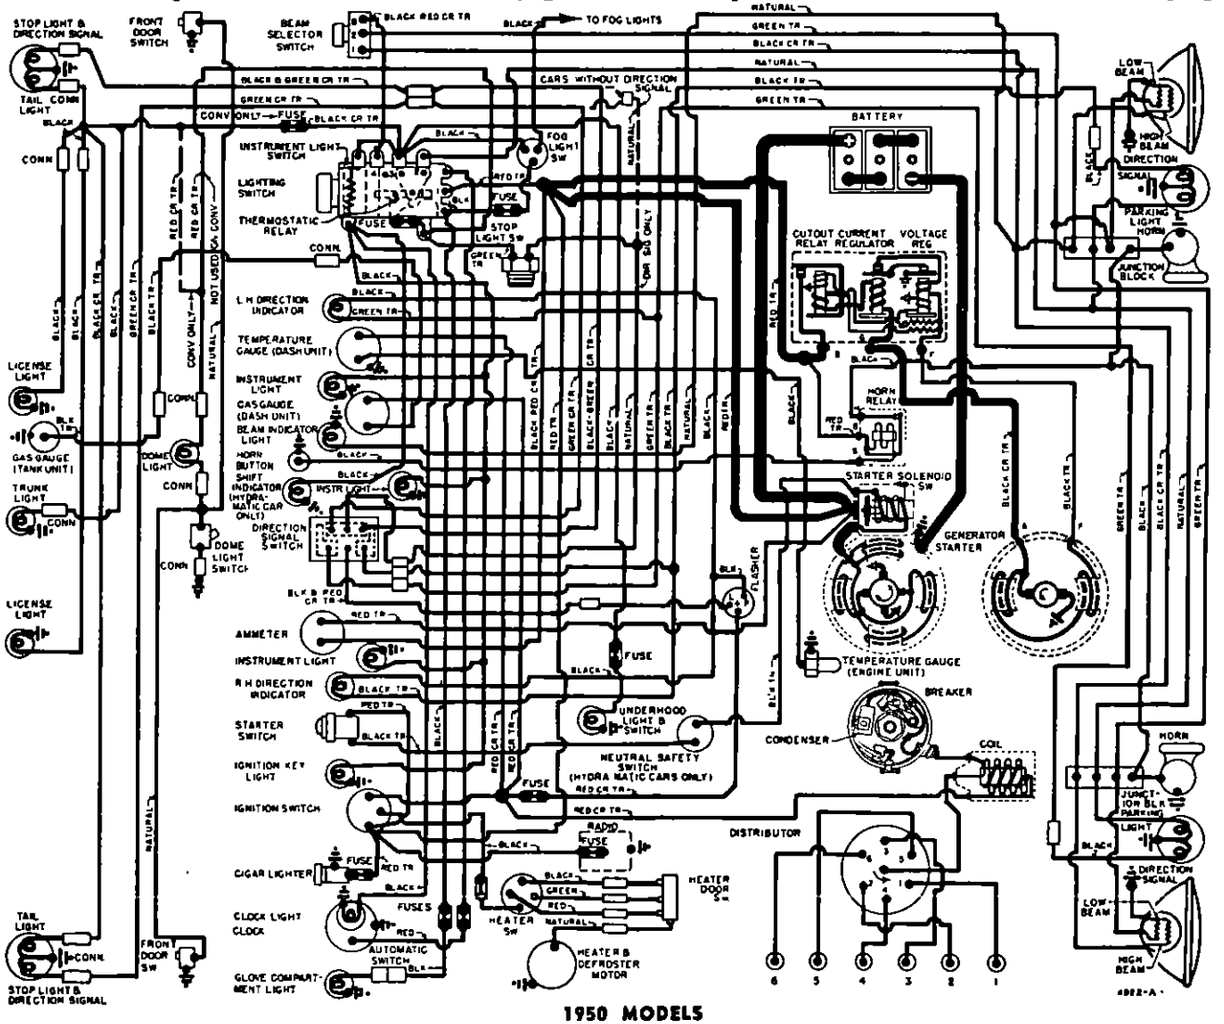
Vacuum Advance		
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5-7"
8°	16°	(1116039) 16½-18½"
8°	16°	(1116053) 16-20"

Octane Selector—Hold-down plate permits 10° advance or retard. See Ignition Timing.

IGNITION TIMING

Std. Setting — Piston Position

Standard Setting ..... **TDC**



NOTE—Modify this setting for special fuel and altitude conditions. See Octane Selector Setting.

Flywheel Mark—Steel ball on flywheel (#1 and #6 piston top dead center position). Inspection hole in left front face of flywheel housing above starter.

Timing (with Synchroscope)—Use Tool HMO-161. Loosen distributor hold-down plate bolt, center hold-down plate scale ("0" at indicator line), tighten hold-down bolt. Clip synchroscope lead to #1 spark plug, direct light on flywheel through inspection hole in housing above starter. With engine idling, loosen hold-down plate clamp screw, rotate distributor until ignition mark (steel ball insert) lines up with pointer, tighten clamp screw, check Octane selector setting (below).

Timing (without Synchroscope)—Turn engine over to firing position for #1 cylinder (steel ball on flywheel aligned with pointer in inspection hole in housing above starter). Loosen distributor hold-down plate bolt, center hold-down plate scale ("0" at indicator line), tighten hold-down bolt. Loosen hold-down plate clamp screw, rotate distributor until contacts begin to open, tighten clamp screw, check Octane Selector Setting below.

Octane Selector Setting: Set for slight ping when accelerating with wide open throttle in high gear below 15 MPH. To adjust, loosen hold-down plate bolt, move plate toward RET end of scale if no ping noted, toward ADV end if ping too severe, tighten bolt.

1950 MODELS

CARBURETOR

Carter WA-1.
(1949) 709S, (1950) 763S sup. by 763SA.....H-M Drive
(1949) 710S, (1950) 764S.....S-M Trans.
1½" single barrel downdraft, Carter Climatic Contr.
Casting No. on Flange—538.
See Carburetor Section for complete data.

►**763S, SA Production Changes—*See "Carter WA-1" in Carburetor Section.***

Settings (Idle Setting, Float Level, and Accelerating Pump): ***See Tune-Up data.***
Metering Rods & Jets—*See Carter Downdraft Jet Specification Table in Carburetor Section.*

Hydra-Matic Throttle Linkage Adjustment: ***See Oldsmobile Hydra-Matic Drive in Transmission Section.***

Throttle Cracker Adjustment (S-M cars only): .0625 to .0825" clearance between throttle stop screw and highest step of fast idle cam with starter button fully depressed. Adjusting screw on accelerator bellcrank.

Fast Idle: Carter Single Barrel Carburetor type.
Setting—⅝" clearance between choke valve and air horn (Gauge T109-85) with throttle valve closed and stopscrew against (not on) first step of fast idle cam. Adjust by bending connector link at lower offset (use Tool T109-41).
See Carburetion Equipment Section for complete data.

Automatic Choke: Carter Climatic Control (single barrel carbs).
Setting—Centered (coil housing at index mark).
See Carburetion Equipment Section for complete data.

CARB. EQUIPMENT

Air Cleaner: AC No. 1544458 oil wetted type (std.), No. 1544459 heavy duty oil-bath type (optl.).
Filter Element—AC #6 (std.), #21 (hvy. duty).
Servicing—Clean and re-oil std. cleaner every 2000 miles. On heavy duty types clean and refill reservoir with 1 pint SAE 50 (40 in winter) oil every 2500-5000 miles.

Fuel Pump: AC No. 1539516 fuel & vacuum pump.
Replacement Pump—AC No. 9297.
Pressure—4-5 lbs.
See Carburetion Equipment Section for complete data.

Gasoline Gauge: AC Electric type.
Dash Unit—AC No. 1517011.
Tank Unit—AC No. 1517299.
See Carburetion Equipment Section for complete data.

BATTERY

Delco Type 15AA-4. 6 Volt, 15 Plate, 100 Ampere Hour Capacity (20 hour rate).
Starting Capacity—120 amperes for 20 minutes.
Zero Capacity—300 amperes for 3.6 minutes. Five second voltage—4.2 volts.
Grounded Terminal—Negative (—) to Starter.
Location—In engine compartment on left side.

STARTER

Delco-Remy Model 1107955. Armature No. 1867897.

►***CAUTION—Starter operates whenever pushbutton depressed (and shift lever in neutral on Hydra-Matic) regardless of ignition switch position.***

Drive—Overrunning clutch (solenoid pinion shift).
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—24-28 ozs. each.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Performance Data

Torque		R.P.M.	Volts	Amperes
0	ft. lbs.	5500	5.7	80①
14	"	Lock	3.0	600

①—Includes current draw of starter switch.

Starting Switch: Delco-Remy Solenoid Switch No. 1118136 (no relay used) mounted on starter and controlled by Pushbutton Switch No. 1996038 (1949), 1996046 (1950), (and Neutral Switch No. 1997849 on Hydra-Matic cars).

▷*CAUTION*—Overrunning clutch pinion clearance must be adjusted whenever solenoid removed.

See Electrical Equipment Section for complete data.

Neutral Safety Switch Adjustment—***See Oldsmobile Hydra-Matic Drive in Transmission Section.***

GENERATOR

Delco-Remy 1102706 (Std.), 1102707 (Hydra-Matic). Armature No. 1880550. Two brush (shunt) types with voltage and current regulation. Ventilated by fan.

Charging Rate Adjustment—None. See Regulator.

Maximum Charging Rate—40 amperes min. reached at car speed of 22 MPH. Actual charging rate controlled by regulator.

Performance Data

	Amperes	Volts	R.P.M.
Cold	40①	8.0	1900

①—Not maximum output. See Current Regulator.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—25 ozs. each.

Field Current—1.9-2.05 amperes at 6.0 volts.

Belt Adjustment: Check with straightedge across pulleys. Belt deflection should be ⅜".

REGULATOR

Delco-Remy 1118300. Voltage & Current Regulator.

▷*NEW "1118300 SERIES"* regulators have screw adjustment for settings and single regulator springs. ***See Electrical Equipment Section for complete data.***

CAUTION—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

Cutout Relay

Cuts In—5.9-6.8 volts hot (set to 6.4 volts hot).

Contact Gap—.020" (same for both sets).

Air Gap—.020" (with contacts just closed).

Voltage Regulator

Setting—7.0-7.7 volts hot (set to 7.4 volts hot). Regulator is over-compensated for temperature. Check with cover in place and regulator hot.

Air Gap—.075" with armature pressed down to point where contacts are just touching.

Checking & Adjustment—***See Elec. Equip. Section.***

Current Regulator

Setting—40-46 amperes hot (set to 42 amps. hot).

Air Gap—.075" with armature pressed down to point where contacts are just touching.

Checking & Adjustment—***See Elec. Equip. Section.***

LIGHTING

Headlamps: Guide "Sealed Beam" type.

See Electrical Equipment Section for complete data.

Headlamp Adjustment—Aim upper beam straight ahead (hot spot center 3" below lamp center height).

Beam Indicator—Small red indicator in upper edge of speedometer. Lighted when Upper Beams in use.

Direction Signal: ***See Electrical Equipment Section.***

Direction Signal Indicators—Left & Right Turn Indicator located at either end of instrument cluster. Lights when direction signal on same side of car operating (Stop Light flashes at rear).

Switches

Lighting—Delco-Remy No. 1995030.

Instrument—Part of Lighting Switch (Rheostat operated by turning light switch knob).

Beam Selector—Delco-Remy No. 1997008.

Directional Signal—Delco-Remy No. (1949) 1995542, (1950) 1995554.

Stop Light—Delco-Remy No. 1997725.

MISC. ELECTRICAL

THERMOSTATIC CIRCUIT BREAKER: Delco-Remy. On back of light switch (part of switch assy.). Contacts remain closed with 30 amperes but open in 3 minutes with 42 amperes at 70°F. Not adjustable.

FUSES: Dome & Stop—SFE 14 amp. On light switch.

Dome & Tail (Convertible only)—AGC 20 ampere. In body feed wire to dome and tail lights.

Glove Box & Under-hood Light—AGA 5 amp. each.

Direction Signal—SFE 9 ampere. In Flasher to Ignition Switch wire behind instrument panel.

Electric Clock—AGA 2 ampere. In feed wire.

Cigar Lighter—AGC 30 ampere.

HORNS: Delco-Remy No. (1949) 1999617, (1949-50) 1999647 (welded type) **Low Note. Delco-Remy No. (1949) 1999618, (1949-50) 1999648** (welded type) **High Note.** Vibrator type operated by relay.

Horn Relay: Delco-Remy No. 1116775.

Contact Gap—.027". **Air Gap**—.014" (closed).

Contacts Close—2.75-4.0 volts (set to 3.5 volts).

ENGINE

ENGINE SPECIFICATIONS: Big Six. 6 cylinder, "L" head.

Bore—3 17/32". **Stroke**—4 3/8".

Displacement—257 cubic ins. **Rated HP.**—29.9.

Developed Horsepower—105 at 3400 RPM.

Compression Ratio—6.5-1 cast-iron head.

Compression & Vacuum Reading—***See Tune-Up.***

TIGHTENING TORQUES: ***See Oldsmobile Special Data.***

CYLINDER HEAD INSTALLATION: ***See Oldsmobile Special Data.***

OIL PAN REMOVAL: ***See Oldsmobile Special Data.***

PISTONS: Aluminum alloy, T-slot, cam ground, oxalic sulphuric acid coated type.

Weight—('49) 18.24 ozs., ('50) 18.05 ozs. (stripped).

Length—4 1/32".

Removal—Pistons and rods removed from above.

Clearance—Top Land .023-.028". Skirt clearance Top .0025", Bottom .00075". See Fitting New Pistons following.

Replacement Pistons: Finished pistons (pins fitted) .003", .005", .010", .015", .030" oversize.

Fitting New Pistons: Check piston for size with micrometer (pin removed) 90° from pin bosses ⅜" below lower ring groove and also ⅜" from bottom of skirt. Taper should be .0004" max. (larger diameter at the bottom). Then check clearance by inserting .0015 x ½" feeler between piston (pin removed) and cylinder wall on valve side with piston inverted and T-slot on opposite side from feeler. Pull to withdraw feeler should be 7 to 20 lbs.

Installing Pistons: Mark "V-S" on piston head toward valves.

PISTON RINGS: 2 coated compression (install with mark TOP up), 2 oil control rings, all above pin.

Ring	Width	End Gap	Side Clearance
Comp. (#1,2)	.0925-.0935"	①	.001-.003"
Oil (#3,4)	.1860-.1865"	.007-.016"	.001-.0025"

①—(1949) .007-.017". (1950) .008-.018".

Replacement Rings: .010", .020", .030" oversize.

PISTON PIN: Diameter .8554-.8557". Length 3 5/32". Pin locked in one piston boss by lockscrew (opposite end slotted). Piston bosses may be reamed for installation of oversize pins.

Pin Fit in Piston—.0001" tight to .0002" loose (plain boss end), .0003-.0006" tight (lock boss end), or a tight wring fit (with solid end of pin in boss, pin should just be able to be turned with 6" drift in pin lock screw hole—test each boss).

Pin Fit in Rod Bushing—.0003-.0006" clearance, or suck fit (pin holds on own weight but can be pushed through with slight thumb pressure).

Replacement Pins: Std., .001", .003" oversize.

Piston Pin Removal and Installation—***See "Piston Pins" in Oldsmobile Special Data.***

CONNECTING ROD: Length 7 13/16". **Wgt.** 30.72 oz.

Crankpin Journal Diameter—2.353-2.354".

Lower Bearing Diameter—2.3570-2.3575".

Lower Bearing—Removable steel-backed, Durex-babbitt overlay. No shims.

Clearance—.0005-.0025". **Sideplay**—.0055-.0105".

Bearing Adjustment: None (no shims). Replace bearings. Do not file rods or caps.

Installing Rods: Oil spit hole at lower end toward valves and grooves on rod and cap bolt boss (part number side) matched. Special ground cap bolts with self-locking nuts used. Tighten to 45-50 ft. lbs.

CRANKSHAFT: 4 bearing, 7 integral counterweights.

Journal Diameters—#1, 2.478-2.479"; #2, 2.5405-2.5415"; #3, 2.6655-2.6665"; #4, 2.6855-2.6865".

Bearings—Removable, steel-backed, Durex-babbitt overlay bearing shells. Front bearing has oil groove (to front) for thrust plate lubrication.

Clearance—.0005-.002" (rear), .001-.003" (others).

Bearing Adjustment: None (no shims). Replace bearings. Do not file caps. *NOTE*—9/16" cap bolts used on rear bearing, ½" on others (heads are alike).

Bearing Removal—***See "Crankshaft & Main Bearings" in Oldsmobile Special Data.***

End Thrust: At No. 1 bearing. **Endplay**—.004-.008".

See "Crankshaft & Main Bearings" in Oldsmobile Special Data for thrust collar and plate data.

Rear Main Bearing Oil Seal Installation: ***See "Crankshaft & Main Bearings" in Oldsmobile Special Data.***

Flywheel Installation: *See "Flywheel" in Oldsmobile Special Data.*

CAMSHAFT: 4 bearing. Non-adjustable chain drive.

Journal Diameters (1949)—No. 1, 1.9974-1.9981"; No. 2, 1.9349-1.9351"; No. 3, 1.8724-1.8731"; No. 4, 1.8099-1.8106".

Journal Diameters (1950)—No. 1, 1.9974-1.9979"; No. 2, 1.9349-1.9354"; No. 3, 1.8724-1.8729"; No. 4, 1.8099-1.8104".

Reamed Bushing Diameters—#1, 1.9995-2.001"; #2, 1.937-1.9385"; #3, 1.8745-1.876"; #4, 1.812-1.8135".

Bearings—Steel backed copper lead bronze bushings.

ENGINE

CONTINUED FROM PRECEDING PAGE

Clearance—.0014-.0036" (1949), .0016-.0036" (1950).

End Thrust: Forward thrust taken by flange on front engine support plate, rear thrust by flange on shaft bearing against front of engine block.

Timing Chain: Link-Belt. Width 15/16". Pitch .500". Length 47 links or 23½".

Camshaft Setting: Mesh chain with sprocket marks adjacent and in line with a straightedge across the shaft centers (or use Tool HM-408-0).

VALVES	Head Diam.	Stem Diam.	Length
Intake	1.745-1.755"	.3415-.3425"	5.7695-5.8095"
Exhaust	1 27/64"	.3410-.3418"	5 51/64"

	Seat Angle	Lift	Stem Clearance
Intake	30°	.310"	.0022-.0042"
Exhaust	45°	.308"	.0029-.0047"

Valve Guides: Intake and exhaust guides same. Press guides in until top end ⅞" below top of block, Tool J-952 positions guide correctly in block. Ream to .34425-.34525" inside diameter (not tapered).

Length—3 7/32".

Valve Springs: Intake and exhaust springs the same. Damper installed on top of each spring. Free length 2⅝".

	Spring Pressure	Spring Length
Valve Closed	55 ± 3 lbs.	2 1/4"
Valve Open	100 ± 3 lbs.	1 15/16"

Valve Lifters: Mushroom type with self-locking screws. Body Diameter .6235-.6240". Head Diam. 1.125-1.140".

Clearance—.0005-.0008".

Replacement Lifters—.001", .002", .005", .010" O. S.

NOTE—Lifter holes in block have "Bearingized" finish. If holes worn, fit oversize lifter without reaming hole when possible to preserve finish.

VALVE TIMING

Tappet Clearance: .008" INT., .011" EXH. Hot & idling.

NOTE—Self-locking tappet screws used.

Valve Timing: See camshaft setting above.

Intake Valves—Open 5° BTDC. Close 45° ALDC.

Exhaust Valves—Open 45° BLDC. Close 5° ATDC.

Valve Timing Check—With .0125" tappet clearance #1 intake valve should open with piston 5° (.010") BTDC. with flywheel steel ball insert (TDC mark) approx. 2 teeth before indicator (hole on left front face of housing). Reset tappet clearance at .008" hot.

LUBRICATION

Engine Oiling System: Pressure to main, connecting rod, and camshaft bearings, piston pins and chain.

Crankcase Capacity—5 quarts.

Normal Oil Pressure—28-33 lbs. (1949), 40 lbs. (1950) at 30 MPH.

Oil Pressure Regulator—On oil pump. Opens at 30 lbs. (1949), 40 lbs. (1950). Non-adjustable.

Oil Pump: Gear type on right side of crankcase.

Oil Pump Assembly & Installation—*See "Oil Pump" in Oldsmobile Special Data.*

Oil Pressure Gauge: AC No. 1507124. Not electric.

Crankcase Ventilation: Filter element in oil filler cap (inlet breather). Outlet pipe on right side of engine.

CO LING

Cooling System: Pressure type with pressure valve and vacuum valve (relief valve) in filler cap. Water distribution tube installed in block. Re-circulation of water through engine (with thermostat closed) permitted by fixed by-pass from cylinder head through block to pump inlet.

Capacity—18½ quarts.

Pressure Valve—AC No. 850501 Filler Cap. Opens at 4 lbs. (3¼-4¼ lbs.).

Radiator Core Removal: *See Oldsmobile Special Data.*

Water Pump: Packless, sealed ball-bearing shaft. *See Water Pump Section for complete data.*

Thermostat: Harrison. In cylinder head water outlet. **Setting**—Starts to open 152°F. Fully open 173°F.

Temperature Gauge: AC Electric.
Dash Unit—AC No. 1512168.
Engine Unit—AC No. 1512015.
See Miscellaneous Section for complete data.

CLUTCH

Borg & Beck Model 10A7 (Borglite driven member). Single plate, dry disc type with pressure plate oil baffle and release bearing lubrication fitting.

Clutch Cover No.—927 stamped on cover.

See Clutch Section for complete data.

Clutch Release Bearing Lubrication—*See Oldsmobile Special Data.*

Facings—Spiral wound (spirally grooved) molded woven, 2 used. Inside Diam. 7". O. D. 10". ⅛" thick.

Pedal Adjustment: Free travel (1949) ⅞-1¼", (1950) 1-1¼". Turn link at fork in or out of clevis on auxiliary shaft.

Removal: Remove transmission (see data below), clutch underpan and take out 6 mounting screws in clutch cover (when installing, use 2 long shank mounting screws in 2nd hole on each side of locating dowel), lower clutch assembly out.

TRANSMISSION

STANDARD

Own Make. All helical gear, constant-mesh, synchro-mesh (2nd & high), sliding gear (low & reverse).

See Transmission Section for complete data.

Transmission Control: Oldsmobile "Handi-shift". *See Transmission Section for complete data.*

Removal: Disconnect shift and selector rods from levers at transmission, speedometer cable, rear universal and slide slip yoke and propeller shaft to rear. Remove 4 transmission mounting capscrews, pull transmission straight back and remove.

HYDRA-MATIC DRIVE

OPTIONAL EQUIPMENT

Own Make. Consists of Fluid Coupling and automatic self-shifting four-speed transmission.

►*1950-51 "WHIRLAWAY" TYPE HYDRA-MATIC CONVERSION TO STANDARD 4-SPEED HYDRA-MATIC*—*See "Hydra-Matic Drive" in Transmission Section for complete data.*

►*HYDRA-MATIC PRODUCTION CHANGE*—Late production cars have modulated throttle pressure.

See Transmission Section for complete data including Testing & Trouble Shooting.

►*NOTE—Different Hydra-Matic Transmissions used and can be distinguished by Serial No. Plate Color and Prefix as follows:*

Car Model	Prefix (& Plate Color)
1949 Six	08-(Black)
1950 Six (First Cars)	8- (Aluminum)
1950 Six (Later "Whirlaway")①	B- (Orange)

①—Beginning No. 6A108158H.

►*CAUTION*—"Whirlaway" transmissions not interchangeable with earlier transmissions.

Lubrication—Check fluid level in transmission every 2000 miles. Drain and refill after first 15000 miles and every 25,000 miles thereafter. Use only "Oldsmobile Hydra-Matic Drive Fluid."

Draining & Refilling—*See "Hydra-Matic Drive" in Transmission Section.*

Capacity—Approx. 11 qts. (1949), Approx. 10½ qts. (1950).

Checking Fluid Level—Raise front floor mat at right side, remove sheet metal cover in floor, clean opening of lint, sand, etc. Set hand brake, start engine and let engine idle, move control lever to "DR" (1949-50), or "LO" (1950 Whirlaway) position. Remove dipstick, wipe dry, and replace. Remove dipstick quickly and check fluid level. Add fluid as necessary to bring level up to "FULL" mark on stick with engine idling.

Linkage Adjustment—*See "Hydra-Matic Drive" in Transmission Section.*

►*OTHER HYDRA-MATIC SERVICE DATA: See "Hydra-Matic Drive" in Transmission Section.*

UNIVERSALS

Mechanics 2C or 2CR. Roller bearing types.

NOTE—Slip joint formed at rear of transmission ahead of front U-joint (one-piece driveshaft used).

►*CAUTION*—Rear universal companion nut controls rear axle pinion bearing "pre-load" (must be adjusted whenever nut is loosened). *See Oldsmobile Rear Axle in Rear Axle Section for complete data.*

REAR AXLE

Own Make. Hypoid gear, semi-floating type with pinion mounted on two taper roller bearings.

►*CAUTION*—Do not use "76" series carrier and axle housing on "88" and "98" series cars. New support used on "88" and "98" series rear axles.

►*NOTE*—Rear universal companion nut controls pinion bearing "pre-load."

See Rear Axle Section for complete data.

Standard Ratios

41:10 (4.1)—Std. exc. Convertible & Sta. Wagon.

43:10 (4.3)—Std. on Convertible & Station Wagon. Optional Hilly Ratio Domestic Cars, & Export Cars.

39:10 (3.9)—Optional on Export Cars.

Hydra-Matic Ratios

40:11 (3.64)—Std. exc. Convertible & Station Wagon. Optional on Export Cars.

39:10 (3.9)—Std. on Convertible and Station Wagon. Optional Hilly Ratio Domestic Cars and Export Cars.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

41:12 (3.42)—Optional on Export Cars.

Rear Axle Ratio Marking (1949)—Ring and pinion ratio (39:10, etc.) and date stamped on underside of carrier right horizontal rib.

Rear Axle Ratio Marking (1950)—Coded ring and gear marking stamped on upper side of carrier housing as follows: 4=39:10, 6=40:11, 8=41:12.

NOTE—Early 1950 housings were stamped with three figures, last two of which indicated date of manufacture.

Backlash—.004-.008". Screw adjustment.

Removal: Disconnect driveshaft at rear universal (wire trunnions to avoid losing rollers), mark joint (reassemble to mark when reassembling). Remove axle shafts (see data below) and carrier capscrews.

►*CAUTION*—Rear universal joint companion flange nut controls pinion bearing "pre-load" (must be adjusted whenever nut is loosened).

Axle Shaft Removal: Remove wheel. Take off brake drum by removing two Tinnerman nuts from wheel studs (if nuts removed by turning off threads they can be re-used, if nuts damaged new nuts must be used). Remove backing plate mounting nuts, and static collector. Loosen bearing retainer (do not move backing plate or brake line may be damaged). Pull shaft and bearing with Puller J-942 (do not allow shaft to drag on oil seal); replace one backing plate nut.

Wheel Bearing Adjustment—None.

Rear Suspension: Coil spring type with support arms.
See Rear Axle Section for complete data.

SHOCK ABSORBERS

Delco. Double acting (parallel cyl. rear), hydraulic.
FRONT—Model 1947-J (right), 1947-K (left).
REAR (1949) Model 2105-N (right), 2105-P (left).
REAR (1950) Model 2105-T (right), 2105-P (left).

FRONT SUSPENSION

Front Suspension: Independent, linked parallelogram type with coil springs.
See Front Suspension Section for complete data.

Kingpin Inclination—4°29'47".

Caster—0° to Neg. ¾°. Adjustable.

Camber—Neg. ¾° to Pos. ¾° (Service Limits), Neg. ¼° to Pos. ¾° (New Car Specification).

Toe-In—1/16-1/8". Adjust each tie rod equally.

Steering Geometry Inner wheel 23° ± ½°. Outer 20°.

STEERING GEAR

Steering Gear—Saginaw Model 420. Worm-and-Roller type.
See Steering Gear Section for complete data.

BRAKES

Service Brakes: Bendix Hydraulic, duo-servo, single anchor type **without eccentric adjustment.** Hand lever applies rear wheel service brakes.
See Brake Section for complete data.

Wheel Cylinder Bore—Front wheels 1⅛", Rear 1".

Drums—Cast-iron. Diameter 11". Max. rebore .060". (or .030" cut).

Lining (1949)—Molded. **Width** 2" (front wheels), 1¾" (rear wheels). **Thickness** 3/16". **Length per shoe** 9 11/16" (front primary); 11 31/32" (front secondary); 12" (all shoes, rear wheels).

Lining (1950)—Molded. **Width** 2" (front wheels). 1¾" (rear wheels). **Thickness** 3/16". **Length per shoe** (front and rear wheels) 9 11/16" (primary); 11 31/32" (secondary).

Clearance—.015" at both ends of secondary (rear) shoe with primary shoe forced out against drum.

Braking Power—56% front wheels, 44% rear.

Hand Brake: See Service Brakes above.

MISC. MECHANICAL

Convertible Top Control: Hydro-lectric type (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders).
See Miscellaneous Section for complete data.

Windshield Wiper: Vacuum Link-&-Crank Arm type.
See Miscellaneous Section for complete data.

MODEL IDENTIFICATI N

SERIAL NUMBER: On left front door hinge post.

►*SERIAL NUMBER NOTE: Complete serial number (example 499M 1001) includes following identification data in sequence.*

Year①	Series②	Assy. Plant③	④Serial No.
49	9	M	1001

①—Last two digits of year.
②—7 (88 Series 1951). 8 (88 Series 1949-50; Super 88 Series 1951; Deluxe 88 & Super 99 1952). 9 (98 Series).
③—See Assembly Plant Designation below.
④—1001 Starting Serial Number at all plants.

Assembly Plant Designation

M—Lansing	**L**—Linden
A—Atlanta	**C**—South Gate
B—Framingham	**W**—Wilmington
K—Kansas City	**T**—Arlington

ENGINE NUMBER (1949): Stamped on front face of left cylinder block just below cylinder head and is prefixed by the digit "8", indicating number of cylinders, and a letter indicating compression ratio. ('A' for 7.25-1 & 'C' for 7.5-1).

Starting Engine Number (1949): 1001.

ENGINE NUMBER (1950-51): Stamped on machined pad on left side of block between #5 & #7 exhaust port, and is prefixed by the digit "8", indicating number of cylinders, and a letter indicating compression ratio. ('A' for 7.25-1 & 'C' for 7.5-1).

Starting Engine Number: 194001 (1950); 1001 (1951). *NOTE*—Suffix letters indicate as follows: **H**—Hydra-Matic. **B**—Synchro-mesh.

ENGINE NUMBER (1952): Stamped on machined pad located on top of left hand cylinder block between center and rear exhaust manifold ports.

Starting Engine Number (1952): R-1001.

TUNE-UP

COMPRESSION PRESSURE: 136 lbs. at cranking spd.

VACUUM READING: Steady 17" min. at idling speed.

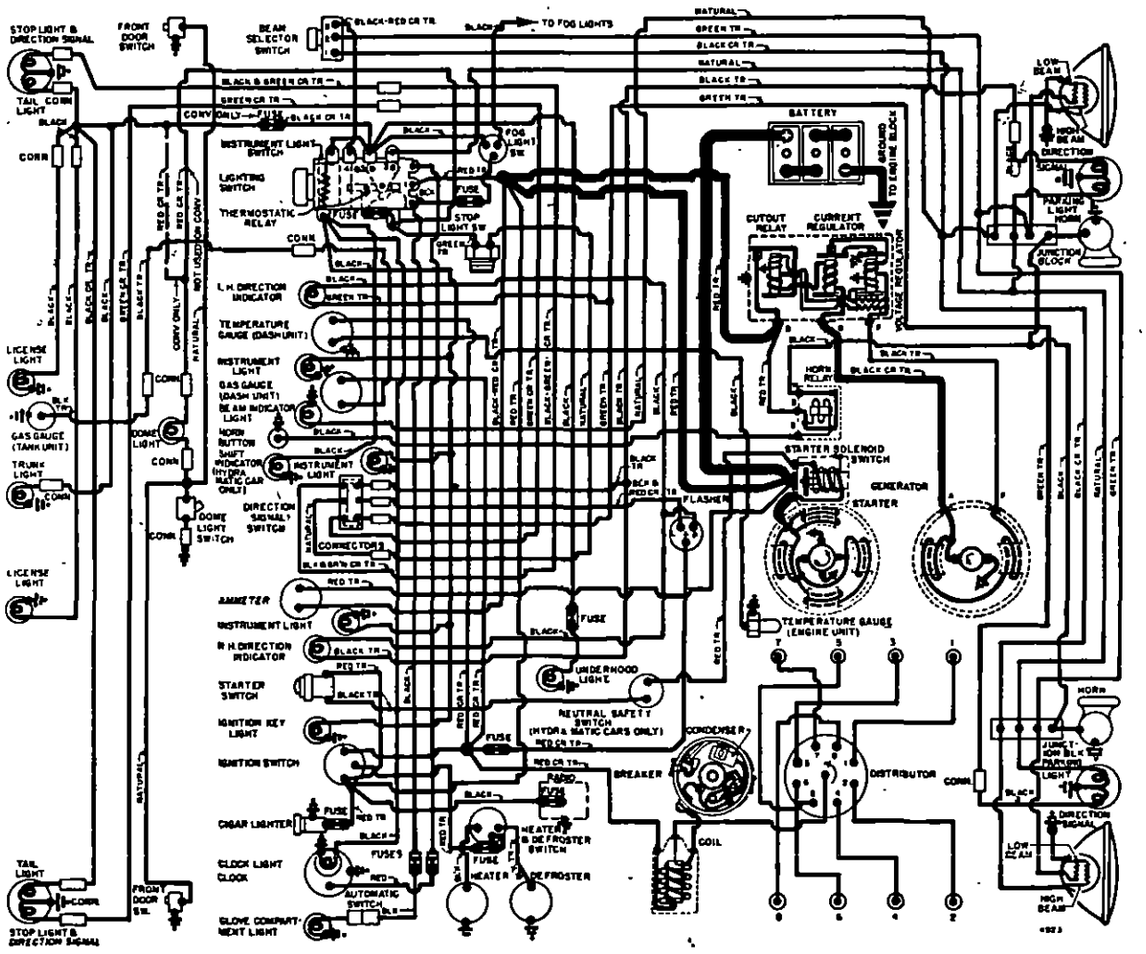
FIRING ORDER: 1-8-7-3-6-5-4-2 (Cyl. Nos. 1-3-5-7 Left Bank, 2-4-6-8 Right Bank, front-to-rear). See wiring diagram.

SPARK PLUG GAPS: .030".
Plugs—AC No. 46-5

DISTRIBUTOR: **Delco-Remy 1110814 (Early 1949); 1110817 (Late 1949 & 1950); 1110824 (1951 & 1952).**
Breaker Gap—.012-.0175". Set new points to .016-.021" to allow for initial wear on rubbing block.
Cam Angle—21-30° (1110814 & 1110817); 26-33° (1110824). All with .016" gap.
See "Delco-Remy Cam Angle" in Electrical Equip. Section.
Breaker Arm Spring Tension—19-23 ozs.
Automatic & Vacuum Advance—*See Ignition.*
Condenser Capacity—.18-.23 microfarad.

IGNITION TIMING (1949-51): 2½° BTDC. *CAUTION*—Ignition timing is very sensitive and must be set exactly between steel balls, brass pins, or edges of slot on vibration dampener.

IGNITION TIMING (1952): 5° BTDC with engine idling at 850 RPM and vacuum line to distributor disconnected at carburetor, and carburetor opening taped closed.
Timing Mark (1949)—Pointer on left front side of engine and two steel balls (early cars had two brass pins) on outer surface of vibration dampener. *NOTE—First ball or pin indicates TDC. Adjust timing so pointer is midway between the two points.*
Timing Mark (1950-52)—Slot in rim of vibration dampener (or pulley) and pointer on front cover. Leading edge of slot is at 5° BTDC. Trailing edge is at TDC.



►*1952 ENGINE TIMING CAUTION:* The "Slow Idle" setting method recommended for earlier models should not be used to time 1952 models.

►*1952 MODEL DETONATION CORRECTION: If engine detonates (due to low octane fuel or carbon build-up) set timing to 2½° BTDC. For high-altitude operation, timing can be advanced to 7½° BTDC, if detonation does not occur.*

CARBURETION: (1949 Series 88 & 98)—**Carter WGD-714S, SA.** *NOTE—Rochester Carburetor also used. See below.*
Idle Setting—Both screws ½-1 turn open. Turning screws out gives richer mixture.
Idle Speed—(Standard) 425 RPM.
Idle Speed (Hydra-Matic)—375 RPM (3-Speed Hydra-Matic); 400 RPM (4-Speed Hydra-Matic) with selected lever in "Dr." position.
Float Level—¼" from top of float to lower face of bowl cover with needle valve seated.
Accelerating Pump—No seasonal adjustment.
Choke Setting—Centered.

CARBURETION: (1949-50 Series 88 & 98)—**Rochester Model AA.** *NOTE—Carter Carburetor also used. See above.*
Idle Setting—Approximately 1 turn open. Turning screws out gives richer mixture.
Idle Speed—(Synchro-mesh) 425 RPM. or 6 MPH.
Idle Speed—(Hydra-Matic) 350 RPM. with selector lever in "Dr" position.
Float Level—23/32" from top of seam on free end to gasket seat on cover with cover assembly inverted and needle seated.

CONTINUED ON NEXT PAGE

1949 MODELS

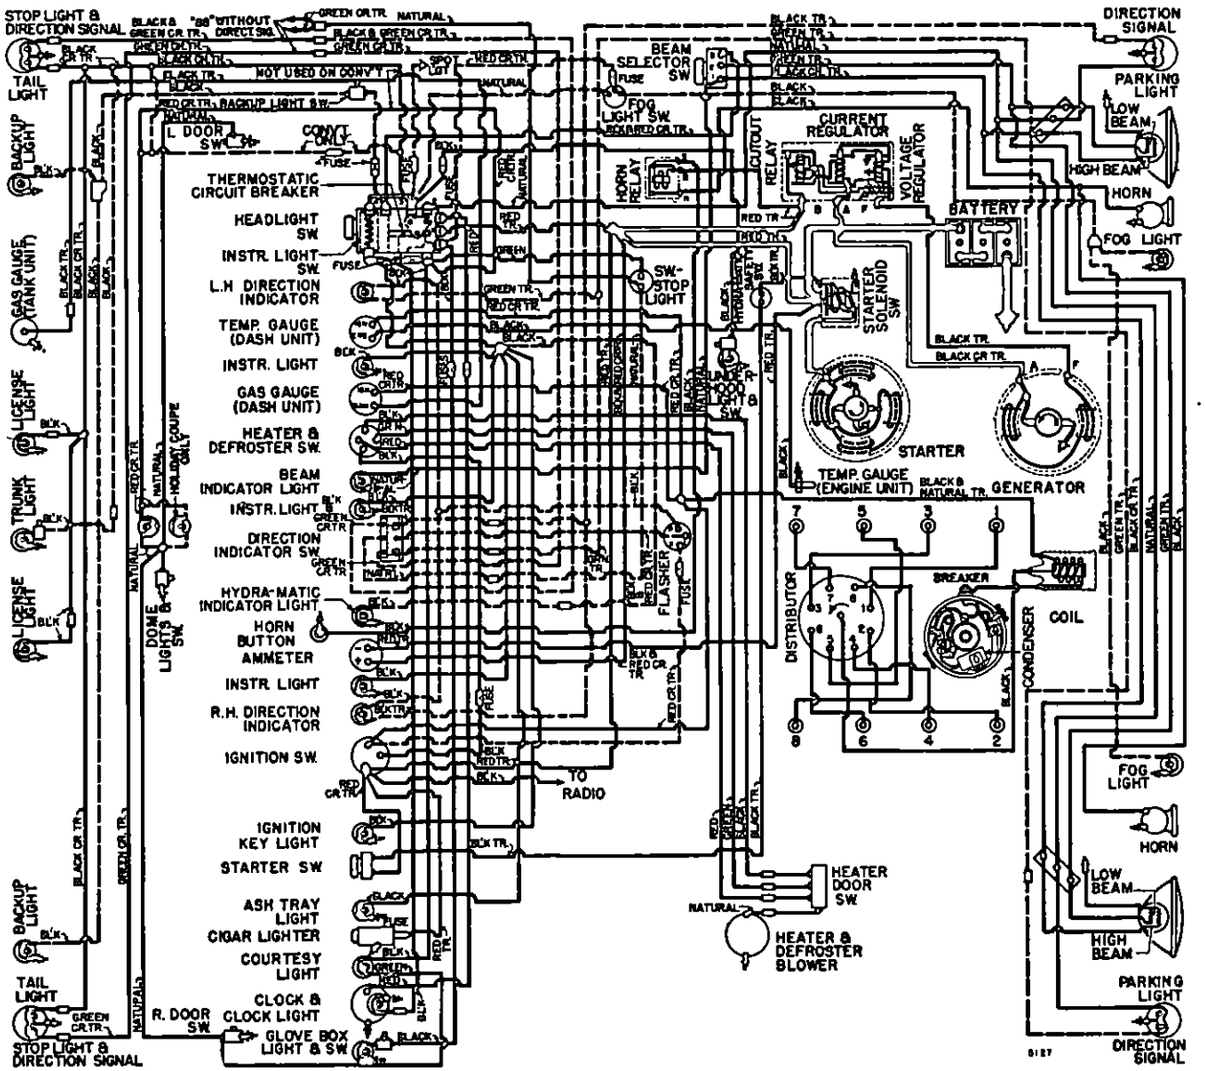
CONTINUED FROM PRECEDING PAGE

Float Tension—Bend float tang against spring to decrease amount of drop; bend away from spring to increase drop. Tension is correct when the bottom edge of float is suspended freely from cover and is 1/8" above the power stem.

Accelerating Pump Adjustment—3 holes in pump shaft lever. Outer hole (minimum stroke), Center **Recommended Setting**—(1949) Outer hole (minimum stroke); (1950) Middle hole (medium stroke).

Choke Setting—Centered on index.

CARBURETION: (1951 Series 88 & 98; 1952 Deluxe 88) —Rochester Model BB. *NOTE—Carter Carburetor also used. See below.*



Idle Setting—Approximately 1½ turns open. Turning screw out gives richer mixture.

Idle Speed—(Synchro-mesh) 425 RPM. or 6 MPH.

Idle Speed—(Hydra-Matic) 350 RPM (1951); 400 RPM (1952), with selector lever in "Dr" position.

Float Level—Set float position with Float Gauge BT-51.

Float Tension—Bend float tang against balance spring to decrease drop; bend away from spring to increase drop. Tension is correct when the distance from bottom of air horn gasket to bottom of float is 1⅝", which is equivalent to the distance from scribed line on Gauge BT-51 to end of gauge.

1950-51 MODELS

Accelerating Pump—No seasonal adjustment.

Choke Setting—Centered.

CARBURETION: (1951 Series 88 & 98; 1952 Deluxe 88) —Carter WGD-851S. *NOTE—Rochester Carburetor also used. See above.*

Idle Setting—Both screws ¾-1¼ turns open. Turning screws out gives richer mixture.

Idle Speed—(Standard) 425 RPM. or 6 MPH.

Idle Speed—(Hydra-Matic) 350 RPM (1951); 400 RPM (1952), with selector lever in "Dr" position.

Float Level—¼" between top of float and bowl cover with bowl inverted.

Accelerating Pump—No seasonal adjustment.

Choke Setting—Centered on index.

CARBURETION: (1952 Series 88 Super, & 98)—Carter WCFB-932S. *NOTE—Rochester Carburetor also used. See below.*

▷*CARBURETOR PRODUCTION CHANGE NOTE: See "Carter WCFB" in Carburetor Section.*

Idle Speed—(Synchro-mesh) 425 RPM.

Idle Speed—(Hydra-Matic) 400 RPM with selector lever in "Dr" position.

▷*OTHER DATA: See "Carter WCFB" in Carburetor Section.*

CARBURETION: (1952 Series 88 Super, & 98)—Rochester Model 4GC. *NOTE—Carter Carburetor also used. See above.*

Idle Speed—(Synchro-mesh) 425 RPM.

Idle Speed—(Hydra-Matic) 400 RPM with selector lever in "Dr" position.

▷*OTHER DATA: See "Rochester 4GC" in Carburetor Section.*

MANIFOLD HEAT CONTROL: Thermostatic coil type. Valve located on left side between exhaust manifold and exhaust pipe. Stop spring should strike stop before counter-weight touches pin to prevent valve rattles when closed.

VALVE TAPPET CLEARANCE: None in service (automatic hydraulic type tappet take-up).

Valve Timing Check—*See Valve Timing.*

STARTING: *See Battery, Starter, Generator, Regulator.*

IGNITION

IGNITION SWITCH: Delco-Remy 1116453 (1949-51); 1116476 (1952). *NOTE—1952 Switch is combination ignition & starter switch, others are ignition switch only.*

COIL: Delco-Remy 1115380. Mounted on manifold just ahead of distributor.

Ignition Current—2.0 amperes idling, 4.5 stopped.

CONDENSER: Delco-Remy No. 1869704.

Capacity—.18-.23 microfarad.

DISTRIBUTOR: Delco-Remy 1110814 (Early 1949); 1110817 (Late 1949 & 1950); 1110824 (1951-52). "Center-Bearing" type (Except No. 1110814), with automatic and vacuum advance.

See "Delco-Remy Center-Bearing Breaker Plate Distributor" in Electrical Equipment Section.

Breaker Gap—.012-.017". Set new points to .016-.021" to allow for initial wear on rubbing block.

Cam Angle—21-30° (1110814, 1110817); 26-33° (1110824).

See "Delco-Remy Cam Angle" in Electrical Equipment Section.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Breaker Arm Spring Tension—19-23 ozs.

Rotation—Counter-clockwise viewed from above.

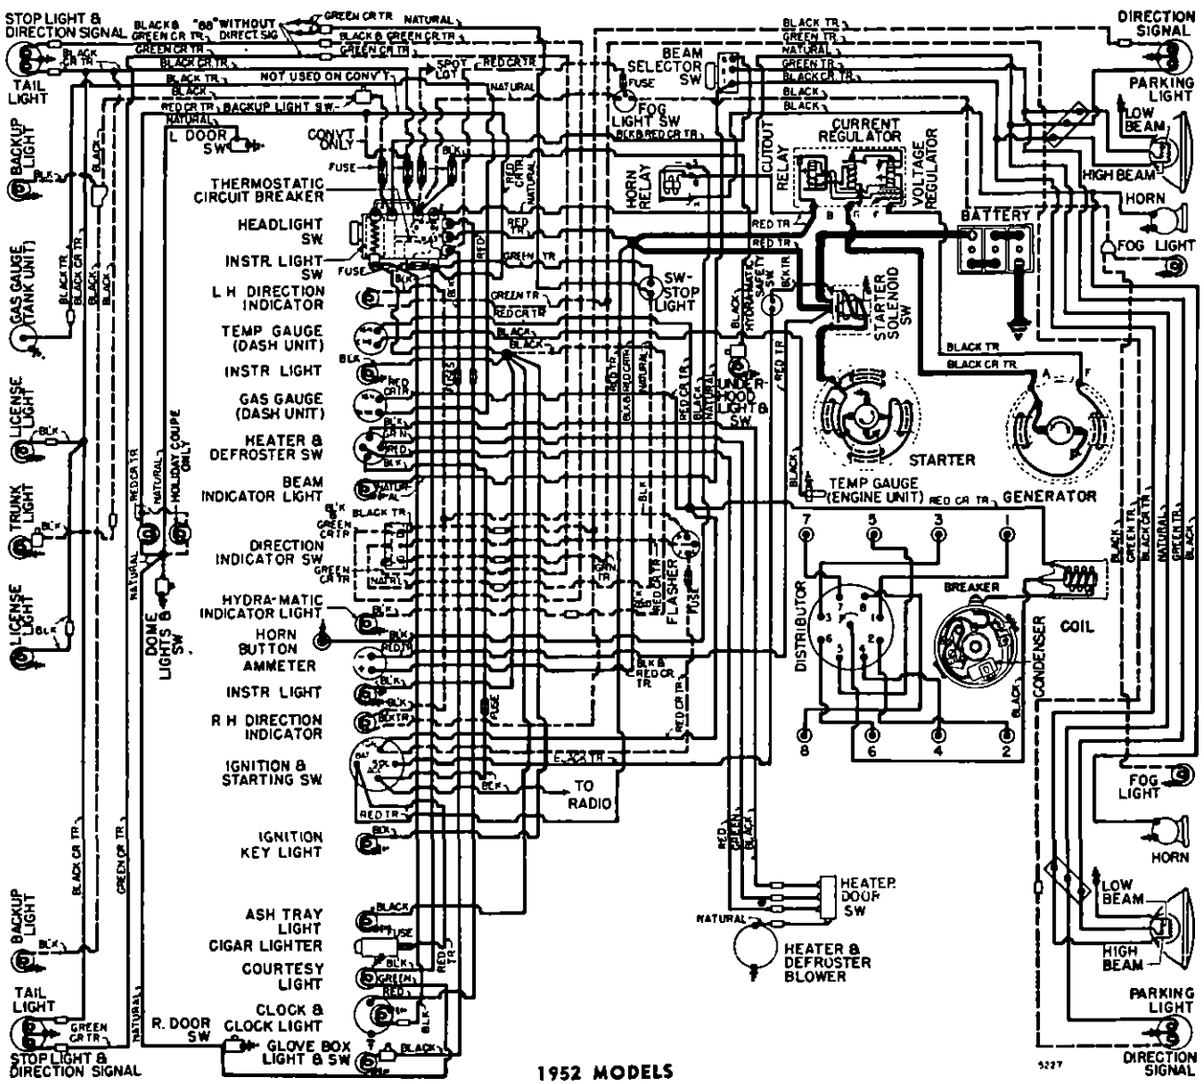
Distr. Degrees	Automatic Advance RPM	Eng. Degrees	RPM
0-2	400	0-4	800
9-11	1350	18-22	2700
14-16	1850	28-32	3700

Vacuum Spark Control: Delco-Remy 1116048 (1949-50); 1116059 (1951-52). Integral type linked directly to breaker plate.

Plunger Travel—7/32-15/64".

Vacuum Advance - 1116048

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	6.5-8.5"
10°	20°	19-21"



Vacuum Advance - 1116059.

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	4.5-6.5"
10°	20°	15-16

Octane Selector—Hold-down plate permits 15° advance or retard. See Ignition Timing.

Removal: Remove distributor cap, disconnect breaker lead and vacuum line, take out 2 distributor clamp-to-block capscrews, lift distributor straight up.

►**Installation**—Place #1 piston in firing position and Timing pointer centered midway between timing marks on dampener (see Pulley Marks above). Install distributor with flat in distributor drive gear aligned with flat on oil pump shaft, push distributor down just enough to engage oil pump shaft—drive gear must not engage camshaft gear. Align distributor clamp with holes in engine (1949 engines). Turn rotor and align with breaker terminal (low tension connection). Push distributor down to engage camshaft gear (rotor will turn to #1 terminal). Install hold-down plate. Connect low tension terminal lead and vacuum line, install cap

1952 MODELS

IGNITION TIMING

Std. Setting—2½° BTDC (1949-51); 5° BTDC (1952).

Dampener Mark—*See Tune-Up.*

Timing (with Synchroscope)—Use Tool KMO-161. Loosen hold-down plate and center scale "0" mark on center line, tighten hold-down plate. Clip synchroscope lead to #1 spark plug, direct light on dampener at timing pointer on left side of engine. With engine idling, loosen clamp bolt, rotate distributor until point on dampener midway between edges of slot line up with pointer, tighten bolts.

Octane Selector Setting: Normal setting, "0" mark on scale at center line. Timing should not be retarded more than to eliminate spark ping if required.

CARBURETOR

CARTER 2-BARREL

Carter 714S, SA, (1949). 1¼" downdraft horizontal air intake type.

Carter 851S, (1951). 1¼" downdraft, vertical air intake type. Used partial production.

Casting No. 604 (714S, SA), 836 (851S). On face of flange.

Carter Installation Unit No. 195-43U—Required when installing 714S, SA, 849S carburetors on 1949 Oldsmobile 8 engine not originally equipped with Carter.

Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up data.*

Metering Rods & Jets—*See "Carter Downdraft Carburetor Jet Specifications" in Carburetor Section.*

Hydra-Matic Throttle Linkage Adjustment: *See "Oldsmobile Hydra-Matic Drive" in Transmission Section.*

Fast Idle: Carter Dual (WGD) Carburetor type. *See Carburetion Equipment Section for complete data.*

Setting (714S, SA)—*CAUTION*—Two separate adjustments:

1) **Fast Idle Linkage.** Back off fast idle screw until fast idle cam can be revolved freely. Loosen choke lever clampscrew. Insert .018" flat feeler (Gauge T109-72) between lip of fast idle cam and boss on carburetor casting, hold choke valve tightly closed, remove all slack from linkage by pressing choke lever toward closed position, tighten clampscrew in this position.

2) **Fast Idle Screw.** Back off throttle lever set screw closing throttle valves. Turn fast idle cam until ear on cam opposite fast idle screw (choke valve wide open). Adjust fast idle screw until it just touches ear on cam.

Setting (851S). Remove thermostatic coil housing, gasket and baffle plate. Crack throttle valve and

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

hold choke valve tightly closed, then close throttle. This will allow fast idle cam to revolve to fast idle position. With choke valve held tightly closed and slight tension on throttle lever, loosen lock nut on choke connector rod assembly and turn sleeve until there is .020" clearance between throttle valve and bore of carburetor, side opposite port. Hold sleeve in position, lock nut.

▷*THROTTLE STICKING CORRECTION (851S)—Fast idle link change. See Carburetor Section for complete data.*

Automatic Choke: Carter Climatic Control (Dual Carburetor).
See Carburetion Equipment Section for complete data.
Setting—Centered (housing centered on scale).

CARTER 4-BARREL

Carter WCFB-932S. Four-barrel downdraft type with automatic choke.

▷*OTHER DATA: See "Carter WCFB" in Carburetor Section.*

Hydra-Matic Throttle Linkage Adjustment: *See "Oldsmobile Hydra-Matic Drive" in Transmission Section.*

ROCHESTER 2-BARREL

1949—Rochester Model AA—Oldsmobile No. 7001570.
1950—Rochester Model AA—Oldsmobile No. 7002570 Dual downdraft concentric bowl, horizontal air intake type with diaphragm accelerating pump.
1951—Rochester Model BB—Oldsmobile No. 7002900. Dual downdraft, vertical air intake type with lever operated accelerating pump and automatic choke. Used partial production 1951.

Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up Data.*

Hydra-Matic Throttle Linkage Adjustment: *See "Oldsmobile Hydra-Matic Drive" in Transmission Section .*

Fast Idle: Rochester GM Dual Carburetor type.
See Carburetion Equipment Section for complete data.
Setting—500 RPM. engine idling speed with engine and transmission warm. Adjusted by opening throttle slightly, rotating fast idle cam by hand until fast idle screw rests on first (low) step of fast idle cam and turning fast idle screw for 500 RPM. idle speed with transmission selector lever in "N" position.

Automatic Choke: Rochester GM Automatic Choke.
See Carburetion Equipment Section for complete data.
Setting—Centered (index marks aligned).

ROCHESTER 4-BARREL

Rochester 4GC, No. 7004300 (Hydra-Matic); 7004800 (Synchro-mesh). Four barrel downdraft type with automatic choke.

▷*OTHER DATA: See "Rochester 4GC" in Carburetor Section.*

Hydra-Matic Throttle Linkage Adjustment: *See "Oldsmobile Hydra-Matic Drive" in Transmission Section.*

CARB. EQUIPMENT

Fuel Pump: AC No. 1539294 fuel-&-vacuum pump.
Replacement Pump—AC No. 9294.
Pressure—4-5 lbs.

▷*CAUTION—*When installing fuel pump, tip pump up to place arm under fuel pump eccentric.
See Carburetion Equipment Section for complete data.

Gasoline Gauge: AC Electric type.
Dash Unit—AC No. 1517011 (1949-50); 1517358 (1951-52).
Tank Unit—AC No. 1517299 (1949-50 exc. Sta. Wgn.); 1516342 (1949-50 Sta. Wgn.); 1517420 (1951); 1517716 (1952).
See "Fuel Gauges" in Carburetion Section.

BATTERY

Delco 17K4W. 6 volt, 17 plate, 115 ampere hour capacity (20 hr. rate).
Grounded Terminal—Negative. To cylinder block.
Location—In engine compartment on left side.

STARTER

Delco-Remy 1107956 (1949-50); 1107982 (1951); 1107997 (1952).
Armature—Delco-Remy 1867897 (1949-51); 1919267 (1952).
Drive—Overrunning clutch (solenoid pinion shift).

▷***CAUTION—Overrunning clutch pinion clearance must be adjusted whenever solenoid removed from starter.***

Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—24-28 ozs. each.

Performance Data—1107956 & 1107982

Torque	R.P.M.	Volts	Amperes
0 ft. lbs	5500	5.67	80
14 "	Lock	3.0	600

Performance Data—1107997

Torque	R.P.M.	Volts	Amperes
0 ft. lbs	5500	5.67	80
15 "	Lock	3.0	600

Starting Switch: Delco-Remy Solenoid Switch No. 1118136 (1949-51); No. 1118156 (1952), (no relay used) mounted on starter and controlled by Push-button Switch No. 1996038 (1949); No. 1996046 (1950-51). Combination Starter & Ignition Switch No. 1116476 (1952). See "Hydra-Matic Neutral Safety Switch" below.

Hydra-Matic Neutral Safety Switch: Delco-Remy No. 1997849 (1949-50); 1997887 (1951); 1998011 (1952). Connected in starter circuit. Starter operative only when selector lever in "N" (neutral) position.
Adjustment—*See "Hydra-Matic Drive" in Transmission Section.*

GENERATOR

Delco-Remy. Two brush type.

Model	Generator	Armature
1949-50 & Early 1951	1102704	1880550
1951 (Late)	1102771	1921621
1952	1102780	1921621

Maximum Charging Rate—See Regulator.

Performance Data—Cold

Generator No.	Amperes	Volts	R.P.M.
1102704	40	8.0	2150
1102711 & 780	45	8.0	2350

▷***GENERATOR CAUTION: Use correct voltage regulator as indicated. See REGULATOR (below).***
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—28 ozs.
Field Current—1.87-2.0 amperes at 6.0 volts.

Generator Belt Adjustment: Loosen generator attaching bolts and place tool J-4170 against generator between bracket and generator. Attach torque wrench to tool and pull generator against belt to a tension of: (1949-50). 12-13 ft. lbs., (1951) 4 ft. lbs. Tighten generator attaching bolts.

▷*1951 NOTE—*Cut ¾" from end of Tool J-4170 so tool will clear valve cover.

Fan Belt Adjustment: *See COOLING.*

REGULATOR

Delco-Remy No. 1118300 (for Gen. No. 1102704); 1118725 (for Gen. Nos. 1102771 & 1102780).

▷*IDENTIFICATION NOTE—*Red daub of paint around lower mounting screw hole on Regulator No. 1118300; None on Regulator No. 1118725.

▷***REGULATOR CAUTION—Use only regulator specified for generator. In an emergency, Regulator No. 1118300 can be used with Gen. 1102771 or 1102780. DO NOT USE REGULATOR 1118725 WITH GEN. 1102704.***
See Electrical Equipment Section for complete data.

▷*CAUTION—*Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

Cutout Relay
Cuts In—5.9-6.7 volts (hot).
Contact Gap—.020" (same for both sets).
Air Gap—.020" (with contacts just closed).

Voltage Regulator
Setting—6.9-7.4 volts (hot). Regulator is over-compensated for temperature. Check with cover in place and regulator hot.
Air Gap—.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator
Setting—(1118300) 37-42 amperes (hot).
Setting—(1118725) 42-47 amperes (hot).
Air Gap—.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting—*See Electrical Equip. Section.*

LIGHTING

Headlamps: Sealed Beam. *See Electrical Equip. Section.*

Directional Signal: *See Electrical Equipment Section.*

Directional Signal Indicators—Left & Right Turn Indicator located at either end of instrument cluster. Lights when directional signal on same side of car operating (Stop Lights flash at rear).

Switches
Lighting—Delco-Remy No. 1995030.
Instrument—Part of Lighting Switch (Rheostat operated by turning light switch knob).
Beam Selector—Delco-Remy No. 1997008.

Direction Signal—Delco-Remy 1995542 (1949); 1995554 (1950); 1995559 (1951); 1995563 (1952).
Stop Light—Delco-Remy 1997725 (1949-50), pressure type in brake line. Delco-Remy 1997901 (1951); 1997915 (1952), mechanical type mounted on floor board.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Back-up Light—(1951-52 Synchro-mesh) Delco-Remy 1997893.

Back-up Light—(1951 Hydra-Matic) Delco-Remy 1997875. (1952 Hydra-Matic) 1998011. Combined with Neutral Safety Switch.

MISC. ELECTRICAL

THERMOSTATIC CIRCUIT BREAKER: Delco-Remy. On back of light switch (part of switch assembly). Contacts remain closed with 30 amperes but open in 3 minutes with 42 amperes at 70°F. Not adjustable.

FUSES: Located as indicated below.

1949-52 Dome & Tail Light (Conv. Only)—20 amps. In line near light switch.

1949-52 Stop & Dome Light (Exc. 1952 Series 98 & Conv.)—14 amps. On light switch.

1952 Dome Light & Rear Cigar Lighter (98 4-Door Only)—30 amps. Near light switch in fuse holder.

1949-52 Electric Clock—2 amps. In lead from clock to light switch.

1949-51 Glove Box—5 amps. In lead near glove box.

1952 Glove Box—4 amps. In lead near glove box.

1949-52 Heater—20 amps. (1949); **30 amps.** (1950-52). In lead to heater.

1949-52 Underhood Light—5 amps. (1949-51); **4 amps.** (1952). In lead near main light switch.

1949-52 Back-up Light—14 amps. (Exc. Bumper Mounting); **9 amps.** (Bumper Mounting). In line near light switch.

1952 Stop Light (1952 98 4-Dr. & Conv.)—**14 amps.** In Headlight switch.

HORNS: Delco-Remy models as follows:

Delco-Remy No.—	Low Note	High Note
1949	1999617	1999618
1949-51 (Welded Type)	1999647	1999648
1951-52①	1999665	1999666

①—Delco-Remy 1999671 (Low Note, 1999672 (High Note) also used on 1952 Super 88 & 98.

ENGINE

ENGINE SPECIFICATIONS: Rocket Engine. New 90° V8 with Overhead Valves. Both cylinder blocks and crankcase cast Enbloc.

Model	Bore	Stroke	Displacement
All	3¾"	3 7/16"	303 cu. ins.

Model	Compr. Ratio	Rated HP	①Dev. HP
1949-50	7.25-1	45	135
1951	7.5-1	45	135
1952 (Deluxe 88)	7.5-1	45	145
1952 (Super 88 & 98)	7.5-1	45	165

①—All at 3600 RPM

Compression & Vacuum Reading—*See Tune-Up.*

CYLINDER HEAD & TIGHTENING TORQUES: *See Oldsmobile Special Data.*

OIL PAN REMOVAL: *See Oldsmobile Special Data.*

FRONT ENGINE MOUNT INSTALLATION: *See "Engine Mountings" in Oldsmobile Special Data.*

PISTONS: Aluminum alloy, three-ring, auto-thermic steel-strut, slipper skirt, cam ground, tin plated.

Length—4". Weight—19.88 ozs. (stripped).

Removal—Pistons and rods removed from above.

►*CAUTION*—When removing more than one piston assembly, stamp cylinder number on piston, connecting rod, and cap, before loosening assembly.

Clearance—Top land .032-.036". Skirt clearance .0005-.001" measured ⅛" from bottom of skirt with piston pin removed.

Fitting New Pistons: Insert .0015" x ½" x 12" feeler between piston (pin removed) and cylinder wall at right angles to pin hole. Pull to withdraw feeler should be 5-12 lbs. *NOTE—This specification supersedes previous setting of 10-18 lbs.*

►*CAUTION*—Allow rebored cylinders to cool to normal room temperature before fitting pistons.

Installing Pistons: Mark "F" cast on each side of pin hole on front side of piston. Install pistons 1, 3, 5, 7 in left bank, 2, 4, 6, 8 in right bank with letter "F" toward front on all pistons.

PISTON RINGS: Two coated (Top ring chrome plated on 1951 engines) compression rings, one slotted oil ring, all above pin. Oil ring groove drilled.

Ring	Width	Gap	Side Clearance
Comp. (#1, #2)	.077-.078"	①	.001-.003"
Oil (#3)	.1860-.1865"	①	.0018-.0033"

①—Perfect Circle .010-.020". Sealed Power .008-.016"

Installing Rings—Compression rings installed with step on inner edge UP. Oil rings marked TOP installed with mark UP.

PISTON PIN: Diameter—.9803-.9807". **Length**—3" (1949); 3 1/64" (1950-52). Floating type with lock ring at each end. *NOTE*—1949 rods are rifle drilled for pin lubrication. Rods in later engines are NOT drilled.

►*CAUTION*—Discard old lock rings and install new service type lock rings when installing pins.

Pin Fit in Piston—.0000-.0002" loose. Pin should NOT fall through piston of own weight. Pin can be tapped in place using brass drift. Pin hole out-of-round .0005" max. Hone pin hole and install oversize pin.

Pin Fit in Rod Bushing—.0003-.0005" loose.

►*1949 CONNECTING ROD BUSHING REPLACEMENT CAUTION:* Align oil hole in bushing and rod for pin lubrication. Finish to size with Piston Pin Bushing Hone KMO-754.

Replacement Pins: Std. size, and .001", .003", oversize.

CONNECTING ROD: Length 6.625", Weight 29.54 ozs. Rifle drilled in 1949 engines for piston pin lubrication. Not drilled in later engines.

►*CAUTION*—Use Guide Tool No. BT-22 over rod bolts to prevent damaging crankpin journals when removing and installing piston and rod assemblies.

Crankpin Journal Diameter—2.2488-2.2498.

Lower Bearing—Removable, steel-backed, Durex-babbitt overlay. No shims.

Clearance—.0009-.0029". **Sideplay**—.002-.011".

Bearing Adjustment: None (no shims). Replace bearings. Do not file rods or caps.

NOTE—Tang on bearing insert must seat in notches in cap and rod.

►**Installing Rods:** *CAUTION*—Rods have plain side and boss side (two machined bosses at lower end). Install **rods #1, 3, 5, 7, with plain side to front, and #2, 4, 6, 8, with boss side to front** (NOTE—Pistons marked "F" on front side). Caps offset and cannot be installed incorrectly. Groove on rod and cap and pads for numbering caps and rods are on same side.

►*CAUTION*—Misaligned rods must be replaced, straightening rods in field not recommended.

NOTE—Oil spit hole for lubrication of opposite cylinder wall provided in rod above cap joint.

CRANKSHAFT: 5 bearing, 6 integral counterweights.

Journal Diamters #1, 2, 3, 4, 2.498-2.499"; #5, 2.623-2.624".

Bearings—Removable, steel-backed, Durex-babbitt overlay bearing shells. Rear bearing flanged.

Clearance—.002-.0035" (rear), .0005-.003" (others).

►*REAR BEARING SHELLS*—Marked with letter on backside of bearing tang. **Use same size bearing (indicated by letter on tang) when replacing bearing.** Rear bearings are selective fit during manufacture, 3 sizes used: "M" Medium, "T" Thin, "H" Heavy.

Bearing Adjustment: None (no shims). Replace bearings. Do not file caps.

NOTE—#1, 2, 3, 4, bearing caps numbered. Install with numbers toward right hand cylinder bank.

Bearing Removal—Bearing shells can be removed and installed without removing crankshaft.

End Thrust: Taken by flanges on rear main bearing.

Endplay—.004-.008".

Crankshaft Front Oil Seal and Rear Main Bearing Oil Seal Installation: *See "Crankshaft & Main Bearings" in Oldsmobile Special Data.*

CAMSHAFT: 5 bearing, coated (Parco-Lubrited) shaft

Camshaft Removal & Installation—*See Oldsmobile Special Data.*

Journal Diameter—1.8724-1.8731" (1949); 1.8724-1.8729" (1950-52).

Reamed Bushing Diameters—1.8745-1.8760" (all).

Bearings—Steel-backed, babbitt bushings.

Clearance—.0014-.0036".

End Thrust (1949): Forward thrust taken by thrust plate on front of engine, rear thrust at front of cylinder block.

►*CAUTION*—Thrust plate seals off two oil galleys and must be installed flat to prevent low oil pressure at idling speeds. 1/16" hole in plate at right galley provides lubrication for chain, sprockets, fuel pump

End Thrust (1950-52): Forward thrust taken by plunger and spring on front of engine, rear thrust at front of block.

►*CAUTION*—Two main galley oil holes in block sealed by hex head bolt. A small hole in bolt for right hand galley provides lubrication to timing chain sprocket, fuel pump eccentric and lever.

Engine Front Cover Removal: *See Oldsmobile Special Data.*

Timing Chain	Link-Belt	Morse
Width	①	7/8"
Pitch	.500"	.375"
Length (Links)	48	64

①—11/16" (1949-51); 27/32" (1952).

►*NOTE—Link-Belt and Morse chains not interchangeable unless sprockets also changed.*

Camshaft Setting: Mesh chain with sprocket marks adjacent and in line with a straightedge across the shaft centers (or use Tool BT-11).

NOTE—Fuel pump eccentric bolted to front end of camshaft ahead of sprocket. Assemble with "0" mark to front, machined step against sprocket.

VALVES:	Head Diam.	Stem Diam.	Length
Intake	1 3/4"	.3417-.3425"	4.907-4.927"
Exhaust	1.432-1.442"	.3930-.3938"	4.931-4.951"

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

1949 Models

Valve	Seat Angle	Lift	Stem Clearance
Intake	45°	.330"	.0017-.0035"
Exhaust	45°	.330"	.0022-.0040"

1950-51 Models

Valve	Seat Angle	Lift	Stem Clearance
Intake	45°	.333"	.0022-.0042"
Exhaust	45°	.333"	.0027-.0045"

1952 Models

Valve	Seat Angle	Lift	Stem Clearance
Intake	45°	.366"	.0022-.0042"
Exhaust	45°	.366"	.0027-.0045"

Intake Valve Rubber Seals—Installed in second groove from end of valve stem between lock retainer and valve stem. Always use new seals.

Valve Seat Width: .042-.071" (Intake); .070-.098" (Exhaust).

Valve Guides: Intake valve guides tapered at lower end. Press guides into head until top end is 27/32" (1949-51); .740" (1952), above face of valve spring seat. Use Tool BT-13 (1949-51); Tool J-5158 to correctly position guides in head. Ream inside diameter of guides as follows: .34425-.34525" (1949 Intake); .3447-.3457" (1950-52 Intake); .39605-.39705" (1949 Exhaust); .3965-3975" (1950-52 Exhaust).

Valve Springs: Intake and exhaust springs are alike. Dampeners used on lower end of all springs.
Free Length—2 3/32" (1949-51); 2.33" (1952).

1949-51 Spring Specifications

Valve	Spring Pressure	Spring Length
Closed	62-68 lbs.	1.777"
Open	136-146 lbs.	1.477"

1952 Spring Specifications

Valve	Spring Pressure	Spring Length
Closed	85-95 lbs.	1.829"
Open	149-163 lbs.	1.463"

▷***CAUTION*—Lower end of damper and spring must seat in recess in head.**

Valve Lifters: Barrel type hydraulic lifters.
▷***HYDRAULIC LIFTER INSTALLATION CAUTION:*** FIVE different sizes used in production as follows (marked as indicated): Standard (unmarked), .001" O.S. (marked "1"), .002" O.S. (marked "2"), .003" O.S. (marked "3"), .005" O.S. (marked "5"). **Lifters** marked by etched number on lifter body, **Cylinder Block** marked by number on rail under engine top cover. Re-install lifter in same hole or replace with proper size.
Diameter—.8424-.8427". **Length**—2" (overall).
Clearance in Block—.0005-.0018" (selective).
Replacement Lifters—Std. and .001", .002", .003", .005" Oversize.
Hydraulic Valve Lifter Removal & Overhaul—*See "Hydraulic Valve Lifters" in Oldsmobile Special Data.*
▷***1952 NOISY VALVE LIFTER (AT HIGH SPEED) CORRECTION:** If valve lifters become noisy at continuous high speed, then quiet down as speed is reduced, one or more valve lifter counterbores may not be to maximum depth. See "Valve System" in Oldsmobile Special Data.*

Rocker Arms: New rocker arm and shaft assemblies mounted on each cylinder head. Intake rocker arms identified by brass pin in oil lead.
Rocker Arm Shaft Disassembly and Reassembly—*See Oldsmobile Special Data.*
▷***CAUTION*—Steel plain finish push rods (alike for all valves) used on domestic engines. Longer copper finish push rods (for thicker head gaskets) used on export engines only.**

VALVE TIMING

Tappet Clearance: None in service (hydraulic type lifters which maintain zero clearance).
Valve Timing: *See Camshaft Setting above.*
Intake Valves—Open 14° BTDC. Close 50° ALDC.
Exhaust Valves—Open 50° BLDC. Close 14° ATDC.
Valve Timing Check—#1 intake valve opens 14° before top dead center (#1 piston .060" before top dead center) with zero tappet clearance.

LUBRICATION

Crankcase Capacity—5 quarts.
Normal Oil Pressure—35-45 lbs. at 50 MPH.
Oil Pressure Regulator—Located on oil pump. Opens at 35-45 lbs. Non-adjustable.
Oil Pump: Gear type. Located in crankcase and attached to rear main bearing cap by three bolts.
NOTE—Pump can be removed and installed without disturbing distributor drive (flat on upper end of oil pump shaft engages flat on distributor drive gear).
Removal & Overhaul: *See "Oil Pump" in Oldsmobile Special Data.*
Oil Filter: AC PF-122 full-flow type optional. On lower right side of crankcase at rear.
▷***CAUTION*—If oil filter (or pad cover if filter not used) replaced, use a new gasket (coat both sides with POB No. 5 Sealer) and tighten bolts to 35-40 ft. lbs. Oil filter (or pad) mounted externally on lower right side of crankcase at rear. Oil filter is full flow type (all oil from pump delivered to oil filter) requires pad when filter not used to return oil to main oil galley.**
Oil Pressure Gauge: AC No. 1507124 (1949-51 Exc. 1951 Super 88); AC No. 1507522 (1951 Super 88 & All 1952). Not Electric.
Crankcase Ventilation: Air intake in oil filler cap (oil-wetted type cleaner) with outlet connection to a ventilating baffle at rear of block above right bank. Outlet pipe push fit at ventilator and extends down below right rear corner of engine.
Servicing—Wash and re-oil filter element in cap every 2000 miles (oftener in dusty areas).

COOLING

Capacity—21½ qts.
Pressure Valve—AC No. 850549 Radiator Cap. Opens at 7 lbs.
Radiator Core Removal: *See Oldsmobile Special Data.*
Water Pump: Packless, sealed ball-bearing shaft. Pump mounted in front engine cover casting.
See Water Pump Section for complete data.
Removal—Take off fan and two fan pulleys. Remove six pump mounting bolts (4 to engine cover, 2 to block). Remove pump. NOTE—When installing pump, coat one side of pump housing gasket with gasket cement, dip four bolts in CP No. 9 Sealer.
Fan Belt Adjustment—Loosen idler pulley attaching screws and place tool J-4139 over idler pulley attaching bolt and under bracket. Attach torque wrench to tool J-4139 and tighten belt to 25 ft. lbs.
Generator Belt Adjustment—*See GENERATOR.*
Thermostat: Harrison. In water outlet (integral with intake manifold casting).
Setting—Starts to open 152°F. Fully open 173°F.
Temperature Gauge: AC Electric.
Dash Unit—AC No. 1512168 (1949-50); 1512275 (1951-52).
Engine Unit—AC No. 1512015.
See "Temperature Gauges" in Miscellaneous Section.

FLYWHEEL HOUSING

FLYWHEEL HOUSING ALIGNMENT & INSTALLATION: *See "Flywheel" in Oldsmobile Special Data.*

CLUTCH

Long 11CF-10½ TI—Semi-centrifugal, single plate, dry disc type.
See Clutch Section for complete data.
Facings—Woven type. I.D. 7", O.D. 10½", Thick. .137".
Pedal Adjustment: Pedal free travel ⅞-1¼" (1949); 1-1¼" (1950-51). Adjust by turning nut on connector rod at clutch fork.
Removal: Remove transmission (see Transmission), remove right and left splash pans, engine breather pipe, and right and left lower flywheel housing bolts. Install Engine Rear Support Tool BT-28, entering pilot supports into lower housing bolt holes. Remove engine rear mount bolts at clutch housing, and remove frame cross-member by removing three bolts at each end. Remove clutch housing by removing eight bolts holding housing to flywheel housing. Remove clutch assembly from flywheel.

TRANSMISSION

SYNCHRO-MESH

Own Make. Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse), all helical gear type with remote shift control.
▷***1951 NOTE*—Different shifting arrangement used on this transmission. Not interchangeable with previous models.**
See Transmission Section for complete data.
Transmission Control: Oldsmobile "Handi-shift."
See Transmission Section for complete data.
Removal: Drain transmission and disconnect manual control rods and speedometer cable at transmission. Remove clutch return spring and disconnect clutch linkage at yoke connecting link. Detach drive shaft at rear universal joint, and slide shaft from transmission. Remove transmission.

HYDRA-MATIC TRANSMISSION

Own Make. Consists of fluid coupling and automatic transmission. NOTE—*Three different transmissions used as follows:*
▷***1950-51 "WHIRLAWAY" TYPE HYDRA-MATIC CONVERSION TO STANDARD 4-SPEED HYDRA-MATIC*—*See "Hydra-Matic Drive" in Transmission Section for complete data.***
1949—Standard type transmission as used in previous models.
1950—"Whirlaway" type with Modulated Throttle pressure.
1951—"Whirlaway" type with Modulated Throttle Pressure and Hydraulically operated "Cone Type Clutch" Reverse mechanism.
1952—Standard type with Modulated Throttle Pressure and hydraulically operated "Cone Type Clutch" Reverse mechanism.
See Transmission Section for complete data including Testing & Trouble Shooting.
▷***CAUTION—Eight Cylinder model transmissions not interchangeable with Six Cylinder models.***

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Lubrication—Check fluid level in transmission every 2000 miles. Drain and refill after first 25000 miles and every 25000 miles thereafter. Use only "Oldsmobile Hydra-Matic Drive Fluid."

Draining & Refilling—*See "Hydra-Matic Drive" in Transmission Section.*

Capacity—10½ qts.

►*1951 NOTE*—Fluid level can be checked from under hood with bayonet gauge now being used.

Checking Fluid Level—Raise front floor mat at right side, remove sheet metal cover in floor, clean opening thoroughly. Set hand brake, start engine and let engine idle, move selector lever to "Dr" (1949); "Lo" (1950-52) position. Remove dipstick, wipe dry and replace. Remove stick quickly and check level. Level should be at "FULL" mark. Add fluid to bring up to "FULL" mark if required, with engine idling.

Linkage Adjustment—*See "Hydra-Matic Drive" in Transmission Section.*

Removal: *See "Hydra-Matic Drive" in Transmission Section.*

UNIVERSALS

Mechanics 2C or 2CR, & Saginaw. Roller bearing types.

►*CAUTION*—Rear universal companion nut controls rear axle pinion bearing "pre-load" (must be adjusted whenever nut is loosened). *See Oldsmobile Rear Axle in Rear Axle Section for complete data.*

REAR AXLE

Own Make. Hypoid gear, semi-floating type with pinion mounted on two tapered roller bearings.

►*CAUTION*—New carriers (with machined surfaces on differential side bearing caps) and axle housings (with 2 welded support plates—supports bearing caps to take care of increased torque of new Rocket engine) are used. *Not interchangeable with "76" Series carrier and axle housing.* Use only carriers and axle housings described above on "88" and "98" Cars.

►*NOTE*—Rear universal companion nut controls pinion bearing "pre-load."

See Rear Axle Section for complete data.

1949 Axle Ratios

Synchro-mesh—4.10-1 (41-10); 4.30-1 (43-10).
Hydra-Matic—3.63-1 (40-11); 3.90-1 (39-10); 3.23-1 (42-13).

1950 Axle Ratios

Synchro-mesh—4.10-1 (41-10); 4.30-1 (43-10); 3.63-1 (40-11); 3.90-1 (39-10).
Hydra-Matic—3.63-1 (40-11); 3.90-1 (39-10); 3.42-1 41-12).

1951 Axle Ratios

Synchro-mesh—3.63-1 (40-11); 3.90-1 (39-10).
Hydra-Matic—3.42-1 (41-12); 3.63-1 (40-11); 3.90-1 (39-10).

1952 Axle Ratios

Synchro-mesh—3.63-1 (40-11); 3.90-1 (39-10).
Hydra-Matic—3.23-1 (42-12); 3.42-1 (41-12); 3.63-1 (40-11).

Rear Axle Ratio Markings (1949)—Ring and pinion gear ratio and date stamped on underside of carrier right horizontal rib.

Rear Axle Pinion Marking (1950-52)—Coded ring and pinion gear marking stamped on lower side of carrier housing as follows: 4 (39-10); 6 (40-11); 8 (41-12); 9 (42-13); 0 (40-13).

NOTE—Early 1950 housings were stamped with three figures, last two of which indicate date of manufacture.

Backlash—.004-.008". Screw adjustment.

Removal: Disconnect driveshaft at rear universal (wire trunnions to avoid losing rollers), mark joint (reassemble to mark when reassembling). Remove axle shafts (see data below) and carrier capscrews.

►*CARRIER INSTALLATION CAUTION*—Due to close fit between carrier pedestal caps and support plates in housing, special carrier installation procedure used. *See Oldsmobile Rear Axle in Rear Axle Section.*

►*CAUTION*—Rear universal joint companion flange nut controls pinion bearing "pre-load" (must be adjusted whenever nut is loosened).

Axle Shaft Removal: Remove wheel. Take off brake drum by removing two Tinnerman nuts from wheel studs (if nuts removed by turning off threads they can be re-used, if nuts damaged new nuts must be used). Remove backing plate mounting nuts, and static collector. Loosen bearing retainer (do not move backing plate or brake line may be damaged). Pull shaft and bearing with Puller J-942 (do not allow shaft to drag on oil seal), replace one nut.

Wheel Bearing Adjustment—None.

Rear Suspension (1949-50 All Models & 1951 Deluxe 88): Coil spring type with support arms.

Rear Suspension (1951 Super 88 & 98. 1952 All Models): Semi-eliptical springs and direct acting shock absorbers.

See Rear Axle Section for complete data.

SHOCK ABSORBERS

Delco. Double acting front and rear on 1949-50 & 1951 Deluxe 88. Double acting front and direct acting rear on 1951 Super 88 & 98, 1952 all models.

Shock Absorber Application

	Front		Rear	
Model	**RH**	**LH**	**RH**	**LH**
1949 "88"	1947-J	1947-K	2105-N	2105-P
1950-51 "98"	1947-J	1947-K	2105-T	2105-U
1951 Super "88"	1947-J	1947-K	801-T	801-T
1952 "88"	1947-J	1947-K	①851-T	①851-T
1949 "98"	1947-C	1947-D	2105-E	2105-F
1950 "98"	1947-C	1947-D	2105-R	2105-S
1951 "98"	1947-C	1947-D	801-T	801-T
1952 "98"	1947-J	1947-K	801-T	801-T

①Use No. 801-T for convertible models.

FRONT SUSPENSION

Front Suspension: Independent, linked parallelogram type with coil springs.

See Front Suspension Section for complete data.

Kingpin Inclination—4° 29' 47" crosswise.

Caster—0° to Neg. ¾°. Adjustable.

Camber—Neg. ¾° to Pos. ¾° (Service Limits), Neg. ¼° to Pos. ¾° (New Car Specification).

Toe-In—1/16-1/8". Adjust each tie rod equally.

Steering Geometry Inner wheel 23° ± ½°. Outer 20°.

STEERING GEAR

1949 Series "98" & 1949-51 Series "88". Saginaw Worm & Roller type.

1950-52 Series "98" & 1952 Series "88". Saginaw Recirculating Ball Worm & Nut type.

See Steering Gear Section for complete data.

Power Steering (1952): Saginaw GM. Recirculating Ball Worm & Nut type to which hydraulic power had been added.

See "Saginaw (GM) Power Steering" in Steering Section.

Steering Wheel & Horn Button Removal: *See "Saginaw Steering Gears" in Steering Section.*

Steering Gear Removal: *See "Saginaw Steering Gears" in Steering Section.*

BRAKES

Service Brakes: Bendix Hydraulic, duo-servo, single anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

See Brake Section for complete data.

Wheel Cylinder Bore (Series 88)—1 3/32" (Front Whl.); 15/16" (Rear Whl.).

Wheel Cylinder Bore (Series 98)—1949—1 1/8" (Front Whl.); 1" (Rear Whl.). **1950-52**—1 3/32" (Front Whl.); 15/16" (Rear Whl.).

Drums—Diameter 11". Max. rebore .060".

Lining Length

Model	Primary	Secondary
1949	9 11/32"	11 31/32"
1950-52	9 3/8"	12 1/32"

Width—2½" (Front Whls.); 2" (Rear Whls.).

Thickness—3/16".

Clearance—.015" at both ends of secondary (rear) shoe with primary shoe forced out against drum.

Braking Power (Exc. 1949 Series 98)—58% (Front); 42% (Rear. 1949 Series 98—56% (Front); 44% (Rear).

Hand Brake: See Service Brakes above.

MISC. MECHANICAL

Power Operated Convertible Tops, Windows, & Front Seat: Hydro-Lectric type (motor driven pump).

►*1952 NOTE:* Two different systems used. **Reversible Motor** Series 88 Convertible without window regulators. **Non-Reversible Motor** (With Hydraulic Flow Control Valve) on all other models.

See Miscellaneous Section for complete data.

Windshield Wiper: (1949-51 Series 98) Vacuum, Cable operated. (Other Models) Vacuum, Link & Arm type.

See Miscellaneous Section for complete data.

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning equipment or lines. See "Air Conditioning Service Cautions" in Miscellaneous Section.*

MODEL IDENTIFICATION

SERIAL NUMBERS: On left body pillar post.
Starting Serial Number—1001.

►*SERIAL NUMBER NOTE: Complete Serial Number (example 547M1001) includes following identification data in sequence.*

Year	Series ①	Assy. Plant②	Serial No.
54	7	M	1001

①—Series Designation: 7 (88 Series). 8 (Super 88 Series) 9 (98 Series)

②—See Assembly Plant Designation following:

Assembly Plant Designation

M—Lansing	L—Linden
A—Atlanta	C—South Gate
B—Framingham	W—Wilmington
K—Kansas City	T—Arlington

ENGINE NUMBER: Stamped on machined pad located on top of left hand cylinder bank of block in either of the following two positions: Between center and rear, or center and front, exhaust manifold ports.

Starting Engine No.—R-215001 (1953). V-1001 (1954).

TUNE-UP

COMPRESSION PRESSURE: 100 lbs. minimum at cranking speed. Reading on low cylinders should not be less than 80% of high cylinder.

VACUUM READING: Steady 17" minimum at idle speed.

VALVE TAPPET CLEARANCE: None in service (hydraulic).

MANIFOLD HEAT CONTROL: Thermostatic coil type located on left side between exhaust manifold and exhaust pipe. Stop spring should strike stop before counter-weight touches pin to prevent valve rattle when cold.

►*MANIFOLD HEAT CONTROL VALVE NOTE*—Check for broken valve welds or frozen bearings by allowing manifold to cool, then start engine and with transmission in neutral, "flash" throttle quickly. The valve should open and return to close position immediately. If welds are broken or bearings frozen, valve weight will not move. Replace the valve assembly.

IGNITION

►*1954 IGNITION SECONDARY WIRING PRODUCTION CHANGE: New resistance type wires used. Center conductor is graphite impregnated nylon making it necessary to use only pre-cut assemblies for replacement. A new distributor rotor without a resistance unit is also used with this type wiring. (See Distributor below).*

FIRING ORDER: 1-8-7-3-6-5-4-2. See Diagram.

SPARK PLUG GAP: .030".
Spark Plugs—AC 46-5. 14mm.

COIL: Delco-Remy 1115082. *12 Volt.*
Ignition Current—2.0 amperes idling. 4.5 stopped.
Resistor—Delco-Remy 1928016. On bracket adjacent to ignition coil.

►*COIL RESISTOR NOTE*—Resistor is connected in lead from ignition switch-to-coil. This resistor is by-passed during cranking by a lead from starter solenoid-to-coil.

DISTRIBUTOR: Delco-Remy 1110824 (1953). 1110843 (Early 1954). 1110850 (Late 1954). *12 Volt.*

►*1954 DISTRIBUTOR ROTOR CAUTION: Resistance type distributor rotor replaced in production by a non-resistance type for use with new secondary wiring (see Secondary Ignition Wiring Production Change above). Distributor Rotor, Part No. 1927393 must always be used with later type resistance wiring.*

Condenser—Delco-Remy 1869704. **Capacity** .18-.23 mfd.
Contact Point Set—Delco-Remy 1918140
Breaker Gap—.016" (.012-.0175").
Cam Angle—26-33° (with .016" gap).

►*BREAKER GAP CAUTION:* Manufacturer recommends final check with feeler gauge or dial indicator if dwell meter used to set gap.
Breaker Arm Spring Tension—19-23 ozs.
Rotation—Counter-clockwise viewed from above.

Automatic Advance—1110824

Degrees Distr.	RPM	Degrees Eng.	RPM
0-2	400	0-4	800
9-11	1350	18-22	2700
14-16	1850	28-32	3700

Automatic Advance—1110843, 1110850

Degrees Distr.	RPM	Degrees Eng.	RPM
0-2	400	0-4	800
7.5-9.5	1000	15-19	2000
11-13	1450	22-26	2900
13-15	1725	26-30	3450

Vacuum Spark Control: Delco-Remy 1116059.
Plunger Travel—7/32-15/64".

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	4.5-6.5
10	20	16-17

►*DISTRIBUTOR INSTALLATION CAUTION:* Before installing distributor, make certain that crankshaft turned to #1 firing position (see Ignition Timing following), install distributor with flat on the distributor gear in line with flat on oil pump shaft, push distributor down just enough to engage gear with shaft but do not push distributor all the way down. Turn rotor so that it is in line with #8 terminal in distributor cap (in line with breaker terminal on housing), push distributor all the way down. NOTE—Rotor will turn to #1 spark plug terminal position as gears are meshed. Install and tighten distributor hold-down clamp.

IGNITION TIMING

Setting—5° BTDC. with engine idling at 850 RPM. and vacuum line to distributor disconnected and carburetor opening taped closed.

►*ENGINE TIMING CAUTION: The "Slow Idle" setting method formerly recommended should not be used.*

►*DETONATION CAUTION: If engine detonates (due to low octane fuel or carbon build-up) set timing to 2½° BTDC. For high altitude operation, timing can be advanced to 7½° BTDC, if detonation does not occur.*

Timing Mark—Slot in rim of crankshaft pulley and pointer on front cover. Leading edge of slot is 5° BTDC. Trailing edge is TDC. Midway between these two points is 2½° BTDC.

CARBURETOR

►*CARBURETOR APPLICATION NOTE: Carter 2-Barrel used on DeLuxe 88. Carter WCFB or Rochester 4GC 4-Barrel used on Super 88 & 98.*

►*1953 CARBURETOR METERING JETS & VENTURI CLUSTER PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: Different combinations used in production. See "Rochester 4GC 4-Barrel" in Carburetor Section for data.*

►*1954 THROTTLE RETURN SPRING BRACKET CAUTION (Synchro-mesh Cars):* Connect throttle spring to TOP holes for 2-Barrel carburetors, and to BOTTOM holes for 4-Barrel carburetors.

1953 Synchro-mesh Throttle Linkage Adjustment: Adjust engine idle speed to 425 RPM, then adjust throttle rod (rod from bellcrank on dash panel to bellcrank on engine) to allow 5/16" to 3/8" clearance between depression in dash panel and bellcrank assembly. Remove return spring on dash panel bellcrank and advance carburetor throttle to wide open position. Adjust rod between upper and lower bellcranks on dash to allow ¼" clearance between accelerator pedal and floor mat. Assemble return spring and tighten locknuts on rod.

Hydra-Matic Throttle Control Linkage Adjustment (1953 Series 88-With 2-Barrel Carburetors): Apply hand brake firmly, warm up engine so that it idles at hot or slow idle speed.

1) With engine warm, disconnect upper throttle rod from bellcrank on engine (*CAUTION*—do not disconnect intermediate throttle rod to which upper throttle rod is connected at the bellcrank). Adjust engine idle speed to 400 RPM with selector lever in "Dr" range, then turn off engine.

2) After setting idle speed, adjust length of intermediate throttle rod (free clevis from bellcrank on engine, turn rod in or out of clevis) until clearance between rear face of lever to which rod is connected and depression in dash is 5/16-3/8", tighten clevis locknut and connect the rod.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

3) Disconnect throttle return spring from bellcrank on dash, open carburetor throttle valves to wide open position, adjust clevis at bellcrank end of accelerator pedal linkage so that clearance between lower face of boss on underside of pedal and top of floor mat is ¼", tighten clevis locknut and connect rod (*CAUTION*—open side of clevis must be facing AWAY from engine).

4) Disconnect lower throttle rod from lever on left side of transmission case. Hold carburetor throttle lever in slow idle position against its stop, adjust length of upper throttle rod so that Pin Gauge BT-25 freely enters holes in bellcrank and hole in bracket on engine. Tighten clevis locknut and connect rod at bellcrank. *CAUTION*—open side of clevis must be AWAY from engine.

5) With lower throttle rod disconnected from transmission lever, check position of lever as follows: Install checking tool J-2195 on machined surface on rear face of transmission case with gauging rod extending forward toward lever. Hold throttle lever back against stop. If small end of tool does not enter hole in lever freely in this position, bend lever as required using tool J-2029. Do not connect rod to lever at this point.

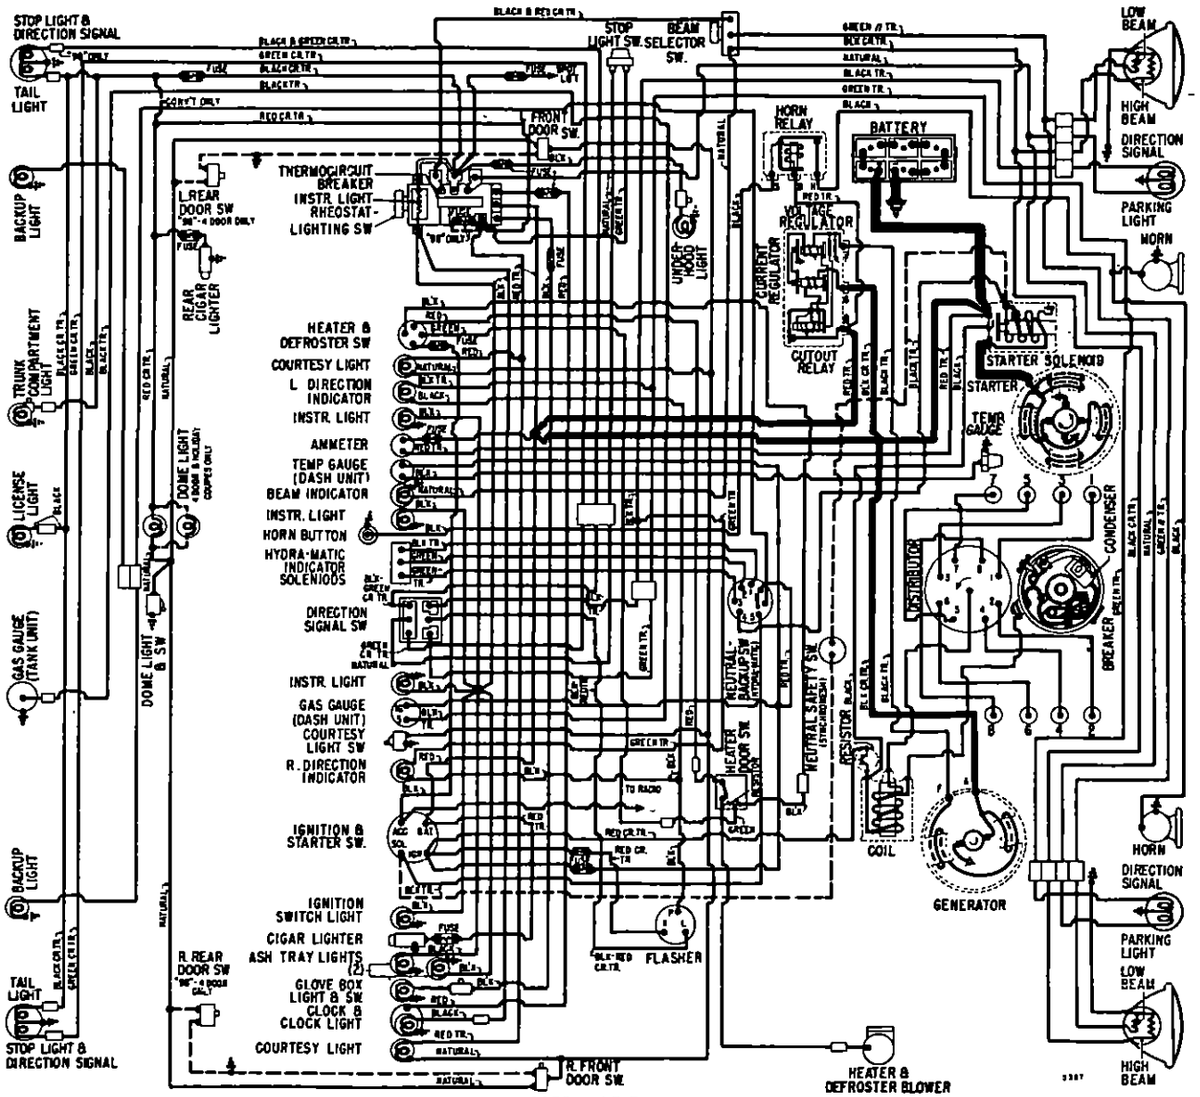
6) After adjusting lever position, see that carburetor is in slow idle position (throttle lever against stop), hold transmission lever fully back against its stop, adjust length of the rod by loosening locknut and turning clevis until clevis pin enters hole in lever freely, then **shorten rod by one full turn of the clevis,** tighten locknut and connect rod.

Hydra-Matic Throttle Control Linkage Adjustment (1953 Super 88 & 98-With 4-Barrel Carburetors): Disconnect accelerator pedal from accelerator rod (in front compartment), disconnect lower throttle rod (between bellcrank on engine and transmission case lever) at bellcrank, disconnect intermediate throttle rod at bellcrank on dash. Then proceed as follows:

1) Hold carburetor throttle valves in slow idle position, adjust intermediate throttle rod (turn clevis on rear end of rod) until clearance between rear face of bellcrank and depression in dash is 5/16-3/8" when rod connected. Tighten clevis locknut and connect rod (*CAUTION*—open side of clevis must face AWAY from center of engine).

2) Start engine and allow it to warm up (*CAUTION*—apply hand brake firmly to hold car). Adjust engine idle speed to 400 RPM with selector lever in "Dr" range, then turn off engine.

3) Hold carburetor throttle valves in slow idle position, check alignment of two holes in bellcrank at rear of engine with hole in bellcrank bracket. If Gauge Pin BT-25 does not enter all three holes freely, adjust as follows: Disconnect upper throttle rod from bellcrank, adjust rod length (turn rod in or out of clevis at forward end) as necessary to line up bellcrank and bracket holes, tighten clevis locknut and connect rod.



4) Connect lower throttle rod to this bellcrank at rear of engine, disconnect lower end of rod from lever on left side of transmission.

5) Check and adjust transmission lever (see step 5 in Series 88 2-barrel carburetor adjustment above).

6) After adjusting lever position, see that carburetor is in slow idle position (throttle lever against stop), hold transmission lever fully back against the stop, adjust length of lower throttle rod by loosening locknut and turning clevis on rear end of rod until clevis pin enters hole in lever freely, then **shorten rod by three full turns of the clevis,** tighten locknut and connect rod.

7) Hold carburetor choke valve completely open, move intermediate throttle rod (from bellcrank on dash to bellcrank on engine to rear of carburetor) forward until carburetor throttle valves are in wide open position and throttle linkage has moved transmission lever fully forward and against its stop (through detent positions). Hold linkage in this position and turn stopscrew (on bellcrank just to rear of carburetor) down until it just contacts the downshift lever assembly (to which transmission throttle rod connected). Release linkage, then **back stopscrew off one complete turn** and tighten locknut. This will provide 1/32" clearance—between stopscrew—and downshift—lever with transmission lever against its forward stop.

CONTINUED ON NEXT PAGE

1953 MODELS

CONTINUED FROM PRECEDING PAGE

8) Connect accelerator pedal to accelerator rod inside car. Adjust clevis at upper end of accelerator pedal linkage (at bellcrank on dash) so that clearance between boss on underside of pedal and floor mat is ¼" with carburetor throttle valves in wide open position.

CAUTION–Open side of clevis at bellcrank end of accelerator pedal linkage must face AWAY from center of engine.

Hydra-Matic Throttle Control Linkage Adjustment (1954 All Series-With 2-Barrel & 4-Barrel Carburetors):

1) Remove throttle rod from transmission throttle lever and move throttle lever to rear against its stop. Place Throttle Lever Gauge J-5605 flat against rear face of transmission case, rod on gauge should just enter hole in throttle lever. The distance from rear face of transmission case to hole in throttle lever should be 6¾". Adjust by bending lever with tool J-2029. Attach throttle rod to transmission lever.

2) Apply hand brake and allow engine to warm up. Place throttle lever in "Dr" position and adjust engine idle speed to 400 RPM. Turn off engine. Disconnect upper throttle rod from engine bellcrank. Check clearance between end of intermediate throttle rod assembly and dash. This distance should be 5/16" to 3/8" with carburetor on slow idle. Adjust intermediate throttle rod assembly as necessary to obtain the specified clearance. *(NOTE*–On 4-Barrel carburetors, open side of rod end should face away from center of engine, and toward center of engine on 2-Barrel carburetors).

3) Loosen jam nut and remove pin from lower throttle rod at throttle bellcrank, and with bellcrank against stop and intermediate throttle rod against its stop, the clevis pin should enter holes in clevis of lower throttle rod and hole in throttle bellcrank freely. Adjust clevis on end of lower throttle rod so pin enters hole freely. *CAUTION–Do not shorten or lengthen rod after this setting is obtained.*

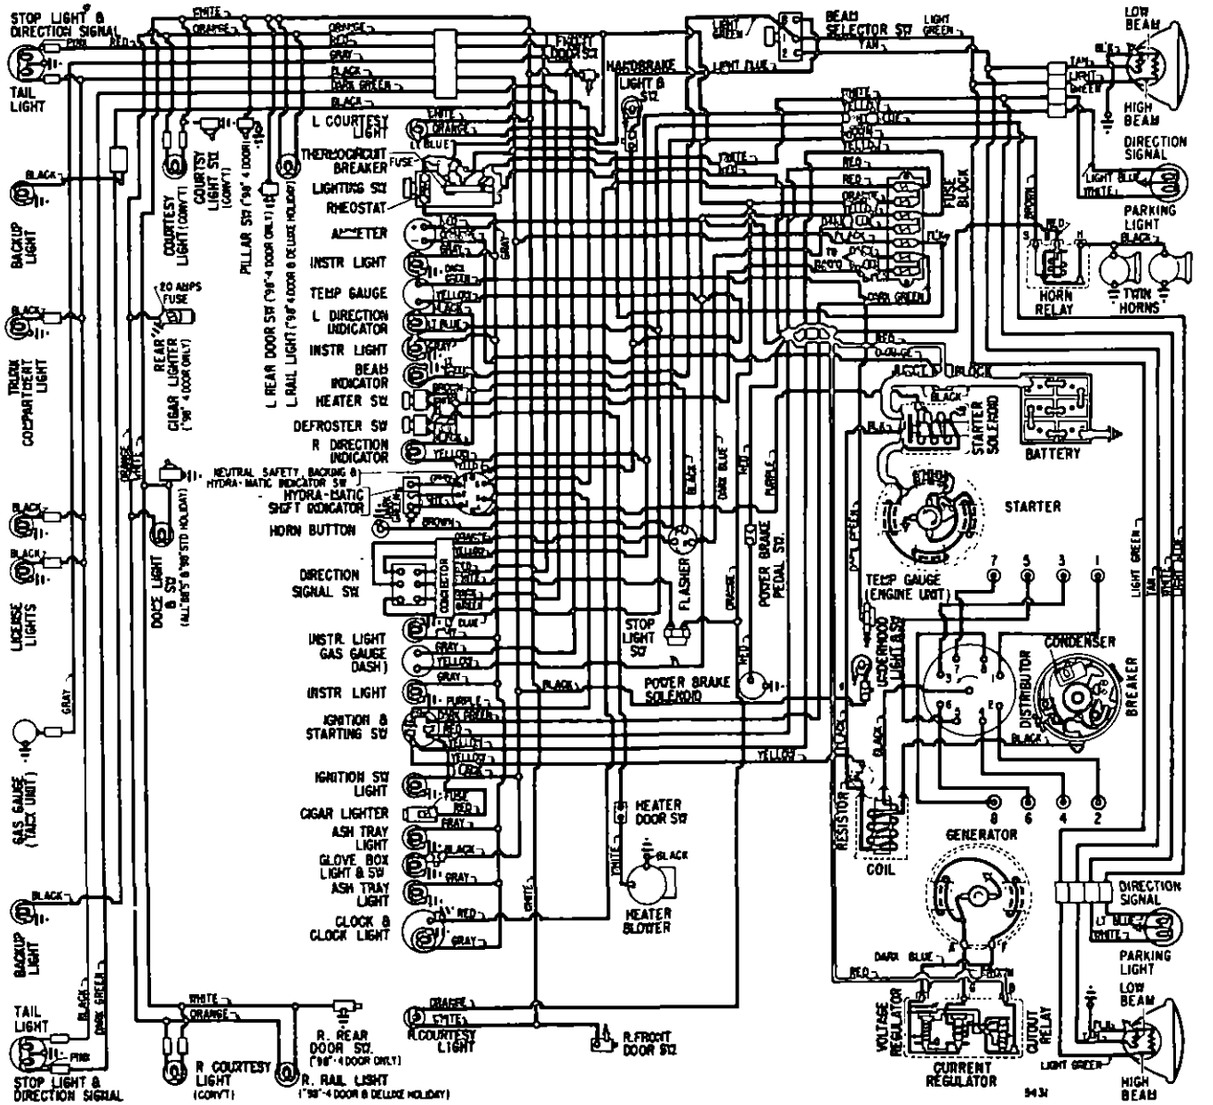
4) With upper throttle rod assembly held rearward with light pressure to remove lash, the clevis pin should just touch gauge point on throttle bellcrank (gauge point is a curved projection above clevis pin hole in bellcrank). Adjust by rotating clevis so clevis pin just touches, or is within ½ turn short of gauge point. Replace clevis pin and tighten jam nut.

5) Hold choke completely open and move upper throttle rod assembly forward until throttle is wide open. Continue pushing upper throttle rod until transmission throttle lever just stops at its forward position (Repeat this procedure several times until the exact forward position is distinctly felt). Do not force linkage beyond this point. With linkage in this position there should be zero clearance between throttle bellcrank stopscrew and downshift lever. With linkage held forward as outlined, loosen locknut on setscrew and adjust setscrew until it just contacts the downshift lever. Release lever and tighten jam nut.

6) Place a wood block 3 7/8" long on top center of floor mat retainer and bring bottom of accelerator pedal down to rest on block. With carburetor in slow idle position (choke completely off) pedal should just touch gauge block. If necessary adjust accelerator position by disconnecting accelerator pedal rod from accelerator bellcrank on dash, and adjust accelerator pedal rod so that clevis just slides over pin with wood block in position and carburetor on slow idle. Reassemble rod, making sure open side of rod end is facing away from center of engine. Remove wood gauge block.

CARTER 2-BARREL

Carter WGD, No. 851SA (Early 1953); No. 2015S (Late 1953); No. 2058S (1954). Dual downdraft type with automatic choke.



Idle Setting–¾-1¼ (1953); 1½-2½ (1954), turns open. Turn screws out for richer mixture.

Idle Speed (Synchro-mesh)–425 RPM.

Idle Speed (Hydra-Matic)–400 RPM with selector lever in "Dr" position.

Idle Speed (Dynaflow)–400 RPM with selector lever in "P" position.

CONTINUED ON NEXT PAGE

1954 MODELS

CONTINUED FROM PRECEDING PAGE

Float Level: ¼" between top of float and bowl cover with float assembly inverted.
Accelerating Pump—No seasonal adjustment.
Fast Idle: .020" throttle opening or clearance between valve and wall on side opposite idle ports with choke valve tightly closed. Adjust by turning sleeve on connector rod.
Automatic Choke Setting: Centered (at index).

1953 Synchro-mesh Throttle Linkage Adjustment: *See "Carburetor" above.*
1953-54 Hydra-Matic Throttle Linkage Adjustment: *See "Carburetor" above.*

►*OTHER DATA: See "Carter WGD Carburetor" in Carburetor Section.*
Fuel Pump Pressure: 4-5 lbs. at 16" above outlet at 1800 RPM.

CARTER 4-BARREL

Carter WCFB, No. 2016S (Early 1953); No. 2080S (Late 1953); No. 2059S (1954). 4-Barrel downdraft type with automatic choke.

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyl. 1-4-6-7. LEFT barrels 2-3-5-8.*
Idle Setting (2016S, 2080S)—1¾-2¾ turns open (both screws). Turn screws out for richer mixture.
Idle Setting (2059S)—1-2 turns open (both screws). Turn screws out for richer mixture.
Idle Speed (Synchro-mesh)—425 RPM.
Idle Speed (Hydra-Matic)—400 RPM with selector lever in "Dr" position.
Idle Speed (Dynaflow)—400 RPM with selector lever in "P" position.

1953 Synchro-mesh Throttle Linkage Adjustment: *See "Carburetor" above.*
1953-54 Hydra-Matic Throttle Linkage Adjustment: *See "Carburetor" above.*

►*OTHER DATA—See "Carter WCFB Carburetor" in Carburetor Section.*
Fuel Pump Pressure: 4-5 lbs. at 16" above outlet at 1800 RPM.

ROCHESTER 4-BARREL

Rochester Model 4GC. 4-Barrel downdraft type with automatic choke.

Rochester Carburetor Application

Model	Rochester No.
1953 (Synchro-mesh)	7005700
1953 (Hydra-Matic)	7005600
1953 (Dynaflow)	7006250
1954 (Synchro-mesh)	7005600
1954 (Hydra-Matic)	7005900

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyl. 1-4-6-7. LEFT barrels 2-3-5-8.*
Idle Setting—Adjust with engine at normal operating temperature, automatic choke not operating and engine idling at hot or slow idle speed. Adjust idle speed(see below) to correct RPM, then adjust each idle mixture screw (one screw for each primary throttle valve) until engine idles smoothly and RPM is at maximum. Then turn each screw out ½ turn additional for slightly richer mixture (both idle speed and vacuum will drop off slightly). Check setting by slowly opening throttle until speed increases to 1000 RPM, then close throttle rapidly. If slight rich roll is noted as engine returns to idle speed, *turn each idle screw in not more than 1/8 turn.*
Idle Speed (Synchro-mesh)—425 RPM.
Idle Speed (Hydra-Matic)—400 RPM with selector lever in "Dr" position.
Idle Speed (Dynaflow)—400 RPM with selector lever in "P" position.

1953 Synchro-mesh Throttle Linkage Adjustment: *See "Carburetor" above.*
1953-54 Hydra-Matic Throttle Linkage Adjustment: *See "Carburetor" above.*

►*OTHER DATA: See "Rochester 4GC Carburetor" in Carburetor Section.*
Fuel Pump Pressure: 4-5 lbs. at 16" above outlet at 1800 RPM.

CARB. EQUIPMENT

Fuel Pump: AC. Fuel & Vacuum.
Replacement Pump—AC No. 9775 (1953 & Early 1954); No. 4140 (Late 1954).
Pressure—4-5 lbs. at 16" above outlet at 1800 RPM. *See "Fuel Pumps" in Carburetion Equipment Section.*

Gasoline Gauge: AC Electric type.
►*1954 GASOLINE GAUGE NOTE: Gasoline tank outlet tube is part of gauge tank unit and is equipped with a saran filter. Some early cars did not have filter installed in production.*
Dash Unit—AC No. 1517783 (1953); 1517999 (1954).
Tank Unit—AC No. 1517716 (1953); 1518134 (Early 1954-without filter); 1518022 (Late 1954-with saran filter).
See "Fuel Gauges" in Carburetion Equipment Section.

BATTERY

1953-Delco 3EE70W. *12 Volt.* 11 plate,70 ampere hour capacity (20 hr. rate).
1954-Delco 8KM60. *12 Volt.* 9 plate, 60 ampere hour capacity (20 hr. rate).
Battery Ground—Negative. To cylinder head.
Engine Ground—Connected between engine and forward side of firewall.

STARTER

Delco-Remy 1107603 (1953); 1107623 (1954). *12 Volt.*
Armature—Delco-Remy 1919267 (1107603), No. 1927343 (1107623).
►*1953-54 STARTER & ENGINE CONTINUING TO RUN (With ignition key on or off):* May be caused by shorting of ignition switch lead or broken return spring in starter solenoid allowing contact disc to float forward and complete circuit through ignition "by-pass" circuit. Correct by repairing or replacing solenoid.
Drive—Overrunning clutch (solenoid pinion shift).
►*CAUTION: Overrunning clutch pinion clearance must be adjusted whenever solenoid removed from starter.*
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—24 ozs. minimum (1107603); 35 ozs. minimum (1107623).

Performance Data (1107603)

Torque	RPM	Volts	Amperes
0 ft. lbs.	6500	10.3	75
11.0 ft. lbs.	Lock	4.9	520

Performance Data (1107623)

Torque	RPM	Volts	Amperes
0 ft. lbs.	3500	10.1	95
10.5 ft. lbs.	Lock	5.4	470

Starting Switch: Delco-Remy 1118188 (1953); No. 1119761 (1954) no relay used. Mounted on starter and controlled by combination Starter & Ignition Switch. *NOTE—A Neutral Safety Switch is used on all models.*

See "Starter-Controls" in Electrical Equipment Section.
Synchro-Mesh Neutral Safety Switch: Delco-Remy 1998031. Switch is controlled by transmission shift linkage, and allows the starter to be operated only when transmission gear shift lever in "Neutral" position.
Adjustment—Place transmission in 2nd gear and adjust the Neutral Safety Switch so there is 1/16" clearance between switch arm and stop. Check to see that engine will not start with gear shift lever in any position except neutral.
Hydra-Matic Neutral Safety Switch: Delco-Remy 1998026. Combination Neutral Safety Switch, Back-up Light Switch, and Hydra-Matic Indicator Switch.
Adjustment—*See "Hydra-Matic Drive" in Transmission Section.*
Hydra-Matic Indicator Switch: *See "Hydra-Matic Transmission" following for description of indicator unit.*

GENERATOR

Delco-Remy 1102003 (1953-54 Std.); No. 1102021 (1954 Air Conditioned Cars).
Armature—Delco-Remy No. 1923535.

Performance Data—Cold

Amperes	Volts	RPM
30①	14	2150

①—Not maximum. See Regulator.
Brush Spring Tension—24-32 ozs.
Field Current—1.48-1.62 amperes at 12 volts.
Rotation—Counter-clockwise at commutator end.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Belt Adjustment: Loosen generator attaching bolt and place tool J-4170 against generator between bracket and generator housing. Attach torque wrench to tool and apply a torque of 16 ft. lbs. Tighten generator attaching bolts while holding tension on belt.

REGULATOR

1953 Models—Delco-Remy 1118750. Current & voltage regulator.
See "Delco-Remy 1118700 Series Regulator" in Electrical Equipment Section.
1954 Models—Delco-Remy 1118826. Current & voltage regulator.

►*1954 REGULATOR NOTE: Checking procedure is different than for 1953 regulators. See "Delco-Remy 1118825 Series Regulator" in Electrical Equipment Section. Specifications below are "Normal" settings for this regulator.*

Cutout Relay

Cuts In—12.8 volts (hot).
Contact Gap—.020".
Air Gap—.020" (with contacts just closed).

Voltage Regulator

Setting—14.5 volts (hot).
Air Gap—.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator

Setting—30 amperes (hot).
Air Gap—.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting—*See Electrical Equip. Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Equip. Section.*
Autronic Eye: *See "Autronic Eye" in Electrical Equipment Section.*
Direction Signal: *See Electrical Equipment Section.*

Lighting Switch Removal: Disconnect battery cable and disconnect wires from lighting switch. Pull switch knob out to last notch, then depress spring loaded latch button on switch body while pulling rod and knob assembly out of switch. Remove switch mounting nut and remove switch and escutcheon from instrument panel.

Stop Light Switch Location (Std. Brakes): Mechanical type on underside of toe board near brake pedal.
Stop Light Switch Location (Power Brakes): Directly above brake pedal on firewall. Adjust so lights come on within free travel of brake pedal.

1953 MODELS

FUSES: Following circuits are fused as indicated.
1) Dome & Rear Seat Cigar Lighter ("98" 4-Door)—AGC-30. Near light switch in fuse holder.
2) Stop & Dome (Exc. "98" 4-Door & Conv.)—SFE-14. On light switch.
3) Stop Light ("98" 4-Door & Conv.)—SFE-14. On headlight switch.
4) Tail Light (Exc. Conv.)—SFE-20. Near light switch in lead.
5) Dome & Tail Light (Conv.)—SFE-20. In lead.
6) Directional Signal—SFE-9. Near flasher on brace.
7) Cigar Lighter—On back of lighter.
8) Glove Box—SFE-4. In lead.
9) Clock—AGA-1. In lead.
10) Heater—SFE-14. In lead.
11) Back-Up-Light—SFE-9 in lead near light switch.

1954 MODELS

FUSES: All fuses (exc. Instrument Panel fuses) are located on a combination fuse and junction block under the instrument panel. A color code is used on the fuse panel corresponding to the color code of circuits protected by each fuse. The following fuses will be found on this panel:
(1) Clock (Std. on 98 Series only). 1 ampere.
(2) Courtesy Lights, Dome & Stop Lights, and Rear Cigar Lighter. 20 amps. (Exc. 98), 25 amps. (98 Series).
(3) Fuel & Temp. Gauges, Hand Brake Signal Light, Hydra-Matic Shift Indicator, and Back-up Lights. 9 amperes.
(4) Glove Box, Underhood, Keyhole, Tail, Trunk, & Spot Lights. 9 amperes.
(5) Turn Signal. 9 amperes.
(6) Radio. 7.5 amperes.
(7) Heater & Air Conditioner. 20 amps. (without Air-Conditioner). 25 amps. (with Air-Conditioner).
Window & Seat Regulators—20 amps. Located on separate fuse block attached to main fuse block.
Instrument Panel Lights—2 amps. located on headlamp switch.
Cigar Lighter—20 amps. Located behind cigar lighter.
Air-Conditioner Solenoid Valve—2 amps. Located in lead near Solenoid Valve.

CIRCUIT BREAKER: 22 amps. Located in headlamp switch.

HORNS: Delco-Remy 1999753 (Low Note), 1999754 (High Note). *12 Volt.*

Horn Relay: Delco-Remy 1116781. *12 Volt.*
Contacts Close—2.75-4.0 volts.
Contact Gap—.025". **Air Gap**—.015" (closed).

ENGINE

►*AIR-CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air-conditioning system. See "Air Conditioning Service Cautions" in Miscellaneous Section.*

►*1954 OLDSMOBILE FRONT MAIN BEARING PRODUCTION CHANGE: Beginning with Car Serial V52229 a selective fit front main bearing entered production. There are two bearings available in addition to the regular Std. size, .002", .010", & .020" Undersize bearings. See "Crankshaft" below.*

ENGINE SPECIFICATIONS: 90° V8 with overhead valves.

Model	Bore	Stroke	Displacement
1953	3 3/4"	3 7/16"	303.73 cu. ins.
1954	3 7/8"	3 7/16"	324.31 cu. ins.

Model	Compr. Ratio	Rated HP	Developed HP
1953 ①	8.0-1	45	105 at 3600 RPM
1953 ②	8.0-1	45	165 at 3600 RPM
1954 ①	8.25-1	48	170 at 4000 RPM
1954 ②	8.25-1	48	185 at 4000 RPM

①—DeLuxe 88.
②—Super 88 & 98.

Compression & Vacuum Reading—*See TUNE-UP.*

CYLINDER HEAD: *See Oldsmobile Special Data.*

TIGHTENING TORQUES: *See Oldsmobile Special Data.*

OIL PAN REMOVAL: *See Oldsmobile Special Data.*

ENGINE FRONT MOUNT INSTALLATION: *See Oldsmobile Special Data.*

PISTONS

Aluminum alloy, three ring, autothermic, steel strut, slipper skirt, cam ground, tin plated.
Length—4". **Weight**—20.46 ozs. (1953); 21.7 ozs. (1954).
Removal—Pistons and rods removed from above.

►*CAUTION:* Mark pistons, rods, and bearing caps with cylinder number before removal to insure correct reinstallation.

Fitting New Pistons: .0005-.0010" skirt clearance, measured 1/8" from bottom of skirt with piston pin removed. Use a .0015" x 1/2" x 12" feeler between piston (pin removed) and cylinder wall at right angles to pin. Pull to withdraw feeler should be 10-18 lbs.

►*CAUTION: Allow rebored cylinders to cool to normal room temperature before fitting pistons.*

Replacement Pistons: Standard & .020", .030" Oversize. Pistons furnished only with fitted pins.

Installing Pistons: Mark "F" cast on each side of piston pin hole on front side of piston. Install pistons 1, 3, 5, 7 in left bank, 2, 4, 6, 8 in right bank with letter "F" toward front on all pistons.

PISTON PINS

Floating type with lock rings at each end.

►*CAUTION: Discard old lock rings and install new service type lock rings when installing pins.*

Diameter—.9803-.9807". **Length**—3.016" (1953); 3 9/64" (1954).
Clearance in Piston—.0000-.0002".
Pin Fit in Piston—Pin should not fall through piston of own weight. Pin can be tapped in place using brass drift.
Pin Fit in Rod Bushing—.0003-.0005" loose.
Replacement Pins: Standard size, and .001", .003" Oversize.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr. (#1 & 2)	.077-.078"	Ⓒ	.001-.003"
Oil (#3)	1.860-1.865"	Ⓒ	.0018-.0033"

Ⓒ—Perfect Circle .010-.020". Sealed Power .008-.016".

Replacement Rings: Standard size, .020", .030"Oversize.

Installing Rings: Compression rings with step on inner edge UP. Oil rings marked TOP, installed with mark up.

CONNECTING RODS

Length—6 5/8" (Center to center). **Weight**—29.54 ozs.
Crankpin Journal Diameter—2.2488-2.2498".
Out of Round Limit—.0015".

Bearings—Durex 100A, steel backed, full precision type. Both halves interchangeable. No shims.
Clearance—.0009-.0029".

Sideplay—.002-.011" (total for both rods).

Replacement Bearings: Standard size, .002", .010", .020" Undersize.

Installing Rods: *CAUTION*—Rods have plain side and boss side (two machined bosses at lower end). Install rods **1, 3, 5, 7 with plain side to front, and 2, 4, 6, 8 with boss side to front** (*NOTE*—Pistons marked "F" on front side). Caps offset and cannot be installed incorrectly. Groove on rod and cap, and pads for numbering caps and rods are on same side.

►*CAUTION—Use Guide tool BT-22 over rod bolts to prevent damaging crankpin journals when removing and installing piston and rod assemblies.*

NOTE—Oil spit hole for lubrication of opposite cylinder wall provided in rod above cap joint.

CRANKSHAFT

Journal Diameter—#1, 2, 3, 4 2.498-2.499"; #5 2.623-2.624".
Bearings—Durex 100A, steel backed, full precision type. Rear bearing flanged.
Clearance—.0005-.002" (Front—See Note below), .002-.0035" (Rear - See Note below), .0005-.003" (Others).

►*FRONT BEARING NOTE:* Beginning with Car Serial V52229 a selective fit front bearing entered production. **On Cars with Power Steering or Air-conditioning it is very important that front bearing fit be held as close to minimum as possible because of the increased pump drive and compressor drive belt load.** Bearing Part No. 565770 (Marked "M" on tang) will reduce bearing clearance .0005". Bearing Part No. 565771 (marked "H" on tang) will reduce bearing clearance .001". These bearings are in addition to regular replacement bearings.

►*REAR BEARING NOTE:* Rear bearings are selective fit during manufacture, 3 sizes used: "M" Medium, "T" Thin, "H" heavy. **Use same size bearing (indicated by letter on tang) when replacing bearing.**

Replacement Bearings: Standard size, .002", .010", .020" Undersize. In addition to lettered bearings used at front and rear. *See Front & Rear Bearing Notes above.*

End Thrust: Taken by rear (#5) flanged bearing.
Endplay—.004-.008"

Crankshaft Front Oil Seal & Rear Main Bearing Oil Seal Installation: *See "Crankshaft & Main Bearings" in Oldsmobile Special Data.*

Flywheel & Clutch Housing Alignment: *See "Flywheel Housing" in Oldsmobile Special Data.*

CAMSHAFT

Journal Diameters—1.8724-1.8729".
Bearings—Steel backed babbitt.
Clearance—.0014-.0036".

End Thrust: Forward thrust taken by plunger and spring on front of engine, rear thrust at front of cylinder block.

►*CAUTION:* Two main oil gallery holes in block sealed by hex head bolt. A small hole in bolt for right hand gallery provides lubrication to timing chain, fuel pump eccentric and lever.

Camshaft Removal & Installation: *See "Camshaft" in Oldsmobile Special Data.*

Timing Chain:	Link-Belt (Std.)	Morse (Optl.)
Width	.27/32"	7/8"
Pitch	.500"	.375"
Length (Links)	48	64

►*NOTE—Morse and Link-Belt chains not interchangeable unless sprockets also changed.*

Engine Front Cover—*See "Engine Front Cover" in Oldsmobile Special Data.*

Camshaft Setting: Mesh chain with sprocket marks adjacent and in line with a straight edge across shaft centers (or use Tool BT-11).

NOTE—Fuel pump eccentric bolted to front of camshaft ahead of sprocket. Assemble with "O" mark to front, machined step against sprocket.

VALVES

Tappet Clearance: None in service (hydraulic).

Valve	Head Diam.	Stem Diam.	Length
Intake	1¾"	.3417-.3425"	4.907-4.927"
Exhaust	1.432-1.442"	.3930-.3938"	4.931-4.951"

Valve	Angle	Lift	Clearance
Intake	45°	.366"	.0022-.0040"
Exhaust	45°	.366"	.0027-.0045"

Valve Seat Width—.042-.071" (Intake), .070-.098" (Exhaust).

Intake & Exhaust Valve Stem Seals—Installed in second groove from end of valve stem between lock retainer and valve stem. When servicing valves always use new seals.

Valve Springs: Intake and exhaust valve springs are alike. Dampeners used on lower end of all valve springs.
Valve Spring Free Length—2.33".

Valve Spring Specifications

Valve	Pressure	Length
Closed	85-95 lbs.	1.829"
Open	149-163 lbs.	1.463"

►*CAUTION—Lower end of dampener and spring must seat in recess in head.*

Valve Guides: Intake guides tapered on lower end. Press guides in head until top of guide is 47/64" (.7344") above face of valve spring seat (Tool J-5158 positions guides correctly in head). Ream inside diameter of guide after installation to .3447-.3457 (Intake), .3965-.3975" (Exhaust).

Hydraulic Valve Lifters: Barrel type.

►*HYDRAULIC LIFTER INSTALLATION CAUTION:* FIVE different sizes used in production as follows (marked as indicated): Standard (unmarked), .001" O.S. (marked "1"), .002" O.S. (marked "2"), .003" O.S. (marked "3"), .005" O.S. (marked "5"). **Lifters** marked by etched number on lifter body, **Cylinder Block** marked by number on rail under engine top cover. *Reinstall lifter in same hole or replace with proper size.*

Diameter—.8424-.8427". **Length**—2" (Overall).
Clearance in Block—.0005-.0018" (Selective).

Replacement Lifters: Standard size, .001", .002", .003", .005" Oversize.

Lifter Overhaul & Testing—*See "Hydraulic Lifters" in Oldsmobile Special Data.*

Rocker Arm Assembly: *See "Valve System" in Oldsmobile Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.
Intake Valves—Open 13½° BTDC. Close 50½° ALDC.
Exhaust Valves—Open 49½° BLDC. Close 14½° ATDC.

Valve Timing Check—Remove left hand cylinder head rocker arm assembly and rotate engine so that #1 piston is on top dead center (firing stroke). Trailing edge of notch in vibration dampener will be aligned with pointer on timing chain cover. Install tool J-5374 in place of rear rocker shaft bracket with step plunger over #7 cylinder exhaust push rod. The 7/16" diameter pilot at bottom of tool will fit into cylinder head bolt hole. Screw main body of gauge down so step plunger contacts push rod and small diameter of step plunger is flush with top of main body. Tighten clamp bolt. Rotate engine one complete revolution so that #1 piston is again at TDC (intake stroke). Distributor rotor should now be pointing toward rear of engine. If timing chain is installed properly, top of tool plunger will rise so top of main body of tool is between second and third step. If camshaft is retarded one tooth, the third step will rise above top of main body, and if advanced one tooth, second step will be below main body.

OILING SYSTEM

Crankcase Capacity: 5 qts. (refill). 6 qts. (dry).
NOTE—1 qt. additional for dry filter.

Normal Oil Pressure: 35-45 lbs. at 50 MPH.
Pressure Regulator Valve—In pump body. Not adjustable.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Oil Pressure Gauge—AC No. 1507940 (1953); No. 1508118 (1954). Not electrical.

Oil Pump: Gear type. In crankcase at rear end.
Pump Overhaul—*See "Oil Pump" in Oldsmobile Special Data.*

Oil Filter: AC No. PM-90-3 full flow type (optional). On lower right side of crankcase at rear.
Replacement Filter Element—AC No. PF-122.

►*CAUTION*—If filter (or pad cover if filter not used) is replaced, used a new gasket (coat both sides with POB No. 5 Sealer) and tighten bolts to 35-40 ft. lbs. Oil filter or pad mounted externally on lower right side of crankcase at rear. Oil filter is full flow type (all oil from pump delivered to oil filter) requires pad when filter not used to return oil to main oil gallery.

Crankcase Ventilation: Air intake in oil filler cap has oil-wetted cleaner, AC No. 1551091 (Std.), No. 1551509 (Heavy Duty). Outlet is connected to ventilating baffle at rear of block above right bank. Outlet pipe is push fit at ventilator and extends down below right rear corner of engine.
NOTE—Tail pipe breather, AC No. 1551075 used on cars with oil bath air cleaner and heavy duty inlet breather in oil filler cap.

COOLING

Water Capacity: (With Heater)—22½ qts. (1953); 21½ qts. (1954). **(Without Heater)**—21½ qts. (1953); 20½ qts. (1954)

Pressure Valve: AC No. 850549 Radiator Filler Cap (stamped 549/7#).

Thermostat: Oldsmobile No. 563219 (160°). NOTE—use No. 563311 (180°) with permanent type anti-freeze.

Water Pump: Packless, sealed ball bearing type.
See "Oldsmobile" in Water Pump Section.
Pump Removal—Remove fan and fan pulley. Remove six mounting bolts (4 to engine cover, 2 to engine block). Remove pump. *NOTE*—When installing pump, coat one side of pump housing gasket with gasket cement, dip bolts in CP No. 9 Sealer.

Temperature Gauge: *12 Volt.* AC Electric. *CAUTION*—Use only 12 Volt type units which are stamped "12 Volt" on threaded side of block unit below nut hex. Later type 12 volt block units also have a copper colored terminal. 6 volt units have a natural brass terminal.
Dash Unit—AC No. 1512598 (1953); 1512810 (1954).
Engine Unit—AC No. 1512678.
See "Temperature Gauges" in Miscellaneous Section.

CLUTCH

Long 11CF-11 TJ. Single plate dry disc type.
See "Long Clutches" in Clutch Section.

Clutch Disc No.—Oldsmobile No. 562395 (1953); 565059 (1954).

Pedal Adjustment: Pedal free travel 1 1/8-1 3/8". Adjust by turning adjusting nut on clutch connector link at throw-out yoke.

Removal: Remove transmission (see Transmission), remove right and left splash pans, engine breather pipe, and right and left lower flywheel housing bolts. Install Engine Rear Support Tool BT-28, entering pilot supports into lower housing bolt holes. Remove engine rear mount bolts at clutch housing, and remove frame cross member by removing three bolts at each end. Remove clutch housing by removing eight bolts holding housing to flywheel housing. Remove clutch assembly from flywheel.

Clutch Housing Alignment: *See "Flywheel Housing" in Oldsmobile Special Data.*

SYNCHRO-MESH TRANSMISSION

Own. Constant mesh, synchro-mesh (second & high), sliding gear (low & reverse) all helical gear type. *See "Oldsmobile Synchro-mesh" in Transmission Section.*

►*TRANSMISSION LEAKAGE CORRECTION: See "Oldsmobile Synchro-mesh" in Transmission Section.*

Transmission Control: *See "Transmission Controls" in Transmission Section.*

Removal: Drain transmission and disconnect manual control rods and speedometer cable at transmission. Remove clutch return spring and disconnect clutch linkage at yoke connecting link. Detach drive shaft at rear universal joint, and slide shaft from transmission. Remove transmission.

DYNAFLOW DRIVE

►*FOR 1953 CARS WITH "TWIN-TURBINE DYNAFLOW DRIVE": See "Buick Dynaflow Drive" in Transmission Section.*

HYDRA-MATIC DRIVE

"Dual-Range" four speed automatic transmission and fluid coupling.

►*NOISE IN LIGHT THROTTLE REVERSE OPERATION CORRECTION: See "Hydra-Matic Drive" in Transmission Section.*

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Hydra-Matic Drive" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Hydra-Matic Drive" in Transmission Section.*

Lubrication—Check fluid level every 1000 miles. Drain & Refill every 25,000 miles. Use only GM Hydra-Matic Drive Fluid.

Checking Fluid Level—Set hand brake, let engine idle and move selector lever to "Lo" position. Raise engine Raise engine hood and remove dipstick located at right rear side of engine, wipe dry. With engine idling, replace dipstick, and remove quickly to check fluid level. Add GM Hydra-Matic Drive Fluid to bring level to "FULL" mark.

►*CAUTION—DO NOT FILL ABOVE "FULL" MARK.*

Hydra-Matic Indicator: Lights on instrument panel indicate position of Hydra-Matic selector lever. Unit consists of three coils in sealed unit operating five lights on instrument panel. Coils are energized by by movement of Hydra-Matic Neutral Safety and Indicator Switch which is connected to Hydra-Matic linkage.

Checking Indicator Unit—Disconnect all three leads from unit. Connect jumper wire from hot side of ignition switch to #1 terminal on unit; "N" should light. Connected to #2 terminal; "S" should light. Connected to to #3 terminal; "R" should light. If indicator does not indicate correctly, replace unit.

►*OTHER HYDRA-MATIC SERVICE DATA: See "Hydra-Matic Drive" in Transmission Section.*

UNIVERSALS

Mechanics. Roller bearing type.

►*CAUTION*—Rear universal companion flange nut controls rear axle pinion bearing pre-load (must be adjusted whenever nut loosened) *See "Oldsmobile Hypoid" in Rear Axle Section.*

REAR AXLE

Own. Hypoid gear, semi-floating with Hotchkiss drive. *See "Oldsmobile Hypoid" in Rear Axle Section.*

Axle Ratios

Ratio	①Code
3.07-1 (40:13)	0
3.9-1 (39:10)	4
3.64-1 (40:11)	6
3.42-1 (41:12)	8
3.23-1 (42:13)	9

①—Rear axle ratio code number stamped on lower locating boss on forward side of carrier.

Backlash—.004-.006". Screw adjustment.

Axle Shaft Removal: Remove wheel and take off brake drum by removing two Tinnerman nuts from wheel studs (if nuts removed by turning off threads they can be reused, if nuts damaged, new nuts must be used). Remove backing plate mounting nuts and static collector. Loosen bearing retainer (do not move backing plate or brake line may be damaged). Pull shaft and bearing with Puller J-942 (do not allow shaft to drag on oil seal), replace one nut to hold backing plate in position.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Differential Carrier Assembly Removal: Remove axle shafts (see above). Clean differential carrier and axle housing around carrier to prevent dirt entering housing. Disconnect propeller shaft at rear universal joint after having wired trunnion blocks together to avoid loss of rollers. Mark universal joint so it can be replaced in the same position. Drain oil by removing nuts from carrier mounting studs and moving carrier away from housing.

CAUTION– Do not wash exterior of carrier until differential has been disassembled.

Wheel Bearing Adjustment: None required. Bearings are built with .012-.015" endplay between balls. Check endplay before removing axle shaft and if endplay greater than .020", replace bearings. *CAUTION–* If bearings removed from shaft, they cannot be reused.

SHOCK ABSORBERS

Delco. Double Acting used on front. **Direct Acting** used on rear.

Front Shock Absorbers ①

Model	Right	Left
1953 Series 88	5518436	5518437
1953 Series 98②	5513733	5513734
1953 Series 98 Hol. Cpe.	5519053	5519054
1953 Series 98 Fiesta	5513987	5513988
1954 Series 88③	5511190	5511191
1954 Series 98	5513733	5513734

①—Oldsmobile Part Numbers.
②—Except Holiday Coupe & Fiesta.
③—Except Air Conditioned Cars.

Rear Shock Absorbers

Model	Oldsmobile Part No.
1953 Series 88 (Exc. Conv)	5518438
1953 Super 88 Conv.	5518439
1953 Series 98 (Exc. Conv. &.Air. Cond.)	5518439
1953 Series 98 Conv. (Exc. Fiesta)	5325689
1953 Series 98 Fiesta (Early)	5383754
1953 Series 98 Fiesta (Late)	5325689
1953 Series 98 (with Air Cond.)	5518438
1954 Series 88	5511192
1954 Series 98 (Exc. Conv.)	5519693

►*SHOCK ABSORBER LUBRICATION NOTE–*(Front) Check fluid level every 10,000 miles and replenish with Delco Shock Absorber Fluid. (Rear) Not serviced.

FRONT SUSPENSION

Independent. Double acting shock absorber directly connected to steering knuckle support and forms upper control arm.
See "Oldsmobile" in Front Suspension Section.

►*STEERING TIE-ROD STRIKING OIL PAN CORRECTION:* To prevent tie-rod from striking oil pan on extreme turns, place a 7/16" flat washer under head of wheel stop bolt on steering knuckle support so that stop bolt protrudes a minimum of 1". If this does not provide at least 1/8" clearance between tie-rod and pan, reform the pan slightly as necessary. *CAUTION– Be very careful not to puncture oil pan.*

Kingpin Inclination–4°55'13" (1953); 5°51'10" (1954).

Caster– 0° to Neg. ¾°. Variation between both sides should not exceed ½°.

Camber–Neg. ¾° to Pos. ¾°. Variation between both sides should not exceed ½°.

Toe-In–1/16" to 1/8".
Toe-Out on Turns–23°±½°-on-inner-wheel-with-outer wheel turned 20°.

STEERING

Manual: Saginaw Ball Bearing Worm & Nut. Recirculating ball worm & nut.
See "Saginaw Ball Bearing Worm & Nut" in Steering Section.

Power Steering: Saginaw (GM) Hydraulic. Recirculating ball nut and worm type plus extended pitman shaft with gear sector in mesh with power rack. Power rack pinned to piston rod of hydraulic power cylinder.
See "Saginaw (GM) Power Steering" in Steering Section.

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

BRAKES

►*1954 PARKING BRAKE CABLE PRODUCTION CHANGE & ADJUSTMENT CAUTION:* Early 1954 type parking brake rear cables are longer, and front cables are shorter. It is necessary when adjusting the first types that threaded part of rear cables do not protrude into clevis more than ¾". Front cable threaded part should be installed all the way through the clevis. Later type cables have been adjusted for length and do not require the above precautions.

►*1953 POWER BRAKE SOLENOID CHECK VALVE ADJUSTMENT:* This solenoid valve used to conserve the reserve tank vacuum supply is controlled by the brake pedal (consolidated with stop light switch) and requires adjustment. *See "Bendix Power Unit" in Brake Section.*

Bendix Hydraulic (Single Anchor). Conventional two shoe with short molded lining front (Primary), and long molded lining rear (Secondary). Parking brake applies rear wheel service brakes.
See "Bendix Hydraulic" in Brake Section.
Drums–Diameter 11". Rebore limits .060".

Wheel Cylinder Diameter–Front 1 1/32" (1953-54); Rear 15/16" (1953), 31/32" (1954).
Lining–Molded. **Width**–2½" (front wheels). 2" (rear wheels). **Thickness**–3/16" (1953); 7/32" (1954).
Braking Power–**(1953)**–58% (front), 42% (rear). **(1954)** –56% (front), 44% (rear).

Clearance–Heavy drag and back off 16 notches.

Standard Master Cylinder: On left chassis frame front extension under hood.

Checking Fluid–Fluid reservoir is part of master cylinder. Maintain fluid level to top of reservoir.
Removal–Remove from above. Not necessary to disturb other parts.

Power Brakes: Bendix Vacuum Power Unit (combination vacuum power unit and hydraulic master cylinder). Unit mounted on underside of toe-board and replaces regular master cylinder.
See "Bendix Power Unit" in Brake Section.
Checking Fluid–Same as for standard master cylinder.

Removal of Power Unit–Disconnect hydraulic line at master cylinder and secure hose so that end is above level of junction assembly. Disconnect vacuum hoses hoses at power cylinder, and remove dipstick. Disconnect leads from stop light switch and fold back floor mat. Remove three brake pedal bracket attaching bolts and remove pedal and bracket. Remove mast jacket grommet retainer and slide grommet up mast jacket. Remove mast jacket cover plate attaching screws, cover plate and power cylinder assembly. Remove two cover plate-to-power cylinder bolts and remove cover plate.

MISC. MECHANICAL

Windshield Wipers: Cable operated Vacuum type. *See "Windshield Wipers" in Miscellaneous Section.*

Air Conditioning: Frigidaire type with solenoid controlled compressor clutch (compressor) operates only with air-conditioning switch turned on. *See "Frigidaire Air-Conditioning" in Miscellaneous Section.*

Window Regulators: Two systems used:
(1) Electric–Reversible motor in each window.
(2) Hydro-Lectric–Window raised hydraulically, lowered by return spring. *See Miscellaneous Section for types and Model application.*

Power Top Control: Hydro-Lectric. *See "Power Top Controls" in Miscellaneous Section.*

Power Seat Adjusters: Two systems used:
(1) Electric–Individual reversible motor for vertical and horizontal adjustment.
(2) Hydro-Lectric–Individual cylinder for vertical and horizontal adjustment. *See Miscellaneous Section for types and Model application.*

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

MODEL IDENTIFICATION

SERIAL NUMBERS: On left body pillar post.
Starting Serial Number–1001.

►*SERIAL NUMBER NOTE: Complete serial number (example 557M 1001) includes following identification data in sequence.*

Year	Series①	Assy. Plant②	Serial No.
55	7	M	1001

①–Series Designation: 7(88 Series), 8(Super 88 Series), 9 (98 Series).

②–See Assembly Plant Designation following.

Assembly Plant Designation

M–Lansing	L–Linden
A–Atlanta	C–South Gate
B–Framingham	W–Wilmington
K–Kansas City	T–Arlington

ENGINE NUMBER: Stamped on machined pad located on top of left hand cylinder bank of block. The number can be observed between the front and center exhaust manifold ports.
Starting Engine Number–V400001.

TUNE-UP

COMPRESSION PRESSURE: 100 lbs., minimum at cranking speed. Reading on low cylinders should not be less than 80% of high cylinder.

VACUUM READING: Steady 17" minimum at idling speed.

VALVE TAPPET CLEARANCE: None in service (hydraulic).

MANIFOLD HEAT CONTROL: Thermostatic coil type located on left side between exhaust manifold and exhaust pipe. Stop spring should strike stop before counter-weight touches pin to prevent valve rattle when cold.

IGNITION

►*IGNITION SECONDARY WIRING NOTE: Resistance type wires used. Center conductor is graphite impregnated nylon making it necessary to use only pre-cut assemblies for replacement. Distributor rotor does not have a resistance unit.*

FIRING ORDER: 1-8-7-3-6-5-4-2.
Cylinders–RIGHT BANK 2-4-6-8, LEFT BANK 1-3-5-7.

SPARK PLUG GAP: .030".
Spark Plugs–AC No.44-5.14mm. Torque to 23-28 ft. lbs.

COIL: Delco-Remy 1115082. *12 Volt.*
Ignition Current–2.0 amperes idling. 4.5 stopped.
Resistor–Delco-Remy 1928016. On bracket adjacent to ignition coil.

►*COIL RESISTOR NOTE: Resistor is connected in lead from ignition switch-to-coil. This resistor is by-passed during cranking by a lead from starter solenoid-to-coil.*

DISTRIBUTOR: Delco-Remy 1110850.
Condenser–Delco-Remy 1869704. **Capacity** .18-.23 mfd.
Contact Point Set–Delco-Remy 1918148.
Breaker Gap–.016" (.012-.0175").
Cam Angle–26-33° (with .016" gap).

►*BREAKER GAP CAUTION:* Manufacturer recommends final check with feeler gauge or dial indicator if dwell meter used to set gap.
Breaker Arm Spring Tension–19-23 ozs.
Rotation–Counter-clockwise viewed from above.

Automatic Advance

Degrees	Distr. RPM	Degrees	Eng. RPM
0-2	400	0-4	800
7.5-9.5	1000	15-19	2000
11-13	1450	22-26	2900
13-15	1725	26-30	3450

Vacuum Spark Control: Delco-Remy 1116059.
Plunger Travel–7/32-15/64".

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	4.5-6-5
10	20	16-17

►*DISTRIBUTOR INSTALLATION CAUTION:* Before installing distributor, make certain that crankshaft is turned to No. 1 firing position (see Ignition Timing following). Install distributor with flat on distributor gear in line with flat on oil pump shaft, push distributor down just enough to engage gear with shaft but do not push distributor all the way down. Turn rotor so that it is in line with No. 8 terminal in distributor cap (in line with breaker terminal on housing), push distributor all the way down. *NOTE*–Rotor will turn to No. 1 spark plug terminal position as gears are meshed. Install and tighten distributor hold-down clamp.

IGNITION TIMING

Setting–5° BTDC, with engine idling at 850 RPM and vacuum line to distributor disconnected and carburetor opening taped closed.

►*DETONATION CAUTION: If engine detonates (due to low octane fuel or carbon build-up) set timing to 2½° BTDC. For high altitude operation, timing can be adjusted to 7½° BTDC, if detonation does not occur.*
Timing Mark–Slot in rim of crankshaft pulley and pointer on front cover. Leading edge of slot is 5° BTDC. Trailing edge is TDC. Midway between these points is 2½° BTDC.

CARBURETOR

►*CARBURETOR APPLICATION: Rochester 2GC 2-Barrel used on 88 Series, Carter WCFB or Rochester 4GC 4-Barrel used on Super 88 & 98 Series.*

►*IDLE ADJUSTMENT NOTE:* A new "Split Throttle" lever permits idle speed adjustment after Hydra-Matic Throttle Linkage adjustment made (without affecting that adjustment).

►*AIR-CONDITIONED CAR IDLE ADJUSTMENT CAUTION: For Summer operation, set idle speed with Air Conditioner turned "ON". For Winter operation, set idle speed with Air Conditioner turned "OFF".*

THROTTLE LINKAGE ADJUSTMENT (2 & 4-BARREL CARBURETORS): 1) Remove throttle rod from transmission throttle lever and move throttle lever to rear against its stop, and with Throttle Lever Gauge J-5605 placed flat against rear face of transmission case, rod on gauge should just enter hole in throttle lever. The distance from rear face of transmission case to hole in throttle lever should be 6¾". Adjust by bending lever with tool J-2029. Attach throttle rod to transmission lever.

►*THROTTLE LEVER PRODUCTION CHANGE (Requiring the reworking of Throttle Lever Bending Tool J-2029):* The present forged type throttle and manual levers on transmission are being replaced with pressed steel levers. The new pressed steel manual lever can be used for 1954 & 1955 models. The new pressed steel throttle lever can be used only on 1955 models after transmission Serial No. R55-76159.

►*THROTTLE LEVER BENDING TOOL REWORK (For use with Later Type Pressed Steel Levers):* With movable lever of tool held upward, grind off 1/8" from lower side of top support pin (flush with side of tool).
2) Apply hand brake and allow engine to warm up. Place throttle lever in "Dr" position and adjust engine idle speed to 400 RPM. Turn engine off. Disconnect upper throttle rod from engine bell crank. Check clearance between end of intermediate throttle rod assembly and dash. This distance should be 5/16" to 3/8" with carburetor on slow idle. Adjust intermediate throttle rod assembly as necessary to obtain specified clearance (NOTE–on 4-Barrel carburetors, open side of rod should face away from center of engine, and toward center of engine on 2-Barrel carburetors).
3) Loosen jam nut and remove pin from lower throttle rod at throttle bellcrank, and with bellcrank against its stop and intermediate throttle rod against its stop, the clevis pin should enter holes in clevis of lower throttle rod and hole in throttle bellcrank freely. Adjust clevis on end of lower throttle rod so pin enters hole freely. *CAUTION–Do not shorten or lengthen rod after this setting obtained.*
4) With upper throttle rod assembly held rearward with light pressure to remove lash, the clevis pin should just touch gauge point on throttle bellcrank (gauge point is curved projection above clevis pin hole in bellcrank). Adjust by rotating clevis so clevis pin just touches, or is within ½ turn short of gauge point. Replace clevis pin and tighten jam nut.
5) Hold choke completely open and move upper throttle rod assembly forward until throttle is wide open. Continue pushing upper throttle rod until transmission throttle lever just stops at its forward position (repeat this operation several times until the exact forward position is distinctly felt). Do not force linkage beyond this point. With linkage in this position there should be zero clearance between throttle bellcrank stopscrew and downshift lever. With linkage held forward as outlined, loosen locknut on setscrew and adjust setscrew until it just contacts downshift lever. Release lever and tighten jam nut.
6) Place a wood block 3 7/8" long on top center of floor mat retainer and bring bottom of accelerator pedal down to rest on block. With carburetor in slow idle position (choke completely off) pedal should just touch gauge block. If necessary adjust accelerator position by disconnecting accelerator pedal rod from accelerator bellcrank on dash, and adjust accelerator pedal rod so that clevis just slides over pin with wood block in position and carburetor on slow idle. Reassemble rod, making sure open side of rod end is facing away from center of engine. Remove wood block.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

ROCHESTER 2GC

Rochester No. 7006970 (Synchro-mesh & Hydra-Matic).

►*MANIFOLD FUEL DISTRIBUTION:* Carburetor RIGHT barrel feeds Cyl. 1-4-6-7, LEFT barrel 2-3-5-8.

Idle Setting—Initial setting for both screws 1½ turns open. With engine at operating temperature, turn each adjusting screw in or out for smoothest possible idle (highest vacuum and RPM), then turn each screw out (rich) ¼ turn. *NOTE*—If engine rolls from richness when throttle snapped closed, turn each screw in 1/8 turn.

Idle Speed—(Synchro-mesh)—425 RPM. (Hydra-Matic)—400 RPM, with selector lever in "Dr" range. *For "Idle Speed Setting" on Air Conditioned Cars, see "Carburetor" above.*

Float Level—1 9/32" from air-horn gasket to top of float with assembly inverted. Use Gauge J-5917 so it rests against power piston shaft with outer leg in line with center of float. Adjust by bending float arm between pivot and float.

Float Drop—1 29/32" between air-horn gasket and lowest point on bottom of float. Adjust by bending float tang toward float needle seat to lessen drop and away from seat to increase drop.

Fast Idle: 1400-1500 RPM with fast idle screw on high step of fast idle cam. Adjust screw as necessary to obtain the correct engine RPM.

Automatic Choke Setting: Centered (at index).

►*OTHER DATA: See "Rochester 2GC Carburetor" in Carburetor Section.*

Hydra-Matic Throttle Linkage Adjustment: *See "CARBURETOR" above.*

Fuel Pump Pressure: 4-5 lbs. (16" above outlet at 1800 RPM).

CARTER WCFB

Carter No. 2246S. Downdraft type with automatic choke.

►*MANIFOLD FUEL DISTRIBUTION:* Carburetor RIGHT barrels feed Cyl. 1-4-6-7, LEFT barrels 2-3-5-8.

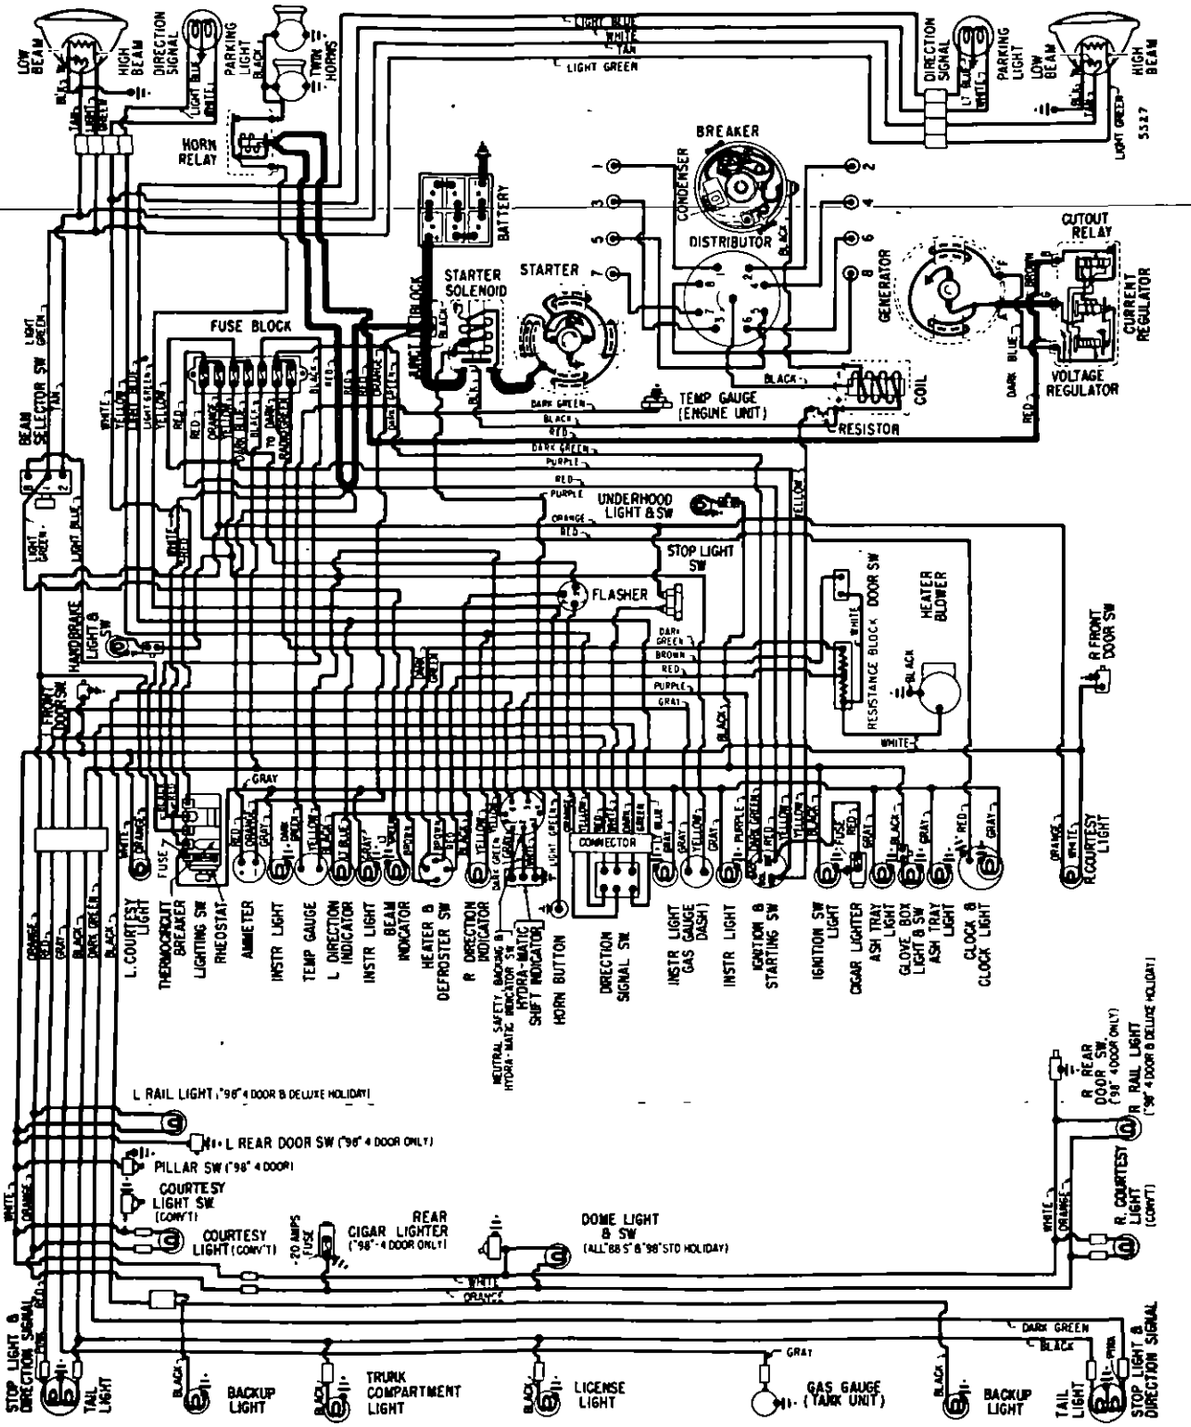
Idle Setting—With engine at operating temperature, set idle speed (see below), turn each screw in or out for smoothest possible idle (highest vacuum and RPM), then turn each screw out (rich) ¼ turn. NOTE—If engine rolls from richness when throttle snapped closed, turn each screw in (lean) 1/8 turn.

Idle Speed—(Synchro-mesh) 425 RPM, (Hydra-Matic) 400 RPM with selector lever in either "Dr" position. *For "Idle Speed Setting" on Air Conditioned Cars, see "Carburetor" above.*

►*OTHER DATA: See "Carter WCFB Carburetor" in in Carburetor Section.*

Hydra-Matic Throttle Linkage Adjustment: *See "CARBURETOR" above.*

Fuel Pump Pressure: 4-5 lbs. (16" above outlet at 1800 RPM).



ROCHESTER 4GC

Rochester No. 7006000 (Synchro-mesh Cars), 7007000 (Hydra-Matic Drive Cars).

►*MANIFOLD FUEL DISTRIBUTION:* Carburetor RIGHT barrels feed Cyl. 1-4-6-7, LEFT barrels 2-3-5-8.

Idle Setting—With engine at operating temperature, set idle speed (see below), turn each screw in or out for smoothest possible idle (highest vacuum and RPM),

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

then turn each screw out (rich) ¼ turn. *NOTE*–If engine rolls from richness when throttle snapped closed, turn each screw in (lean) 1/8 turn.

Idle Speed–(Synchro-mesh) 425 RPM, (Hydra-Matic) 400 RPM with selector lever in either "Dr" range. *For "Idle Speed Setting" on Air Conditioned Cars, see "Carburetor" above.*

▷*OTHER DATA: See "Rochester 4GC Carburetor" in Carburetor Section.*

Hydra-Matic Throttle Linkage Adjustment: *See "CARBURETOR" above.*

Fuel Pump Pressure: 4-5 lbs. (16" above outlet at 1800 RPM).

CARB. EQUIPMENT

Fuel Pump: AC Replacement No. 4148. Fuel & Vacuum. **Pressure**–4-5 lbs. at 16" above outlet at 1800 RPM. *See "Fuel Pumps" in Carburetion Equipment Section.*

Gasoline Gauge: AC Electric Type. *NOTE–Gasoline Gauge tank outlet tube is part of gauge tank unit and is equipped with a saran filter.*

Dash Unit–AC No. 1517999.

Tank Unit–AC No. 1518134.

See "Fuel Gauges" in Carburetion Equipment Section.

BATTERY

Delco 3KM60. *12 volt,* 9 plate, 60 ampere hour capacity (20 hr. rate).

Battery Ground–Negative.

Engine Ground–Connected between engine and forward side of firewall.

STARTER

Delco-Remy 1107623. *12 Volt.* **Armature–1927343.**

Drive–Overrunning clutch (solenoid pinion shift).

Rotation–Counter-clockwise at commutator end.

Brush Spring Tension–30-40 ozs.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	3500	10.1	95
11 ft. lbs.	Lock	5.2	460

Starting Switch: Delco-Remy Solenoid 1119761 (no relay used) mounted on starter and controlled by combination Starter & Ignition Switch and Neutral Safety Switch. *NOTE–A Neutral Safety Switch is used on all models.*

See "Starter Controls" in Electrical Equipment Section.

▷*NEUTRAL SAFETY SWITCH REPLACEMENT CAUTION:* When replacing Neutral Safety Switch, Part No. 1998026 on 1955 model cars make sure that the replacement switch terminals are in the same location as the switch being replaced. The plastic plug used in 1955 carries the switch leads and is designed to fit the second type switch only. *NOTE*–The first type switch can be used providing the leads are removed from the plug and connected individually to the switch.

Synchro-Mesh Neutral Safety Switch: Delco-Remy 1998031 (Without Air Conditioning), Delco-Remy 1998094 (With Air Conditioning). Switch is controlled by transmission shift linkage, and allows starter to be operated only when transmission gear shift lever in "Neutral" position.

Adjustment–Place transmission in 2nd gear and adjust the Neutral Safety Switch so there is 1/16" clearance between switch arm and stop. Check to see that engine will not start with gearshift lever in any position except neutral.

Hydra-Matic Neutral Safety Switch: Delco-Remy 1998026 (Without Air Conditioning), Delco-Remy 1998093 (With Air Conditioning). Combination Neutral Safety Switch, Back-up Light Switch, and Hydra-Matic Indicator Switch.

Adjustment–*See "Hydra-Matic Drive" in Transmission Section.*

Hydra-Matic Indicator Switch: *See "Hydra-Matic Transmission" following for description of indicator unit.*

GENERATOR

Delco-Remy 1102003 (Std.), 1102021 (Air-Conditioned Cars). *12 Volt.*

Armature–Delco-Remy 1923535 (All Models).

Maximum Charging Rate–*See Voltage Regulator.*

Performance Data–Cold

Amperes	Volts	RPM
30①	14	2150

①–Not maximum. See Regulator.

Brush Spring Tension–24-32 ozs.

Field Current–1.48-1.62 amps at 12 volts.

Rotation–Counter-clockwise at commutator end.

Bolt Adjustment: Loosen generator attaching bolt and place Tool J-4170 against generator between bracket and generator housing. Attach torque wrench to tool to apply torque of 16 ft. lbs. Tighten generator attaching bolts while holding tension on wrench.

REGULATOR

Delco-Remy 1118826. *12 Volt. NOTE–Regulators are "1118825 Series". Specifications below are "Normal" settings.*

Cutout Relay

Cuts In–12.8 volts (hot).

Contact Gap–.020".

Air Gap–.020" (with contacts just closed).

Voltage Regulator

Setting–14.5 volts (hot).

Air Gap–.075" with armature pressed down to point where contacts just touching.

Checking & Adjusting–*See Electrical Equip. Section.*

Current Regulator

Setting–30 amperes (hot).

Air Gap–.075" with armature pressed down to point where contacts just touching.

Checking & Adjusting–*See Electrical Equip. Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Equip. Section.*

Autronic Eye: See "Autronic Eye" in Electrical Equipment Section.

▷*AUTRONIC EYE PRODUCTION CHANGE: See "Autronic Eye" in Electrical Equipment Section.*

Direction Signal: *See Electrical Equipment Section.*

Lighting Switch Removal: Disconnect battery cable and disconnect wires from lighting switch. Pull switch knob out to last notch then depress spring loaded latch button on switch body while pulling rod and knob assembly out of switch. Remove switch mounting nut and remove switch and escutcheon from instrument panel.

Stop Light Switch Location (Std. Brakes): Mechanical type on toe board near brake pedal.

Stop Light Switch Location (Power Brakes): Directly above brake pedal on firewall. Adjust so lights come on within free travel of brake pedal.

FUSES: All fuses (exc. Instrument Panel fuses) are located on a combination fuse and junction block under the instrument panel. A color code is used on the fuse panel corresponding to the color code of circuits protected by each fuse. The following fuses will be found on this panel:

(1) Clock (Std. on 98 Series only). 1 ampere.
(2) Courtesy Lights, Dome & Stop Lights, and Rear Cigar Lighter. 25 amperes.
(3) Fuel & Temp. Gauges, Hand Brake Signal Light, Hydra-Matic Shift Indicator, and Back-up Lights. 9 amperes.
(4) Turn Signal. 9 amperes.
(5) Glove Box, Underhood, Keyhole, Tail, Trunk, & Spot Lights. 9 amperes.
(6) Radio. 7.5 amperes.
(7) Heater & Air Conditioner. 20 amperes (without Air Conditioner), 25 amperes (with Air Conditioner).
(8) Electric Windows & Antenna. 20 amperes.
Instrument Panel Lights–2 amperes located on headlight switch.
Cigar Lighter–20 amperes located behind lighter.

CIRCUIT BREAKER: 22 amps. Located in headlamp switch.

HORNS: Delco-Remy 1999753 (Low Note). **1999754** (High Note). *12 Volt.*

Horn Relay: Delco-Remy 1116781. *12 Volt.*

Contacts Close–2.75-4.0 volts.

Contact Gap–.025". **Air Gap**–.015" (closed).

ENGINE

▷*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: 90° V8 with overhead valves.

Bore	Stroke	Displacement	Rated HP
3 7/8"	3 7/16"	324 cu. ins.	48

Engine	Compr. Ratio	Developed HP
Deluxe 88	8.5-1	185 at 4000 RPM
Super 88 & 98	8.5-1	202 at 4000 RPM

Compression & Vacuum Reading–*See Tune-Up.*

CYLINDER HEAD: *See Oldsmobile Special Data.*

INTAKE MANIFOLD INSTALLATION: *See "Cylinder Head & Manifolds" in Oldsmobile Special Data.*

TIGHTENING TORQUES: See *Oldsmobile Special Data.*

OIL PAN REMOVAL: *See Oldsmobile Special Data.*

ENGINE FRONT MOUNT INSTALLATION: *See Oldsmobile Special Data.*

PISTONS

Aluminum alloy, three ring, autothermic, steel strut, slipper skirt, cam ground, tin plated.

Length–4 1/32". **Weight**–21.7 ozs. (less rings & pin).

Removal–Pistons and rods removed from above.

▷*CAUTION:* Mark pistons, rods, and bearing caps with cylinder number before removal to insure correct reinstallation.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Fitting New Pistons: .0005-.0010" skirt clearance measured 1/8" from bottom of skirt with piston pin removed. Use a .0015" x 1/2" x 12" feeler between piston (pin removed) and cylinder wall at right angles to pin. Pull to withdraw feeler should be 5-12 lbs.

►*CAUTION: Allow rebored cylinders to cool to normal room temperature before fitting pistons.*

Replacement Pistons: Standard & .020", .030" Oversize. Pistons furnished only with fitted pins.

Installing Pistons: Mark "F" cast on each side of piston pin hole on front side of piston. Install pistons 1, 3, 5, 7 in left bank, 2, 4, 6, 8 in right bank with letter "F" toward front on all pistons.

PISTON PINS

Floating type with lock rings at each end.

►*CAUTION: Discard old lock rings and install new service type lock rings when installing pins.*

Diameter—.9803-.9807". **Length**—3 9/64".

Clearance in Piston—.0000-.0002" loose.

Pin Fit in Piston—Pin should not fall through piston of own weight when using the low limit (.0000" fit). Piston pin can be tapped in place using a brass drift.

Pin Fit in Rod Bushing—.0003-.0005" loose.

Replacement Pins: Standard size, and .001", .003" Oversize.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr. (#1 & 2)	.077-.078"	Ⓒ	.001-.003"
Oil (#3)	1.860-1.865"	Ⓒ	.0018-.0033"

Ⓒ—Perfect Circle .010-.020". Sealed Power .008-.016".

Replacement Rings: Standard size, .020"; .030" Oversize.

Installing Rings: Compression rings with step on inner edge UP. Oil rings marked TOP, installed with mark up.

CONNECTING RODS

Length—6 5/8" (Center to center). **Weight**—29.54 ozs.
Crankpin Journal Diameter—2.2488-2.2498".
Out of Round Limit—.0015".

Bearings—Durex 100A, steel backed, full precision type. Both halves interchangeable. No shims.
Clearance—.0009-.0029".

Sideplay—.002-.011" (total for both rods).

Replacement Bearings: Standard size, .002", .010", .020" Undersize.

Installing Rods: *CAUTION*—Rods have plain side and boss side (two machined bosses at lower end). Install rods **1, 3, 5, 7 with plain side to front, and 2, 4, 6, 8 with boss side to front** (*NOTE*—Pistons marked "F" on front side). Caps offset and cannot be installed incorrectly. Groove on rod and cap, and pads for numbering caps and rods are on same side.

►*CAUTION—Use Guide tool BT-22 over rod bolts to prevent damaging crankpin journals when removing and installing piston and rod assemblies.*

NOTE—Oil spit hole for lubrication of opposite cylinder wall provided in rod above cap joint.

CRANKSHAFT

Journal Diameter—#1, 2, 3, 4 2.498-2.499"; #5 2.623-2.624".

Bearings—Durex 100A, steel backed, full precision type. Rear bearing flanged.

Clearance—.0005-.002" (Front—See Note below), .002-.0035" (Rear - See Note below), .0005-.003" (Others).

►*FRONT MAIN BEARING NOTE: Selective fit bearing used. On cars with Power Steering or Air Conditioning* **it is very important that front bearing fit be held as close as possible because of the increased pump drive and compressor drive belt load.** Bearing Part No. 565770 (Marked "M" on tang) will reduce bearing clearance .0005". Bearing Part No. 564771 (marked *"H" on tang) will reduce bearing clearance .001".* These bearings are in addition to regular replacement bearings.

►*REAR BEARING NOTE:* Rear bearings are selective fit during manufacture, 3 sizes used: "M" Medium, "T" Thin, "H" heavy. **Use same size bearing (indicated by letter on tang) when replacing bearing.**

Replacement Bearings: Standard size, .002", .010", .020" Undersize. In addition to lettered bearings used at front and rear. *See Front & Rear Bearing Notes above.*

End Thrust: Taken by rear (#5) flanged bearing.

Endplay—.004-.008"

Crankshaft Rear Main Bearing Oil Seal Installation: *See "Crankshaft & Main Bearings" in Oldsmobile Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Oldsmobile Special Data.*

Flywheel & Clutch Housing Alignment: *See "Flywheel Housing" in Oldsmobile Special Data.*

CAMSHAFT

Journal Diameters—1.8724-1.8729".
Bearings—Steel backed babbitt.
Clearance—.0014-.0036".

End Thrust: Forward thrust taken by plunger and spring on front of engine, rear thrust at front of cylinder block.

►*CAUTION:* Two main oil gallery holes in block sealed by hex head bolt. A small hole in bolt for right hand gallery provides lubrication to timing chain, fuel pump eccentric and lever.

Camshaft Removal & Installation: *See "Camshaft" in Oldsmobile Special Data.*

Timing Chain:	Link-Belt (Std.)	Morse (Optl.)
Width	.27/32"	7/8"
Pitch	.500"	.375"
Length (Links)	48	C4

►*NOTE—Morse and Link-Belt chains not interchangeable unless sprockets also changed.*

Engine Front Cover Removal & Installation: *See "Engine Front Cover" in Oldsmobile Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front Seal) Installation: *See "Engine Front Cover" in Oldsmobile Special Data.*

Camshaft Setting: Mesh chain with sprocket marks adjacent and in line with a straight edge across shaft centers (or use Tool BT-11).

►*NOTE—Fuel pump eccentric bolted to front of camshaft ahead of sprocket. Assemble with "0" mark to front, machined step against sprocket.*

VALVES

►*INTAKE & EXHAUST VALVE AND SEAL PRODUCTION CHANGE: New valves used in production and for service replacement do not have the oil seal grooves, and valve stem is relieved below the head and at end of stem. A "Top Hat" type oil seal is used with this valve.*

Tappet Clearance: None in service (hydraulic).

Valve	Head Diam.	Stem Diam.	Length
Intake	1¾"	.3417-.3425"	4.965-4.985"
Exhaust	1.432-1.442"	.3930-.3938"	4.989-5.009"

Valve	Angle	Lift	Clearance
Intake	45°	.403"	.0022-.0040"
Exhaust	45°	.403"	.0027-.0045"

Valve Seat Width—.042-.071" (Intake), .070-.098" (Exhaust).

Intake & Exhaust Valve Stem Seals: First type seals are "O" ring type installed in second groove of valve. Later type valves (see Production Change Above) are a "Top Hat" type seal installed above valve spring. *NOTE*—"Top Hat" type seals can be used as service replacement on all 1953 and later engines.

Valve Springs: Intake and exhaust valve springs are alike. Dampeners used on lower end of all valve springs.
Valve Spring Free Length—2.33".

Valve Spring Specifications

Valve	Pressure	Length
Closed	85-95 lbs.	1.829"
Open	149-163 lbs.	1.463"

►*CAUTION—Lower end of dampener and spring must seat in recess in head.*

Valve Guides: Intake guides tapered on lower end. Press guides in head until top of guide is 47/64" (.7344") above face of valve spring seat (Tool J-5158 positions guides correctly in head). Ream inside diameter of guide after installation to .3447-.3457 (Intake), .3965-.3975" (Exhaust).

Hydraulic Valve Lifters: Barrel type.

►*HYDRAULIC LIFTER INSTALLATION CAUTION:* FIVE different sizes used in production as follows (marked as indicated): Standard (unmarked), .001" O.S. (marked "1"), .002" O.S. (marked "2"), .003" O.S. (marked "3"), .005" O.S. (marked "5"). **Lifters** marked by etched number on lifter body, **Cylinder Block** marked by number on rail under engine top cover. *Reinstall lifter in same hole or replace with proper size.*

Diameter—.8424-.8427". **Length**—2" (Overall).
Clearance in Block—.0005-.0018" (Selective).

Replacement Lifters: Standard size, .001", .002", .003", .005" Oversize.

Hydraulic Lifter Overhaul & Testing—*See "Valve System" in Oldsmobile Special Data.*

Rocker Arm Assembly: *See "Valve System" in Oldsmobile Special Data.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.
Intake Valves—Open 13½° BTDC. Close 50½° ALDC.
Exhaust Valves—Open 49½° BLDC. Close 14½° ATDC.

Valve Timing Check—Remove left hand cylinder head rocker arm assembly and rotate engine so that #1 piston is on top dead center (firing stroke). Trailing edge of notch in vibration dampener will be aligned with pointer on timing chain cover. Install tool J-5374 in place of rear rocker shaft bracket with step plunger over #7 cylinder exhaust push rod. The 7/16" diameter pilot at bottom of tool will fit into cylinder head bolt hole. Screw main body of gauge down so step plunger contacts push rod and small diameter of step plunger is flush with top of main body. Tighten clamp bolt. Rotate engine one complete revolution so that #1 piston is again at TDC (intake stroke). Distributor rotor should now be pointing toward rear of engine. If timing chain is installed properly, top of tool plunger will rise so top of main body of tool is between second and third step. If camshaft is retarded one tooth, the third step will rise above top of main body, and if advanced one tooth, second step will be below main body.

OILING SYSTEM

Crankcase Capacity: 5 qts. (refill). 6 qts. (dry).
NOTE– 1 qt. additional for dry filter.

Normal Oil Pressure: 35-45 lbs. at 50 MPH.
Pressure Regulator Valve—In pump body. Not adjustable.

Oil Pressure Indicator—AC No. 1508118. Not electrical.

Oil Pump: Gear type. In crankcase at rear end.
Pump Overhaul—*See "Oil Pump" in Oldsmobile Special Data.*

Oil Filter: AC No. PM-90-3 full flow type (optional). On lower right side of crankcase at rear.
Replacement Filter Element—AC No. PF-122.

►*CAUTION*—If filter (or pad cover if filter not used) is replaced, used a new gasket (coat both sides with POB No. 5 Sealer) and tighten bolts to 35-40 ft. lbs. Oil filter or pad mounted externally on lower right side of crankcase at rear. Oil filter is full flow type (all oil from pump delivered to oil filter) requires pad when filter not used to return oil to main oil gallery.

Crankcase Ventilation: Air intake in oil filler cap has oil-wetted cleaner, AC No. 1551091 (Std.), No. 1551509 (Heavy Duty). Outlet is connected to ventilating baffle at rear of block above right bank. Outlet pipe is push fit at ventilator and extends down below right rear corner of engine.

►*NOTE:* Air cleaner also used in lower section of ventilator outlet tube on cars with heavy duty inlet breather in filler cap and oil bath air cleaner.

COOLING

Water Capacity: 20½ qts. (without heater), 21½ qts. (with heater).

Pressure Valve: AC Type RC-1, No. 850549. Radiator Filler Cap (stamped 549/7#).

Thermostat: Oldsmobile No. 563219 (160°). NOTE—use No. 563311 (180°) with permanent type anti-freeze.

Water Pump: Packless, sealed ball bearing type.
See "Oldsmobile" in Water Pump Section.
Pump Removal—Remove fan and fan pulley. Remove six mounting bolts (4 to engine cover, 2 to engine block). Remove pump. *NOTE*—When installing pump, coat one side of pump housing gasket with gasket cement, dip bolts in CP No. 9 Sealer.

Temperature Gauge: *12 Volt.* AC Electric. *CAUTION*—Use only 12 Volt type units which are stamped "12 Volt" on threaded side of block unit below nut hex. Later type 12 volt block units also have a copper colored terminal. 6 volt units have a natural brass terminal.
Dash Unit—AC No. 1512810.
Engine Unit—AC No. 1512078.
See "Temperature Gauges" in Miscellaneous Section.

CLUTCH

Long 11CF-11 TI. Single plate dry disc type.
See "Long Clutches" in Clutch Section.
Clutch Disc No.—Oldsmobile No. 565059.
Pedal Adjustment: Pedal free travel 1 1/8-1 3/8". Adjust by turning adjusting nut on clutch connector link at throw-out yoke.

Removal: Remove transmission (see Transmission), remove right and left splash pans, engine breather pipe, and right and left lower flywheel housing bolts. Install Engine Rear Support Tool BT-28, entering pilot supports into lower housing bolt holes. Remove engine rear mount bolts at clutch housing, and remove frame cross member by removing three bolts at each end. Remove clutch housing by removing eight bolts holding housing to flywheel housing. Remove clutch assembly from flywheel.

Clutch Housing Alignment: *See "Flywheel Housing" in Oldsmobile Special Data.*

SYNCHRO-MESH TRANSMISSION

Own. Constant mesh, synchro-mesh (second & high), sliding gear (low & reverse) all helical gear type.
See "Oldsmobile Synchro-mesh" in Transmission Section.

Transmission Control: *See "Transmission Controls" in Transmission Section.*

Removal: Drain transmission and disconnect manual control rods and speedometer cable at transmission. Remove clutch return spring and disconnect clutch linkage at yoke connecting link. Detach drive shaft at rear universal joint, and slide shaft from transmission. Remove transmission.

HYDRA-MATIC DRIVE

"**Dual-Range**" four speed automatic transmission and fluid coupling.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Hydra-Matic Drive" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Hydra-Matic Drive" in Transmission Section.*

Lubrication—Check fluid level every 1000 miles. Drain & Refill every 25,000 miles. Use only GM Hydra-Matic Drive Fluid.

Checking Fluid Level—Set hand brake, let engine idle and move selector lever to "Lo" position. Raise engine Raise engine hood and remove dipstick located at right rear side of engine, wipe dry. With engine idling, replace dipstick, and remove quickly to check fluid level. Add GM Hydra-Matic Drive Fluid to bring level to "FULL" mark.

►*CAUTION—DO NOT FILL ABOVE "FULL" MARK.*

Hydra-Matic Indicator: Lights on instrument panel indicate position of Hydra-Matic selector lever. Unit consists of three coils in sealed unit operating five lights on instrument panel. Coils are energized by by movement of Hydra-Matic Neutral Safety and Indicator Switch which is connected to Hydra-Matic linkage.

Checking Indicator Unit—Disconnect all three leads from unit. Connect jumper wire from hot side of ignition switch to #1 terminal on unit; "N" should light. Connected to #2 terminal; "S" should light. Connected to to #3 terminal; "R" should light. If indicator does not indicate correctly, replace unit.

►*OTHER HYDRA-MATIC SERVICE DATA: See "Hydra-Matic Drive" in Transmission Section.*

UNIVERSALS

Mechanics. Roller bearing type.

►*PROPELLER SHAFT YOKE LUBRICATION CAUTION:* Remove plug, install fitting and lubricate with hand pressure gun using high melting point, low viscosity lubricant, Oldsmobile Part No. 567196. Remove fitting and replace plug. **Do not use chassis grease at this point.**

►*CAUTION*—Rear universal companion flange nut controls rear axle pinion bearing pre-load (must be adjusted whenever nut loosened) *See "Oldsmobile Hypoid" in Rear Axle Section.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

REAR AXLE

Own. Hypoid gear, semi-floating with Hotchkiss drive. *See "Oldsmobile Hypoid" in Rear Axle Section.*

►*PINION SHAFT COMPRESSIBLE SPACER PRODUCTION CHANGE: New type spacer not interchangeable with those on previous rear axle assemblies. See "Oldsmobile-Hypoid" in Rear Axle Section.*

Axle Ratios

Ratio	①Code
3.07-1 (40:13)	0
3.9-1 (39:10)	4
3.64-1 (40:11)	6
3.42-1 (41:12)	8
3.23-1 (42:13)	9

①—Rear axle ratio code number stamped on lower locating boss on forward side of carrier.

Backlash—.004-.006". Screw adjustment.

Axle Shaft Removal: Remove wheel and take off brake drum by removing two Tinnerman nuts from wheel studs (if nuts removed by turning off threads they can be reused, if nuts damaged, new nuts must be used). *Remove backing plate mounting nuts and static collector.* Loosen bearing retainer (do not move backing plate or brake line may be damaged). Pull shaft and bearing with Puller J-942 (do not allow shaft to drag on oil seal), replace one nut to hold backing plate in position.

Differential Carrier Assembly Removal: Remove axle shafts (see above). Clean differential carrier and axle housing around carrier to prevent dirt entering housing. Disconnect propeller shaft at rear universal joint after having wired trunnion blocks together to avoid loss of rollers. Mark universal joint so it can be replaced in the same position. Drain oil by removing nuts from carrier mounting studs and moving carrier away from housing.

CAUTION—Do not wash exterior of carrier until differential has been disassembled.

Wheel Bearing Adjustment: None required. Bearings are built with .012-.015" endplay between balls. Check endplay before removing axle shaft and if endplay greater than .020", replace bearings. *CAUTION*—If bearings removed from shaft, they cannot be reused.

SHOCK ABSORBERS

Delco. Double Acting used on front. **Direct Acting** used on rear.

Front Shock Absorbers

Model	Right	Delco No.	Left
88 & Super 88①	5511190		5511191
98	5513733		5513734

①—Except Air-Conditioned Cars.

Rear Shock Absorbers

Model	Right	Delco No.	Left
88 & Super 88	5511192		5511192
98	5519693		5519693

►*SHOCK ABSORBER LUBRICATION NOTE*—(Front) Check fluid level every 10,000 miles and replenish with Delco Shock Absorber Fluid. (Rear) Not serviced.

FRONT SUSPENSION

Independent. Double acting shock absorber directly connected to steering knuckle support and forms upper control arm.
See "Oldsmobile" in Front Suspension Section.

►*STEERING TIE-ROD STRIKING OIL PAN CORRECTION:* To prevent tie-rod from striking oil pan on extreme turns, place a 7/16" flat washer under head of wheel stop bolt on steering knuckle support so that stop bolt protrudes a minimum of 1". If this does not provide at least 1/8" clearance between tie-rod and pan, reform the pan slightly as necessary. *CAUTION—Be very careful not to puncture oil pan.*

Kingpin Inclination—5° 51' 10" crosswise.
Caster— 0° to Neg. ¾°. Variation between both sides should not exceed ½°.
Camber—Neg. ¾° to Pos. ¾°. Variation between both sides should not exceed ½°.
Toe-In—1/16" to 1/8".
Toe-Out on Turns—23°±½° on inner wheel with outer wheel turned 20°.

STEERING

Manual: Saginaw Ball Bearing Worm & Nut. Recirculating ball worm & nut.
See "Saginaw Ball Bearing Worm & Nut" in Steering Section.

Power Steering: Saginaw (GM) Hydraulic. Recirculating ball nut and worm type plus extended pitman shaft with gear sector in mesh with power rack. Power rack pinned to piston rod of hydraulic power cylinder.
See "Saginaw (GM) Power Steering" in Steering Section.

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

BRAKES

Bendix Hydraulic (Single Anchor). Conventional two shoe with short molded lining front (Primary), and long molded lining rear (Secondary). Parking brake applies rear wheel service brakes.
See "Bendix Hydraulic" in Brake Section.

►*BRAKE ASSEMBLY PRODUCTION CHANGE:* Beginning May 15, the brake assembly has been revised to include a larger retracting spring and parking lever assembly. *See "Bendix Hydraulic Single Anchor (Without Eccentric)" in Brake Section.*
Drums—Diameter 11". Rebore limits .060".

Wheel Cylinder Diameter—Front 1 1/32". Rear 31/32".
Lining—Molded. **Width**—2½" (front wheels), 2" (rear wheels). **Thickness**—7/32".

Length—(Primary)—9-3/8", (Secondary)-12-1/32".

Clearance—Adjusting screw backed off 16 notches from point where wheels can just be turned by hand.

Braking Power—56% Front. 44% Rear.

Standard Master Cylinder: On left chassis frame front extension under hood.

Checking Fluid—Fluid reservoir is part of master cylinder. Maintain fluid level to top of reservoir.

Removal—Remove from above. Not necessary to disturb other parts.

Power Brakes: Bendix or Moraine Power Unit (combination vacuum power unit and hydraulic master cylinder). Unit is mounted on under side of toe board and replaces regular master cylinder. *See "Bendix Power Unit" or "Moraine Power Unit" in Brake Section.*

Checking Fluid—Same as for standard master cylinder.

Removal of Power Unit—Disconnect hydraulic line at master cylinder and secure hose so that end is above level of junction assembly. Disconnect vacuum hoses hoses at power cylinder, and remove dipstick. Disconnect leads from stop light switch and fold back floor mat. Remove three brake pedal bracket attaching bolts and remove pedal and bracket. Remove mast jacket grommet retainer and slide grommet up mast jacket. Remove mast jacket cover plate attaching screws, cover plate and power cylinder assembly. Remove two cover plate-to-power cylinder bolts and remove cover plate.

MISC. MECHANICAL

Windshield Wipers: Cable operated Vacuum type. *See "Windshield Wipers" in Miscellaneous Section.*

Air Conditioning: *See "Oldsmobile Air Conditioning" in Miscellaneous Section.*

Power Window Regulators: Electric type with individual motors in each window.

See "Power Window Regulators" in Miscellaneous Section.

Power Top Control: Hydro-Lectric. *See "Power Top Controls" in Miscellaneous Section.*

Power Seat Adjusters: Electric type with separate reversible motors for vertical and horizontal adjustment. *See "Power Seat Adjusters" in Miscellaneous Section.*

TIGHTENING SPECIFICATIONS

1946-48 MODELS

	Ft. Lbs.	In. Lbs.
Spark Plugs (10 MM. Type)	4	50 Max.

ENGINE

1951-54 MODELS

ENGINE REMOVAL: Remove hood assembly. Disconnect and remove battery. Drain cooling system and remove radiator core. (NOTE—Radiator core, cradle, grille and front fenders may be removed as an assembly). Disconnect propeller shaft and remove transmission (see Transmission Removal). Use a jack or auxiliary support beam to support rear end of engine while transmission is being removed. Remove carburetor air cleaner, and crankcase ventilator tube. Disconnect heat indicator sending unit lead wire. Disconnect wire at oil pressure indicator sending unit. Disconnect electrical leads at generator, starter and ignition coil. Disconnect clutch linkage and remove clutch torsion shaft bearing bracket from upper flywheel housing. Remove engine front support insulator-to-upper bracket attaching nuts. Using an engine lifting bracket and a chain hoist, raise engine off support insulators. Remove auxiliary support beam from frame and remove engine.

Installation—Reverse removal instructions and note the following: Lower and locate engine in its approximate position by allowing the pilots in the support insulators (front) to protrude through the center hole in engine front support bracket.

1955 V8 MODELS

ENGINE REMOVAL: *(NOTE—On Synchro-mesh cars, Engine and transmission can be removed as an assembly providing front fenders and grille are first removed).*

1) Drain engine oil pan. Remove hood assembly and drain cooling system. Remove radiator core. Disconnect heater hose at cylinder head and remove water pump and manifold assembly. Remove battery and carburetor air cleaner.

2) Remove coil, bracket, distributor cap and ignition wiring as an assembly. Remove carburetor assembly. Disconnect power brake vacuum line at power cylinder (if car so equipped). Disconnect vacuum hose at windshield wiper motor. Disconnect flexible fuel pump line.

3) Remove generator assembly. Disconnect wire leads to water temperature and oil pressure indicator sending units. Disconnect engine ground wire at dash. If car equipped with Power Steering, remove screws at pump bracket and place pump pressure lines and hose assembly out of way.

4) Remove valve tappet cover vent tube. Remove starting motor and flywheel housing lower cover. Disconnect exhaust pipe from exhaust manifold. Drain transmission oil pan and remove transmission filler tube assembly. Disconnect oil cooler lines at transmission. Loosen transmission rear support bracket, *but do not remove bolts.* Support transmission using a block of wood and a jack. Disconnect throttle control valve linkage at transmission.

5) Remove converter clutch housing to flywheel retaining nuts, and bell housing to flywheel housing capscrews. Disconnect front motor supports at frame. Install a flexible lifting cable or rope around intake manifold and attach a chain fall or hoist. Clamp or wire converter to transmission case to keep converter from sliding out of transmission. Raise engine and slide forward to clear transmission and slide out of chassis.

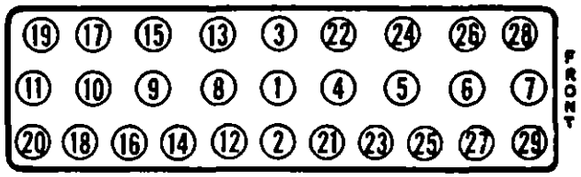
OIL PAN

1948-54 MODELS

OIL PAN REMOVAL: Place car to position hoist over engine. Disconnect steering idler lever support from frame side rail and lower steering linkage. Remove flywheel housing lower cover and take out oil pan screws. Lower oil pan and if necessary, rotate crankshaft to place counterweights up for clearance (use pry bar at flywheel housing engaging teeth on flywheel). If pan requires additional clearance, attach hoist to front of engine (do not disturb front engine support bolts), raise engine just enough to relieve load on support, pan should then come out.

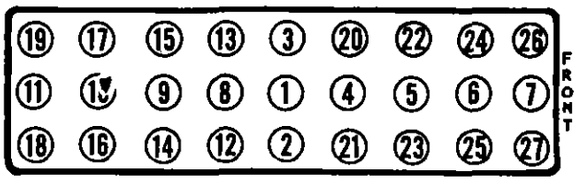
1955 V8 MODELS

OIL PAN REMOVAL: Drain engine oil and remove screws attaching steering idler lever to frame and lower steering linkage. Remove engine oil level indicator. On cars not equipped with the dual exhaust system the crossover pipe from left to right banks must be removed, on cars with dual exhaust, remove left exhaust pipe. Remove starting motor and flywheel lower housing. Remove attaching screws and washers and remove oil pan.



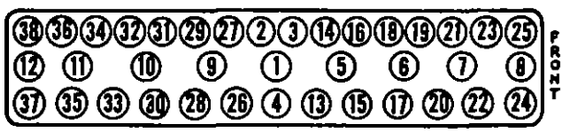
CYLINDER HEAD & MANIFOLD

1946-54 MODELS



CYLINDER HEAD INSTALLATION: Use Torque Indicating Wrench to tighten cylinder head stud nuts, tighten in correct sequence as shown in the diagrams. Procedure for tightening Cast Iron and Aluminum heads is as follows:

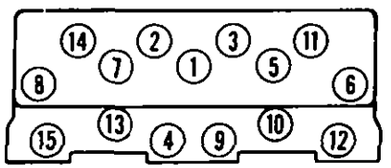
Cast Iron Heads—With engine cold, tighten all nuts evenly to correct tension. Then run engine until it is thoroughly warmed up and recheck all nuts (additional tightening may be necessary for correct tension).



Aluminum Heads—With the engine cold, tighten all nuts to correct tension. Run engine until thoroughly warm, allow engine to cool off, and then recheck all nuts. Do not tighten aluminum heads when warm.

1946-47 PACKARD 8 (EXCEPT SUPER 8)

1946-47 PACKARD SUPER 8 CYL. HEAD



1948-54 PACKARD 8 CYLINDER HEAD

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

1955 V8 MODELS

CYLINDER HEAD: Removal—Drain cooling system. Remove generator (if removing right bank head), or fan belt (if removing left bank head). Remove fan, water pump, and manifold assembly. Remove air cleaner. Remove ignition coil and bracket, disconnect ignition cables and place the coil and wiring out of way. Remove carburetor and intake manifold assembly. Remove valve cover and remove bolts attaching rocker lever shaft to cylinder head, and lift off the rocker lever shaft assembly. Disconnect exhaust manifold from exhaust pipe. Remove cylinder head bolts. Install Cylinder Head Lifter J-4159 in the front and rear spark plug holes and lift off cylinder head. *NOTE*—To remove right bank head it will be necessary to remove heater and oil level indicator. On cars equipped with Twin Ultramatic Transmission the filler tube assembly will have to be removed. On removing the left bank head, the oil filter and bracket will have to be loosened from cylinder head, On cars equipped with Power Steering the bracket bolts will have to be removed and pump and hose assembly will have to be moved out of way.

PACKARD V8 CYLINDER HEAD

Installation: Clean gasket surfaces of cylinder head and engine block. Coat gasket with Perfect Seal No. 5 and install on block. Install cylinder head over dowels (dowels are drilled for oil return from rocker arm chamber). Install flat washers on head bolts and start the five medium length bolts in center holes of head. Install valve pushrods making sure they engage in sockets in valve lifters, and carefully install rocker shaft lever assembly. The two end rocker shaft mounting brackets are doweled to line up with bosses on cylinder head. Use the four longest cylinder head bolts and tighten them equally, and at the same time place pushrods in their respective sockets in the rocker levers. Install the short cylinder head bolts along lower edge of cylinder head and tighten all bolts in sequence shown in diagram to 55-60 ft. lbs.

ORIGINAL BORE & PISTONS

1946-54 MODELS

ORIGINAL BORE & PISTON SIZES: Mark stamped on piston head and cylinder block indicate size variation in relation to nominal size. (See below).

Piston Mark Location—Stamped in piston head.

Cylinder Bore Mark Location—Stamped on top left face of cylinder block.

NOTE—Piston and Bore marks should correspond on engines that have neither been bored nor honed.

PISTON & BORE MARKING (FOR SIZE VARIATION)

AA—.00025" Under Nominal Size.
A—Nominal Size
BB—.00025" Over Nominal Size.
B—.0005" Over Nominal Size.
CC—.00075" Over Nominal Size.
C—.001" Over Nominal Size.
DD—.00125" Over Nominal Size.
D—.0015" Over Nominal Size.

NOMINAL SIZE

Bore	Piston	Bore
3 3/16"	3.18575-3.18600"	3.18725-3.18750"
3 1/4"	3.24850-3.24875"	3.24975-3.25000"
3 1/2"	3.49875-3.49900"	3.49975-3.50000"

►**.020" Oversize Bore Engines—Marked by ★ following engine serial number.**

PISTONS

1946-54 MODELS

REPLACEMENT ALUMINUM ALLOY & CAST IRON PISTONS:—Finished aluminum alloy or cast-iron replacement pistons are stamped on head with decimal figure (.005, .010, etc.) indicating nominal oversize and one or two letters (AA, A, BB, B, CC, C, DD, D) which indicates the actual size variation (in .00025" steps) of the piston from indicated nominal oversize. See oversizes listed below and size variations for each letter (in table).

NOTE—This system of marking makes it possible to order a finished piston (using number and letter) for any particular bore size within these limits.

Piston Oversizes (Figures Stamped on Piston Head)—Furnished in Standard size and the following oversizes: .003", .005", .010", .015", .020", .030", .040".

PISTON MARKING (FOR SIZE VARIATION)

(Letters Stamped on Piston Head)

For All Models and Piston Oversizes

AA—.00025" Under marked size.
A—Same as marked size.
BB—.00025" Over marked size.
B—.0005" Over marked size.
CC—.00075" Over marked size.
C—.001" Over marked size.
D—.00125" Over marked size.
DD—.0015" Over marked size.

PISTON PINS

1946-54 MODELS

PISTON PIN BUSHING INSTALLATION: Two-piece bushing used in rod. Use Piston Pin Bushing Replacement Set J-2555 (consists of: Remover, Replacer, Plate, Burnisher), and Piston Pin Bushing Reamer J-874-18. Press old bushings out with Remover and arbor press. *(CAUTION*—Each half of bushing must be installed and burnished separately so that oil channel formed between inner ends of bushing halves will not close up). Install one half of bushing flush with outer end of rod, then using Plate of tool under end of rod, push Burnisher through from inner end of bushing. Install second half of bushing and burnish in place from inner end working through bushing half already in place. Ream bushing for size-to-size fit with piston pin using Reamer J-874-18. Check pin fit as follows:

Piston Pin Fit in Rod Bushing—With lower bearing inserts and cap installed on rod, insert piston pin in rod, clamp pin in vise with lead jaws placing rod in horizontal position. Rod should hold in this position, but should fall down of own weight when tapped down by hand.

1955 V8 MODELS

PISTON PIN BUSHING (IN CONNECTING ROD) INSTALLATION: After pressing old bushing out with an arbor press, install new bushing so that it is flush with both sides of rod. Position Burnisher Tool J-6055 in bushing, then applying plate of the tool under the rod, push burnisher through bushing with an arbor press. After bushing has been burnished, and before reaming bushing, the oil hole in bushing should be drilled using a 3/16" drill.

PISTON RINGS

1946-54 MODELS

TRIPLE ACTION PISTON RING SETS: Service Sets.—These rings furnished in packaged sets for all models and should be installed on **aluminum pistons only** as directed below. CAUTION—Do not use these rings with Cast Iron pistons.

Oil Ring—Spring expander type oil ring used consisting of top and bottom rails with a spring assembled between two rails. Two tabs in each rail engage a loop in spring expander when assembly installed in ring groove. Install ring on piston as follows: Place lower rail with locking tabs up (45° to right of thrust face or left side of piston) on piston slightly below lower ring groove. Insert spring expander in oil ring groove with end gap centered on thrust or left side of piston. Install upper rail in ring groove with locking tabs down so as to engage first loop in spring to left of spring end gap. Move lower rail up into ring groove with tabs in rail engaging first loop in spring expander to right of spring end gap. Press upper and lower rails down firmly on spring so that rails are properly seated on spring and are free in groove.

#2 Compression Ring—Assemble ring in #2 ring groove with groove on outer edge down.

Top Compression Ring—Assemble ring in top ring groove with groove on inner edge up.

CRANKSHAFT & MAIN BEARINGS

1946-54 MODELS

CRANKSHAFT FRONT SEAL: Installed on front end behind timing chain cover. To replace seal remove radiator core, vibration dampener (puller J-2636 for fluid type dampener), and timing chain cover. Remove old seal and install new seal over end of shaft. Place cover aligning arbor over end of shaft, install cover and tighten cover screws. Insert feeler gauge between arbor and hole in cover, run gauge around arbor, if clearance not uniform, loosen cover screws and shift cover until clearance uniform.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

1946-54 MODELS

REAR MAIN BEARING OIL SEAL REPLACEMENT (Engine in Car): Raise car on stands at all four corners, keeping engine in its normal position and on a level plane. Remove transmission and oil pan. Remove rear main bearing cap. ***Do not remove other main bearing caps.*** Loosen each main bearing cap attaching screw just enough to "break loose" each screw from its tightened position. Alternately back off each main bearing cap screw ½ turn at a time until crankshaft has been lowered evenly ½". Remove rear main bearing seal (upper) from its groove in crankcase, using a pointed tool. Remove seal from rear main bearing cap, and remove the wooden side seals. To install upper seal, first form it to shape using the lower bearing cap. With a round wood block, 2¾" diameter, press seal into bearing cap with an arbor press. After seal has been shaped, feed it up into upper groove around crankshaft. When seal has been positioned, tighten each bearing cap attaching screw alternately ½ turn to raise crankshaft evenly to its normal position. Rotate crankshaft to burnish seal into position. Continue tightening bearing cap screws until torque of 90-95 ft. lbs. is obtained. Cut off ends of seal flush with split line of bearing. Form seal into lower bearing groove in same manner as with upper seal. While holding seal in position with round wood block and arbor press, trim end of seal so that 1/16" of seal extends above bearing split line at each end. Install bearing cap and torque to 90-95 ft. lbs. Install wood side seals in bearing cap by driving them into grooves in cap, then trim them off flush with bearing cap. Install oil pan and transmission.

1955 V8 MODELS

CRANKSHAFT: Removal (With Engine in Car)—Remove transmission. Drain cooling system and remove radiator core. Drain and remove engine oil pan. Remove water pump and manifold assembly. Remove fuel pump. Remove engine vibration dampener, engine front cover, timing chain and sprockets. Remove oil and vacuum pump assembly. Remove spark plugs. Disconnect connecting rods and push piston assemblies up into cylinder bores so that crankshaft can be removed without interfering with connecting rods. Remove front and rear main bearing caps. Support crankshaft at front and rear journals and remove the three intermediate bearing caps. Carefully lower crankshaft and flywheel assembly.

Installation: Install new rear main bearing seals in upper crankcase and in bearing cap (See Rear Main Bearing Oil Seal Installation below). Install new front crankshaft seal in engine front cover. Reverse removal procedure indicated above.

CRANKSHAFT REAR MAIN BEARING OIL SEAL: Apply Lubriplate to groove in bearing cap and install oil seal. Using Oil Seal Installer J-3048-A and a hammer, drive seal into place. With seal still in place, trim ends of seal flush with surface of cap. To install upper half of seal in crankcase, remove crankshaft and install in same manner as for bearing cap.

VIBRATION DAMPENER

1955 V8 MODELS

VIBRATION DAMPENER: Removal—Drain cooling system, remove radiator core and top splasher. Remove fan assembly. Remove vibration dampener retainer screw and washer and if car is equipped with Power Steering or Air Conditioning, remove the drive pulleys by prying them off dampener assembly. Install center adapter J-5992-2 in threads of crankshaft. Install screw assembly J-5995-3 in remover body J-5992-1 and remove dampener.

Installation: Lubricate oil seal in engine front cover, and position dampener over crankshaft and tap it into place by tapping it with a rawhide hammer. Assemble Vibration Dampener Installer J-5992 by placing the 3/4" nut on screw assembly J-5992-3 and slide spacer J-5992-4 over screw assembly. Start screw in end of crankshaft and tighten until it bottoms in the threads. With one end of the spacer against dampener, turn nut on screw until dampener hub bottoms the crankshaft oil slinger against a shoulder on the crankshaft. Install Power Steering and/or Air Conditioning Pulleys, retainer washer and screw. Tighten retainer screw to 130-150 ft. lbs.

ENGINE FRONT COVER

1955 V8 MODELS

ENGINE FRONT COVER: Removal—Remove vibration dampener (see above), and water pump manifold assembly. Disconnect and remove fuel pump. Remove screws *attaching front cover to block and remove cover.*

Installation: Using a new gasket, install engine front cover in place and start capscrews in threads, *but do not tighten.* Lubricate oil seal in cover, and install vibration dampener assembly, using hub on dampener as a pilot to align front cover. Complete installation by reversing removal procedure.

ENGINE FRONT COVER OIL SEAL (CRANKSHAFT FRONT SEAL) INSTALLATION: Remove engine front cover (see above), drive out old seal with a hammer and punch, being careful not to damage cover. Install a new seal using tool J-5983, pressing seal into place with an arbor press.

CAMSHAFT & BEARINGS

1946-54 MODELS

CAMSHAFT REMOVAL: Remove cylinder head, raise front end of car and place stands under front suspension. Remove right front wheel from hub and drum, and right front fender splash apron cover plate. Disconnect and remove fuel pump and oil pump. Remove valve spring chamber cover. Raise valve with lifter HM-536. DO NOT REMOVE VALVE LOCKS. Insert two blocks of wood between valve head and block to hold valves open (wood block should be approximately ⅜" thick, ⅛" wide, 1" long). Raise all valves and block them up with similar blocks of wood. Lift valve tappets up by hand, retaining them with spring-loaded type clothespins. Remove camshaft thrust plate from front end of engine block. Carefully remove camshaft, rotating it as it is withdrawn, to prevent scoring or damaging bearings.

Camshaft Bearing Removal & Replacement: Remove oil pan and camshaft (see Camshaft Removal above). Drive out old camshaft bearing using a smooth faced drift of smaller diameter than outside diameter of bearings. Replace new bearings by using similar drift with larger outside diameter than outside of bearings. CAUTION—Be sure oil holes in bearings line up with passages in block.

Cleaning & Inspection—Clean camshaft, and inspect cams and bearing surfaces for wear, scores, or pits. Inspect oil pump drive gear for nicks, scores, pits or wear. Camshaft to bearing clearance should be .001-.003". If tappets removed (see Hydraulic Valve Lifters, below).

Camshaft Installation: Reverse removal procedure, and check camshaft endplay (see Car Pages for Camshaft Endplay specifications). If endplay not within limits, replace camshaft thrust plate.

1955 V8 MODELS

CAMSHAFT: Removal (With Engine in Car)—Drain and remove radiator. Remove fan, water pump and manifold assembly. Remove air cleaner, ignition coil, carburetor and intake manifold. Remove vacuum line to distributor, disconnect ignition cables and place out of way. Remove distributor. Remove valve rocker covers, the four rocker lever shaft capscrews (both banks), and lift off shaft assemblies. Remove upper valve tappet cover and breather tube, and remove the lower cover. Remove pushrods and hydraulic lifters (keeping them in sequence so they will be installed in the same location). Remove vibration dampener (see above). Drain engine oil and remove oil pan. Remove engine front cover (see above). Pry off oil slinger from end of crankshaft. Remove fuel pump drive eccentric. Rotate engine to line up marks on camshaft and crankshaft sprockets so marks are adjacent and in line across shaft centers. Remove the sprockets by alternately prying on them and slide chain and sprocket assembly off the shafts. Remove the three camshaft retainer plate screws and remove plate and camshaft spacer. Carefully pull camshaft forward into the radiator grille far enough to clear engine block, taking care not to damage camshaft or bearings.

Installation: Reverse removal procedure and note the following: Install camshaft gear about 1/16" beyond a position flush with camshaft end, to allow mounting of fuel pump eccentric.

TIMING CHAIN

1955 V8 MODELS

TIMING CHAIN: Removal—Remove engine front cover (see above). Pry off oil slinger from end of crankshaft and remove fuel pump eccentric. Rotate engine to line up marks on sprockets so marks are adjacent and in line across shaft centers. Remove sprockets by alternately prying on them and slide chain and sprocket assembly off the shafts.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Installation: Install camshaft and crankshaft sprocket keys being sure they are properly seated in keyways. Rotate engine crankshaft to bring No. 1 cylinder to firing position. Slide crankshaft sprocket part way on the crankshaft and assemble camshaft sprocket in chain, locating and lining up the "O" marks on the sprockets in line with camshaft and crankshaft centers. Position chain on crankshaft sprocket and start camshaft sprocket on camshaft. Using a rawhide hammer, alternately tap both sprockets into proper position. Camshaft gear must be installed about 1/16" beyond a position flush with end of camshaft for installation of fuel pump eccentric. Complete installation by reversing removal procedure.

VALVE SYSTEM

VALVE TAPPET ADJUSTMENT

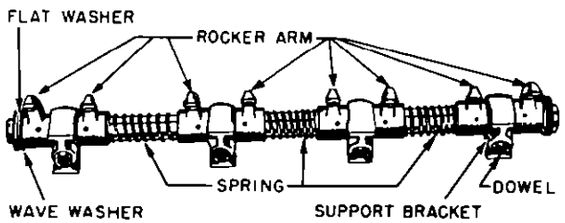
1955 V8 MODELS

VALVE TAPPET ADJUSTMENT: *NOTE—Checking must be done with no oil in compression chamber of tappet and the plunger completely bottomed, with tappet on base circle of cam.* With piston on compression stroke and both valves closed, press downward on the push-rod end of rocker arm to compress plunger spring and force plunger to its bottom position. While still holding down on rocker arm, measure the lash. The clearance between valve stem end and rocker arm tip should be .050" to .210".

VALVE GUIDES

1955 V8 MODELS

CHECKING VALVE STEM CLEARANCE: After valves have been removed from head, and with valve stems and guides clean, install valve in respective guide bore and measure side-to-side play crosswise to the cylinder head using a dial indicator or thin strips of feeler gauge material placed between stem and guide bore. If clearance is greater than .004" (intake), or .005" (exhaust) guides should be reamed and oversize valves installed.



VALVE GUIDE REAMING: Four oversize reamers are available in Valve Guide Set J-6042 which will provide the desired clearance of .001-.002" (Intake), and .002-.003" (Exhaust) between stem and guide. After checking clearance, select the proper oversize reamer and pilot for the oversize valve to be installed.

R CKER ARMS

1955 V8 MODELS

►*IMPROVED OIL CONTROL ROCKER ARM SHAFT PRODUCTION CHANGE & CORRECTION ON EARLY CARS:* Three types of rocker arm shafts have been used in production with different number and size of rocker arm oil holes. For all replacement use, use LATEST type shaft, Part No. 440466, which may be identified by ALL oil holes being of the same size (.062").

ROCKER ARM AND SHAFT: Disassembly—Remove rocker arm and shaft assembly from cylinder head. Remove cotter pins, and flat and wave washers from end of shaft. Remove rocker arms, springs and supports, keeping all parts in order so they can be replaced in original position.

PACKARD V8 ROCKER ARM ASSEMBLY

Inspection: Clean and inspect all parts, making sure that all oil holes are open. Inspect shaft and arms for wear. Inspect rocker arm radius at valve stem end, and if worn replace the rocker arm. Inspect plugs at each end of shaft for tightness.

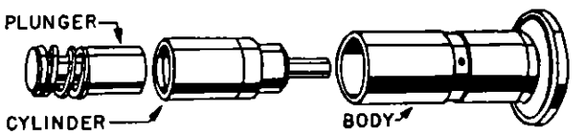
Reassembly: *Reverse disassembly procedure and note* the following: Rocker arm shaft must be assembled with the grooved oil hole in the downward position, or facing the cylinder head.

►*CAUTION: There is a right and left rocker arm and if reversed in assembly they will not properly contact the valve stem.*

HYDRAULIC VALVE LIFTER

1946-54 MODELS

HYDRAULIC VALVE LIFTERS ("Wilcox-Rich"): Mushroom type lifters, removed from below with camshaft out of engine. Lifter is composed of three major units: tappet body, cylinder, and plunger. Oil is introduced to lower part of lifter body from main oil pressure system, and then through a ball check valve to cylinder below plunger.



Removal: Remove camshaft (see Camshaft Removal above), and oil pan. Lifters can then be removed from below.

Disassembly: ***(CAUTION—Plungers and cylinders are selectively fit at the factory and must not be interchanged. Disassemble one unit at a time to avoid mixing parts).*** To remove plunger from cylinder, twist plunger in a direction that would "wind-up" the spring and pull outward at the same time. If plunger is stuck in cylinder, clean all carbon and varnish from lifter and then insert a match in oil inlet hole at bottom of lifter and raise check valve ball, allowing oil to drain out. If lifter remains stuck, soak in a carbon solvent.

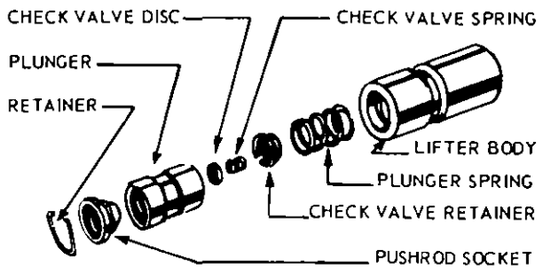
Cleaning & Inspection: Clean all lifter parts in clean solvent and check for scoring, burrs, wear or foreign matter *Blow parts dry with compressed air.*

Testing:—Make sure there is no oil on lifter parts, then with cylinder held upright in one hand, start plunger into cylinder with the other. Depress plunger and release it quickly. Plunger should yield slightly to finger pressure but should "kick-back" immediately upon release of pressure. If it does not, place finger over oil inlet hole and repeat the test. If "kick-back" does not occur on second test, thoroughly re-clean lifter to eliminate the possibility of dirt causing check valve to leak. Again check lifter, and if "kick-back" is not felt, it must be assumed that lifter check valve is damaged. Replace entire hydraulic unit.

Reassembly: Clean plunger and cylinder, and blow completely dry with air. Avoid touching plunger with fingers to prevent oil film, and place plunger in cylinder, pushing it down until air escapes, then place unit in lifter body. CAUTION—It is important to keep plunger and cylinder assembly free of oil, as a dry assembly will bleed quicker and prime quicker, eliminating excessive noise when engine first started.

1946-54 PACKARD HYDRAULIC VALVE LIFTER

Initial Adjustment (after Valves Ground or New Parts Installed): Check the take-up reserve of each hydraulic valve lifter after valves and valve seats have been refaced or new lifter parts installed. Remove hydraulic plunger and cylinder from lifter body (valve springs and retainers removed from valve stems). Bring piston of cylinder to top of its compression stroke (this must be done on each cylinder when checking the respective valves) which will place lifters on heel of cam lobe. Check valve clearance by inserting Plug Gauge of Hydraulic Gauge Set J-4540 or J-2553 (which ever required) in lifter body. Check clearance between gauge plug and valve stem (with valve held down on seat) using feeler gauge supplied with gauge set. **Clearance should be .030" to .070".** If under .030", grind off end of valve stem with valve refacer. NOTE—Feeler gauge marked "GO" and "NO GO."



►*CAUTION*—When checking other valves, make certain piston for that cylinder is at top of compression stroke.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

1955 V8 MODELS

HYDRAULIC VALVE LIFTERS: Removal–Remove valve rocker covers and rocker arm shaft mounting bracket bolts and lift off rocker arm shaft assembly. Remove

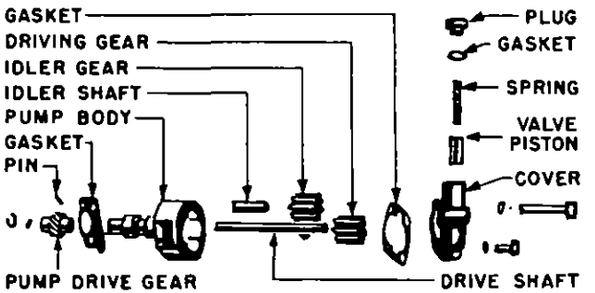
PACKARD V8 HYDRAULIC VALVE LIFTER

upper valve tappet cover and breather tube and then remove lower valve tappet cover. Remove pushrods and hydraulic valve lifters keeping pushrods and lifters in sequence so they can be replaced in the same relative position. *NOTE*–Lifters can be removed from block with Valve Lifter Remover J-5962 or a wire hook.

Disassembly: Press down on valve pushrod socket and use a pair of needle nose pliers to remove the lock ring. Remove pushrod socket, plunger, and plunger spring. Remove check valve assembly from plunger being careful not to lose the small flat valve and coil spring. *(CAUTION–Disassemble one lifter at a time to avoid mixing plungers and bodies. These parts are selectively fitted and must not be interchanged).* Use clean solvent and thoroughly wash all parts. Remove any varnish or gum deposits.

Inspection: Inspect plunger and walls of body for scratches (if plunger or body are scratched, replace complete unit). Try the plunger for fit in body. If check valve assembly removed from plunger, inspect flat disc valve, spring and seat.

Reassembly: Reverse disassembly procedure. See illustration for correct sequence.



Testing: Use a clean container deep enough to cover the lifter assembly (in an upright position). Fill container with clean kerosene. Remove the pushrod socket and place lifter in kerosene in an upright position, allowing it to fill up. Remove lifter and replace pushrod socket. Place lifter assembly between jaws of checking tool J-5978. Check leakdown by depressing the tool. A decided resistance should be felt. If plunger collapses immediately, the lifter should be checked again. Replace if no resistance felt.

OILING SYSTEM

OIL PUMP

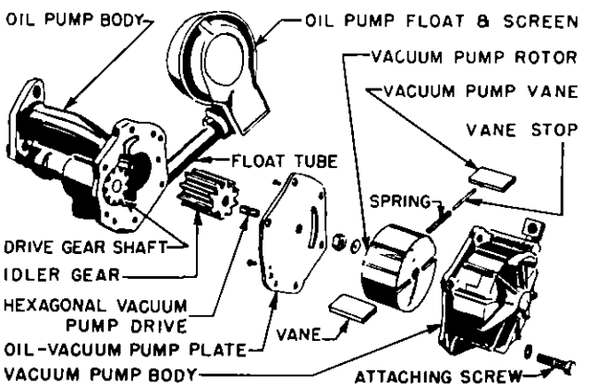
1946-54 MODELS

OIL PUMP: Removal—Set engine in firing position for #1 cylinder (6° BTDC.), remove distributor cap and mark rotor position on distributor housing. With pump cover off, mark pump driving gear position on pump body (check to this mark when re-assembling since pump must be rotated 180° on some cars to clear frame when removing pump from engine).

1946-54 PACKARD OIL PUMP

Disassembly: Remove pump cover and gasket. Place a straight-edge across pump body, and with a feeler gauge, measure clearance between pump gears and straight-edge. Clearance should be .002" or less. Clearance between gears and pump body should be .005" or less. Holding hand under pump body, rotate drive shaft until driven gear falls out. Drive out driving gear retaining pin and press out drive gear. Driving gear may be pressed from shaft if necessary.

Reassembly: Assemble shaft and drive pump gear and install in oil pump body. Press drive gear on shaft until endplay of shaft measures .003-.010". Measure this clearance between drive gear and pump body, using a feeler gauge. If a new pump drive shaft installed, drill a ⅛" hole through drive gear and shaft, install pin and peen it over on both ends. Install oil pump idler gear. Lubricate pump with clean engine oil and install pump cover, using a new gasket. Torque attaching screws to 25-30 ft. lbs. Clean and inspect relief valve by removing valve piston, spring, and plug from pump cover. Check piston for scores and for improper seating. Check pump cover for dirt or foreign material and clean thoroughly. If necessary crocus cloth can be used to polish relief valve piston.



Installation: Correct engaging position of pump drive is with driving blade in pump drive gear parallel with camshaft, and punch mark on end of drive gear at **top.** Reassemble to marks made at time pump removed, and with engine in firing position for No. 1 cylinder. If pump does not engage slot in distributor shaft, remove pump and turn pump drive one tooth and reinstall, making certain that distributor is at No. 1 firing position.

1955 V8 MODELS

OIL PUMP: Removal–Remove engine oil pan. Disconnect vacuum pump line to crankcase. Remove the two screws attaching oil pump to rear main bearing cap and remove oil pump, vacuum pump and strainer assembly.

Disassembly: Remove screws attaching vacuum pump to oil pump body and remove vacuum pump. Do not lose the small hexagonal drive. Remove idler gear. Remove pin from shaft and drive off sleeve. Remove upper and lower oil pump driving shaft and gear. If necessary, press shaft out of gear. If necessary to to remove the float assembly, the tube can be unscrewed from pump.

Inspection: Wash all parts in clean solvent and blow dry with air. Inspect float for leaks. Inspect strainer. Inspect pump shaft and gears for wear, scores or pits. Check clearance between gears and pump housing using a feeler gauge. This clearance should not exceed .005". Check gear endplay using a straightedge across gears and housing. Endplay should not exceed .003". Check clearance between shaft and body. Clearance should not exceed .003". Inspect pressure relief valve piston for scores. Inspect relief valve spring. Free length of spring should be approximately 3-19/64". When compressed to 1-3/8", pressure should be 9–9-1/2 lbs. Inspect pump cover for wear. Dress down on a surface plate if necessary.

V8 OIL & VACUUM PUMP ASSEMBLY

Reassembly: If float and suction tube removed from pump body, special care should be taken when installing to see that suction tube is tight in threads of pump body, and that float is properly positioned. To position float and tube (vacuum pump must be removed), measure the distance between machined face of pump housing and top edge of float. This distance must be 3/4" *(CAUTION–When positioning float, do not unscrew*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

tube to position float, but continue one more turn). Install key in pump shaft keyway and press driving gear on shaft until flush with bottom of gear. Install upper and lower shafts and gear in pump body. Install sleeve on shaft. Install pin in sleeve and stake both ends of pin. Install idler gear and hexagonal drive in end of gear. Position vacuum pump on oil pump body to line up with dowel pins and install attaching screws.

Installation: Start oil pump driving shaft in hole in rear main bearing cap and turn shaft to engage mating end on distributor shaft. Start the two screws and lockwashers and tighten screws to 25-30 ft. lbs. Connect vacuum pump line to crankcase. Install engine oil pan.

COOLING SYSTEM

1946-47 CLIPPER MODELS

RADIATOR CORE REMOVAL: The radiator core can be removed without removal of Front End Assembly as follows: Remove pan from between Radiator Core and Radiator Grille, loosen radiator core mounting bolts, lift core out of car. CAUTION—Do not damage fan blades when lifting core out of car.

CLUTCH NOTES

1946-54 MODELS

CLUTCH PEDAL OVER-CENTER SPRING: New adjustable type over-center (booster) spring. Adjustment provided at spring eye-bolt nut (front end of spring) and by turn buckle type pedal-to-relay lever link (controls over-center point). To adjust, proceed as follows:

Clutch Pedal Linkage Adjustment: Check over-center *eye bolt (should be 1 5/8" from end of bolt to head* of nut—adjust if necessary). Back off locknut and adjusting nut on rod at throwout lever and unhook pedal retracting spring from throwout lever. Adjust pedal-to-relay lever link turnbuckle so that over-center spring will pull pedal down after pedal moved down one inch from toeboard (make certain throwout lever does not contact adjusting nut and locknut backed off above). Hook pedal retracting spring to throwout lever. Adjust pedal for 1¼-1⅜" free play at pedal pad. Check over-center spring hold-in position by pulling pedal to floor and hooking spring at bend in pedal arm. Adjust eye bolt nut to hold pedal down with seven lbs. pull on scale.

ELECTRICAL EQUIPMENT NOTE: If Delco-Remy units are used (Starter, Generator, Regulator), refer to preceding article on Packard Clipper Six for complete data on these units.

HOOD LOCK: One piece side hinge hood. To raise hood, release lever under instrument panel on side to be raised, lift hood slightly, release safety catch (approx. 2 feet from rear edge of hood), raise hood, engage prop on dash to hold hood open.

MODEL IDENTIFICATION

SERIAL NUMBER: On left side of cowl (use Eng. No.)

ENGINE NUMBER: First No. F-300001 (1946), F-320001 (1947). On upper left side of cylinder block between #3 and #4 cylinders.

TUNE-UP

COMPRESSION: Pressure—118 lbs. at cranking speed.

VACUUM READING: Steady 18-20" idling at 6 MPH.

FIRING ORDER: 1-6-2-5-8-3-7-4.

SPARK PLUGS: AC No. 104 or Champion Y4-A. 10 mm. or Auto-Lite No. P-4. 10 mm.
Gaps—.028" (.0255-.0305").
NOTE—Tighten plugs to 50 inch lbs. only.

IGNITION: See Coil, Condenser, and Distributor.
Breaker Gap—.017". Cam Angle—27° Closed.
Breaker Arm Spring Tension—17-20 ozs.
Automatic Advance—Starts 325 RPM., 5.3° at 800 RPM., Max. 10.75° at 1500 RPM. Distr. ° & RPM.
Vacuum Advance—Starts with 10" of vacuum, Max. 6° with 17" vacuum. Distributor degrees.

IGNITION TIMING: See Ignition Timing.
Std. Setting—5° BTDC.
Timing Mark—Vibration dampener at front of engine marked "#1UP.DC" with fifteen 1° graduations before this point. Set ignition contacts to open at 5th graduation before "DC" mark.
Fuel Compensator—Set for slight ping accelerating with wide open throttle (shift link on quadrant).

CARBURETION: See Carburetor & Carb. Equipment.
Idle Setting—Set both idle adjusting screws ½-1½ turns open. Adjust for smooth 6 MPH. idle speed.
Float Level—5/32" from top of float to cover with valve seated (remove gasket and invert to check).
Accelerating Pump—Inner Hole (minimum) Normal, outer hole (max. stroke) if greater charge required.

Fuel Pump Pressure: 4¾ lbs. maximum.

MANIFOLD HEAT CONTROL: Thermostatic coil type. Make certain that valve operates freely and does not bind or stick. Do not oil control.

VALVES: See Valve Timing.
Tappet Clearance—.007" Intake, .010" Exh., Hot.

STARTING: See Battery, Starter, Generator and Regulator.

IGNITION

IGNITION SWITCH: Mitchellock Switch Model 24-B. Auto-Lite No. CE-2260BCS Lock Switch and cable.
Ignition Lock—Briggs & Stratton. B & S No. 50184.
Key Series—P1250 to P1500. Groove—No. 2.

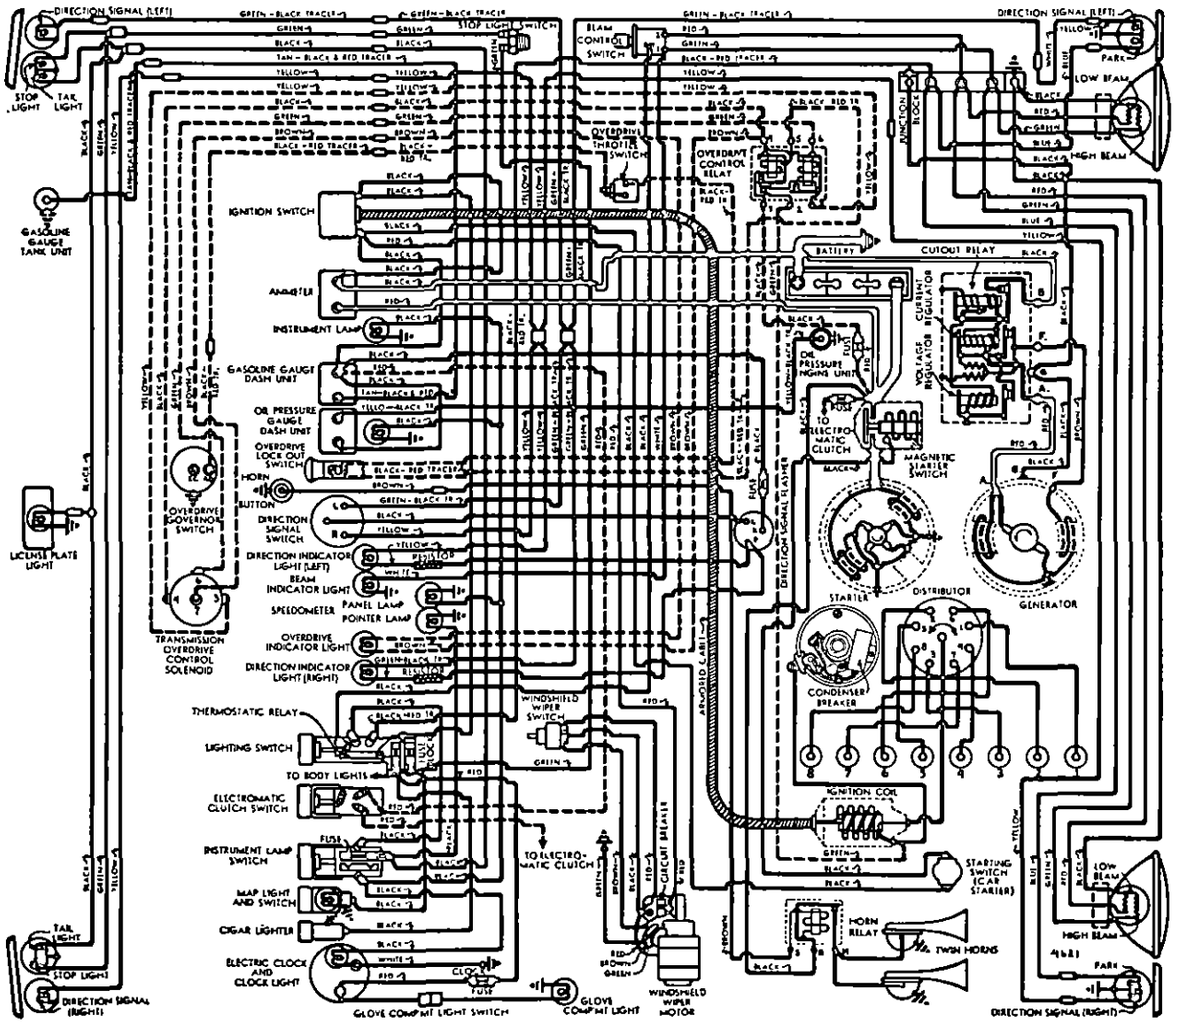
COIL: Auto-Lite Model CE-4659. Service coil (less switch & cable) CE-3224US. On left side of engine.
Ignition Current—2.4 amperes idling, 5 stopped.

CONDENSER: Auto-Lite Part No. IG-2671K.
Capacity—.20-.25 microfarad.

DISTRIBUTOR: Auto-Lite Model IGP-4502A. Single breaker, 8 lobe cam, full automatic advance type with vacuum spark control and Fuel Compensator.
Breaker Gap—.017" Limits .0125-.0175".
Cam Angle or Dwell—27° clsd., 18° open (.017" gap).
Breaker Arm Spring Tension—17-20 ounces.
Rotation—Counter-clockwise viewed from above.

Automatic Advance

Distributor Degrees	R.P.M.	Engine Degrees	R.P.M.
Start	325	0	650
3	600	6	1200
5.3	800	10.6	1600
8	1175	16	2350
10.75	1550	21.5	3100



Fuel Compensator Adjustment—Permits 40° range of adjustment by loosening vacuum unit link screw at distributor quadrant. See Ignition Timing below.

Vacuum Spark Control: Auto-Lite Unit. Mounted on hold-down plate and linked to adjusting quadrant on distributor. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit.

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	10"
1°	2°	11⅛"
3°	6°	13⅛"
5°	10°	15⅞"
6°	12°	17"

Removal:—Distributor mounted on left side of crankcase. To remove, disconnect vacuum line, take out screw in hold-down plate, lift entire unit out.

IGNITION TIMING

Std. Setting—As given below. See Fuel Compensator Setting for service and fuel corrections.

	Flywheel Degrees	Piston Position
All Engines	5° BTDC	.0103" BTDC

Timing Mark Note—Marks on vibration dampener at front of engine. Dampener marked '#1 UP.DC' with fifteen 1° graduations before this point.

Timing—With #1 piston on compression, turn engine over until piston reaches firing position with correct mark on dampener in line with pointer on chain case cover (see table above). Loosen vacuum unit link screw in distributor quadrant, rotate distributor until contacts begin to open, tighten screw. Check Fuel Compensator Setting (below).

Timing (Neon Timing Light)—Mark correct graduation on vibration dampener, clip neon timing light to #1 spark plug and direct light on vibration dampener, idle engine and adjust distributor as directed above.

Fuel Compensator Setting—Should be set for slight ping when accelerating engine with wide open throttle. To adjust, loosen vacuum unit link screw in distributor quadrant, rotate one graduation at a time counter-clockwise (if ping too severe), clockwise (if no ping), until correct performance secured.

CARBURETOR

Carter Type WDO, Model 512S. 1" Dual (double barrel), Downdraft type with Carter Climatic Control. *See Carburetor Section for complete data.*

NOTE—Carburetor Casting No. 371 on flange.

Idle Adjustment—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stopscrew for idle speed of 6 MPH. (8-10 MPH. for cars with Electromatic Clutch). Turn idle adjusting screw for each barrel (in succession) until engine fires smoothly (½-1½ turns open for each screw—turn screws in for leaner mixture). Readjust idle speed.

Accelerating Pump—Pump arm under dust cover at top of carburetor has two holes for pump link engagement. Set as follows:

Inner (min. stroke)—Normal weather & fuel.
Outer (max. stroke)—Cold weather or low-test fuel.

Float Level—5/32" from top of float to bowl cover with valve seated (remove gasket & invert to check).

Metering Rods & Jets—*See Carter Jet Table in Carburetor Section for complete data.*

Fast Idle:—Integral type (built-in carburetor). *See Carburetion Equipment Section for data.*

Setting—Adjust fast idle screw for .020" throttle opening with choke valve closed.

Automatic Choke:—Carter Climatic Control. *See Carburetion Equipment Section for data.*

Setting—Set thermostat coil housing at Index mark.

CARB. EQUIPMENT

Air Cleaner: AC. Oil-wetted type Std., Heavy duty Oil-bath type Optl.

Servicing (Oil-wetted type)—Wash and re-oil filter element whenever crankcase oil changed (1000-2000 mile intervals for normal service).

Servicing (Oil-bath type)—Clean filter element, clean and refill oil reservoir with SAE No. 50 engine oil (Summer), SAE No. 30 (Winter) to level of indicator line on case (approx. 1 pint) whenever crankcase oil changed (1000-2000 mile intervals).

Oil Filler Cap (Crankcase Ventilator Filter)—Wash filter element in filler cap and re-oil when servicing air cleaner.

Fuel Pump: AC. Type AH (Std.), Type AJ (Optl.). Diaphragm type fuel pump (AH), combination fuel-and-vacuum pump (AJ). Pump Exchange AC. No. 525 (AH), 508 (AJ).

Pressure—4-4¾ lbs. (AH), 3-3¾ lbs. (AJ).

Gasoline Gauge:—Stewart (Stewart-Warner) Electric. *See Carburetion Equipment Section for data.*

BATTERY

Auto-Lite Type PN-15ZR or Willard Type SW-1D-100. 6 Volt, 15 Plate, 100 Ampere Hour Capacity (20 hour rate). End-to-end type.

Starting Capacity—120 amperes (Auto-Lite), 122 amperes (Willard) for 20 minutes.

Zero Capacity—300 amperes for 3.2 minutes. Five second voltage 4.15 volts (Auto-Lite), 4.2 volts (Willard).

Grounded Terminal—Positive (+) to frame.

Dimensions—Length 19⅜". Width 4". Height 9 3/16" (Auto-Lite), 8 15/16" (Willard).

Location—On left side in engine compartment.

STARTER

Auto-Lite Model MAW-4024 or MAW-4027. Armature No. MAW-2128.

Drive—Outboard Barrel Type Bendix No. A1792.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—42-53 ozs. (new brushes).

Cranking Engine—125 RPM., 175 amperes, 5.1 volts.

Performance Data—Auto-Lite

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.5	65
0.60 "	3300	5.5	100
2.75 "	1480	5.0	200
5.45 "	820	4.5	300
8.50 "	400	4.0	400
11.55 "	110	3.5	500
11.5 "	Lock	3.0	505
18.0 "	*Lock*	4.0	*670*

Removal: Flange mounted on left front face of flywheel housing. To remove, take out flange mounting screws, lift out starter and switch assembly.

Starting Switch: Auto-Lite Model SS-4017 Magnetic Switch mounted on starter and controlled by Carter Car Starter Model 192-11U on carburetor. *See Electrical Equipment Section for complete data on Magnetic Switch & Carter Car Starter.*

GENERATOR

Auto-Lite Model GDZ-4801F (Std.), GEB-4802C-2 (Taxicab). Armature No. GDZ-2006F (GDZ Gen.), GEB-2006F (GEB Gen.). Two brush (shunt) type with voltage and current regulation. Ventilated.

Charging Rate Adjustment—No adjustment at generator. Charging rate controlled by Voltage Regulator, maximum output by Current Regulator.

Maximum Charging Rate—35 amperes, 8.0 volts, 1900 RPM and above with load or discharged battery. Actual charging rate controlled by voltage regulator and dependent on battery condition.

Performance Data—GDZ-4801F

Cold Amperes	Volts	RPM.	Hot Amperes	Volts	RPM.
0	6.4	925	0	6.4	1000
5	6.65	1080	5	6.65	1150
10	6.85	1200	10	6.85	1290
15	7.05	1340	15	7.05	1430
20	7.3	1480	20	7.3	1590
25	7.55	1620	25	7.55	1750
30	7.8	1760	30	7.8	1980
*35	8.0	1900	35	8.0	2250

Performance Data—GEB-4802C-2

0	6.4	560	0	6.4	620
5	6.6	640	5	6.6	700
10	6.8	720	10	6.8	800
15	7.1	800	15	7.1	910
20	7.3	880	20	7.3	1040
25	7.5	980	25	7.5	1170
30	7.8	1080	30	7.8	1340
*35	8.0	1200	35	8.0	1520

*—Current Regulator Setting.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—35-53 ozs. (GDZGen.), 64-68 ozs. (GEB Gen.) for new brushes.

Field Current—1.60-1.78 amperes at 6.0 volts.

Motoring Current—4.16-4.60 amperes (GDZ Gen.), 4.0-4.5 amperes (GEB Gen.) at 6.0 volts.

Removal: Pivot mounted at left side of engine at front. To remove, take out pivot and clamp bolts.

Belt Adjustment: 50 lbs. tension on spring scale hooked to generator frame, or ½" thumb-pressure deflection midway between generator and pump pulleys.

REGULATOR

Auto-Lite Model VRP-4002C (GDZ-4801F Gen.), Model VRP-4002D (GEB-4802C-2 Gen.). Voltage-Current Type. Vibrating type Voltage and Current Regulators in case with Cutout Relay. *See Electrical Equipment Section for complete data.*

NOTE—Regulator case cover is sealed. Serviced on exchange basis if seals not broken (to remove cover).

Cutout Relay

Cuts In—6.4-7.0 volts. 920 RPM (set to 6.4-6.6 volts).
Cuts Out—4.1-4.8 volts (approx. 4-6 amps. disch.).
Contact Gap—.015" minimum.
Air Gap—.031-.034" with contacts open (check at hinge end of core).

Voltage Regulator

Setting—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.

To Check (without breaking seals)—Connect ammeter in charging line at regulator 'B' terminal (use short heavy leads), voltmeter between 'B' terminal and ground. Operate generator at speed equivalent to 30 MPH, charging fully charged battery, until voltage is steady. Voltage reading should agree with setting given above.

To Adjust (with cover removed)—Change regulator armature spring tension by bending lower spring hanger slightly. *See Electrical Equipment Section.*

Contact Gap—.012" min. (armature against stop pin).
Air Gap—.048-.052" with contacts just opening.

Current Regulator

Setting—34-36 amperes (marked '35' on the cover).

To Check (without breaking seals)—Connect test meters as for voltage check (above). Operate gen-

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

erator at speed equivalent to 30 MPH. charging battery, turn on car lights and accessories or connect load (bank of headlamp bulbs, etc.) between ammeter and battery so that generator charges at peak rate and Current Regulator operates. Current reading should agree with setting given above. If more than slight excess noted, regulator is defective.

To Adjust (with cover removed)—Same as for Voltage Regulator (above).

Contact Gap & Air Gap—Same as Voltage Regulator.

LIGHTING

Headlamps: Hall "Sealed Beam" type. Upper and lower beams controlled by Beam Selector Switch on toeboard.

See Electrical Equipment Section for complete data.

Adjustment—Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.).

Beam Indicator—Red light on left side of speedometer dial. Lighted with upper beam "on".

Direction Signal: *See Electrical Equipment Section.*

Direction Signal Indicator—Illuminated arrows on face of speedometer dial. Right or Left arrow lighted when direction signal on same side operating.

Switches

Lighting—Delco-Remy No. 1995021.

Beam Selector—Delco-Remy No. 1997008.

Bulb Specifications

MISC. ELECTRICAL

THERMOSTATIC RELAY: Delco-Remy. On lighting switch. Contacts remain closed with 30 amperes, open in 3 minutes with 42 amps. at 70° F. Not adj.

FUSES: Auxiliary (Stop Light, Cigar Lighter, Body Lights, Accessories)—SFE 20 ampere. Two fuses on lighting switch.

Instrument & Tail Light—SFE 20 ampere. On Panel Light Switch.

Clock—SFE 4 ampere. In clock lead near clock.

Overdrive—SFE 30 ampere. In relay lead.

Direction Signal—9 ampere. In flasher lead.

HORNS: Sparton. Vibrator type, air tone, twin horns operated by relay.

Horn Current—22-25 amperes.

Horn Relay: Delco-Remy No. 1116775.

Contact Gap—.025". **Air Gap**—.015" (closed).

Contacts Close—2.75-4.0 volts.

ENGINE

ENGINE SPECIFICATIONS: Eight cylinder "L" head type. **Bore**—3¼". **Stroke**—4¼".

Displacement—282 cubic ins. **Rated HP.**—33.8.

Developed Horsepower—125 at 3600 RPM.

Compression Ratio—6.85-1 Std. cast iron head.

Compression & Vacuum Reading—*See Tune-up data.*

ORIGINAL BORE & PISTONS: *See Packard Shop Notes*

TIGHTENING TORQUES: *See Packard Shop Notes.*

CYLINDER HEAD: Tightening Torque & Cylinder Head Diagram—*See Packard Shop Notes.*

PISTONS: Aluminum alloy, autothermic strut type.

Length 3⅞".

Weight—17¼ ozs. (stripped), 23⅛ (with rings&pin).

Removal—Pistons and rods removed from above.

Clearance—.0005"-.001". See Fitting New Pistons.

Replacement Pistons: *See Packard Shop Notes.*

Fitting New Pistons:—Insert .0015" feeler ½" wide between piston and cylinder wall on side opposite slot. Pull to withdraw feeler should be 12-18 lbs.

Installing Pistons:—Slot toward valves.

PISTON RINGS: Two compression rings (No. 200 top groove, No. 70 second groove), one oil control ring (No. 86) per piston, all above pin. Oil ring groove has twelve 5/32" oil drain holes.

Ring	Width	End Gap	Side Clearance
Comp. (#1)	.0925-.0935"	.007-.017"	.0025-.003"
Comp. (#2)	.1240-.1235"	.007-.017"	.0025-.003"
Oil Control	.1865-.186"	.007-.015"	.0025-.003"

NOTE—Oil Ring (Perfect Circle No. 86) has coil spring type expander spring.

Replacement Rings:—.005, .010", .020", .030", .040" O.S. Triple Action (packaged sets) std. & .020" oversize. *See Packard Shop Notes for Piston Ring data.*

PISTON PIN: Diameter .875". Length 2 51/64". Pin floats in piston and rod, held by locking rings.

Pin Fit in Piston—Palm push fit with piston at 160°F. (heat in water).

Pin Fit in Rod Bushing—Finger push fit at 70°F.

Piston Pin & Connecting Rod Bushing Servicing—*See Packard Shop Notes.*

Replacement Pins:—Std. and .003", .006" oversize.

CONNECTING ROD: Length 7 11/16". Weight 31.6 oz.

Upper Bearing (Piston Pin Bushing)—Split type. *See Packard Shop Notes for servicing data.*

Crankpin Journal Diameter—2.094".

Lower Bearing—Shimless, precision, steel backed, Moraine Durex "300" (copper nickel matrix with babbitt overlay) lined type.

Clearance—.0005-.0025". **Endplay**—.004-.010".

Bearing Adjustment:—None (no shims). Replace bearings. Do not file rods or caps

Replacement Bearings: Furnished Std. size and .001", .002", .003", .015" Undersize.

Installing Rods:—Oil squirt hole toward camshaft.

CRANKSHAFT: Five bearing type with integral counterweights and vibration dampener on forward end.

Journal Diameter—2.7465".

Bearings—Interchangeable, shimless, precision type steel-backed, Moraine Durex "300" (copper nickel matrix with babbitt overlay) lined type.

Clearance—.0005-.0025".

Bearing Adjustment:—None (no shims). Replace bearings (upper halves can be 'rotated' in and out).

Replacement Bearings: Furnished Std. size and .001", .002" Undersize.

End Thrust:—By #3 bearing. **Endplay**—.003-.008".

Crankshaft Front & Rear Oil Seal Replacement: *See "Crankshaft & Main Bearings" in Packard Special Data.*

CAMSHAFT: Five bearing type. Non-adjustable (two sprocket) chain drive.

Bearings—Shimless, precision, steel backed, babbitt lined type. **Clearance**—.001-.003".

End Thrust:—Taken by thrust plate in back of camshaft sprocket. **Endplay**—.0025-.006".

Timing Chain: Morse or Ramsey. Width 1¼". Pitch .375". Length 21¾" or 58 links.

Camshaft Setting:—Install chain and sprockets together with '0' marks on sprockets adjacent and in line with straightedge across shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 31/64"	.33975"	5.619"
Exhaust	1⅜"	.33975"	5.619"

	Seat Angle	Lift	Stem Clearance
Intake	30°	.318"	.0015-.0035"
Exhaust	45°	.3175"	.0035-.0055"

Valve Guides:—Pressed in block from above with upper end 31/32" below valve seat. Exhaust guides counter-bored on upper inner diameter to ⅜" diameter and ⅜" deep.

Valve Springs:—Intake and exhaust springs interchangeable. Anti-rotation serrated washer installed on top of springs.

	Spring Pressure	Spring Length
Valve Closed	52-57 lbs.	1 5/8"
Valve Open	119-129 lbs.	1 5/16"

Valve Lifters:—Mushroom type. Remove from below with camshaft out. Lifters furnished .001", .002", .005" oversize. Use Tool S.T. 5144 (piloted in valve guide) and ream for .005" oversize lifters.

Diameter—.6235-.6240". **Clearance**—.0003-.0012".

VALVE TIMING

Tappet Clearance:—.007" Intake, .010" Exh. (warm & idling). NOTE—Self-locking tappet screw used.

Valve Timing:—See Camshaft Setting above.

Intake Valves—Open 1° BTDC. Close 39° ALDC.

Exhaust Valves—Open 45° BLDC. Close 5° ATDC.

Above figures correct with .0125" Intake, .015" Exhaust tappet clearance.

Valve Timing Check—With .0125" tappet clearance #1 intake valve should open with #1 piston 1° or .0004" BTDC with 1st graduation before top dead center mark '#1 UP DC' on vibration damper lined up with pointer (permissible variation 4° either way). Reset tappet clearance .007" (hot & idling).

LUBRICATION

Engine Oiling System: Full pressure system (pressure to main and connecting rod bearings, camshaft bearings, piston pins, valve lifters, and timing chain). Oil pump mounted externally on right side of crankcase.

Crankcase Capacity—5½ quarts.

Normal Oil Pressure—40 lbs. at driving speeds.

Oil Pressure Regulator—On oil pump cover. Not adjustable. Pressure regulator spring tension should be 14 lbs. ± 2 oz. at 1⅞".

Oil Pump: Gear type. On right side of crankcase.

Oil Pump Removal & Overhaul—*See "Oil Pump" in Packard Special Data.*

Oil Filter: Special equipment.

Servicing—Renew filter cartridge at 8000-10000 mile intervals.

C LING

Cooling System: Pressure type with pressure valve (relief valve) in radiator filler cap. Water pump mounted on front of engine with generator & fan belt drive.

Capacity—17 quarts.

Radiator Core Removal—*See Packard Shop Notes.*

Pressure Valve—In filler cap. Opens at 4½ lbs.

Water Pump:—Packless, sealed ball-bearing type.

See Water Pump Section for complete data.

Removal—Remove fan belt, disconnect pump hose, take out pump mounting screws, lift out pump.

Belt Adjustment—*See Generator Belt Adjustment.*

Thermostat:—Harrison. In cylinder head outlet.

Setting—Starts to open at 145-150°F. (Std. Type), 160-165°F. (Optl. High Reading Type).

CLUTCH

Long Model 10CF-CI. Single plate, semi-centrifugal, dry disc type.

See Clutch Section for complete data.

Facings—Woven (US Asbestos) type, 2 required. I.D. 6". O.D. 10". Thickness .125" (⅛").

Adjustment:—Adjust nut on pedal rod (at clutch fork) for 1½-1¾" free travel (2" on cars with Electromatic Clutch).

Removal:—Remove transmission (see Transmission Removal following) and flywheel housing lower cover. Disconnect and remove pedal rod, clutch throw-out bearing. Remove clutch cover screws (release tension evenly) and lower assembly out.

ELECTROMATIC CLUTCH

Electromatic Clutch—Vacuum type actuation with electrical control. Optl. on all models.

See Clutch Section for complete data.

TRANSMISSION

Own Make. Helical gear, constant-mesh, synchro-mesh (Second & High), constant-mesh (Low). Sliding spur gear (Reverse). Low & Second speed gears are ball bearing mounted.

See Transmission Section for complete data.

Transmission Control: Remote control type with shift lever mounted on steering column.

See Transmission Section for complete data.

Removal:—Disconnect shifter rods, speedometer cable, hand brake cable at equalizer, engine ground strap, overdrive cable and solenoid wires (if used); front universal (block drive shaft up against floor pan) and rubber bearing at rear of overdrive. Support rear of engine with jack and unbolt cross member (at frame ends and transmission case), disconnect clutch retractor spring and fore-and-aft restraint rod. Take out transmission-to-housing mounting screws, remove transmission assembly.

OVERDRIVE

►*INSTALLATION OF R11 OVERDRIVE (To replace original R9 Assembly)—See "Warner R11 Overdrive" in Transmission Section for complete data.*

Warner Model AS2-R9 ("Econo-drive" used with Packard Transmission). Electric solenoid operated type (no centrifugal pawls) with Governor control and throttle operated "kick-down."

See Transmission Section for complete data.

►**Overdrive Lock-up in Reverse Correction for Clipper:** Install 1948 Safety Switch (Kit No. 394484). *See 1948 Packard Car Pages for Overdrive Safety Switch description and Car Wiring Diagram showing Overdrive Circuit with Safety Switch installed.*

Overdrive Indicator Light—Green light on right side of speedometer dial. Lights when overdrive is ready to engage (at car speed of 22 MPH), goes out when accelerator pedal released momentarily to engage overdrive.

Overdrive Relay—Delco-Remy No. 1116823.

Removal: Disconnect control cable and all leads to solenoid, governor, and lockout switch. Free mounting at rear of overdrive case. Then remove overdrive and transmission assembly as directed in Transmission removal (above).

UNIVERSALS

Mechanics Type 3CR. Needle bearing type, 2 used.

►CAUTION—Rear universal flange nut controls rear axle pinion bearing pre-load which **must be adjusted whenever nut is loosened.** *See Packard Rear Axle article in Rear Axle Section for complete data.*

REAR AXLE

Own Make. Semi-floating, hypoid gear type with Hotchkiss Drive.

See Rear Axle Section for complete data.

►*REAR AXLE OIL SEAL LEAKAGE CORRECTION—See "Packard Rear Axle" in Rear Axle Section for complete data.*

Ratio—4.1-1 (Std.), 4.3-1 (With Overdrive).

Backlash—.003-.005". Screw adjustment.

Removal:—Remove wheel, hub, and brake backing plate assembly. Withdraw axle shafts. Disconnect rear universal joint and drop drive shaft. Remove carrier-to-housing bolt nuts, withdraw carrier.

Wheel Bearing Adjustment—Endplay controlled by shims between flanged end of housing and brake backing plate. Unbolt backing plate and clips holding brake tube to housing. Add or remove shims (endplay up to .050" can be adjusted to desired .006" at one wheel). **Endplay**—.004-.007".

SHOCK ABSORBERS

Delco Model 1946-J,K (front), Model 1040-V (rear). Hydraulic, double acting (front), direct (rear).

Fifth Shock Absorber (Stabilizer):—Monroe 373935. Direct acting, hydraulic (built-in rear stabilizer).

FRONT SUSPENSI N

Front Suspension: Clipper Type Packard Safe-T-Flex, independent, linked parallelogram type with coil springs.

See Front Suspension Section for complete data.

Kingpin Inclination—5°35' crosswise.

Camber—0° plus or minus ¼°.

Caster—Neg. 1° plus or minus ½°. Adjustable.

Toe In—0" (plus 1/16", minus 0") at hub height. Adjust by turning adjuster at outer end of each tie rod equally.

Steering Geometry—Inner wheel 23° ± ½°. Outer 20°.

STEERING GEAR

Steering Gear: Own Make (same design as Gemmer Model 335) Worm & Roller with "push-pull" adjustment.

See Steering Gear Section for complete data.

BRAKES

Service: Bendix Hydraulic, 4-wheel, Duo-Servo, Single anchor type **without eccentric adjustment.** Hand lever applies rear wheel service brakes.

See Brake Section for complete data.

Drums—Centrifuse. Diameter 12".

Lining—Marshall 2201H-8 (primary shoe), Marshall B-50 (secondary). Width 1¾". Thickness 3/16". Length per shoe 11½" (primary), 13" (secondary).

Clearance—.015" at both end of secondary shoe with primary shoe forced out against drum.

Hand Brake:—See Service Brake (above).

MISC. MECHANICAL

WINDSHIELD WIPER: Stewart-Warner Type 645-H. Electric-type. NOTE—'Klixon' type circuit-breaker mounted on unit (no fuse used).

See Miscellaneous Section for complete data.

HOOD LOCK: One piece design, side hinge type hood with remote control levers at each side of front compartment under instrument panel. To raise hood, push remote control lever in to unlocked position on side to be raised, raise hood about 1", release safety catch under hood (approx. 2" ahead of rear edge of hood), raise hood up and prop in open position with lever pivoted on dash.

MODEL IDENTIFICATION

SERIAL NUMBER: On left side of cowl (use Eng. No.).

ENGINE NUMBER: First No. F-500001 (1946), F-506001 (1947). On upper left side of cylinder block between #3 and #4 cylinders.

TUNE-UP

COMPRESSION: Pressure—133 lbs. at 300 RPM.

VACUUM READING: Steady 18½" idling at 6 MPH.

FIRING ORDER: 1-6-2-5-8-3-7-4.

SPARK PLUGS: AC No. 104 or Champion Y4-A. 10mm. or Auto-Lite No. P-4. 10 mm.
Gaps—.028" (.0255-.0305").
NOTE—Tighten spark plugs to 50 inch lbs. only.

IGNITION: See Coil, Condenser, and Distributor.
Breaker Gap—.017". **Cam Angle**—27° Closed.
Breaker Arm Spring Tension—17-20 ozs.
Automatic Advance—Starts 250 RPM, 6° at 700 RPM, Max. 11½° at 1800 RPM. Distributor degrees & RPM.
Vacuum Advance—Starts with 7" of vacuum, Max. 5½° with 16" of vacuum. Distributor degrees.

IGNITION TIMING: See Ignition Timing.
Std. Setting—4° BTDC.
Timing Mark—Vibration dampener at front of engine marked "#1 UP.DC" with fifteen 1° graduations before this point. Set ignition contacts to open at 4th graduation before "DC" mark.
Fuel Compensator—Set for slight ping accelerating with wide open throttle.

CARBURETION: See Carburetor & Carb. Equipment.
Idle Setting—Set both idle adjusting screws 1 to 2 turns open. Adjust for smooth idle. Idle speed 6 MPH.
Float Level—5/32" from top of float to cover with valve seated (remove gasket and invert to check).
Accelerating Pump—Inner Hole (minimum) Normal, outer hole (max. stroke) if greater charge required.

Choke Setting: Coil Housing Centered at index.

Fuel Pump Pressure: 4¾ lbs. maximum.

MANIFOLD HEAT CONTROL: Thermostatic coil type. Make certain that valve operates freely and does not bind or stick.

VALVES: See Valve Timing.
Tappet Clearance—None in service (automatic hydraulic type tappet take-up).

STARTING: See Battery, Starter, Generator, and Regulator.

IGNITION

IGNITION SWITCH: Mitchellock Switch Model 24-B. Auto-Lite No. CE-2260BCS Lock Switch and cable.
Ignition Lock Cylinder—Briggs & Stratton 50184.
Key Series—P1251 to P1500. **Groove**—No. 2.

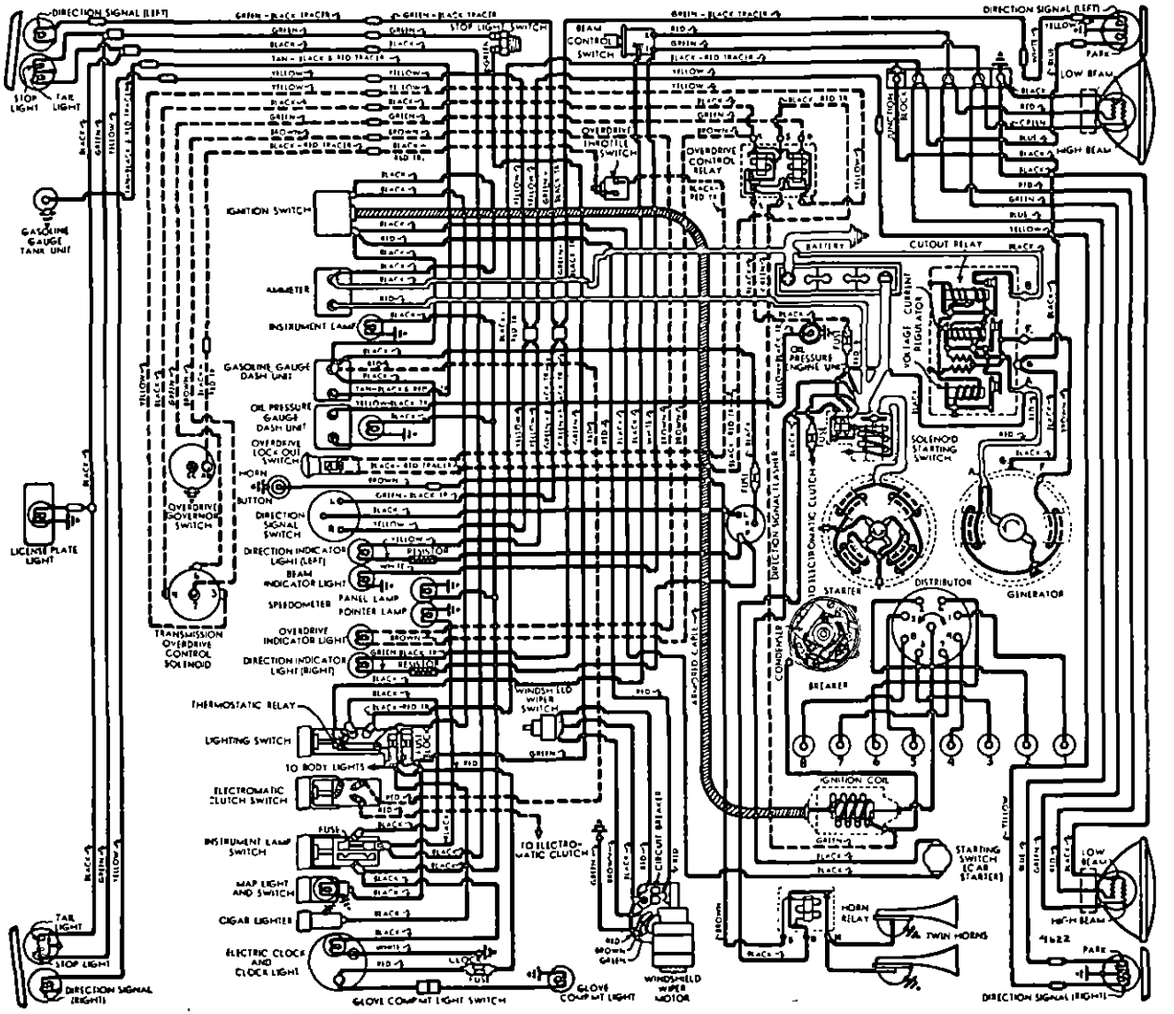
COIL: Auto-Lite No. CE-4659. Service Coil (less switch & cable) CE-3224US. On dash.
Ignition Current—2.4 amperes idling, 5 stopped.

CONDENSER: Auto-Lite Part No. IG-2671J.
Capacity—.20-.25 microfarad.

DISTRIBUTOR: Auto-Lite No. IGT-4203 (or IGT-4102). Automatic advance type with Vacuum Spark Control and Fuel Compensator adjustment.
Breaker Plate Identification—Maximum vacuum advance limited by slot and marked by number (#5½) on plate.
Breaker Gap—Set at .017".
Cam Angle—27° closed, 18° open (with .017" gap).
Breaker Arm Spring Tension—17-20 ozs.
Rotation—Counter-clockwise viewed from above.

Automatic Advance

Distributor Degrees	R.P.M.	Engine Degrees	R.P.M.
Start	250	0	500
3	475	6	950
6	700	12	1400
9	1300	18	2600
11½	1800	23	3600



Fuel Compensator—Manual adjustment at distributor providing 10° advance or retard from center '0' position. See Ignition Timing for setting.

Vacuum Spark Control: Auto-Lite Unit. On distributor, linked directly to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle (spark retarded by return spring in unit).

Vacuum Advance

Distr. Degrees	Engine Degrees	Vacuum (" of HG)
Start	0°	7"
1°	2°	8⅝"
3°	6°	12"
4°	8°	13½"
5½°	11°	16"

Distributor Removal:—Mounted on left side of crankcase. To remove, disconnect vacuum line and take out hold-down screw in advance arm.

IGNITI N TIMING

Std. Setting—As given below. See Fuel Compensator Setting for service and fuel corrections.

	Flywheel Degrees	Piston Position
All Engines	4° BTDC	.0070" BTDC.

Timing Mark—Vibration dampener at front of engine marked '#1 UP.DC' at top dead center for #1 piston with 15 (1°) graduations before this mark.
Timing—Loosen thumbnut, set Fuel Compensator pointer at '0', tighten thumbnut. With #1 piston on compression, turn engine over until piston reaches firing position (see table above) with 4th graduation ahead of #1UP.DC mark in line with pointer on chain case cover. Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt, see that rotor opposite #1 segment in distributor cap, check Fuel Compensator setting (following).
Timing (Neon Timing Light)—Mark 4th graduation ahead of #1UP.DC mark on vibration dampener with white paint, clip neon timing light at #1 spark plug and direct light on vibration dampener, idle engine below 500 RPM and adjust distributor as directed above until mark in line with pointer on chain case cover.
Fuel Compensator Setting—Should be set for slight ping when accelerating with wide open throttle. To adjust, loosen thumbnut, rotate distributor counter-clockwise (if ping too severe), clockwise (if no ping noted), tighten thumbnut and recheck performance.

CARBURETOR

Carter Type WDO, Model 531S, SA. 1¼" Dual downdraft type with Carter Climatic Control.
See Carburetor Section for complete data.
Casting Numbers—377 (531S), 564 (531SA).
►*CARBURETOR RECOMMENDED CHANGES (for better Low Speed Performance and Increased Gas Mileage)—See "Carter WDO" in Carburetor Section for complete data.*
Idle Setting—With engine warm (fast idle inoperative), set throttle stopscrew for 6 MPH idle speed. (Std.), 8-10 MPH. (Cars with Electromatic Clutch) Adjust both idle screws (1 for each barrel, adjust alike) for smooth idling performance (turn screws in for leaner mixture, correct setting 1 to 2 turns open for each screw. Recheck idle speed.
Accelerating Pump—Pump arm under dust cover at top of carburetor has two holes for pump link engagement. Set as follows:
Inner Hole (min. stroke)—Normal setting.
Outer (max. stroke)—If greater charge required.
Float Level—5/32" from top of float to bowl cover with valve seated (remove gasket & invert to check).
Metering Rods & Jets—*Refer to Carburetor Index for Carter Downdraft Carburetor Jet Specification Table.*
Fast Idle:—Integral type (built-in carburetor).
See Carburetion Equipment Section for data.
Setting—Adjust fast idle screw for .023-.028" throttle opening (Gauge T109-189) with choke closed.
Automatic Choke:—Carter Climatic Control.
See Carburetion Equipment Section for data.
Setting—Set thermostat coil housing at index.

CARB. EQUIPMENT

Air Cleaner: AC. Oil-wetted type Std., Heavy duty Oil-bath type Optl.
Servicing (Oil-wetted type)—Wash and re-oil filter element whenever crankcase oil changed (1000-2000 mile intervals for normal service).
Servicing (Oil-bath type)—Clean filter element, clean and refill oil reservoir with SAE No. 50 engine oil (Summer), SAE No. 30 (Winter) to level of indicator line on case (approx. 1 pint) whenever crankcase oil changed (1000-2000 mile intervals).
Oil Filler Cap (Crankcase Ventilator Filter)—Wash filter element in filler cap and re-oil when servicing air cleaner.
Fuel Pump: AC. Type AH. Diaphragm type fuel pump. Exchange Pump AC No. 545.
See Carburetion Equipment Section for data.
Pressure—4-4¾ lbs. max.
Gasoline Gauge:—Stewart (Stewart-Warner) electric.
See Carburetion Equipment Section for data.

BATTERY

Auto-Lite Type PN-17ZR. 6 Volt, 17 Plate, 120 Ampere Hour Capacity (20 hour rate).
Starting Capacity—138 amperes for 20 minutes.
Zero Capacity—300 amperes for 4.1 minutes. Five second voltage 4.35 volts.
Grounded Terminal—Positive (+) to frame.
Dimensions—Length 19⅜". Width 4". Hght. 9 3/16".
Location—On left side in engine compartment.

STARTER

Auto-Lite Model MAX-4052. Armature MAW-2069.
Drive—Overrunning clutch (solenoid pinion shift) through reduction gears.
Rotation—Clockwise at commutator end.
Brush Spring Tension—42-53 ozs. (new brushes).

Performance Data

Torque	RPM①	Volts	Amperes
0 ft. lbs.	2700	5.5	77
33.5 "	Lock	3.0	650
45.9 "	Lock	4.0	900

①—Pinion shaft RPM. (reduction gear drive).
Removal:—Flange mounted on left front face of flywheel housing. To remove, take out flange mounting screws, lift out starter and switch assembly.
Starting Switch: Auto-Lite Model SS-4205 Solenoid type. Mounted on starter and controlled by Carter Car Starter Model 192-11U mounted on carburetor (accelerator pedal starting). *See Electrical Equipment Section for Auto-Lite Solenoid Switches and Carter Car Starter.*

GENERATOR

Auto-Lite Model No. GEA-4802A-1. Armature No. GDZ-2006F. Two brush type with Current and Voltage control. Air cooled by fan on pulley.
Charging Rate Adjustment—None. See Regulator.
Maximum Charging Rate—35 amperes (hot or cold), 8.0 volts, 1700 RPM and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

Performance Data

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	850	0	6.4	865
4	6.6	950	4	6.6	975
8	6.75	1050	8	6.75	1075
12	6.95	1150	12	6.95	1180
16	7.1	1250	16	7.1	1300
20	7.3	1345	20	7.3	1425
24	7.5	1440	24	7.5	1560
28	7.7	1540	28	7.7	1695
32	7.85	1635	32	7.85	1850
35	8.0	1700	35	8.0	1970

Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—53 ozs. max. (new brushes).
Field Current—1.57-1.75 amperes at 6.0 volts.
Motoring Current—4.45-4.9 amperes at 6.0 volts.
Removal:—*Pivot mounted at left front of engine.* To remove, take out pivot and clamp bolts.
Belt Adjustment:—Swing generator out until 50 lb. reading secured on scale hooked to clamp bolt lug parallel to clamp link or until belt deflection midway between generator and water pump pulley is ½" with thumb pressure.

REGULAT R

Auto-Lite Model VRP-4002C. Voltage-Current Type. Vibrating type Voltage and Current Regulators in case with Cutout Relay.
See Electrical Equipment Section for complete data.
NOTE—Regulator case cover is sealed. Serviced on exchange basis if seals not broken (to remove cover).

Cutout Relay

Cuts In—6.4-7.0 volts, 780 RPM (set to 6.4-6.6 volts).
Cuts Out—4.1-4.8 volts (approx. 4-6 amps. disch.).
Contact Gap—.015" minimum.
Air Gap—.031-.034" with contacts open (check at hinge end of core).

Voltage Regulator

Setting—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.
To Check (without breaking seals)—Connect ammeter in charging line at regulator 'B' terminal (use short heavy leads), voltmeter between 'B' terminal and ground. Operate generator at speed equivalent to 30 MPH., charging fully charged battery, until voltage is steady. Voltage reading should agree with setting given above.
To Adjust (with cover removed)—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section.
Contact Gap—.012" min. (armature against stop pin).
Air Gap—.048-.052" with contacts just opening.

Current Regulator

Setting—34-36 amperes (marked '35' on the cover).
To Check (without breaking seals)—Connect test meters as for voltage check (above). Operate generator at speed equivalent to 30 MPH. charging battery, turn on car lights and accessories or connect load (bank of headlamp bulbs, etc.) between ammeter and battery so that generator charges at peak rate and Current Regulator operates. Current reading should agree with setting given above. If more than slight excess noted, regulator is defective.
To Adjust (with cover removed)—Same as for Voltage Regulator (above).
Contact Gap & Air Gap—Same as Voltage Regulator.

LIGHTIN

Headlamps: Hall "Sealed Beam" type. Upper and lower beams controlled by Beam Selector Switch on toeboard.
See Electrical Equipment Section for complete data.
Adjustment—Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.).
Beam Indicator—Red light on left side of speedometer. Lighted when Upper beams in use.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Direction Signal: *See Electrical Equipment Section.*

Direction Signal Indicator—Illuminated arrows on face of speedometer dial. Right or Left arrow lighted when direction signal on same side operating.

Switches

Lighting—Delco-Remy No. 1995021.

Beam Selector—Delco-Remy No. 1997008.

Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	40-30 watts	Sealed Beam

MISC. ELECTRICAL

THERMOSTATIC RELAY: Delco-Remy. On lighting switch. Contacts remain closed with 30 amperes, open in 3 minutes with 42 amps. at 70° F. Not adj.

FUSES: Auxiliary (Stop Light, Cigar Lighter, Body Lights, Accessories)—SFE 20 ampere. Two fuses on lighting switch.

Instrument & Tail Light—SFE 20 ampere. On Panel Light Switch.

Clock—SFE 4 ampere. In clock lead near clock.

Overdrive—SFE 30 ampere. In relay lead.

Direction Signal—9 ampere. In flasher lead.

HORNS: Sparton. Vibrator type, air tone, twin horns operated by relay.

Horn Current—22-25 amperes.

Horn Relay: Delco-Remy No. 1116775.
Contact Gap—.025". **Air Gap**—.015" (closed).
Contacts Close—2.75-4.0 volts.

ENGINE

ENGINE SPECIFICATIONS: Eight cylinder, "L" head type.
Bore—3½". **Stroke**—4⅝".

Displacement—356 cubic inches. **Rated HP**—39.2.

Developed Horsepower—165 at 3600 RPM.

Compression Ratio—6.85-1 cast-iron head. No Optl.
Compression & Vacuum Reading—*See Tune-up data.*

ORIGINAL BORE & PISTONS: *See Packard Shop Notes*

TIGHTENING TORQUES: *See Packard Shop Notes.*

CYLINDER HEAD: Tightening Torque & Cylinder Head Diagram—*See Packard Shop Notes.*

PISTONS: Aluminum alloy, autothermic strut type.
Length—3⅞".

Weight 20¼ oz. (stripped), 26¾ (with rings & pin).

Removal—Pistons and rods removed from above.

Clearance—.0005-.001". See Fitting New Pistons.

Replacement Pistons: *See Packard Shop Notes.*

Fitting New Pistons:—Insert .0015" feeler ½" wide between piston and cylinder wall on side opposite slot. Pull to withdraw feeler should be 12-18 lbs.

Installing Pistons:—Slot toward valves.

PISTON RINGS: Two compression rings (No. 200 top groove, No. 70 second groove), one oil control ring (No. 86) per piston, all above pin. Oil ring groove has twelve 5/32" oil drain holes.

Ring	Width	End Gap	Side Clearance
Comp. (#1)	.0930-.0935"	.007-.017"	.0025-.003"
Comp. (#2)	.1240-.1235"	.007-.017"	.0025-.003"
Oil Control	.1865-.186"	.007-.015"	.0025-.003"

NOTE—Oil Ring (Perfect Circle No. 86) has coil spring type expander spring.

Replacement Rings:—.005", .010", .020", .030", .040" O.S. Triple Action (packaged sets) std. & .020" oversize.
See Packard Shop Notes for Piston Ring data.

PISTON PIN: Diameter ⅞". Length 3 1/64".
Pin floats in piston and rod. Held by locking rings.

Pin Fit in Piston—Palm push fit with piston at 160°F (heat in water).

Pin Fit in Rod Bushing—Finger push fit at 70°F.

Piston Pin & Connecting Rod Bushing Servicing—*See Packard Shop Notes.*

Replacement Pins: Std. and .003", .006", oversize.

CONNECTING ROD: Length—9¼". **Weight**—39 ozs.
Upper Bearing (Piston Pin Bushing)—Split type.
See Packard Shop Notes for Piston Pin servicing data.

Crankpin Journal Diameter—2.250".

Lower Bearing—Shimless, precision, steel backed, Moraine Durex "300" (copper nickel matrix with babbitt overlay) lined type.

Clearance—.0005-.0025". **Endplay**—.004-.010".

Bearing Adjustment:—None (no shims). Replace bearings. Do not file rods or caps.

Replacement Bearings: Furnished Std. size and .001", .002", .003", .015" Undersize.

Installing Rods:—Oil squirt hole toward camshaft.

CRANKSHAFT: Nine bearing type with bolted-on counterweights and vibration dampener at forward end.

Journal Diameter—2.7465".

Bearings—Interchangeable, shimless, precision, steel-backed, Moraine Durex "300" (copper nickel matrix with babbitt overlay) lined type.

Clearance—.0005-.0025".

Bearing Adjustment:—None (no shims). Replace bearings (upper halves can be 'rotated' in and out).

Replacement Bearings: Furnished Std. size and .001", .002" Undersize.

End Thrust:—By #5 bearing. **Endplay**—.003-.008".

Crankshaft Front & Rear Oil Seal Replacement: *See "Crankshaft & Main Bearings" in Packard Special Data.*

CAMSHAFT: Eight bearing type. Non-adjustable (two-sprocket) chain drive.

Bearings—Shimless, precision, steel-backed, babbitt lined type. **Clearance**—.001-.003".

End Thrust:—Taken by thrust plate in back of camshaft sprocket. **Endplay**—.0025-.006".

Timing Chain: Morse. Width 1¼". Pitch .375" (⅜"). Length 23¼" or 62 links.

Camshaft Setting:—Install chain and sprockets together with '0' marks on sprockets adjacent and in line with a straightedge across the shaft centers.

VALVES:

	Head Diameter	Stem Diameter	Length
Intake	1.670"	.34025"	6.224"
Exhaust	1 7/16"	.34025"	6.224"

	Seat Angle	Lift	Stem Clearance
Intake	30°	.340"	.001-.003"
Exhaust	45°	.340"	.003-.005"

Valve Guides:—Pressed in block from above with upper end 31/32" below valve seat. Exhaust guide upper end counterbored to ⅜" diameter, ⅜" deep.

Valve Springs:—Washer used on top of each spring.

	Spring Pressure	Spring Length
Valve Closed	60-66 lbs.	1¾"
Valve Open	135-145 lbs.	1 13/32"

Valve Lifters:—Wilcox-Rich 'Zero-lash' type hydraulic lifters (mushroom type). Remove from below with camshaft out. Lifters furnished .001", .002", .005" oversize. Use Tool S.T. 5101 (piloted in valve guide) and ream for .005" oversize lifters.
Refer to Packard Shop Notes for checking Valve Lifter Clearance when grinding valves.

Diameter .7177-.7182". **Clearance** .0002" selective.

Hydraulic Valve Lifter Removal & Overhaul: *See "Hydraulic Valve Lifters" in Packard Special Data.*

VALVE TIMING

Tappet Clearance:—None in service (hydraulic type lifter). *See Valve Servicing in Packard Shop Notes.*

Valve Timing:—See Camshaft Setting above.
Intake Valves—Open 4° BTDC. Close 51° ALDC.
Exhaust Valves—Open 49° BLDC. Close 10° ATDC.
Valve Timing Check—#1 exhaust valve close 10° after top dead center (#1 piston .0438" ATDC) with hydraulic lifter dry (all oil drained out) and built up with feeler stock for zero tappet clearance.

LUBRICATION

Engine Oiling System: Full pressure system (pressure to main and connecting rod bearings, camshaft bearings, piston pins, valve lifters, and timing chain). Oil pump mounted externally on right side of crankcase.

Crankcase Capacity—7 quarts.

Normal Oil Pressure—50 lbs. at driving speeds.

Oil Pressure Regulator—On oil pump cover. Not adjustable. Pressure regulator spring tension should be 17½-18½ lbs. at 1⅞".

Oil Pump: Gear type. on right side of crankcase.
Oil Pump Removal & Overhaul—*See "Oil Pump" in Packard Special Data.*

Oil Filter: Std. equipment. On left side of engine.
Servicing—Replace filter cartridge at 8000-10000 mile intervals.

Oil Pressure Gauge: Stewart-Warner Electric type.

COOLING

Cooling System: Pressure type with pressure valve (relief valve) in radiator filler cap. Water pump mounted on front of engine (belt driven with generator and fan).

Capacity—20 quarts.

Pressure Valve—In filler cap. Opens at 7 lbs. (Std.), 12 lbs. (with Air Conditioning equipment).

Water Pump:—Packless, sealed ball-bearing type.
See Water Pump Section for complete data.

Thermostat: Harrison. In water outlet elbow on cylinder head.

Setting—Starts to open at 145-150°F. (Std. Type), 160-165°F. (Optl. High Reading Type).

CLUTCH

Long Model 11CF-CI. Single plate, semi-centrifugal, dry disc type.

See Clutch Section for complete data.

Facings—Woven type (US Asbestos), 2 required. I.D. 6". O.D. 11". Thickness .125" (⅛").

Pedal Adjustment: 1¾-2¼" (Std.); 2" (with Electromatic Clutch) pedal free travel. Adjusting nut (with locknut) located on clutch fork end of connecting link.

Removal: Remove Transmission (see Transmission Removal below), disconnect pedal linkage, remove throw-out bearing. Remove clutch cover mounting screws evenly to relieve spring pressure, remove clutch and driven member.

ELECTROMATIC CLUTCH

Electromatic Clutch—Vacuum type actuation with electrical control. Optl. on all models.

See Clutch Section for complete data.

TRANSMISSION

Own Make. Helical gear, constant-mesh, synchromesh (Second & High), constant-mesh (Low), sliding spur gear (Reverse). Constant-mesh gears (Low & Second) are ball-bearing mounted.

See Transmission Section for complete data.

Transmission Control: Remote control type with shift lever mounted on steering column.

See Transmission Section for complete data.

Removal: Disconnect shifter rods, speedometer cable, hand brake cable at equalizer, and ground strap at transmission. Disconnect front universal joint, block drive shaft up for clearance. Support engine with jack, unbolt frame cross-member carrying rear engine mountings and remove cross-member. Remove flywheel housing lower cover, disconnect stabilizer rod (from transmission to X-member). Take out transmission-to-housing mounting screws, pull transmission straight back and remove from car.

OVERDRIVE

►*INSTALLATION OF R11 OVERDRIVE (To replace original R9 Assembly)—See "Warner R11 Overdrive" in Transmission Section for complete data.*

Warner Model AS1-R9A ("Econo-drive" used with Packard Transmission). Electric solenoid operated type (no centrifugal pawls) with Governor control and throttle operated "kick-down."

See Transmission Section for complete data.

►**Overdrive Lock-up In Reverse Correction for Clipper:** Install 1948 Safety Switch (Kit No. 394484). *See 1948 Packard Car Pages for Overdrive Safety Switch description and Car Wiring Diagram showing Overdrive Circuit with Safety Switch installed.*

Overdrive Indicator Light—Green light on right side of speedometer dial. Lights when overdrive is ready to engage (at car speed of 22 MPH), goes out when accelerator pedal released momentarily to engage overdrive.

Overdrive Relay—Delco-Remy No. 1116823.

Removal: Disconnect control cable and all leads to solenoid, governor, and lockout switch. Free mounting at rear of overdrive case. Then remove overdrive and transmission assembly as directed in Transmission removal (above).

UNIVERSALS

Mechanics Type 3CR. Needle bearing type, 2 used.

►*CAUTION*—Rear universal flange nut controls rear axle pinion bearing pre-load which **must be adjusted whenever nut is loosened.** *See Packard Rear Axle article in Rear Axle Section for complete data.*

REAR AXLE

Own Make. Semi-floating, hypoid gear type with Hotchkiss Drive. NOTE—Ring gear has special Support Roller. Housing cover is welded in place.

See Rear Axle Section for complete data.

►*REAR AXLE OIL SEAL LEAKAGE CORRECTION—See "Packard Rear Axle" in Rear Axle Section for complete data.*

►**Pinion Bearing Spacer**—*CAUTION*—1/16" spacer used on some 2103, 2106, 2126 cars. *See 1946-47 Packard in Rear Axle Section.*

Ratio—3.92-1 (Std.), 4.09-1 (With Overdrive).

Backlash—.003-.005". Screw adjustment.

Removal: Remove wheel, hub, and brake backing plate assembly, withdraw axle shafts. Disconnect rear universal joint and drop drive shaft. Remove axle carrier mounting bolt nuts, withdraw carrier assembly.

Wheel Bearing Adjustment—Endplay controlled by shims between flanged end of housing and brake backing plate. To adjust endplay, unbolt backing plate and clips holding brake tube to housing, add or remove shims.

Endplay—.004-.007"

SHOCK ABSORBERS

Delco No. 1946-J,K (front), Monroe No. 18096 (rear), Hydraulic, double acting (front), direct (rear).

EXPORT CARS—Used Delco 1040-V (direct) rear.

Fifth Shock Absorber (Stabilizer): Monroe Model 373935 Direct acting type (built-in one end of stabilizer bar).

FRONT SUSPENSION

Front Suspension (Clipper):—New type Packard Safe-T-fleX (parallelogram type with upper & lower support arms and coil springs—no torque arms)

See Front Suspension Section for complete data.

Kingpin Inclination—5°35' crosswise.

Caster—Negative 1° plus or minus ½°.

Camber—0° plus or minus ¼°.

Toe In—0-1/16" measured 10" up from floor.

Steering Geometry Inner wheel 23° ± ½°. Outer 20°.

STEERING GEAR

Steering Gear: Own Make (same design as Gemmer Model 335) Worm & Roller with "push-pull" adjustment.

See Steering Gear Section for complete data.

BRAKES

Service: Bendix Hydraulic, 4-wheel, Duo-Servo, Single anchor type **without eccentric adjustment.** Hand lever applies rear wheel service brakes.

See Brake Section for complete data.

Drums—Centrifuse type. Diameter 12".

Lining—Marshall 2201H-8 (primary),) B-50 (secondary). Width 2¼" (front wheels), 2" (rear wheels). Thickness 3/16". Length per shoe 11½" (primary), 13" (secondary).

Clearance—.015" at both ends of secondary shoe with primary shoe forced out against drum.

Hand Brake: See Service Brakes above.

MISC. MECHANICAL

WINDSHIELD WIPER: Stewart-Warner Type 645-H. Electric type. NOTE—"KLIXON" type circuit breaker mounted near wiper motor.

See Miscellaneous Section for complete data.

ELECTRICAL EQUIPMENT NOTE: Both Auto-Lite and Delco-Remy electrical equipment are used.

M DEL IDENTIFICATION

►**1949 MODEL DESIGNATION**—These models are continuation of 1948 "2200" Series with "—9" following Model No. and Body No. Engine Nos. are continuation of 1948 Nos.

SERIAL NUMBER: On left side of cowl (use Eng. No.).

ENGINE NUMBER: Stamped on upper left side of cylinder block between #3 and #4 cylinders.

1948 Numbers—G-200001 Up (8), G-400001 Up (Super 8).

►***ENGINE NUMBER CODE: Marks following engine number indicate changes or differences over unmarked engines as follows:***

★—Engine Bore, .020" Oversize.
"A"—Oversize Valve Guides used.
"C"—Late type Pistons and Rings used.
"CD"—Same as "C" and "D".
"CE"—Same as "C" and "E".
"D"—7 qt. oil pan—"7 qt." mark on dip stick.
"E"—7 qt. oil pan and Late type Camshaft used.

TUNE-UP

COMPRESSION PRESSURE: 120 lbs. cranking speed.

VACUUM READING: Steady 18-20" idling at 6 MPH.

FIRING ORDER: 1-6-2-5-8-3-7-4. See diagram.

SPARK PLUG GAP: .028", Limits .025-.030".

Plug Types—Auto-Lite P-4, AC No. 104, or Champion Y4A. 10 mm. Metric.

CAUTION—Avoid overtightening plugs. Tighten snugly with fingers using plug wrench.

IGNITION: *See Coil, Condenser, and Distributor.*
Breaker Gap—.017". Limits .013-.018".
Cam Angle—Closed 27° Auto-Lite, 31° Delco-Remy.
Breaker Arm Spring Tension—17-20 ounces.
Automatic & Vacuum Advance—*See Distributor.*

IGNITION TIMING: 6° BTDC.
Timing Procedure—*See Ignition Timing.*
Vibration Dampener Mark—"#1UP.DC" with fifteen 1° graduations ahead of this point. Set ignition contacts to open at 6th graduation before "DC"
Fuel Compensator Setting—Slight ping accelerating with wide open throttle.

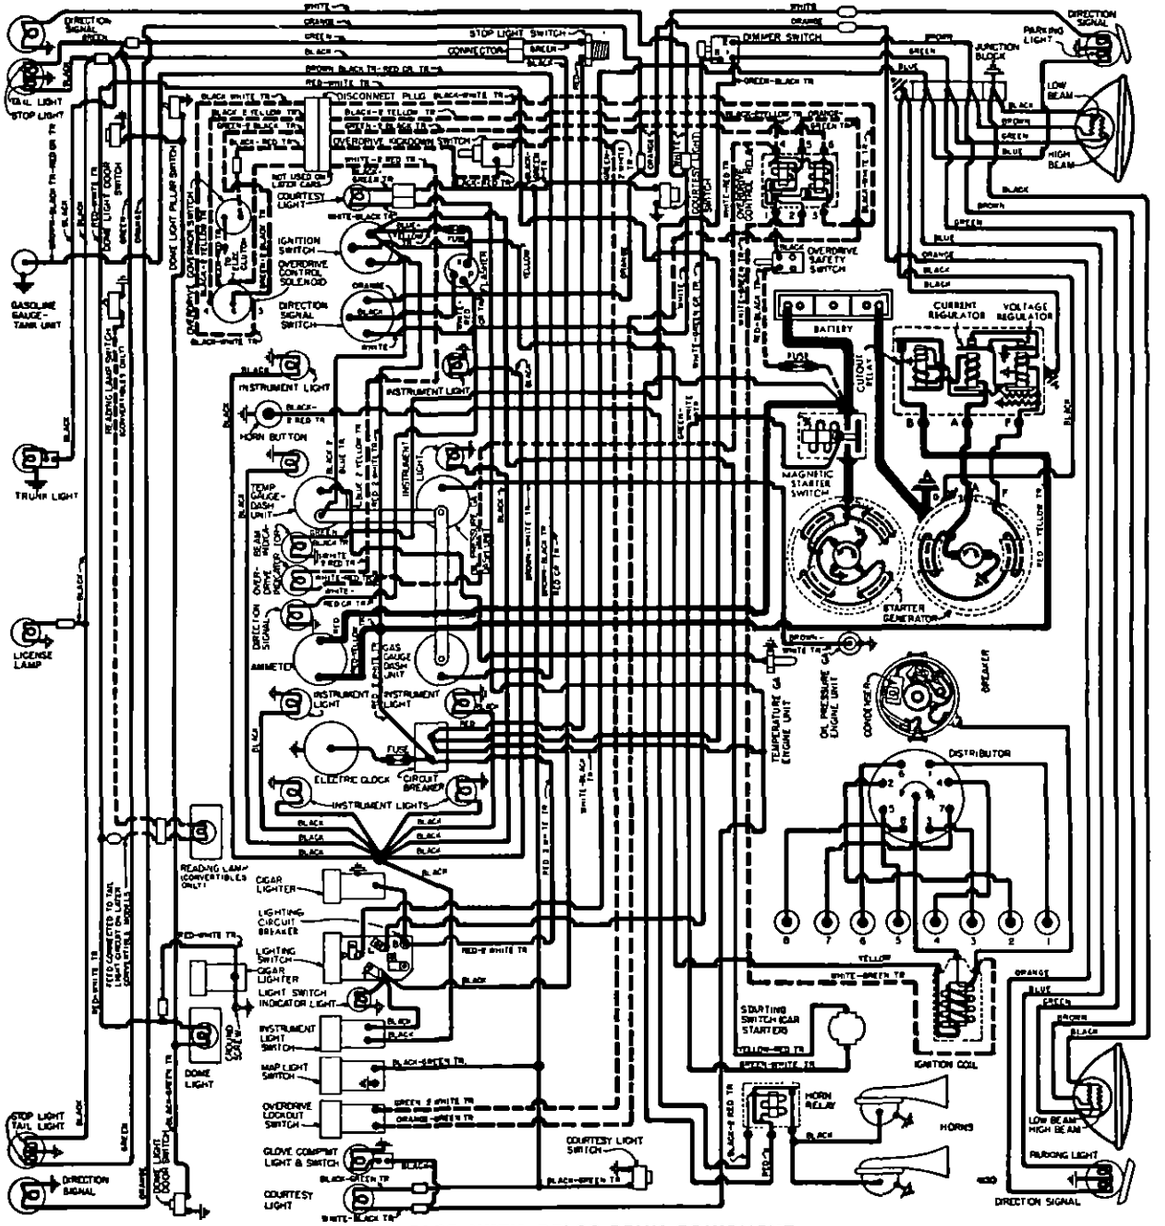
CARBURETION: *See Carburetor & Carb. Equipment.*
Idle Setting—⅝-1⅛ turns open (Eight), ¾-1¼ turns open (Super 8). Two screws—turn out for richer mixture.
Idle Speed (standard)—6 MPH.
Float Level—5/32" from top of float to cover with valve seated (remove gasket and invert to check).
Accelerating Pump—Not adjustable on 643S, SA. Inner Hole (Normal 644S, SA). Outer hole if more charge needed.
Fuel Pump Pressure—4-4¾ lbs.

MANIFOLD HEAT CONTROL: Automatic. No adjustment. Valve must operate freely.

VALVE TAPPET CLEARANCE: *CAUTION—Special setting for early & late camshafts:*

►**ENGINES WITH EARLY CAMSHAFT**
.006" Intake, .008" Exhaust, Hot. (Supersedes original setting of .007" Int. & .010" Exh. to reduce tappet noise).

►**ENGINES WITH LATER CAMSHAFT**
►**With Code "CE" or "E" following Engine No.**
.007" Intake, .010" Exhaust, Hot.



STARTING: *See Battery, Starter, Generator, Regulator.*

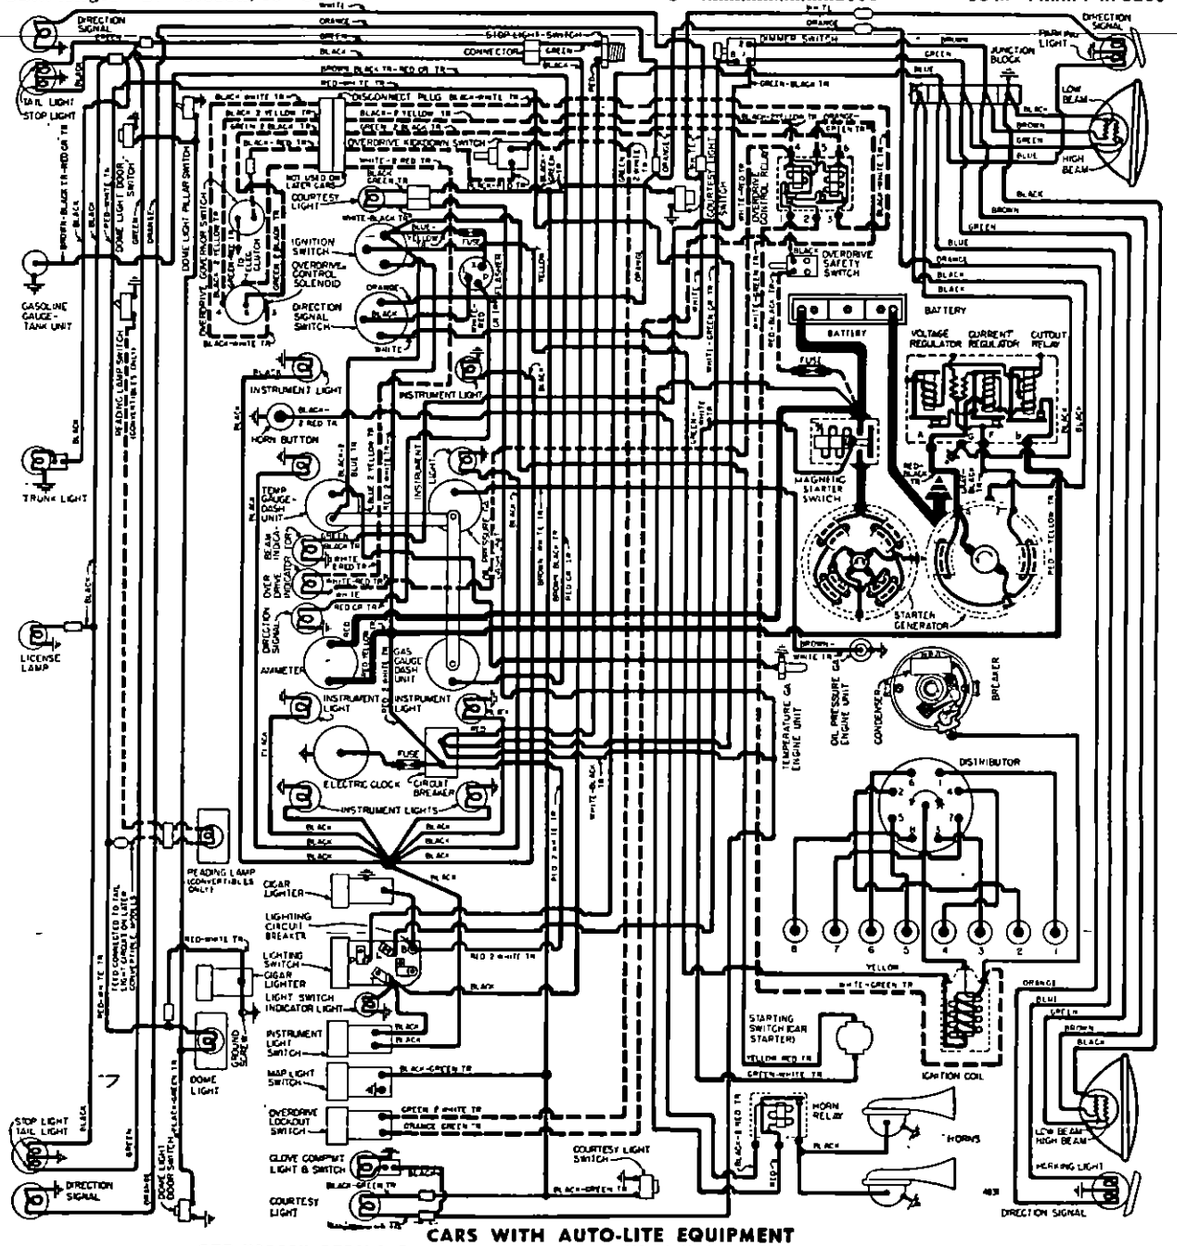
IGNITION

AUTO-LITE

IGNITION SWITCH: Mitchellock Type 42-B.
Ignition Lock—Briggs & Stratton. B & S No. 50184.
Key Series—P1251 to P1500. **Groove**—No. 2.

COIL: Auto-Lite Model CE-4033.

CARS WITH DELCO-REMY EQUIPMENT
SEE "2300" SERIES FOR 1949 R11 OVERDRIVE WIRING (1948 R9 SHOWN ABOVE)



Location—Left side of engine above distributor.
Ignition Current—2.75 amps. idling, 4.5 stopped.

CONDENSER: Auto-Lite Part No. IG-2671K.
Capacity—.20-.25 microfarad.

DISTRIBUTOR: Auto-Lite Model IGP-4502B. Automatic advance type with Vacuum Spark Control and Fuel Compensator Adjustment.
Breaker Gap—.017". Limits .013-.018".
Cam Angle—27° Closed, 18° Open.
Breaker Arm Spring Tension—17-20 ounces.
Rotation—Counter-clockwise viewed from above.

Automatic Advance (Auto-Lite)

Degrees Start	Distr. R.P.M.	Degrees	Eng. R.P.M.
	300	0	600
1	400	2	800
3	600	6	1200
6	1200	12	2400
8	1600	16	3200

CARS WITH AUTO-LITE EQUIPMENT
SEE "2300" SERIES FOR 1949 R11 OVERDRIVE WIRING (1948 R9 SHOWN ABOVE)

Fuel Compensator: 40° range of adjustment on quadrant at vacuum link connection. See Ign. Timing.

Vacuum Spark Control: Auto-Lite. Mounted on hold-down plate and linked to adjusting quadrant on distributor. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring.

Vacuum Advance (Auto-Lite)

Distr. Degrees Start	Eng. Degrees	Vacuum (" of HG)
	0°	6"
2°	4°	9⅜"
4°	8°	10½"
6°	12°	12⅞"
7°	14°	14"

Distributor Removal: On left side of engine. Disconnect vacuum line, take out hold-down plate screw,

IGNITI N

DELCO-REMY

IGNITION SWITCH: Mitchellock Type 42-B.
Ignition Lock—Briggs & Stratton. B & S No. 50184.
Key Series—P1251 to P1500. Groove No. 2.

COIL: Delco-Remy No. 1115380.
Location—Left side of engine above distributor.
Ignition Current—2.4 amperes idling, 5 stopped.

CONDENSER: Delco-Remy Part No. 1869704.
Capacity—.18-.25 microfarad.

DISTRIBUTOR: Delco-Remy Model 1110811. Automatic advance type with Vacuum Spark Control and Fuel Compensator.
Breaker Gap—.017". Limits .013-.018".
Cam Angle—31° Closed, 14° Open.
Breaker Arm Spring Tension—17-20 ounces.
Rotation—Counter-clockwise viewed from above.

Automatic Advance (Delco-Remy)

Degrees Start	Distr. R.P.M.	Degrees	Eng. R.P.M.
	300	0	600
4	600	8	1200
9	1600	18	3200

Fuel Compensator: 10° advance or retard adjustment at distributor. See Ignition Timing.

Vacuum Spark Control: Delco-Remy 1116041. Integral type mounted on distributor and linked directly to breaker plate. Plunger Travel—5/32" max.

Vacuum Advance (Delco-Remy)

Distr. Degrees Start	Eng. Degrees	Vacuum (" of HG)
	0°	5-7"
7°	14°	13.0-15.0"

Distributor Removal: Same as for Auto-Lite (above)

IGNITION TIMING

Std. Setting ..... **6° BTDC.**

NOTE—Modify this setting for special fuel and altitude conditions. See Fuel Compensator Setting.
Vibration Dampener Mark—"#1UP.DC" with fifteen 1° graduations ahead of mark.
Timing—With #1 piston on compression, turn engine over until piston reaches firing position with correct mark on dampener in line with pointer on chain case cover (see table above). Loosen vacuum unit link screw in distributor quadrant (Auto-Lite distributors), or hold-down screw in advance arm (Delco-Remy distributors), rotate distributor until contacts begin to open, tighten screw.
Timing (with Neon Timing Light)—Mark 6th line ahead of "#1UP.DC" mark on vibration dampener with white paint, clip timing light to #1 spark plug.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Idle engine below 600 RPM., adjust distributor (as directed above) until mark lines up with pointer.
Fuel Compensator Setting—Should be set for slight ping when accelerating engine with wide open throttle. To adjust, loosen vacuum unit link screw in distributor quadrant (Auto-Lite Distributors), advance arm hold-down screw (Delco-Remy Distributors), rotate distributor one graduation at a time counter-clockwise (if ping too severe), clockwise (if no ping), until correct performance secured.

CARBURETOR

Eight.....**Carter WDO, No. 644S or SA.**
Super Eight.....**Carter WDO, No. 643S or SA.**
1¼" dual barrel downdraft types with Carter Climatic Control.
Casting No.—377 (643S), 561 (643SA, 644S, SA).
See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up data.*
Metering Rods & Jets—*See Carter Jet Table in Carburetor Section.*

Fast Idle: Carter Dual (WDO) Carburetor type.
See Carburetion Equipment Section for complete data.
Setting—.026" (643S, SA), .020" (644S, SA) throttle opening with choke valve closed. Adjust by turning fast idle screw on high step of fast idle cam.

Automatic Choke: Carter Climatic Control (Dual Carburetors).
See Carburetion Equipment Section for complete data.
Setting—Centered (at index).

CARB. EQUIPMENT

Fuel Pump (Fuel-&-Vacuum): AC Type AJ. No. 1523867 or 1523629.

Replacement Pump—AC No. 508.

Pressure—4-4¾ lbs.
See Carburetion Equipment Section for complete data.

Gasoline Gauge: King-Seeley Electric.
Dash Unit—K-S No. 41635.
Tank Unit—K-S No. 41676 (Eight), 41678 (Super 8).
See Carburetion Equipment Section for complete data.

Air Cleaner (std.—oil wetted): AC No. 1544180 (Type #6 element).
Optl. (oil-bath)—AC. Element #14.
Servicing (oil-wetted type)—Wash and re-oil filter element every 1000 to 2000 miles whenever crankcase oil is changed.
Servicing (oil bath type)—Clean filter element, clean and refill oil reservoir with SAE No. 50 engine oil (Summer), No. 30 (Winter) to level of indicator line on case (approx. 1 pint) every 5000 miles or oftener if required.

BATTERY

Auto-Lite Type PN-15ZR or Willard SW-1D-100.
6 volt, 15 plate, 100 amp. hr. capacity (20 hr. rate).
Starting Capacity—120 amperes (Auto-Lite), 122 amperes (Willard) for 20 minutes.

Grounded Terminal—Positive (+) to frame.

Location—Left side in engine compartment.

STARTER
AUTO-LITE

Auto-Lite Model MCL-6003. Armature No. MCH-2021
Drive—Outboard Barrel Type Bendix No. A-1915.
Rotation—Counter-clockwise at commutator end.
Cranking Engine—175-225 amperes.
Brush Spring Tension—42-53 ozs. (new brushes).

Performance Data (Auto-Lite)

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.0	65
8.0 ft. lbs.	Lock	2.0	4.0

Removal: On left front face of flywheel housing. To remove, take out flange mounting screws.

Starting Switch: Auto-Lite Model SS-4017 Magnetic Switch on starter controlled by Carter Car Starter No. 192-11U on carburetor (accelerator control).
See Electrical Equipment Section for complete data.

STARTER
DELCO-REMY

Delco-Remy Model 1107943. Armature No. 1910938.
Drive—Outboard Barrel Type Bendix No. A-1792.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—24-28 ozs. each.
Cranking Engine—175-225 amperes.

Performance Data (Delco-Remy)

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	6000	5.0	60
15 "	Lock	3.0	600

Removal: Same as Auto-Lite data (above).

Starting Switch: Delco-Remy Model 1452 Magnetic Switch on starter controlled by Carter Car Starter No. 192-11U on carburetor (accelerator control).
See Electrical Equipment Section for complete data.

GENERATOR
AUTO-LITE

Auto-Lite Model GDZ-4801F or GDZ-4801T. Arm. GDZ-2006F. 2 brush with voltage & current regulation.

Maximum Charging Rate—35 amperes, 8.0 volts.
Charging Rate Adjustment—None. See Regulator.

Performance Data (Auto-Lite)

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	925	0	6.4	1000
10	6.85	1200	10	6.85	1290
20	7.3	1480	20	7.3	1590
30	7.8	1760	30	7.8	1980
*35	8.0	1900	35	8.0	2250

*—Current Regulator Setting.

Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—35-53 ozs. (new brushes).
Field Current—1.60-1.78 amperes at 6.0 volts.
Motoring Current—4.16-4.60 amperes at 6.0 volts.

Removal: Pivot mounted at left front of engine. To remove, take out strap screw and mounting bolts.

Belt Adjustment: ¼" belt deflection between fan and generator. Loosen adjusting strap screw, pry generator out for ¼" setting, tighten screw.

GENERATOR
DELCO-REMY

Delco-Remy Models 1102699 or 1102705.
Armature No.—Delco-Remy No. 1879002.
2 brush with voltage and current regulation.
Maximum Charging Rate—35 amperes at 8.0 volts.
Charging Rate Adjustment—None. See Regulator.

Performance Data (Delco-Remy)

	Amperes	Volts	R.P.M.
Cold	30①	8.0	1750

①—Not maximum output. See Current Regulator.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—25 ounces each.
Field Current—1.75-1.9 amperes at 6.0 volts.

Removal & Belt Adjustment: See Auto-Lite (above).

REGULATOR
AUTO-LITE

Auto-Lite Model VRP-4402A. Voltage-current type.
See Electrical Equipment Section for complete data.
NOTE—Regulator cover sealed. Warranty void if seals broken.

Cutout Relay

Cuts In—6.4-7.0 volts, 920 RPM. (set to 6.4-6.6 volts).
Cuts Out—4.1-4.8 volts (approx. 4-6 amps. disch.).
Contact Gap—.015" minimum.
Air Gap—.031-.034" with contacts open (check at hinge end of core).

Voltage Regulator

Setting—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.
Checking (without breaking seals) & Adjustment—*See Electrical Equipment Section for complete data.*
Contact Gap—.012" min. (armature against stop pin).
Air Gap—.048-.052" with contacts just opening.

Current Regulator

Setting—34-36 amperes (marked '35' on cover).
Checking (without breaking seals) & Adjustment—*See Electrical Equipment Section for complete data.*
Contact Gap—.012" min. (armature against stop pin).
Air Gap—.048-.052" with contacts just opening.

REGULATOR
DELCO-REMY (FIRST CARS)

Delco-Remy 1118278 Single Core Voltage & Current type.
See Electrical Equipment Section for complete data.
CAUTION—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

Cutouf Relay

Cuts In—6.2-6.7 volts hot.
Cuts Out—0-4.0 ampere discharge current.
Contact Gap—.020" (same for both sets).
Air Gap—.020" (with contacts just closed).

Voltage Regulator

Setting—7.2-7.4 volts hot (operating temperature). Regulator over-compensated for temperature. Should be checked with cover in place and hot.
Checking & Adjustment—*See Electrical Equip. Section.*
Air Gap—.070" between center of core and armature with contacts just closing (press down on armature to open contacts, release pressure, check gap at point where contacts just close).

Current Regulator

Setting—34-36 amperes hot (operating temp.).
Checking & Adjustment—*See Electrical Equip. Section.*
Air Gap—.080" (check same as Voltage Regulator).

REGULATOR
DELCO-REMY (LATER CARS)

Delco-Remy Model 1118331. (For 1102705 Generator).
See "1949-50 Packard Eight" for complete data.

LIGHTING

Headlamps: Hall "Sealed Beam" type.
See Electrical Equipment Section for complete data.
Beam Indicator—Left hand indicator below speedometer. Lighted when Upper Beam "on".
Direction Signal: Std. *See Electrical Equipment Section.*
Direction Signal Indicator—Below speedometer.

Switches

Lighting—Packard No. 393563:
Beam Selector—Delco-Remy No. 1997008.
Instrument—Packard No. 393565.
Map Light—Packard No. 396675.
Courtesy Light (Door Switch)—Packard 393517.
Dome Light—Packard No. 399289.

MISC. ELECTRICAL

CIRCUIT BREAKERS: Vibrating, thermostatic types. Packard No. 410047 (Lighting), 393746 (Accy.).
Lighting—On lighting switch. 30 ampere.
Accessory (Stop & Body Lights)—Behind instrument panel above Clock. 30 ampere.

FUSES: Clock—SFE 2 ampere in lead near Clock.
Direction Signal—SFE 9 ampere. In Flasher feed wire above speedometer.
Overdrive—SFE 30 ampere. In lead from Starter to Overdrive Safety Switch.
Electromatic Clutch—9 ampere. In lead from Ignition Switch to Electromatic Switch.
Heater—SFE 30 ampere. In cable under clock.

HORNS: Sparton. Dual horns operated by relay.
Horn Current—22-25 amperes.

Horn Relay: Delco-Remy No. 1116775.
Contact Gap—.025". **Air Gap**—.015" (closed).
Contacts Close—2.75-4.0 volts.

ENGINE

ENGINE SPECIFICATIONS: 8 cylinder, "L" head type.

	Eight	Super 8
Bore	3½"①	3½"①
Stroke	3¾"	4¼"
Displacement	288 cu. ins.	327 cu. ins.
Rated HP	39.2	39.2
Developed HP	130 at 3600	145 at 3600

①—*For Original Bore Sizes, see Packard Shop Notes.*
Compression Ratio—7.0-1 std. cast iron head.
Compression & Vacuum Reading—*See Tune-Up data.*
►*.020" OVERSIZE BORE ENGINES: Marked by star following engine number.*

OIL PAN REMOVAL: *See Packard Special Data.*

TIGHTENING TORQUES: *See Packard Shop Notes.*

CYLINDER HEAD: Tightening Torque & Cylinder Head Diagram—*See Packard Shop Notes.*

PISTONS: Aluminum alloy, autothermic strut type. *Original Piston Sizes & Markings, see Packard Shop Notes.*
►*LATE TYPE PISTONS AND RINGS: Used on engines marked with letters "C", "CD", or "CE" following engine number.*
Length—3⅞".
Weight—19½ ozs. (stripped), 25⅞ (with rings & pin)
Removal—Pistons and rods removed from above.
Clearance—.0005-.001". See Fitting New Pistons.

Replacement Pistons: *See Packard Shop Notes.*

Fitting New Pistons: Insert .0015" feeler ½" wide between piston and cylinder wall on side opposite slot. Pull to withdraw feeler should be 12-18 lbs.

Install Pistons: Slot toward valves.

PISTON RINGS: Two compression rings (No. 200 top groove, No. 70 second groove), one oil control ring (No. 86) per piston, all above pin. Oil ring groove has twelve 5/32" oil drain holes.
►*LATE TYPE PISTONS AND RINGS: Used on engines marked C, CD, or CE following engine number.*

Ring	Width	End Gap	Side Clearance
Comp. (#1)	.0930-.0935"	.0054-.0233"	.0025-.003"
Comp. (#2)	.1235-.124"	.0054-.0233"	.0025-.003"
Oil Control	.186-.1865"	.0054-.0213"	.0025-.003"

Oil Ring Note—Perfect Circle No. 86 with coil spring type expander.

Replacement Rings: .005", .010", .020", .030", .040" OS. Triple Action Sets (std. & .020" OS.). *For installation of these sets see Packard Shop Notes.*

PISTON PIN Diameter—.875". **Length**—3 1/64".
Floating type retained by lock ring at each end. Split type bushing used in upper end of rod.
Pin Fit in Piston—Palm push fit with piston at 160°F. (heat piston in water only).
Pin Fit in Rod Bushing—Finger push fit at 70°F.
Piston Pin (Connecting Rod) Bushing Installation—*See "Piston Pins" in Packard Shop Notes.*

Replacement Pins: Std. and .003", .006" oversize.

CONNECTING ROD: Length 7 15/16" (8), 7 11/16" (Super 8).
Weight—35.7 ozs. (Eight), 35.4 ozs. (Super 8).
Connecting Rod Journal Diameter—2.250".
Lower Bearing—Shimless, precision, steel backed, Moraine Durex or Federal Mogul H-24.
Clearance—.0005-.0025". **Endplay**—.003-.011".

Bearing Adjustment: None (no shims). Replace bearings. Self-locking nuts used on cap bolts (tighten to 60-65 ft. lbs.).

Replacement Bearings: .001", .002", .003", .015" U. S.

Installing Rods: Oil squirt hole toward camshaft.

CRANKSHAFT: 5 bearing integral counterweights.
Vibration Dampener—Houde with Silicone fluid (8), Rubber Friction Disc (Super 8).
Dampener Removal Note—Use Puller Tool No. J-2636 to avoid damaging dampener.
Main Bearing Journal Diameter—2.7465".
Bearings—Interchangeable, shimless, precision, steel-backed Moraine Durex or Federal Mogul H-24.
Clearance—.0005-.0025".

Bearing Adjustment: None (no shims). Replace bearings (upper halves can be rotated in and out).

Replacement Bearings: Std., .001", .002" undersize.

End Thrust: At #3 bearing. **Endplay**—.003-.008".

Crankshaft Front & Rear Oil Seal Replacement: *See "Crankshaft & Main Bearings" in Packard Special Data.*

CAMSHAFT: 5 bearing. Non-adjustable chain drive.
►*LATE TYPE CAMSHAFT—Has redesigned cam lobe contour reducing tappet noise. Engines equipped with this camshaft marked "E" or "CE" after Eng. No.*
►*CAUTION—Different tappet clearance settings used for each camshaft. See Tappet Clearance under VALVE TIMING.*
Bearings—Steel-backed, babbitt lined bushings.
Clearance—.001-.003".

End Thrust: Taken by thrust plate in back of camshaft sprocket.
Endplay (8)—.004-.006", **(Super 8)** .0025-.006".

Timing Chain: Morse or Ramsey. Width 1¼". Pitch .375". Length 21¾" or 58 links.

Camshaft Setting: Install chain and sprockets together with "0" marks on sprockets adjacent and in line with straightedge across shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 43/64"	.3417"	5 7/8"
Exhaust	1 7/16"	.3398"	5 7/8"

	Seat Angle	Lift	Stem Clearance
Intake	30°	.342"	.0005-.0031"
Exhaust	45°	.342"	.0024-.005"

Valve Guides: Lubrite coated. Pressed in block from above with upper end 31/32" below top of block. Exhaust guides counterbored on upper inner diameter to .375" diameter and .375" deep.
►*OVERSIZE VALVE GUIDES—Used on engines marked "A" following engine number.*

Valve Springs: Intake and exhaust springs interchangeable. Anti-rotation serrated washer installed on top of spring and seats in recess in block.

	Spring Pressure	Spring Length
Valve Closed	60-66 lbs.	1¾"
Valve Open	135-145 lbs.	1 13/32"

Valve Lifters: Mushroom type. Remove from below
Diameter—.6235-.6240". **Clearance**—.0003-.0012".
Replacement Lifters—.001", .002", .005" oversize. Use Tool S.T. 5144 (piloted in valve guide) and ream for .005" oversize lifters.

VALVE TIMING

VALVE TAPPET CLEARANCE: *CAUTION—Special setting for early & late camshafts:*

►**ENGINES WITH EARLY CAMSHAFT**
.006" Intake, .008" Exhaust, Hot. (Supersedes original setting of .007" Int. & .010" Exh. to reduce tappet noise).

►**ENGINES WITH LATER CAMSHAFT**
►**With Code "CE" or "E" following Engine No.**
.007" Intake, .010" Exhaust, Hot.

Valve Timing: See Camshaft Setting above.
Intake Valves—Open 10° BTDC. Close 50° ALDC.
Exhaust Valves—Open 50° BLDC. Close 5° ATDC.
Above figures for .0125" Intake, .015" Exhaust tappet clearance.
Valve Timing Check—With .0125" tappet clearance #1 intake valve should open with #1 piston 10° BTDC. with 10th graduation before top dead center mark "#1UP.DC" on vibration dampener aligned with pointer. Reset tappet clearance .007" Hot.

LUBRICATI N

Engine Oiling System: Pressure to main and connecting rod bearings, camshaft bearings, piston pins, valve lifters, and timing chain. Oil pump mounted externally on right side of engine.
►**Crankcase Capacity**—*CAUTION*—5½ quarts on unmarked engines. 7 quarts on engines marked "CD", "CE", "D", or "E" following engine number and "7 qt." mark on dip stick.
Normal Oil Pressure—40 lbs. Normal Driving.
Oil Pressure Regulator—On oil pump cover. Not adjustable. Pressure regulator spring tension should be 14 lbs. ± 2 ozs. at 1⅞".

Oil Pump: Gear type. On right side of crankcase.
Oil Pump Removal & Overhaul—*See "Oil Pump" in Packard Special Data.*

Oil Filter: Opti. Replace cartridge at 8000-10000 miles or when oil shows signs of being dirty.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Oil Pressure Gauge: King-Seeley Electric.
Dash Unit—K-S No. 41640.
Engine Unit—K-S No. 40767.
See Miscellaneous Section for complete data.

COOLING

Cooling System: Pressure type with pressure relief valve in filler cap and fan belt driven pump.
Capacity—18 qts. (Eight), 20 qts. (Super 8), with 2 quarts additional for heater and defroster.
Pressure Valve—AC 850005 Filler Cap. Opens 7 lbs.
Water Pump: Centrifugal, belt-driven, packless type.
See Water Pump Section for complete data.
Belt Adjustment—*See Generator Belt Adjustment.*
Thermostat: In cylinder head outlet.
Setting (std.)—Starts to open 145-150°F.
Setting (Optl. High Reading)—Starts to open 160-165°F. or 175-180°F.
Temperature Gauge: King-Seeley Electric.
Dash Unit—K-S No. 41645.
Engine Unit—K-S No. 41085.
See Miscellaneous Section for complete data.

CLUTCH

Long 10CF-TI (Eight), 11CF-10½TI (Super Eight). Single plate, semi-centrifugal, dry disc type.
See Clutch Section for complete data.
Facings—Woven (U. S. Asbestos). Thickness .125". I.D. 6¾" (8), 7" (Super 8). Outside Diameter 10" (8), 10½" (Super 8).
Pedal Adjustment: (1948)—1¼-1½" free travel. Adjusting nut on rod between relay lever and throwout lever.
Pedal Adjustment: (1949)—*See "Clutch Notes" in Packard Special Data.*
Removal: Remove transmission (see Transmission Removal following) and flywheel housing lower cover. Disconnect throwout linkage and remove throwout bearing. Remove clutch cover screws (release tension evenly), lower assembly out of car.

ELECTROMATIC CLUTCH

Electromatic Clutch: Vacuum type clutch actuation with electrical control. Optional equipment.
See Clutch Section for complete data.

TRANSMISSION

Own Make. Helical gear, constant-mesh, synchro-mesh (Second & High), constant-mesh (Low). Sliding spur gear (Reverse). Low & Second speed gears are ball bearing mounted.
See Transmission Section for complete data.
Transmission Control: Steering column type.
See Transmission Section for complete data.
Removal: Disconnect shifter rods, speedometer cable, hand brake cable at equalizer, engine ground strap, front universal (block driveshaft up against floor pan). Support rear of engine with jack and unbolt cross member (at frame ends and transmission), Disconnect clutch retractor spring and fore-and-aft restraint rod. Take out transmission-to-housing mounting screws, remove transmission.

OVERDRIVE

1948 WARNER R9

▷*INSTALLATION OF R11 OVERDRIVE (To replace original R9 Assembly)—See "Warner R11 Overdrive" in Transmission Section for complete data.*
Warner Model AS2-R9 (Eight), AS1-R9A (Super Eight). Optl. equipment used with Packard transmission. Overdrive is solenoid operated type no centrifugal pawls) with Governor Control and throttle operated "kick-down".
See Transmission Section for complete data.
▷**Overdrive Short-Circuit Correction**—Disconnect Plug under car (as shown in wiring diagram) discontinued on Late 1948 Cars to avoid short circuits at this point due to water and corrosion. On earlier cars Plug can be removed and wires spliced, soldered, taped and shellacked to prevent short circuits.
▷**Overdrive Safety Switch**—Mounted at lower end of steering column and operated by first and reverse shift lever when in reverse position to open circuit between battery and overdrive relay (see wiring diagram). Switch has two extra terminals to operate back-up light. **1947 & Earlier Clipper Models**—To prevent overdrive lock-up when car shifted to reverse, install Safety Switch (Kit No. 394484).
Overdrive Indicator Light—Next to high beam indicator under speedometer. Lights when overdrive ready to engage (22 MPH and up), goes out when accelerator pedal released to engage overdrive.
Overdrive Relay—D-R 1116823, Packard 347943.
Throttle Kick-down Switch—Packard No. 347496.
Safety (Rev. Lock-out) Switch—Packard 403303.
Lock-out Switch—Packard No. 354820.
Removal: See R11 Overdrive (following).

OVERDRIVE

1949 WARNER R11

Warner Model (Eight) AS3-R11, (Super Eight) AS4-R11. Optl. equipment used with Packard transmission. New simplified solenoid operated overdrive
▷**Series 2200 Note**—Started part production with Engine Serial No. G-272006 (Eight), G-424978 (Super 8). Started full production with Engine Serial No. G-285157 (Eight), G-427710 (Super Eight).
See Transmission Section for complete data.
▷**Early R11 Overdrive Failure to Engage Correction**—*See "Warner R11 Overdrive" in Transmission Section.*
Overdrive Solenoid—Packard No. 403942.
Governor—Packard No. 418447.
Control Relay—Packard No. 403940.
Kick-down Switch—Packard No. 403945.
Lock-out Switch—Packard No. 354820.
Removal: Disconnect control cable and all leads to solenoid and governor. Free mounting at rear of overdrive case. Then remove overdrive and transmission (see Transmission Removal above).

UNIVERSALS

Mechanics Type 3CR (Type 3C used at front on Long WB. Cars with 3 universals). Needle bearing.

▷CAUTION—Rear universal flange nut controls rear axle pinion bearing pre-load which **must be adjusted whenever nut is loosened.** *See Packard Rear Axle article in Rear Axle Section for complete data.*

REAR AXLE

Own Make. Semi-floating, hypoid gear type with Hotchkiss Drive.
Model 2222 (141" WB. 7-Pass. Sedan) Note—Axle is Custom 8 type with Ring Gear Idler Roller.
See Rear Axle Section for complete data.
▷*REAR AXLE OIL SEAL LEAKAGE CORRECTION—See "Packard Rear Axle" in Rear Axle Section for complete data.*
Ratio—Std.: 3.9-1 (39-10). OD.: 4.1-1 (41-10).
NOTE—Some cars without Overdrive use 4.1-1 ratio.
2222 NOTE—Std. Ratio 4.09-1 (45-11).
Backlash—.004-.008". Screw adjustment.
Removal: Remove axle shafts (see Removal below). Disconnect rear universal (wire trunnions), wire or prop propeller shaft up against floor pan with 2 x 4 inserted inside frame X-member. Drain differential, replace drain plug. Clean off housing, take off carrier lock nuts, lift carrier out.
Axle Shaft Removal: Remove wheel, brake drum (use screw type puller KMO-476—do not use knock-out type puller or thrust block may be damaged). Disconnect brake line at wheel cylinder. Remove nuts at oil seal guard and take off seal guard, gasket, retainer, oil seal, brake support plate, and bearing shims. Remove axle shaft and bearing using Puller
Wheel Bearing Adjustment: Endplay controlled by shims between flanged end of housing and brake backing plate. Add or remove shims (furnished .005", .007", .020" thick) at one wheel for .050" or under, at both wheels if over .050" to secure .004-.007" endplay.
Endplay—.004-.007".

SHOCK ABSORBERS

Delco Model 1946-J, K (front), Model 1040-V (rear). Double acting (front), direct acting (rear).
Fifth Shock Absorber (Stabilizer): Monroe 373935. Direct acting, hydraulic (built-in rear stabilizer).

FRONT SUSPENSION

Front Suspension: Packard Clipper Safe-T-Flex, independent, linked parallelogram type with coil springs and double acting shock absorbers.
See Front Suspension Section for complete data.
Kingpin Inclination—5°50' crosswise.
Caster—Neg. 1° ± ½°. Eccentric adjustment.
Camber—0° ± ¼°. Eccentric adjustment.
Toe In—0" (plus 1/16", minus 0"). Adjust by turning adjuster at outer end of each tie rod equally.

STEERING GEAR

Packard—Gemmer Model 335—"3-tooth" Worm-and-Roller type with "push-pull" adjustment.
See Steering Gear Section for complete data.

BRAKES

Service: Bendix Hydraulic, Duo-Servo, Single Anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.
See Brake Section for complete data.
Wheel Cylinder—Front 1 1/16" (1" on 7-pass.), Rear 15/16".
Drums—12" centrifuse type.
Lining—Marshall 2201H-8 (primary shoe), Marshall B-50 (secondary). Width 1¾". Thickness 3/16". Length per shoe 11½" (primary), 13" (secondary).
Model 2222 7-Pass. Note—Lining width 2¼" all shoes except 2" on rear wheel secondary shoe.
Clearance—.015" at both ends of secondary shoe with primary shoe forced out against drum.
Hand Brake: See Service Brakes above.

MISC. MECHANICAL

Power Operated Convertible Tops, Windows & Front Seat: Hydro-Lectric type (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders).
See Miscellaneous Section for complete data.

►**1949 MODEL DESIGNATION**—These models are continuation of 1948 "2200" Series with "—9" following Model No. and Body No. Engine Nos. are continuation of 1948 Nos.

MODEL IDENTIFICATION

SERIAL NUMBER: On left side of cowl (use Eng. No.).

ENGINE NUMBER: Stamped on upper left side of cylinder block between #3 and #4 cylinders.
~~1948 Numbers—G-600001 Up.~~

►***ENGINE NUMBER CODE: Code marks following engine number indicate changes or differences over unmarked engines as follows:***
★—Engine Bore .020" Oversize.
"C"—Late type Pistons and Rings used.

TUNE-UP

COMPRESSION PRESSURE: 135 lbs. at 300 RPM.

VACUUM READING: Steady 18-20" idling at 6 MPH.

FIRING ORDER: 1-6-2-5-8-3-7-4. See Diagram.

SPARK PLUG GAP: .028". Limits .025-.030".
Plug Types—Auto-Lite P-4, AC No. 104, or Champion Y4A, 10 mm. Metric.
CAUTION—Tighten plugs with plug wrench snugly with fingers. Avoid overtightening.

IGNITION: *See Coil, Condenser, and Distributor.*
Breaker Gap—Set at .017". Limits .015-.019".
Cam Angle—27° closed, 18° open (with .017" gap)
Breaker Arm Spring Tension—17-20 ounces.
Automatic & Vacuum Advance—*See Distributor.*

IGNITION TIMING: 6° BTDC.
Timing Procedure—*See Ignition Timing.*
Vibration Dampener Mark—"#1UP.DC" with fifteen 1° graduations ahead of this point. Set ignition contacts to open at 6th graduation before "DC"
Fuel Compensator Setting—Slight ping accelerating with wide open throttle.

CARBURETION: *See Carburetor & Carb. Equipment.*

►***METERING ROD CHANCE ON EARLY 531-S CARBURETORS FOR SMOOTHER PERFORMANCE DURING WARM-UP AND AT LOW SPEED (ALSO INCREASED GAS MILEAGE): New rod No. 75-616 (stamped on shank of rod) installed on 531-S carburetors marked with round hole punched in brass inspection tag on carburetor. This rod used on all 531-SA carburetors (later type). Car manufacturer recommends this rod be installed on unmarked 531-S carburetors.***
Idle Setting—1½-2 turns open. Two screws—turn out for richer mixture.
Idle Speed (standard)—6 MPH.
Float Level—5/32" from top of float to cover with valve seated (remove gasket and invert to check).

Choke Setting: Coil Housing Centered at index.
Accelerating Pump—Not adjustable.
Fuel Pump Pressure—4-4¾ lbs.

MANIFOLD HEAT CONTROL: Automatic. No adjustment. Valve must operate freely.

VALVE TAPPET CLEARANCE: None in service (hydraulic type lifters).
Valve Timing Check—*See Valve Timing.*

STARTING: *See Battery, Starter, Generator, Regulator.*

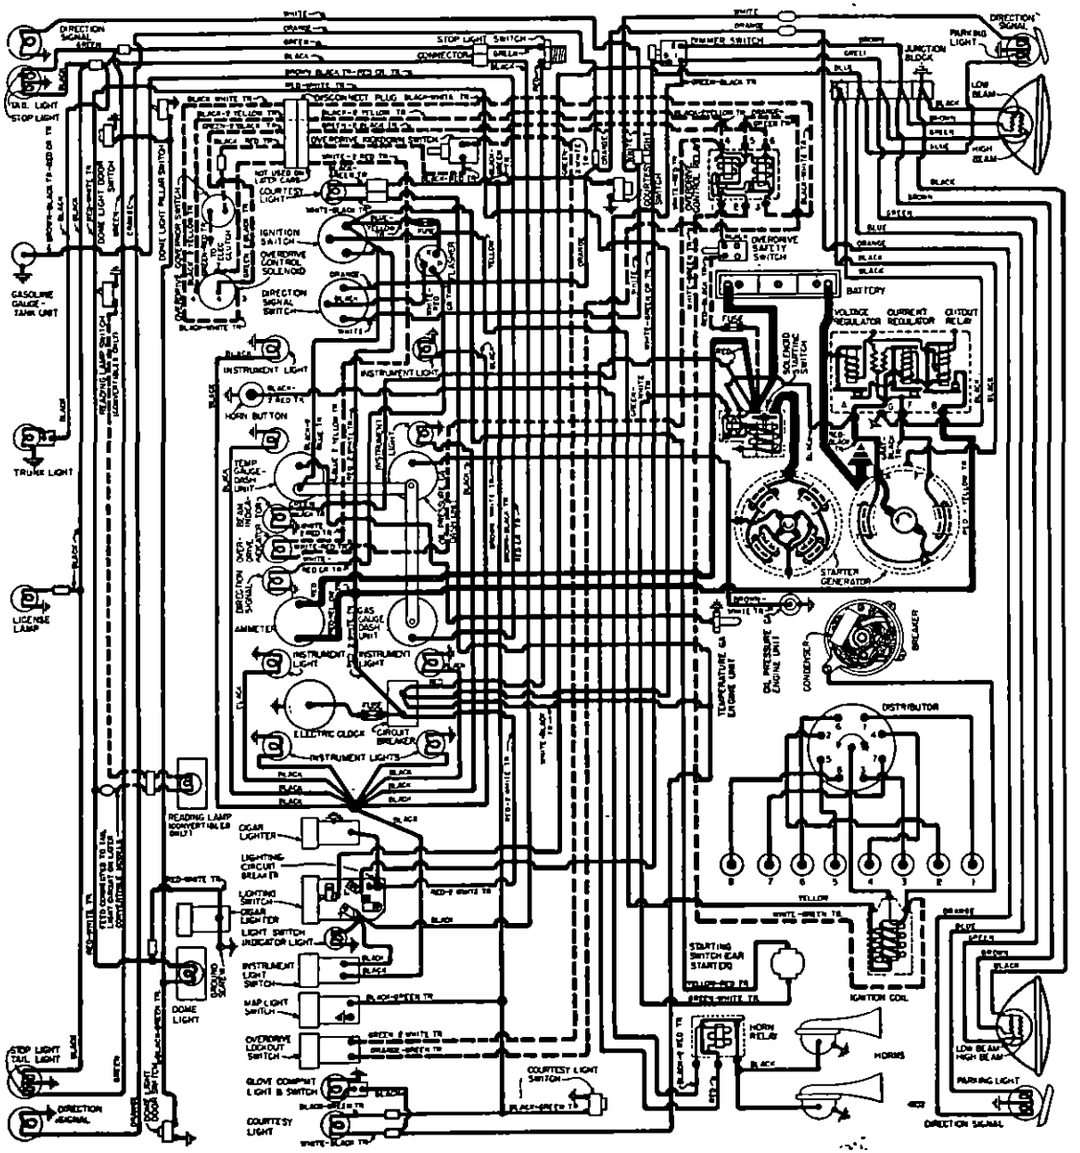
IGNITION

IGNITION SWITCH: Mitchellock Type 42-B.
Ignition Lock—Briggs & Stratton. B & S No. 50184.
Key Series—P1251 to P1500. **Groove**—No. 2.

COIL: Auto-Lite Model CE-4033.
Location—Left side of engine above distributor.
Ignition Current—2.4 amperes idling, 5 stopped.

CONDENSER: Auto-Lite Part No. IG-2671J.
Capacity—.20-.25 microfarad.

DISTRIBUTOR: Auto-Lite Model IGT-4203. Automatic advance type with Vacuum Spark Control and Fuel Compensator Adjustment.
Breaker Plate Identification—Maximum vacuum advance limited by slot (marked 5½) on plate.
Breaker Gap—Set at .017". Limits .015-.019".
Cam Angle—27° closed, 18° open (with .017" gap).
Breaker Arm Spring Tension—17-20 ounces.
Rotation—Counter-clockwise viewed from above.



Automatic Advance

Degrees	Distr. R.P.M.	Degrees	Eng. R.P.M.
Start	250	0	500
3	475	6	950
6	700	12	1400
9	1300	18	2600
11½	1800	23	3600

Fuel Compensator: 10° advance or retard manual adjustment at distributor. See Ignition Timing.

Vacuum Spark Control: Auto-Lite. On distributor, linked directly to breaker plate.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	7"
1°	2°	8⅝"
3°	6°	12"
4°	8°	13½"
5½°	11°	16"

Distributor Removal: On left side of engine. Disconnect vacuum line, take out hold-down screw, lift off.

IGNITION

Std. Setting .....6° BTDC.
NOTE—Modify this setting for special fuel and altitude conditions. See Fuel Compensator Setting.

Vibration Dampener Mark—"#1UP.DC" with fifteen 1° graduations ahead of mark.

Timing—Set Fuel Compensator at "0". With #1 piston on compression, turn engine over until piston reaches firing position with correct mark on dampener in line with pointer on chain case cover (see table above). Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt. Check spark plug connections (see diagram), see that rotor opposite #1 segment in cap. Check Fuel Compensator Setting.

Timing (with Neon Timing Light)—Mark 6th line ahead of "#1UP.DC" mark on vibration dampener with white paint, clip timing light to #1 spark plug. Idle engine below 500 RPM., adjust distributor (as directed above) until mark lines up with pointer.

Fuel Compensator Setting—Should be set for slight ping when accelerating with wide open throttle. To adjust, loosen thumbnut, rotate distributor counterclockwise (if ping too severe), clockwise (if no ping noted), tighten thumbnut and recheck performance.

CARBURETOR

Carter WDO, No. 531S (Early), 531SA (Later). 1¼" Dual barrel downdraft type with Carter Climatic Control.
Casting No. on Flange—377 (for 531S), 564 (531SA).
See Carburetor Section for complete data.

▷**Production Change 531S to 531SA.** New metering rod used in 531SA carburetor for smoother performance during warm up and slow speeds (and improved gas mileage). Can be installed in 531S carburetors. *See Carter WDO Vacumeter Carburetor article in Carburetor Section.*

Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up data.*
Metering Rods & Jets—*See Carter Jet Table in Carburetor Section.*

Fast Idle: Carter Dual (WDO) Carburetor type.
See Carburetion Equipment Section for complete data.
Setting—Adjust fast idle screw for .023-.028" throttle opening (Gauge T109-189) with choke closed.

Automatic Choke: Carter Climatic Control (Dual Carburetors).
See Carburetion Equipment Section for complete data.
Setting—Centered (at index).

CARB. EQUIPMENT

Fuel Pump (Fuel-&-Vacuum): AC Type AH. No. 1539116.
Replacement Pump—AC No. 9116.
Pressure—4-4¾ lbs.
See Carburetion Equipment Section for complete data.

Gasoline Gauge: King-Seeley Electric.
Dash Unit—K-S No. 41635.
Tank Unit—K-S No. 41678.
See Carburetion Equipment Section for complete data.

Air Cleaner (std.—oil bath): AC No. 1542318.
Element—AC No. 14.
Servicing (oil bath type)—Clean filter element, clean and refill oil reservoir with SAE No. 50 engine oil (Summer), No. 30 (Winter) to level of indicator line on case (approx. 1 pint) every 5000 miles or oftener if required.

BATTERY

Auto-Lite Type PN-17ZR. 6 Volt, 17 Plate, 120 Ampere Hour Capacity (20 hour rate).
Starting Capacity—138 amperes for 20 minutes.
Zero Capacity—300 amperes for 4.1 minutes. Five second voltage—4.3 volts.
Grounded Terminal—Positive (+) to frame.
Dimensions—Length 19¼". Width 4". H. 8 29/32".
Location—On left side in engine compartment.

STARTER

Auto-Lite Model MAX-4052. Armature MAW-2069.
Drive—Overrunning clutch (solenoid pinion shift) through reduction gears.
Rotation—Clockwise at commutator end.
Brush Spring Tension—42-53 ozs. (new brushes).
Cranking Engine—200-250 amperes.

Performance Data

Torque	RPM①	Volts	Amperes
0 ft. lbs.	2560	5.5	70
13.0 "	Lock	2.0	410

①—Pinion Shaft RPM. (reduction gear drive).

Removal: On left front face of flywheel housing. To remove, take out flange mounting screws.

Starting Switch: Auto-Lite Model SS-4205 Solenoid Switch on starter controlled by Carter Car Starter No. 192-11U on carburetor (accelerator pedal control).
See Electrical Equipment Section for complete data.

GENERATOR

Auto-Lite GDZ-4801G or GDZ-4801V. Arm. GDZ-2006F.
2 brush with voltage and current regulation.
Maximum Charging Rate—35 amperes, 8.0 volts.
Charging Rate Adjustment—None. See Regulator.

Performance Data

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	925	0	6.4	1000
10	6.85	1200	10	6.85	1290
20	7.3	1480	20	7.3	1590
30	7.8	1760	30	7.8	1980
35①	8.0	1900	35	8.0	2250

①—Current regulator setting. See Regulator data.

Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—35-53 ozs. (new brushes).
Field Current—1.60-1.78 amperes at 6.0 volts.
Motoring Current—4.16-4.60 amperes at 6.0 volts.

Removal: Pivot mounted at left front of engine. To remove, take out strap screw and mounting bolts.

Belt Adjustment: ¼" belt deflection between fan and generator. Loosen adjusting strap screw, pry generator out for ¼" setting, tighten screw.

REGULATOR

Auto-Lite VRP-4402A or B. Voltage-current type.
See Electrical Equipment Section for complete data.
NOTE—Regulator cover sealed. Warranty void if seals broken.

Cutout Relay

Cuts In—6.4-7.0 volts, 920 RPM. (set to 6.4-6.6 volts).
Cuts Out—4.1-4.8 volts (approx. 4-6 amps. disch.).
Contact Gap—.015" minimum.
Air Gap—.031-.034" with contacts open (check at hinge end of core).

Voltage Regulator

Setting—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.
Checking (without breaking seals) & Adjustment—*See Electrical Equipment Section for complete data.*
Contact Gap—.012" min. (armature against stop pin).
Air Gap—.048-.052" with contacts just opening.

Current Regulator

Setting—34-36 amperes (marked '35' on cover).
Checking (without breaking seals) & Adjustment—*See Electrical Equipment Section for complete data.*
Contact Gap—.012" min. (armature against stop pin).
Air Gap—.048-.052" with contacts just opening.

LIGHTING

Headlamps: Hall "Sealed Beam" type.
See Electrical Equipment Section for complete data.
Adjustment—Aim upper beams straight ahead (hot spot center 3" below lamp center height at 25 ft.).
Beam Indicator—Left hand indicator below speedometer. Lighted when Upper Beam "on".

Direction Signal: Optl. *See Electrical Equip. Section.*
Direction Signal Indicator—Below speedometer. Flashes when Signal in use.

Switches

Lighting—Packard No. 393563.
Beam Selector—Delco-Remy No. 1997008.
Instrument—Packard No. 393565.
Map Light—Packard No. 396675.
Courtesy Light (Door Switch)—Packard 393517.
Dome Light—Packard No. 399289.

MISC. ELECTRICAL

CIRCUIT BREAKERS: Vibrating, thermostatic types. Packard No. 410047 (Lighting), 393746 (Accy.).
Lighting—On lighting switch. 30 ampere.
Accessory (Stop & Body Lights)—Behind instrument panel above Clock. 30 ampere.
Hydro-Lectric Power (Convertible)—On engine side of dash on pump upper bracket.

FUSES: Clock—SFE 2 ampere in lead near Clock.
Direction Signal—SFE 9 ampere. In Flasher feed wire above speedometer.
Overdrive—SFE 30 ampere. In lead from Starter to Overdrive Safety Switch.
Electromatic Clutch—9 ampere. In lead from Ignition Switch to Electromatic Switch.
Radio—SFE 14 ampere in cable at left of radio.
Heater—SFE 30 ampere. In cable under clock.

HORNS: Sparton. Dual horns operated by relay.
Horn Current—22-25 amperes.

Horn Relay: Delco-Remy No. 1116775.
Contact Gap—.025". **Air Gap**—.015" (closed).
Contacts Close—2.75-4.0 volts.

Form 248—1956-M

ENGINE

ENGINE SPECIFICATIONS: 8 cylinder, "L" head type.
Bore—3½"①. **Stroke**—4⅝".
①—*For Original Bore Sizes, see Packard Shop Notes.*

►*.020" OVERSIZE BORE ENGINES: Marked by star following engine number.*

Displacement—356 cubic inches. **Rated HP.**—39.2.
Developed Horsepower—160 at 3600 RPM.
Compression Ratio—7.0-1 std. cast iron head.
Compression & Vacuum Reading—*See Tune-Up data.*

OIL PAN REMOVAL: *See Packard Special Data.*

TIGHTENING TORQUES. *See Packard Shop Notes.*

CYLINDER HEAD: Tightening Torque & Cylinder Head Diagram—*See Packard Shop Notes.*

PISTONS: Aluminum alloy, autothermic strut type. *Original Piston Sizes & Markings, see Packard Shop Notes.*

►*LATE TYPE PISTONS AND RINGS: Used on engines marked with letter "C" following engine number.*
Length—3⅞".

Weight—19½ ozs. (stripped), 25⅞ (with rings & pin)
Removal—Pistons and rods removed from above.
Clearance—.0005-.001". See Fitting New Pistons.

Replacement Pistons: *See Packard Shop Notes.*

Fitting New Pistons: Insert .0015" feeler ½" wide between piston and cylinder wall on side opposite slot. Pull to withdraw feeler should be 12-18 lbs.

Install Pistons: Slot toward valves.

PISTON RINGS: Two compression rings (No. 200 top groove, No. 70 second groove), one oil control ring (No. 86) per piston, all above pin. Oil ring groove has twelve 5/32" oil drain holes.

►*LATE TYPE PISTONS AND RINGS: Used on engines Marked with letter "C" following engine number.*

Ring	Width	End Gap	Side Clearance
Comp. (#1)	.0930-.0935"	.0054-.0233"	.0025-.003"
Comp. (#2)	.1235-.124"	.0054-.0233"	.0025-.003"
Oil Control	.186-.1865"	.0054-.0213"	.0025-.003"

Oil Ring Note—Perfect Circle No. 86 with coil spring type expander.

Replacement Rings: .005", .010", .020", .030", .040" OS. Triple Action Sets (std. & .020" OS.). *For installation of these sets see Packard Shop Notes.*

PISTON PIN Diameter—.875". **Length**—3 1/64".
Floating type retained by lock ring at each end. Split type bushing used in upper end of rod.
Pin Fit in Piston—Palm push fit with piston at 160°F. (heat piston in water only).
Pin Fit in Rod Bushing—Finger push fit at 70°F.
Piston Pin (Connecting Rod) Bushing Installation—*See "Piston Pins" in Packard Shop Notes.*

Replacement Pins: Std. and .003", .006" oversize.

CONNECTING ROD: Length 9¼". **Weight** 38.9 ozs.
Connecting Rod Journal Diameter—2.250".
Lower Bearing—Shimless, precision, steel backed, Moraine Durex or Federal Mogul H-24.
Clearance—.0005-.0025". **Endplay**—.004-.012".

Bearing Adjustment: None (no shims). Replace bearings. Self-locking nuts used on cap bolts (tighten to 60-65 ft. lbs.).

Replacement Bearings: .001", .002", .003", .015" U. S.

Installing Rods: Oil squirt hole toward camshaft.

CRANKSHAFT: 9 bearing with bolted-on counterweights. Rubber friction disc dampener on front end.
Main Bearing Journal Diameter—2.7465".
Bearings—Interchangeable, shimless, precision, steel-backed Moraine Durex or Federal Mogul H-24.
Clearance—.0005-.0025".

Bearing Adjustment: None (no shims). Replace bearings (upper halves can be rotated in and out).

Replacement Bearings: Std., .001", .002" undersize.

End Thrust: At #5 bearing. **Endplay**—.003-.008".

Crankshaft Front & Rear Oil Seal Replacement: *See "Crankshaft & Main Bearings" in Packard Special Data.*

CAMSHAFT: 8 bearing. Non-adjustable chain drive.
Bearings—Steel-backed, babbitt lined bushings.
Clearance—.001-.003".

End Thrust: Taken by thrust plate in back of camshaft sprocket. **Endplay**—.0025-.006".

Timing Chain: Morse. Width 1¼". Pitch .375" (⅜"). Length 23¼" or 62 links.

Camshaft Setting: Install chain and sprockets together with "0" marks on sprockets adjacent and in line with straightedge across shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 43/64"	.3417"	6 7/32"
Exhaust	1 7/16"	.3398"	6 7/32"

	Seat Angle	Lift	Stem Clearance
Intake	30°	.342"	.0005-.0031"
Exhaust	45°	.342"	.00195-.00455"

Valve Guides: Lubrite coated. Pressed in block from above with upper end 31/32" below top of block. Exhaust guides counterbored on upper inner diameter to .375" diameter and .375" deep.

Valve Springs: Intake and exhaust springs interchangeable. Anti-rotation serrated washer installed on top of spring and seats in recess in block.

	Spring Pressure	Spring Length
Valve Closed	60-66 lbs.	1¾"
Valve Open	135-145 lbs.	1 13/32"

Valve Lifters: Wilcox-Rich "Zero-lash" type hydraulic lifters (mushroom type). Remove from below with camshaft out.
Diameter .7177-.7182". **Clearance** .0002" selective.

Hydraulic Valve Lifter Removal & Overhaul: *See "Hydraulic Valve Lifters" in Packard Special Data.*
Replacement Lifters—.001", .002", .005" oversize. Use Tool S.T. 5101 (piloted in valve guide) and ream for .005" oversize lifters.
Valve Lifter Clearance Check when Grinding Valves—*See Packard Shop Notes.*

VALVE TIMING

Tappet Clearance: None in service (hydraulic type lifters). See Valve Lifters above.

Valve Timing: See Camshaft Setting above.
Intake Valves—Open 4° BTDC. Close 51° ALDC.
Exhaust Valves—Open 49° BLDC. Close 10° ATDC.
Valve Timing Check—#1 exhaust valve closes 10° after top dead center (#1 piston .0438" ATDC) with hydraulic lifter dry (all oil drained out) and built up with feeler stock for zero tappet clearance.

LUBRICATION

Engine Oiling System: Pressure to main and connecting rod bearings, camshaft bearings, piston pins, valve lifters, and timing chain. Oil pump mounted externally on right side of engine.
Crankcase Capacity—7 quarts.
Normal Oil Pressure—50 lbs. Normal Driving.
Oil Pressure Regulator—On oil pump cover. Not adjustable. Pressure regulator spring tension should be 17½-18½ lbs. at 1⅞".

Oil Pump: Gear type. On right side of crankcase.
Oil Pump Removal & Overhaul—*See "Oil Pump" in Packard Special Data.*

Oil Pressure Gauge: King-Seeley Electric.
Dash Unit—K-S No. 41640.
Engine Unit—K-S No. 40767.
See Miscellaneous Section for complete data.

Servicing—Wash filter element in gasoline and re-oil when changing oil (1000-2000 miles).

COOLING

Cooling System: Pressure type with pressure relief valve in filler cap and fan belt driven pump.
Capacity—20 qts.
Pressure Valve—AC No. 850005 pressure cap. Opens at 7 lbs.

Water Pump: Centrifugal, belt-driven, packless type. *See Water Pump Section for complete data.*
Belt Adjustment—*See Generator Belt Adjustment.*

Thermostat: In cylinder head outlet.
Setting (std.)—Starts to open 145-150°F.
Setting (Optl. High Reading)—Starts to open 160-165°F. or 175-180°F.

Temperature Gauge: King-Seeley Electric.
Dash Unit—K-S No. 41645.
Engine Unit—K-S No. 41085.
See Miscellaneous Section for complete data.

CLUTCH

Long Model 11CF-TI. Single plate, semi-centrifugal, dry disc type.
See Clutch Section for complete data.
Facings—Woven (U. S. Asbestos). Thickness .125". Inside Diameter 7". Outside Diameter 11".

Pedal Adjustment: (1948)—1¼-1½" free travel. Adjusting nut on rod between relay lever and throwout lever.

Pedal Adjustment: (1949)—*See "Clutch Notes" in Packard Special Data.*

Removal: Remove transmission (see Transmission Removal following) and flywheel housing lower cover. Disconnect throwout linkage and remove throwout bearing. Remove clutch cover screws (release tension evenly), lower assembly out of car.

ELECTROMATIC CLUTCH

Electromatic Clutch: Vacuum type clutch actuation with electrical control. Optional equipment.
See Clutch Section for complete data.

TRANSMISSION

Own Make. Helical gear, constant-mesh, synchro-mesh (Second & High); constant-mesh (Low). Sliding spur gear (Reverse). Low & Second speed gears are ball bearing mounted.
See Transmission Section for complete data.

Transmission Control: Steering column type.
See Transmission Section for complete data.

Removal: Disconnect shifter rods, speedometer cable, hand brake cable at equalizer, engine ground strap, front universal (block driveshaft up against floor pan). Support rear of engine with jack and unbolt cross member (at frame ends and transmission). Disconnect clutch retractor spring and fore-and-aft restraint rod. Take out transmission-to-housing mounting screws, remove transmission.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

OVERDRIVE

1948 WARNER R9

Warner Model AS1-R9A. Optl. equipment used with Packard Transmission. Overdrive is solenoid operated type (no centrifugal pawls) with Governor Control and throttle operated "kick-down". A new Overdrive Safety Switch is used.
See Transmission Section for complete data.

►**Overdrive Short-Circuit Correction**—Disconnect Plug under car (as shown in wiring diagram) discontinued on Late 1948 Cars to avoid short circuits at this point due to water and corrosion. On earlier cars Plug can be removed and wires spliced, soldered, taped and coated with shellac to prevent short circuits.

►**Overdrive Safety Switch**—Mounted at lower end of steering column and operated by first and reverse shift lever when in reverse position to open circuit between battery and overdrive relay (see wiring diagram). Switch has two extra terminals to operate back-up light. **1947 & Earlier Clipper Models**—To prevent overdrive lock-up when car shifted to reverse, this Safety Switch (Kit No. 394484) can be installed.

Overdrive Indicator Light—Next to high beam indicator under speedometer. Lights when overdrive ready to engage (22 MPH and up), goes out when accelerator pedal released to engage overdrive.

Overdrive Relay—D-R 1116823, Packard 347943.
Throttle Kick-down Switch—Packard No. 347496.
Safety (Rev. Lock-out) Switch—Packard 403303.
Lock-out Switch—Packard No. 354820.

Removal: Disconnect control cable and all leads to solenoid and governor. Free mounting at rear of overdrive case. Then remove overdrive and transmission (see Transmission Removal above).

OVERDRIVE

1949 WARNER R11

►*INSTALLATION OF R11 OVERDRIVE (To replace original R9 Assembly)—See "Warner R11 Overdrive" in Transmission Section for complete data.*

Warner Model AS4-R11. Optl. equipment used with Packard transmission. New simplified solenoid operated overdrive.

►**Series 2200 Note**—Started part production with Engine Serial No. G-610359. Started full production with Engine Serial No. G-611500.
See Transmission Section for complete data.

►**Early R11 Overdrive Failure to Engage Correction**—*See "Warner R11 Overdrive" in Transmission Section.*
Overdrive Solenoid—Packard No. 403942.
Governor—Packard No. 418447.
Control Relay—Packard No. 403940.
Kick-down Switch—Packard No. 403945.
Lock-out Switch—Packard No. 354820.

Removal: Disconnect control cable and all leads to solenoid and governor. Free mounting at rear of overdrive case. Then remove overdrive and transmission (see Transmission Removal above).

UNIVERSALS

Mechanics Type 3CR (Type 3C used at front on Long Wheelbase Cars with 3 Universals). Needle bearing type.

NOTE—One-piece shaft used on cars without Overdrive.

►CAUTION—Rear universal flange nut controls rear axle pinion bearing pre-load which **must be adjusted whenever nut is loosened.** *See Packard Rear Axle article in Rear Axle Section for complete data.*

REAR AXLE

Own Make. Semi-floating, hypoid gear type with Hotchkiss drive and Ring Gear Idler Roller.
See Rear Axle Section for complete data.

►*REAR AXLE OIL SEAL LEAKAGE CORRECTION—See "Packard Rear Axle" in Rear Axle Section for complete data.*

Ratio—Std. 3.92-1 (47-12). OD.: 4.09-1 (45-11).
NOTE—2226 (148" WB.) Std. Ratio 4.09-1 (45-11).

Backlash—.004-.006". Screw adjustment.

Removal: Remove axle shafts (see Removal below). Disconnect rear universal (wire trunnions), wire or prop propeller shaft up against floor pan with 2 x 4 inserted inside frame X-member. Drain differential, replace drain plug. Clean off housing, take off carrier lock nuts, lift carrier out.

Axle Shaft Removal: Remove wheel, brake drum (use screw type puller KMO-476—do not use knock-out type puller or thrust block may be damaged). Disconnect brake line at wheel cylinder. Remove nuts at oil seal guard and take off seal guard, gasket, retainer, oil seal, brake support plate, and bearing shims. Remove axle shaft and bearing using Puller J-2552 (do not drag shaft on inner oil seal). Use Tool J-943-B to remove inner oil seal.

Wheel Bearing Adjustment: Endplay controlled by shims between flanged end of housing and brake backing plate. Add or remove shims (furnished .005", .007", .020" thick) at one wheel for .050" or under, at both wheels if over .050" to secure .004-.007" endplay.
Endplay—.004-.007".

SHOCK ABSORBERS

Delco No. 1946-J, K (front), Monroe No. 18096 (rear). Hydraulic, double acting (front), direct (rear).
Fifth Shock Absorber (Stabilizer): Monroe 373935. Direct acting, hydraulic (built-in rear stabilizer).

FRONT SUSPENSION

Front Suspension: Packard Clipper Safe-T-Flex, independent, linked parallelogram type with coil springs and double acting shock absorbers.
See Front Suspension Section for complete data.
Kingpin Inclination—5°50' crosswise.
Caster—Neg. 2° ± ½°. Eccentric adjustment.
Camber—0° ± ¼°. Eccentric adjustment.
Toe In—0" (plus 1/16", minus 0"). Adjust by turning adjuster at outer end of each tie rod equally.

STEERING GEAR

Packard—Gemmer Model 335—"3-tooth" Worm-and-Roller type with "push-pull" adjustment. See Gemmer.
See Steering Gear Section for complete data.

BRAKES

Service: Bendix Hydraulic, Duo-Servo, Single Anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.
See Brake Section for complete data.
Wheel Cylinder—Front 1". Rear 15/16". For Model 2226 7-Pass. 1¼" front, 1⅛" rear.
Lining—Marshall 2201H-8 (primary shoe), Marshall B-50 (secondary). Width 2¼" (front wheel), 2" (rear). Length per shoe 11½" (primary), 13" (secondary). Thickness 3/16".
Model 2226 7-Pass. Note—Marshall 9017 (secondary). All shoes 13" long, 2½" wide.
Clearance—.015" at both ends of secondary shoe
Hand Brake: See Service Brakes above.

MISC. MECHANICAL

Power Operated Convertible Tops, Windows & Front Seat: Hydro-Lectric type (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders).
See Miscellaneous Section for complete data.

ELECTRICAL EQUIPMENT NOTE: Both Auto-Lite and Delco-Remy electrical equipment are used.

MODEL IDENTIFICATION

SERIAL NUMBER: On left side of cowl (use Eng. No.).

ENGINE NUMBER: Stamped on upper left side of cylinder block between #3 and #4 cylinders.

►**1949 Numbers "2300" Series**—(Eight) H-200001 and Up. (Super Eight) H-400001 and Up.
1950 Numbers "2300-5" Series—Continuation of 1949 numbers.

►***ENGINE NUMBER CODE: Marks following no. indicate:***
★—Engine Bore. .020" Oversize.
"F"—Super 8 Engines with Hydraulic Valve Lifters.

TUNE-UP

COMPRESSION PRESSURE: 120 lbs. at cranking spd.

VACUUM READING: Steady 18-20" idling at 6 MPH.

FIRING ORDER: 1-6-2-5-8-3-7-4. See diagram.

SPARK PLUG GAP: .028", Limits .025-.030".
Plug Types—Auto-Lite P-4, AC No. 104, or Champion Y4A, 10 mm. Metric.

DISTRIBUTOR: Breaker Gap—.017". Limits .013-.018".
Cam Angle—(Auto-Lite)—Closed 27°, Open 18°.
Cam Angle—(Delco-Remy)—Test limits with .016" gap—21-30°.
Breaker Arm Spring Tension—17-20 ounces.
Automatic & Vacuum Advance—*See Ignition.*
Condenser Capacity—.20-.25 microfarad.

IGNITION TIMING: 6° BTDC.
Timing Procedure—*See Ignition Timing.*
Vibration Dampener Mark—"#1UP.DC" with fifteen 1° graduations ahead of this point. Set ignition contacts to open at 6th graduation before "DC"
Fuel Compensator Setting—Slight ping accelerating with wide open throttle.

CARBURETION:
Idle Setting—(Eight—WDO) ⅝-1⅛ turns open, (8—WGD) 1-1½ turns open, (Super 8) ¾-1¼ turns open. Two screws—turning out gives richer mixture.
Idle Speed (standard)—6 MPH.
Idle Speed (Ultramatic Drive)—375 R.P.M. with selector lever in "H" position.
Float Level—(WDO) 5/32", (WGD) 13/64" from top of float to cover with valve seated (assy. inverted).
Accelerating Pump (644SA only)—Inner Hole (minimum) Normal. Outer hole if more charge needed.

Choke Setting (643SA, 644SA): Centered (at index).

Choke Setting: (728S) 2½ points lean. (728 SA) 2 points lean.

Fuel Pump Pressure: 4-4¾ lbs.

MANIFOLD HEAT CONTROL: Automatic. No adjustment. Valve must operate freely.

►**VALVE TAPPET CLEARANCE: (Eight & Early Super 8)**—.007" Intake, .010" Exhaust, Hot. **(Late Super 8)—If Engine Number Code has letter "F" following Engine Number, engine is equipped with Hydraulic Valve Lifters.**
Valve Timing Check—*See Valve Timing.*

STARTING: *See Battery, Starter, Generator, Regulator.*

IGNITION

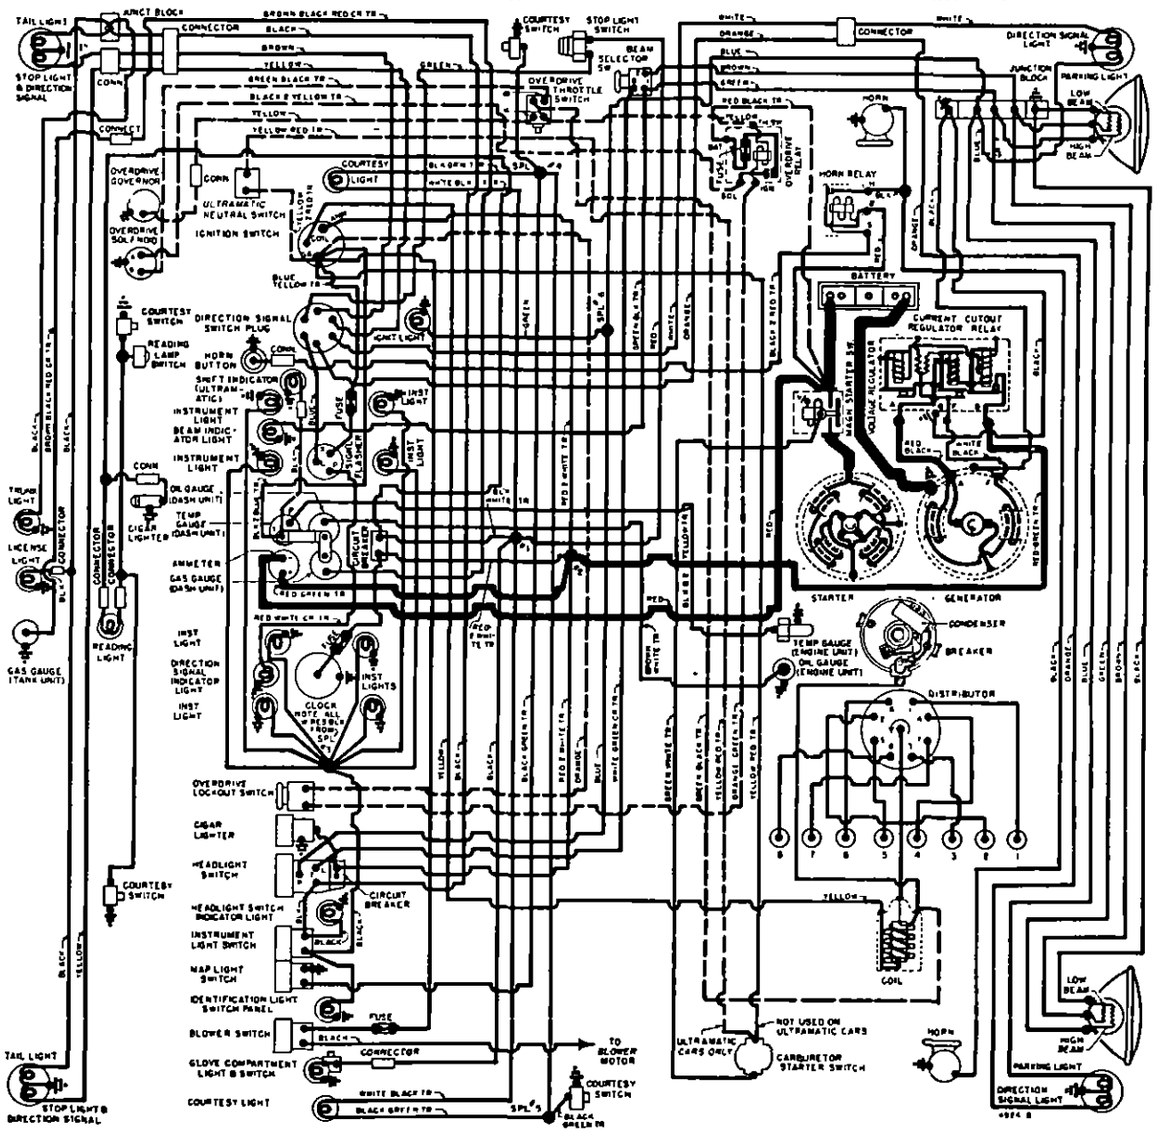
AUTO-LITE

IGNITION SWITCH: Mitchellock Type 24.

COIL: Auto-Lite Model CE-4033.
Location—Left side of engine above distributor.
Ignition Current—2.75 amperes idling, 4.5 stopped.

CONDENSER: Auto-Lite Part No. IG-2671K.
Capacity—.20-.25 microfarad.

DISTRIBUTOR: Auto-Lite Model IGP-4502B. Automatic advance type with Vacuum Spark Control and Fuel Compensator Adjustment.
Breaker Gap—.017". Limits .013-.018".
Cam Angle—Closed 27°, Open 18°.
Breaker Arm Spring Tension—17-20 ounces.
Rotation—Counter-clockwise viewed from above.



Automatic Advance (Auto-Lite)

Degrees Start	Distr. R.P.M.	Degrees Eng.	R.P.M.
1	300	0	600
3	400	2	800
6	600	6	1200
8	1200	12	2400
	1600	16	3200

Fuel Compensator: 40° range of adjustment on quadrant at vacuum link connection. See Ignition Timing.

Vacuum Spark Control: Auto-Lite. Mounted on hold-down plate and linked to adjusting quadrant on

CONTINUED ON NEXT PAGE

CARS WITH AUTO-LITE EQUIPMENT

CONTINUED FROM PRECEDING PAGE

distributor. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring.

Vacuum Advance (Auto-Lite)

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	6"
2°	4°	9¾"
4°	8°	10½"
6°	12°	12⅞"
7°	14°	14"

Distributor Removal: On left side of engine. Disconnect vacuum line, take out hold-down plate screw, lift off.

I NITION

DELCO-REMY

IGNITION SWITCH: Mitchellock Type 24.

COIL: Delco-Remy No. 1115376.
Location—Left side of engine above distributor.
Ignition Current—2.75 amperes idling, 4.5 stopped.

CONDENSER: Delco-Remy Part No. 1869704.
Capacity—.20-.25 microfarad.

DISTRIBUTOR: Delco-Remy Model 1110811. Automatic advance type with Vacuum Spark Control and Fuel Compensator.
Breaker Gap—.017". Limits .013-.018".
Cam Angle—Test limits with .016" gap—21-30°. *See "Delco-Remy Cam Angle" in Electrical Equipment Section.*
Breaker Arm Spring Tension—17-20 ounces.
Rotation—Counter-clockwise viewed from above.

Automatic Advance (Delco-Remy)

Degrees	Distr. R.P.M.	Degrees	Eng. R.P.M.
Start	300	2	600
4	600	8	1200
9	1600	18	3200

Fuel Compensator: 10° advance or retard adjustment at distributor. See Ignition Timing.

Vacuum Spark Control: Delco-Remy 1116041. Integral type mounted on distributor and linked directly to breaker plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring in unit. Plunger Travel—5/32" max.

Vacuum Advance (Delco-Remy)

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5-7"
7°	14°	13.0-15.0"

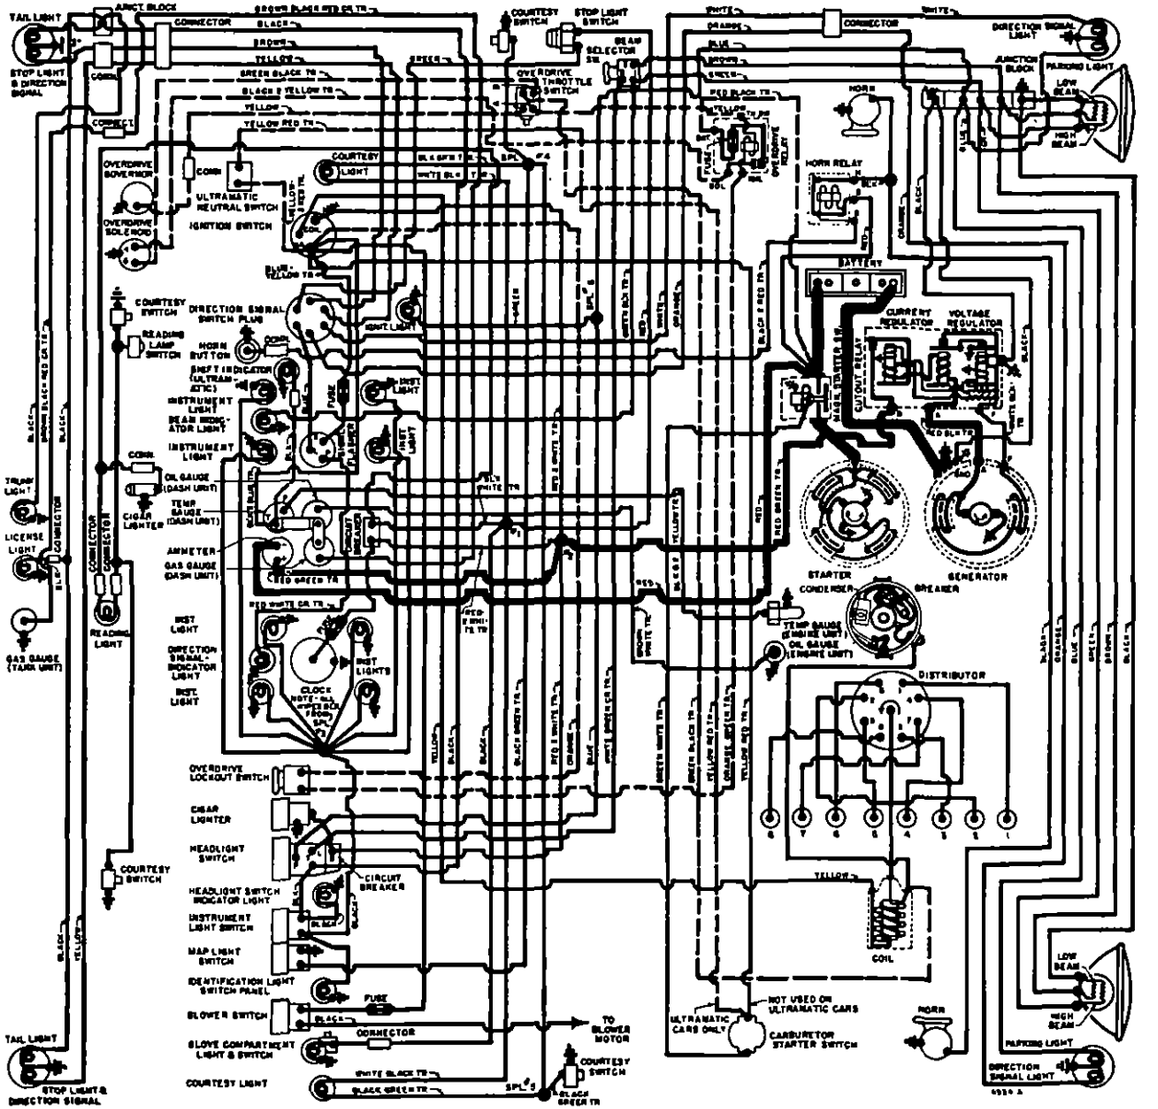
Distributor Removal: Same as for Auto-Lite (above)

IGNITI N TIMING

Std. Setting ..... 6° BTDC.
NOTE—Modify this setting for special fuel and altitude conditions. See Fuel Compensator Setting.
Vibration Dampener Mark—"#1UP.DC" with fifteen 1° graduations ahead of mark.

Timing—With #1 piston on compression, turn engine over until piston reaches firing position with correct mark on dampener in line with pointer on chain case cover, (see table above). Loosen vacuum unit link screw in distributor quadrant. (Auto-Lite distributors), or hold-down screw in advance arm (Delco-Remy distributors), rotate distributor until contacts begin to open, tighten screw.

Timing (with Neon Timing Light)—Mark 6th line ahead of "#1UP.DC" mark on vibration dampener with white paint, clip timing light to #1 spark plug. Idle engine below 600 RPM., adjust distributor (as directed above) until mark lines up with pointer.



Fuel Compensator Setting—Should be set for slight ping when accelerating engine with wide open throttle. To adjust, loosen vacuum unit link screw in distributor quadrant (Auto-Lite Distributors), advance arm hold-down screw (Delco-Remy Distributors), rotate distributor one graduation at a time counter-clockwise (if ping too severe), clockwise (if no ping), until correct performance secured.

CARBURETOR

Eight (First Cars).....**Carter WDO, No. 644SA.**
Eight (Later Cars).....**Carter WGD, No. 728S & SA**
Super Eight.....**Carter WDO, No. 643SA.**
1¼" dual barrel downdraft types with Carter Climatic Control.
Casting No. on Flange—(WDO) 561, (WGD) 615.
See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up data.*

►**WGD Carburetor Jet Production Changes**—*See Carter "WGD" Carburetor in Carburetor Section.*

CARS WITH DELCO-REMY EQUIPMENT

Metering Rods & Jets—*See Carter Jet Table in Carburetor Section.*

Fast Idle (WDO): Carter Dual (WDO) Carburetor.
See Carburetion Equipment Section for complete data.
Setting—.026" (643SA), .020" (644SA) throttle opening with choke valve closed. Adjust by turning fast idle screw on high step of fast idle cam.

Fast Idle (WGD): Carter Dual (WGD) Carburetor.
See Carburetion Equipment Section for complete data.
Setting—.026" throttle opening with choke valve closed—(throttle must be opened first). Adjust by bending choke connector rod at lower angle.

Automatic Choke: Carter Climatic Control (Dual Carburetors).
See Carburetion Equipment Section for complete data.
Setting—(WDO) Centered. (WGD 728S) 2½ points lean. (WGD 728SA) 2 points lean.

CARB. EQUIPMENT

Air Cleaner (std.—oil-wetted): AC No. 1544276 (Type #6 element).
Opti. (oil bath)—AC. 1544277 (Type #7-S element).
Servicing (oil-wetted type)—Wash and re-oil filter element every 1000 to 2000 miles whenever crankcase oil is changed.
Servicing (oil bath type)—Clean filter element, clean and refill oil reservoir with SAE No. 50 engine oil (Summer), No. 30 (Winter) to level of indicator line on case (approx. 1 pint) every 5000 miles or oftener if required.

Fuel Pump (Fuel-&-Vacuum): AC Type AJ. No. 1523867.
Replacement Pump—AC No. 508.
Pressure—4-4¾ lbs.
See Carburetion Equipment Section for complete data.

Gasoline Gauge: King-Seeley Electric.
Dash Unit—K-S No. 41635.
Tank Unit—K-S No. 41676 (Eight), 41678 (Super 8).
See Carburetion Equipment Section for complete data.

BATTERY

Auto-Lite Type PN-15ZR or Willard SW-1D-100.
6 volt, 15 plate, 100 amp. hr. capacity (20 hr. rate).
Starting Capacity—120 amperes (Auto-Lite), 122 amperes (Willard) for 20 minutes.
Zero Capacity—300 amperes for 3.3 minutes. Five second voltage—4.2 volts.
Grounded Terminal—Positive (+) to frame.
Dimensions—Length 19¼". Width 4". Hgt. 8 29/32".
Location—Left side in engine compartment.

STARTER

AUTO-LITE

Auto-Lite Model MCL-6003. Armature No. MCH-2021
Drive—Outboard Barrel Type Bendix No. A-1915.
Rotation—Counter-clockwise at commutator end.
Cranking Engine—175-225 amperes.
Brush Spring Tension—42-53 ozs. (new brushes).

Performance Data (Auto-Lite)

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5300	5.5	65
8.0 "	Lock	2.0	410

Removal: On left front face of flywheel housing. To remove, take out flange mounting screws.

Starting Switch: Auto-Lite Model SS-4017 Magnetic Switch on starter controlled by Carter Car Starter No. 192-11U on carburetor (accelerator pedal control).
See Electrical Equipment Section for complete data.
►**Ultramatic Drive Starter Safety Switch**—Packard No. 421319. On left side of transmission case. Connected in starter control circuit so that starter operative only with lever in "N" Neutral or "P" Parking.

STARTER

DELCO-REMY

Delco-Remy Model 1107943. Armature No. 1910938.
Drive—Outboard Barrel Type Bendix No. A-1792.
Rotation—Counter-clockwise at commutator end.
Cranking Engine—175-225 amperes.
Brush Spring Tension—24-28 ozs. each.

Performance Data (Delco-Remy)

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5.7	65
16 "	Lock	3.0	600

Removal: *Same as Auto-Lite data (above).*

Starting Switch: Delco-Remy Model 1452 Magnetic Switch on starter controlled by Carter Car Starter No. 192-11U on carburetor (accelerator pedal control).
See Electrical Equipment Section for complete data.
►**Ultramatic Drive Starter Safety Switch**—Packard No. 421319 (Early 1950), No. 423439 (Late 1950). On left side of transmission case. Connected in starter control circuit so that starter operative only with with lever in "N" neutral, or "P" parking position.

GENERATOR

AUTO-LITE

Early.....**Auto-Lite GDZ-4801T.** Arm. GDZ-2006F.
Later.....**Auto-Lite GGW-6001E.** Arm. GGW-2006F.
Convt......**Auto-Lite GGU-6001C.** Arm. GGU-2006F.
Two brush types with current and voltage regulation.
Maximum Charging Rate—See table below.
Charging Rate Adjustment—None. See Regulator.

Performance Data (Auto-Lite GDZ-4801T)

Amperes	Volts	Cold—R.P.M.—Hot	
0	6.4	870-970	950-1050
35	8.0	1800-2000	2150-2350

Performance Data (Auto-Lite GGU-6001C)

45	8.0	1550 Max.	

Performance Data (Auto-Lite GGW-6001E)

0	6.4	870-970	950-1050
40	8.0	1800-2000	2150-2350

Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—35-53 ozs. (new brushes).
Field Current—1.6-1.8 amperes at 6.0 volts.
Motoring Current—(GDZ) 4.2-4.6 amps., (GGU) 5.5-6.5 amps., (GGW) 4.6-5.2 amperes, all at 6.0 volts.

Removal: Pivot mounted at left front of engine To remove, take out strap screw and mounting bolts.

Belt Adjustment: ½" belt deflection between fan and generator. Loosen adjusting strap screw, pry the generator out for ½" setting, tighten screw.

GENERATOR

DELCO-REMY

"2300".....Delco-Remy 1102715. Arm. No. 1912599
Two brush types with current and voltage regulation.
Maximum Charging Rate—See tables below.
Charging Rate Adjustment—None. See Regulator.

Performance Data (Delco-Remy)

	Amperes	Volts	R.P.M.
1102715 (Cold)	40	8.0	1900

Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—25 ounces each.
Field Current—1.90-2.05 amperes at 6.0 volts.
Removal & Belt Adjustment: See Auto-Lite above.

REGULATOR

AUTO-LITE

Auto-Lite VAV-4401B.....for GGU-6001C Generator
Auto-Lite VRP-4402A.....for GDZ-4801T Generator
Auto-Lite VRP-4402C.....for GGW-6001E Generator
All are current-voltage types.
See Electrical Equipment Section for complete data.
NOTE—Regulator cover sealed. Warranty void if seals broken.

Cutout Relay
Cuts In—6.4-7.0 volts, (set to 6.4-6.6 volts).
Cuts Out—4.1-4.8 volts (approx. 4-6 amps. disch.).
Contact Gap—.015" minimum.
Air Gap—.031-.034" with contacts open (check at **hinge end of core).**

Voltage Regulator
Setting—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.
Checking (without breaking seals) & Adjustment—*See Electrical Equipment Section for complete data.*
Contact Gap—.012" min. (armature against stop pin).
Air Gap—.048-.052" with contacts just opening.

Current Regulator
Setting—As follows:
VAV-4401B 44-46 amperes (marked '45' on cover).
VRP-4402A 34-36 amperes (marked '35' on cover).
VRP-4402C 39-41 amperes (marked '40' on cover).
Checking (without breaking seals) & Adjustment—*See Electrical Equipment Section for complete data.*
Contact Gap—.012" min. (armature against stop pin).
Air Gap—.048-.052" with contacts just opening.

REGULAT R

DELCO-REMY

Delco-Remy 1118360.....for 1102715 Generator
►*NEW "1118300 SERIES"* regulators have screw adjustment for settings and single regulator springs.
See Electrical Equipment Section for complete data.
CAUTION—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

Cutout Relay
Cuts In—5.9-6.8 volts hot (set to 6.4 volts hot).
Contact Gap—.020" (same for both sets).
Air Gap—.020" (with contacts just closed).

Voltage Regulator
Setting—7.0-7.7 volts hot (set to 7.4 volts hot). Regulator is over-compensated for temperature. Should be checked with cover in place and hot.
Air Gap—.075" with armature pressed down to point where contacts are just touching.
Checking & Adjustment—*See Electrical Equipment Section.*

Current Regulator
Setting—As follows:
1118360.....40-46 amperes hot (set to 42 hot)
Air Gap—.075" with armature pressed down to point where contacts are just touching.
Checking & Adjustment—*See Electrical Equipment Section.*

LIGHTING

Headlamps: Hall "Sealed Beam" type.
See Electrical Equipment Section for complete data.
Adjustment—Aim upper beams straight ahead (hot spot center 3" below lamp center height at 25 ft.).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Beam Indicator—Light at top of speedomter dial. Lighted when Upper Beams "on".

Direction Signal: Std. *See Electrical Equipment Section.*

Direction Signal Indicator—Light at top of clock. Flashes when Signal in use.

MISC. ELECTRICAL

CIRCUIT BREAKERS: Vibrating, thermostatic types.

Lighting—30 ampere. On lighting switch.

Accessory (Stop & Body Lamps)—30 ampere. Behind instrument panel below gauges. Protects Glove Box Lamp, Courtesy Lamps, Map Lamp, Stop Lamps, Dome Lamp, and Rear Cigar Lighter.

Hydro-Lectric Power (Convertible)—On engine side of dash on pump upper bracket.

FUSES: Clock—SFE 3 ampere in lead below Clock.

Direction Signal—SFE 9 ampere. In Flasher feed wire above Ash Tray.

Overdrive—SFE 30 ampere. On Overdrive Relay (at BAT terminal) on engine side of dash.

Electromatic Clutch—9 ampere. In lead from Ignition Switch to Electromatic Clutch Switch.

Heater—SFE 30 ampere. In cable near Ign. Switch.

HORNS: Sparton. Dual horns operated by relay.

Horn Current—22-25 amperes.

Horn Relay: Delco-Remy No. 1116775.

Contacts Close—2.75-4.0 volts (set to 3.5 volts).

Contact Gap—.027". **Air Gap** .014" (contacts closed).

ENGINE

ENGINE SPECIFICATIONS: 8 cylinder, "L" head type.

	Eight	Super 8
Bore	3½"①	3½"①
Stroke	3¾"	4¼"
Displacement	288 cu. ins.	327 cu. ins.
Rated HP.	39.2	39.2
Developed HP.	135 at 3600	150 at 3600

Compression Ratio—7.0-1 std. cast iron head.

Compression & Vacuum Reading—*See Tune-Up data.*

①—*For Original Bore Sizes, see Packard Special Data.*

▷*.020" OVERSIZE BORE ENGINES: Marked by star following engine number.*

▷*HYDRAULIC VALVE LIFTERS: On Super 8 Engines marked by "F" following engine number.*

OIL PAN REMOVAL: *See Packard Special Data.*

TIGHTENING TORQUES: *See Packard Special Data.*

CYLINDER HEAD: Tightening Torque & Cylinder Head Diagram—*See Packard Special Data.*

PISTONS: Aluminum alloy, autothermic strut type. *Original Piston Sizes & Markings, See Packard Special Data.*

Length—3⅞".

Weight—19½ ozs. (stripped), 25½ (with rings & pin)

▷**Cyl. Bore Taper Note**—Car manufacturer recommends cylinders be re-bored and new pistons installed if cylinder taper exceeds .007-.010". If necessary, new rings only can be installed (without reboring) for taper up to .014".

Removal—Pistons and rods removed from above.

Clearance—.0005-.001". See Fitting New Pistons.

▷**Piston Skirt Expander Note**—Car manufacturer recommends skirt expanders be installed if cylinder diameter over .006" greater than piston skirt diameter (measured alongside upper end of piston skirt slot).

Replacement Pistons: *See Packard Special Data.*

NOTE—Check ring grooves for wear by installing new piston ring in groove—if .006" feeler can be inserted 1/16", wear excessive and piston should be replaced. Check top groove when testing.

Fitting New Pistons: Insert .0015" feeler ½" wide between piston and cylinder wall on side opposite slot. Pull to withdraw feeler should be 12-18 lbs.

NOTE—Piston should hold in any portion of bore of own weight, but should move when one or two finger pressure applied to piston with cyl. bore vertical.

Install Pistons: Slot toward camshaft.

PISTON RINGS: Two compression rings (No. 200 top groove, No. 200 second groove), one oil control ring (No. 85) per piston, all above pin. Oil ring groove has twelve 5/32" oil drain holes.

Ring	Width	End Gap	Side Clearance
Comp. (#1, 2)	.0930-.0935"	.0054-.0233"	.0025-.003"
Oil (#3)	.186-.1865"	.0054-.0213"	.0025-.003"

Installing Rings—End gaps must be between pin holes with #2 ring on same side as skirt slot, #1 and #3 ring on side opposite slot.

Replacement Rings: Std., .020", .030", .040" oversize.

PISTON PIN Diameter—7/8". **Length**—3 1/64".

Floating type retained by lock ring at each end. Split type bushing used in upper end of rod.

Pin Fit in Piston—Palm push fit with piston at 160°F. (heat piston in water only).

Pin Fit in Rod Bushing—Finger push fit at 70°F.

Piston Pin (Connecting Rod) Bushing Installation—*See "Piston Pins" in Packard Special Data.*

Replacement Pins: Std. and .003", .006" oversize.

CONNECTING ROD: Length 7 15/16" (8), 7 11/16" (Super 8).

Weight—35.8 ozs. (Eight), 35.4 ozs. (Super 8).

Crankpin Journal Diameter—2.250".

Lower Bearing—Shimless, precision, steel backed, Moraine Durex or Federal Mogul H-24.

Clearance—.0005-.0025". **Endplay**—.003-.011".

Bearing Adjustment: None (no shims). Replace bearings. Self-locking nuts used on cap bolts (tighten to 60-65 ft. lbs.).

Replacement Bearings: Std., .001", .002", .020" US.

Installing Rods: Oil squirt hole toward camshaft.

CRANKSHAFT: 5 bearing type with integral counterweights.

Vibration Dampener—Houde with Silicone fluid (8), Rubber Friction Disc (Super 8).

Dampener Removal Note—Use a Puller Tool No. J-2582 for Friction Disc Dampeners, or J-2636 for Fluid type Dampeners.

Journal Diameter—2.7465".

Bearings—Interchangeable, shimless, precision, steel-backed Moraine Durex or Federal Mogul H-24.

Clearance—.001-.003".

Bearing Adjustment: None (no shims). Replace bearings (upper halves can be rotated in and out).

Replacement Bearings: Std., .001", .002", .020" US.

Crankshaft Front & Rear Oil Seal Replacement: *See "Crankshaft & Main Bearings" in Packard Special Data.*

End Thrust: At #3 bearing. **Endplay**—.0035-.0085".

CAMSHAFT: 5 bearing. Non-adjustable chain drive.

Bearings—Steel-backed, babbitt-lined bushings.

Clearance—.001-.003".

End Thrust: Taken by thrust plate in back of camshaft sprocket. **Endplay**—.004-.006".

Timing Chain: Morse. Width 1¼". Pitch .375". Length 21¾" or 58 links.

Camshaft Setting: Install chain and sprockets together with "0" marks on sprockets adjacent and in line with straightedge across shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 43/64"	.3417"	5 7/8"
Exhaust	1 7/16"	.3398"	5 7/8"

	Seat Angle	Lift	Stem Clearance
Intake	30°	.342"	.002"
Exhaust	45°	.342"	.004"

Valve Guides: Lubrite coated. Pressed in block from above with upper end 31/32" below top of block. Use Valve Guide Driver and Depth Gauge No. J-2577—properly positions guides when gauge seats on block. Ream guides after installation with 11/32" (.3437") reamer. Upper end of exhaust guide counterbored.

Valve Guide Removal Note—If guides to be removed with tappets in engine, use Valve Guide Remover Tool J-2580 to drive guide down to just clear tappet (with tappet on heel of cam). Score guide with chisel inserted through valve ports, then break off lower end, finally drive remainder of guide out. If tappets out, guide can be driven down and out without breaking.

Valve Springs: Intake and exhaust springs interchangeable. Anti-rotation serrated cup washers installed on top of spring and seats in recess in block.

	Spring Pressure	Spring Length
Valve Closed	60-66 lbs.	1 3/4"
Valve Open	135-145 lbs.	1 13/32"

Valve Lifters (Conventional): Mushroom type. Remove from below. **(Hydraulic Lifters)**—Wilcox-Rich "Zero-lash" type hydraulic lifters (mushroom type). Removed from below with camshaft out of engine.

Hydraulic Valve Lifter Removal & Overhaul: *See "Hydraulic Valve Lifters" in Packard Special Data.*

Diameter—.6235-.6240". **Clearance**—.0003-.0012".

Replacement Lifters—.001", .002", .005" oversize. Use Tool S.T. 5144 (piloted in valve guide) and ream for .005" oversize lifters.

Valve Lifter Clearance Check When Grinding Valves—*See "Hydraulic Valve Lifters" in Packard Special Data.*

VALVE TIMING

▷**VALVE TAPPET CLEARANCE: (Eight & Early Super 8)**—.007" Intake, .010" Exhaust, Hot. **(Late Super 8)—If Engine Number Code has letter "F" following Engine Number, engine is equipped with Hydraulic Valve Lifters.**

Valve Timing: See Camshaft setting above.

Intake Valves—Open 15° BTDC .Close 45° ALDC.

Exhaust Valves—Open 50° BLDC. Close 9° ATDC.

Above figures for .01267" Intake, .015" Exhaust tappet clearance.

Valve Timing Check (Convtl.): With .01267" tappet clearance #1 intake valve should open with #1 piston 10° BTDC. with 10th graduation before top dead center mark "1UP.DC" on vibration dampener aligned with pointer. Reset tappet clearance .007" Hot.

CAUTION—If valve over 8° before or after this point in opening, camshaft setting incorrect.

Valve Timing Check (Hydraulic Lifters): Check by turning tappet plunger for No. 8 exhaust valve with fingers. Turn engine over until this valve fully open, turn engine further until valve nearly closed (plunger should not turn), continue turning engine while attempting to turn plunger, until plunger "breaks loose" or turns. This should be approx. 9° after top dead center—check at timing mark on vibration dampener.

CAUTION—If valve over 8° before or after this point in closing, camshaft setting incorrect.

LUBRICATION

Engine Oiling System: Pressure to main and connecting rod bearings, camshaft bearings, piston pins, valve lifters, and timing chain.

Crankcase Capacity—7 quarts.
Normal Oil Pressure—40 lbs. Normal Driving.
Oil Pressure Regulator—On oil pump cover. Not adjustable. Pressure regulator spring tension should be 14 lbs. ±2 ozs. at 1⅞".
Oil Pump: Gear Type. On right side of crankcase.
Oil Pump Removal & Overhaul—*See "Oil Pump" in Packard Special Data.*
Oil Filter: Optl. Replace cartridge at 8000-10000 miles or when oil shows signs of being dirty.
Oil Pressure Gauge: King-Seeley Electric.
Dash Unit—K-S No. 41640.
Engine Unit—K-S No. 40767.
See Miscellaneous Section for complete data.

COOLING

Cooling System: Pressure type with pressure relief valve in filler cap and fan belt driven pump.
Capacity—18 qts. (Eight), 19 qts. (Super 8), with ½ quart additional for heater and defroster.
Pressure Valve—AC 850005 Filler Cap. Opens 7 lbs.
Water Pump: Centrifugal, belt-driven, packless type.
See Water Pump Section for complete data.
Belt Adjustment—*See Generator Belt Adjustment.*
Thermostat: In cylinder head outlet.
Setting (std.)—Starts to open 148-150°F.
Setting (Optl. High Reading)—Starts to open 157-165°F. or 175-184°F.
Temperature Gauge: King-Seeley Electric.
Dash Unit—K-S No. 41645.
Engine Unit—K-S No. 41035 (1949), 42550 (1950).
See Miscellaneous Section for complete data.

CLUTCH

Long Eight 10CF-TI, (Super Eight) 11CF-10½TI. Single plate, semi-centrifugal, dry disc type.
See Clutch Section for complete data.
Facings—Woven (U.S. Asbestos). Thickness .125". Inside Diameter (Eight) 6¾", (Super Eight) 7". Outside Diameter (Eight) 10", (Super Eight) 10½".
Pedal Adjustment: 1¼-1⅜" free travel. Adjusting nut on rod at throwout lever.
►**Clutch Pedal Over-Center Spring:** New adjustable type. *See "Clutch Notes" in Packard Special Data for adjustment.*
Removal: Remove transmission (see Transmission Removal following) and flywheel housing lower cover. Disconnect throwout linkage and remove throwout bearing. Remove clutch cover screws (release tension evenly), lower assembly out of car.

ELECTROMATIC CLUTCH

Electromatic Clutch: Vacuum type clutch actuation with electrical control. Optional equipment.
See Clutch Section for complete data.

TRANSMISSION

Own Make. Helical gear, constant-mesh, synchromesh (Second & High), constant-mesh (Low). Sliding spur gear (Reverse). Low & Second speed gears are ball bearing mounted.
See Transmission Section for complete data.
Transmission Control: Steering column type.
See Transmission Section for complete data.
Removal: Disconnect shifter rods, speedometer cable, hand brake cable at equalizer, engine ground strap, front universal (block driveshaft up against floor pan). Support rear of engine with jack and unbolt cross-member (at frame ends and transmission). Disconnect clutch retractor spring and fore-and-aft restraint rod. Take out transmission-to-housing mounting screws, remove transmission.

OVERDRIVE

Warner Model (Eight) AS3-R11, (Super Eight) AS4-R11. Optl. equipment used with Packard transmission. New simplified solenoid operated overdrive with Governor Control and throttle operated "kick-down." *See Transmission Section for complete data.*
►**Early R11 Overdrive Failure to Engage Correction**—*See "Warner R11 Overdrive" in Transmission Section.*
Overdrive Solenoid—Packard No. 403942.
Governor—Packard No. 418447.
Control Relay—Packard No. 403940.
Removal: Disconnect control cable and all leads to solenoid and governor. Free mounting at rear of overdrive case. Then remove overdrive and transmission (see Transmission Removal above).

ULTRAMATIC DRIVE

Own Make. Torque Converter (with hydraulically operated Direct Speed Clutch) and hydraulically operated planetary unit with manual control.
See Transmission Section for complete data including Testing & Trouble Shooting.
►**Production Changes & Oil Leak Corrections**—*See "Ultramatic Drive" in Transmission Section.*
Linkage Adjustment on Ultramatic Drive Cars: *See Packard "Ultramatic Drive" in Transmission Section.*
Lubrication—Check fluid level every 1000 miles, drain and refill every 25,000 miles.
Recommended Fluid. Packard Ultramatic Drive or Type "A" Automatic Transmission Fluid with AQ-ATF number on container.
Capacity. Approximately 12 quarts.
Draining & Refilling. *See Packard "Ultramatic Drive" in Transmission Section.*
Checking Fluid Level. ***CAUTION—Fluid must only be checked at normal operating temperatures and after engine has been idling at 800 RPM. for at least one minute with selector lever in "N" position.*** Stop the engine, check level by removing dipstick from filler hole on left side of transmission (accessible from under car—release cap by turning ½ turn counter-clockwise). Add fluid as required to bring level up to FULL mark on dipstick.
Removal: *See "Packard Ultramatic Drive" in Transmission Section.*

UNIVERSALS

Mechanics 3CR or Spicer. Needle bearing types.

►***CAUTION***—Rear universal flange nut controls rear axle pinion bearing pre-load which **must be adjusted whenever nut is loosened.** *See "Packard Rear Axle" in Rear Axle Section for complete data.*

REAR AXLE

Own Make. Semi-floating, hypoid gear type with Hotchkiss Drive.
Model 2322 (141" WB. 7 Pass. Sedan) Note—Axle is Custom 8 type with Ring Gear Idler Roller.
See Rear Axle Section for complete data.

Model	Std.	O.D. Cars	Ultramatic Cars
	Std. Ratios		
2301	3.9-1	4.1-1	3.9-1
2302, 2332	3.9-1	4.1-1	3.54-1
2322	4.09-1	4.36-1	3.92-1
	Optl. Ratios		
2301	4.1-1	4.3-1	4.1, 4.3-1
2302, 2332	4.1-1	——	3.9, 4.1-1

Backlash—.003-.005". Screw adjustment.
Removal: Remove axle shafts (see Removal below). Disconnect rear universal (wire trunnions), wire or prop propeller shaft up against floor pan with 2 x 4 inserted inside frame X-member. Drain differential, replace drain plug. Clean off housing, take off carrier lock nuts, lift carrier out.
Axle Shaft Removal: Remove wheel, brake drum (use screw type puller J-4153—do not use knock-out type puller or thrust block may be damaged). Disconnect brake line at wheel cylinder. Remove nuts at oil seal guard and take off seal guard, gasket, retainer, oil seal, brake support plate, and bearing shims. Remove axle shaft and bearing using Puller J-2552 (do not drag shaft on inner oil seal). Use Tool J-943-B to remove inner oil seal.
Wheel Bearing Adjustment: Endplay controlled by shims between flanged end of housing and brake backing plate. Add or remove shims (furnished .005", .007", .020" thick) at one wheel for .050" or under, at both wheels if over .050" to secure .004-.007" endplay.
Endplay—.004-.007".

SHOCK ABSORBERS

Delco Model 1946-J, K (front), Delco or Monroe (rear). Double acting (front), direct acting (rear).
Fifth Shock Absorber (Stabilizer) Super 8: Monroe direct acting, hydraulic (built-in rear stabilizer).

FRONT SUSPENSI N

Front Suspension: Packard Clipper Safe-T-Flex, independent, linked parallelogram type with coil springs and double acting shock absorbers.
See Front Suspension Section for complete data.
Kingpin Inclination—5°50' crosswise.
Caster—Neg. 1° ± ½°. Eccentric adjustment.
Model 2322: Neg. 2° ± ½°.
Camber—0° ± ¼°. Eccentric adjustment.
Toe In—0" (plus 1/16", minus 0"). Adjust by turning adjuster at outer end of each tie rod equally.

STEERING GEAR

Gemmer Model 335. 3-tooth Worm-and-Roller (push-pull adjustment). *See Steering Gear Sect. for data.*

BRAKES

Service: Bendix Hydraulic, Duo-Servo, Single Anchor type without eccentric adjustment. Hand lever applies rear service brakes. *See Brake Sect. for data.*
Wheel Cylinder—Diam. Front 1 1/16" (1" 7-Pass.), Rear wheels 15/16".
Drums—12" centrifuse type.
Lining—Marshall 4112 (primary shoe), Marshall 9051 (secondary). Width 1 3/4". Thickness 3/16". Length per shoe 11½" (primary), 13" (secondary).
Model 2322 7-Pass. Note—Lining width 2¼" front wheel shoes, 2" rear wheel shoes.
Clearance—.015" at both ends of secondary shoe with primary shoe forced out against drum.
Hand Brake: See Service Brakes above.

MISC. MECHANICAL

Power Operated Convertible Tops, Windows & Front Seat: Hydro-Lectric type (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders). *See Misc. Sect. for complete data.*
Windshield Wiper: Vacuum type, cable operated.
See Miscellaneous Section for complete data.

MODEL IDENTIFICATION

SERIAL NUMBER: On left side of cowl (use Eng. No.).

ENGINE NUMBER: Stamped on upper left side of cylinder block between #3 and #4 cylinders.

►**1949 Numbers "2300" Series**—H-600001 Up.
1950 Numbers "2300-5" Series—Continuation of 1949 numbers.

►***ENGINE NUMBER CODE: Code marks following engine number indicate changes or differences over unmarked engines as follows:***
★—Engine Bore. .020" Oversize.

TUNE-UP

COMPRESSION PRESSURE: 135 lbs. at 300 RPM.

VACUUM READING: Steady 18-20" idling at 6 MPH.

FIRING ORDER: 1-6-2-5-8-3-7-4. See diagram.

SPARK PLUG GAP: .028", Limits .025-.030".
Plug Types—Auto-Lite P-4, AC No. 104, or Champion Y4A. 10 mm. Metric.
CAUTION—Tighten plugs with plug wrench snugly with fingers. Avoid overtightening.

DISTRIBUTOR: Breaker Gap—Set at .017". Limits .013-.018".
Cam Angle—27° closed, 18° open (with .017" gap).
Breaker Arm Spring Tension—19-23 ounces.
Automatic & Vacuum Advance—*See Ignition.*
Condenser Capacity—.20-.25 microfarad.

IGNITION TIMING: 6° BTDC.
Timing Procedure—*See Ignition Timing.*
Vibration Dampener Mark—"#1UP.DC" with fifteen 1° graduations ahead of this point. Set ignition contacts to open at 6th graduation before "DC" mark.
Fuel Compensator Setting—Slight ping accelerating with wide open throttle.

CARBURETION:
Idle Setting—1½-2 turns open. Two screws—turn out for richer mixture.
Idle Speed (standard)—6 MPH.
Idle Speed (Ultramatic)—375 RPM. with selector lever in "H" position.
Float Level—5/32" from top of float to cover with valve seated (remove gasket and invert to check).
Accelerating Pump—Not adjustable.

Choke Setting: Centered (at index).

Fuel Pump Pressure: 4-4¾ lbs.

MANIFOLD HEAT CONTROL: Automatic. No adjustment. Valve must operate freely.

VALVE TAPPET CLEARANCE: None in service (hydraulic type lifters).
Valve Timing Check—*See Valve Timing.*

STARTING: *See Battery, Starter, Generator, Regulator.*

IGNITION

IGNITION SWITCH: Mitchellock Type 24.

COIL: Auto-Lite Model CE-4033.
Location—Left side of engine above distributor.
Ignition Current—2.75 amperes idling, 4.5 stopped.

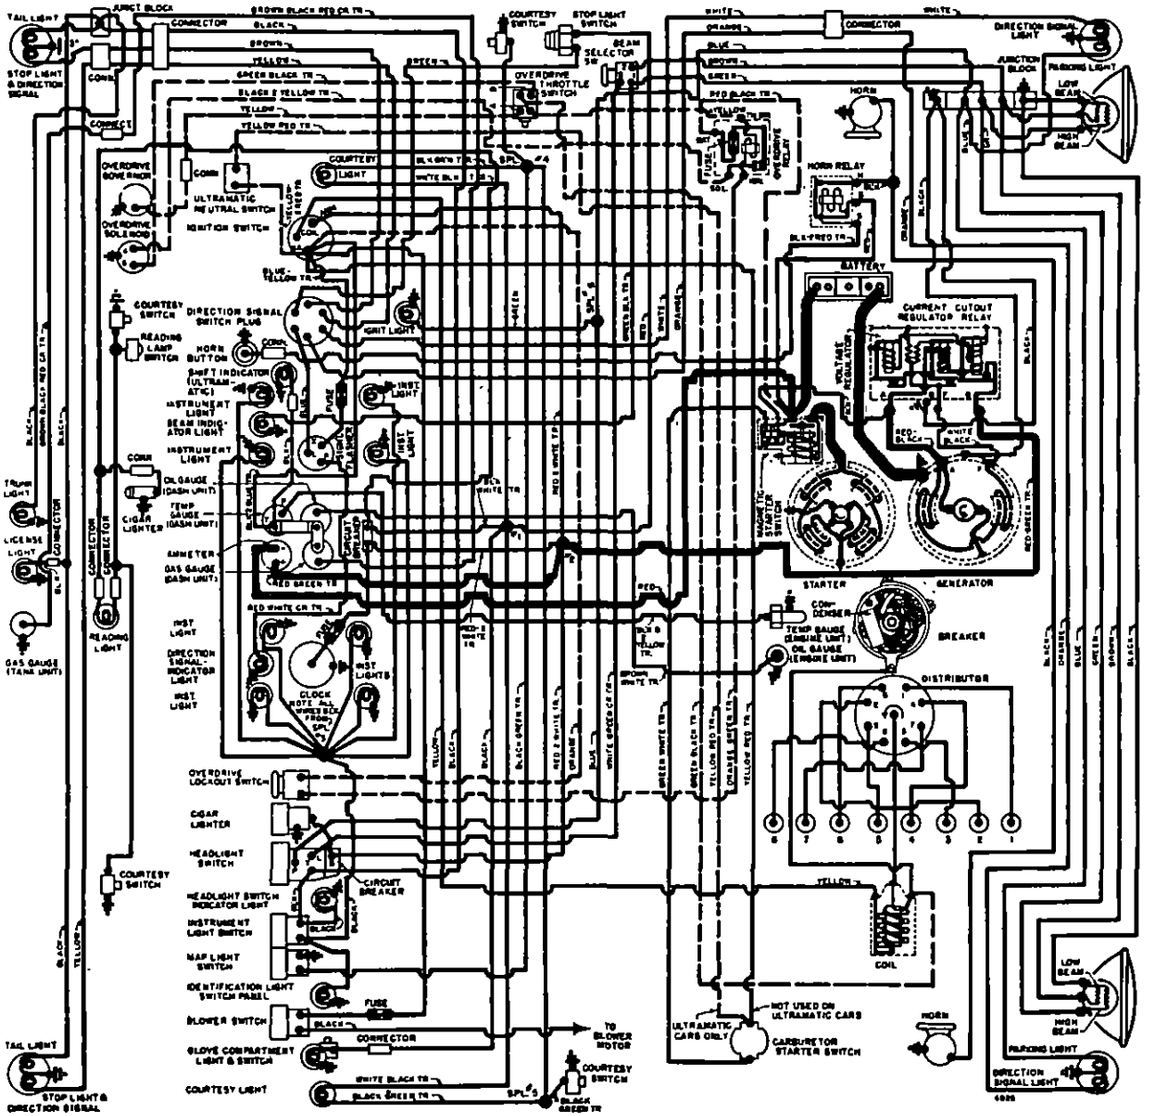
CONDENSER: Auto-Lite Part No. IG-2671J.
Capacity—.20-.25 microfarad.

DISTRIBUTOR: Auto-Lite Model IGT-4203. Automatic advance type with Vacuum Spark Control and Fuel Compensator Adjustment.
Breaker Plate Identification—Maximum vacuum advance limited by slot (marked 5½) on plate.

Breaker Gap—Set at .017". Limits .013-.018".
Cam Angle—27° closed, 18° open (with .017" gap).
Breaker Arm Spring Tension—19-23 ounces.
Rotation—Counter-clockwise viewed from above.

Automatic Advance

Degrees Distr.	R.P.M.	Degrees Eng.	R.P.M.
Start	250	0	500
3	475	6	950
6	700	12	1400
9	1300	18	2600
11½	1800	23	3600



Fuel Compensator: 10° advance or retard manual adjustment at distributor. *See Ignition Timing.*

Vacuum Spark Control: Auto-Lite. On distributor, linked directly to breaker plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring.

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	7"
1°	2°	8⅝"
3°	6°	12"
4°	8°	13½"
5½°	11°	16"

Distributor Removal: On left side of engine. Disconnect vacuum line, take out hold-down screw, lift off.

I NITI N TIMING

Std. Setting.....6° BTDC.
NOTE—Modify this setting for special fuel and altitude conditions. See Fuel Compensator Setting.
Vibration Dampener Mark—"#1UP.DC" with fifteen 1° graduations ahead of mark.
Timing—Set Fuel Compensator at "0". With #1 piston on compression, turn engine over until piston reaches firing position with correct mark on dampener in line with pointer on chain case cover (see table above). Loosen advance arm clamp bolt, rotate distributor until contacts begin to open, tighten clamp bolt. Check spark plug connections (see diagram), see that rotor opposite #1 segment in cap. Check Fuel Compensator Setting.
Timing (with Neon Timing Light)—Mark 6th line ahead of "#1UP.DC" mark on vibration dampener with white paint, clip timing light to #1 spark plug. Idle engine below 500 RPM., adjust distributor (as directed above) until mark lines up with pointer.
Fuel Compensator Setting—Should be set for slight ping when accelerating with wide open throttle. To adjust, loosen thumbnut, rotate distributor counterclockwise (if ping too severe), clockwise (if no ping noted), tighten thumbnut and recheck performance.

CARBURETOR

Carter WDO, No. 531SA. 1¼" Dual barrel downdraft type with Carter Climatic Control.
Casting No. on Flange—564.
See Carburetor Section for complete data.
Settings (Idle Setting, Float Level, and Accelerating Pump): ***See Tune-Up data.***
Metering Rods & Jets—***See Carter Jet Table in Carburetor Section.***
Fast Idle: Carter Dual (WDO) Carburetor type.
See Carburetion Equipment Section for complete data.
Setting—Adjust fast idle screw for .023-.028" throttle opening (Gauge T109-189) with choke closed.
Automatic Choke: Carter Climatic Control (Dual Carburetors).
See Carburetion Equipment Section for complete data.
Setting—Centered (at index).

CARB. EQUIPMENT

Air Cleaner (std.—oil bath): AC No. 1542318.
Element—AC No. 14.
Servicing (oil bath type)—Clean filter element, clean and refill oil reservoir with SAE No. 50 engine oil (Summer), No. 30 (Winter) to level of indicator line on case (approx. 1 pint) every 5000 miles or oftener if required.
Fuel Pump (Fuel-&-Vacuum): AC Type AH. No. 1539116.
Replacement Pump—AC No. 9116.
Pressure—4-4¾ lbs.
See Carburetion Equipment Section for complete data.
Gasoline Gauge: King-Seeley Electric.
Dash Unit—K-S No. 41635.
Tank Unit—K-S No. 41678.
See Carburetion Equipment Section for complete data.

BATTERY

Auto-Lite Type PN-17ZR. 6 Volt, 17 Plate, 120 Ampere Hour Capacity (20 hour rate).
Starting Capacity—138 amperes for 20 minutes.
Zero Capacity—300 amperes for 4.1 minutes. Five second voltage—4.3 volts.
Grounded Terminal—Positive (+) to frame.
Dimensions—Length 19¼". Width 4". Hgt. 8 29/32".
Location—On left side in engine compartment.

STARTER

Auto-Lite Model MAX-4052. Armature MAW-2069.
Drive—Overrunning clutch (solenoid pinion shift) through reduction gears.
Rotation—Clockwise at commutator end.
Brush Spring Tension—42-53 ozs. (new brushes).
Cranking Engine—200-250 amperes.

Performance Data

Torque	RPM①	Volts	Amperes
0 ft. lbs.	2560	5.5	70
13.0 "	Lock	2.0	410

①—Pinion Shaft RPM. (reduction gear drive).
Removal: On left front face of flywheel housing. To remove, take out flange mounting screws.
Starting Switch: Auto-Lite Model SS-4205 Solenoid Switch on starter controlled by Carter Car Starter No. 192-11U on carburetor (accelerator pedal control).
See Electrical Equipment Section for complete data.
►**Ultramatic Drive Starter Safety Switch**—Packard No. 421319 (Early 1950), No. 423439 (Late 1950). On left side of transmission case. Connected in starter control circuit so that starter operative only with with lever in "N" neutral, or "P" parking position.

GENERATOR

Early.....**Auto-Lite GDZ-4801V.** Arm. GDZ-2006F.
Later.....**Auto-Lite GGW-6001F.** Arm. GGW-2006F.
①**Convt.**.....**Auto-Lite GEG-4823F.** Arm. GEG-2006F.
②**Convt.**.....**Auto-Lite GGU-6001D.** Arm. GGU-2006F.
①—Early Cars. ②—Later Cars.
Two brush types with current and voltage regulation.
Maximum Charging Rate—See table below.
Charging Rate Adjustment—None. See Regulator.

Performance Data (Auto-Lite GDZ-4801V)

Amperes	Volts	Cold—R.P.M.—Hot	
0	6.4	870-970	950-1050
35	8.0	1800-2000	2150-2350

Performance Data (Auto-Lite GEG-4823F)

Amperes	Volts	Cold—R.P.M.—Hot
40	8.0	1575 Max.

Performance Data (Auto-Lite GGU-6001D)

0	6.4	750-850	800-900
45	8.0	1450-1650	1650-1850

Performance Data (Auto-Lite GGW-6001F)

0	6.4	870-970	950-1050
40	8.0	1800-2000	2150-2350

Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—64-68 ozs. (GEG), 35-53 ozs. (Others) New brushes.
Field Current—1.6-1.8 amperes at 6.0 volts.
Motoring Current—(GDZ) 4.2-4.6 amps., (GGU) 5.5-6.5 amps., (GGW) 4.6-5.2 amps., (GEG) 4.7-5.2 amperes, all at 6.0 volts.
Removal: Pivot mounted at left front of engine To remove, take out strap screw and mounting bolts.
Belt Adjustment: ½" belt deflection between fan and generator. Loosen adjusting strap screw, pry the generator out for ½" setting, tighten screw.

REGULATOR

Auto-Lite VAV-4401B.....for GGU-6001D Generator
Auto-Lite VRP-4402A.....for GDZ-4801V Generator
Auto-Lite VRP-4402B.....for GEG-4823F Generator
Auto-Lite VRP-4402C.....for GGW-6001F Generator
All are current-voltage types.
See Electrical Equipment Section for complete data.
NOTE—Regulator cover sealed. Warranty void if seals broken.

Cutout Relay

Cuts In—6.4-7.0 volts, (set to 6.4-6.6 volts).
Cuts Out—4.1-4.8 volts (approx. 4-6 amps. disch.).
Contact Gap—.015" minimum.
Air Gap—.031-.034" with contacts open (check at hinge end of core).

Voltage Regulator

Setting—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.
Checking (without breaking seals) & Adjustment—***See Electrical Equipment Section for complete data.***
Contact Gap—.012" min. (armature against stop pin).
Air Gap—.048-.052" with contacts just opening.

Current Regulator

Setting—As follows:
VAV-4401B 44-46 amperes (marked '45' on cover).
VRP-4402A 34-36 amperes (marked '35' on cover).
VRP-4402B 39-41 amperes (marked '40' on cover).
VRP-4402C 39-41 amperes (marked '40' on cover).
Checking (without breaking seals) & Adjustment—***See Electrical Equipment Section for complete data.***
Contact Gap—.012" min. (armature against stop pin).
Air Gap—.048-.052" with contacts just opening.

LIGHTING

Headlamps: Hall "Sealed Beam" type.
See Electrical Equipment Section for complete data.
Adjustment—Aim upper beams straight ahead (hot spot center 3" below lamp center height at 25 ft.).
Beam Indicator—Light at top of speedomter dial. Lighted when Upper Beams "on".
Direction Signal: Std. ***See Electrical Equipment Section.***
Direction Signal Indicator—Light at top of clock. Flashes when Signal in use.

MISC. ELECTRICAL

CIRCUIT BREAKERS: Vibrating, thermostatic types.
Lighting—30 ampere. On lighting switch.
Accessory (Stop & Body Lamps)—30 ampere. Behind instrument panel below gauges. Protects Glove Box Lamp, Courtesy Lamps, Map Lamp, Stop Lamps, Dome Lamp, and Rear Cigar Lighter.
Hydro-Lectric Power (Convertible)—On engine side of dash on pump upper bracket.

FUSES: **Clock**—SFE 3 ampere in lead below Clock.
Direction Signal—SFE 9 ampere. In Flasher feed wire above Ash Tray.
Overdrive—SFE 30 ampere. On Overdrive Relay (at BAT terminal) on engine side of dash.
Electromatic Clutch—9 ampere. In lead from Ignition Switch to Electromatic Clutch Switch.
Heater—SFE 30 ampere. In cable near Ign. Switch.

HORNS: Sparton. Dual horns operated by relay.
Horn Current—22-25 amperes.

Horn Relay: Delco-Remy No. 1116775.
Contacts Close—2.75-4.0 volts (set to 3.5 volts).
Contact Gap—.027". **Air Gap** .014" (contacts closed).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

ENGINE

ENGINE SPECIFICATIONS: 8 cylinder, "L" head type.
Bore—3½"①. **Stroke**—4⅝".
①—*For Original Bore Sizes, See Packard Special Data.*
▷*.020" OVERSIZE BORE ENGINES: Marked by star following engine number.*
Displacement—356 cubic inches. **Rated HP.**—39.2.
Developed Horsepower—160 at 3600 RPM.
Compression Ratio—7.0-1 std. cast iron head.
Compression & Vacuum Reading—*See Tune-Up data.*

OIL PAN REMOVAL: *See Packard Special Data.*

TIGHTENING TORQUES: *See Packard Special Data.*

CYLINDER HEAD: Tightening Torque & Cylinder Head Diagram—*See Packard Special Data.*

PISTONS: Aluminum alloy, autothermic strut type. *Original Piston Sizes & Markings, see Packard Special Data.*
Length—3⅞".
Weight—19½ ozs. (stripped), 25½ (with rings & pin).
▷**Cyl. Bore Taper Note**—Car manufacturer recommends cylinders be re-bored and new pistons installed if cylinder taper exceeds .007-.010". If necessary, new rings only can be installed (without reboring) for taper up to .014".
Removal—Pistons and rods removed from above.
Clearance—.0005-.001". See Fitting New Pistons.
▷**Piston Skirt Expander Note**—Car manufacturer recommends skirt expanders be installed if cylinder diameter over .006" greater than piston skirt diameter (measured alongside upper end of piston skirt slot).

Replacement Pistons: *See Packard Special Data.*
NOTE—Check ring grooves for wear by installing new piston ring in groove—if .006" feeler can be inserted 1/16", wear excessive and piston should be replaced. Check top groove when testing.

Fitting New Pistons: Insert .0015" feeler ½" wide between piston and cylinder wall on side opposite slot. Pull to withdraw feeler should be 12-18 lbs.
NOTE—Piston should hold in any portion of bore of own weight, but should move when one or two finger pressure applied to piston with cyl. bore vertical.

Install Pistons: Slot toward camshaft.

PISTON RINGS: Two compression rings (No. 200 top and second groove), one oil control ring (No. 85) per piston, all above pin. Oil ring groove has twelve 5/32" oil drain holes.

Ring	Width	End Gap	Side Clearance
Comp. (#1, 2)	.0930-.0935"	.0054-.0233"	.0025-.003"
Oil (#3)	.186-.1865"	.0054-.0213"	.0025-.003"

Installing Rings—End gaps must be between pin holes with #2 ring on same side as skirt slot, #1 and #3 ring on side opposite slot.

Replacement Rings: Std., .020", .030", .040" oversize.

PISTON PIN Diameter—7/8". **Length**—3 1/64".
Floating type retained by lock ring at each end. Split type bushing used in upper end of rod.
Pin Fit in Piston—Palm push fit with piston at 160°F. (heat piston in water only).
Pin Fit in Rod Bushing—Finger push fit at 70°F.
Piston Pin (Connecting Rod) Bushing Installation—*See "Piston Pins" in Packard Special Data.*

Replacement Pins: Std. and .003", .006" oversize.

CONNECTING ROD: Length 9¼". **Weight**—38.9 ozs.
Crankpin Journal Diameter—2.250".
Lower Bearing—Shimless, precision, steel backed, Moraine Durex or Federal Mogul H-24.
Clearance—.0005-.003". **Endplay**—.004-.012".

Bearing Adjustment: None (no shims). Replace bearings. Self-locking nuts used on cap bolts (tighten to 60-65 ft. lbs.).

Replacement Bearings: Std., .001", .002", .020" US.

Installing Rods: Oil squirt hole toward camshaft.

CRANKSHAFT: 9 bearing with bolted-on counterweights. Rubber friction disc dampener on front end.
Journal Diameter—2.7465".
Bearings—Interchangeable, shimless, precision, steel-backed Moraine Durex or Federal Mogul H-24.
Clearance—.001-.003".

Bearing Adjustment: None (no shims). Replace bearings (upper halves can be rotated in and out).

Replacement Bearings: Std., .001", .002", .020" US.

Crankshaft Front & Rear Oil Seal Replacement: *See "Crankshaft & Main Bearings" in Packard Special Data.*

End Thrust: At #5 bearing. **Endplay**—.003-.008".

CAMSHAFT: 8 bearing. Non-adjustable chain drive.
Bearings—Steel-backed, babbitt-lined bushings.
Clearance—.001-.003".

End Thrust: Taken by thrust plate in back of camshaft sprocket. **Endplay**—.004-.006".

Timing Chain: Morse. Width 1¼". Pitch .375" (⅜"). Length 23¼" or 62 links.

Camshaft Setting: Install chain and sprockets together with "0" marks on sprockets adjacent and in line with straightedge across shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 43/64"	.3417"	6 7/32"
Exhaust	1 7/16"	.3398"	6 7/32"

	Seat Angle	Lift	Stem Clearance
Intake	30°	.342"	.002"
Exhaust	45°	.342"	.004"

Valve Guides: Lubrite coated. Pressed in block from above with upper end 31/32" below top of block. Use Valve Guide Driver and Depth Gauge No. J-2577—properly positions guides when gauge seats on block. Ream guides after installation with 11/32" (.3437") reamer. Upper end of exhaust guide counterbored.
Valve Guide Removal Note—If guides to be removed with tappets in engine, use Valve Guide Remover Tool J-2580 to drive guide down to just clear tappet (with tappet on heel of cam). Score guide with chisel inserted through valve ports, then break off lower end, finally drive remainder of guide out. If tappets out, guide can be driven down and out without breaking.

Valve Springs: Intake and exhaust springs interchangeable. Anti-rotation serrated cup washers installed on top of spring and seats in recess in block.

	Spring Pressure	Spring Length
Valve Closed	60-66 lbs.	1 3/4"
Valve Open	135-145 lbs.	1 13/32"

Valve Lifters: Wilcox-Rich "Zero-lash" type hydraulic lifters (mushroom type). Remove from below with camshaft out of engine
Diameter—.7177-.7182". **Clearance**—.0002" selective.

Hydraulic Valve Lifter Removal & Overhaul: *See "Hydraulic Valve Lifters" in Packard Special Data.*
Replacement Lifters—.001", .002", .005" oversize. Use Tool S.T. 5101 (piloted in valve guide) and ream for .005" oversize lifters.

Valve Lifter Clearance Check When Grinding Valves—*See "Hydraulic Valve Lifters" in Packard Special Data.*

VALVE TIMING

Tappet Clearance: None in service (hydraulic type lifters). See Valve Lifters above.

Valve Timing: See Camshaft Setting above.
Intake Valves—Open 4° BTDC. Close 51° ALDC.
Exhaust Valves—Open 49° BLDC. Close 10° ATDC.
Valve Timing Check—Check by turning tappet plunger for No. 8 exhaust valve with fingers. Turn engine over until this valve fully open, turn engine further until valve nearly closed (plunger should not turn), continue turning engine while attempting to turn plunger, until plunger "breaks loose" or turns. This should be 10° after top dead center—check at timing mark on vibration dampener.
CAUTION—If valve over 8° before or after this point in closing, camshaft setting incorrect.

LUBRICATION

Engine Oiling System: Pressure to main and connecting rod bearings, camshaft bearings, piston pins, valve lifters, and timing chain. Oil pump mounted externally on right side of engine.
Crankcase Capacity—7 quarts.
Normal Oil Pressure—50 lbs. Normal Driving.
Oil Pressure Regulator—On oil pump cover. Not adjustable. Pressure regulator spring tension should be 17½-18½ lbs. at 1⅞".

Oil Pump: Gear type. On right side of crankcase.
Oil Pump Removal & Overhaul—*See "Oil Pump" in Packard Special Data.*

Oil Pressure Gauge: King-Seeley Electric.
Dash Unit—K-S No. 41640.
Engine Unit—K-S No. 40767.
See Miscellaneous Section for complete data.

Crankcase Ventilation: Oil-wetted type filter element in oil filler cap, air intake). Outlet pipe in valve compartment cover at rear.
Servicing—Wash filter element in gasoline and re-oil when changing oil (1000-2000 miles).

COOLING

Cooling System: Pressure type with pressure relief valve in filler cap and fan belt driven pump.
Capacity—19 qts. Add ½ qt. for heater.
Pressure Valve—AC No. 850005 pressure cap. Opens at 7 lbs.

Water Pump: Centrifugal, belt-driven, packless type.
See Water Pump Section for complete data.
Belt Adjustment—*See Generator Belt Adjustment.*

Thermostat: In cylinder head outlet.
Setting (std.)—Starts to open 145-150°F.
Setting (Opt. High Reading)—Starts to open 160-165°F. or 175-180°F.

Temperature Gauge: King-Seeley Electric.
Dash Unit—K-S No. 41645.
Engine Unit—K-S 41085 (1949), 42550 (1950).
See Miscellaneous Section for complete data.

CLUTCH

Long Model 11CF-T1. Single plate, semi-centrifugal, dry disc type.
See Clutch Section for complete data.
Facings—Woven (U.S. Asbestos). Thickness .125". Inside Diameter 7". Outside Diameter 11".

Pedal Adjustment: 1¼-1⅜" free travel. Adjusting nut on rod at throwout lever.

▷**Clutch Pedal Over-Center Spring:** New adjustable type. *See "Clutch Notes" in Packard Special Data for adjustment.*

Removal: Remove transmission (see Transmission Removal following) and flywheel housing lower cover. Disconnect throwout linkage and remove throwout bearing. Remove clutch cover screws (release tension evenly), lower assembly out of car.

ELECTROMATIC CLUTCH

Electromatic Clutch: Vacuum type clutch actuation with electrical control. Optional equipment.
See Clutch Section for complete data.

TRANSMISSION

Own Make. Helical gear, constant-mesh, synchromesh (Second & High), constant-mesh (Low). Sliding spur gear (Reverse). Low & Second speed gears are ball bearing mounted.
See Transmission Section for complete data.

Trahsmission Control: Steering column type.
See Transmission Section for complete data.

Removal: Disconnect shifter rods, speedometer cable, hand brake cable at equalizer, engine ground strap, front universal (block driveshaft up against floor pan). Support rear of engine with jack and unbolt cross-member (at frame ends and transmission). Disconnect clutch retractor spring and fore-and-aft restraint rod. Take out transmission-to-housing mounting screws, remove transmission.

OVERDRIVE

Warner Model AS4-R11. Optl. equipment used with Packard transmission. New simplified solenoid operated overdrive with Governor Control and throttle operated "kick-down".
See Transmission Section for complete data.

►**Early R11 Overdrive Failure to Engage Correction**—*See "Warner R11 Overdrive" in Transmission Section.*
Overdrive Solenoid—Packard No. 403942.
Governor—Packard No. 418447.
Control Relay—Packard No. 403940.
Kick-down Switch—Packard No. 403945.
Lock-out Switch—Packard No. 354820.

Removal: Disconnect control cable and all leads to solenoid and governor. Free mounting at rear of overdrive case. Then remove overdrive and transmission (see Transmission Removal above).

ULTRAMATIC DRIVE

STD. EQUIPMENT ON SERIES 2306 & 2333

Own Make. Torque Converter (with hydraulically operated Direct Speed Clutch) and hydraulically operated planetary unit with manual control.
See Transmission Section for complete data including Testing & Trouble Shooting.

►**Production Changes & Oil Leak Corrections**—*See "Ultramatic Drive" in Transmission Section.*

Linkage Adjustment on Ultramatic Drive Cars: *See Packard "Ultramatic Drive" in Transmission Section.*

Lubrication—Check fluid level every 1000 miles, drain and refill every 25,000 miles.

Recommended Fluid. Packard Ultramatic Drive or any Type "A" Automatic Transmission Fluid which has an AQ-ATF number embossed on container.

Capacity. Approximately 12 quarts.

Draining & Refilling. *See Packard "Ultramatic Drive" in Transmission Section.*

Checking Fluid Level. *CAUTION—Fluid must only be checked at normal operating temperatures and after engine has been idling at 800 RPM. for at least one minute with selector lever in "N" position.* Stop the engine, check level by removing dipstick from filler hole on left side of transmission (accessible from under car—release cap by turning ½ turn counterclockwise). Add fluid as required to bring level up to FULL mark on dipstick.

Removal: *See "Packard Ultramatic Drive" in Transmission Section.*

UNIVERSALS

Mechanics 3CR or Spicer. Needle bearing types.
NOTE—Cars without Overdrive use one-piece shaft.

►*CAUTION*—Rear universal flange nut controls rear axle pinion bearing pre-load which **must be adjusted whenever nut is loosened.** *See "Packard Rear Axle" in Rear Axle Section for complete data.*

REAR AXLE

Own Make. Semi-floating, hypoid gear type with Hotchkiss drive and Ring Gear Idler Roller.
See Rear Axle Section for complete data.

Ratios—As follows:

Model	Std.	O.D. Cars	Ultramatic Cars
	Std. Ratios		
2306, 2333	3.92-1	4.09-1	3.54-1
2313	4.54-1	4.7-1	———
	Optl. Ratios		
2306, 2333	4.09-1	———	3.92-1

Backlash—.004-.006". Screw adjustment.

Removal: Remove axle shafts (see Removal below). Disconnect rear universal (wire trunnions), wire or prop propeller shaft up against floor pan with 2 x 4 inserted inside frame X-member. Drain differential, replace drain plug. Clean off housing, take off carrier lock nuts, lift carrier out.

Axle Shaft Removal: Remove wheel, brake drum (use screw type puller J-4153—do not use knock-out type puller or thrust block may be damaged). Disconnect brake line at wheel cylinder. Remove nuts at oil seal guard and take off seal guard, gasket, retainer, oil seal, brake support plate, and bearing shims. Remove axle shaft and bearing using Puller J-2552 (do not drag shaft on inner oil seal). Use Tool J-943-B to remove inner oil seal.

Wheel Bearing Adjustment: Endplay controlled by shims between flanged end of housing and brake backing plate. Add or remove shims (furnished .005", .007", .020" thick) at one wheel for .050" or under, at both wheels if over .050" to secure .004-.007" endplay.
Endplay—.004-.007".

SHOCK ABSORBERS

Delco Model 1946-J, K (front), Delco or Monroe (rear). Double acting (front), direct acting (rear).

Fifth Shock Absorber (Stabilizer) Super 8: Monroe direct acting, hydraulic (built-in rear stabilizer).

FRONT SUSPENSI N

Front Suspension: Packard Clipper Safe-T-Flex, independent, linked parallelogram type with coil springs and double acting shock absorbers.
See Front Suspension Section for complete data.
Kingpin Inclination—5°50' crosswise (2°30' on 156" wheelbase hearse).
Caster—Neg. 2° ± ½°. Eccentric adjustment.
Camber—0° ± ¼°. Eccentric adjustment.
Toe In—0" (plus 1/16", minus 0"). Adjust by turning adjuster at outer end of each tie rod equally.

STEERING GEAR

Packard—Gemmer Model 335. "3-tooth" Worm-and-Roller with "push-pull" adjustment. See Gemmer.
See Steering Gear Section for complete data.

BRAKES

Service: Bendix Hydraulic, Duo-Servo, Single Anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.
See Brake Section for complete data.
Wheel Cylinder—Front 1⅛". Rear 1" (1⅛" 156" WB.).
Drums: 12" centrifuse type.
Lining—Marshall 4112 (primary shoe). Marshall 9051 (secondary). Width 2¼" (front wheel), 2" (rear). Length per shoe 11½" (primary), 13" (secondary). Thickness 3/16".
156" WB. Hearse Note—Bonded lining used. All shoes 13" long, 2½" wide, 3/16" thick.
Clearance—.015" at both ends of secondary shoe with primary shoe forced out against drum.

Hand Brake: See Service Brakes above.

MISC. MECHANICAL

Power Operated Convertible Tops, Windows & Front Seat: Hydro-Lectric type (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders).
See Miscellaneous Section for complete data.

Windshield Wiper: Vacuum type, cable operated.
See Miscellaneous Section for complete data.

ELECTRICAL EQUIPMENT NOTE: Both Auto-Lite and Delco-Remy equipment are used. Cars are equipped entirely with either one or the other system.

MODEL IDENTIFICATION

SERIAL NUMBERS: Stamped on plate mounted on left front door pillar post.

ENGINE NUMBERS: Stamped on left side of engine opposite #8 cylinder.

Starting Engine Numbers	1951	1952
200	J-200001	K-200000
250		K-*400000*
300	J-400001	K-400000
400	J-600001	K-600000

▷*ENGINE NUMBER NOTE: A "STAR" following engine number indicates .020" oversize cylinder bores.*

TUNE-UP

COMPRESSION PRESSURE: At 150 RPM. (Cranking Speed).
"200"—124 lbs., with 7.0-1 head.
"250" & "300"—134 lbs., with 7.0-1 head, 144 lbs., with 7.8-1 head.
"400"—144 lbs., with 7.8-1 head.

VACUUM READING: 18-21" idling at 400 RPM.

FIRING ORDER: 1-6-2-5-8-3-7-4.

SPARK PLUG GAPS: .025".
Plugs—Auto-Lite A5, AC No. 46-5. Champion J8. 14 mm.

DISTRIBUTOR: Auto-Lite No. IGP-4502C. Automatic advance type with vacuum spark control and fuel compensator adjustment.
Breaker Gap—.017". Limits .015-.019".
Cam Angle—Closed 27°. Open 18°.
Breaker Arm Spring Tension—17-20 ozs.
Rotation—Counter-clockwise viewed from above.
Automatic & Vacuum Advance—*See Ignition.*
Fuel Compensator—40° range of adjustment on quadrant at vacuum link connection.

DISTRIBUTOR: Delco-Remy No. 1110825. Automatic and vacuum advance type with "center-bearing" breaker plate and fuel compensator adjustment.
Breaker Gap—.016".
Cam Angle—Test limits with .016" gap, 21-30°.
Breaker Arm Spring Tension—17-21 ozs.
Rotation—Counter-clockwise viewed from above.
Automatic & Vacuum Advance—*See Ignition.*
Fuel Compensator—10° advance or retard adjustment at distributor.

COIL: Auto-Lite No. CR-4001A, or Delco-Remy No. 1115380. *Use Auto-Lite Coil & Auto-Lite Distributor, or Delco-Remy Coil & Delco-Remy Distributor together.*
Ignition Current—2 amps. idling, 5 stopped.

CONDENSER: (Capacity)—.20-.25 microfarad (Auto-Lite). .18-.23 microfarad (Delco-Remy).

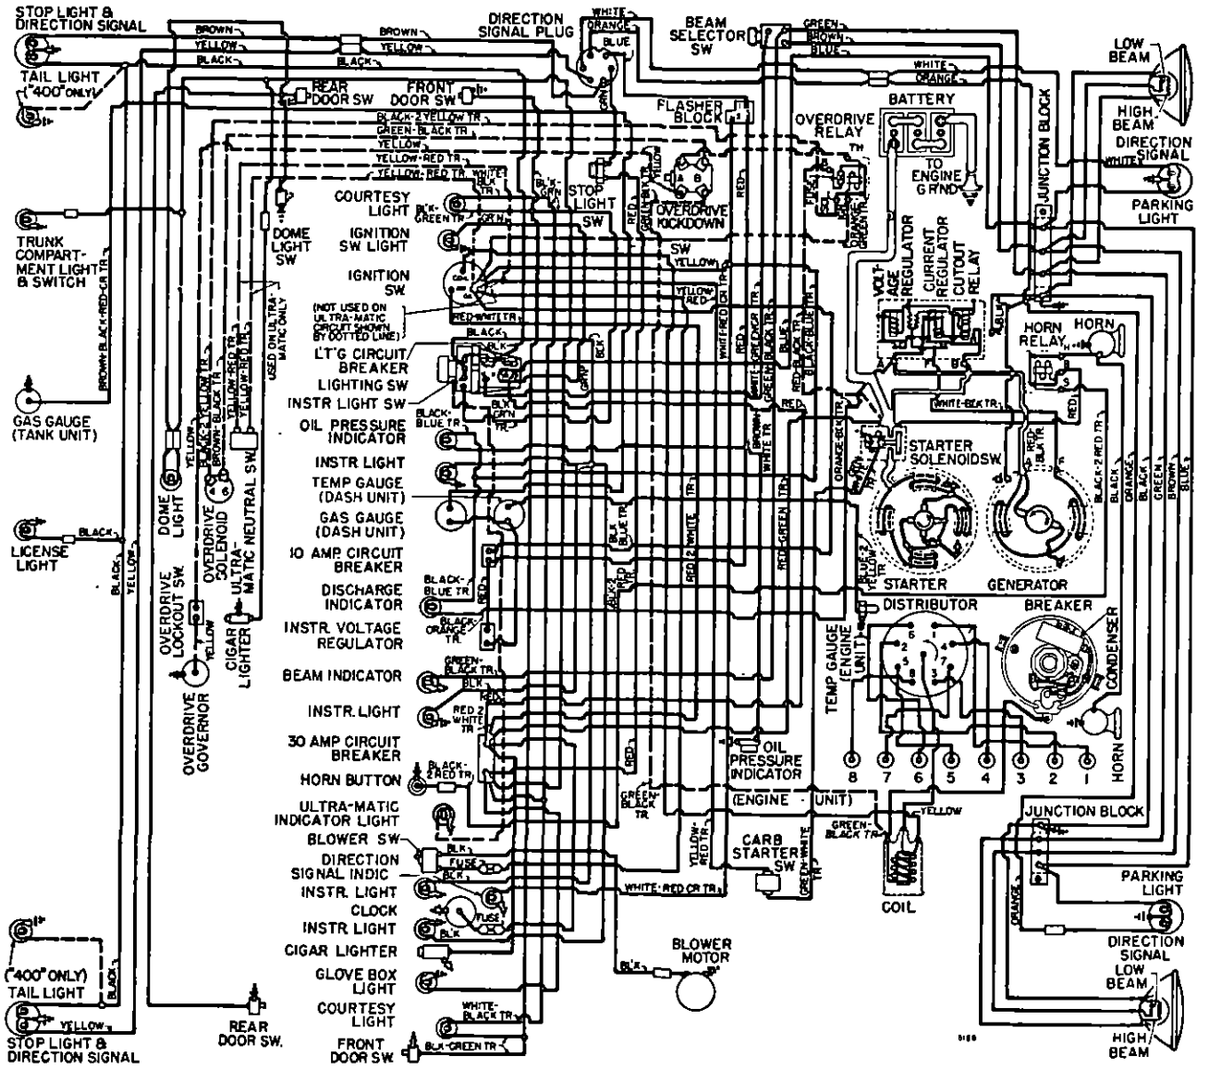
IGNITION TIMING: 6° BTDC. *NOTE*—Modify this setting for special fuel and altitude conditions. See Fuel Compensator (below).
Timing Mark—"#1UP.DC" with fifteen 1° graduations ahead of mark.

Fuel Compensator Setting: Should be set for slight ping when accelerating engine with wide open throttle. To adjust, loosen vacuum unit link screw in distributor quadrant (Auto-Lite distributors), advance arm hold-down screw (Delco-Remy distributors), rotate distributor one graduation at a time counter-clockwise (if ping too severe), clockwise (if no ping) until correct performance secured.
Timing Procedure—*See Ignition Timing.*

CARBURETION: Carter WGD, No. ("200") 784S, (1951 "300" & "400") 767S, (1952 "250," "300," & "400") 928S. 1¼" dual down-draft type with Carter Climatic Control.
Idle Setting—½-1½ turns open. Adjust both screws equally. Turn screws out for richer mixture.
Idle Speed (Synchro-mesh Trans.)—6 MPH.
Idle Speed (Ultramatic)—375 RPM. with selector lever in "H" position.
Float Level—13/64" from top of float to cover with valve seated (assembly inverted).
Accelerating Pump—Not adjustable.

Choke Setting: 1 Point Rich (all models).

Fast Idle Setting: .023" throttle opening with choke valve closed (throttle must be opened first). Adjust by bending choke connector rod at lower end.



Fuel Pump Pressure: 4-4¾ lbs.

MANIFOLD HEAT CONTROL: Automatic thermostatic type. No adjustment necessary.

VALVE TAPPET CLEARANCE: "200" Engine. .007" Intake. .010" Exhaust.
"250," "300" & "400" Engines—Hydraulic lifters used. No adjustment required.

IGNITION
AUTO-LITE

COIL: *Auto-Lite CR-4001A.*
Location—Left side of engine above distributor.
Ignition Current—2 amps idling, 5 stopped.

1951 MODELS (AUTO-LITE EQUIPMENT)

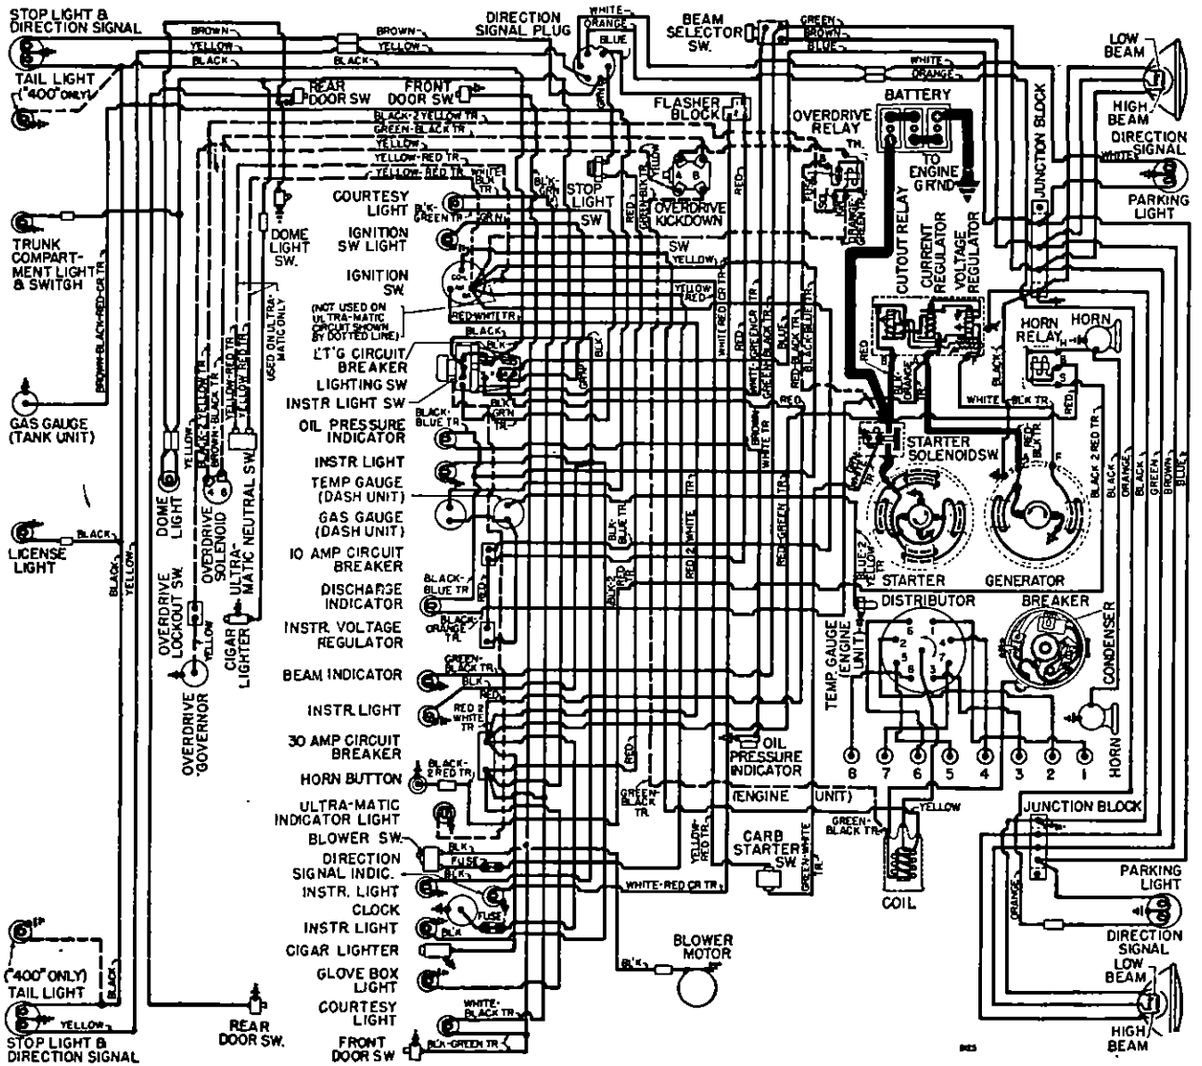
CONDENSER: Auto-Lite.
Capacity—.20-.25 microfarad.

DISTRIBUTOR: Auto-Lite Model No. IGP-4502C. Automatic advance type with Vacuum Spark Control and Fuel Compensator adjustment.
Breaker Gap—.017". Limits .013-.018".
Cam Angle—Closed 27°, Open 18°.
Breaker Arm Spring Tension—17-21 ozs.
Rotation—Counter-clockwise viewed from above.

Automatic Advance (Auto-Lite)

Degrees Distr.	R.P.M.	Degrees Eng.	R.P.M.
Start	300	0	600
1	400	2	800
3	600	6	1200
6	1200	12	2400
8	1600	16	3200

Fuel Compensator: 40° range of adjustment on quadrant at vacuum link connection. *See Ignition Timing.*



Vacuum Spark Control: Auto-Lite. Mounted on hold-down plate and linked to adjusting quadrant on distributor housing.

Vacuum Advance (Auto-Lite)

Dist. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	6
1	2	6¾
5.7	11.4	10
9	18	14¾
10.5	21	17

DELCO-REMY

COIL: Delco-Remy No. 1115380.
Location—Left side of engine above distributor.

1951 MODELS (DELCO-REMY EQUIPMENT)

Ignition Current—2 amps. idling, 5 stopped.

CONDENSER: Delco-Remy Part No. 1869704.
Capacity—.18-.23 microfarad.

DISTRIBUTOR: Delco-Remy 1110825. Automatic and vacuum advance type with "center bearing" breaker plate and fuel compensator adjustment.
See "Delco-Remy Center-Bearing Breaker Plate Distributor" in Electrical Equipment Section.
Breaker Gap—.017". Limits .015-.019".
Cam Angle—Test limits with .016" gap—21-30°. *See "Delco-Remy Cam Angle" in Electrical Equipment Section.*
Breaker Arm Spring Tension—19-23 ozs.
Rotation—Counter-clockwise viewed from above.

Automatic Advance (Delco-Remy)

Degrees Distr.	R.P.M.	Degrees Eng.	R.P.M.
0-2	400	0-4	800
2-4	600	4-8	1200
4-6	1000	8-12	2000
7-9	1600	14-18	3200

Fuel Compensator: 10° advance or retard adjustment at distributor. *See Ignition Timing.*

Vacuum Spark Control: Delco-Remy 1116060. Integral type mounted on distributor and linked directly to breaker plate.

Vacuum Advance (Delco-Remy)

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	5-7
9-11	18-22	19

Plunger Travel—7/32"-15/64".

IGNITION TIMING

Std. Setting ..... **6° BTDC.**
NOTE—Modify this setting for special fuel and altitude conditions. *See Fuel Compensator Setting.*
Vibration Dampener Mark—"#1UP.DC" with fifteen 1° graduations ahead of mark.
Timing—With #1 piston on compression, turn engine over until piston reaches firing position with correct mark on dampener in line with pointer on chain cover (see table above). Loosen vacuum unit link screw in distributor quadrant. (Auto-Lite distributors), or hold-down screw in advance arm Delco-Remy distributors), rotate distributor until contacts begin to open, tighten screw.
Fuel Compensator Setting—Should be set for slight ping when accelerating engine with wide-open throttle. To adjust, loosen vacuum unit link screw in distributor quadrant (Auto-Lite distributors), advance arm hold-down screw (Delco-Remy distributors), rotate distributor one graduation at a time counter-clockwise (if ping too severe), clockwise (if no ping) until correct performance secured.

CARBURETOR

Carter WGD, No. ("200") 784S, (1951 "300" & "400") 767S, (1952 "250", "300" & "400") 928S. 1¼" dual down-draft type with Carter Climatic Control.
Casting No. on Flange—803.
See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up.*
Metering Rods & Jets—*See Carter Downdraft Jet Table in Carburetor Section.*

Fast Idle: Carter (WGD) Carburetor type.
Setting—.023" throttle opening with choke valve closed (throttle must be opened first). Adjust by bending choke connector rod at lower end.
See Carburetion Equipment Section for complete data.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Automatic Choke: Carter Climatic Control (Dual Carburetors).
Setting—1 Point rich.
See Carburetion Equipment Section for complete data.

Air Cleaner: ("200") AC Oil-wetted (Std.), Oil-bath (Opt'l).
("250", "300" & "400") AC Oil-bath type.
Replacement Elements—("200") **AC No. 6** (Oil-wetted), **No. 19** (Oil-bath). ("250", "300" & "400") **No. 20.**

Fuel Pump: AC Fuel & Vacuum Type.
Replacement Pump—(1951 "200") 508 to Engine No. J-233206, (Later "200", All Others) 9590.
Pressure—4-4¾ lbs.
See Carburetion Equipment Section for complete data.

Gasoline Gauge: King-Seeley Electric "CV" (constant voltage) type with voltage regulator.

Model	Dash Unit	Tank Unit
1951 "200"	45654	44510
1951 "300" & "400"	45607	44510
1952 "200"	45953	44517
1952 "250", "300" & "400"	45607	44517

See Carburetion Equipment Section for complete data.

BATTERY

("200", "250", & "300"): Auto-Lite Type 2L-100 or Willard SW-2L-100, 6 volt, 17 plate, 100 ampere hr. capacity (20 hour rate).
("400"): Auto-Lite Type 2FH-120 or Willard HW-2F-120, 6 volt, 17 plate, 120 ampere hr. capacity (20 hr. rate).
rate).
Grounded Terminal—Positive (+) to engine at water pump.
Location—Left side of engine compartment.

STARTER

AUTO-LITE

Auto-Lite No. MCL-6003 (Early 1951 "200", "300"); No. MCL-6113 (Late 1951 & 1952 "200", "250" & "300"); No. MCL-6114 (1951, 1952 "400").
Armature—Auto-Lite MCH-2021 (MCL-6003), MCH-2028 (MCL-6113), MCH-2070 (MCL-6114).
Drive—(MCL-6003) Bendix Drive No. A-1915, (MCL-6113) Bendix Drive No. A-1792 (MCL-6114) Solenoid pinion shift.
Rotation—Counter-clockwise at commutator end.
Cranking Engine—175-225 amperes.
Brush Spring Tension—42-53 ozs. (new brushes).

Performance Data (Auto-Lite)

Torque		RPM.	Volts	Amperes
0	ft. lbs	4900.	5.0	65
8.0	"	Lock	2.0	410

Starting Switch: ("200", "250", "300") Auto-Lite SS 4017 Magnetic switch, ("400") Auto-Lite SSX-4102 solenoid pinion shift and switch. Controlled by Carter Car Starter No. 192-11U on carburetor (accelerator pedal starting).
See Electrical Equipment Section for complete data.

Ultramatic Drive Starter Safety Switch—Packard No. 423429. On left side of transmission case, connected in starter control circuit so that starter operative only with lever in "N" Neutral or "P" Parking.

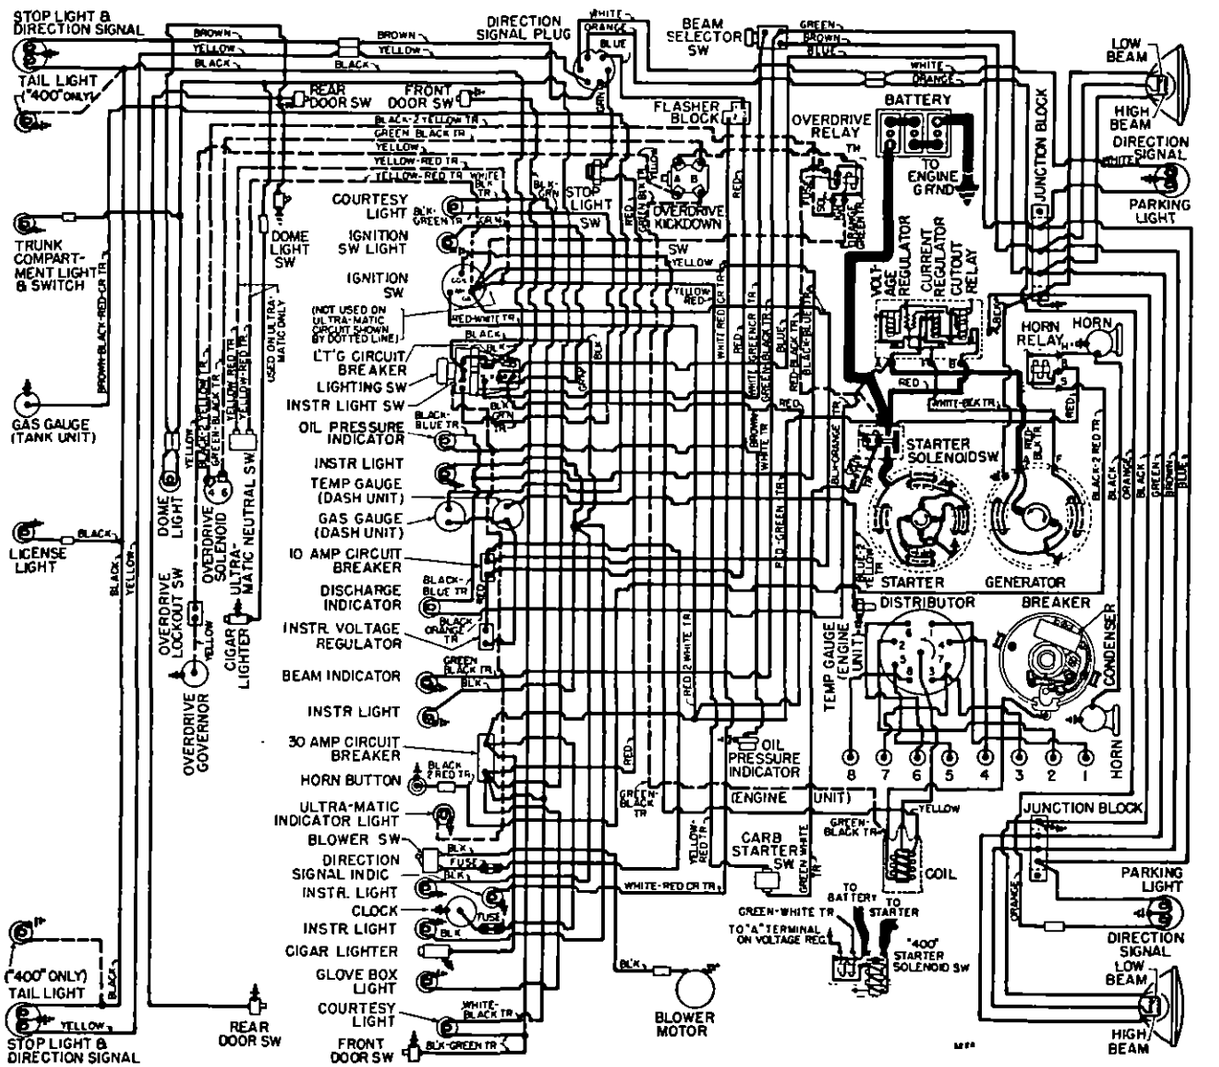
STARTER

DELCO-REMY

Delco-Remy No. 1107943 (1951 & Early 1952); No. 1108008 (Late 1952). Armature No. 1910938.
Drive—Outboard barrel Type Bendix No. A-1792.
Rotation—Counter-clockwise at commutator end.
Cranking Engine—175-225 amperes.
Brush Spring Tension—24-28 ozs.

Performance Data (Delco-Remy)

Torque		R.P.M.	Volts	Amperes
0	ft. lbs	5500	5.7	65
16	"	Lock	3.0	600



Starting Switch: Delco-Remy No. 1452 (for 1107943), 1465 (for 1108008) Magnetic Switch on starter, controlled by Carter Car Starter No. 192-11U on carburetor (accelerator pedal control).
See Electrical Equipment Section for complete data.

Ultramatic Drive Starter Safety Switch—Packard No. 423429. On left side of transmission case, connected in starter control circuit so that starter operative only with level in "N" Neutral or "P" Parking.

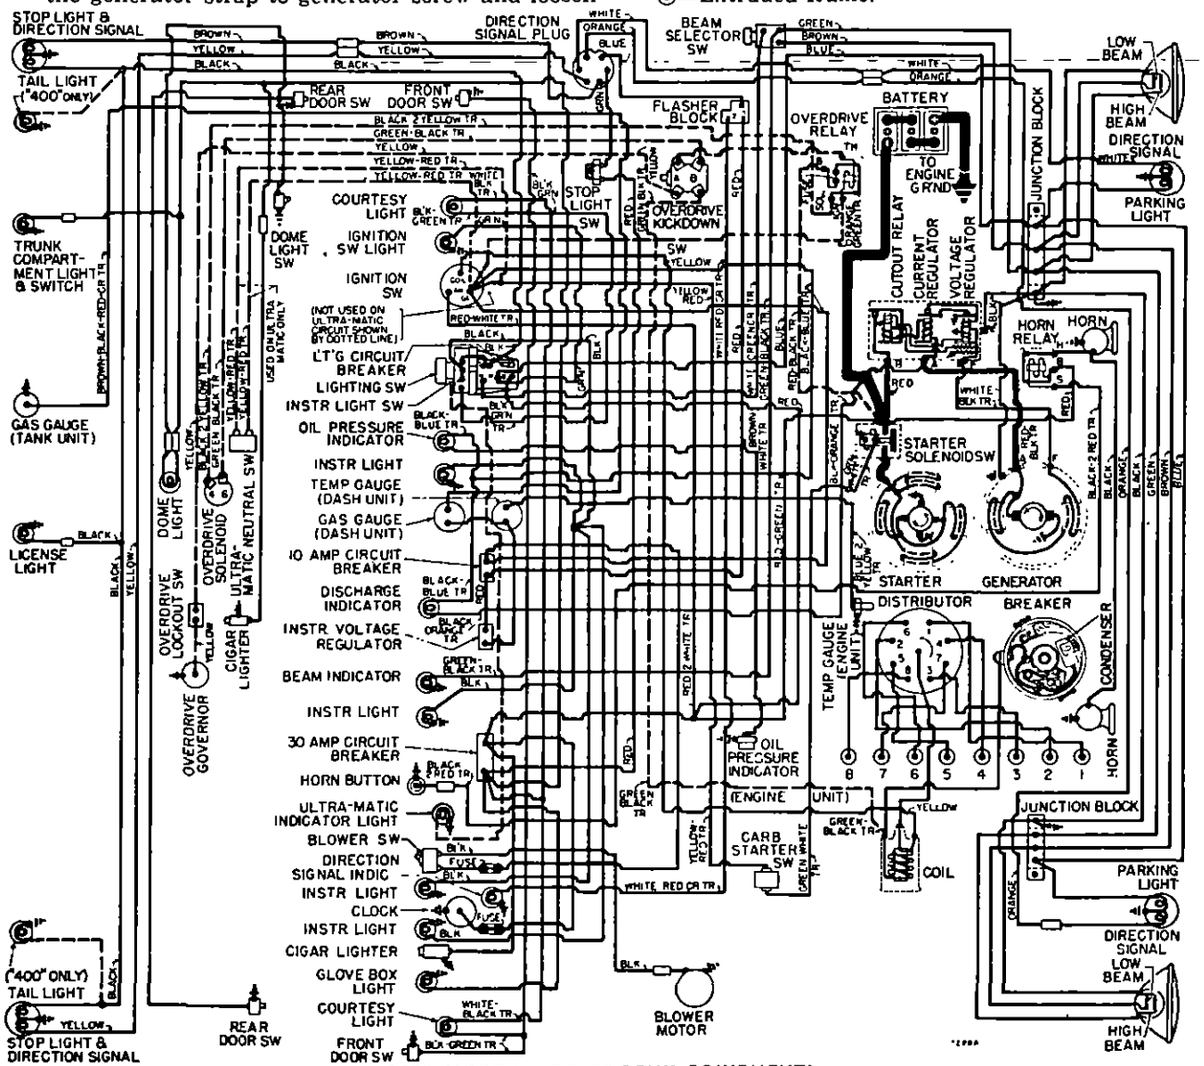
GENERATOR

AUTO-LITE

Auto-Lite GGW-6003A. Armature No. GGW-2006F. Two brush type with current and voltage regulation.
Maximum Charging Rate—See table below.
Charging Rate Adjustment—None. See Regulator.

1952 MODELS (AUTO-LITE EQUIPMENT)

Performance Data



Amperes	Volts	Cold—R.P.M.—Hot
0	6.4	870-970 950-1050
40	8 0	1800-2000 2150-2350
45	8 0	1925-2125 2350-2550

Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—35-53 ozs. (new brushes).
Field Current—1.3-1.5 amperes at 5.0 volts (70°F.).
Motoring Current—3.9-4.5 amperes at 5.0 volts (70°F.) with field terminal grounded to frame.
Generator Charge Indicator: Red light on right side of instrument cluster. Lights when ignition turned on, goes out when generator begins to charge battery.
Belt Adjustment: Loosen two generator bracket-to-generator screw nuts two or three turns. Loosen the generator strap to generator screw and loosen the generator to water pump screw. Place tool J-4714 over the head of the generator bracket front screw and rotate the tool clockwise until the arm of the tool contacts the edge of the generator drive end plate. Using a torque wrench with a 7/8" socket over the tool, rotate the wrench clockwise and move the generator outward until 15 ft. lbs. torque in indicated on the scale. The adjusting strap to generator screw should be tightened to hold the generator in this position while maintaining the 15 ft. lbs. torque. Tighten all screws previously loosened.

DELCO-REMY

Delco-Remy No.	Generator	Armature
1951	1102745	1912599
1952 (Early)	1102773	1921621
1952 (Later)①	1102778	1921621

①—Extruded frame.

1952 MODELS (DELCO-REMY EQUIPMENT)

Two brush type with current and voltage regulation.
Maximum Charging Rate—See table below.
Charging Rate Adjustment—None. See Regulator.

Performance Data—1102745

	Amperes	Volts	R.P.M.
Cold	40	8.0	1950

Performance Data—1102773, 8

	Amperes	Volts	R.P.M.
Cold	45	8.0	2450

Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—28 ozs.
Field Current—1.90-2.05 amperes at 6.0 volts.
Generator Charge Indicator: Red light on right side of instrument cluster. Lights when ignition turned on, goes out when generator begins to charge battery.
Belt Adjustment: Same as Auto-Lite (above).

REGULATOR

AUTO-LITE

Auto-Lite (1951) VRP-4402C, (1952) VBE-6102A. Current-voltage type. VBE-6102A has "Temperature-Compensated" current regulator.
NOTE—Regulator cover sealed. Warranty void if seal broken.

Cutout Relay

Cuts In—6.3-6.8 volts.
Cut Out—4.1-4.8 volts.
Contact Gap—.015" minimum.
Air Gap—.031-.034" (check at hinge end of core).
Checking & Adjusting & Detailed Data—*See Electrical Equipment Section.*

Voltage Regulator

Setting—7.2-7.5 volts at 70°F. *(VBE) after 15 minutes operation charging at ½ maximum rate, (VRP) normal operation while charging at 10 amperes.*
Air Gap—.048-.052" with contacts just opening (check at brass armature stop pin).
Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator—VRP

Setting—39-41 amperes (marked "40" on cover).
Air Gap—.048-.052 with contacts just opening.
Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator—VBE

►*SETTING CAUTION—"Temperature Compensated" type. Set to following specifications at 70°F.*

Test A Operating Amperes	Test B
52 amperes	45 (43-47)

Test A—After 15 minutes operation charging at ½ maximum rate.
Test B—After additional 15 minutes operation with current regulator operating (load applied to hold voltage down to 6.7-6.9 volts).
Checking & Adjusting—*See Electrical Equip. Section.*

DELCO-REMY

Delco-Remy No. (1951) 1118360 for 1102745 Gen., (1952) 1118726 for 1102773 & 1102778 Gens.). Current-voltage type.
NOTE—Regulators have screw adjustment for settings and single regulator springs.
►*CAUTION*—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

Cutout Relay

Cuts In—5.9-6.7 volts hot (set to 6.4 volts hot).
Contact Gap—.020" (same for both sets).
Air Gap—.020" (with contacts just closed).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Checking & Adjusting & Detailed Data—*See Electrical Equipment Section.*

Voltage Regulator

Setting—7.0-7.7 volts (set to 7.4 hot). Regulator is over-compensated for temperature. Should be checked with cover in place and hot.
Air Gap—.075" with armature pressed down to point where contacts are just touching.
Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator

Setting—(1118360) 40-46 amperes, set to 42 hot. (1118726) 45-51 amperes, set to 47 hot.
Air Gap—.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting—*See Electrical Equip. Section.*

LIGHTING

Headlamps: Sealed Beam. *See Electrical Equip. Section.*
Direction Signal: *See Electrical Equipment Section.*

Switches

Lighting—Packard No. 416288.
Beam Selector—Delco-Remy No. 1997008.
Instrument Switch—Part of Lighting Switch.
Stop Light—Packard No. 362862.

MISC. ELECTRICAL

CIRCUIT BREAKERS: Vibrating thermostatic types.
Lighting—30 ampere. On lighting switch.
Accessory (Stop & Body Lamps)—30 ampere. Behind instrument panel below gauges. Protects Glove Box Lamp, Courtesy Lamps, Stop Lamps, Dome Lamp and Rear Cigar Lighter.
Hydro-Electric Power (Convertible)—On engine side of dash on pump upper bracket.
Directional Signal—10 ampere circuit breaker on instrument cluster.

FUSES: Clock—SFE 3 ampere in lead below clock.
Overdrive—SFE 30 ampere. On overdrive relay (at BAT terminal) on engine side of dash.
Heater—SFE 20 ampere. In cable near Ign. Switch.

HORNS: Sparton: Dual horns operated by relay.
Horn Current—22-25 amperes.

Horn Relay—Delco-Remy No. 1116775.
Contacts Close—2.75-4.0 volts (set to 3.5 volts).
Contact Gap—.027". **Air Gap**—.014" (contacts closed).

GAUGE VOLTAGE REGULATOR: King-Seeley No. 45550—Consists of a thermo bi-metal interrupter unit designed to maintain a constant voltage of 5 volts (regardless of generator charging voltage fluctuation) on gauge feed circuit. Unit is mounted on the instrument cluster and is connected between the ten amp. circuit breaker and the instrument circuits. See Wiring Diagram.

ENGINE SPECIFICATIONS: 8 cylinder, "L" head type.

ENGINE

	"200"	"250"	"300"	"400"
Bore	3½"	3½"	3½"	3½"
Stroke	3¾"	4¼"	4¼"	4¼"
Displacement (cu. ins.)	288	327	327	327
Rated HP	39.2	39.2	39.2	39.2
Developed HP①	135	150	150	155
Comp. Ratio (Std.)	7.0-1	7.0-1	7.0-1	7.8-1
Comp. Ratio (Opt'l)	7.5-1	7.8-1	7.8-1	

①—HP at 3600 RPM., Std. Comp. Ratio.

►***HYDRAULIC VALVE LIFTERS: Standard on "250", "300" & "400" Engines.***

ENGINE & OIL PAN REMOVAL: *See Packard Special Data.*

CYLINDER HEAD & TIGHTENING TORQUES: *See Packard Special Data.*

PISTONS: Aluminum alloy, autothermic strut type.
Original Bore & Pistons—*See Packard Special Data.*
Length—3 7/8".

►**Out-of-Round Note**—Car manufacturer recommends cylinder be rebored and new pistons installed if cylinder out-of-round exceeds .004".
Weight—19.575 ozs. (stripped), 25½ ozs. (with rings and pins).

►**Cyl. Bore Taper Note**—Car manufacturer recommends cylinders be rebored and new pistons installed if cylinder taper exceeds .007-.010". If necessary, new rings only can be installed (without reboring) for tapers up to .014".
Removal—Pistons and rods removed from above.
Clearance—.0005-.001". See Fitting New Pistons.

►**Piston Skirt Expander Note**—Car manufacturer recommends skirt expanders be installed if cylinder diameter over .006" greater than piston skirt diameter (measure alongside upper end of piston skirt slot).

Replacement Pistons: *See Packard Special Data.*

►*NOTE*—Check ring grooves by installing new piston ring in groove—if .006" feeler can be inserted 1/16", wear excessive and piston should be replaced. Check top groove when testing.

Fitting New Pistons: Insert .0015" feeler ½" wide between piston and cylinder wall on side opposite slot. Pull to withdraw feeler should be 10-16 lbs.

►*NOTE*—Piston should hold in any portion of the bore of its own weight, but should move when one or two finger pressure applied to piston with cylinder bore vertical.

Installing Pistons: Slot toward camshaft.

PISTON RINGS: Two compression rings (No. 200 top groove, No. 200 second groove), one oil control ring (No. 85) per piston, all above pin. Oil ring groove has 12 holes 5/32" dia., for drainage.

Ring	Width	End Gap	Side Clearance
Comp. (#1, 2)	.0930-.0935"	.007-.017"	.0025-.003"
Oil (#3)	.186-.1885"	.007-.015"	.0025-.003"

Installing Rings—End gaps must be between pin holes with #2 ring on same side as skirt slot, #1 and #3 ring on side opposite slot.
Replacement Rings: Std., .020", .030", .040" oversize.

PISTON PIN: Diameter 7/8". **Length** 3 1/64".
Floating type retained by lock ring at each end. Split type bushings used in upper end of rod.
Pin Fit in Piston—Palm push fit with piston at 160°F. (heat piston in water only).
Piston Pin (Connecting Rod) Bushing Installation—*See "Piston Pins" in Packard Special Data.*

Replacement Pins: Std., .003" and .006" oversize.

CONNECTING ROD: (Length) 7 15/16" ("200"); 7 11/16" ("250", "300", "450"). Measured center-to-center.

Weight	1951	1952
"200"	35.8 ozs.	36.5 ozs.
"250"		36.0 ozs.
"300" & "400"	35.4 ozs.	36.0 ozs.

Crankpin Journal Diameter—2.250".

Lower Bearing—Shimless precision, steel backed, Moraine Durex or Federal Mogul 24.
Clearance—.0005-.0025". **Endplay**—.003-.011".
Bearing Adjustment—None (no shims). Replace bearings. Self-locking nut used on cap bolts (tighten to 60-65 ft. lbs.).

Replacement Bearings: Std., .001", .002", .020" US.

Installing Rods: Oil squirt hole toward camshaft.

CRANKSHAFT: Five bearing ("200", "250", "300" Engine), Nine bearing ("400" Engine).
Vibration Dampener—Hydraulic type, filled with silicone fluid.
Dampener Removal—Use puller tool No. J-2636.
Journal Diameter—2.7465".
Bearings—Interchangeable, shimless, precision, steel-backed. Moraine Durex or Federal Mogul.
Clearance—(1951) .001-.003", (1952) .0005-.0025".

Bearing Adjustment—None (no shims). Replace bearings (upper halves can be rotated in and out).

Replacement Bearings—Std., .001", .002", .020" US.

Crankshaft Front & Rear Oil Seal Replacement: *See "Crankshaft & Main Bearings" in Packard Special Data.*
End Thrust—At center bearing. **Endplay** .0035-.0085"

CAMSHAFT: 5 bearing. Non-adjustable chain drive.
Bearings—Steel-backed, babbitt-lined bushings.
Clearance—.001-.003".

End Thrust: Taken by thrust plate in back of camshaft sprocket. **Endplay**—.004-.006".

Timing Chain: Morse. Width 1". Pitch .375". Length 58 links.

Camshaft Setting: Install chain and sprockets together with "0" marks on sprockets adjacent and in line with straightedge across shaft centers.

VALVES:	**Head Diam.**	**Stem Diam.**	**Length**
Intake	1 43/64"	.3417"	5 7/8"
Exhaust	1 7/16"	.3398"	5 7/8"

	Seat Angle	**Lift**	**Stem Clearance**
Intake	30°	.342"	.002"
Exhaust	45°	①.342"	.004"

①—.337" Lift on "250", "300" & "400" series.

Valve Guides: Lubrite coated. Pressed in block from above with upper end 31/32" below top of block. Use Valve Guide Driver No. J-2577. This tool properly positions guides when gauge seated on block. Ream guides after installation with 11/32" (.3437") reamer. Upper end of exhaust guide counterbored.

►**Valve Guide Removal Note**—If guides to be removed with lifters in engine, use Valve Guide Remover Tool J-2580 to drive guide down to just clear tappet (with tappet on heel of cam). Score guide with chisel thru valve chamber, then break off low end, finally driving remainder of guide out. If lifters out, guide can be driven down and out without breaking.

Valve Springs: Intake and exhaust springs interchangeable. Anti-rotation serrated cup washers installed on top of spring and seats in recess in block.

	Spring Pressure	**Spring Length**
Valve Closed	*60-66* lbs.	1 3/4"
Valve Open	135-145 lbs.	1 13/32"

Valve Lifters ("200" Engine): Conventional mushroom type. Remove from below with camshaft out.
Diameter—.6236-.6239". **Clearance**—.0001-.0016".
Replacement Lifters—.001", .002" Oversize.
Use Tool ST-5144 (piloted in valve guide) to ream for .005" oversize lifter installation.

Valve Lifters ("250", "300" & "400" Engines): Wilcox-Rich "Zero-Lash" hydraulic type (mushroom body). Remove from below with camshaft out.
Diameter—.6236-.6239". **Clearance**—.0001-.0016".

Hydraulic Valve Lifter Removal & Overhaul: *See "Hydraulic Valve Lifters" in Packard Special Data.*

Valve Lifter Clearance Check (When Grinding Valves)—*See "Hydraulic Valve Lifters" in Packard Special Data.*

VALVE TIMING

VALVE TAPPET CLEARANCE: *Adjustment required only on "200" engines (hydraulic lifters on others).*

("200" Engine)—.007" Intake, .010" Exhaust, HOT.

("250", "300" & "400" Engines)—No adjustment required (hydraulic lifters).

VALVE TIMING: See Camshaft Setting above.

"200" Engine Valve Timing

Intake Valves—Open 15° BTDC. Close 43° ALDC.
Exhaust Valves—Open 50° BLDC. Close 9° ATDC.

"250", "300" & "400" Engine Valve Timing

Intake Valves—Open 15° BTDC. Close 43° ATDC.
Exhaust Valves—Open 53° BLDC. Close 4° ATDC.

Above figures for .0125" intake, .015" exhaust tappet clearance ("200" Engine).

Valve Timing Check ("200" Eng.): With .0125" tappet clearance #1 intake valve should be open, with #1 piston 10° BTDC, (10th graduation before top dead center mark "1UP.DC" on vibration dampener aligned with pointer). Reset tappet clearance to .007" Hot.

►*CAUTION*—If valve more than 8° before or after this point in closing, camshaft setting incorrect.

Valve Timing Check ("250", "300" & "400" Engines)—Check by turning No. 8 Exhaust tappet plunger with fingers. Turn engine over until this valve fully open, turn engine further until valve nearly closed (plunger should not turn), continue turning engine while attempting to turn plunger, until plunger "breaks loose" or turns. This should be approx. 4° after top dead center—check at timing mark on vibration dampener.

►*CAUTION*—If valve more than 8° before or after this point in closing, camshaft setting incorrect.

LUBRICATION

Engine Oiling System: Pressure to main and connecting rod bearings, camshaft bearings, piston pins, valve lifters and timing chain.

Crankcase Capacity—7 qts.

Normal Oil Pressure—40 lbs., Normal driving.

Oil Pressure Regulator—On oil pump cover. NOT adjustable.

Oil Pump: Gear type. Mounted externally on right side of engine.

Oil Pump Removal & Overhaul—*See "Oil Pump" in Packard Special Data.*

Oil Filter: Optl. ("200"), Std. ("250", "300" & "400"). Replace cartridge every 8000 miles or when oil shows signs of being dirty.

Oil Pressure Indicator: Red light on left side of instrument cluster. Lighted when oil pressure less than 10 lbs. (lights when ignition turned on, goes out when pressure exceeds 10 lbs.).

Engine Unit—King-Seeley No. 47110 Pressure Switch. Contacts open when pressure exceeds 10 lbs. (remain closed at lower pressures).

Crankcase Ventilation: Oil-wetted type filter element in oil filler cap air intake. Outlet pipe in valve compartment at rear.

COOLING

Cooling System: Pressure type with pressure relief valve in filler cap and fan driven pump.

Capacity—20 qts., with 2/3 additional for heater and defroster.

Pressure Valve—AC No. 846713. Opens at 7 lbs.

Water Pump: Centrifugal belt driven, packless type. *See Water Pump Section for complete data.*

Belt Adjustment—*See Generator Belt Adjustment.*

Thermostat: In cylinder head outlet.

Setting (Std.)—Starts to open 148°-154°F.
Setting (Optl.)—Starts to open 157°-163° F. or 177°-183°F.

Temperature Gauge: King-Seeley "CV" (Constant Voltage) type with Voltage regulator.

Dash Unit—(1951 "200") K-S No. 45658, (1952 "200") K-S No. 45956, (Others) K-S No. 45611.

Engine Unit—K-S No. 44215.

See Miscellaneous Section for complete data.

CLUTCH

Long ("200" Engine) 10CF-TI, ("250", "300" Engine) 11CF-10½TI. Single plate, semi-centrifugal, dry disc clutch.

See Clutch Section for complete data.

Facings—Woven (U.S. Asbestos). Thickness .125". Inside Diameter ("200") 6¾", ("250", "300") 7". Outside Diameter ("200") 10", ("250", "300") 10½".

Pedal Adjustment: 1¼-1½" free travel. Adjustment nut on rod at throw-out lever.

►**Clutch Pedal Over-Center Spring:** New adjustable type. *See "Clutch Notes" in Packard Special Data for Adjustment.*

Removal: Remove transmission (see Transmission Removal following) and flywheel housing lower cover. Disconnect throw-out linkage and remove throw-out bearing. Remove clutch cover screws (release tension evenly), lower assembly out of car.

SYNCRO-MESH TRANSMISSION

Own Make. Helical gear, constant-mesh, synchromesh (second & high), constant-mesh (low), sliding spur gear (reverse). Low & Second speed gears are ball bearing mounted.

See Transmission Section for complete data.

Transmission Control: Steering column type.

See Transmission Section for complete data.

Removal: Disconnect shifter rod, speedometer cable, hand brake cable at equalizer, engine ground strap, front universal (block driveshaft up against floor pan). Support rear of engine with jack and unbolt cross-member (at frame ends and transmission). Disconnect clutch retractor spring and fore-and-aft restraint rod. Take out Transmission-to-housing mounting screws, remove transmission.

OVERDRIVE

Warner Model AS8-R11. Optional equipment with Packard transmission. Solenoid operated overdrive with Governor Control and throttle operated "kick-down."

►*NOTE*—AS8-R11 has new piloted ring gear housing, new ring gear and tail shaft.

See Transmission Section for complete data.

Overdrive Solenoid—Delco-Remy No. 1118155.
Governor—Packard No. 418447.
Control Relay—Packard No. 403940.
Kick-down Switch—Packard No. 403945.
Lock-out Switch—Packard No. 426453.

Removal: Disconnect control cable and all leads to solenoid and governor. Free mounting at rear of overdrive case. Then remove overdrive and transmission (see Transmission Removal above).

ULTRAMATIC TRANSMISSION

Own Make. Torque Converter (with hydraulically operated Direct Speed clutch) and hydraulically operated planetary unit with manual control.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Packard Ultramatic" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See Transmission Section.*

Linkage Adjustment on Ultramatic Drive Cars: *See "Ultramatic Drive" in Transmission Section.*

Lubrication—Check fluid every 1000 miles, drain and refill every 25,000 miles.

Checking Fluid Level. *CAUTION—Fluid must only be checked at normal operating temperatures and after engine has been idling at 800 RPM. for at least one minute with selector lever in "N" position.* Stop the engine, check level by removing dipstick from filler hole on left side of transmission (accessible from under car—release cap by turning ½ turn counter-clockwise). Add fluid as required to bring level up to FULL mark on dipstick.

Recommended Fluid. Packard Ultramtic Drive or any Type "A" Automatic Transmission Fluid which has an AQ-ATF number embossed on container.

Capacity. Approximately 12 qts.

►*OTHER ULTRAMATIC SERVICE DATA: See Transmission Section.*

UNIVERSALS

Mechanics, Universal Products or Spicer. Needle bearing type.

►*CAUTION*—Rear universal flange nut controls rear axle pinion bearing preload which **must be adjusted whenever nut is loosened.** *See "Packard Rear Axle" in Rear Axle Section for complete data.*

REAR AXLE

Own Make. Semi-floating, hypoid gear type with Hotchkiss Drive.

See Rear Axle Section for complete data.

►*REAR AXLE OIL SEAL LEAKAGE CORRECTION—See "Packard Rear Axle" in Rear Axle Section for complete data.*

Model	Ratios Std.	O. D. Cars	Ultramatic
200 (1951)	3.9-1	4.1-1	3.9-1
200 (1952)	3.9-1	4.1-1	3.54-1
250	3.9-1	4.1-1	3.54-1
300	3.9-1	4.1-1	3.54-1
400			3.54-1

Backlash—.003-.005". Screw adjustment.

Removal: Remove axle shafts (see Removal below). Disconnect rear universal (wire trunnions), wire or prop propeller shaft up against floor pan with 2x4

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

inserted inside frame X-member. Drain differential, replace drain plug. Clean off housing, take off carrier locknuts, lift carrier out.

Axle Shaft Removal: Remove wheel, brake drum (use screw type puller J-4153—do not use knock-out type puller or thrust block may be damaged). Disconnect brake line at wheel cylinder. Remove nuts at oil seal guard and take off seal guard, gasket, retainer, oil seal, brake support plate, and bearing shims. Remove axle shaft and bearing using Puller J-2552 (do not drag shaft on inner seal). Use Tool J-943-B to remove inner seal.

Wheel Bearing Adjustment: Endplay controlled by shims between flanged end of housing and brake backing plate. Add or remove shims (furnished .005", .007", .020" thick) at one wheel if .050" or under. At both wheels if over .050" to secure .004-.007" endplay.

Endplay—.004-.007".

SHOCK ABSORBERS

Direct acting hydraulic type. Front shock absorbers are inside front suspension coil springs.

FRONT SUSPENSION

Front Suspension: Packard Broad-Beam Suspension, independent, linked parallelogram type with coil springs and double acting shock absorbers.

See Front Suspension Section for complete data.

King Pin Inclination—5°50′ crosswise.

Caster—Neg. 1° ± ½°. Eccentric adjustment.

Camber—(1951) 0° ± ¼°, (1952) 0° (+¾° to —¼°).

Toe-In—0" (plus 1/16", minus 0"). Adjust by turning adjuster at outer end of each tie rod equally.

STEERING GEAR

Packard-Gemmer Model 335. Worm & 3-tooth Roller type with "push-pull" adjustments.

See Steering Gear Section for complete data.

BRAKES

Service: Bendix-Hydraulic, Duo-Servo, Single Anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

See Brake Section for complete data.

Wheel Cylinder—Diam. Front 1⅛", Rear Wheels 1".

Drums—12" Centrifuse type.

Lining—Marshall 4112 (Primary Shoes), Marshall 9051 (Secondary Shoes). Width—see table below. Thickness 3/16". Length per shoes 11½" (Primary), 13" (Secondary).

Lining Width	Front Wheels	Rear Wheels
200	1¾"	1¾"
250, 300, 400	2¼"	2"

Clearance—.015" at lower end of secondary shoe, .010" at upper end of secondary shoe with primary shoe forced out against drum.

Hand Brake: See Service Brake above.

Power Brakes: "Easamatic" (combination power cylinder and hydraulic master cylinder unit). Optl. *See "Power Brakes" in Brake Section for complete data.*

MISC. MECHANICAL

Windshield Wiper: Vacuum type, cable operated

See Miscellaneous Section for complete data.

►*ELECTRICAL EQUIPMENT NOTE*—Auto-Lite Equipment used on Patrician (2606) and Packard (2626). Other Models use Delco-Remy Equipment.

►*MODEL 2601 STARTER NOTE*—Auto-Lite starters used on some cars with remainder of electrical equipment being Delco-Remy (Delco-Remy starter used on other 2601 cars).

MODEL IDENTIFICATION

Model	Chassis Symbol
Clipper	2601
Cavalier	2602
Patrician	2606
Clipper Deluxe	2611
Commercial (327 cu. in.)	2613
Packard	2626
Mayfair & Convertible	2631
Commercial (288 cu. in.)	2633

SERIAL NUMBERS: Stamped on plate mounted on left front door pillar post.

ENGINE NUMBERS: Stamped on left side of engine opposite #8 cylinder.

►*ENGINE NUMBER NOTE: A "STAR" following engine number indicates .020" oversize cylinder bores.*

Starting Engine Numbers:

2601 & 2633	L-200011
2611 & 2613	L-300011
2602 & 2631	L-400011
2606 & 2626	L-600011

TUNE-UP

COMPRESSION PRESSURE: All cylinders should be equal within 10 lbs.

VACUUM READING: 18-21" at idling speed.

FIRING ORDER: 1-6-2-5-8-3-7-4.

SPARK PLUG GAPS: .023-.028".
Plugs Auto-Lite A7, AC 46-5, Champion J8. 14 mm.

DISTRIBUTOR (2606 & 2626): Auto-Lite No. IGP-4502D. Automatic advance type with vacuum spark control and fuel compensator adjustment.
Breaker Gap—.017". Limits .013-.018".
Cam Angle—Closed 27°. Open 18°.
Breaker Arm Spring Tension—17-20 ozs.
Rotation—Counter-clockwise viewed from above.
Automatic & Vacuum Advance—*See Ignition.*
Fuel Compensator—40° range of adjustment on quadrant at vacuum link connection.

DISTRIBUTOR (Others): Delco-Remy No. 1110836 (Early), No. 1110841 (Late). Automatic and vacuum advance type with "center-bearing" breaker plate and fuel compensator adjustment.
Breaker Gap—.016".
Cam Angle—Test limits with .016" gap, 26-33°.
Breaker Arm Spring Tension—17-21 ozs.
Rotation—Counter-clockwise viewed from above.
Automatic & Vacuum Advance—*See Ignition.*
Fuel Compensator—10° advance or retard adjustment at distributor.

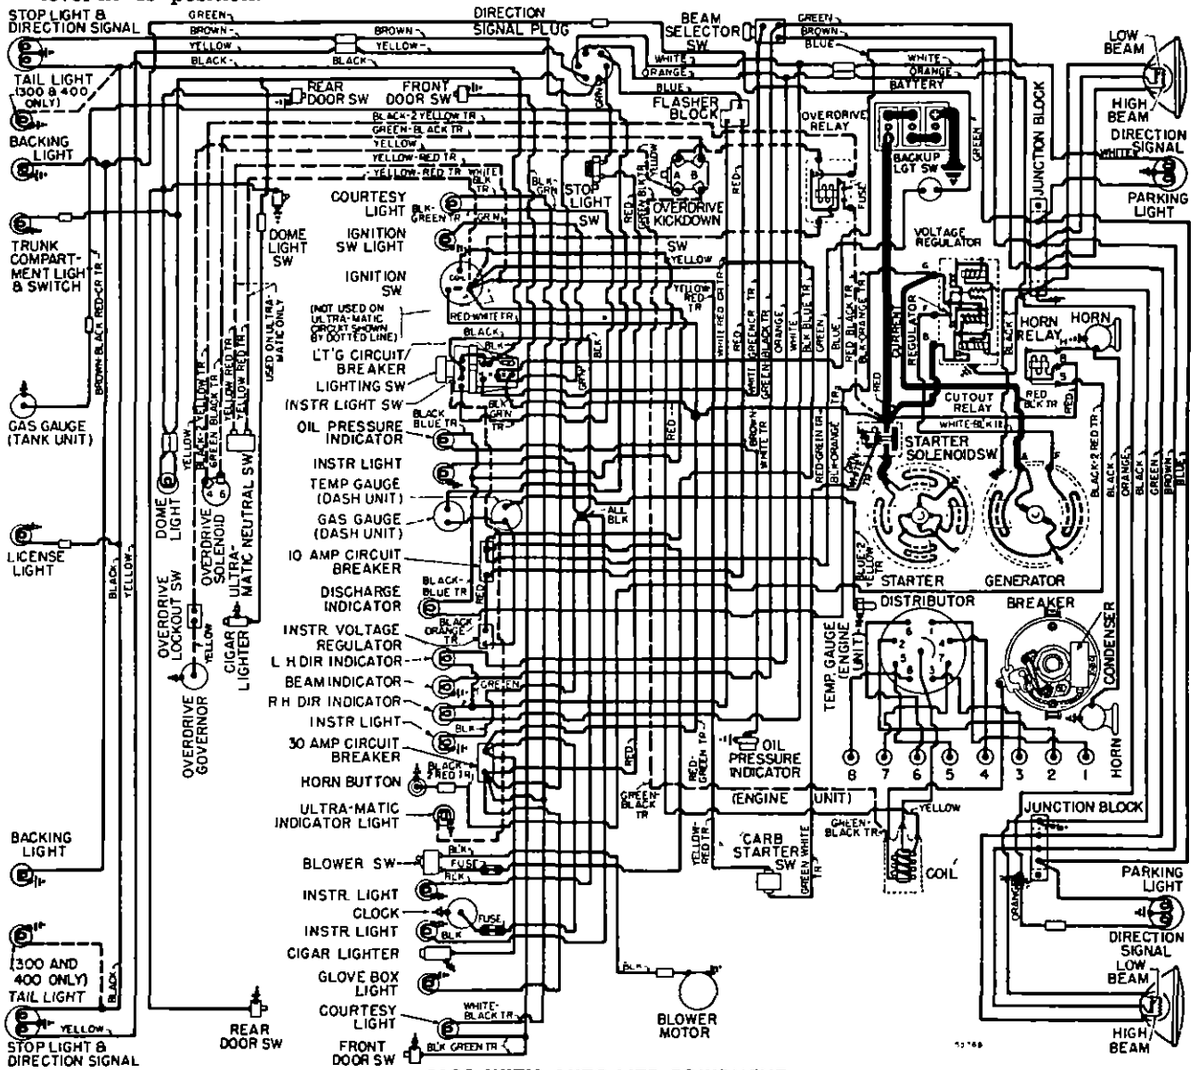
COIL (2606 & 2626) Auto-Lite No. CR-4001A. (Others) Delco-Remy No. 1115376.
Ignition Current—1.5 amperes idling, Hot.

CONDENSER: (Capacity)—.20-.25 microfarad (Auto-Lite). .18-.23 microfarad (Delco-Remy).

IGNITION TIMING: 6° BTDC. *NOTE*—Modify this setting for special fuel and altitude conditions. See Fuel Compensator (below).
Timing Mark—"#1UP.DC" with fifteen 1° graduations ahead of mark.

Fuel Compensator Setting: Should be set for slight ping when accelerating engine with wide open throttle. To adjust, loosen vacuum unit link screw in distributor quadrant (Auto-Lite distributors), advance arm hold-down screw (Delco-Remy distributors), rotate distributor one graduation at a time counter-clockwise (if ping too severe), clockwise (if no ping) until correct performance secured.
Timing Procedure—*See Ignition Timing.*

CARBURETION (2601, 2611, 2613, 2633): Carter WGD, No. 784S (2601 & 2633), No. 928S (2611 & 2613). Dual Downdraft type with automatic choke.
Idle Setting—½-1½ turns open. Adjust both screws equally. Turn screws out for richer mixture.
Idle Speed (Synchro-mesh Trans.)—6 MPH.
Idle Speed (Ultramatic)—375 RPM. with selector lever in "H" position.
Float Level—13/64" from top of float to cover with valve seated (assembly inverted).
Accelerating Pump—Not adjustable.



Ultramatic Throttle Linkage Adjustment: *See "Packard Ultramatic" in Transmission Section for complete data.*

Fast Idle Setting: With thermostatic cover and coil assembly removed, crack throttle, hold choke valve closed, release throttle. Throttle valve opening measured between edge of valve and bore on side opposite idle ports should be .023". Adjust by bending choke connector rod at lower angle.

Choke Setting: 1 Point Rich (all models).

Fuel Pump Pressure: 4-5 lbs.

CONTINUED ON NEXT PAGE

CARS WITH AUTO-LITE EQUIPMENT

CONTINUED FROM PRECEDING PAGE

CARBURETION (2602, 2606, 2626, 2631): Carter WCFB No. 985S (First Cars), No. 2084S (Later Cars). Four barrel downdraft, with automatic choke.
See "Carter WCFB 4-Barrel Carburetor" in Carburetor Section for complete data.

▷*CARBURETOR FLOODING CONDITION—See "Carter WCFB" in Carburetor Section for complete data.*

▷*CARBURETOR PRODUCTION & RECOMMENDED CHANGES: See "Carter WCFB" in Carburetor Section for new settings and other changes.*

Idle Setting—1-2 turns open. Adjust both screws equally. Turn screws out for richer mixture.
Idle Speed—(Synchro-mesh Trans.) 6 MPH.
Idle Speed—(Ultramatic Trans.) 375 RPM with selector lever in "H".
Other Settings—*See "Carter WCFB" in Carburetor Section for complete data.*

Ultramatic Throttle Linkage Adjustment: *See "Packard Ultramatic" in Transmission Section for data.*

Fuel Pump Pressure: 4-5 lbs.

MANIFOLD HEAT CONTROL: Automatic thermostatic type. No adjustment necessary.

VALVE TAPPET CLEARANCE (2601, 2611, & 2633): .007" Intake, .010" Exhaust.

VALVE TAPPET CLEARANCE (Others): Hydraulic lifters used. No adjustment required.

IGNITION

AUTO-LITE

COIL: Auto-Lite CR-4001A.
Location—Left side of engine above distributor.
Ignition Current—1.5 amperes idling, hot.

CONDENSER: Auto-Lite IG-2671K.
Capacity—.20-.25 microfarad.

DISTRIBUTOR: Auto-Lite Model No. IGP-4502D. Automatic advance type with Vacuum Spark Control and Fuel Compensator adjustment.
Breaker Gap—.017". Limits .013"-.018".
Cam Angle—Closed 27°, Open 18°.
Breaker Arm Spring Tension—17-21 ozs.
Rotation—Counter-clockwise viewed from above.

Automatic Advance (Auto-Lite)

Degrees Distr.	RPM	Degrees Eng.	RPM
Start	250	0	500
1	300	2	600
5	575	10	1150
7	1225	14	2450
7.5	1400	15	2800

Fuel Compensator: 40° range of adjustment on quadrant at vacuum link connection. *See Ignition Timing.*

Vacuum Spark Control: Auto-Lite. Mounted on hold-down plate and linked to adjusting quadrant on distributor housing.

Vacuum Advance (Auto-Lite)

Dist. Degrees	Eng. Degrees	(Vacuum (" of Hg)
Start	0	6
1	2	6½
3	6	7¾
5	10	9
6.5	13	10

DELCO-REMY

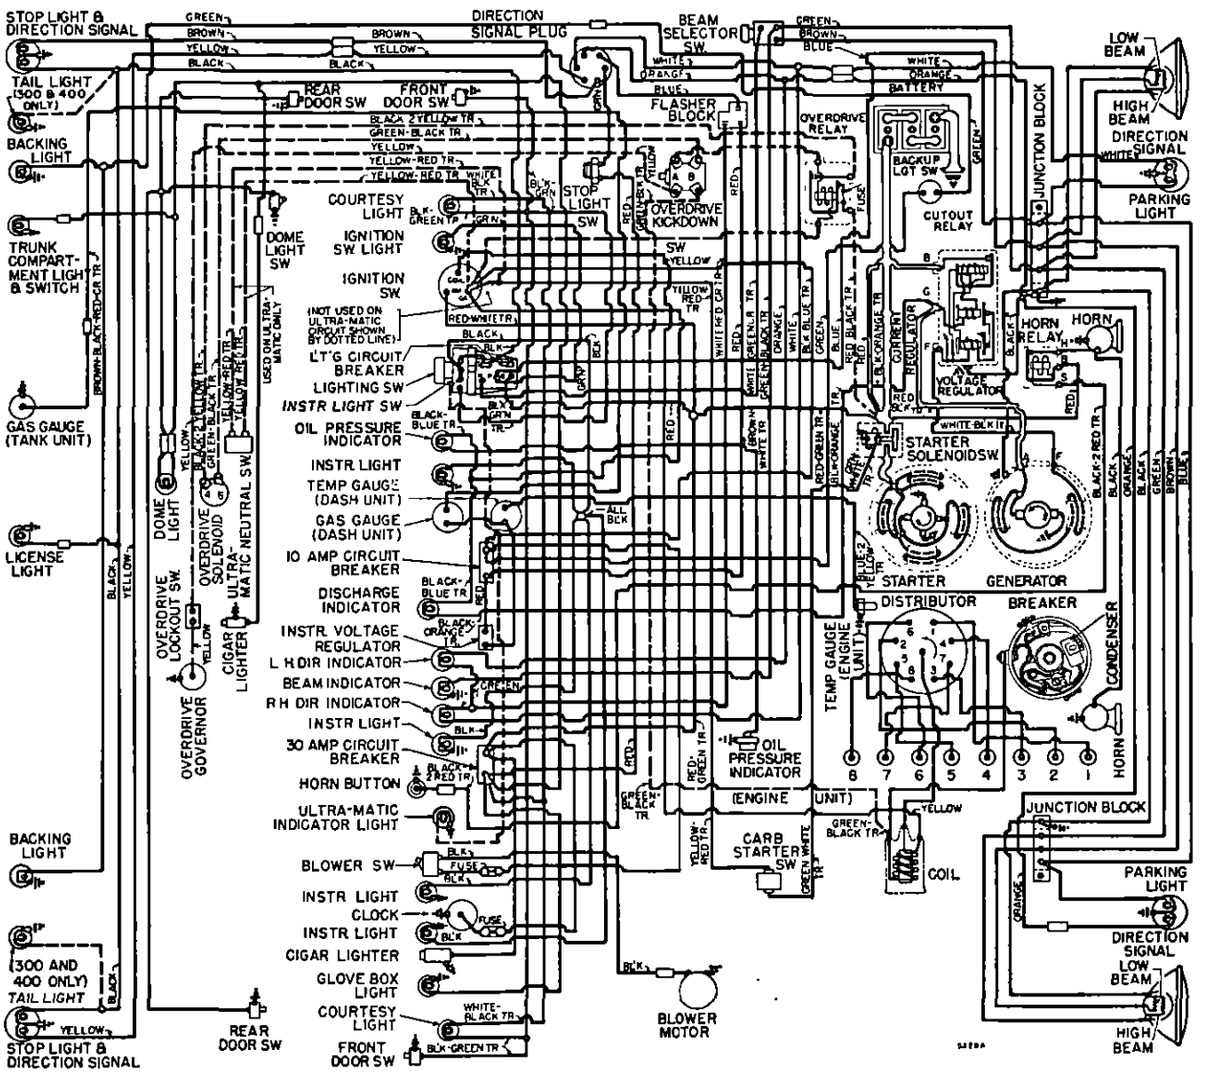
COIL: Delco-Remy No. 1115376.
Location—Left side of engine above distributor.
Ignition Current—1.5 amperes idling, hot.

CONDENSER: Delco-Remy Part No. 1869704.
Capacity—.18-.23 microfarad.

DISTRIBUTOR: Delco-Remy No. 1110836 (Early), No. 1110841 (Late). Automatic and vacuum advance type with "center-bearing" breaker plate and fuel compensator adjustment.
Breaker Gap—.016".
Cam Angle—Test limits with .016" gap—26-33°. *See*
Breaker Arm Spring Tension—17-21 ozs.
Rotation—Counter-clockwise viewed from above.

Automatic Advance—No. 1110836

Degrees Distr.	R.P.M.	Degrees Eng.	R.P.M.
Start	400	0-4	800
3-5	600	6-10	1200
5-7.5	1100	10-15	2200
6.5-9	1500	13-18	3000



Automatic Advance—No. 1110841

Degrees Distr.	R.P.M.	Degrees Eng.	R.P.M.
Start	375	0-4	750
2.5-4.5	550	5-9	1100
5-7	1100	10-14	2200
7-9	1600	14-18	3200

Fuel Compensator: 10° advance or retard adjustment at distributor. *See Ignition Timing.*

Vacuum Spark Control: D-R No. 1116070. Integral type mounted on distributor and linked directly to breaker plate.

Plunger Travel—9/64-⅛".

CARS WITH DELCO-REMY EQUIPMENT

Vacuum Advance (Delco-Remy)

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	5-7
4-6	8-12	11

IGNITION TIMING

Std. Setting.....6° BTDC.
NOTE—Modify this setting for special fuel and altitude conditions. *See Fuel Compensator Setting.*
Vibration Dampener Mark—"#1UP.DC" with fifteen 1° graduations ahead of mark.
Timing—With #1 piston on compression, turn engine over until piston reaches firing position with correct mark on dampner in line with pointer on chain cover *(see table above)*. Loosen vacuum unit link screw in distributor quadrant. (Auto-Lite distributors), or holdown screw in advance arm (Delco-Remy distributors), rotate distributor until contacts begin to open, tighten screw.
Fuel Compensator Setting—Should be set for slight ping when accelerating engine with wide open throttle. To adjust, loosen vacuum unit link screw in distributor quadrant (Auto-Lite distributors), advance arm hold-down screw (Delco-Remy distributors), rotate distributor one graduation at a time counter-clockwise (if ping too severe), clockwise (if no ping) until correct performance secured.

CARBURETOR

CARTER TWO-BARREL

Carter WGD (2601, 2633) No. 784S, (2611, 2613) No. 928S. 1¼" dual barrel, downdraft types with Carter Climatic Control.
See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up.*
Metering Rods & Jets—*See Carter Downdraft Jet Table in Carburetor Section.*

Fast Idle: Carter (WGD) Carburetor type.
Setting—.023" throttle opening with choke valve closed (throttle must be opened first). Adjust by bending choke connector rod at lower end.
See Carburetion Equipment Section for complete data.

Automatic Choke: Carter Climatic Control.
Setting—1 Point rich.
See Carburetion Equipment Section for complete data.

CARTER FOUR-BARREL

Carter WCFB (2602, 2606, 2626, 2631) No. 985S (First Cars), No. 2084S (Later Cars). Four barrel downdraft type with automatic choke.
►*CARBURETOR FLOODING CONDITION: See "Carter WCFB" in Carburetor Section for complete data.*
►*CARBURETOR PRODUCTION & RECOMMENDED CHANGES: See "Carter WCFB" in Carburetor Section for new settings and other changes.*

CARB. EQUIPMENT

Air Cleaner: AC. Oil-wetted type Std., Oil-bath type Optl. (with 2-barrel Carb.), Oil-bath type Std. (with 4-barrel Carb.).

Fuel Pump: AC. Combination fuel-and-vacuum pump.
Replacement Pump—AC No. 9590.
Pressure—4-5 lbs.
See Carburetion Equipment Section for complete data.

Gasoline Gauge: King-Seeley Electric "CV" (constant-voltage) type with voltage regulator.
Dash Unit—(2601, 2611, 2613, 2633) K-S No. 46084, (2602, 2606, 2626, 2631) K-S No. 46064.
Tank Unit—K-S No. 44517.
See Carburetion Equipment Section for complete data.

BATTERY

BATTERY: 2601, 2602, 2611, 2626, 2631, 2633:
Auto-Lite 2L-100 or Willard SW-2L-100. 6 Volt, 17 Plate, 100 Ampere Hour Capacity.
2606, 2613
Auto-Lite 2FH-120 or Willard HW-2F-120. 6 Volt, 17 Plate, 120 Ampere Hour Capacity.
Grounded Terminal—Positive (+) to engine at water pump.
Location—Left side of engine compartment.

STARTER

AUTO-LITE

Auto-Lite No. MCL-6122. Armature No. MCH-2028.
Drive—Bendix No. A-3281.
Rotation—Counter-clockwise at commutator end.
Cranking Engine—175-225 amperes.
Brush Spring Tension—42-53 ozs. (new brushes).

Performance Data (Auto-Lite)

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.0	65
8.0 "	Lock	2.0	410

Starting Switch: (2602, 2606, 2626, 2631) Auto-Lite No. SS-4017, Magnetic Switch. Controlled by Carter Car Starter Switch No. 192-21U on carburetor.
See carburetor data in Carburetor Section for switch adjustment.
Ultramatic Drive Starter Safety Switch—Packard No. 423439. On left side of transmission case, connected in starter control circuit so that starter operative with lever in "N" or "P" position.

DELCO-REMY

Delco-Remy No. 1107943 (200 Eng.), 1108008 (250 & 300 Engine).
Armature—Delco-Remy No. 1910938 (all).
Drive—Bendix Drive No. A3281.
Rotation—Counter-clockwise at commutator end.
Cranking Engine—175-225 amperes.
Brush Spring Tension—24-28 ozs.

Performance Data (Delco-Remy 1107943)

Torque	R.P.M.	Volts	Amperes
0 ft.lbs.	5500	5.0	65
16 "	Lock	3.0	600

Performance Data (Delco-Remy 1108008)

0 ft. lbs.	6000	5.0	60
15 "	Lock	3.0	600

Starting Switch: Delco-Remy Model 1465 Magnetic Switch on starter, controlled by Carter Car Starter No. 192-21U on carburetor.
See carburetor data in Carburetor Section for switch adjustment.
Ultramatic Drive Safety Switch—*See Auto-Lite Starter data above.*

GENERATOR

AUTO-LITE

Auto-Lite GGW-6003A. Armature No. GGW-2006F. Two brush type with current and voltage regulation.
Maximum Charging Rate—See table below.
Charging Rate Adjustment—None. See Regulator.

Performance Data

Amperes	Volts	Cold—R.P.M.—Hot	
0	6.4	870-970	950-1050
40	8.0	1800-2000	2150-2350
45	8.0	1925-2125	2350-2550

Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—35-53 ozs. (new brushes).
Field Current—1.3-1.5 amperes at 5.0 volts (70°F).
Motoring Current—3.9-4.5 amperes at 5.0 volts (70°F) with field terminal grounded to frame.
Generator Charge Indicator: Red light on right side of instrument cluster. Lights when ignition turned on, goes out when generator begins to charge.
Belt Adjustment: Loosen two generator bracket-to-generator screw nuts two or three turns. Loosen the generator strap to generator screw and loosen the generator to water pump screw. Place tool J-4714 over the head of the generator bracket front screw and rotate the tool clockwise until the arm of the tool contacts the edge of the generator drive end plate. Using a torque wrench with a 7/8" socket over the tool, rotate the wrench clockwise and move the generator outward until 15 ft. lb. torque is indicated on the scale. The adjusting strap to generator screw should be tightened to hold the generator in this position while maintaining the 15 ft. lbs. torque. Tighten all screws previously loosened.

DELCO-REMY

Delco-Remy No. 1102778. Armature No. 1921621.
Maximum Charging Rates—See table below.
Charging Rate Adjustment—None. See Regulator.

Performance Data (Delco-Remy)

	Amperes	Volts	R.P.M.
Cold	45	8.0	2450

Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—25 ozs.
Field Current—1.90-2.05 amperes at 6.0 volts.
Generator Charge Indicator: Red light on right side of instrument cluster. Lights when ignition turned on, goes out when generator begins to charge.
Belt Adjustment: Same as Auto-Lite (above).

REGULATOR

AUTO-LITE

Auto-Lite VBE-6102A for GGW-6003 Generator. Current-voltage type with "Temperature Compensated" current regulator.
NOTE—**Regulator cover sealed. Warranty void if seal broken.**

Cutout Relay

Cuts In—6.3-6.8 volts.
Cuts Out—4.1-4.8 volts.
Contact Gap—.015" minimum.
Air Gap—.031-.034" (check at hinge end of core).
Checking & Adjusting & Detailed Data—*See Electrical Equipment Section.*

Voltage Regulator

Setting—7.2-7.5 volts at 70°F. *after 15 minutes operation charging at ½ maximum rate.*
Air Gap—.048-.052" with contacts just opening (check at brass armature stop pin).
Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator

►*SETTING CAUTION—"Temperature Compensated" type. Set to following specifications at 70°F.*

Test A	Operating Amperes	Test B
52 amperes		45 (43-47)

Test A—After 15 minutes operation charging at ½ maximum rate.
Test B—After additional 15 minutes operation with current regulator operating (load applied to hold voltage down to 6.7-6.9 volts).
Air Gap—.048-.052" with contacts opening.
Checking & Adjusting—*See Electrical Equip. Section.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

DELC -REMY

Delco-Remy No. 1118726 (For Gen. No. 1102778). Voltage and current regulator.
1118700 SERIES" *regulators have screw adjustment* for settings and single regulator springs.

▷***CAUTION***—**Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.**

Cutout Relay

Cuts In—5.9-6.7 volts hot (set to 6.4 volts hot).
Contact Gap—.020" (same for both sets).
Air Gap—.020" (*with contacts just closed*).
Checking & Adjusting & Detailed Data—*See Electrical Equipment Section.*

Voltage Regulator

Setting—7.0-7.7 volts hot (set to 7.4 hot). Regulator is over-compensated for temperature. Should be checked with cover in place and hot.
Air Gap—.075" with armature pressed down to point *where contacts are just touching.*
Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator

Setting—45-51 amperes hot (set to 47 hot).
Air Gap—.075" with armature pressed down to point where contacts are just touching.
Checking & Adjusting—*See Electrical Equip. Section.*

LIGHTING

Headlamps: Sealed Beam. *See Electrical Equip. Section.*
Direction Signal: *See Electrical Equipment Section.*

Switches

Lighting—Packard No. 416288.
Beam Selector—Delco-Remy No. 1997008.
Instrument Switch—Part of Lighting Switch.
Stop Light—Packard No. 362862.

MISC. ELECTRICAL

CIRCUIT BREAKERS: Vibrating thermostatic types.
Lighting—30 ampere. On lighting switch.
Accessory (Stop & Body Lamps)—30 ampere. Behind instrument panel below gauges. Protects Glove Box Lamp, Courtesy Lamps, Stop Lamps, Dome Lamp and Rear Cigar Lighter.
Hydro-Electric Power (Convertible)—On engine side of dash on pump upper bracket.
Directional Signal—10 ampere circuit breaker on instrument cluster.

FUSES: Clock—AGA 3 ampere. In clock lead.
Overdrive—SFE 30 ampere. On overdrive relay (at BAT terminal) on engine side of dash.
Heater—SFE 20-ampere. In cable near Ign. Switch.

HORNS: Sparton. Dual horns operated by relay.
Horn Current—22-25 amperes.

Horn Relay—Delco-Remy No. 1116775.
Contacts Close—2.75-4.0 volts (set to 3.5 volts).
Contact Gap—.027". **Air Gap**—.014" (contacts closed).

GAUGE VOLTAGE REGULATOR: King-Seeley No. 45550—Consists of a thermo-by-metal interrupter unit designed to maintain a constant voltage of 5 volts (regardless of generator charging voltage fluctuation) on gauge feed circuit. Unit is mounted on the instrument cluster and is connected between the ten amp. circuit breaker and the instrument circuits. See Wiring Diagram.

ENGINE

ENGINE SPECIFICATIONS: 8 cylinder, "L" head type.

	2601, 2633	Others
Bore	3 1/2"	3 1/2"
Stroke	3 3/4"	4 1/4"
Displ. (cu. ins.)	288	327
Rated HP	39.2	39.2
Developed HP①	150	②180
Comp. Ratio	7.7-1	8.0-1

①—At 4000 engine RPM.
②—2611 & 2613 develop 160 at 3600 RPM.

▷***HYDRAULIC VALVE LIFTERS—Standard on all engines except 2601, 2611, & 2633.***

ENGINE & OIL PAN REMOVAL: *See Packard Special Data.*

CYLINDER HEAD & TIGHTENING TORQUES: *See Packard Special Data.*

PISTONS: Aluminum alloy, autothermic strut type.
Original Bore & Pistons—*See Packard Special Data.*
Length—3 7/8".

▷**Out-of-Round Note**—Car manufacturer recommends cylinders be rebored and new pistons installed if cylinder out-of-round exceeds .004".
Weight—19.575 ozs. (stripped), 25½ ozs. (with rings and pins).

▷**Cyl. Bore Taper Note**—Car manufacturer recommends cylinders be rebored and new pistons installed if cylinder taper exceeds .007-.010". If necessary, new rings only can be installed (without reboring) for tapers up to .014".
Removal—Pistons and rods removed from above.
Clearance—.0005-.001". See Fitting New Pistons.

▷**Piston Skirt Expander Note**—Car manufacturer recommends skirt expanders be installed if cylinder diameter over .006" greater than piston skirt diameter (measured beside upper end of skirt slot).

Replacement Pistons: *See Packard Special Data.*

▷***NOTE***—Check ring grooves by installing new piston ring in groove—if .006" feeler can be inserted 1/16", wear excessive and piston should be replaced. Check top groove when testing.

Fitting New Pistons: Insert .0015" feeler ½" wide between piston and cylinder wall on side opposite slot. Pull to withdraw feeler should be 10-16 lbs.

▷***NOTE***—Piston should hold in any portion of the bore of own weight but should move with one or two finger pressure (cylinder bore vertical).

Installing Pistons: Slot toward camshaft.

PISTON RINGS: Two compression rings (No. 200 top groove, No. 200 second groove), one oil control ring (No. 85) per piston, all above pin.

Ring	Width	End Gap①	Side Clearance
Comp.	.0925-.0935"	.007-.017"	.0025-.003"
Oil	.186-.1865"	.007-.015"	.0025-.003"

①—Top compr. ring gap .007-.015" (2602,6,26,31).

Installing Rings—End gaps must be between pin holes with #2 ring on same side as skirt slot. #1 and #3 ring on side opposite slot
Replacement Rings: Std., .020", .030", .040" oversize.

PISTON PIN: Diameter 7/8". Length 3 1/64".
Floating type retained by lock ring at each end. Split type bushing used in upper end of rod.
Pin Fit in Piston—Palm push fit with piston at 160°F. (heat piston in water only).
Piston Pin (Connecting Rod) Bushing Installation—*See "Piston Pins" in Packard Special Data.*

Replacement Pins: Std., .003" and .006" oversize.

CONNECTING ROD: Length—(2601, 2633) 7 15/16", (Others) 7 11/16". Measured from center-to-center.
Weight—(2601, 2633) 36½ ozs. (Others) 36 ozs.

▷***CONNECTING ROD CAUTION—Connecting rods for 2601 & 2633 engines are not interchangeable with connecting rods for other engines.***
Crankpin Journal Diameter—2.250".
Lower Bearing—Shimless precision, steel backed, Moraine Durex or Federal Mogul 24.
Clearance—.0005-.0025". **Endplay**—.003-.011".
Bearing Adjustment—None (no shims). Replace bearings. Self-locking nut used on cap bolts (tighten to 60-65 ft. lbs.).

Replacement Bearings: Std., .001", .002", .020" US.

Installing Rods: Oil squirt hole toward camshaft.

CRANKSHAFT: (2606, 2626) 9 bearings, (Others) 5 bearings. Thrust taken on center bearing.
Vibration Dampener—Hydraulic (silicone) type.
Dampener Removal—Use puller tool No. J-2636.
Journal Diameter—2.7465".
Bearings—Interchangeable, shimless, precision, steel-backed, Moraine Durex or Federal Mogul.
Clearance—.0005-.0025".

Bearing Adjustment—None (no shims). Replace bearings (upper halves can be rotated in and out).

Replacement Bearings—Std., .001", .002", .020" US.

Crankshaft Front & Rear Oil Seal Replacement: *See "Crankshaft & Main Bearings" in Packard Special Data.*
End Thrust—At center bearing. Endplay .0035-.0085"

CAMSHAFT: 5 bearing. Non-adjustable chain drive.
Bearings—Steel-backed, babbitt-lined bushings.
Clearance—.001-.003".
Camshaft Removal & Installation: *See "Camshaft & Bearings" in Packard Special Data.*

End Thrust: Taken by thrust plate in back of camshaft sprocket. **Endplay**—.004-.006".

Timing Chain: Morse. Width 1". Pitch .375". Length 58 links.
Timing Chain & Sprocket Removal: *See "Valve System" in Packard Special Data.*

Camshaft Setting: Install chain and sprockets together with "0" marks on sprockets adjacent and in line with straightedge across shaft centers.

VALVES:	Head Diam.	Stem Diam.	Length
Intake	1 43/64"	.3417"	5 7/8"
Exhaust	1 7/16"	.3398"	5 7/8"

	Seat Angle	Lift	Stem Clearance
Intake	30°	.342"	.002"
Exhaust	45°	①.342"	.004"

①—.337" Lift on "250", "300" & "400" series.

Valve Guides: Lubrite coated. Pressed in block from above with upper end 31/32" below top of block. Use Valve Guide Driver No. J-2577. This tool properly positions guides when gauge seated on block. Ream guides after installation with 11/32" (.3437") reamer. Upper end of exhaust guide counter bored.

▷**Valve Guide Removal Note**—If guides to be removed with lifters in engine, use Valve Guide Remover Tool J-2580 to drive guide down to just clear tappet (with tappet on heel of cam). Score guide with chisel thru valve chamber, then break off low end, finally driving remainder of guide out. If lifters out, guide can be driven down and out without breaking.

Valve Springs: Intake and exhaust springs interchangeable. Anti-rotation serrated cup washers installed on top of spring and seats in recess in block.

	Spring Pressure	Spring Length
Valve Closed	60-66 lbs.	1 3/4"
Valve Open	135-145 lbs.	1 13/32"

Valve Lifters (2601, 2611, 2633): Conventional mushroom type. Remove from below with camshaft out.
Diameter—.6236-.6239". **Clearance**—.0001-.0016".
Replacement Lifters—.001", .002" Oversize.
Use Tool ST-5144 (piloted in valve guide) to ream for .005" oversize lifter installation.

Valve Lifters (Others): Wilcox-Rich "Zero-Lash" hydraulic type (mushroom type body). Hydraulic unit can be removed from above. Lifter body removed from below with camshaft out.
Diameter—.6236-.6239", **Clearance**—.0001-.0016".

Hydraulic Valve Lifter Removal & Overhaul: *See "Hydraulic Valve Lifters" in Packard Special Data.*

Valve Clearance Check (When Grinding Valves): *See "Hydraulic Valve Lifters" in Packard Special Data.*

VALVE TIMING

VALVE TAPPET CLEARANCE: *Adjustment required only on 2601, 2611, & 2633 engines. Others have hydraulic valve lifters.*
(2601, 2611, 2633)—.007" Intake, .010"-Exhaust, HOT.

VALVE TIMING: See Camshaft Setting above.

2601, 2611, 2633 Valve Timing①
Intake Valves—Open 15° BTDC. Close 45° ALDC.
Exhaust Valves—Open 50° BLDC. Close 9° ATDC.
①—.0125" intake, .015" exhaust tappet clearance.

(Others) Valve Timing
Intake Valves—Open 15° BTDC. Close 43° ALDC.
Exhaust Valves—Open 53° BLDC. Close 4° ATDC.

Valve Timing Check (2601, 2611, 2633): With .0125" tappet clearance No. 1 intake valve should be open with No. 1 piston 10° BTDC. (10th graduation before top dead center mark "1UP.DC" on vibration dampener aligned with pointer). Reset tappet clearance to .007" hot.

►*CAUTION*—If valve more than 8° before or after this point in closing, camshaft setting incorrect.

Valve Timing Check (Others): Check by turning tappet plunger for No. 8 exhaust valve with fingers. Turn engine over until this valve fully open, turn engine further until valve nearly closed (plunger should not turn), continue turning engine until plunger "breaks loose" or turns. This should be approximately 9° after top dead center—check at timing mark on dampener.

►*CAUTION*—If valve more than 8° before or after this point in closing, camshaft setting incorrect.

LUBRICATION

Engine Oiling System: Pressure to main and connecting rod bearings, camshaft bearings, piston pins, valve lifters and timing chain.
Crankcase Capacity—7 qts.
Normal Oil Pressure—40 lbs., Normal driving.
Oil Pressure Regulator—On oil pump cover. Not Adjustable.

Oil Pump: Gear type mounted externally on right side of engine.
Oil Pump Removal, Overhaul & Installation: *See "Oil Pump" in Packard Special Data.*

Oil Filter: Purolator. Optl. 2601, 2611, 2631. Std. on other models. Replace oil filter cartridge every 8000 miles or more often if required.

Oil Pressure Indicator: Red light on left side of instrument cluster. Lighted when oil pressure less than 10 lbs. (lights when ignition turned on, goes out when pressure exceeds 10 lbs.).
Engine Unit—King-Seeley No. 47140. Pressure Switch. Contacts open when pressure exceeds 10 lbs. (remain closed at lower pressures).

Crankcase Ventilation: Oil-wetted type filter element in oil filler cap air intake. Outlet pipe in valve compartment at rear.

COOLING

►*APPARENT OVERHEATING (Temperature Gauge reading high without boiling or loss of coolant): See Pressure Valve, Thermostat, and Temperature Gauge changes below.*

Cooling System: Pressure type with pressure relief valve in filler cap and fan driven pump.
Capacity—20 qts., with 2/3 qts. additional for heater and defroster.
Pressure Valve—*Two types used—See Note below.* Radiator Filler Cap. (2601, 2611, 2633) AC. No. 846713, 7 lbs. type. (2602, 2606, 2626, 2613) Packard No. 446546, 12 lbs. type.

►*2601, 2611, 2633 NOTE*—On cars with first type Thermostat (see Thermostat data below), later type thermostat AND 12 lb. type Pressure Valve can be installed to correct overheating.

Water Pump: Centrifugal belt driven, packless type. *See Water Pump Section for complete data.*
Belt Adjustment—*See Generator Belt Adjustment.*

Thermostat: *CAUTION—New "capsule" type thermostat used beginning Engine Nos. L-216891, L-312370, L-409334, L-604405.*

►*OVERHEATING CORRECTION (First Cars): Above "capsule" type thermostat can be installed on earlier cars but must be used with 12 lb. type pressure valve. See Pressure Valve Note also.*
Setting (Std.)—Starts to open 148°-154°F.
Setting (Optl.)—Starts to open 157°-163°F. or 177°-183°F.

Temperature Gauge: CAUTION—*Two types of Engine Unit (sending unit) used. See Engine Unit below.*
King-Seeley "CV" (constant voltage) electric type with Gauge Voltage Regulator. *See MISC. ELECTRICAL for regulator data.*
Dash Unit—(2601, 2611, 2613, 2633) K-S No. 46087, (Others) No. 46067.
***Engine Unit* (Before Eng. No. L-202588, L-301595, L-401245, L-600503)**—King-Seeley No. 44215 (Packard No. 416281) used with special "Temperature Gauge Regulator" (resistor wire connected between temperature gauge feed terminal and feed terminal on fuel gauge).
NOTE—Temperature Gauge Regulator is Packard No. 436586.
Engine Unit (Later Cars—after above Eng. Nos.). King-Seeley No. 44225 (Packard No. 439368) used without special "temperature Gauge Regulator. May be identified by lead wire from gauge voltage regulator being connected directly to temperature gauge with jumper extending to feed terminal of fuel gauge.

►*CAUTION*—Whenever later type engine unit (King-Seeley No. 44225) used, Temperature Gauge Regulator (resistor wire between fuel gauge and temperature gauge dash unit) MUST NOT BE USED. Connections shown on wiring diagram are for this later type gauge.

CLUTCH

Synchro-mesh Transmission Cars. (2601, 2633) Long Model 10CF-TI, (Others) Long Model 11CF-10½TI. Single plate, semi-centrifugal type.
See Clutch Section for complete data.
Facings—Woven (U.S. Asbestos). Thickness .125". Inside Diameter ("200") 6¾", ("250", "300") 7". Outside Diameter ("200") 10", ("250", "300") 10½".
Pedal Adjustment: 1¼-1½" free travel. Adjustment nut on rod at throw-out lever.

►**Clutch Pedal Over-Center Spring:** New adjustable type. *See "Clutch Notes" in Packard Special Data for Adjustment.*

Removal: Remove transmission (see Transmission Removal following) and flywheel housing lower cover. Disconnect throw-out linkage and remove throw-out bearing. Remove clutch cover screws (release tension evenly), lower assembly out of car.

TRANSMISSION

SYNCHRO-MESH

Own Make. Helical gear, constant-mesh, synchro-mesh (second & high), constant-mesh (low), sliding spur gear (reverse). Low & Second speed gears are ball bearing mounted.
See Transmission Section for complete data.

Transmission Control: Steering column type.
See Transmission Section for complete data.

Removal: Disconnect shifter rod, speedometer cable, hand brake cable at equalizer, engine ground strap, front universal (block driveshaft up against floor pan). Support rear of engine with jack and unbolt cross-member (at frame ends and transmission). Disconnect clutch retractor spring and fore-and-aft restraint rod. Take out Transmission-to-housing mounting screws, remove transmission.

OVERDRIVE

Warner Model AS8-R11. Optional equipment with Packard transmission. Solenoid operated overdrive with Governor Control and throttle operated "kick-down."

►*NOTE*—AS8-R11 has new piloted ring gear housing, new ring gear and tail shaft.
See Transmission Section for complete data.
Overdrive Solenoid—Delco-Remy No. 1118155.
Governor—Packard No. 433613.
Control Relay—Packard No. 403940.
Kick-down Switch—Packard No. 403945.
Lock-out Switch—Packard No. 426453.

Removal: Disconnect control cable and all leads to solenoid and governor. Free mounting at rear of overdrive case. Then remove overdrive and transmission (see Transmission Removal above).

ULTRAMATIC TRANSMISSI N

Own Make. Torque Converter (with hydraulically operated Direct Speed clutch) and hydraulically operated planetary unit with manual control.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Packard Ultramatic" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See Transmission Section.*

Linkage Adjustment on Ultramatic Drive Cars: *See "Ultramatic Drive" in Transmission Section.*

Lubrication—Check fluid every 1000 miles, drain and refill every 25,000 miles.

Checking Fluid Level. ***CAUTION—Fluid must only be checked at normal operating temperatures and after engine has been idling at 800 RPM. for at least one minute with selector lever in "N" position.*** Stop the

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

engine, check level by removing dipstick from filler hole on left side of transmission (accessible from under car—release cap by turning ½ turn counter-clockwise). Add fluid as required to bring level up to FULL mark on dipstick.

Recommended Fluid. Packard Ultramatic Drive or any Type "A" Automatic Transmission Fluid which has an AQ-ATF number embossed on container.

Capacity. Approximately 12 qts.

►*OTHER ULTRAMATIC SERVICE DATA: See Transmission Section.*

UNIVERSALS

Mechanics, Universal Products or Spicer. Needle bearing type.

►*CAUTION*—Rear universal flange nut controls rear axle pinion bearing preload which must be adjusted whenever nut is loosened. *See "Packard Rear Axle" in Rear Axle Section for complete data.*

REAR AXLE

Own Make. Semi-floating, hypoid gear type with Hotchkiss Drive.

See Rear Axle Section for complete data.

►*PINION BEARING PRELOAD ADJUSTMENT CHANGE —Procedures for setting pinion bearing preload have been changed. See "Packard Hypoid" in Rear Axle Section for complete data.*

Standard Ratios

Model	Std.	O.D. Cars	Ultramatic
2601, 2602, 2631	3.9-1	4.1-1	3.54-1
2606			3.54-1
2611	3.9-1	4.1-1	3.23-1
2613	4.54-1	4.7-1	4.36-1
2626	4.1-1	4.55-1	3.90-1
2633	4.55-1	4.55-1	4.10-1

Optional Ratios

Model	Std.	O.D. Cars	Ultramatic
2601, 2602, 2631	4.1-1	3.9-1	3.23-1
2606			3.23-1
2611	4.1-1	3.9-1	3.54-1

Backlash—.003-.005". Screw adjustment.

Removal: Remove axle shafts (see Removal below). Disconnect rear universal (wire trunnions), wire or prop propeller shaft up against floor pan with 2x4 inserted inside frame X-member. Drain differential, replace drain plug. Clean off housing, take off carrier mounting nuts, lift carrier assembly out.

Axle Shaft Removal: Remove wheel, brake drum (use screw type puller J-4153—do not use knock-out type puller or thrust block may be damaged). Disconnect brake line at wheel cylinder. Remove nuts at oil seal guard and take off seal guard, gasket, retainer, oil seal, brake support plate, and bearing shims. Remove axle shaft and bearing using Puller J-2552 (do not drag shaft on inner seal). Use Tool J-943-B to remove inner seal.

Wheel Bearing Adjustment: Endplay controlled by shims between flanged end of housing and brake backing plate. Add or remove shims (furnished .005", .007", .020" thick) at one wheel if .050" or under. At both wheels if over .050" to secure .004-.007" endplay.

Endplay—.004-.007".

SHOCK ABSORBERS

Direct acting hydraulic type. Front shock absorbers are inside front suspension coil springs.

Packard Shock Absorber Nos.

Model	Front	Rear
2601, 2611	446233	446239
2602, 2606	446233	①446349
2613	446235	446240
2626	446361	446362
2631	446233	②446238
2633	446233	446241

①—Color Ident. White. ②—Color Ident. Blue. All other shocks PLAIN (no color ident.).

FRONT SUSPENSION

Front Suspension: Packard Broad-Beam Suspension, independent, linked parallelogram type with coil springs and double acting shock absorbers.

See Front Suspension Section for complete data.

Kingpin Inclination—(2613, 2633) 2°30'. (Others) 5°50'.

Caster—(2613, 2633) Neg. 2° ± ½°. (Others) Neg. 1° ± ½°.

Camber—0° (+ ¾° — ¼° range).

Toe-In—0" (plus 1/16", minus 0"). Adjust by turning adjuster at outer end of each tie rod equally.

STEERING GEAR

Std. Steering Gear: Packard Gemmer Model 335. Worm and Roller type with push-pull adjustments.

See Steering Gear Section for complete data.

Optl. Power Steering—Bendix Hydraulic "Linkage Type" used with standard type steering gear.

See "Packard Power Steering" in Steering Section for complete data.

BRAKES

Service: Bendix Hydraulic, Duo-Servo, Single Anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

See Brake Section for complete data.

Drums—Centrifuse type. Front 12". Rear (2613, 2633) 14", (Others) 12".

Wheel Cyl. Diameter—Front Wheels 1⅛" (all), Rear Whls. (exc. 2613, 2633) 1", Rear Whls. (2613 & 2633 only) 1¼".

Lining—Primary Shoes (2613, 2633) Marshall 9051, (Others) Marshall 4112. **Secondary Shoes** (2613, 2633) Marshall 9032, (Others) Marshall 9051.

Lining Width—	Front Wheels	Rear Wheels
2601, 2611	1 3/4"	1 3/4"
2602, 2606, 2626, 2631	2 1/4"	2"
2613, 2633	2 1/2"	2 3/4"

Thickness	Front Wheels	Rear Wheels
2601, 2611	3/16"	3/16"
2602, 2606, 2626, 2631	3/16"	3/16"
2613, 2633	3/16"	¼"

Length (per shoe)	Primary	Secondary
2601, 2611	11½"	13"
2602, 2606, 2626, 2631	11½"	13"
2613, 2633	13"	14¾"

Clearance—.015" at both ends of secondary shoe with primary shoe forced out against drum.

Hand Brake: See Service Brake above.

Power Brakes: Easamatic (combination power cylinder and hydraulic master cylinder unit). Optl.

See "Power Brakes" in Brake Section for complete data.

MISC. MECHANICAL

Window Regulators, Seat Control, Convt. Top Control: Hydro-Lectric type (hydraulic type with motor driven pump supplying oil under pressure).

See Miscellaneous Section for complete data.

Windshield Wiper: Vacuum type, cable operated.

See Miscellaneous Section for complete data.

►*1954 AIR-CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning equipment or lines. See "Frigidaire Air Conditioning" in Miscellaneous Section.*

►*ELECTRICAL EQUIPMENT NOTE:* Auto-Lite Equipment used on Clipper Special (5400), Clipper Deluxe (5401), and Commercial (5433). Other models use Delco-Remy Equipment.

MODEL IDENTIFICATION

Model	Chassis Symbol
Clipper Special	5400
Clipper DeLuxe	5401
Cavalier	5402
Patrician	5406
Clipper Super	5411
Commercial (359 cu. in.)	5413
Custom	5426
Packard	5431
Commercial (288 cu. in.)	5433

SERIAL NUMBER: Stamped on plate mounted on left front door pillar post.

ENGINE NUMBERS: Stamped on left side of engine opposite #8 cylinder.

TUNE-UP

COMPRESSION PRESSURE: All cylinders should be equal within 10 lbs.

VACUUM READING: 18-21" at idling speed.

VALVE TAPPET CLEARANCE (5400, 5401, 5411, 5433): .007" Intake, .010" Exhaust. Engine warm.

VALVE TAPPET CLEARANCE (Others): Hydraulic lifters used. No adjustment required.

MANIFOLD HEAT CONTROL: Automatic thermostatic type. No adjustment required.

IGNITION

FIRING ORDER: 1-6-2-5-8-3-7-4. See diagram.

SPARK PLUG GAP: .023-.028".

Spark Plug—Champion J8. 14mm.

AUTO-LITE

COIL: Auto-Lite CR-4001A.

Ignition Current—1.5 amperes idling, HOT.

DISTRIBUTOR: Auto-Lite IGP-4502E.

Condenser—Auto-Lite IG-2671K. **Capacity** .20-.25 mfd.

Contact Point Set—Auto-Lite IGP-3028KS.

Breaker Gap—.015-.019". Set maximum gap to .017".

Cam Angle—27°±3°. Do not exceed gap limits to obtain dwell.

Breaker Arm Spring Tension—17-20 ozs.

Rotation—Counter-clockwise viewed from above.

Automatic Advance (Auto-Lite)

Degrees	Distr.	RPM	Degrees	Eng.	RPM
Start		300	0		600
1		375	2		750
3.75		550	7.5		1100
7		1350	14		2700
8		1600	16		3200

Fuel Compensator: 40° range of adjustment on quadrant at vacuum link connection. *See Ignition Timing.*

Vacuum Spark Control: Auto-Lite. Mounted on hold-down plate and linked to adjusting quadrant on distributor.

Vacuum Advance (Auto-Lite)

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	6
1	2	6 3/4
3	6	8 3/8
4	8	9 1/4
5	10	10

DELCO-REMY

COIL: Delco-Remy 1115376.

Ignition Current—1.5 amperes idling, HOT.

DISTRIBUTOR: Delco-Remy 1110841 & 1110848.

Condenser—Delco-Remy 1869704. **Capacity** .18-.23 mfd.

Contact Point Set—Delco-Remy 1918148.

Breaker Gap—.016".

Cam Angle—Test limits with .016" gap, 26-33°

Breaker Arm Spring Tension—19-23 ozs.

Rotation—Counter-clockwise viewed from above.

Automatic Advance—1110841

Degrees	Distr.	RPM	Degrees	Eng.	RPM
0-2		375	0-4		750
2.5-4.5		550	5-9		1100
5-7		1100	10-14		2200
7-9		1600	14-18		3200

Automatic Advance—1110848

Degrees	Distr.	RPM	Degrees	Eng.	RPM
.5-2.5		350	1-5		700
2-4		400	4-8		800
7-9		800	14-18		1600
9-11		950	18-22		1900

Vacuum Spark Control: Delco-Remy 1116070 (use with 1110841 Distr.). Delco-Remy 1116087 (use with 1110841 Distr.). Integral type mounted on distributor and linked directly to breaker plate.

Plunger Travel—7/64" (1116070), 3/16-13/64" (1116087).

Vacuum Advance—1116070

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	5-7
5	10	9.5-11

Vacuum Advance—1116087

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	5-7
9	18	12-14.5

IGNITION TIMING

Setting—(5400, 5401, 5411, 5402, 5433) 6° BTDC. **(5431, 5406, 5426, 5431)** TDC. *NOTE*—Modify this setting for special fuel and altitude conditions. See Fuel Compensator Setting (below).

Timing Mark—"#1 UP.DC" with fifteen 1° graduations ahead of mark.

Fuel Compensator Setting: Should be set for slight ping when accelerating engine with wide open throttle. To adjust, loosen vacuum unit link screw in distributor quadrant (Auto-Lite Distributors), advance arm hold-down screw (Delco-Remy Distributors), rotate distributor one graduation at a time counter-clockwise (if ping too severe), clockwise (if no ping) until correct performance secured.

CARBURETOR

CARTER 2-BARREL

Carter WGD (5400, 5433) 986S. (5401, 5411) 2102S. Dual downdraft types with Carter Climatic Control.

Idle Setting—1/2 to 1 1/2 turns open. Turn screws out for richer mixture.

Idle Speed—400-450 RPM. (Std. & Overdrive), 375 RPM. (Ultramatic).

Float Level—13/64" between top of float and bowl cover (Gauge T109-39), with bowl cover inverted and needle seated.

Accelerating Pump—No seasonal adjustment.

Fast Idle Setting: With thermostatic coil housing, gasket and baffle plate removed, crack throttle valve and hold choke valve closed. Then close throttle. There should now be .023" clearance (Gauge T109-189) between throttle valve and bore of carburetor (side opposite idle ports). Adjust by bending choke connector rod at lower angle.

Automatic Choke Setting: Set one point rich.

►*OTHER DATA: See "Carter WGD" Carburetor in Carburetor Section.*

Fuel Pump Pressure: 3½-5½ lbs.

CARTER 4-BARREL

Carter WCFB (5402) 2103S & 2142S, (5406, 5413, 5426, 5431) 2112S. Four-barrel downdraft types with Carter Climatic Control.

Idle Setting—(2103S) 1¼-2¼ turns open, (2112S) ¾-1¾ turns open, (2142S) 1-2 turns open. Turn screws out for richer mixture.

Idle Speed—400-450 RPM. (Std. & Overdrive, 375 RPM. (Ultramatic).

►*OTHER DATA: See "Carter WCFB" Carburetor in Carburetor Section*

Fuel Pump Pressure: 4-5 lbs.

CARB. EQUIPMENT

Fuel Pump: (5400, 5401, 5411, 5433) Carter M2049S, **(Others)** AC No. 1539920.

Pressure—(Carter) 3½-5½ lbs., (AC) 4-5 lbs.

See "Fuel Pumps" in Carburetion Equipment Section.

Gasoline Gauge: King-Seeley Electric "CV" (constant-voltage) type with voltage regulator. *See MISC. ELECTRICAL for regulator data.*

Dash Unit—(5400, 5401, 5411) K-S No. 46595, (Others) K-S No. 46570.

Tank Unit—K-S No. 44517.

See "Fuel Gauges" in Carburetion Equipment Section.

BATTERY

(5400, 5401, 5402, 5411, 5433) Auto-Lite 2L-100, National 2L-S-100, or Willard SW-2L-100. 6 volt, 17 plate, 100 ampere hour capacity.

(5406, 5413, 5426, 5431) Auto-Lite 2FH-120, National 2F-S-120, or Willard HW-2F-120. 6 volt, 17 plate, 120 ampere hour capacity.

Battery Ground—Positive.

Engine Ground—Left front of engine.

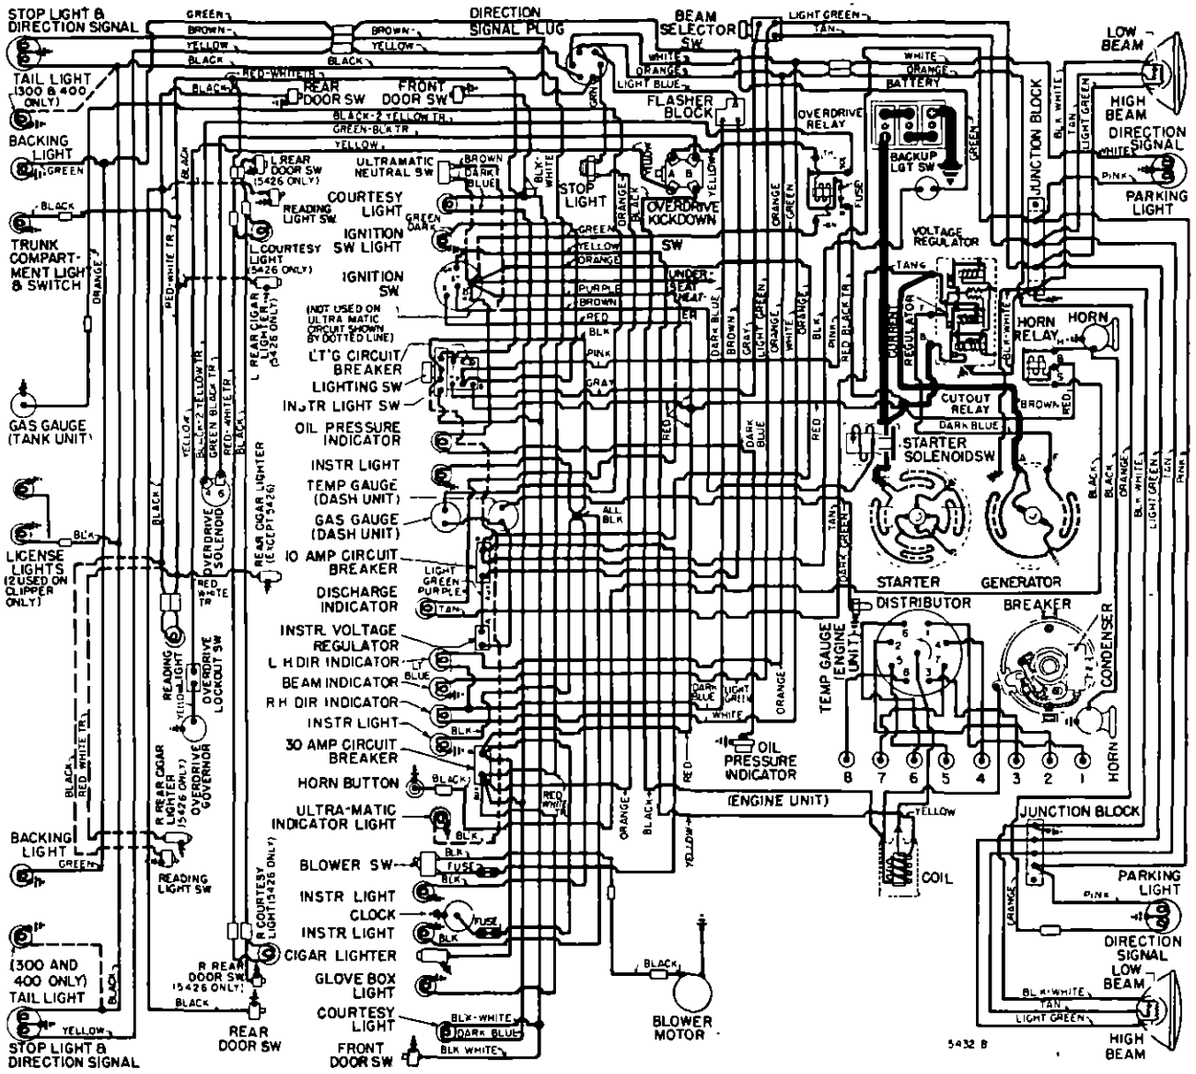
CONTINUED FROM PRECEDING PAGE

STARTER

AUTO-LITE

Auto-Lite MCL-6129. Armature - MCH-2028.
Drive—Bendix No. A1792.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—42-53 ozs.



Performance Data—MCL-6129

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.0	65
8 ft. lbs	Lock	2.0	410

Starting Switch: Auto-Lite SST-4010. Magnetic switch. Key starting. *See "Starter Controls" in Electrical Equip. Section.*
Ultramatic Neutral Safety & Backup Light Switch: *See Delco-Remy Starter data below.*

DELCO-REMY

Delco-Remy 1108027. Armature—1917855.
Drive—Delco-Remy 1873789. Overrunning clutch (solenoid pinion shift).
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—24-28 ozs.

CARS WITH AUTO-LITE EQUIPMENT

Performance Data—1108027

Torque	R.P.M.	Volts	Amperes
0 ft. lbs	5500	5.65	70
12 ft. lbs	Lock	3.15	570

Starting Switch: *Delco-Remy 1118136. Key starting with solenoid pinion shift. See "Starter Controls" in Electrical Equip. Sect.*
Neutral Safety Switch: Mounted on left side of transmission case. Connected in starter control circuit so that starter operative only with selector lever in "N" or "P" positions.

GENERATOR

AUTO-LITE

Auto-Lite GGW-6003A. Armature—GGW-2006F.

Performance Data (Auto-Lite)

Amperes	Volts	Cold - R.P.M. - Hot
0	6.4	870-970 — 950-1050
40	8.0	1800-2000 — 2150-2350
45①	8.0	1925-2125 — 2350-2550

①—Do not operate at higher output and do not operate at this voltage without ventilating fan.

Brush Spring Tension—35-53 ozs. with new brushes.
Field Current—1.4-1.5 amperes at 5.0 volts (70° F).
Motoring Current—4.8-5.3 amperes at 5.0 volts (70° F.) with field terminal grounded to frame.
Rotation—Counter-clockwise at commutator end.

Belt Adjustment: Loosen two generator bracket screw nuts 2-3 turns. Loosen generator strap screw, then loosen generator-to-water pump screw. Place Tool J-4714 over the head of the generator bracket front screw and rotate the tool clockwise until the arm of the tool contacts edge of generator drive end plate. Using torque wrench with a 7/8" socket over the tool, rotate the wrench clockwise and move the generator outward until 15 ft. lbs. torque is indicated on the scale. The adjusting strap to generator screw should be tightened to hold the generator in this position while maintaining the 15 ft. lbs. torque.

DELCO-REMY

Delco-Remy 1102778. Armature—1921621.

Performance Data—1102778

	Amperes	Volts	R.P.M.
Cold	45①	8.0	2450

①—Not maximum. See Regulator.
Brush Spring Tension—28 ozs.
Field Current—1.87-2.0 amperes at 6.0 volts.
Rotation—Counter-clockwise at commutator end.
Belt Adjustment: Same as Auto-Lite (above).

REGULATOR

AUTO-LITE

Auto-Lite VBE-6102A (for Auto-Lite GGW-6003A Gen.)

Cutout Relay

Cuts In—6.3-6.8 volts.
Cuts Out—4.1-4.8 volts.
Contact Gap—*.015" minimum.*
Air Gap—.031-.034" (check at hinge end of core).

CONTINUED ON NEXT PAGE

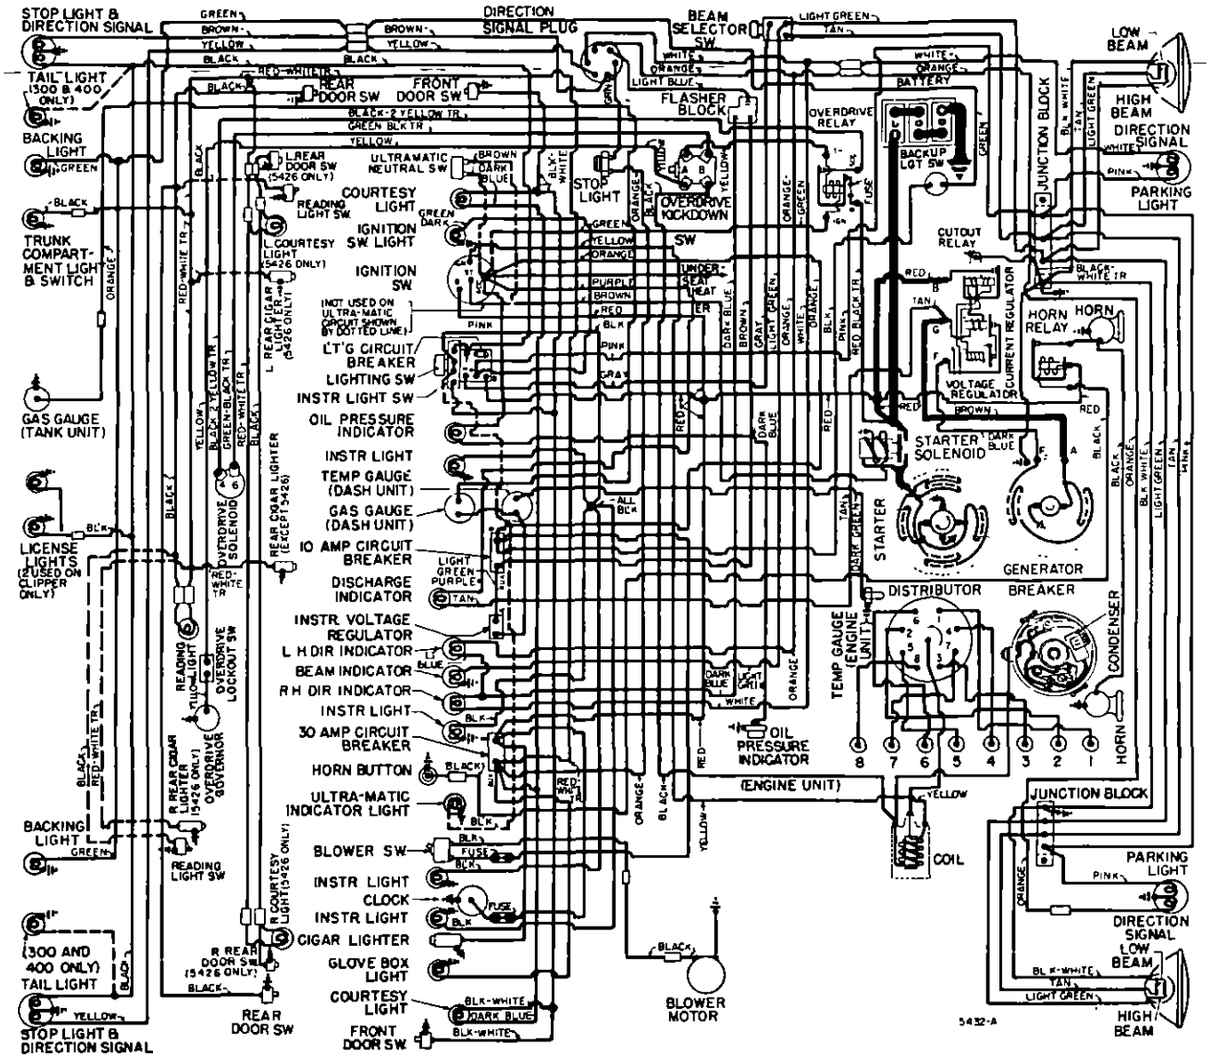
CONTINUED FROM PRECEDING PAGE

Voltage Regulator

Setting—7.2-7.5 volts at 70° F. *after 15 minutes operation charging at 1/2 maximum rate.*
Air Gap—.048-.052" with contacts just opening (check at brass armature stop pin).
Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator

►*SETTING CAUTION: "Temperature Compensated" type. Set to following specifications at 70° F.*



Test A	Operating Amperes	Test B
52 amperes	45	(43-47)

Test A—After 15 minutes operation charging at 1/2 maximum rate.
Test B—After additional 15 minutes operation with current regulator operating (load applied to hold voltage down to 6.7-6.9 volts).
Air Gap—.048-.052" with contacts just opening.
Checking & Adjusting—*See Electrical Equip. Section.*

DELCO-REMY

Delco-Remy 1118829 (for Delco-Remy 1102778 Gen.) New "1118825 Series" regulator.

►*REGULATOR NOTE: Checking procedure is different than for previous models. See "Delco-Remy 1118825 Series Regulator" in Electrical Equip. Section. All specifications are "Normal" settings.*

CARS WITH DELCO-REMY EQUIPMENT

Cutout Relay

Cuts In—6.4 volts (hot).
Contact Gap—.020".
Air Gap—.020" (with contacts just closed).

Voltage Regulator

Setting—7.3 volts (hot).
Air Gap—.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator

Setting—47 amperes (hot).
Air Gap—.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting—*See Electrical Equip. Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Equip. Section.*
Direction Signal: *See Electrical Equip. Section.*
Lighting Switch Removal: Remove knob, then remove mounting nut on instrument panel with special wrench. Remove switch.
Stop Light Switch Location: At brake master cylinder outlet tee.

FUSES: Clock—AGA 3 amps. In clock lead.
Overdrive—SFE 30 amps. On overdrive relay.
Heater—SFE 20 amps. In cable near Ign. Switch.

CIRCUIT BREAKERS: Lighting—30 amps. On lighting switch.
Accessory (Body & Stop Lamps)—30 amps. Behind instrument panel below gauges.
Hydro-Electric Power (Convertible)—On engine side of dash on pump upper bracket.
Direction Signal—10 amps. On instrument cluster.

HORNS: Sparton. Dual horns operated by relay.
Horn Relay: Delco-Remy 1116775.
Contacts Close—2.75-4.0 volts (set to 3.5 volts).
Contact Gap—.027". **Air Gap**—.014" (contacts closed).

GAUGE VOLTAGE REGULATOR: King-Seeley 45677. Consists of a thermo-bi-metal interrupter unit designed to maintain a constant voltage of 5 volts (regardless of generator charging voltage fluctuation) on gauge feed circuit. Unit is mounted on the instrument cluster and is connected between the 10 ampere circuit breaker and the instrument circuits. See Wiring Diagram.

ENGINE

►*AIR-CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning system. See "Frigidaire Air Conditioning" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: 8 Cylinder, "L" Head.

Series	Bore	Stroke	Displmnt.
5400, 33	3 1/2"	3 3/4"	288 cu. ins.
5401, 11	3 1/2"	4 1/4"	327 cu. ins.
5402	3 1/2"	4 1/4"	327 cu. ins.
5406, 13, 26, 31	3 9/16"	4 1/2"	359 cu. ins.

Series	Rated HP	Dev. HP.	Comp. Ratio
5400, 33	39.2	150 at 4000 RPM	7.7-1
5401, 11	39.2	165 at 3600 RPM	8.0-1
5402	39.2	185 at 4000 RPM	8.0-1
5406, 13, 26, 31	40.6	212 at 4000 RPM	8.7-1

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Compression & Vacuum Reading—*See TUNE-UP.*

►*HYDRAULIC VALVE LIFTERS: Standard on all engines except 5400, 5401, 5411, & 5433.*

ENGINE & OIL PAN REMOVAL: *See Packard Special Data.*

CYLINDER HEAD & TIGHTENING TORQUES: *See Packard Special Data.*

PISTONS

Autothermic strut type, aluminum alloy.

Original Bore & Pistons—*See Packard Special Data.*

Weight—(5400, 01, 02, 11, 33) 25.5 ozs. (Others) 25.7 ozs. Includes rings, pin and locks.

Removal—Pistons and rods removed from above.

Fitting New Pistons: Clearance .0005-.001", ¾" from bottom of piston. Insert .0015" x 1/2" feeler between piston and cylinder wall on side opposite slot. Pull to withdraw feeler should be 10-16 lbs. NOTE—Piston should hold in any portion of bore of own weight but should move with one or two finger pressure (cylinder bore vertical).

Replacement Pistons: *See Packard Special Data.*

►*NOTE:* Cylinder bore out-of-round limit .004", taper limit .010".

►*PISTON SKIRT EXPANDER NOTE:* If cylinder diameter over .006" greater than piston skirt diameter (measured beside upper end of skirt slot) skirt expanders should be installed.

►*RING GROOVE NOTE:* Check ring grooves by installing new piston ring in groove—if .006" feeler can be inserted 1/16", wear is excessive and piston should be replaced. Check top groove when testing.

Installing Pistons: Slot toward camshaft.

PISTON PINS

Floating type retained by lock ring at each end. Split type bushing used in upper end of rod.

Diameter—7/8". **Length**—3 1/64"

Pin Fit in Piston—Palm push fit at 160° F. (heat piston in water only).

Pin Fit in Rod—Finger push fit.

Replacement Pins: Std., .003", .006" Oversize.

Piston Pin Bushing Installation: *See "Piston Pins" in Packard Special Data.*

PISTON RINGS

Models 5400, 5401, 5402, 5411, 5433

Ring	Width	End Gap	Side Clr.
Compr. (#1, #2)	.0925-.0935"	.0054-.0207"	①
Oil	.1860-.1865"	.0054-.0207"	①

Models 5406, 5413, 5426, 5431

Ring②	Width	End Gap	Side Clr.
Compr. (#1)	.0775-.078"	.0084-.0247"	①
Compr. (#2)	.0775"-.0785"	.0084-.0247"	①
Oil	.1860-.1865"	.0084-.0247"	①

①—With new ring installed in top groove (greatest wear in this groove), insert .006" feeler in this groove. If feeler can be inserted 1/16", side clearance is too great and piston should be replaced.

②—Top compression ring is chrome type.

Replacement Rings: Furnished in sets Std. .020", .030", .040" Oversize. *See "Piston Rings" in Packard Special Data.*

Installing Rings: Install top (#1) compression ring and oil ring with ring gap opposite slotted side of piston and midway between piston pin bosses. Install lower (#2) compression ring with gap toward slotted side of piston and midway between piston pin bosses.

CONNECTING RODS

Length—(5400, 5433) 7 15/16". **(Others)** 7 11/16". Measured center to center. *CAUTION*—5400, 5433 rods **not interchangeable** with others.

Weight—(5400, 5433) 36.5 ozs. **(Others)** 36 ozs.

Crankpin Journal Diameter—2.250".

Lower Bearing—Shimless precision, steel backed. No adjustment. Replace bearings.

Clearance—.0005-.0025". **Endplay**—.003-.011".

Replacement Bearings: Std., .001, .002", .020" Undersize.

Installing Rods: Oil hole toward camshaft.

CRANKSHAFT

Journal Diameter—2.7465". (5400, 01, 02, 11, 33) Five bearings. (Others) Nine bearings.

Bearings—Interchangeable, shimless, precision. No adjustment. Replace bearings.

Clearance—.0005-.0025".

Replacement Bearings: Std., .001", .002", .020" Undersize.

End Thrust: Taken by center bearing.

Endplay—.0035-.0085".

Crankshaft Oil Seals: *See "Crankshaft & Main Bearings" in Packard Special Data.*

CAMSHAFT

Five bearing.

Bearings—Steel-backed babbitt lined bushings.

Clearance—.001-.003".

End Thrust—Taken by thrust plate in back of camshaft sprocket. **Endplay**—.004-.006".

Camshaft Removal & Installation: *See "Camshaft & Bearings" in Packard Special Data.*

Timing Chain: Morse. **Width**—1". **Pitch**—.375". **Length**—58 links.

Camshaft Setting: Install chain and sprockets together with "O" marks on sprockets adjacent and in line with straightedge across shaft centers.

VALVES

Tappet Clearance: (5400, 01, 11, 33) .007" Intake, .010" Exhaust, engine warm. **(Others)** None (hydraulic lifters).

Valves	Head Diameter	Stem Diameter	Length
Intake	1 51/64"①	.3417"	5 7/8"
Exhaust	1 7/16"	.3398"	5 7/8"

Valve	Seat Angle	Lift	Stem Clearance
Intake	30°	.342"	.0005-.0031"
Exhaust	45°	.342"②	.0024-.005"

①—Head Diameter 1 43/64" on 5400, 01, 02, 11, 33.

②—Lift .337" on 5402 exhaust valve.

Valve Springs: Single spring used on all valves. Intake and exhaust springs interchangeable. Shakeproof type washer between top of valve spring and cylinder block seat.

Valve Spring Specifications

Valve	Spring Pressure	Spring Length
Closed	60-66 lbs.	1 3/4"
Open	135-145 lbs.	1 13/32"

Valve Guides: If guides to be removed with lifters in engine, use Valve Guide Remover J-2580 to drive guide down to just clear tappet (with tappet on heel of cam). Score guide with chisel through valve chamber, then break off lower end, finally driving remainder of guide out. If lifters out, guide can be driven down and out without breaking. To install, press guide into block with upper end 31/32" below top of block, using Valve Guide Driver J-2577. This gauge properly positions guides when gauge seated in block. Ream guides after installation with 11/32" (.3437") reamer. Upper end of exhaust guide counter-bored.

Valve Lifters (5400, 5401, 5411, 5433): Conventional mushroom type (Standard). Hydraulic type (Optional). Standard type removed from below with camshaft out. To remove Hydraulic type see below.

Valve Lifters (Others): Wilcox-Rich "Zero Lash" hydraulic type (mushroom type body). Hydraulic unit can be removed from above. Lifter body removed from below with camshaft out.

Diameter—.6236-.6239". **Clearance in Block**—.0001-.0016".

Lifter Overhaul & Testing—*See "Valve System" in Packard Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

5400, 5433 Valve Timing

Intake Valves—Open 15° BTDC. Close 45° ALDC.
Exhaust Valves—Open 50° BLDC. Close 9° ATDC.

5401, 5411 Valve Timing

Intake Valves—Open 10° BTDC. Close 50° ALDC.
Exhaust Valves—Open 45° BLDC. Close 14° ATDC.

5402 Valve Timing

Intake Valves—Open 10° BTDC. Close 48° ALDC.
Exhaust Valves—Open 48° BLDC. Close 9° ATDC.

5406, 5413, 5426, 5431 Valve Timing

Intake Valves—Open 22° BTDC. Close 65° ALDC.
Exhaust Valves—Open 55° BLDC. Close 15° ATDC.

Valve Timing Check (5400, 5401, 5411, 5433): Set No. 1 intake valve tappet to .0125" (cold) and turn engine over until No. 1 intake valve just begins to open. Valves are properly timed and the camshaft and crankshaft sprockets properly related when the No. 1 intake valve starts to open at 15° (5400, 5433), 10° (5401, 5411) BTDC as indicated on timing scale on vibration damper.

Valve Timing Check (Others): Turn engine over until No. 8 exhaust valve has fully opened and continue turning the engine until valve is nearing its closed position. At this time, tappet plunger should not be able to be turned by finger pressure. While maintaining

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

steady finger pressure to turn plunger, turn engine over until plunger suddenly "breaks loose" (plunger can be turned). At this point valve is closed. Pointer should register 9° (5402), 15° (5406, 5413, 5426, 5431) as noted on vibration damper.

►*VALVE TIMING NOTE:* If valves open or close in excess of 8° before or after their specified opening or closing positions, the camshaft and crankshaft sprockets are not properly related. *See "Camshaft Setting" under CAMSHAFT above.*

OILING SYSTEM

Crankcase Capacity: 7 quarts. One quart additional when filter changed.

Normal Oil Pressure: 40 lbs. at normal driving speed.

Pressure Regulator Valve—In oil pump cover. Not adjustable.

Oil Pressure Indicator— Red light on left side of instrument panel. Lighted when oil pressure less than 10 lbs. (lights when ignition turned on, goes out when pressure exceeds 10 lbs.).

Oil Pressure Switch (Engine Unit)—King-Seeley 47140. Contacts open when pressure exceeds 10 lbs. (remain closed at lower pressures).

Oil Pump: Gear type mounted externally on right side of engine.

Pump Removal, Overhaul & Installation—*See "Oil Pump" in Packard Special Data.*

Oil Filter: Purolator P-70. Optional on 5400, 5401, 5411. Standard on other models. Replace filter element every 8000 miles or more often as required.

Replacement Filter Element—AC P-31C or C-31G.

Crankcase Ventilation: Filter element in oil filler cap (air intake). Outlet pipe in valve compartment in rear.

COOLING

Water Capacity: 20 quarts (20 2/3 quarts with heater).

Pressure Valve: Radiator filler cap, 12 lb. type.

Thermostat: "Capsule" type. In cylinder head water outlet flange. Starts to open 167-173°F. (Standard), 177-182°F. (Optl.).

Water Pump: Centrifugal, belt driven, packless type.
See "Packard" in Water Pump Section.

Pump Removal—Disconnect hose from water pump. Remove nut and washers attaching battery ground cable to water pump. Remove screws holding water pump to front face of engine cylinder block. Lift pump out.

Temperature Gauge: King-Seeley "CV" (constant voltage) electric type with Gauge Voltage Regulator. *See MISC. ELECTRICAL for regulator data.*

Dash Unit—(5400, 5401, 5411) K-S No. 46597, **(Others)** No. 46573.

Engine Unit—K-S No. 44225.

See "Temperature Gauges" in Miscellaneous Section.

CLUTCH

Synchro-mesh Transmission Cars. (5400, 5433) Long Model 10CF-TI, Assy. No. 267954, (Others) Long Model 11CF-10½TI, Assy. No. 268349.

See "Long Clutches" in Clutch Section.

Clutch Disc No. —Long (10CF-TI) 287952, (11CF-10½ TI) 287951.

Pedal Adjustment: 1⅛-1½" free travel. Adjustment nut rod at throw-out lever. *See "Clutch Notes" in Packard Special Data.*

Removal: Remove transmission (See Transmission Removal following). Remove flywheel lower housing, clutch release bearing and sleeve. Mark clutch cover plate and flywheel. Loosen capscrews that attach clutch cover to the flywheel in succession (to release tension evenly) until clutch cover is free. Remove clutch cover and pressure plate and clutch driven plate from flywheel housing. Remove clutch shaft pilot bearing using tool J-164 or J-489.

SYNCHRO-MESH TRANSMISSION

Own. *See "Packard Synchro-mesh" in Transmission Section.*

Transmission Controls: *See "Transmission Controls" in Transmission Section.*

Removal: Disconnect speedometer cable, gear shift rods from levers on transmission case, and propeller shaft at rear universal joint. Remove propeller shaft completely by slipping the front universal joint flange off the transmission main shaft. *(CAUTION*—Wire or tape the two bearings of the universal joints together to prevent them from falling off). Support rear of engine with a jack. Remove rear engine support mounting and support cross members. Remove cap screws attaching transmission to flywheel housing. Using two pilots in the bolt holes, slip the transmission to the rear, so that the clutch release bearing pull-back spring may be unhooked. Remove transmission.

OVERDRIVE

Warner Type AS8-R11. Planetary gear type with solenoid operation and accelerator pedal controlled kick-down.
See "Warner R11" Overdrive in Transmission Section.

Overdrive Controls: *See "Overdrive Controls" in Transmission Section.*

Removal: Same as for Synchro-mesh Transmission (above) after disconnecting overdrive control cable from lever on right side of overdrive case, electric leads at governor, lockout switch, and solenoid. Remove governor with tool J-4653, then remove solenoid.

ULTRAMATIC DRIVE

Own. Torque Converter (with hydraulically operated Direct Speed Clutch) and hydraulically operated planetary unit with manual control.
See "Ultramatic Transmission" in Transmission Section.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Ultramatic Transmission" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Ultramatic Transmission" in Transmission Section.*

Lubrication: Check fluid level every 1000 miles, drain and refill every 25,000 miles.

Checking Fluid Level—*(CAUTION—Fluid must only be checked at normal operating temperatures and after engine has been idling at 800 RPM. for at least one minute with selector lever in "N" position).* Stop engine, check level by removing dipstick from filler hole *on left side of transmission(accessible from under car*—release cap by turning ½ turn counter-clockwise). Add fluid as required to bring level up to FULL mark on dipstick.

Capacity—Approximately 12 qts. *Use only Packard Ultramatic Drive or any Type "A" Transmission Fluid which has an AQ-ATF number embossed on container.*

►*OTHER "ULTRAMATIC" SERVICE DATA: See "Ultramatic Transmission" in Transmission Section.*

UNIVERSALS

Spicer (Cross Type), **Detroit Universal** (Ball & Trunnion Type), **Mechanics** (Cross Type).

►*CAUTION:* Rear universal flange nut controls rear axle pinion bearing preload which **must be adjusted whenever nut is loosened.** *See "Packard Hypoid" in Rear Axle Section.*

REAR AXLE

Own. Semi-floating, hypoid gear type with Hotchkiss Drive.
See "Packard Hypoid" in Rear Axle Section.

Standard Axle Ratios

Model	Std. O.D. Cars	Ultramatic
5400, 5402, 5431	3.9-1, 4.1-1	3.54-1
5401, 5411	3.9-1, 4.1-1	3.23-1
5406		3.54-1
5413	4.54-1, 4.7-1	4.36-1
5426	4.1-1, 4.55-1	3.9-1
5433	4.55-1, 4.55-1	4.1-1

Optional Axle Ratios (Exc. 5426)

Standard	Overdrive	Ultramatic
4.1-1	3.9-1	3.23-1, 3.54-1
	3.54-1	3.9-1, 4.1-1

Backlash—.004-.008".

Carrier Removal: Remove axle shafts (see Axle Shaft Removal below). Disconnect rear universal (wire trunnions), wire or prop propeller shaft up against floor pan with a 2x4 inserted inside frame X-member. Drain differential, replace drain plug. Clean off housing, take off carrier mounting nuts, lift carrier assembly out.

Axle Shaft Removal: Remove wheel and brake drum (use screw type puller J-4153—do not use knock-out type puller or thrust block may be damaged). Disconnect brake line at wheel cylinder. Remove nuts at oil seal guard and take off seal guard, gasket, retainer, oil seal, brake support plate, and bearing shims. Remove axle shaft and bearing using Puller J-2552 (do not drag shaft on inner seal). Use Tool J-943-B to remove inner seal.

Wheel Bearing Adjustment: Endplay controlled by shims between flanged end of housing and brake backing plate. Add or remove shims (furnished .005", .007", .020" thick) at one wheel if .050" or under, at both wheels if over .050" to secure .004-.007" endplay.

Endplay—.004-.007".

SHOCK ABSORBERS

Delco or Monroe. Direct acting hydraulic type. Serviced by replacement.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

FRONT SUSPENSION

Independent. Coil spring and direct acting shock absorbers.
See "Packard" in Front Suspension Section.
Kingpin Inclination—(5413, 5433) 2°30'. **(Others)** 5°50'.
Caster—(5413, 5433) Neg. 2°±½°. **(Others)** Neg.1°±½°.
Camber—0° (Pos. ¾° to Neg. ¼° range).
Toe-In—0" (plus 1/16", minus 0"). Adjust by turning adjuster at outer end of each tie rod equally.
Toe-Out on Turns—Inside wheel at 23¾° with outside wheel at 20°.

STEERING

Manual: Gemmer. Worm and three-tooth roller.
See "Gemmer Worm & Roller" in Steering Section.
Power Steering: Bendix. Linkage type. Used with Standard Steering Gear.
See "Bendix Power Steering" in Steering Section.
Steering Linkage: *See "Steering Linkage" in Steering Section.*
Steering Wheel & Horn Button Removal: *See "Gemmer Worm & Roller" in Steering Section.*
Steering Gear Removal: *See "Gemmer Worm & Roller" in Steering Section.*

BRAKES

Service: Bendix hydraulic, Duo-Servo, Single Anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.
See "Bendix Hydraulic" in Brake Section.

Drum Diameter	Front	Rear
5400, 5401, 5411	11"	11"
5402, 5406, 5426, 5431	12"	12"
5413, 5433	12"	14"

Wheel Cylinder Diameter	Front	Rear
5400, 5401, 5411	1 1/8"	1 1/16"
5402, 5406, 5426, 5431	1 1/8"	1"
5413, 5433	1 1/8"	1 1/4"

Lining Width	Front	Rear
5400, 5401, 5411	2½"	2"
5402, 5406, 5426, 5431	2¼"	2"
5413, 5433	2½"	2¾"

Lining Thickness—(5413, 5433) ¼". **(Others)** 3/16".

Lining Length (per shoe)	Primary	Secondary
5400, 5401, 5411	9 5/16"	12"
5402, 5406, 5426, 5431	11 1/2"	13"
5413, 5433	13" (Fr.)	13" (Fr.)
5413, 5433	14 3/4" (Rr.).	14 3/4" (Rr.)

Clearance—.015" at both ends of secondary shoe with primary shoe forced out against drum.
Standard Master Cylinder: On bracket on left side of frame near transmission support.
Checking Fluid—Access hole in front floor pan at left corner of driver's seat.
Removal—Disconnect brake lines from master cylinder. Disconnect push rod at pedal. Remove gearshift selector linkage bell crank from mounting bolt stud. Remove mounting bolts and master cylinder.
Power Brakes: Bendix Easamatic. Combination power cylinder and hydraulic master cylinder unit..
See "Bendix Power Unit" in Brake Section.
Checking Fluid—Check level every 1000 miles. If level not up to full mark, add brake fluid.
Removal of Power Unit—Disconnect hose line and electrical wiring from power unit (raise hydraulic line above level of junction assembly to prevent fluid leakage). Disconnect and remove brake and accelerator pedals. Remove steering column grommet retainers, slide grommet up out of way. Remove carpet retainers and fold back carpet. Remove cover plate screws, then remove power brake and cover as an assembly, take out mounting screws and remove power brake from cover.

MISC. MECHANICAL

Windshield Wipers: Vacuum type, cable operated. *See "Windshield Wipers" in Miscellaneous Section.*
Air Conditioning: Frigidaire. *See "Frigidaire" Air Conditioning in Miscellaneous Section.*
Window Regulators, Seat Control, Convertible Top Control: Hydro-Lectric type (hydraulic type with motor driven pump supplying oil under pressure). *See "Hydro-Lectric Top Controls" and "Hydro-Lectric Window & Seat Regulators" in Miscellaneous Section.*

►*TORSION LEVEL SUSPENSION CAR SERVICING CAUTION:* Do not jack car up in rear with jack placed under rear load arms or any part of torsion level suspension assembly. Rear load arm link may become disengaged from arm.

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, See "Air Conditioning Service Cautions" in Miscellaneous Section.*

►*ELECTRICAL EQUIPMENT NOTE: Auto-Lite Equipment used on Clipper Deluxe & Super. Other models use Delco-Remy.*

MODEL IDENTIFICATION

Model	Model Designation	Series
Clipper Deluxe	5522	5540
Clipper Super	5542, 5547	5540
Clipper Custom	5562, 5567	5560
Packard	5582, 5587	5580
Caribbean	5588	5580

SERIAL NUMBER: Stamped on plate mounted on left front door pillar post.

ENGINE NUMBER: Stamped on front end of engine block between cylinder banks, directly behind water pump.

TUNE-UP

►*ROUGH IDLE, OR POOR PERFORMANCE OR GASOLINE ECONOMY (Cars with Carter 2284S Carburetor): See "Carter WCFB 4-Barrel" in Carburetor Section.*

COMPRESSION PRESSURE: 120 lbs. minimum at 150 RPM. Variation between cylinder should not exceed 10 lbs.

VACUUM READING: 18-21" at idling speed.

VALVE TAPPET CLEARANCE: None required in service (hydraulic). *See "Valves" below for initial setting if head removed or valves disturbed.*

MANIFOLD HEAT CONTROL: Thermostatic spring type located in left hand exhaust manifold outlet.

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2.
Cylinders – RIGHT BANK 2-4-6-8. LEFT BANK 1-3-5-7.

SPARK PLUG GAP: .033-.037".
Spark Plug–Champion H-10. Tighten to 26-30 ft. lbs.

AUTO-LITE

COIL: Auto-Lite CAD-4001. *12 Volt.*
Ignition Current–1.25 amperes idling HOT.
Resistor–Auto-Lite PU-4001.

►*COIL RESISTOR NOTE: Resistor connected in lead from ignition switch-to-coil. This resistor is by-passed during cranking by lead from starter solenoid to coil.*

DISTRIBUTOR: Auto-Lite IBJ-4001 (No. 440689 Cyl. Hd. First Cars), IBJ-4001B (No. 440854 Cyl. Hd. Later Cars). *12 Volt.*
Condenser–Auto-Lite IBB-2015L. **Capacity** .25-.28 mfd.
Contact Set–Auto-Lite IGW-2028HS.
Breaker Gap–.016".
Cam Angle–27° ± 2°.
Breaker Arm Spring Tension–17-20 ozs.
Rotation–Counter-clockwise viewed from above.

Automatic Advance–IBJ-4001

Degrees	Distr.	RPM	Degrees	Eng.	RPM
Start		300	0		600
1		325	2		650
11		600	22		1200
19		1135	38		2270
20		1200	40		2400

Automatic Advance–IBJ-4001B

Degrees	Distr.	RPM	Degrees	Eng.	RPM
Start		300	0		600
1		375	2		750
8		850	16		1700
15		1650	30		3300
16		1750	32		3500

Vacuum Spark Control: Integral type.

Vacuum Advance–IBJ-4001

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	6
1	2	6-3/8
3	6	7
5	10	7-5/8
6	12	8

Vacuum Advance–IBJ-4001B

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	6 1/4
1	2	6 5/8
6	12	9
11	22	12 1/8
12	24	13

►*DISTRIBUTOR REMOVAL CAUTION: Mark position of rotor so that it can be replaced in the same position when distributor installed.*

Distributor Installation: If engine crankshaft rotated with distributor removed, proceed as follows: Rotate crankshaft until No. 1 cyl. is 5° BTDC on firing stroke. Place gasket on distributor shaft, and with distributor cap removed insert distributor to engage oil pump drive shaft by turning distributor rotor. Select the correct tooth so that when distributor is in full mesh with camshaft gear, rotor will be at No. 1 terminal.

DELCO-REMY

COIL: Delco-Remy 1115084 *12 Volt.*
Ignition Current–1.25 amperes idling HOT.
Resistor–Delco-Remy 1927809.

►*COIL RESISTOR NOTE: Resistor connected in lead from ignition switch-to-coil. This resistor is by-passed during cranking by lead from starter solenoid-to-coil.*

DISTRIBUTOR: Delco-Remy 1110854. *12 Volt.*
Condenser – Delco-Remy 1869704. **Capacity** – .18-.23 mfd.
Contact Point Set–Delco-Remy 1118148.
Breaker Gap–.016".
Cam Angle–26-33°.
Breaker Arm Spring Tension–19-23 ozs.
Rotation–Counter-clockwise viewed from above.

Automatic Advance–1110854

Degrees	Distr.	RPM	Degrees	Eng.	RPM
0-2		350	0-4		700
11-13		1300	22-26		2600
15-17		2100	30-34		4200

Vacuum Spark Control: Delco-Remy 1116093. Integral type mounted on distributor and linked directly to breaker plate.
Plunger Travel–17/64".

Vacuum Advance–1116093

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	5-7
12	24	13-15

►*DISTRIBUTOR REMOVAL CAUTION: Mark position of rotor so that it can be installed in the same position when distributor installed.*

Distributor Installation: Same as Auto-Lite above.

IGNITION TIMING

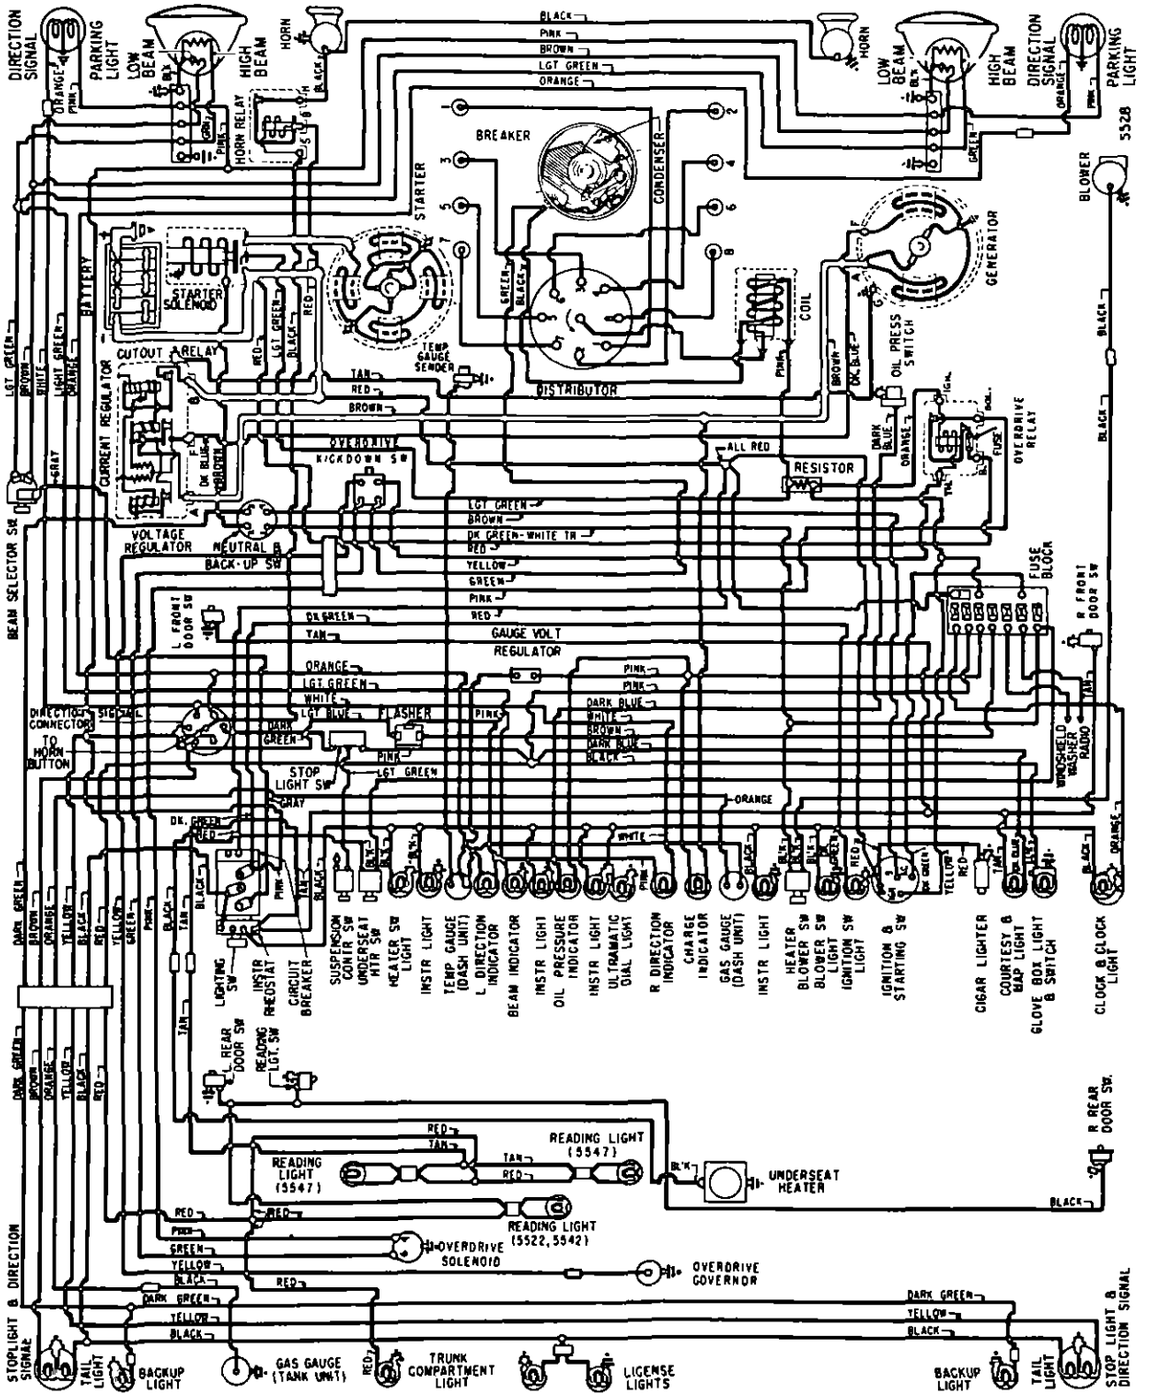
Setting–5° BTDC with engine running at 400 RPM.
Timing Marks–Timing indicator on chain cover marked "0" - "5" - "15". Align groove in vibration dampener with correct mark on indicator.

CARBURETOR

►*CARBURETOR APPLICATION: Carter 4-Barrel used on Clipper Deluxe & Custom. Rochester used on all other models. NOTE–Two Rochester 4-Barrel Carburetors used on "Caribbean" Model.*

THROTTLE LINKAGE ADJUSTMENT (ULTRAMATIC DRIVE): With engine at normal operating temperature, choke valve fully open and throttle in the slow idle position, adjust engine idle speed to 400 RPM (see "Carburetor" below for idle adjustment and Carburetor Synchronizing). Loosen the two locknuts (4 or 5 turns), that position the transmission throttle control rod cross shaft adjuster on accelerator-to-carburetor rod. Make sure that adjuster is free to move back and forth. Move transmission throttle shaft outer lever on right side of transmission so that it is at its rearward position. With carburetor throttle adjusting screw against its stop, adjust the throttle operating rod turnbuckle so that accelerator pedal rod lever just touches underside of the floorboard (this point is where rod from accelerator pedal extends through the floorboard), **then lengthen turnbuckle one full turn** to provide clearance. Tighten locknut on turnbuckle. Apply a slight forward pressure on transmission throttle rod adjuster and move rear locknut up to the adjuster. Move the front locknut up to the adjuster and tighten securely. Make sure that the alignment of the adjuster does not cause lever to bind.

CARTER WCFB
Nos. 2232S & 2284S



►*CARBURETOR PRODUCTION CHANGE: Carter No. 2232S used with first No. 440689 Cyl. Hd., No. 2284S used with later No. 440854 Cyl. Hd.*

►*CARTER 2284S HIGH VACUUM AT DISTRIBUTOR VACUUM PORT (Causing Rough Idle, Poor Performance or Poor Gasoline Economy): See "Carter WCFB 4-Barrel" in Carburetor Section for test and correction.*

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyl. 2-3-5-8. LEFT barrels 1-4-6-7.*
Idle Setting–1/2–1-1/2 turns open. Turn screws out for richer mixture.
Idle Speed–400-450 RPM (Synchro-mesh). 400 RPM with selector lever in "High" (Ultramatic).

►*OTHER DATA: See "Carter WCFB 4-Barrel" in Carburetor Section.*

CONTINUED ON NEXT PAGE

CLIPPER MODELS WITH AUTO-LITE ELECTRICAL EQUIPMENT

CONTINUED FROM PRECEDING PAGE

Throttle Linkage Adjustment: *See "Carburetor" above.*
Fuel Pump Pressure: 3-1/2–5-1/2 lbs.

ROCHESTER 4GC (EXC. CARIBBEAN) No. 7007230

▷*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT Barrels feed Cyl. 2-3-5-8. LEFT barrels 1-4-6-7.*
Idle Setting—1—1-1/2 turns open. Turn screws out for richer mixture.
Idle Speed—400-450 RPM (Synchro-mesh), 400 RPM, with selector lever in "High" (Ultramatic).
OTHER DATA: See "Rochester 4GC Carburetor" in Carburetor Section.
Throttle Linkage Adjustment: *See "Carburetor" above.*
Fuel Pump Pressure: 3-1/2–5-1/2 lbs.

ROCHESTER 4GC (CARIBBEAN) No. 7008230 (Front) No. 7008231 (Rear)

▷*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyl. 2-3-5-8. LEFT barrels 1-4-6-7.*
Idle Setting—1—1-1/2 turns out. Turn screws out for richer mixture.
Idle Setting—400 RPM (Ultramatic), with selector lever in "High".

Synchronizing Carburetors: 1) Loosen both jam nuts on throttle rod at front carburetor throttle valve lever and both jam nuts at forward end of transmission throttle rod (where it connects with accelerator pedal rod), several turns.

2) Back out front and rear carburetor idle speed adjusting screws until throttle valves are closed. While holding the front carburetor throttle valves tightly closed, adjust jam nuts on throttle rod at front carburetor throttle lever so that pin fits freely in lever, then tighten jam nuts.

3) Turn in the idle speed screw on **front** carburetor until it makes contact and then turn it in **one additional turn.** Turn the four idle mixture screws (two each carburetor) all the way in and then **back them out one full turn.**

4) After engine is warmed up, adjust the **front carburetor** idle speed screw to obtain 400 RPM (with transmission selector lever in "Drive" position). *NOTE—The rear carburetor idle speed screw is not used and should therefore remain in the "backed out" position.*

5) Adjust the idle mixture screws to obtain a smooth idle in the following recommended manner: Turn each idle mixture screw in until the lean "drop-off" point (as noticed by a drop in the tachometer and vacuum gauge readings), counting the turns while turning the needle out to its rich "drop-off" point, then returning the screw to a position midway between the two "drop-off" points. Repeat with each idle mixture screw in the following sequence: right rear, right front, left front, left rear. Adjust for the highest possible RPM and vacuum reading. Readjust front carburetor idle speed screw to 400 engine RPM if necessary.

6) Raise the **rear** carburetor fast idle cam so that the idle speed adjusting screw rests on the high step of the cam. Adjust fast idle screw to obtain 2300-2350

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

engine RPM and then drop cam away from the screw. Repeat this procedure with the **front** carburetor, adjusting the screw to obtain 1850 RPM, drop cam away from the screw. *NOTE—Because of the inaccessibility of the fast idle screws on both carburetors at low idle position, it will be necessary to shut the engine off and partially open the throttle to adjust the fast idle screws.*

Throttle Linkage Adjustment: *See "Carburetor" above.*

Fuel Pump Pressure: 3-1/2–5-1/2 lbs.

CARB. EQUIPMENT

Fuel Pump: Carter (Fuel only). Vacuum pump is part of engine oil pump assembly.

Replacement Fuel Pump—Carter No. M-2198S.

Pressure—3-1/2–5-1/2 lbs.

See "Fuel Pumps" in Carburetion Equipment Section.

Gasoline Gauge: King-Seeley Electric "CV" (Constant Voltage) type with voltage regulator.

Dash Unit—(Except Clipper) K-S No. 46884, (Clipper) K-S No. 46924.

Tank Unit—K-S No. 44517.

See "Fuel Gauges" in Carburetion Equipment Section.

BATTERY

Auto-Lite 3EA-60-R3 or Willard HDW-3KM-60. *12 Volt* 9 plate, 60 ampere hour capacity (20 hr. rate).

Battery Ground—Positive.

Engine Ground—Cylinder head to dash panel.

STARTER

AUTO-LITE

Auto-Lite MDD-6301. *12 Volt.* **Armature—MDC-2037.**

Drive—Bendix No. A3467.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—42 ozs.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	Free	10.1	60

Starting Switch: Auto-Lite SSW-4101. Magnetic switch, with key starting. *See "Starter Controls" in Electrical Equipment Section.*

Ultra-Matic Neutral Safety & Back-up Light Switch: *See "Delco-Remy Starter" data below.*

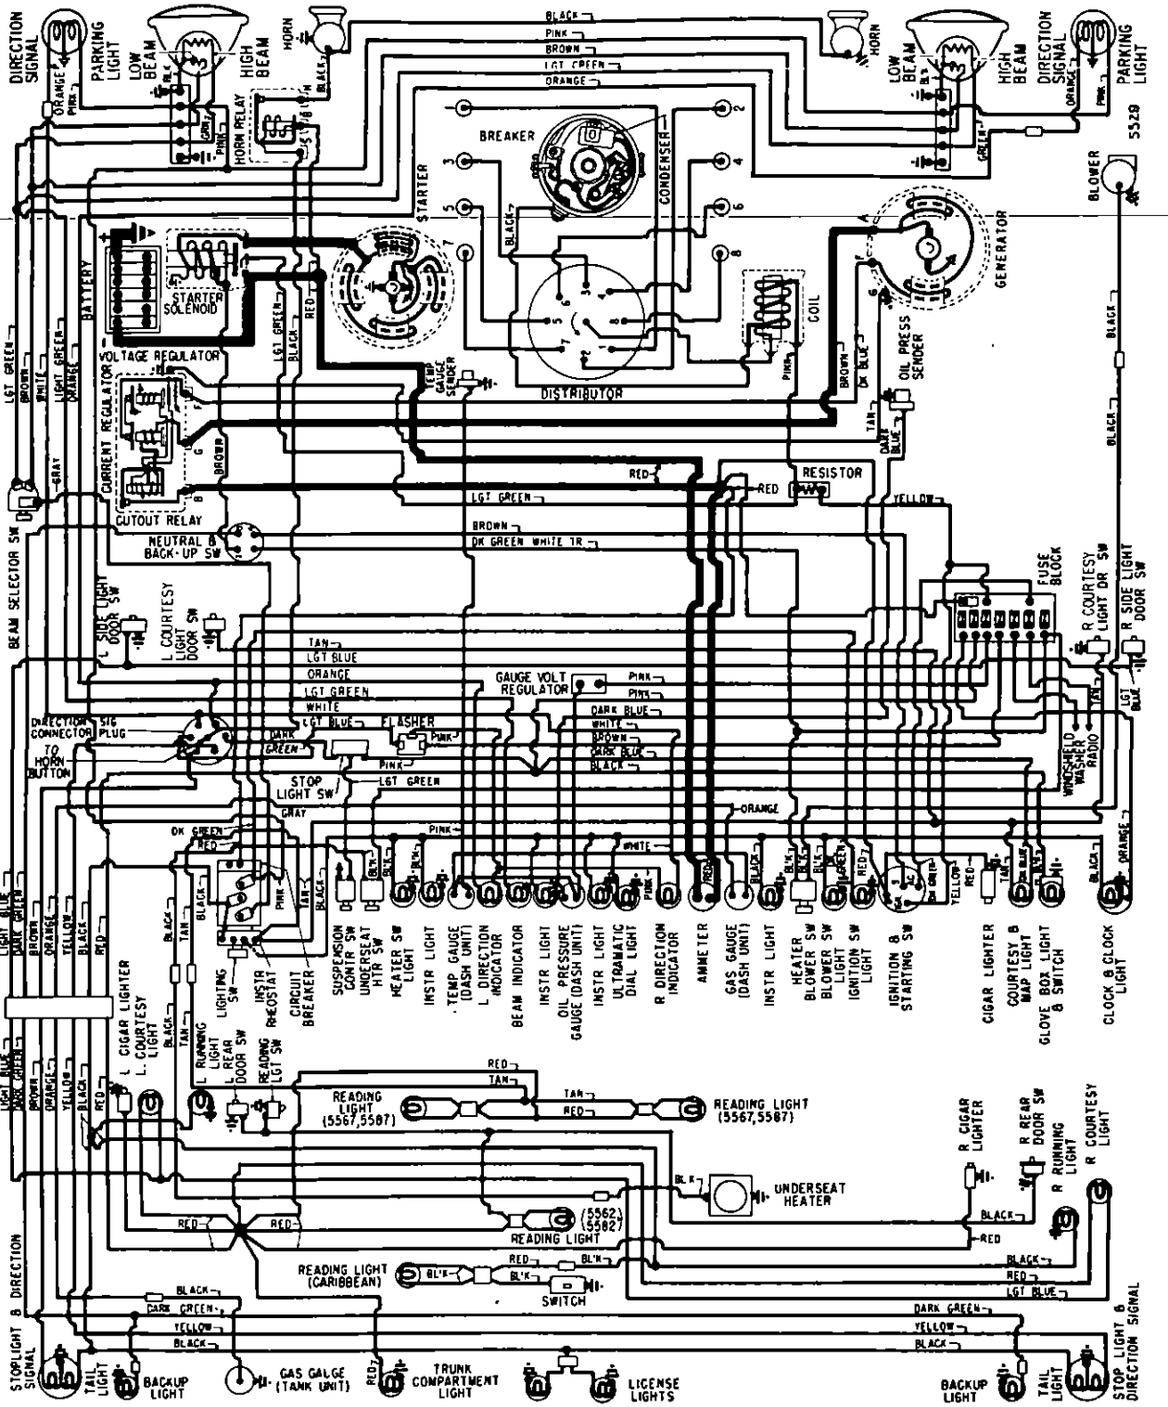
DELCO-REMY

Delco-Remy 1107635. *12 Volt.* **Armature—1926626.**

Drive—Overrunning clutch (solenoid pinion shift).

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—35 ozs. minimum.



Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	3500	10.1	95
10.5 ft. lbs.	Lock	5.4	470

Starting Switch: Delco-Remy Solenoid Switch No. 1119760 mounted on starter and controlled by Ignition & Starter Switch. Turn key full RIGHT to start. *See "Starter Controls" in Electrical Equipment Section.*

Ultramatic Neutral Safety & Backup Light Switch: Delco-Remy 1968118. Located on lower end of steering column. Connected in starter control circuit so that starter operative in "N" or "P" only.

CLIPPER & PACKARD MODELS WITH DELCO-REMY ELECTRICAL EQUIPMENT

CONTINUED FROM PRECEDING PAGE

GENERATOR

AUTO-LITE

Auto-Lite GJC-6001A. *12 Volt.* **Armature—GJC-2006F.**
Maximum Charging Rate—See Voltage Regulator.

Performance Data

Amperes	Volts	RPM
20	15.0	1750
30	15.0	2150

Brush Spring Tension—35-53 ozs. (new brushes).
Field Current—1.23-1.32 amperes at 10.0 volts.
Motoring Current—3.4-3.9 amperes at 10.0 volts.
Rotation—Counter-clockwise at commutator end.
Belt Adjustment: With generator mounting bolts and adjusting strap loose, adjust to 25 ft. lbs. at pivot bolt with torque wrench or 50 lbs. pull in direction of adjusting slot, using a scale.

DELCO-REMY

Delco-Remy 1102022. *12 Volt.* **Armature—1923535.**
Maximum Charging Rate—See Voltage Regulator.

Performance Data

	Amperes	Volts	RPM
Cold	30	14.0	2150

Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—28 ozs.
Field Current—1.48-1.62 amperes at 12.0 volts.
Belt Adjustment: Same as for Auto-Lite above.

RE ULATOR

AUTO-LITE

Auto-Lite VRX-6007A (Use with Auto-Lite GJC-6001A Generator). *12 Volt.*

Cutout Relay

Cuts In—13.0-13.75 volts.
Cuts Out—8.2-9.3 volts.
Contact Gap—.015" minimum.
Air Gap—.031-.034".

Voltage Regulator

Setting—14.50 volts at 70°F. *after 15 minutes operation charging at 1/2 maximum rate.*
Air Gap—.048-.052", with contacts just opening (check at brass armature stop pin).
Checking & Adjusting—See *Electrical Equip. Section.*

Current Regulator

SETTING CAUTION: "Temperature Compensated" type. Set to following specifications at 70°F.

Operating Amperes

Test A	Test B
36 amperes	30 (28-32)

Test A—After 15 minutes operation at 1/2 maximum rate.
Test B—After additional 15 minutes operation with current regulator operating (load applied to hold voltage down to 13.6-13.8 volts).
Air Gap—.048-.052", with contacts just opening.
Checking & Adjusting—See *Electrical Equip. Section.*

DELCO-REMY

Delco-Remy 1118953. *12 Volt. NOTE—Regulator is "1118825 Series". Specifications below are for "Normal" settings.*

Cutout Relay

Cuts In—11.8-13.5 volts (hot).
Contact Gap—.020".
Air Gap—.020" (with contacts just closed).

Voltage Regulator

Setting—13.8-14.8 volts (hot).
Air Gap—.075" *with armature pressed down to point* where contacts just touching.
Checking & Adjusting—See *Electrical Equip. Section.*

Current Regulator

Setting—27-33 amperes (hot).
Air Gap—.075" with contacts pressed down to point where contacts just touching.
Checking & Adjusting—See *Electrical Equip. Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. See *Electrical Equip. Section.*
Direction Signal: See *Electrical Equip. Section.*
Lighting Switch Removal: Remove knob, then remove nut on instrument panel with special wrench. Remove switch.
Stop Light Switch Location: On brake master cylinder outlet tee.
FUSES: All fuses except as noted are on a fuse block under instrument panel.
Clock—2 amperes.
Direction Signal—9 amperes.
Radio—7-1/2 amperes.
Heater—15 amperes.
Glove Box, Stop Light, Courtesy Light, Torsion Level Control, Body Wiring—20 amperes.
Windshield Washer—9 amperes.
Instruments—7-1/2 amperes.
Overdrive—15 amperes, on relay on dash panel.
Torsion Level Motor Feed—20 amperes, in fuse container near starter terminal.
CIRCUIT BREAKERS: 20 amperes, on headlight switch protects head, tail, and parking lights.
30 amperes—On engine side of dash. Protects Power Seat & Power Window relays.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

►*SERIES 5540 CYLINDER HEAD PRODUCTION CHANGE:* Cyl. Head No. 440689 used on first cars, No. 440854 used on later cars. Different Distributor and Carburetor used with each head.

►*IMPROVED OIL CONTROL PRODUCTION CHANGE & CORRECTION ON EARLY CARS:* THREE types of rocker arm shafts have been used in production and latest type should be installed if trouble experienced on cars with previous type shafts. *See "Rocker Arms" under VALVE SYSTEM in Packard Special Data.*

ENGINE SPECIFICATIONS: Own. V8 Valve in head.

Series	Bore	Stroke	Displacement
5540	3-13/16"	3-1/2"	320 cu. ins.
5560, 5580, 5588	4"	3-1/2"	352 cu. ins.

Series	Rated HP	Compr. Ratio	Developed HP
5540	46.5	8.5-1	225 at 4600 RPM
5560	51.2	8.5-1	245 at 4600 RPM
5580	51.2	8.5-1	260 at 4600 RPM
5588	51.2	8.5-1	275 at 4800 RPM

Compression & Vacuum Reading—See *TUNE-UP.*

TIGHTENING TORQUES: See *"Tightening Specifications" in Packard Special Data.*

ENGINE REMOVAL: See *"Engine" in Packard Special Data.*

OIL PAN REMOVAL: See *"Oiling System in Packard Special Data.*

CYLINDER HEAD REMOVAL & INSTALLATION: See *"Cylinder Head & Manifolds" in Packard Special Data.*

PISTONS

Aluminum alloy, cam ground, Autothermic flat head, slipper skirt, tin plated.
Weight—22.293 ozs. (Series 5540), 24.763 ozs. (Others).
Removal—Pistons and rods removed from above.
Clearance—.001-.0015" at bottom of skirt.
Fitting New Pistons: Using a .0015 x 1/2" feeler gauge placed against side of cylinder wall, insert piston without rings, in an inverted position in cylinder bore. Push piston down until bottom of skirt is slightly below top of cylinder block and piston pin bore is parallel to crankshaft. Pull to withdraw feeler should be 6-11 lbs.
Installing Pistons: Install with "F" cast in piston strut, and notch in piston head, toward front of engine. *See Rod Installation below.*
Replacement Pistons: *Std. size, .010", .020", .030"* oversize.

PISTON PINS

Floating type retained by lock ring at each end. Split type bushing used at upper end of rod. Pin is offset .0625" toward thrust side.
Pin Fit in Piston—(Clearance) .0000"-.0002". Hand push fit with piston heated to 160°F.
Pin Fit in Connecting Rod—(Clearance) .0000"-.0004". With pin held in a vise and connecting rod horizontal, rod should fall slowly of its own weight.
Replacement Pins: Std. size, .003", .006" oversize.
Piston Pin Bushing (In Connecting Rod) Installation: *See "Piston Pins" in Packard Special Data.*

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr.	.078"	①	.0015-.005"
Oil	.186"	②	.0015-.005"

①—.015" (5540 Series); .019" (Other Series).
②—.015" (5540 Series); .018" (Other Series).
Replacement Rings: Std. size, .010", .020", .030" oversize.
Installing Rings: Install upper compression ring and oil ring with gap toward camshaft side of engine. Install lower compression ring with gap toward opposite side from camshaft. All gaps should be midway between pin bosses. Grooves on inner diameter of compression rings should be toward top of engine.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

CONNECTING RODS

Length–6-25/32". (center-to-center). **Weight**–26.688 ozs.
Crankpin Journal Diameter–2.250".
Lower Bearing–Replaceable precision type.
Clearance–.0005-.0025". **Sideplay**–.003-.011".
Replacement Bearings: Std. size, .001", .002", .020" Undersize.
Installing Rods: Install odd numbered rods in left bank and even numbered rods in right bank, with numbers on rods facing down and away from block and milled oil groove in connecting rod cap upward and toward crankshaft.

CRANKSHAFT

Journal Diameter–2.4990". Five bearings.
Bearings–Precision type. The four front crankshaft bearings are interchangeable.
Clearance–.0005-.0025".
Replacement Bearings: Std. size, .001", .002", .020" undersize.
End Thrust: Taken by No. 5 (rear) main bearing.
Endplay–.0035-.0085".
Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Packard Special Data.*
Crankshaft Front Oil Seal: *See "Engine Front Cover" in Packard Special Data.*
Crankshaft Removal & Installation (With Engine in Car): *See "Crankshaft & Main Bearings" in Packard Special Data.*
Vibration Dampener: *See "Vibration Dampener" in Packard Special Data.*

CAMSHAFT

Bearings–Five, steel-backed babbitt lined precision bearings.
Clearance–.0005-.0045".
End Thrust: Taken by thrust plate behind camshaft sprocket. **Endplay**–.004-.006".
Camshaft Removal & Installation: *See "Camshaft & Bearings" in Packard Special Data.*
Timing Chain: Morse. **Width**–1". **Pitch**–.375". **Length**–64 links.
Engine Front Cover Removal: *See "Engine Front Cover" in Packard Special Data.*
Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Packard Special Data.*
Camshaft Setting: Both sprockets marked "O". Mesh chain with sprockets turned so that marks are adjacent and in line with straight edge across shaft centers.
Timing Chain & Sprocket Removal: *See "Timing Chain" in Packard Special Data.*

VALVES

Tappet Clearance: Hydraulic lifters. Adjustment not required unless cylinder head removed or valve lifters replaced. *See "Valve Tappet Adjustment" in Packard Special Data.*

Valve	Head Diam.	Stem Diam.	Length
Intake	1.937"	.3725"	5.712"
Exhaust	1.687"	.3715"	5.690"

Valve	Seat Angle	Lift	Stem Clearance
Intake	30°	.374"	.001-.002"
Exhaust	45°	.374"	.002-.003"

Valve Seat Width–3/64" (Intake), 5/64" (Exhaust).
Valve Springs: Single springs used. Install springs with the two closely wound coils against cylinder head.

Valve Spring Specifications

Valve	Spring Pressure	Spring Length
Closed	78-86 lbs.	1-3/4"
Open	158-172 lbs.	1-3/8"

Valve Guides: Integral with cylinder head. Ream valve guide holes for oversize valves if valve stem clearance excessive. Valves are furnished with .003", .010", .020", .030" oversize stems.
Checking Valve Stem Clearance and Reaming Guides for Oversize Valve Stems: See "Valve System" in *Packard Special Data.*
Valve Lifters: Hydraulic type.
Hydraulic Lifter Removal, Overhaul & Testing–*See "Valve System" in Packard Special Data.*
Rocker Arm Assembly: *See "Valve System" in Packard Special Data.*
►*ROCKER ARM SHAFT PRODUCTION CHANGES (For Improved Oil Control): See "Valve System" in Packard Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.
Intake Valves–Open 14° BTDC. Close 56° ALDC.
Exhaust Valves–Open 52° BLDC. Close 18° ATDC.
Valve Timing Check: Rotate engine to bring No. 6 piston up on compression stroke. Note mark on vibration dampener and stop turning engine just before the mark reaches the 15° timing indicator mark on engine front cover. With valve cover removed (left bank), attach a dial indicator to flange on cylinder head at No. 1 cylinder, left front bank, and rest point of indicator on milled surface end of intake rocker arm. With valve clearance lash at zero, continue to rotate engine until mark on dampener is at 14° BTDC timing mark. At this point the exhaust valve on No. 1 cylinder will be closing and the intake valve should just begin to open. *NOTE*–To compensate for any leakdown in in the hydraulic tappet, a feeler gauge can be used to maintain zero lash. *If timing chain deflection is greater than the maximum of 1/2", a variation will be noted in valve timing.*

OILING SYSTEM

***Crankcase Capacity:** 5 qts. (refill).*
Normal Oil Pressure: 45 lbs. at 2800 RPM.
Pressure Regulator Valve–In pump body. Not adjustable.
Pressure Relief Valve Spring–3-19/64" (free length). Compressed to 1-3/8", pressure should be 9–9-1/2 lbs.
Oil Pressure Indicator (Clipper Series)–Red light on instrument panel. Lighted when oil pressure low.
Oil Pressure Switch Engine Unit (Clipper Series)–K-S No. 47195.
Oil Pressure Gauge (Packard Series): King-Seeley "CV" (Constant Voltage) electric type with Gauge Voltage Regulator.
Dash Unit–K-S No. 46889.
Engine Unit–K-S No. 44000.
See "Oil Pressure Gauges" in Miscellaneous Section.
Oil Pump: Gear type. Located on rear main bearing cap and driven through distributor drive and camshaft gears. A vacuum pump is attached to oil pump cover plate and is driven by oil pump idler gear.
Oil Pump Removal, Overhaul & Installation–*See "Oiling System" in Packard Special Data.*
Vacuum Pump: Attached to engine oil pump. Serviced only as an assembly. Remove and install in same manner as oil pump. *See "Oiling System" in Packard Special Data.*
Crankcase Ventilation: Filter element in oil filler cap (air intake). Outlet pipe in valve tappet cover.

COOLING

Water Capacity: 26 qts. Additional pint for each heater.
Pressure Valve: Radiator filler cap. 12 lbs. type.
Thermostat: Capsule type. Starts to open 167-173°F (Std.), 177-182°F (High Std.).
Water Pump: Packless type with sealed ball bearing.
See "Packard" in Water Pump Section.
Temperature Gauge: King-Seeley "CV" (Constant Voltage) electric type with Gauge Voltage Regulator.
Dash Unit–K-S No. 46927 (Clipper), 46892 (Other Series).
Engine Unit–K-S No. 44235 (All Series).
See "Temperature Gauges" in Miscellaneous Section.

CLUTCH

Long Model 11CF, Assembly No. 268349 (Clipper Series with Synchro-mesh Transmission).
See "Long Clutches" in Clutch Section.
Clutch Disc–Long No. 284339, 10-1/2" Diam. (Exc. Clipper Custom). Long No. 284330 11" Diam. (Clipper Custom).
Pedal Adjustment: 1-1/4–1-1/2" free travel.
Removal: Remove transmission (see below). Remove flywheel lower housing, and clutch release bearing. Mark flywheel and clutch cover. Remove clutch cover to flywheel bolts evenly to relieve tension.

SYNCHRO-MESH TRANSMISSION

Own. *See "Packard Synchro-mesh" in Transmission Section.*
Transmission Controls: *See "Transmission Controls" in Transmission Section.*
Removal: Disconnect speedometer cable, gear shift rods from levers on transmission case, and propeller shaft at rear universal joint. Remove propeller shaft completely by slipping front universal joint flange off the transmission main shaft. *(CAUTION*–Wire or tape the two bearings of the universal joint together to prevent them from falling off). Support rear of engine with a jack. Remove rear engine support mounting and support crossmember. Remove capscrews attaching transmission to flywheel housing. Using two pilots in bolt holes, slip transmission to rear so that clutch release bearing pull back spring may be unhooked. Remove transmission.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

OVERDRIVE

Warner Type AS8-R11. Planetary gear type with solenoid operation and accelerator pedal controlled kickdown. Overdrive lockout switch not used.
See "Warner R11" Overdrive in Transmission Section.
Overdrive Controls: *See "Overdrive Controls" in Transmission Section.*
Removal: Same as for Synchro-mesh Transmission (above) after disconnecting overdrive control cable from lever on right side of overdrive case, electric leads at governor and solenoid. Remove governor, then remove solenoid.

ULTRAMATIC DRIVE

Own. "Twin Ultramatic", Torque converter (with hydraulically operated direct speed clutch) and hydraulically operated planetary unit with manual control.
See "Twin Ultramatic Transmission" in Transmission Section.
►*TESTING & TROUBLE SHOOTING: See "Twin Ultramatic Transmission" in Transmission Section.*
Lubrication: Check fluid level every 1000 miles, drain and refill every 25,000 miles.
Checking Fluid Level–*(CAUTION–Fluid level must be checked at normal operating temperatures and after engine has been idling at 800 RPM. for at least one minute . to completely fill the transmission).* Run engine at low idle speed while fluid level is being checked, using the dipstick located in engine compartment. Add fluid through dipstick tube as required to bring level to "Full" mark on dipstick.
*NOTE–*If fluid level doubtful due to bent or distorted dipstick tube, check actual fluid level in transmission as follows: Place car on level floor and allow engine to run at idle speed for five minutes in "N" (neutral). Place a pan under rear of transmission and remove plug in rear of transmission case. If no oil runs out of opening, add oil until it begins to run out, install plug, then ADD ONE QT. If oil does run out when plug removed at rear of transmission, allow to drain to level of hole, then ADD ONE QT.
Capacity–Approximately 11 qts. Use only Packard Ultramatic Drive or any Type "A" Automatic Transmission Fluid which has an AQ-ATF number embossed on container.
►*OTHER TWIN ULTRAMATIC SERVICE DATA: See "Twin Ultramatic Transmission" in Transmission Section.*

UNIVERSALS

Spicer (Std. & Overdrive Cars), Universal Products (Ultramatic Drive Cars).

►*CAUTION:* Rear universal joint flange nut controls rear axle pinion bearing preload which **must be adjusted** whenever nut is loosened. *See "Packard Hypoid" in Rear Axle Section.*

REAR AXLE

Own. Semi-floating hypoid gear type with Hotchkiss Drive.
See "Packard Hypoid" in Rear Axle Section.

Axle Ratios

Model	Std.	O.D. Cars	Ultramatic
5522	3.9-1	3.9-1	3.07-1
5542, 47	3.9-1	3.9-1	3.23-1
5562, 67	3.9-1	3.9-1	3.23-1
5582, 87, 88			①3.07-1

①–3.23-1 & 3.54-1 optional ratios.
Backlash–.004-.008".
Carrier Removal: Remove axle shafts (see Axle Shaft Removal below). Disconnect rear universal (wire trunnions), wire or prop propeller shaft up against floor pan with a 2 x 4" inserted inside frame crossmember. Drain differential, replace drain plug. Clean off housing, take off carrier mounting nuts, lift carrier assembly out.
Axle Shaft Removal: Remove wheel and brake drum (use screw type puller J-4153 (do not use knock-out type puller or thrust block may be damaged). Disconnect brake line at wheel cylinder. Remove nuts at oil seal guard and take off seal guard, gasket, retainer, oil seal, brake support plate, and bearing shims. Remove axle shaft and bearing using Puller J-2552 (do not drag shaft on inner seal). Use Tool J-943-B to remove inner seal.
Wheel Bearing Adjustment: Endplay controlled by shims between flange end of housing and brake backing plate. Add or remove shims (furnished .005", .007", .020" thick) at one wheel if .050" or under; at both wheels if over .050" to secure .004-.007" endplay.
Endplay–.004-.007".

SHOCK ABSORBERS

Delco or Monroe. Direct acting hydraulic type. Serviced by replacement.

FRONT SUSPENSION

Independent. Coil springs (Series 5540), "Torsion Level Suspension" (Series 5560 & 5580).
See "Packard" in Front Suspension Section.
Kingpin Inclination– 5°50'.
Caster–Neg. 1° ± 1/2°.
Camber–*0° (Pos. 3/4° to Neg. 1/4° range).*
Toe-In–0" (plus 1/16", minus 0").

STEERING

Manual: Gemmer. Worm and three tooth roller.
See "Gemmer Worm & Roller" in Steering Section.
Power Steering (Series 5540): Monroe Linkage Type.
See "Monroe Linkage Type" in Steering Section.
Power Steering (Series 5560 & 5580): Bendix Linkage type.
See "Bendix Linkage Type" in Steering Section.
Steering Linkage: *See "Steering Linkage" in Steering Section.*
Steering Wheel & Horn Button Removal: *See "Gemmer Worm & Roller" in Steering Section.*
Steering Gear Removal: *See "Gemmer Worm & Roller" in Steering Section.*

BRAKES

Bendix Hydraulic. Single Anchor (without eccentric). Hand lever applies rear wheel service brakes.
rear wheel service brakes.
See "Bendix Hydraulic" in Brake Section.
Drum Diameter–11" (Series 5540 & 5560). 12" (Series 5580).

Lining Width	Front	Rear
5540, 5560	2-1/2"	2"
5580	2-1/4"	2"

Lining Thickness–3/16" (all series).

Lining Length	① Primary	① Secondary
5540, 5560	9-5/16"	12"
5580	11-1/2"	13"

① –Front & Rear wheels.
Clearance–.015" at both ends of secondary shoe with primary shoe forced out against drum. Turn brake adjusting screw until wheel can just be turned by hand, then back off screw until wheel turns free.

Standard Master Cylinder: On bracket on left side of frame near transmission support.
Checking Fluid–Access hole in front floor pan at left corner of drivers seat.
Removal–Remove brake lines from master cylinder. Disconnect pushrod at pedal. Remove gearshift selector linkage bellcrank from mounting bolt stud. Remove mounting bolts and master cylinder.

Power Brakes: Bendix Easamatic. Combination power cylinder and hydraulic master cylinder.
See "Bendix Power Unit" in Brake Section.
Checking Fluid–Check level every 1000 miles. Add fluid to bring level to full mark.
Removal of Power Unit–Disconnect hose line and electrical wiring from power unit (raise hydraulic line above level of junction assembly to prevent fluid leakage). Disconnect and remove brake and accelerator pedal. Remove steering column grommet retainers, slide grommet out of way. Remove carpet retainers and fold carpet back. Remove cover plate screws, then remove power brake and cover as an assembly, take out mounting screws and remove power brake from cover.

MISC. MECHANICAL

Windshield Wipers: Vacuum type, cable operated. *See "Windshield Wipers" in Miscellaneous Section.*
Air Conditioning: Frigidaire. *See "Frigidaire Air Conditioning" in Miscellaneous Section.*
Power Window Regulators: Electric type with individual motors in each window. *See "Electric Window Regulators" in Miscellaneous Section.*
Power Seat Controls: Individual electric motors for horizontal and vertical seat adjustment. *See "Electric Seat Controls" in Miscellaneous Section.*
Power Top Controls: Hydro-Lectric type. *See "Hydro-Lectric Top Controls" in Miscellaneous Section.*

ENGINE

6 CYL. MODELS

ENGINE ASSEMBLY REMOVAL: Engine, clutch, and transmission assembly can be removed from car as an assembly, as follows: Remove hood and radiator core. Disconnect propeller shaft at transmission. Disconnect transmission controls at transmission (wires to overdrive controls), and speedometer cable. Disconnect clutch linkage at clutch housing. Disconnect fuel pump flexible line at pump, throttle and choke controls at carburetor, heat indicator tube at head. Disconnect wires from generator and starter, coil and distributor. Disconnect exhaust pipe at manifold. Disconnect oil gauge tube at flexible line. Remove crankcase breather pipe, and the front and rear engine support bolts. Disconnect hand brake linkage. Remove carburetor air cleaner. Connect hoist to engine and lift assembly out of chassis.

V8 MODELS

ENGINE ASSEMBLY REMOVAL: Drain cooling system (both cylinder bank drain cocks and radiator). Disconnect propeller shaft at transmission and disconnect wires and linkage at transmission and clutch. Remove exhaust pipes, hood, and battery. Disconnect the usual items under hood such as fuel lines, radiator hoses, wires, etc. If using engine lifting fixture C-3162, remove carburetor assembly after disconnecting integral choke tube, fuel lines as listed above.. Remove radiator shroud (if so equipped). Attach lifting fixture to carburetor flange studs on intake manifold, and hook chain hoist to eyebolt. Place a jack under transmission to relieve weight. Then remove engine rear support mounting bolts and cross-member. Then remove engine front support mounting bolts. Lower jack at transmission and remove from under car. Raise engine and at the same time, work engine out of chassis toward the left front fender.

ENGINE MOUNTINGS

1955 MODELS

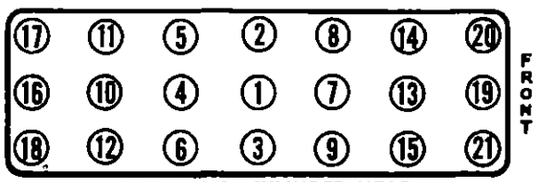
►***HARSH ENGINE VIBRATION CORRECTION (Due to Short Insulator Spacer):*** To obtain proper clearance of engine support, install washer 1⅛" diameter, 1/16-3/32" thick with ½" hole, Part No. 446221, between lower end of insulator spacer assembly and large washer. A washer should be installed on both right and left engine rear mounts. Rubber washer on left engine mount should be installed above extra washer (if car model so equipped). Make sure that correct type rubber insulator is used. Use of harder insulator will cause transfer of engine vibration to car.

ENGINE MOUNTINGS: On some models, a rubber insulating washer 3/32" thick is provided for left mount only, and should be installed between frame and lower flat washer. This washer eliminates transfer of noise on rapid acceleration. Washer must not be compressed between frame and flat washer. *CAUTION*—Do not over-tighten rear engine mounting bolts. Over-tightening these bolts may collapse insulator spacer. ***For "Harsh Engine Vibration Correction (Due to Short Insulator Spacer)" see above.***

OIL PAN

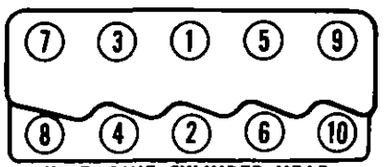
1946-53 MODELS

OIL PAN REMOVAL: Drain oil, replace drain plug. Remove clutch housing underpan to avoid damaging oil pan gaskets on underpan dust shield. Remove oil level indicator, drop oil pan to tie-rod. Pan can then be removed by reaching in and raising oil strainer to clear baffle while sliding pan out to rear.



Installation—When installing new gaskets, end gaskets should extend ¼" to ⅛" above level of oil pan (these ends must not be cut off). Side gaskets installed with ends resting on top of protruding end gaskets. Gaskets will be compressed into place when oil pan screws tightened.

CYLINDER HEAD & MANIFOLD



ALL M DELS

CYLINDER HEAD INSTALLATION: Use Torque Indicating Wrench to tighten cylinder head bolt nuts and capscrews, tighten in correct sequence as shown in diagram for each car.

Tightening Torque—See Tightening (Torque Wrench) Specifications above.

6 CYL. ENG. CYLINDER HEAD

V8 ENGINE CYLINDER HEAD

6 CYL. M DELS

CYLINDER HEAD INSTALLATION: When installing cylinder head, use new gasket. Coat threads of capscrews with sealer except the three screws that lead into intake manifold ports. If sealer used on these capscrews, there is a possibility that it will be drawn into carburetor or valves. Use torque indicating wrench to tighten cylinder head bolt nuts and capscrews. Tighten in sequence shown in diagram.

6 CYL. MODELS

INTAKE & EXHAUST MANIFOLD INSTALLATION: Install the new gasket between intake and exhaust manifold (make sure that heat valve is free and operates freely), and insert the four bolts through exhaust manifold and into intake manifold. Draw bolts down snug but DO NOT TIGHTEN. Install thermostatic coil spring and counter-weight. Install manifold-to-engine block gaskets and install assembled manifolds. While holding manifold and gaskets evenly against engine block, install long

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

center bolts and draw down snugly. (If bolts show signs of water leakage, coat threads with suitable sealer). Install remaining washer and nuts. *(CAUTION*—Be sure to install the four conical, brass washers and nuts on the extreme ends of exhaust manifold). Tighten manifold nuts and bolts, starting from center and working out towards ends, to 15-20 ft. lbs. torque. Tighten the four bolts holding exhaust manifold to intake manifold.

V8 MODELS

CYLINDER HEAD INSTALLATION (Single Rocker Shaft): Before cylinder head removed, remove rocker shaft assembly. Slide out push rods and place them in sequence in a suitable rack in order that each push rod can be reinstalled in its original position. When installing cylinder head, use new gaskets. Make sure all holes are punched out. Be certain cylinder head enters both dowel guide pins in cylinder block. Tighten cylinder head bolts in sequence shown in diagram. Slide push rods in position. Lower rocker shaft assembly down on two locating studs. Install all washers, nuts and bolts. *CAUTION*—Extreme caution must be exercised when tightening rocker shaft bolts and nuts so that hydraulic tappets have time to bleed down to their operating length. If tappets are forced down too rapidly, damage to push rods, tappet bodies or rocker arms will result.

MANIFOLD HEAT CONTROL

V8 MODELS

MANIFOLD HEAT CONTROL VALVE: Attached to right cylinder block exhaust manifold, and can be removed and repaired without removing manifold.

Removal: Remove the two exhaust manifold flange bolts and nuts and apply pressure to exhaust pipe to separate and remove the heat control valve. Remove counter-weight tightening bolt and nut and remove counter-weight. Remove thermostatic spring, spacer washer, then remove horseshoe lock and remove the anti-rattle spring.

▷*CAUTION—Do not operate the engine without heat control valve in the manifold.*

Installation: Install the anti-rattle spring and horseshoe lock, and secure lock to shaft by squeezing end of horseshoe lock together. Check valve and shaft for free movement. Install spacer washer and place inner tongue of coil spring in shaft slot with outer tongue of spring toward forward side of valve and in a down position. Install bumpers on each side of counter-weight, and insert the counter-weight shaft key into counter-weight, securing it in position with the lock bolt. Hold heat control valve in the open position, and move the outer end of thermostatic spring around and up ¾ of a turn, hooking end of spring under forward stop screw. Hold valve in closed position and install counter-weight assembly on shaft. Center butterfly valve in valve body and line up bumpers to clear stop pin, then press counter-weight all the way onto the shaft, with the anti-rattle spring adjusted so that when the valve shaft is pulled up against anti-rattle spring there will be about 1/16" tensional drag on the shaft. Install manifold heat control valve assembly on exhaust manifold. Check assembly for free operation.

ORIGINAL BORE & PISTONS

6 CYL. MODELS

ORIGINAL PISTON & CYLINDER BORE SIZES: Original production (new engine) piston and bore sizes indicated by letter located as follows:

Piston Size—Letter stamped on piston head.

Bore Size—Letter stamped on distributor side of engine at top of block. Do not confuse this letter with 'Special Standard' size letter indicating oversize bore.

"Special Standard" Size Bore—Letter "A" or "AB" following engine number indicates engine has .020" oversize standard cylinder bore.

NOTE—When measuring piston diameter take reading at right angles to pin holes and ¾" from bottom of skirt.

PISTONS

1946-53 MODELS

REPLACEMENT PISTONS: Finished (Aluminum Alloy) Pistons—Furnished in standard size and .005", .020", .030", .040", .060" oversize, for all models.

Semi-Finished (Aluminum Alloy) Pistons—These pistons furnished in two sizes (1) For cylinder bores from standard to .023" oversize. (2) For cylinder bores .025" to .060" oversize. Pistons are finished (head & ring grooves) except for skirt. Pistons must be finished on cam grinding equipment. Do not finish pistons circular. Skirt is elliptical (.010"-.014") with smaller diameter across pin bosses than across thrust faces, and piston is tapered (.0005-.0015"), with smaller diameter at top of piston.

IMPORTANT—Use same type piston when replacing partial set. All pistons in engine must be of same type.

PISTON RINGS

1946-53 MODELS

REPLACEMENT PISTON RINGS: Three types of piston ring sets furnished by car manufacturer for service replacement as follows:

Mopar Oil Master Ring Sets—These rings designed to be installed in cylinders with walls tapered .005" to .030" when cylinder walls not to be reconditioned. No. 4 oil ring is special 4-piece type (*upper and lower rails with stepped segment* between rails and slotted expander). Mopar Oil Master Ring Sets are furnished with either a regular top ring or a chromed top ring.

Mopar Oil Saver Ring Sets—These ring sets are designed to be installed in cylinders with .005" or less taper, or where cylinder walls have been reconditioned. This set consists of the same rings as used in Oil Master Set except that No. 3 & No. 4 rings are alike (slotted oil ring with slotted expander). Mopar Oil Saver Ring Sets are furnished with either a regular top ring or a chromed top ring.

Mopar Chrome Master Ring Sets—These ring sets are designed to be installed in cylinders with walls tapered .005-.003" when cylinder walls are not to be reconditioned. Top and bottom rings are chromed.

Oil Ring Set Sizes—All piston ring sets are available in the following sizes: **Standard** (for standard to .009" oversize cylinders); **.010"** (for .010" to .019" oversize cylinders); **.020"** (for .020" to .029" oversize cylinders); **.030"** (for .030" to .039" oversize cylinders); **.040"** (for .040" to .049" oversize cylinders); **.050"** (for .050" to .060" oversize cylinders).

ORIGINAL BEARING SIZES

1946-53 MODELS

ENGINE NUMBER LETTERS ('SPECIAL STANDARD' BORE & BEARING SIZES): Letters used with engine number (not in circular pad) denote following 'special standard' sizes 'A'—.020" larger standard cylinder bore. 'B'—.010" smaller standard main and connecting rod bearings. 'AB'—Cylinder bore, main and connecting rod bearings 'special standard'.

▷**.001" THICKER WALL MAIN & CONNECTING ROD BEARINGS** *(One or more journals machined undersize)*—Inspect "hollowed out" section of crankshaft center counter-balance for stamped marks indicating main and connecting rod journals which are machined .001" undersize. Stamped marks indicate position of undersize journals in the following manner: "R" indicates connecting rod journal. "M" indicates main bearing journal. Number following letter indicates main or connecting rod journal number (counting from front of engine).

CONNECTING ROD & BEARINGS

1946-53 MODELS

▷*CAUTION—See ORIGINAL BEARING SIZES for markings indicating engines equipped with bearings other than standard sizes.*

CONNECTING ROD BEARINGS: Removal & Installation—Bearing shells can be removed after taking off bearing caps. When installing bearing shells, oil hole in rod and bearing must be aligned, and ear on bearing halves must be fitted in notch in rod and cap.

Fitting Bearings—To check bearing clearance, place oiled piece of feeler stock .0015" thick, ½" wide, ¾" long between bearing and crankshaft. Tighten bearing cap nuts. Bearing clearance is correct when slight drag is felt when turning crankshaft by hand. If no drag felt, and crankshaft out-of-round and taper not over .001", install proper undersize bearing listed below.

Undersize Bearings—Finished bearing shells furnished .001", .002", .010", .012" undersize. Install .001" or .002" undersize bearings on crankshafts which show slight wear, .010" undersize for 'Special Standard' .010" crankshafts (see Engine Lettering 'Special Standard' Bore & Bearing Sizes Note above), .012" undersize bearings for 'Special Standard' .010" crankshafts which show slight wear. Bearing size correct when proper clearance obtained (see Fitting Bearings).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

CRANKSHAFT & MAIN BEARINGS

►*1953 HY-DRIVE ENGINE REAR BEARING CHANGE:* New bearing (Service Pkg. No. 1450682) used in production and furnished for use in **Hy-Drive engines only.** Bearing upper half should be installed with oil groove toward **front** of engine, lower bearing oil groove should correspond (drain back groove and hole omitted, two shallow drain grooves on thrust face extend across entire length of thrust surface).

1946-53 MODELS

►***CAUTION—See ORIGINAL BEARING SIZES for markings indicating production engines equipped with bearings other than standard size.***

REPLACEMENT MAIN BEARING CAPS: Furnished for service replacement where original cap damaged or broken. These replacement caps same as original except for stud holes being 1/64" larger, and bearing cap length which is 1/16" shorter.

Fitting—Replacement caps must be fitted to engine by filing or shimming to obtain proper bearing clearance. This is only necessary when replacement cap originally fitted to engine (cap should not be filed or shimmed to compensate for bearing wear). *CAUTION*—When new bearings installed, always use complete bearing (do not use new bearing half with an old half). Upper and lower halves for all bearings are alike.

Fitting Bearings—To check bearing clearance, place a piece of oiled feeler stock .0015" thick, ½" wide, ¾" long between bearing and crankshaft. Tighten bearing cap nuts or capscrews. Bearing clearance is correct when slight drag is felt when crankshaft turned by hand. If no drag felt, and crankshaft journal out-of-round and taper not over .001", install proper undersize bearings listed below.

Undersize Bearings—Finished bearing shells furnished .001", .002", 010", .012" undersize. Install .001" or .002" undersize bearings on standard crankshaft which shows slight wear. .010" for 'Special Standard' .010" crankshaft (see Engine Lettering 'Special Standard' Bore & Bearing Size Note above), .012" undersize bearings for 'Special Standard' .010" crankshafts which show slight wear. Bearing size correct when proper clearance obtained (see Fitting Bearings).

6 CYL. MODELS

CRANKSHAFT OIL SEALS: Car manufacturer recommends that new oil seals be installed when chain cover or rear main bearing cap removed.

Front Oil Seal—Oil seal located in timing chain cover. Consists of spring backed composition seal in stamped steel housing pressed into chain case cover with composition gasket installed between seal and cover. To install, proceed as follows: Insert new composition gasket in chain case cover, install new seal in place with drift or similar tool slightly larger than seal (seal press fit in cover). Center seal on crankshaft when installing chain case cover as follows: Install chain case cover on engine with cover screws tightened just enough to hold cover in place, install centering tool C-522 on end of crankshaft and hold it in place by tightening crankshaft starting jaw nut finger tight, tighten chain case cover screws and as cover is being compressed, tighten crankshaft jaw nut so as to maintain slight tension between centering tool and seal. Remove tool after chain case cover screws secured. Tighten starter jaw nut to 198 ft. lbs.

1946-52 6 CYL. MODELS

Rear Main Bearing Seal—Rope type seal used, and seal surface on crankshaft is knurled. ***(CAUTION—Rope type seal is not interchangeable with later type neoprene seal).*** It is not necessary to replace upper half of seal unless inspection indicates leakage or wear. To replace lower seal, remove oil pan, clutch housing pan, and rear main bearing cap. Use care to prevent damage to cylinder block, bearing surface, or upper half of seal. Install new lower seal by applying a coating of sealing compound to both sides of lower retainer gasket. Position gasket so that edges of gasket and tabs on cap gasket butt together. Place retainer in position and partially tighten retainer screws. Then tighten bearing cap in position, properly locating seal in position in relation to crankshaft, and fully tighten main bearing cap bolts to 80-85 ft. lbs. torque.

►**Upper Seal Note—If** it is necessary to replace upper seal, remove flywheel, upper seal retainer capscrews, and then upper retainer.

1953-55 6 CYL. MODELS

Rear Main Bearing Seal—Neoprene type seal. ***(CAUTION—Neoprene type seal is not interchangeable with earlier rope type seal).*** When replacing seal, both upper and lower halves should be replaced. Remove oil pan, clutch housing pan, and rear main bearing cap. Remove seal from cap, and then remove upper seal by pushing one corner of seal until opposite end protrudes about ⅜" from block. Pull out with long-nosed pliers. Install new seal in lower half by carefully inserting lower half of seal into bearing cap. Before installing upper seal, coat seal contacting lip with grease. Insert one end of seal into block and push it into place with a rolling motion. Install main bearing cap, making certain that tabs of cap gasket fit in cap seal channel. Tighten cap bolts to 80-85 ft. lbs.

►***CRANKSHAFT CAUTION—Do not use a crankshaft with a knurled seal surface with a neoprene type oil seal.***

V8 MODELS

REAR MAIN BEARING SEAL: Rope type seal of braided asbestos. With bearing cap, bearing and seal removed, install a new seal in position in cap so that both ends of seal protrude above cap. Tap seal down in position with Tool C-3131 until tool is seated in bore. Hold tool down and cut off protruding ends flush with cap. Install bearing insert and both cap seals. The long cap seal should be installed so that when cap is in position, seal is on the oil filter side of engine.

ENGINE FRONT COVER

1955 6 CYL. MODELS

FRONT OIL SEAL: To replace, drive old seal out with suitable drift. When installing seal, make sure seal is driven into place evenly to insure a tight fit. Use a new gasket and position cover in place.

FRONT COVER INSTALLATION: Use new gasket and position cover in place. Install screws but do not tighten. Install pulley and hub on crankshaft far enough so that seal can be evenly positioned on crankshaft. Tighten two screws on right side lightly. Then tighten remainder of screws in like manner. Repeat tightening procedure and torque screws to 15 ft. lbs.

V8 MODELS

ENGINE FRONT COVER (Single Rocker Shaft Engines): Proceed as follows:

Removal: Drain and remove radiator. Disengage fan belt and remove generator. Install Tool C-3033 over pulley and force pulley off end of crankshaft. Support engine with suitable chain hoist fastened to intake manifold. Remove motor support "U" bolts and nuts. Remove fan blades and hub, then remove bolts that hold water pump housing to cylinder block and heads. Lift water pump housing, water pump, front motor support and insulator up and away from front of engine. Discard gaskets. Loosen bolts that hold oil pan to cylinder block. Drop pan slightly to clear chain case cover. Disconnect inlet and outlet fuel lines at fuel pump. Remove bolts that hold pump to chain case cover. Slide pump out and away from engine. Discard gasket. Remove bolts and washers from cover. Disengage cover from locating dowels, remove from engine. Discard gasket.

Installation: Be sure mating surfaces of cover and cylinder block are clean and free of burrs. Install new gasket and position cover locating dowels. Coat screws with suitable sealer and tighten to 15 ft. lbs. *NOTE*—Coat four center screws with sealer suitable for water. Coat other screws (upper and lower) with sealer suitable for oil.

FRONT OIL SEAL: Remove old seal by driving it out with Tool C-3050. Place new seal on the chain case cover with the projecting flange facing the inside of the cover. Insert seal gasket and drive new seal in place with Tool C-3051.

CAMSHAFT & BEARINGS

6 CYL. MODELS

CAMSHAFT REMOVAL: Remove Front End Assembly as a unit. Remove cylinder head, fuel pump, oil pump, valve tappet cover plates, crankshaft pulley, front motor support (with front of engine jacked up), timing chain cover, camshaft sprocket and timing chain. If valves and valve springs are not to be removed, prop valves up by inserting wooden wedges at opposite sides under valve head. Raise tappets and hold in this position (use spring type clothes pins or similar tool to hold tappets up). Withdraw camshaft (rotate shaft to clear any obstructions).

V8 MODELS

CAMSHAFT REMOVAL: Drain radiator, remove radiator and crankshaft pulley. Support engine with chain hoist attached to intake manifold. Remove engine support U-bolts. Remove fan, water pump, and water pump housing assembly. Loosen oil pan

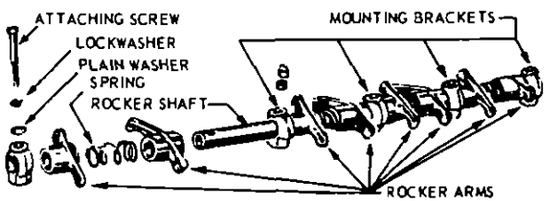
CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

bolts sufficiently in order that oil pan clears chain case cover, camshaft gear hub nut, fuel pump eccentric and dowel. Then remove camshaft gear and timing chain. Support engine at front of oil pan. Then remove intake manifold, distributor, distributor drive gear, tappet chamber cover, rocker cover, rocker shaft assemblies and push rods. Use Tool C-3158 to pull out hydraulic tappets. If varnish build-up is excessive, use puller part of Tool C-3158 and work tappet out of bore. Remove four camshaft thrust bolts, then remove camshaft.

VALVE SYSTEM

VALVE SEAT INSERTS



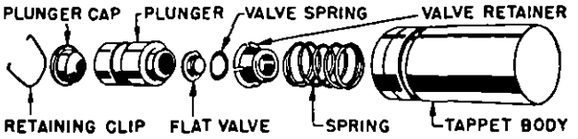
6 CYL. MODELS

EXHAUST VALVE SEAT INSERT REPLACEMENT: Furnished .010" oversize. Use Tool C-732 to remove inserts. After inserts have been removed from engine, smooth any roughness of seat with a blunt drift. Valve seat inserts should be from .002-.004" larger than counterbore to insure correct fit. If inserts are found to be loose, enlarge counterbore with Tool MH-M-1 and install oversize insert. Place inserts in dry ice for approximately 10 minutes. Clean counterbore thoroughly and install a chilled insert with valve side up, and drive it into place with Installing Tool C-767.

R CKER ARMS

V8 MODELS

ROCKER ARM ASSEMBLY (Single Rocker Arm Shaft): Hold rocker arm shaft and end bracket in a horizontal position with oil grooves facing down. Slide an intake rocker arm over shaft and down against bracket, with diagonal slant of arm close to bracket. Then slide a spacer spring over shaft and down against intake rocker arm. Next, slide an exhaust rocker arm over shaft and down against spacer spring, followed by a shaft bracket. Continue to slide first an intake rocker arm, then a spacer spring followed by an exhaust rocker arm and bracket, over shaft until last bracket has been installed. Slide push rods into push rod holes. Be sure that rocker arms are in a horizontal position, then lower rocker shaft assembly down on two locating studs on head. Install flatwashers and nuts.



V8 ROCKER ARM ASSEMBLY

HYDRAULIC VALVE LIFTER

V8 MODELS

HYDRAULIC VALVE LIFTERS (One-Piece Integral Type) Barrel type. Unit consists of plunger and valve assembly operating within a cylinder formed by valve lifter body.. Oil is introduced to this unit through hole in side of lifter plunger.

V8 ONE-PIECE VALVE LIFTER

Removal: Drain cooling system to a point below level of intake manifold, and remove intake manifold. (CAUTION—cover intake port in cylinder head to avoid the entry of dirt). Remove crankcase ventilator pipe and valve chamber cover. Install rocker arm and valve compressor tool C-3024 over rocker arm so heel of tool rests on the valve stem side. Make certain that valve is seated and that valve lifter is on low side of camshaft lobe. (See "Low Point of Camshaft Lobe," following). Using handle of tool C-3024 for leverage, compress valve spring sufficiently to raise rocker arm above push rod end. While holding rocker arm in this position, slide rocker arm to one side along tube and remove push rod. Insert hooked portion of tool C-3158 into hole in lifter body (this portion of tool can be used to remove lifter without varnish build-up on lower end of lifter). Remove lifter from bore. If lifter sticks in bore, proceed as follows: Slide puller portion of tool C-3158 through cylinder head push rod holes and seat firmly in cap in lifter. Insert puller pin through lifter body and tool shaft in holes provided. Grasp tool handle and pull lifter out of bore with a twisting motion. As lifter clears bore, withdraw puller pin and remove puller. Remove lifter from chamber.

Disassembly: ***(CAUTION—Disassemble one lifter at a time to avoid the possibility of mixing lifter parts. It is very important that lifter parts not be interchanged.)*** Depress lifter plunger with a push rod and remove plunger retainer spring clip, plunger cap, plunger ball check (or flat type valve), valve springs, valve retainer, and plunger spring from lifter body. Inspect plunger, lifter body, valves and valve seats for signs of scoring, wear or pitting. Check to see that valve exerts a slight pressure on valve spring to insure valve seating. Clean lifter assembly in clean solvent and remove all traces of varnish and carbon. Blow parts dry with air. DO NOT USE A CLOTH AS LINT WILL CAUSE LIFTER TO OPERATE UNSATISFACTORILY.

Testing: Remove plunger cap and immerse lifter assembly in an upright position in a container of kerosene. ***(CAUTION***—Container and kerosene must be absolutely clean). Allow lifter to fill with kerosene, then remove and replace the plunger cap. Holding lifter in an upright position and using tool C-3160, compress plunger slightly a few times to fill lifter body. Then compress lifter firmly with testing pliers, and if plunger collapses instantly as pressure is applied, disassemble, inspect and clean again. If second cleaning fails to prevent lifter from collapsing instantly when compressing, replace lifter. When cleaning and testing has been completed, remove kerosene and prime lifter lightly with clean engine oil before installing. This will prevent possible scoring of lifter plunger when engine is first started.

Reassembly: Reverse disassembly procedure as noted above.

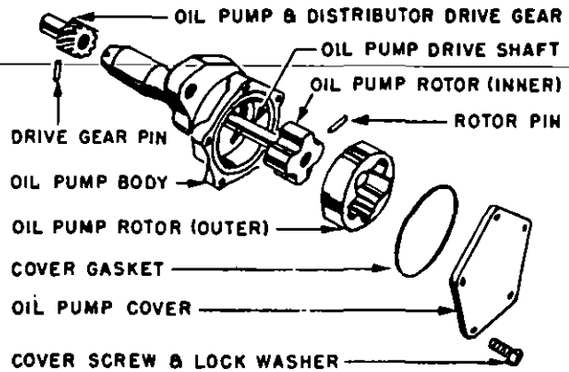
V8 MODELS

LOW POINT OF CAMSHAFT LOBE: Remove distributor cap, noting position of rotor for Nos. 1 and 6 cylinders. Set timing mark "DC" located on crankshaft pulley to pointer. With rotor at No. 1 firing position, the following lifters will be on the low side of the cam lobe: No. 2 intake and exhaust, No. 4 exhaust, No. 7 intake, No. 8 intake and exhaust ***(NOTE***—To remove No. 1 intake and exhaust lifter, rotate crankshaft ¼ turn clockwise from above position after removing lifters listed). With rotor at No. 6 position, following lifters will be on low side of cam lobe: No. 3 intake and exhaust, No. 4 intake, No. 5 intake and exhaust, No. 7 exhaust ***(NOTE***—To remove No. 6 intake and exhaust lifter, rotate crankshaft ¼ turn clockwise from above position after removing lifters listed).

OILING SYSTEM

OIL PUMP

6 CYL. MODELS



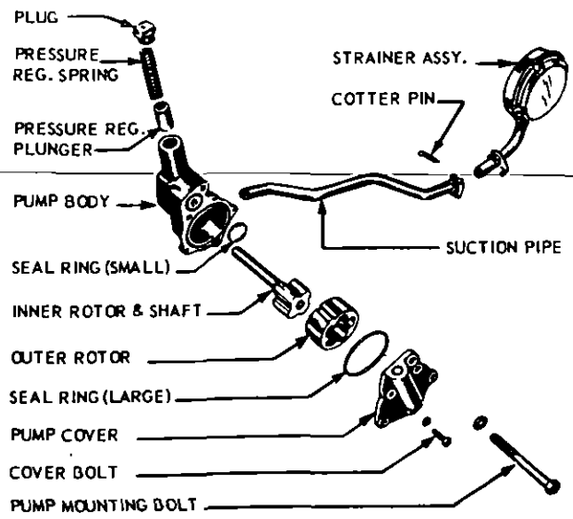
ROTOR TYPE OIL PUMP: Removal—Before removing oil pump, rotate crankshaft and make sure "DC" mark on crankshaft pulley lines up with pointer on timing chain case cover. Do not rotate engine with oil pump removed. Remove the attaching screws and remove pump from engine ***NOTE***—On some models it will be necessary to remove the two upper cover capscrews to obtain sufficient clearance to remove oil pump.

Disassembly & Inspection: Remove the oil pump cover and gasket. Hold hand over cover opening and with pump upside down, turn drive shaft until outer rotor slips out. Drive out the straight pin holding pump drive gear to shaft. Press the shaft out of drive gear and slide shaft and inner rotor assembly out of pump body. Wash all parts and dry with air. Inspect all parts and replace as necessary, then measure clearance between opposite lobe of inner rotor and outer rotor. Clearance should be .010" or less. If clearance is greater, replace both rotors. Measure thickness and diameter of outer rotor. If thickness is .748" or more and diameter is 2.245" or more, rotor is satisfactory. Thickness of inner rotor should be .748" or more. If either rotor is less than these dimensions, replace BOTH rotors. Insert both rotors into pump body and place a straight edge across pump body between bolt holes. Clearance between straight-edge and rotor should be .004" maximum. If greater, replace pump body. Press outer rotor to one side against pump body and measure clearance between rotor and body on op-

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

posite side. Maximum clearance should be .008". If greater, replace pump body. Cover should be smooth and flat. If it is scratched or grooved, replace cover.



6 CYL. OIL PUMP

Check flatness by placing a straight-edge across inner surface of cover. If it is possible to insert a .001" feeler between cover and straight-edge, replace cover.

Reassembly: Slide the drive shaft and rotor assembly into pump body. Press drive gear on shaft until end play of shaft is from .003" to .010". Press rotor down in body with hand and measure clearance with feeler gauge. Install pin and peen over both ends. If pin holes do not line up, drill a new pin hole through gear and shaft, using a 5/32" drill. Slide outer rotor into place in pump body. Install new cover gasket and install cover and tighten screws evenly.

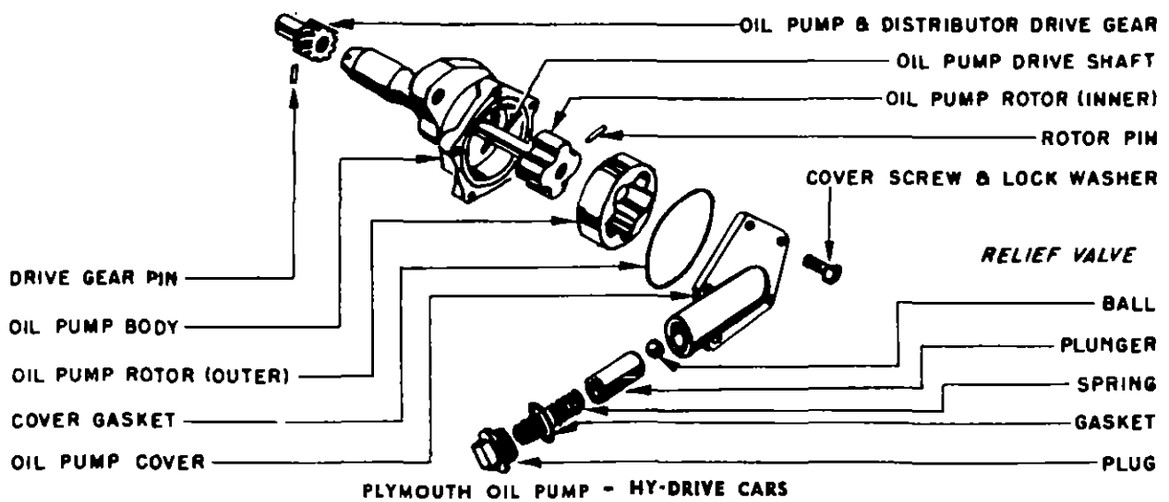
V8 M DELS

V8 OIL PUMP

ROTOR TYPE OIL PUMP: Removal—Drain engine oil, remove oil pan. Remove oil pump mounting bolts and lower pump straight down.

Disassembly & Inspection: Remove cotter pin holding oil strainer to oil pump suction pipe, then remove pipe. Remove cover bolts and cover. Discard oil seal ring. Remove pump rotor shaft and lift out pump outer rotor. Remove oil pressure relief valve plug and lift out spring and plunger. Wash all parts in a suitable solvent and inspect for damage or excessive wear. Check all pump parts as follows:

Outer Rotor—Measure diameter and thickness of rotor with micro-calipers. If diameter less than 2.244" or thickness less than .998", replace both inner and outer rotors.



Inner Rotor—Measure thickness of inner rotor with micro-calipers. If thickness measures less than .998", replace both inner and outer rotors.

Rotor Depth—Slide rotors in pump body. Place a straightedge across pump body. Use a feeler gauge and measure clearance between top of rotors and straightedge. If clearance in excess of .004", replace pump body.

Outer Rotor to Pump Body Clearance—To check rotors for excessive wear, measure clearance between lobes of inner and outer rotors. If clearance in excess of .010", replace both inner and outer rotors.

Reassembly: Use new oil seal ring between cover and body. Tighten cover bolts to 10-15 ft. lbs. Prime pump and then install new oil seal ring in pump mounting face.

Distributor-Oil Pump Drive Shaft Bushing: *See "Ignition Notes" below.*

PLYMOUTH OIL PUMP - HY-DRIVE CARS

COOLING SYSTEM

6 CYL. MODELS

WATER DISTRIBUTION TUBE: Replace whenever engine completely overhauled. If tube becomes rusted or corroded, overheating of engine may occur due to failure of water to circulate properly through cylinder block. To replace tube, remove radiator core and water pump. Pull tube out of block with stiff hooked rod. Install tube with slots up and be sure tube is inserted far enough into block so that water pump will seat properly against block.

1946-53 MODELS

RADIATOR CORE REMOVAL: Raise hood, drain cooling system, disconnect hoses. Take out nuts and capscrews at each side, lift core out, tilting top toward rear.

IGNITION NOTES

V8 M DELS

DISTRIBUTOR-OIL PUMP DRIVE SHAFT BUSHING: Removal—Insert Tool C-3052 and thread it into bushing. Holding puller head with wrench, tighten puller bolt and pull bushing out of bore in block.

Installation: Slide new bushing over burnishing end of Tool C-3053. Insert tool and bushing into bore of block. Drive bushing and tool down into position,

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

using a soft hammer. As the burnisher is pulled through the bushing by pressure applied to puller nut, tool will wedge bushing tight in its bore and will burnish bore to correct size. ***DO NOT REAM THE BUSHING.***

DISTRIBUTOR BASIC TIMING: Before installing distributor-oil pump drive shaft it will be necessary to time engine as follows: Rotate crankshaft until No. 1 cylinder is at TDC (or firing position). When cylinder is in this position, the pointer on chain case cover should be over "DC" on vibration dampener. Using Tool C-3027, position oil pump shaft so that it lines up with slot in drive gear. Coat shaft of drive gear with engine oil. Install it so that, after the gear spirals into place, it will index with oil pump shaft (slot in top of drive gear will be parallel with centerline of crankcase).

CLUTCH NOTES

1946-48 MODELS

CLUTCH OVER-CENTER SPRING: Service only if linkage disturbed or spring bracket on frame bent. Original setting can be obtained by using gauge C-705 as follows: Check spring bracket on frame and straighten if necessary, install gauge over pivot pins with lower end engaging coil spring bracket on frame (turn pedal rod turnbuckle until gauge fits properly). Then re-set pedal position and free travel as directed on car page.

1949-51 MODELS

CLUTCH-OVER CENTER SPRING: Check position of over-center spring bracket by measuring distance from center of pedal shaft grease fitting to lower edge of stamped hook directly above. This dimension should be ⅜" with pedal in returned position. Adjust spring tension by turning sleeve nut on spring eye-bolt. Correct adjustment for use with 9¼" and 9⅛" diameter clutch is obtained when threads on eye-bolt protrude through sleeve nut about 1/8-3/16". With 10" clutch, end of eye-bolt should be flush with outer face of sleeve nut to 1/16" inside the nut.

REAR AXLE NOTES

1946-52 MODELS

AXLE SHAFT OUTER OIL SEAL: Leather type seal mounted on brake support and bears on axle shaft.

Installation—With brake support removed and old seal driven out of support, new seal can be installed as follows: Soak new seal in thin oil for 30 minutes. Roll leather with smooth bar until pliable. Check seal bearing surface on axle shaft making sure surface is smooth. Install seal on front side of support and stake at three points on outer edge. Install sleeve tool C-745 in seal to protect it from damage during support installation. CAUTION—Lip of seal must not be folded when installing in support.

BRAKE NOTES

1946-55 MODELS

HAND BRAKE ADJUSTMENT (External Type): The hand brake adjustments can be made from beneath car as follows: Fully release hand lever (cable length adjusted by means of clevis at lower end). Adjust anchor screw for .015-.020" band to drum clearance by bending back tab of anchor screw lock and turning screw (on lower right side of brake), then lock screw by bending tab against flat of screw. Loosen guide bolt locknut and adjust guide bolt adjusting nut for .015-.020" band to drum clearance (these two nuts located in front of release springs at left side), then tighten locknut. Turn large adjusting bolt nut (on lower end of bolt below springs) for .015-.020" band to drum clearance for upper half of band. Groove in upper end of this nut must contact ridge on band operating lever spacer above nut.

NOTE—Clearance between side of anchor bracket at center of band and anchor must not exceed .005" (if clearance excessive band may be distorted when brake applied). To correct, compress saddle in vise or place on block and tap lightly with a hammer.

1954-55 MODELS

HAND BRAKE ADJUSTMENT (Internal Type): Place transmission shifting lever in neutral and be sure the hand brake is released. Disconnect front end of propeller shaft and remove adjusting screw cover plate. Loosen brake cable guide clamping screw and back off cable adjusting nut. Turn brake shoe adjusting nut to decrease shoe-to-drum clearance until a slight drag is felt on drum. Back off adjusting nut one full notch (using spanner wrench C-3014) to give approx. .010" clearance. (NOTE—be sure the two raised shoulders on the adjusting nut are seated in the grooves on adjusting sleeve). The cable length adjusting nut should be positioned against cable housing so there is at least .005" (but not more than .010") clearance between operating lever and brake shoe cable. To lock the adjustment, tighten cable housing clamp securely and then tighten cable adjusting nut against housing. Test hand brake lever for travel. When properly adjusted, 4 to 6 clicks of ratchet should be obtained to hold car. Install adjusting screw cover plate and connect propeller shaft.

HOOD ADJUSTMENT & HOOD LOCK CONTROL CABLE ADJUSTMENT: *See Plymouth Special Data.*

MODEL IDENTIFICATION

SERIAL NUMBER: On right front door hinge post.

	Detroit	Evansville	Los Angeles

ENGINE NUMBER: Stamped on boss on left front side of engine block between #1 and #2 cylinders.

TUNE-UP

COMPRESSION: Pressure—120 lbs. at cranking speed.

VACUUM READING: Steady 18-21" idling at 6 MPH.

FIRING ORDER: 1-5-3-6-2-4.

SPARK PLUGS: Auto-Lite Type A-5. 14 mm. Metric. Gaps—.030" ± .002".

►*RESISTOR TYPE SPARK PLUG NOTE—Auto-Lite No. 4S-140 Resistor type spark plug can be used without changing coil. Adjust distributor points to .020".*

IGNITION: See Coil, Condenser, and Distributor.
Breaker Gap—.020". Limits .018-.022".
Cam Angle or Dwell—38° closed, 22° open.
Breaker Arm Spring Tension—17-20 ozs.
Automatic & Vacuum Advance—*See Distributor.*

IGNITION TIMING: See Ignition Timing.
Std. Setting—At Top Dead Center.
Timing Mark—'DC' mark on dampener aligned with pointer on chain case cover. Vary as follows:
Octane Selector—Set for slight ping when accelerating with wide open throttle between 10-30 MPH.

CARBURETION: See Carburetor & Carb. Equipment.
Idle Setting—With engine warm, set throttle stop-screw for 6 MPH. idle speed. Set idle adjusting screw ½-1¼ turns open (Carter B&B), 1¼-2¼ turns open (Carter W1), adjust all models for smooth idle.
Idle Speed—6 MPH. hot or slow idle speed.
Float Level (Carter B&B)—Top of the float (not soldered seam) 5/64" ± 1/64" below top edge of bowl.
Float Level (Carter W1)—½" from top of float at free end to machined surface (gasket seat) on bowl cover with valve closed (invert to check).
Float Level (Stromberg)—Fuel level 5/8" below top edge of bowl (even with bottom of inspection hole).
Accelerating Pump—Center Hole Normal Setting, Outer Hole (max.) Winter, Inner (min.) Summer. Carter W1 carburetor does not have adjustment.

Fuel Pump Pressure: 3-4½ lbs.

MANIFOLD HEAT CONTROL: Thermostatic coil type. Install coil so approx. one full turn (335°) required to hook free end over stop stud for correct operation.

VALVES: See Valve Timing.
Tappet Clearance—.008" Intake, .010" Exh., Hot.

IGNITION

IGNITION SWITCH: Briggs & Stratton or Mitchel-lock. NOTE—No armored cable used.

COIL: Auto-Lite No. IG-4806 or IG-4809. Mounted above distributor on ignition cable bracket.
Ignition Current—2¼ amperes idling, 5½ stopped.

CONDENSER: Auto-Lite Part No. IG-3927A.
Capacity—.25-.28 microfarad.

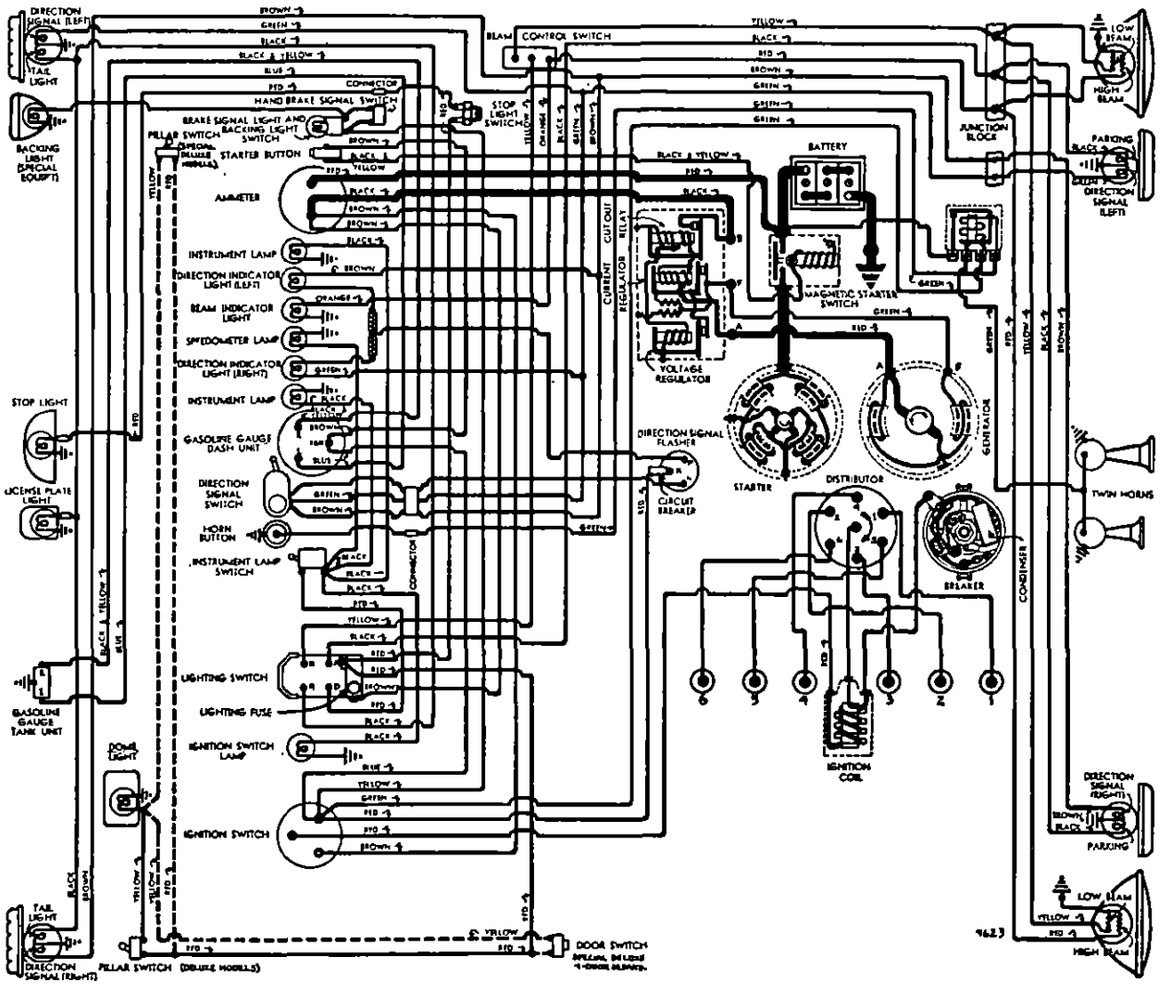
DISTRIBUTOR: Auto-Lite Model IGS-4207-1 (U. S.), IGS-4208B-1 (Canada). Automatic advance type with Vacuum Spark Control and Octane Selector.
Breaker Plate Identification—Maximum vacuum advance limited by slot in plate. Marked for identification by number: #10 (IGS-4207-1), #7 (IGS-4208B-1) stamped on plate.
Breaker Gap—.020". Limits .018-.022".
Cam Angle—38° closed, 22° open.
Breaker Arm Spring Tension—17-20 ounces.
Rotation—Clockwise viewed from above.

Automatic Advance—IGS-4207-1

Distributor Degrees	Distributor R.P.M.	Engine Degrees	Engine R.P.M.
Start	350	0	700
3	400	6	800
5	700	10	1400
7	1000	14	2000
9	1300	18	2600

Automatic Advance—IGS-4208B-1

Start	350	0	700
3	400	6	800
6	850	12	1700
9	1300	18	2600
12	1750	24	3500



Vacuum Spark Control: Auto-Lite Units. Integral type (on distributor, linked directly to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle (spark retarded by return spring).

Vacuum Advance—IGS-4207-1

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5"
2°	4°	6¾"
5°	10°	9½"
8°	16°	12¼"
10°	20°	14"

Vacuum Advance—IGS-4208B-1

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5"
1°	2°	6¾"
3°	6°	9¼"
5°	10°	12⅛"
7°	14°	15"

Manual Adjustment—Provides for minor changes in ignition timing at distributor. See Ignition Timing.

Distributor Removal: Mounted on left side of crankcase. To remove, disconnect vacuum line, take out hold-down screw in lock plate. **Installation Note**—Install distributor with #1 piston in firing position.

IGNITION TIMING

Std. Setting—Initial setting (for regular non-premium fuel) as shown below. See Manual Adjustment (following) for Final Setting.

	Flywheel Degrees	Piston Position
All Engines	0° at TDC	.000" TDC

NOTE—Impulse neutralizer marked 'DC' at TDC. with 15 (1°) graduations on either side.

Timing (Using Timing Light)—Connect timing light between distributor primary terminal and battery terminal on generator regulator. Set #1 or #6 piston in firing position (see setting above) with correct mark on impulse neutralizer aligned with pointer on chain case cover. Loosen lock-plate hold-down screw, center pointer on scale, tighten screw. Loosen lock-plate clamp bolt, rotate distributor until timing light just goes out, tighten clamp bolt. Check Manual Adjustment (following) for final setting.

Timing (Using Synchroscope)—Tool C-374. Clip lead to #1 spark plug, direct light on impulse neutralizer (mark correct graduation with paint), idle engine, adjust distributor as directed above until mark aligned with pointer on chain case cover.

Manual Adjustment—Set to give slight ping from 10-30 MPH accelerating with wide open throttle. To adjust, loosen lock-plate hold-down screw, move plate (not more than 4° or .007" before or after initial setting) counter-clockwise (if no ping), clockwise (if ping too severe), tighten screw.

CARBURETOR

CARTER (B&B)

Carter (B&B) Model D6G1 (Std.), B6V1 or B6W1 (Econ. Models). 1½" (D6G1), 1¼" (B6V1, W1) Single barrel downdraft type with manual choke control.
See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up data.*

Metering Jet—*See Carter (B&B) Jet Tables in Carburetor Section for complete jet data.*

CARBURETOR

CARTER W1

Carter W1, No. 574S. 1¼" Single barrel, downdraft type with manual choke control.
See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up data.*
Metering Rod & Jet—*See Carter Jet Table in Carburetor Section for complete data.*

CARBURETOR

STROMBERG

Stromberg Model BXV-3. Stromberg No. 380220. Code No. 3-84. 1½" single barrel, downdraft type.
See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up data.*
Metering Jet—*See Stromberg Jet Table in Carburetor Section for complete jet data.*

CARB. EQUIPMENT

Fast Idle: Throttle opened to fast idle position when choke valve closed. Not used on Economy carb.

Automatic Choke: Sisson type Optl.
See Carburetion Equipment Section for data.

Air Cleaner: AC No. 1543851 Heavy duty oil-bath type. Filter Element AC No. 1544091.
Servicing—Wash filter element in kerosene, drain and clean oil reservoir and refill to indicated level mark with 1 pint SAE No. 50 engine oil (SAE No. 20W for temperatures below freezing) at 1000 mile or 30 day intervals, or more often if required.
Oil Filler Cap (crankcase Ventilator) Air Cleaner: Wash filter element in cap in kerosene and re-oil by dipping in SAE No. 50 engine oil at 1000 mile or 30 day intervals or more often if required.
Crankcase Ventilator Outlet Air Cleaner—Special equipment for cars operating in dusty regions. Servicing same as given for Oil Filler Cap Cleaner.

Fuel Pump: AC No. 1539042 or Carter No. M594S. Diaphragm type fuel pump.
Replacement Pump—AC No. 577 (for 1539042).
Pressure—3½-5½ lbs.
See Carburetion Equipment Section for data.

Fuel Tank Filter: New Ollite metal filter in tank.
Servicing—If more than 2 pints water in tank, fuel will not pass filter. Remove filler cap and drain plug, draining tank. Disconnect fuel line at some point between pump and tank, blow out line and filter with air, increasing pressure as filter is cleaned. Flush tank with clean gasoline.

Gasoline Gauge: Auto-Lite Electric type. Dash Unit *No. NG-10878D, Tank Unit No. NG-10862T.*
See Carburetion Equipment Section for data.

BATTERY

Auto-Lite Type 1M-100D or Willard WT-1-15C (Orig. Equip.), Auto-Lite Type PN-15 or Willard HW-1-100 (Replacement). 6 volt, 15 Plate, 100 Ampere Hour Capacity (20 hour rate).
Starting Capacity—120 amperes for 20 minutes.
Zero Capacity—300 amperes for 3.2 minutes (Auto-Lite), 3.3 minutes (Willard). Five second voltage 4.15 volts (Auto-Lite), 4.2 volts (Willard).
Grounded Terminal—Positive (+) to engine.
Location—*In left fender shield under engine hood.*
Dimensions—Length 9 3/32" (A-L), 9" (W). Width 7⅛" (A-L), 7" (W). Height 8⅝" (A-L), 8¾" (W).

STARTER

Auto-Lite Model MZ-4133 (U.S.), MAW-4041 (Can.).
Armature—Auto-Lite No. MZ-2108 (MZ-4133 Starter), MAW-2030 (MAW-4041 Starter).
Drive—Outboard Barrel Type Bendix No. A2089.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—42-53 ozs. (new brushes).
Cranking Engine—150-175 amperes, 5.1 volts.

Performance Data—MZ-4133

Torque		R.P.M.	Volts	Amperes
0	ft. lbs.	4300	5.5	70
0.65	"	2500	5.5	100
2.55	"	1325	5.0	200
4.95	"	750	4.5	300
7.65	"	220	4.0	400
7.8	"	Lock	3.0	420
11.8	"	Lock	4.0	560

Performance Data—MAW-4041

Torque		R.P.M.	Volts	Amperes
0	ft. lbs.	4900	5.5	65
.60	"	3300	5.5	100
2.75	"	1480	5.0	200
5.45	"	820	4.5	300
8.50	"	400	4.0	400
11.55	"	110	3.5	500
11.5	"	Lock	3.0	505
18.0	"	Lock	4.0	670

Removal: Disconnect wires (tape battery lead), remove mounting bolts, withdraw starter (not necessary to disturb oil filter or oil lines).

Starting Switch: Auto-Lite Model SST-4001. Magnetic type mounted on left front fender shield and controlled by pushbutton on instrument panel.
See Electrical Equipment Section for complete data.

GENERATOR

STANDARD

Auto-Lite Model GDZ-4801A, Armature GDZ-2006F. Two brush (shunt) type with voltage and current regulation. Ventilated by fan on drive pulley.
Charging Rate Adjustment—None. See Regulator.
Maximum Charging Rate—35 amperes, 8.0 volts, 2200 gen. RPM or approx. 25 MPH, and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

Performance Data

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	925	0	6.4	1000
5	6.65	1060	5	6.65	1150
10	6.85	1200	10	6.85	1290
15	7.05	1340	15	7.05	1430
20	7.3	1480	20	7.3	1590
25	7.55	1620	25	7.55	1750
30	7.8	1760	30	7.8	1980
35①	8.0	1900	35	8.0	2250

①—Current regulator setting. See Regulator data.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—35-53 ozs. (new brushes).
Field Current—1.60-1.78 amperes at 6.0 volts.
Motoring Current—4.16-4.60 amperes at 6.0 volts.

Removal: Pivot mounted at left side of engine at front. To remove, take out pivot and clamp bolts.

Belt Adjustment: Loosen pivot and clamp bolts, pull *out on generator until belt is snug (40-50 lbs. tension secured on scale attached to field frame)* or ¼" belt deflection between generator and pump

GENERATOR

SPECIAL EQUIPMENT

Auto-Lite GEG-4823A or GEG-4823B. Armature No. GEG-2006F. Two brush (shunt) type with voltage and current regulation. Ventilated.
SEE CHRYSLER 8 C39 PAGE FOR ALL DATA.

REGULATOR

Std. (for "GDZ" Gen.)—Auto-Lite VRP-4001A, VRP-4401A, VRP-4501A, VRP-4503A.

Spec. Equip. (for "GEG" Gen.)—Auto-Lite VRP-4001F, VRP-4401B, VRP-4501C (VRP-4005E for negative ground). Vibrating voltage and current regulators with Cutout Relay.
See Electrical Equipment Section for complete data.
NOTE—Regulator case cover is sealed. Serviced on exchange basis if seals not broken (to remove cover).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Cutout Relay

Cuts In—6.4-7.0 volts (set to 6.4-6.6 volts).
Cuts Out—4.1-4.8 volts (approx. 4-6 amps. disch.).
Contact Gap—.015" minimum.
Air Gap—.031-.034" with contacts open (check at hinge end of core).

Voltage Regulator

Setting—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.
Checking (without breaking seals) & Adjustment—*See Electrical Equipment Section.*
Contact Gap—.012" min. (armature against stop pin).
Air Gap—.048-.052" with contacts just opening.

Current Regulator

Setting (VRP-4001A, 4401A)—34-36 amperes ("35").
Setting (VRP-4001F, 4005E, 4401B)—39-41 amperes (marked "40").
Setting (VRP-4501A, 4503A)—35 amperes (42 amperes at 70°F. after 15 minutes run, 33-37 amperes at 70° after additional 15 minutes run). CAUTION—These regulators are temperature-compensated and setting decreases with temperature rise.
Setting (VRP-4501C)—40 amperes (46 amperes at 70°F. after 15 minutes run, 38-42 amperes at 70° after additional 15 minutes run). CAUTION—This regulator temperature-compensated and setting decreases with temperature rise as indicated.
Checking (without breaking seals) & Adjustment—*See Electrical Equipment Section.*
Contact Gap—.012" min. (armature against stop pin).
Air Gap—.048-.052" with contacts just opening.

LIGHTING

Headlamps: Corcoran-Brown "Sealed Beam" type. *See Electrical Equipment Section for complete data.*

Adjustment—Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.).
Beam Indicator—Red light directly above center of speedometer. Lighted with upper beams "on".

Direction Signal: Optl. *See Electrical Equipment Sec'n.*
Direction Signal Indicator—On either side of Headlamp Beam Indicator (above speedometer).

Switches

Lighting—Plymouth No. 910507.
Beam Selector—Plymouth No. 859974.
Instrument—Plymouth No. 1232617.
Map Light—Plymouth No. 1154278.
Dome Lamp Pillar—Plymouth No. 317180.
Door Switches—Plymouth No. 882943.
Stop Light—Plymouth No. 920355.
Direction Signal—Plymouth No. 1163984.

Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	45-35 watts	Sealed Beam
Parking	3	63
Park & Frt. Dir. Sig.	21-3	1158
Beam & Dir. Sig. Ind.	1	51
Instrument	3	63
Ign. Switch	1	51
Tail (No Dir. Sig.)	3	63
Tail & Rear Dir. Sig.	21-3	1158
Stop	21	1129
Rear License	3	63
Dome	15	87

MISC. ELECTRICAL

FUSES: Lighting—30 ampere. On back of lighting switch. NOTE—To replace fuse, press up on knurled cap or fuse and turn to left, withdraw cap and fuse.
Clock—2 ampere. In clock lead connector.
Radio—14 ampere. In fuse connector at radio.

CIRCUIT BREAKER: Direction Signal—On flasher behind instrument panel. 8 ampere, vibrating type.

HORNS: Auto-Lite Model HT-4011 (Low Pitch), HT-4012 (High Pitch). Dual horns operated by relay.

Horn Relay: Auto-Lite HRL-4101. Connected through ignition switch, operates only with ignition on.
Contact Close—1.5-3.0 volts (seal to core with 4 V).
Contacts Open—.5 volt min. (open from seal).
Contact Gap—.026". **Air Gap**—.016-.020" (armature air gap with contacts closed but not sealed), .015-.018" (gap between armature leg and yoke with armature sealed to core).

ENGINE

ENGINE SPECIFICATIONS: 6 cylinder, "L" hd. type.
Bore—3¼". **Stroke**—4⅜".
Displacement—217.8 cu.ins. **Rated H.P.** 25.35.
Developed Horsepower—95 at 3600 RPM.
Compression Ratio—6.6-1 Std. Cast Iron Head.
Compression & Vacuum Reading—*See Tune-up data.*

ORIGINAL BORE & PISTONS: *See Plymouth Special Data.*

ORIGINAL BEARING SIZES: *See Plymouth Special Data.*

ENGINE & OIL PAN REMOVAL: *See Plymouth Special Data.*

TIGHTENING TORQUES & CYLINDER HEAD: *See Plymouth Special Data.*

PISTONS: Aluminum alloy, "U" slot, cam ground type. NOTE—Piston skirt is elliptical (.010-.012" smaller diameter across pin bosses than across thrust faces), and tapered (.0005-.0015" smaller diameter at top of skirt than at bottom).
Length—3 11/16". **Weight**—16.0 ozs. (stripped).
Removal—Pistons and rods removed from above.
Clearance—.028-.032" (Head & Ring Lands), .0005-.001" (Skirt—across thrust faces and ¾" up from bottom). See Fitting New Pistons.

Fitting New Pistons: With cylinder bore and piston clean and dry, piston should be fitted so it will pass through cylinder with a light push of the hand and will stop anywhere in the bore, holding itself in place without falling through of its own weight. NOTE—Fit piston at point of smallest bore diameter, and with piston at point of smallest bore diameter, and with piston pin removed from piston. Make certain that U-slot is away from valve side of engine.
Replacement Pistons: *See Plymouth Special Data.*
Installing Pistons: "U" slot away from valves.

PISTON RINGS: Two compression, two slotted oil control, coated rings per piston, all above pin. Oil ring grooves drilled for oil drainage.

Ring	Width	End Gap	Side Clearance
Compr. (#1)	3/32"	.007-.015"	.0025-.004"
Compr. (#2)	3/32"	.007-.015"	.002-.0035"
Oil Contr. (#3, 4)	5/32"	.007-.015"	.001-.0025"

Installing Rings—#1 Compr. with step on inner edge up. #2 Compr. with step on inner edge up or if step on outer edge, install with step down.
Replacement Rings: *See Plymouth Special Data.*

PISTON PIN: Diameter 55/64". Length 2¾".
Pin floats in piston and rod, held by lock rings.
Pin Fit in Piston—Thumb push fit (piston at 130°F).
Pin Fit in Rod Bushing—Tight thumb push fit at 70°F.
Replacement Pins: Std., .0006", .003", .008" Oversize.

CONNECTING ROD: Length 7 15/16". Weight 1.941 lbs. with bolts less bearings.
NOTE—Pin hole in rod bronze bushed.
Crankpin Journal Diameter—2.0615-2.0625". *See "Original Bearing Sizes" in Plymouth Special Data.*
Lower Bearing—Removable, precision type, steel-backed, thin babbitt lined. No shims.
Clearance—.001-.0015". **Sideplay** .0055-.0115".
Bearing Adjustment: None (no shims). Replace bearings. Do not file rods or bearing caps. *See "Connecting Rod & Bearings" in Plymouth Special Data.*
Replacement Bearings: *See Plymouth Special Data.*
Installing Rods: Wide portion of bearing to rear (#1, 3, 5), to front (#2, 4, 6). Oil hole to camshaft.

CRANKSHAFT: 4 bearings, 7 integral counterweights, with vibration dampener on front end.
Journal Diameters—2.4995-2.5005". *See "Original Bearing Sizes" in Plymouth Special Data.*
Bearings—Removable, precision type, steel-backed, thin babbitt lined. No shims.
Clearance—.001-.0015".
Bearing Adjustment: None (no shims). Replace bearings. Do not file rods or caps.
Replacement Main Bearing Caps: *See "Crankshaft & Main Bearings" in Plymouth Special Data.*
Replacement Bearings: *See Plymouth Special Data.*
Crankshaft Front & Rear Oil Seals: *See Plymouth Special Data.*
End Thrust: Taken by flanged faces of #4 (rear) main bearing. **Endplay**—.003-.007".

CAMSHAFT: 4 bearing. Non-adjustable chain drive.
Bearing Diameters—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1¼".
Bearings—Removable, steel-backed, babbitt lined bushings (except #4—machined in crankcase).
Clearance—.001-.003".
Removal: *See "Camshaft & Bearings" in Plymouth Special Data.*
End Thrust: Taken by thrust plate behind camshaft sprocket hub. **Endplay**—.002-.006".
Timing Chain: Width 1". Pitch .500" (½"). Length 24" or 48 links.
Timing Chain Removal: *See "Timing Chain" in Plymouth Special Data.*
Camshaft Setting: Sprockets marked. Mesh chain with sprockets turned so that '0' marks are adjacent and in line with a straightedge across shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 17/32"	.340-.341"	4 25/32"
Exhaust	1 13/32"	.340-.341"	4 25/32"

	Seat Angle	Lift	Stem Clearance
Intake	45°	⅜"	.001-.003"
Exhaust	45°	⅜"	.003-.005"

Exhaust Valve Seat Inserts—*See Plymouth Special Data.*
Valve Guides: Remove from above. Press new guides in with stepped end down and upper end ⅞" below top of block, ream guides to inside diameter of .342-.343" (Intake), .344-.345" (Exhaust).

Valve Springs: Install with close-coil end to top.

Free Length 2".	Spring Pressure	Spring Length
Valve Closed	40-45 lbs.	1¾"
Valve Open	107-115 lbs.	1⅜"

Valve Lifters: Mushroom type (remove from below with camshaft out of engine). Stem diameter ⅝".

VALVE TIMING

Tappet Clearance: .008" Intake, .010" Exhaust, Hot.
NOTE—Tappet screws self-locking type.

Valve Timing: See Camshaft Setting above.
Intake Valves—Open 12° BTDC. Close 44° ALDC.
Exhaust Valves—Open 50° BLDC. Close 6° ATDC.
Valve Timing Check—With .014" tappet clearance (Cold), #6 intake valve should open with #6 piston 5° to 17° or .011" to .122" BTDC with 5th to 17th graduation before DC mark on impulse neutralizer aligned with pointer on chain case cover. Reset tappet clearance to running clearance .008" Hot.

LUBRICATION

Engine Oiling System: Pressure to main and connecting rod bearings, camshaft bearings, and timing chain. New "Rotor" type oil pump.
Crankcase Capacity—5 qts. (refill).
Normal Oil Pressure—40-45 lbs. above 30 MPH.
Oil Pressure Regulator—Under plug on left side of crankcase (below starter). Opens at 40-45 lbs. Adjustable by replacing spring (Std. spring Unpainted, Lighter spring—Red, Heavier spring—Green).
CAUTION—Install replacement spring of same color as original spring.

Oil Pump: New "Rotor" type on right side of engine.
Servicing—*See "Oil Pump" in Plymouth Special Data.*

Oil Filter: On left side of engine above starter.
Servicing—Replace filter at 8000 mile intervals.

Oil Pressure Gauge: Auto-Lite No. G-10875 (not elec).

C OLING

Cooling System: Positive circulation with water pump on front of engine and water distribution tube in cylinder block. Special Deluxe model has by-pass type thermostat (with bypass between outlet on cylinder head and pump inlet) for re-circulation of water through engine with thermostat closed.
Capacity—15 quarts.

Radiator Core Removal & Water Distribution Tube
Servicing—*See "Cooling System" in Plymouth Special Data.*

Water Pump: Packless type with grease fitting.
See Water Pump Section for complete data.
Removal—Drain cooling system, loosen generator mounting bolts and remove fan belt. Disconnect water inlet hose at pump (and by-pass hose connection on Special Deluxe models). Remove pump mounting capscrews, lift out pump and fan.

Thermostat: In cylinder head water outlet connection. NOTE—By-pass type on Special Deluxe.
Setting—Starts to open at 157-162°F. Fully open at 183-187°F.

Temperature Gauge: Auto-Lite H-11002. Not electric.

CLUTCH

Borg & Beck.....9A7 (Std.), 10A7 (Fleet), 11A6 (Taxi)
Auburn (1948 Part Production).....Model 9251-11

Clutch Identification: 3 pressure plate springs used on Auburn, 9 springs on Borg & Beck.

Borg & Beck Nos. 926 (9A7), 957 (10A7), 931 (1946-47 11A6), 957 (1948 11A6).
See Clutch Section for complete data.
Facings (Borg & Beck)—Woven, 2 required.

	Inside Diam.	Outside Diam.	Thickness
9A7	6"	9¼"	.125" (⅛")
10A7	7"	10"	.125" (⅛")
11A6	6½"	11"	.125" (⅛")

Pedal Adjustment: Set pedal to just clear toeboard (stopscrew on lower end of pedal) and set for 1" free travel (adjust nut on connector link at fork).
NOTE—Do not disturb turnbuckle on pedal link.
Clutch Over-Center Spring—*See "Clutch Notes" in Plymouth Special Data for setting procedure.*

Removal: Remove Transmission (see Transmission Removal below), remove release fork pull-back spring and clutch housing underpan. Disconnect release fork from pivot, withdraw release bearing and sleeve from housing. Mark clutch and flywheel (to insure correct re-installation), remove all clutch cover mounting screws evenly, remove clutch cover assembly and driven member through opening at bottom of housing.

TRANSMISSION

Own Make. All helical gear, constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).
See Transmission Section for complete data.
►*HARD SHIFTING CORRECTION—See "Chrysler, DeSoto, Dodge & Plymouth Synchro-Mesh" in Transmission Section for complete data.*

Transmission Control: Remote control type with gearshift lever mounted on steering column.
See Transmission Section for complete data.

Removal: Jack up front end of car. Disconnect front universal by taking out bolts in shaft flange (if transmission to be dismantled, loosen flange retaining nut), and rear universal by removing bearing caps on rear axle yoke (wire bearing cups in place to prevent loss of bearing rollers). Disconnect speedometer cable, hand brake cable at brake band, gearshift control rod and selector rod at transmission case. Remove transmission mounting screws in clutch housing, pull transmission straight back to free clutch shaft, then lower transmission and remove from beneath car.
NOTE—When installing transmission, use pilot studs installed in upper mounting screw holes to maintain alignment and prevent springing clutch driven member.

UNIVERSALS

Detroit Universal Series 4283 (Early), 4200 (Late).
4283 is ball & trunnion front, cross type rear.
4200 is ball & trunnion front and rear.

REAR AXLE

Own Make. Semi-floating, hypoid gear type with Hotchkiss Drive.
See Rear Axle Section for complete data.
Ratio (Std.)—3.9-1 (exc. Sta. Wgn.), 4.1-1 (Sta. Wgn).
Ratio (Optl.)—3.54-1, 3.73-1, 4.1-1, 4.3-1, 4.56-1 & 4.78-1 (Export).
Backlash—.006-.010". Screw adjustment.

Removal: Hoist rear end of car. Remove rear wheels. Disconnect brake hose at frame bracket, disconnect lower end of shock absorbers. Disconnect propeller shaft by removing capscrews from bearing caps on rear axle yoke (wire bearing caps in place to prevent loss of bearing rollers). Support axle housing, remove rear spring "U" bolts, lower axle assembly and remove from beneath car.
NOTE—Carrier assembly can be removed without disturbing axle housing by removing axle shafts and taking out carrier-to-housing mounting screws.
Axle Shaft Removal—Remove wheel, hub, and drum assembly (use screw type hub puller—Tool C-675), block brake pedal, disconnect brake line at wheel cylinder, remove axle shaft key, install sleeve (Tool C-745) in oil seal, remove brake support (oil seal mounted in support), pull shaft and bearing (use C-499 puller). NOTE—Use Puller C-293-E to remove bearing from shaft, puller C-748 or C-358 to remove inner oil seal, drift C-201 to install seal.

Axle Shaft Oil Seal: New leather type mounted on brake support (backing plate).
Oil Seal Servicing—*See "Rear Axle" in Plymouth Special Data.*

Wheel Bearing Adjustment: Shims between backing plate and axle housing. With wheel and hub removed, check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims (furnished .010", .0125", .015", .030" thick) equally at both wheels. **Endplay**—.003-.008".

SHOCK ABSORBERS

Delco—Model 1030-C (Front), 1031-T (Rear).
Monroe—Model K-11148 (Front), K-11149 (Rear).

FRONT SUSPENSION

Front Suspension: Independent, linked parallelogram type with coil springs and direct acting shock absorbers.
See Front Suspension Section for complete data.
Kingpin Inclination—4¾° to 6° crosswise.
Camber—Positive ¼°. Limits 0° to Pos. ¾°.
Caster—Negative 1° to Positive 1°. No adjustment.
Toe In—0" (0-1/16"). Adjust by turning both tie rods equally.
Steering Geometry—Inner wheel 22½°. Outer 20°.

STEERING GEAR

Own Make. Worm-and-roller type with "push-pull" adjustments. Same as Gemmer design Model 305.
NOTE—See Gemmer Model 305 article for data.
See Steering Gear Section for complete data.

BRAKES

Service: Chrysler "Safe-guard" Lockheed Hydraulic type as follows:
Front Wheels—Two-cylinder type (front shoe anchored at bottom and actuated by upper cylinder, rear shoe anchored at top and actuated by lower cylinder).
Rear Wheels—Double anchor type with single double-acting wheel cylinder.
See Brake Section for complete data.
Brake Squeak Correction—*See "Chrysler-Lockheed Safeguard" in Brake Section.*
Wheel Cylinders—Single acting type (front), double acting type with straight (1⅛") bore (rear).
Drums—Centrifuse type. Diameter 10".
Lining—Molded Asbestos. Width 2". Thick. 13/64". Length per wheel 21" (front wheels), 18½" (rear wheels).
Clearance—.006" at each end of all brake shoes.

Hand Brake: Independent type. Hand lever actuates band on drum at rear of transmission.
Drum Diameter—6". Cast-iron.
Lining—Width 2". Thickness 5/32". Lgth. 16 11/16".
Clearance—.015-.020" around band.
Adjustment—*See Plymouth Special Data.*

MISC. MECHANICAL

CONVERTIBLE TOP CONTROL: Vacuum power type.
See Miscellaneous Section for complete data.

M DEL IDENTIFICATION

SERIAL NUMBER: Stamped on left front door hinge pillar post.

1949 Starting Serial Numbers

Assembly Plant	P17 Deluxe	P18 Deluxe	P18 Spec. Deluxe
Detroit	18,000,101	15,300,001	12,120,001
Los Angeles	26,000,101	26,025,001	25,075,001
Evansville	24,000,101	22,080,001	20,304,001

1950 Starting Serial Numbers

Assembly Plant	P19 Deluxe	P20 Deluxe	P20 Spec. Deluxe
Detroit	18,041,001	15,359,501	12,384,501
Los Angeles	28,004,001	26,030,501	25,097,501
Evansville	24,012,001	22,097,001	20,367,001
San Leandro	28,503,501	26,405,001	25,511,001

1951 Starting Serial Numbers

Assembly Plant	P22 Concord	P23 Cambridge	P23 Cranbrook
Detroit	18,126,001	15,460,001	12,635,001
Los Angeles	28,011,001	26,040,001	25,112,001
Evansville	24,042,001	22,132,001	20,435,001
San Leandro	25,513,001	26,512,001	25,531,001

ENGINE NUMBER: Stamped on boss on left front side of cylinder block.

Starting Engine Number: 1001 up (each year).

TUNE-UP

COMPRESSION PRESSURE: 120-150 lbs. at cranking speed of 150 RPM.

VACUUM READING: Steady 18-21" idling at 6 MPH.

FIRING ORDER: 1-5-3-6-2-4. See diagram.

SPARK PLUG GAPS: .035" (1949-50); .038" (1951). **Plugs**—Auto-Lite Resistor Type AR5 (1949-50); AR8 (1951). 14 mm.

►*RESISTOR TYPE SPARK PLUG NOTE—Auto-Lite No. 4S-140 Resistor type spark plug can be used without changing coil. Adjust distributor points to .020".*

DISTRIBUTOR: Breaker Gap—.020". Limits .018-.022". **Cam Angle**—34½° to 38° Closed. **Breaker Arm Spring Tension**—17-20 ozs. **Condenser Capacity**—.25-.28 microfarad.

IGNITION TIMING: At Top Dead Center (TDC). **Timing Procedure**—*See Ignition Timing.* **Timing Mark**—Fan pulley marked "DC" at top dead center position with 15-1° graduations before and after this point. Set timing with DC mark at pointer on chain case cover, then set manual (octane selector) adjustment. **Octane Selector**—Set for slight ping when accelerating with wide open throttle between 10-30 MPH.

CARBURETION: **Idle Setting**—½-1½ turns open. Turn screw out for richer mixture. **Idle Speed**—450-500 RPM. **Float Level**—Top of the float (not soldered seam) 5/64" ±1/64" below top edge of bowl. ***Accelerating Pump**—Center Hole Normal Setting,* Outer Hole (max.) Winter, Inner (min.) Summer.

Choke Setting: Adjusted by inserting a gauge pin through hole in automatic choke lever shaft and slot in base mounting flange (to position shaft) and adjusting carburetor choke valve lever so that choke valve is tightly closed.

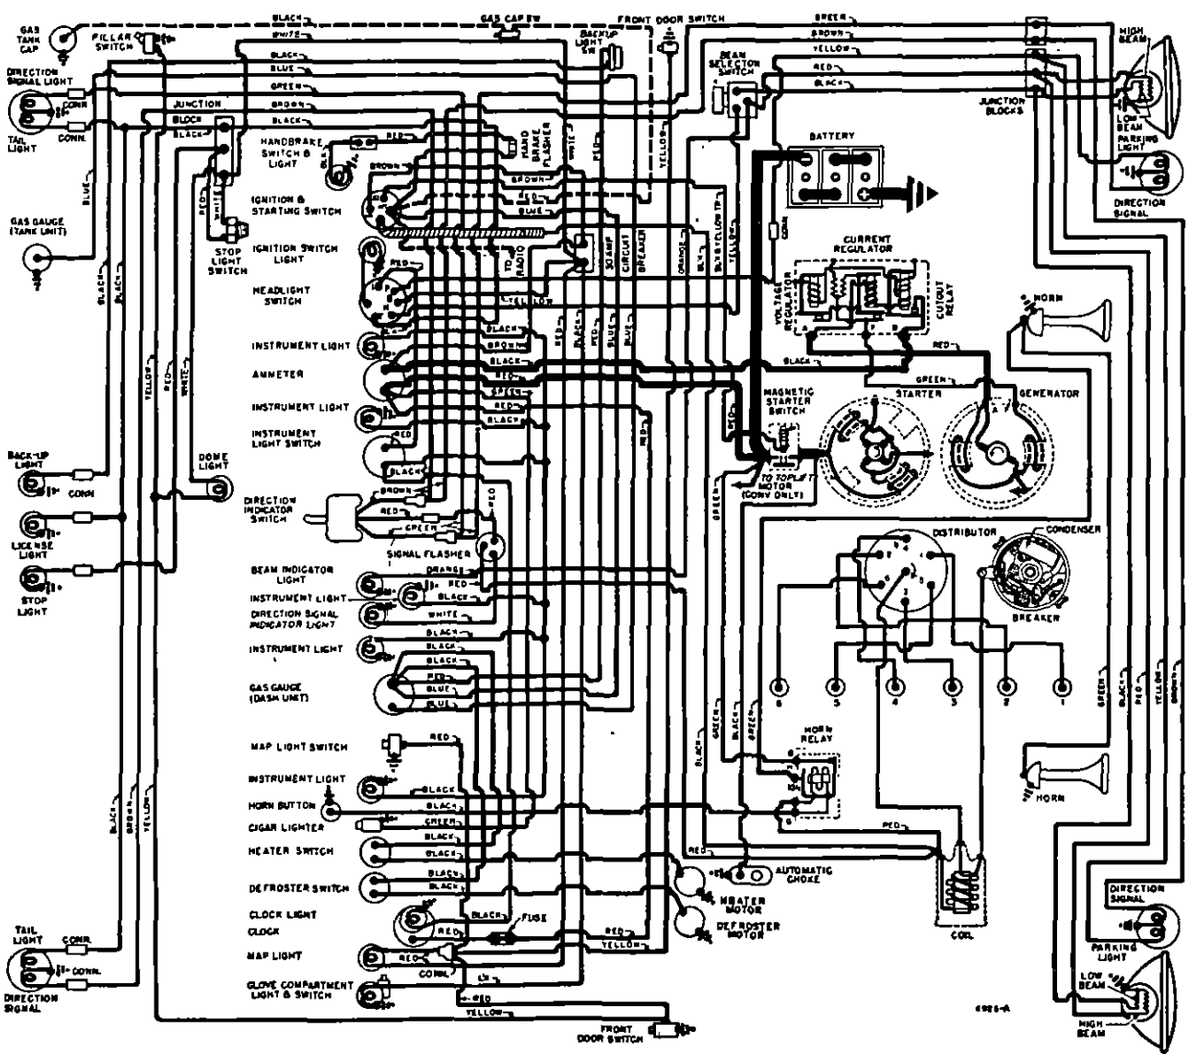
***Fuel Pump Pressure:** 3-5 lbs.*

MANIFOLD HEAT CONTROL: Thermostatic coil type. Install coil so approx. one full turn (335°) required to hook free end over stop stud for correct operation.

VALVE TAPPET CLEARANCE: .008" Intake, .010" Exhaust (1949-50); .010" Intake, .010" Exhaust (1951), hot.

IGNITION

COIL: Auto-Lite No. CR-4001 (U.S.), IG-4809 (Canada). Mounted above distributor. **Ignition Current**—2¼ amperes idling, 5 stopped.



CONDENSER: Auto-Lite Part No. IG-3927G. Capacity—.25-.28 microfarad.

DISTRIBUTOR: Auto-Lite. Automatic advance type with Vacuum Spark Control as follows:

►*DISTRIBUTOR CAP POPPING OFF CORRECTION (Early "IAP" Distributors): See "Auto-Lite IAP Distributors" in Electrical Equipment Section.*

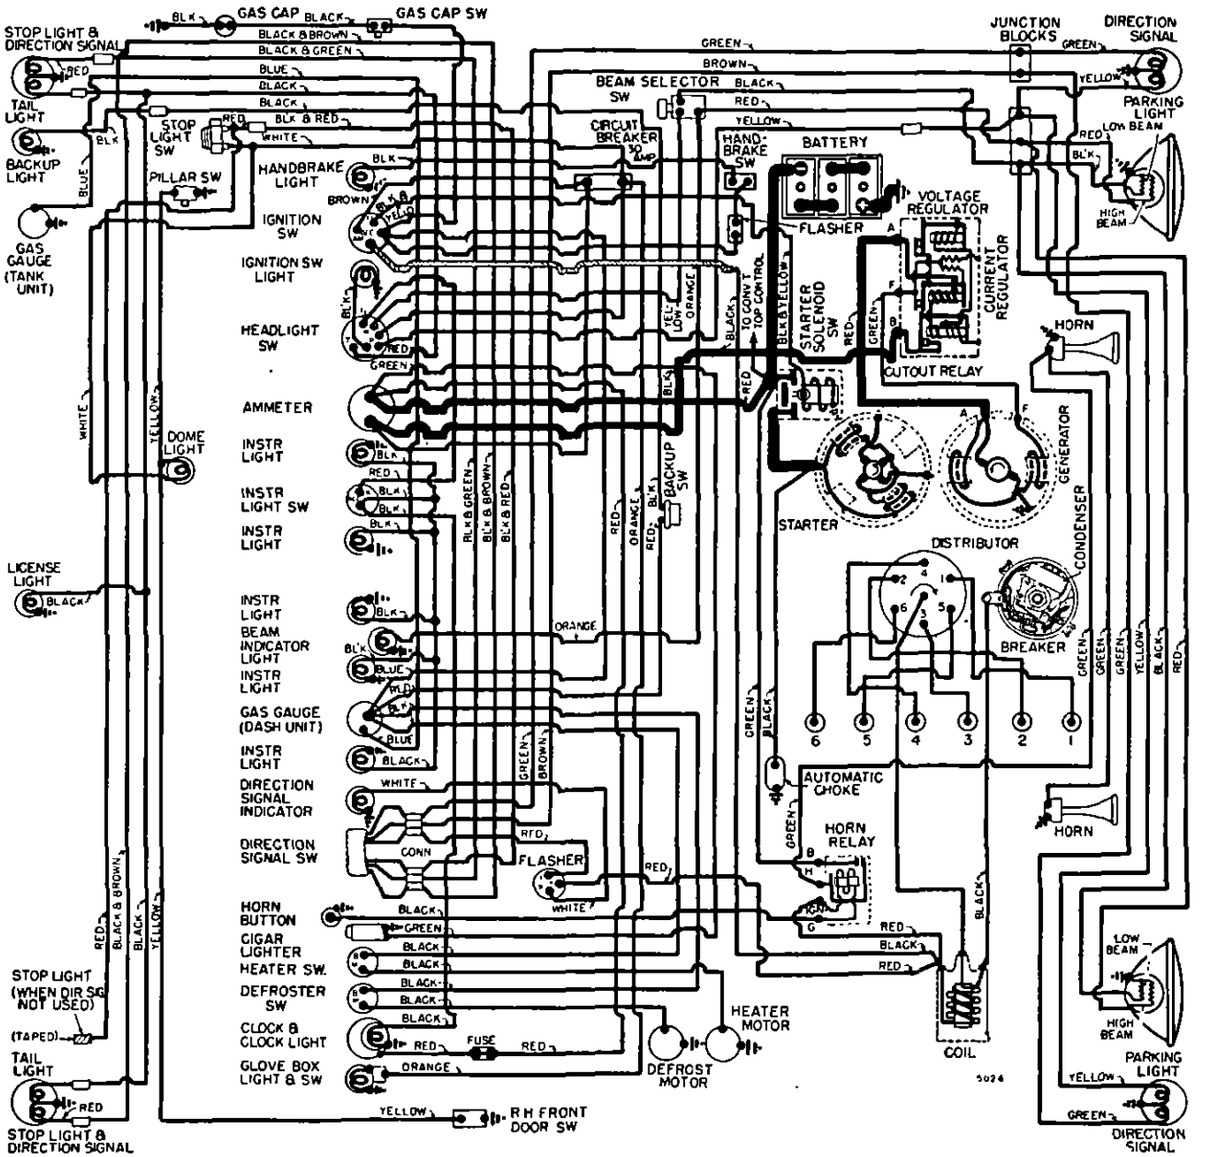
Distributor Removal: Mounted on left side of crankcase. To remove, disconnect vacuum line, take out hold-down screw in lock plate. **Installation Note**—Install distributor with #1 piston in firing position.

IGNITION TIMING



Std. Setting—Initial setting (for regular non-premium fuel) as shown below. See Manual Adjustment (following) for Final Setting.

	Flywheel Degrees	Piston Position
All Engines	At TDC	.000" TDC.

NOTE—Impulse neutralizer marked 'DC' at TDC. with 15 (1°) graduations on either side.

Timing (Using Synchroscope)—Tool C-374. Clip lead to #1 spark plug, direct light on impulse neutralizer (mark correct graduation with paint), idle engine, adjust distributor as directed above until

CONTINUED ON NEXT PAGE

1950 MODELS

CONTINUED FROM PRECEDING PAGE

mark aligned with pointer on chain case cover.

Manual Adjustment—Set to give slight ping from 10-30 MPH. accelerating with wide open throttle. To adjust, loosen lock-plate hold-down screw, move plate (not more than 4° or .007" before or after initial setting) counter-clockwise (if no ping), clockwise (if ping too severe), tighten screw.

CARBURETOR

Carter (B&B)	Model No.
Std. (1949 Early)	D6H1
Std. (1949 Late, 1950-51)	D6H2
City Traffic (1949 Early)	D6N1
City Traffic (1949 Late, 1950-51)	D6N2

1½" single barrel downdraft type with Sisson automatic choke.

See Carburetor Section for complete data.

►**Carburetor Production Changes**—*See "Carter (B&B) Downdraft" in Carburetor Section.*

Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up data.*

Metering Jet—*See Carter (B&B) Jet Table in Carburetor Section for complete data.*

Fast Idle: Throttle opened to fast idle position when choke valve closed.

Automatic Choke: Sisson type Optl.

Setting—Choke can be adjusted by inserting a gauge pin through hole in automatic choke lever shaft and slot in base mounting flange (to position shaft) and adjusting corburetor choke valve lever so that choke valve is tightly closed.

See Carburetion Equipment Section for data.

CARB. EQUIPMENT

Air Cleaner: AC No. 1544640 Heavy duty oil-bath type. Filter Element AC No. 21.

Fuel Pump: AC No. 1539042 (1949); 1538421 (1950-51). Fuel only. AC No. 1538418 (1949-51). Fuel & Vacuum. **Replacement Pump**—AC No. 588 (Fuel only). No. 9418 (Fuel & Vacuum).

Pressure—3-5 lbs.

See Carburetion Equipment Section for data.

Fuel Tank Filter: Ollite metal filter in tank.

Servicing—If more than 2 pints water in tank, fuel will not pass filter. Remove filler cap and drain plug, draining tank. Disconnect fuel line at some point between pump and tank, blow out line and filter with air, increasing pressure as filter is cleaned. Flush tank with clean gasoline.

Gasoline Gauge: Auto-Lite electric type.

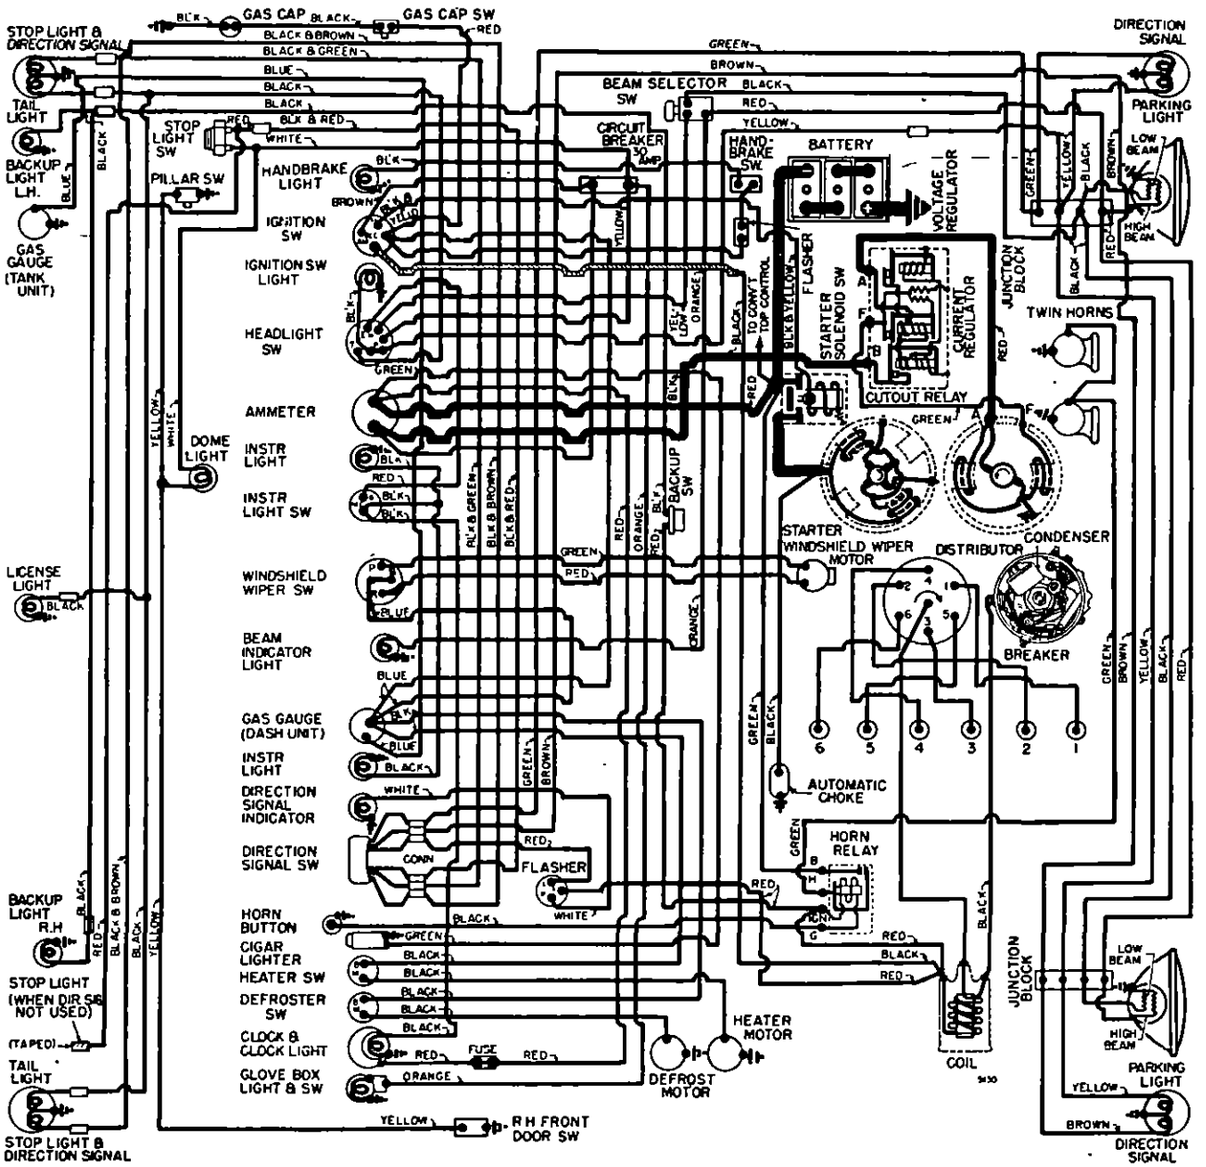
Dash Unit—Auto-Lite No. 11679A (1949); No. 12095A or 12310A (1950); No. 12327A (1951).

Tank Unit—Auto-Lite No. 11538A. (Suburban) NG-11816T.

See Carburetion Equipment Section for data.

BATTERY

Willard HW-1-100-C or Auto-Lite Type 1M-100D. 6 volt, 15 plate, 100 ampere hour capacity (20 hour rate).



Starting Capacity—120 amperes for 20 minutes.

Zero Capacity—300 amperes for 3.2 minutes. Five second voltage 4.15 volts.

Grounded Terminal—Positive (+) to engine.
Location—In left fender shield under engine hood.
Dimensions—Length 9 3/32". Width 7 1/8". Height 8 5/8".

STARTER

U.S. Cars.....**Auto-Lite MCH-6101. Arm. MCH-2028**
Canada.....**Auto-Lite MAW-4041. Arm. MAW-2128**
Drive—Outboard Barrel Type Bendix No. A-2991.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—42-53 ozs. (new brushes).

1951 MODELS

②—Use VBA-4104B for Neg. Ground.
③—Use VRP-4403A for Neg. Ground.
④—Use VBA-4204A for Neg. Ground.
⑤—Use VAV-6002A for Neg. Ground.

See Electrical Equipment Section for complete data.

NOTE—Regulator case cover is sealed. Serviced on exchange basis if seals not broken (to remove cover).

Cutout Relay

Cuts In (VAV, VRP)—6.4-6.9 volts (set to 6.4-6.6 volts).

Cuts In (VBA, VBE)—6.3-6.8 volts (set to 6.4-6.6 volts).

Cuts Out (All)—4.1-4.8 volts (Approx. 4-6 amps. disch.).

Air Gap (All)—.031-.034" with contacts open (check at hinge end of core).

Voltage Regulator

Setting (VAV, VBA, VBE)—7.1-7.4 volts at 70°F. **(VRP)**—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.

Checking (without breaking seals) & Adjustment—***See Electrical Equipment Section.***

Current Regulator

▷(Temperature Compensated Regulators)

Regulator No.	Nominal Setting
VRP-4503A	35 amps.
VRP-4501C, 4503B, 6004A	40 amps.
VAV-4404B, 6001A, 6002A	45 amps.
VBA-4101B, 4104B, VBE-6001F	45 amps.
VAV-4404A	50 amps.
VBA-4101A, 4014A, VBA-4202A, 4204A	50 amps.

▷***CAUTION***—Nominal setting is approx. setting at 70°F. room temperature after regulator has been run (will be higher started cold). See Electrical Equip. Section for settings at various temperatures.

Checking (without breaking seals) & Adjustment—***See Electrical Equipment Section.***

Air Gap (All)—.048-.052" with contacts just opening.

LIGHTING

Headlamps: Corcoran-Brown "Sealed Beam" type with new "Bull's-eye lens."

See Electrical Equipment Section for complete data.

Beam Indicator—On speedometer dial. Lighted when upper beams "on."

Direction Signal: ***See Electrical Equipment Section.***

Direction Signal Indicator—On speedometer dial. Flashes when direction signal operating.

MISC. ELECTRICAL

CIRCUIT BREAKER: 30 ampere. On back of instrument panel above headlight switch.

FUSES: Clock—2 ampere. In clock lead connector. **Radio**—14 ampere. In fuse connector at radio.

HORNS: Auto-Lite No. HW-4201 Low pitch; HW-4202 High pitch (1949-50). Auto-Lite No. HW-4107 Low pitch; HW-4108 High pitch (1951).

Horn Relay: Auto-Lite HRL-4103 or 4104. Connected thru ignition switch, operates only with ignition on.

Contact Close—1.5-3.0 volts (seal to core with 4 V).

Contacts Open—.5 volt min. (open from seal).

Contact Gap—.026". **Air Gap**—.016-.020" (armature air gap with contacts closed but not sealed), .015-.018" (gap between armature leg and yoke with armature sealed to core).

ENGINE

ENGINE SPECIFICATIONS: 6 cylinder, "L" hd. type. **Bore**—3¼". **Stroke**—4⅜". **Displacement**—217.8 cu. ins. **Rated H.P.**—25.35. **Developed Horsepower**—97 at 3600 RPM. **Compression Ratio**—7.0-1 Std. Cast Iron Head. **Compression & Vacuum Reading**—***See Tune-up data.***

ORIGINAL BORE & PISTONS: ***See Plymouth Special Data.***

ORIGINAL BEARING SIZES: ***See Plymouth Special Data.***

ENGINE & OIL PAN REMOVAL: ***See Plymouth Special Data.***

TIGHTENING TORQUES & CYLINDER HEAD: ***See Plymouth Special Data.***

PISTONS: Aluminum alloy, "U" slot, cam ground type. NOTE—Piston skirt is elliptical (.010-.012" smaller diameter across pin bosses than across thrust faces), and tapered (.0005-.0015" smaller diameter at top of skirt than at bottom).

Length—3 11/16". **Weight**—16.0 ozs. (stripped).

Removal—Pistons and rods removed from above. **Clearance**—.028-.032" (Head & Ring Lands), .0002-.0012" (Skirt—across thrust faces and ¾" up from bottom). See Fitting New Pistons.

Fitting New Pistons: Measure piston size with micrometer across thrust faces (right angles to pin bosses) ¾" up from bottom of skirt with piston at 70°F. To fit pistons, with cylinder wall and piston dry and clean and at 70°F., invert piston in cylinder bore. Piston should have slight drag but should pass slowly through bore of own weight.

Replacement Pistons: .005", .020", .030", .040", .060" OS.

Installing Pistons: "U" slot away from valves.

PISTON RINGS: Two compression (top ring chrome-plated), two slotted oil control, coated rings per piston, all above pin. Oil ring grooves drilled for oil drainage.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Ring	Width	End Gap	Side Clearance
Compr. (#1)	3/32"	.007-.015"	.0025-.004"
Compr. (#2)	3/32"	.007-.015"	.002-.0035"
Oil Contr. (#3,4)	5/32"	.007-.015"	.001-.0025"

Installing Rings—#1 Compr. with step on inner edge up. #2 Compr. with step on inner edge up or if step on outer edge, install with step down.

Replacement Rings: .005" .020" .030" .040" .050" .060" OS.

PISTON PIN: Diameter—55/64". **Length**—2¾". Pin floats in piston and rod, held by lock rings.
Pin Fit in Piston—.0000-.0005". Thumb push fit with piston heated to 130°F.
Pin Fit in Rod Bushing—.0001-.0002". Tight thumb push fit at normal room temp. (70°F.).

Replacement Pins: Std., .0006", .003", .008" Oversize.

CONNECTING ROD: Length—7 15/16". **Weight**—31.06 ozs. (with bolts, less bearings).

►*THICK-WALL BEARING CAUTION*—Inspect "hollowed-out" section of crankshaft center counterbalance for stamped mark (M-1, M-2, R-1, R-2, etc.) indicating which main or connecting rod journal uses THICK-WALL BEARING. *See "Original Bearing Sizes" in Plymouth Special Data.*

Crankpin Journal Diameter—2.0615-2.0625". *See "Original Bearing Sizes" in Plymouth Special Data.*

Clearance—.0005-.0015". **Sideplay**—.006-.011".

Bearing Adjustment: None (no shims). Replace bearings. Do not file rods or caps.

Replacement Bearings: .001", .002", .003", .010", .012". Undersize.

Installing Rods: Wide portion of bearing to rear (#1, 3, 5), to front (#2, 4, 6). Oil hole to camshaft.

CRANKSHAFT: 4 bearings, 7 integral counterweights, with vibration dampener on front end.
Journal Diameters—2.4995-2.5005". *See "Original Bearing Sizes" in Plymouth Special Data.*
Bearings—Removable, precision type, steel-backed, thin babbitt-lined. No shims.
Clearance—.0005-.0015".

►*THICK-WALL BEARING CAUTION*—Inspect "hollowed-out" section of crankshaft center counterbalance for stamped mark (M-1, M-2, R-1, R-2, etc.) indicating which main or connecting rod journal uses THICK-WALL BEARING. *See "Original Bearing Sizes" in Plymouth Special Data.*

Bearing Adjustment: None (no shims). Replace bearings. Do not file bearing caps.

Replacement Bearings: .001", .002", .003", .010", .012" Undersize.

Replacement Main Bearing Caps: *See "Crankshaft & Main Bearings" in Plymouth Special Data.*

End Thrust: Taken by flanged faces of #4 (rear) main bearing. **Endplay**—.003-.007".

Crankshaft Front & Rear Oil Seals: *See Plymouth Special Data.*

CAMSHAFT: 4 bearing. Non-adjustable chain drive.
Bearing Diameters—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1 1/4".
Bearings—Removable, steel-backed, babbitt-lined bushings (except #4—machined in crankcase).
Clearance—.001-.003".

Camshaft Removal: *See "Camshaft & Bearings" in Plymouth Special Data.*

End Thrust: Taken by thrust plate behind camshaft sprocket hub. **Endplay**—.002-.006".

Timing Chain: Width 1". Pitch .500" (½"). Length 24" or 48 links.

Timing Chain Removal: *See "Timing Chain" in Plymouth Special Data.*

Camshaft Setting: Sprockets marked. Mesh chain with sprockets turned so that '0' marks are adjacent and in line with a straightedge across shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 17/32"	.340-.341"	4 25/32"
Exhaust	1 13/32"	.340-.341"	4 25/32"

	Seat Angle	Lift	Stem Clearance
Intake	45°	3/8"	.001-.003"
Exhaust	45°	3/8"	.002-.004"

Valve Guides: Remove from above. Press new guides in with stepped end down and upper end 7/8" below top of block, ream guides to inside diameter of .342-.343" (Intake), .344-.345" (Exhaust).

Valve Springs: Install with close-coil end to top.

Free Length 2".	Spring Pressure	Spring Length
Valve Closed	40-45 lbs.	1¾"
Valve Open	107-115 lbs.	1⅜"

Valve Lifters: Mushroom type (remove from below with camshaft out of engine). Stem diameter ⅝". Service by reaming lifter holes (work from above piloting reamer in valve guide) and installing oversize lifters furnished .001", .008", .030" Oversize.

VALVE TIMING

Tappet Clearance: .008" Intake, .010" Exhaust (1949-50); .010" Intake & Exhaust (1951), hot.

Valve Timing: See Camshaft Setting above.
Intake Valves—Open 12° BTDC. Close 44° ALDC.
Exhaust Valves—Open 50° BLDC. Close 6° ATDC.
Valve Timing Check—With .014" tappet clearance (Cold), #6 intake valve should open with #6 piston 5° to 17° or .011" to .0125" BTDC with 5th to 17th graduation before DC mark on impulse neutralizer aligned with pointer on chain case cover. Reset tappet clearance to running clearance .008" Hot.

LUBRICATION

Engine Oiling System: Pressure to main and connecting rod bearings, camshaft bearings, and timing chain. "Rotor" type oil pump.

Crankcase Capacity—5 qts. (refill).

Normal Oil Pressure—40-60 lbs. above 30 MPH.

Oil Pressure Regulator—Under plug on left side of crankcase (below starter). Opens at 45 to 55 lbs. Adjustable by replacing spring (Std. spring Unpainted, Lighter spring—Red, Heavier spring—Green).

CAUTION—Install replacement spring of same color as original spring.

Oil Pump: "Rotor" type on right side of engine.
Servicing—*See "Oil Pump" in Plymouth Special Data.*

Oil Filter: On left side of engine above starter.

Servicing—Replace filter at 8000 mile intervals.

Oil Pressure Gauge: Auto-Lite No. 11678A (1949); 12096A (Early 1950); 12309A (Late 1950); 12324A (1951). Not electric.

C LING

Water Capacity: 15 qts. (1949-50); 13 qts. (1951).

Water Distribution Tube Servicing: *See "Cooling System" in Plymouth Special Data.*

Radiator Core Removal: *See "Radiator" in Plymouth Special Data.*

Water Pump: Packless type with grease fitting.
See Water Pump Section for complete data.

Removal—Drain cooling system, remove fan belt, disconnect hoses at pump, remove pump mounting studs, lift fan and pump off.
Belt Adjustment—***See Generator Belt Adjustment.***

Thermostat: In cylinder head water outlet.
INSTALLATION NOTE—Install thermostat with 2 ports facing front, and 2 ports facing rear.
Setting—Starts to open 157-162°F. Fully open 183°F.

Temperature Gauge: Auto-Lite No. 1680A (1949); 12094A (Early 1950); 12307A (Late 1950); 12326A (1951). Not electric.

CLUTCH

Borg & Beck Model 9A7 or Auburn Model 9251-17. Single plate, dry disc types.
BORG & BECK NOTE—**Cover Assy. marked 924** (Std.), 964 (Special Equipment).
See Clutch Section for complete data.

Facings—Molded woven type. I.D. 6", O.D. 9¼", Thickness .114" on .125" optional.

Facings (Auburn)—Molded type. I.D. 6⅛", O.D. 9⅛", Thickness .125".

Pedal Adjustment: Set pedal to just clear toeboard (stopscrew on lower end of pedal) and set for 1" free travel (adjust nut on connector link at fork).

NOTE—Do not disturb turnbuckle on pedal link.
Clutch Over-Center Spring—*See "Clutch Notes" in Plymouth Special Data.*

Removal: Remove Transmission (see Transmission Removal below), remove release fork pull-back spring and clutch housing underpan. Disconnect release fork from pivot, withdraw release bearing and sleeve from housing. Mark clutch and flywheel (to insure correct re-installation), remove all clutch cover mounting screws evenly, remove clutch cover assembly and driven member through opening at bottom of housing.

TRANSMISSION

Own Make. All helical gear, constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).

►*HARD SHIFTING CORRECTION*—***See "Chrysler, DeSoto, Dodge & Plymouth Synchro-Mesh" in Transmission Section for complete data.***
See Transmission Section for complete data.

Transmission Control: Remote control type with gearshift lever mounted on steering column.
See Transmission Section for complete data.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Removal: Jack up front end of car. Disconnect front universal by taking out bolts in shaft flange (if transmission to be dismantled, loosen flange retaining nut), and rear universal by removing bearing caps on rear axle yoke (wire bearing cups in place to prevent loss of bearing rollers). Disconnect speedometer cable, hand brake cable at brake band, gearshift control rod and selector rod at transmission case. Remove transmission mounting screws in clutch housing, pull transmission straight back to free clutch shaft, then lower transmission and remove from beneath car.
NOTE—When installing transmission, use pilot studs installed in upper mounting screw holes to maintain alignment and prevent springing clutch driven member.

UNIVERSALS

Detroit Universal Series 4200—Ball-and-Trunnion type (front & rear).

REAR AXLE

Own Make. Semi-floating, hypoid gear type with Hotchkiss drive.
See Rear Axle Section for complete data.
Ratio—(P17, P19, P22)—3.73-1 Std. 3.9-1 Optl.
Ratio—(P18, P20, P23)—3.9-1 Std. 4.1-1 Optl.
Ratio—(Station Wagon)—4.1-1 Std.
Backlash—.006-.010". Screw adjustment.

Removal: Hoist rear end of car. Remove rear wheels. Disconnect brake hose at frame bracket, disconnect lower end of shock absorbers. Disconnect propeller shaft by removing capscrews from bearing caps on rear axle yoke (wire bearing caps in place to prevent loss of bearing rollers). Support axle housing, remove rear spring "U" bolts, lower axle assembly and remove from beneath car.
NOTE—Carrier assembly can be removed without disturbing axle housing by removing axle shafts and taking out carrier-to-housing mounting screws.

Axle Shaft Removal—Remove wheel, hub, and drum assembly (use screw type hub puller—Tool C-675), block brake pedal, disconnect brake line at wheel cylinder, remove axle shaft key, install sleeve (Tool C-745) in oil seal, remove brake support (oil seal mounted in support), pull shaft and bearing (use C-499 puller). NOTE—Use Puller C-293-E to remove bearing from shaft, puller C-748 or C-358 to remove inner oil seal, drift C-201 to install seal.

Axle Shaft Oil Seal: New leather type mounted on brake support (backing plate).
See "Rear Axle" in Plymouth Special Data.

Wheel Bearing Adjustment: Shims between backing plate and axle housing. With wheel and hub removed, check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims (furnished .010", .0125", .015", .030" thick) equally at both wheels. **Endplay**—.003-.008".

SHOCK ABSORBERS

Own Make—"Oriflow" hydraulic, direct acting, non-adjustable, non-refillable.

FRONT SUSPENSION

Front Suspension: Independent, linked parallelogram type with coil springs and direct acting shock absorbers.
See Front Suspension Section for complete data.
Kingpin Inclination—4¾° to 6° crosswise.
Camber (1949-50)—Pos. ¼°. Limits 0° to Pos. ¾° (¼-½° higher on left).
Camber (1951)—Neg. ⅜° to Pos. ⅜°. (¼-½° higher on left side).
Caster—0° preferred. Limits Neg. 1° to Pos. 1°. No adjustment.
Toe In—0" (0-1/16"). Adjust by turning both tie rods equally.
Steering Geometry—Inner wheel 22½°. Outer 20°.

STEERING GEAR

Own Make. Worm-and-roller type with "push-pull" adjustments. Same as Gemmer design Model 305.
NOTE—See Gemmer Model 305 article for data.
See Steering Gear Section for complete data.

BRAKES

Service: Chrysler "Safe-guard" Lockheed Hydraulic type as follows:
Front Wheels—Two-cylinder type (front shoe anchored at bottom and actuated by upper cylinder, rear shoe anchored at top and actuated by lower cylinder).
Rear Wheels—Double anchor type with a single double-acting wheel cylinder.
See Brake Section for complete data.
Brake Squeak Correction—*See "Chrysler-Lockheed Safeguard" in Brake Section.*
Wheel Cylinders—Single acting type (front), double acting type with straight (1⅛") bore (rear).
Drums—Centrifuse type. Diameter 10".
Lining—Molded asbestos. **Width**—2". **Thickness**—3/16".
Length per wheel 21" (Front wheels), 18½" (Rear wheels).
Clearance—.006" at each end of all brake shoes.

Hand Brake: Independent type. Hand lever actuates band on drum at rear of transmission.
Drum Diameter—6". Cast-iron.
Lining—Width 2". Thickness 5/32". Length 15⅜".
Clearance—.015-.020" around band.
Adjustment—*See Plymouth Special Data.*

MISC. MECHANICAL

CONVERTIBLE TOP CONTROL: Hydro-Lectric type.
See Miscellaneous Section for complete data.

Windshield Wipers: (Exc. Convertible & Sta. Wgn.) (1949-50)—Vacuum controlled Link & Arm type; (1951)—Auto-Lite EWR-5001A. (Convertible & Sta. Wgn.) (1949-50)—Vacuum Link & Chain type; (1951)—Auto-Lite EWR-5001B.
See Miscellaneous Section for complete data.

HOOD & HOOD LOCK ADJUSTMENT: *See Plymouth Special Data.*

MODEL IDENTIFICATION

SERIAL NUMBER: On plate on left front door hinge pillar post. Starting numbers:

1952 Starting Serial Numbers—

	Concord	Cambridge	Cranbrook
Detroit	18,192,501	15,577,801	12,906,701
Evansville	24,056,701	22,159,601	28,485,001
Los Angeles	28,015,701	26,045,701	25,125,301
San Leandro	28,519,101	26,518,201	25,546,101

1953 Starting Serial Numbers—*See Note below.*

Detroit	13,070,001	Los Angeles	25,136,001
Evansville	20,520,001	San Leandro	25,560,001

►*1953 SERIAL NUMBER NOTE—Serial number is same for both Cambridge & Cranbrook models and BODY CODE NO. (on left side of firewall) should be used when necessary to distinguish models.*

Cranbrook	Cambridge
300—4 Dr. Sedan.	310—4 Dr. Sedan.
302—Club Coupe.	311—Club Sedan.
303—Belvedere.	313—Business Coupe.
304—Convt. Coupe.	317—Suburban.
307—Savoy.	

ENGINE NUMBER: Stamped on boss on left front side of engine block.
First Number (1952 & 1953)—1001 up.

►*ENGINE NUMBER LETTERS (Following Engine Number)—Identified as follows:*
"A"—ALL Cylinders .020" oversize.
"B"—ALL Crankshaft Journals .010" undersize.
"AB"—Both above conditions exist.

TUNE-UP

COMPRESSION PRESSURE: Approximately 105 lbs. at cranking speed. 10 lbs. maximum variation between cylinders.

VACUUM READING: Steady 18-20" at idling speed.

FIRING ORDER: 1-5-3-6-2-4.

SPARK PLUG GAPS: .035".
Plugs—Auto-Lite AR8. 14 mm. Resistor type.

►*RESISTOR TYPE SPARK PLUG NOTE—Auto-Lite No. 4S-140 Resistor type spark plug can be used without changing coil. Adjust distributor points to .020".*

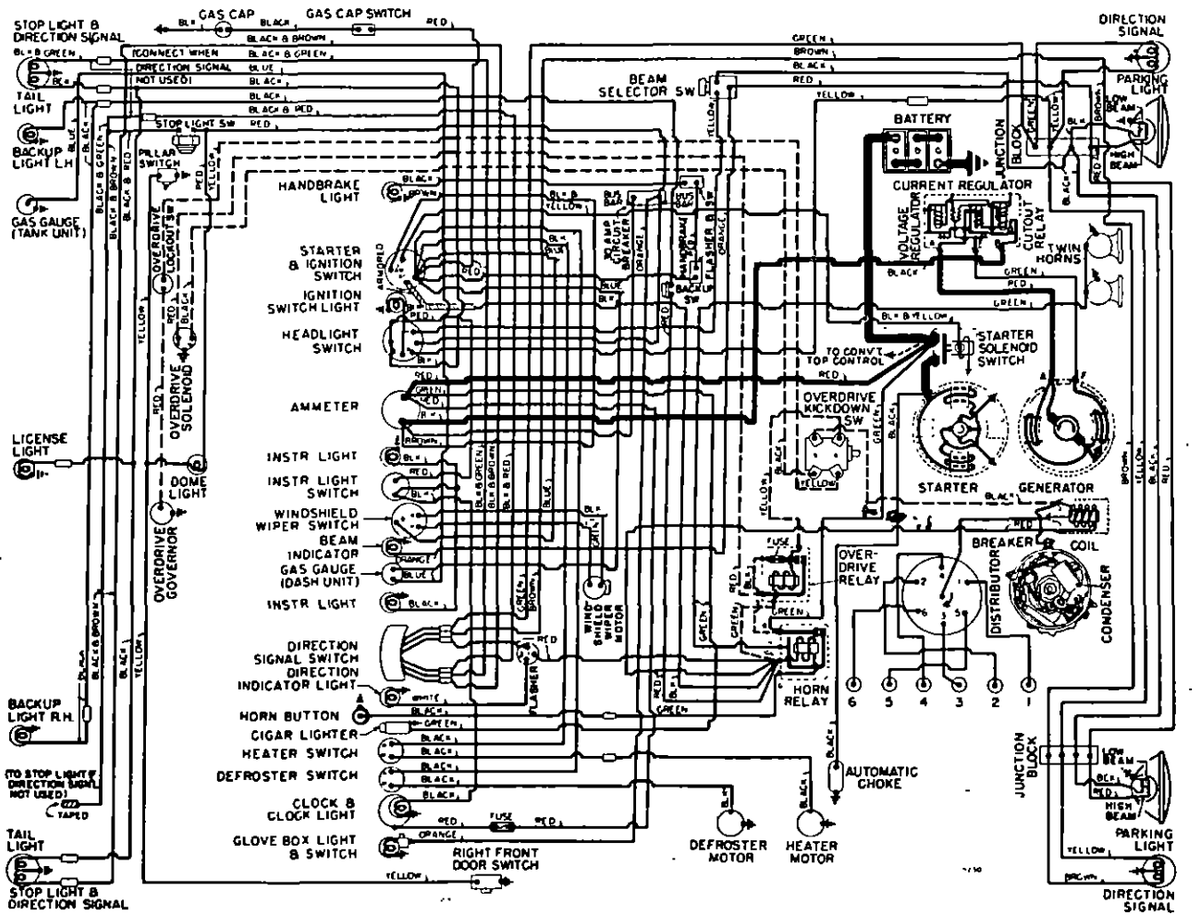
DISTRIBUTOR: Auto-Lite No. IAT-4011 (1952); IAT-4101 (1953). Canada—IAT-4012A. Automatic and vacuum advance.
Breaker Gap—.020".
Cam Angle—39° ± 3° closed. DO NOT exceed breaker gap limits to obtain dwell.
Breaker Arm Spring Tension—17-20 ozs.
Rotation—Clockwise viewed from above.
Automatic & Vacuum Advance—*See Ignition.*

COIL: Auto-Lite No. CR-4001 (U.S.), CR-6007B (Canada). Mounted above distributor.
Ignition Current—2.25 amperes idling, 5 stopped.

CONDENSER: Auto-Lite No. IAT-3076RA (for IAT-4011); IAT-3076LA (for IAT-4101); IAT-3076RA (for IAT-4012A).
Capacity—.25-.28 microfarad.

IGNITION TIMING: TDC ①.
①—Ignition setting for regular fuel. See Ignition Timing for final setting.
Timing Mark—Crankshaft pulley or vibration dampener marked "DC" at top dead center point with 15 1°-graduations before and after this point.
Timing Procedure—*See Ignition Timing.*

CARBURETION: Carter (B&B) No. D6H2 (Std.); D6N2 (City Traffic), D6U1 (Overdrive), D6P1 & D6P2 (Hy-Drive Trans.), D6R1 (Taxicab). 1½" Single barrel downdraft type with Sisson Automatic Choke.



►*1953 SURGE CORRECTION (During Light Acceleration between 20 & 50 MPH)*—If not corrected by careful engine tune-up, this condition can be corrected by installing slightly richer Main Metering Jet and slightly leaner Step-up Power Jet. See Carburetor Section for complete data.
Idle Setting—Adjust for smooth idle (if vacuum gauge used, set for highest steady vacuum). Turn screw out for richer mixture.
Idle Speed—450-500 RPM.
Float Level—Top of float (not soldered seam) 5/64" plus or minus 1/64" below top edge of bowl.
Accelerating Pump—Center Hole normal setting. Outer Hole (max.) Winter, Inner (min.) Summer.
Fast Idle Setting: No adjustment required.
Choke Setting: Insert gauge pin through hole in automatic choke shaft and hole in base flange to position shaft. loosen choke valve lever screw and position choke so that valve is tightly closed.
Fuel Pump Pressure: 4-5½ lbs.
MANIFOLD HEAT CONTROL: Thermostatic coil type. See that valve operates freely. When installing coil, free end should have approx. ¾ turn wind-up (counter-clockwise) to hook over stop stud.
VALVE TAPPET CLEARANCE: .010" Intake & Exhaust HOT. Adjust with engine idling. NOTE—Adjusting screws are self-locking type.

IGNITION

IGNITION SWITCH: Mitchellock. Combination ignition-starter switch. Starter operates when key held fully to right (returns to "on" when released).

COIL: Auto-Lite No. CR-4001 (U.S.), CR-6007B (Canada). Mounted above distributor.
Ignition Current—2.25 amperes idling, 5 stopped.

CONTINUED ON NEXT PAGE

1952 MODELS

CONTINUED FROM PRECEDING PAGE

CONDENSER: Auto-Lite No. IAT-3076RA (for IAT-4011); IAT-3076LA (for IAT-4101); IAT-3076RA (for IAT-4012A).

Capacity—.25-.28 microfarad.

DISTRIBUTOR: Auto-Lite No. IAT-4011 (1952); IAT-4101 (1953). Canada—IAT-4012A. Automatic and vacuum advance.

Breaker Gap—.020" (.018-.022").

Cam Angle—39° ± 3°. DO NOT exceed breaker gap. limits to obtain dwell.

Breaker Arm Spring Tension—17-20 ounces.

Rotation—Clockwise viewed from above.

Automatic Advance—IAT-4011 & 4101

Distributor Degrees	R.P.M.	Engine Degrees	R.P.M.
Start	350	0	700
1	450	2	900
5	800	10	1600
9	1300	18	2600
10	1425	20	2850

Automatic Advance—IAT-4012A

Start	350	0	700
3	400	6	800
6	850	12	1700
9	1300	18	2600
12	1750	24	3500

Vacuum Spark Control: Auto-Lite. Integral type.

Vacuum Advance—IAT-4011 & 4101

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	4¼"
1°	2°	5½"
4°	8°	9⅛"
7°	14°	12¾"
8°	16°	14"

Vacuum Advance—IAT-4012A

Start	0°	5"
1°	2°	6½"
3°	6°	9¼"
5°	10°	12⅛"
7°	14°	15"

Manual Adjustment—Provides for minor changes in timing at distributor. See Ignition Timing.

IGNITION TIMING

Std. Setting.....**①At TDC.**

①—Initial setting for regular fuel. See Manual Adjustment (below) for final setting.

Timing Mark—Crankshaft pulley or vibration dampener marked "DC" at top dead center point with 15-1° graduations before and after this point.

Timing (Using Synchroscope)—Loosen distributor lock-plate hold-down screw, center pointer on scale, tighten screw. Clip lead to #1 spark plug, direct light on impulse neutralizer (mark correct graduation with paint), idle engine, loosen lock-plate clamp bolt, rotate distributor until mark is aligned with pointer on front cover, tighten clampscrew.

Manual Adjustment—Set to give slight ping from 10-30 MPH, accelerating with wide-open throttle. To adjust, loosen lock-plate hold-down screw, move plate (not more than 4° or .007" before or after initial setting) counter-clockwise (if no ping), clockwise (if ping too severe), tighten screw.

CARBURETOR

Carter (B&B)	Model Nos.
Standard	D6H2
City Traffic	D6N2
Overdrive	D6U1
Hy-Drive Trans	D6P1 & D6P2
Taxicab	D6R1

1½" single barrel downdraft type with Sisson automatic choke.

►*1953 SURGE CORRECTION—See Tune-Up.*

See Carburetor Section for complete data.

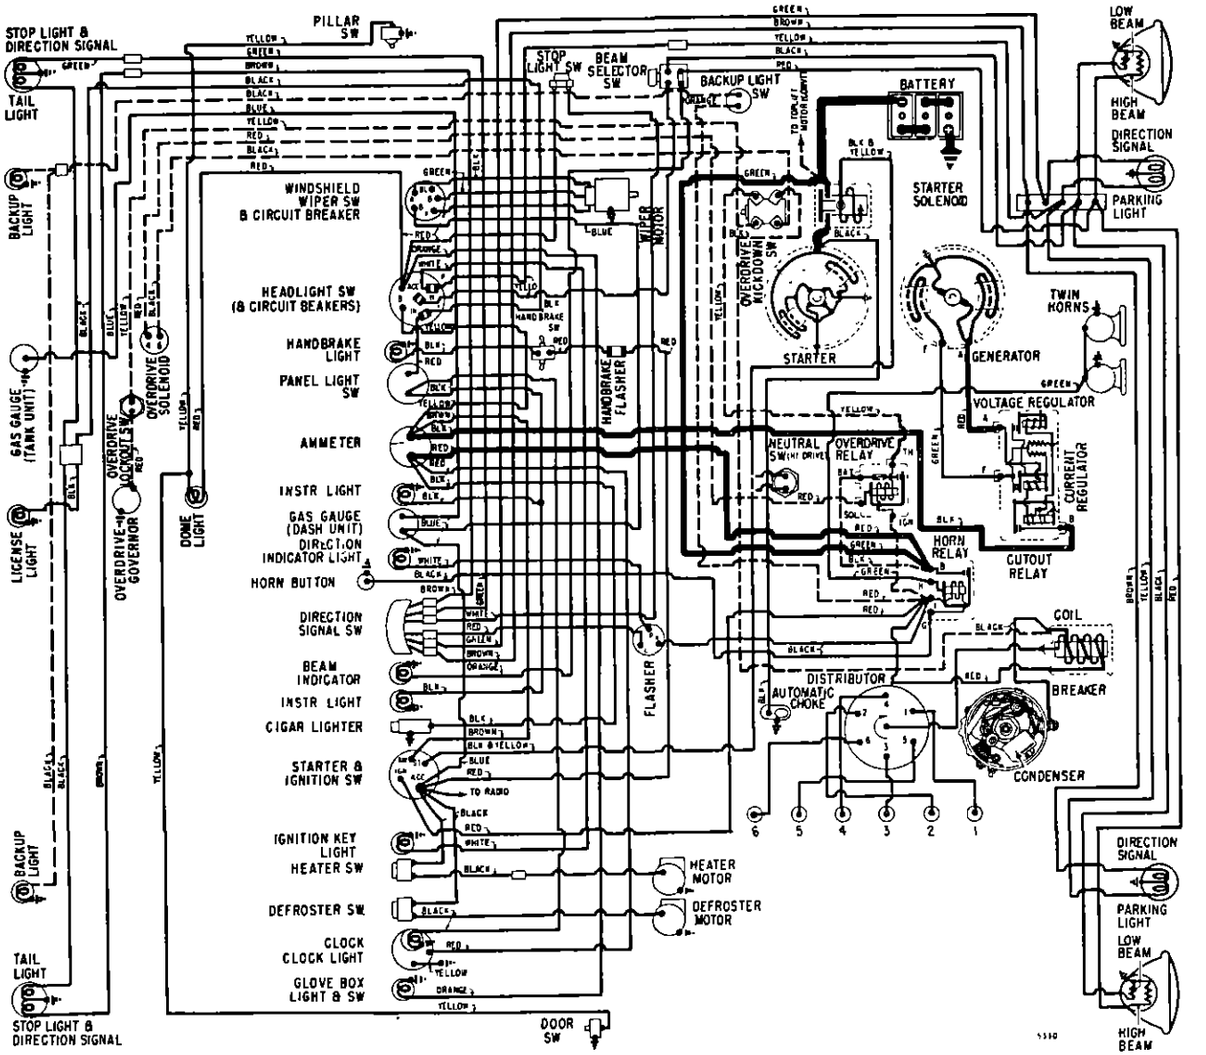
Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up data.*

Metering Jet—*See Carter (B&B) Jet Table in Carburetor Section for complete data.*

Fast Idle: Throttle opened to fast idle position when choke valve closed. No adjustment required.

Automatic Choke: Sisson type Optional.

Setting—Choke can be adjusted by inserting a gauge pin through hole in automatic choke lever shaft and slot in base mounting flange (to position shaft) and adjusting carburetor choke valve lever so that choke valve is tightly closed.



See Carburetion Equipment Section for data.

CARB. EQUIPMENT

Air Cleaner: Oil-bath type. Filter element AC No. 21.

Fuel Pump: AC diaphragm type. Fuel only (Std.); Fuel & Vacuum (Optional).

Replacement Pump: AC No. 588 or 9926.

1953 MODELS

Pressure—4-5½ lbs.
See Carburetion Equipment Section for data.

Fuel Tank Filter: Oilite metal filter in tank.
Servicing—If more than 2 pints water in tank, fuel will not pass through filter. Remove filler cap and drain plug, draining tank. Disconnect fuel line at some point between pump and tank, blow out line and filter with air, increasing pressure as filter is cleaned. Flush tank with clean gasoline.

Gasoline Gauge: Auto-Lite electric type.

►*1953 SUBURBAN FUEL GAUGE SERVICE REPLACEMENT NOTE*—A more accurate reading "Thermostatic" type fuel gauge, Plymouth Part No. 1594499 is available for service replacement.

►*1953 FUEL GAUGE CAUTION*—Suburban & Savoy models are REVERSED type and can be identified by green painted terminal insulator and reversed location of terminals (Dash Unit), longer float arm and green painted cap (Tank Unit). *THESE SPECIAL UNITS MUST BE USED TOGETHER.*

Dash Unit—Auto-Lite No. 12327A (Early 1952); No. 12780A (Late 1952 & 1953—Exc. 1953 Suburban & Savoy models); No. 13210A (Suburban & Savoy).

Tank Unit—Auto-Lite No. 12617A (exc. Suburban & Savoy), No. 12904A (Suburban & Savoy), No. 12618A (Special Equipment).
See Carburetion Equipment Section for data.

BATTERY

Willard HW-1-100-C or Auto-Lite Type 1M-100-D. 6 Volt, 15 Plate, 100 Ampere Hour (20 hr. rate).

►*1953 BATTERY RUNNING DOWN UNDER SLOW DRIVING CONDITIONS—See "Generator Pulley Production Change" (following).*
Grounded Terminal—Positive (+) to engine.
Location—In left fender shield under engine hood.

STARTER

Model	Auto-Lite No.
1952 (Early) (U.S.)	MCH-6201
1952 (Late) & 1953 (U.S.)	MCH-6205
1952 (Early) (Canada)	MCH-6202
1952 (Late) & 1953 (Canada)	MCH-6206

Armature—Auto-Lite No. MCH-2088 (All Cars).
Drive—Bendix No. A3274, "Folo-thru" type.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—42-53 ounces (new brushes).

Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4300	5.0	65
6 "	Lock	2.0	335

Starting Switch: Auto-Lite No. SST-4006. Magnetic type mounted on left front fender shield and controlled by ignition switch.

GENERATOR

Model	Auto-Lite No.
Std. (1952 & Early 1953)	GGW-6001K
Std. (Late 1953)	GGW-6001J
City Police & Taxi	GGJ-6001F
City Police & Taxi	GGU-6001G
State Police	GGJ-6001G
State Police	GGU-6001R

2 brush types with voltage and current regulation.

►*1953 GENERATOR PULLEY PRODUCTION CHANGE (To prevent battery rundown under slow driving conditions)—3¼" pulley used on later 1953 cars (Plymouth Part No. 1345974). Can be installed on earlier 1953 cars if driving conditions warrant.*

Armature—GGW-2006F (GGW type generator); GGU-2006F (GGU type generator); GGJ-2101F (GGJ type generators).

Maximum Charging Rate—See table below.

Charging Rate Adjustment—None. See Regulator.

Performance Data—GGW-6001J, K

Amperes	Volts	Cold—R.P.M.—Hot
0	6.4	870-970 — 950-1050
45	8.0	1925-2125 — 2350-2550

Performance Data—GGU-6001G, R

0	6.4	750-850 — 800-900
45	8.0	1450-1650 — 1650-1850
50	8.0	1550-1750 — 1750-1950

Performance Data—GGJ-6001F, G

0	6.4	600-700 — 650-750
50	8.0	1400-1600 — 1550-1750
55	8.0	1500-1700 — 1650-1850

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—(GGW-GGU) 35-53 ounces (new brushes), (GGJ) 30-37 ounces (new brushes).

Field Current—(GGW) 1.3-1.5 amperes; (GGU-GGJ) 1.4-1.6 amps., all at 5.0 volts.

Motoring Current—(GGW) 3.9-4.5 amperes; (GGU) 5.0-6.0 amps., (GGJ) 3.7-4.2 amps., all at 5.0 volts.

Belt Adjustment: Loosen pivot and clamp bolts, pull generator out for ½" belt deflection midway between generator and pump pulleys.

REGULATOR

Auto-Lite Regulator No.	for Auto-Lite Gen. No.
VAV-6001B or ①VAV-6002B	GGU-6001G, R
VBE-6001A	GGW-6001J, K
VBF-6001A or ①VBF-6002A	GGJ-6001F, G

①—For negative ground.

Voltage and current type with "Temperature Compensated" Current Regulator.
See Electrical Equipment Section for complete data.
NOTE—Regulator case cover sealed. Serviced on exchange basis if seals not broken.

Cutout Relay
Cuts In (All)—6.3-6.8 volts (set to 6.4-6.6 volts).
Cuts Out (All)—4.1-4.8 volts (4-6 amps. disch.).
Air Gap (All)—.031-.034" with contacts open (check at hinge end of core).

Voltage Regulator
Setting (VAV, VBE Reg.)—7.1-7.4 volts.
Setting (VBF Reg.)—7.15-7.45 volts.

►*NOTE—Set after 15 minutes operation charging at 10 amperes (VBF) or at ½ maximum rate (VAV & VBE).*
Air Gap (All)—.048-.052" with contacts just opening (at point side next to armature stop pin).
Checking & Adjusting—*See Elec. Equip. Section.*

Current Regulator
►*SETTING CAUTION—"Temperature Compensated" type. Set to following specifications at 70°F.:*

	Test A—Operating Amperes	Test B
VAV-6001B, 2B	55	50 (48-52)
VBE-6001A	52	45 (43-47)
VBF-6001A, 2A	66	55 (53-57)

Test A—After 15 minutes operation charging at 10 amperes (VBF) or at ½ max. rate (VAV & VBE).
Test B—After additional 15 minutes operation with current regulator operating (load applied to hold voltage down to 6.7-7.0 volts).
Air Gap (All)—.048-.052" with contacts just opening.
Checking & Adjusting—*See Elec. Equip. Section.*

LIGHTING

Headlamps: Sealed Beam type.
See Electrical Equipment Section for complete data.
Beam Indicator—On speedometer dial. Lighted when upper beams on.

Direction Signal: *See Electrical Equipment Section.*
Direction Signal Indicator—On speedometer dial. Flashes when direction signal operating.

Switches
Lighting—Plymouth No. (1952) 1339691, (1953) 1495859.
Beam Selector—Plymouth No. 1253003.
Instrument—Plymouth No. (1952) 1343740, (1953) 1495840.
Direction Signal—Plymouth No. 1440080.

MISC. ELECTRICAL

CIRCUIT BREAKER (1952): 30 ampere. On back of instrument panel above headlight switch.

CIRCUIT BREAKER (1953): In headlight switch assembly. Two 10 ampere and one 20 ampere, protect headlight, tail, stop light, accessory, and interior lighting circuits.

FUSES: Clock—3 ampere. In clock lead connector.
Overdrive—20 ampere. On overdrive relay.

HORNS: Dual horns operated by relay.

	Auto-Lite No.
1952 Low Pitch (U.S.)	HW-4205
1952 High Pitch (U.S.)	HW-4206
Early 1953 Low Pitch (U.S.)	HAB-4619
Early 1953 High Pitch (U.S.)	HAB-4620
Late 1953 Low Pitch (U.S.)	HAB-4655
Late 1953 High Pitch (U.S.)	HAB-4656
1952-53 Low Pitch (Canada)	HW-4107
1952-53 High Pitch (Canada)	HW-4108

Horn Relay: Auto-Lite HRL-4104. Connected through ignition switch, operates only with ignition on.
Contacts Close—1.5-3.0 volts (seal to core with 4 v.).
Contacts Open—.5 volts min. (open from seal).
Contact Gap—.026". **Air Gap**—.016-.020" (armature air gap with contacts closed but not sealed), .015-.018" (gap between armature leg and yoke with armature sealed to core).

ENGINE

ENGINE SPECIFICATIONS: 6 cylinder, "L" hd. type.
Bore—3¼". **Stroke**—4⅜".
Displacement—217.8 cu. ins. **Rated HP.**—25.35.
Developed HP—(1952) 97, (1953) 100, at 3600 RPM.
Compression Ratio—(1952) 7.0-1, (1953) 7.1-1.
Compression & Vacuum Reading—*See Tune-up data.*

ENGINE & OIL PAN REMOVAL: *See Plymouth Special Data.*

CYLINDER HEAD & TIGHTENING TORQUES: *See Plymouth Special Data.*

►*1952 CYLINDER HEAD CAUTION*—Two types of cylinder heads used. Head on later cars identified by

CONTINUED ON NEXT PAGE

ENGINE

CONTINUED FROM PRECEDING PAGE

casting No. 1405849 on top surface toward rear of head. Later head can be used for replacement on earlier models from "P-15" on, but must be used with new type gasket, Plymouth No. 1326319.

PISTONS: Aluminum alloy, "U" slot, cam ground type.
Original Bore & Piston Sizes—*See Plymouth Special Data.*
NOTE—Piston skirt is elliptical (.010-.012" smaller diameter across pin bosses than across thrust faces), and tapered (.0005-.0015" smaller diameter at top of skirt than at bottom).

▷*PISTON NOTE*—"Centerless Ground" and "Diamond Bore Turned" pistons used in production. Both types may be found in the same engine and the wear pattern on the piston wall will be different. "Centerless Ground" type will show normal vertical lines while the "Diamond Bore Turned" type will show horizontal lines. These conditions are normal and the pistons are interchangeable in the engine.

▷*CYLINDER BORE OVERSIZE CAUTION—Engine with letter "A" following engine number indicates that cylinder bore .020" oversize.*
Length—3 11/16". **Weight**—16.0 ozs. (stripped).
Removal—Pistons and rods removed from above.
Clearance—.028-.032" (Head & Ring Lands), .0002-.0012" (Skirt—across thrust faces and ¾" up from bottom). See Fitting New Pistons.

Fitting New Pistons: With cylinder bore and piston clean and dry, piston should be fitted so it will pass through cylinder with a light push fit of the hand and will stop anywhere in the bore, holding itself without falling through of its own weight.
NOTE—Fit piston at point of smallest bore diameter, and with piston pin removed from piston. Make certain that U-slot is away from valve side of engine.

Replacement Pistons: .005", .020", .030", .040", .060" OS.

Installing Pistons: "U" slot away from valves.

PISTON RINGS: Two compression (top ring chrome-plated, second tin-plated), two slotted oil control rings per piston, all above pin. Oil ring grooves drilled for oil drainage.

Ring	Width	End Gap	Side Clearance
Compr. (#1)	3/32"	.007-.015"	.0025-.004"
Compr. (#2)	3/32"	.007-.015"	.002-.0035"
Oil Contr. (#3,4)	.5/32"	.007-.015"	.001.0025"

Installing Rings—#1 Compr. with step on inner edge up. #2 Compr. with step on inner edge up or if step on outer edge, install with step down.

Replacement Rings: .005", .020", .030", .040", .050", .060" OS. *See "Piston Rings" in Plymouth Special Data.*

PISTON PIN: Diameter—55/64". **Length**—2 3/4". Pin floats in piston and rod, held by lock rings.
Pin Fit in Piston—.0000-.0005" or tight double thumb press fit at room temperature.
Pin Fit in Rod—.0001-.0002" or tight thumb press fit at room temperature.

Replacement Pins: Std., .0006", .003", .008" Oversize.

CONNECTING ROD: Length—7 15/16". **Weight**—31.06 ozs. (with bolts, less bearings).
Crankpin Journal Diameter—2 1/16".

▷*THICKER-WALL BEARING AND JOURNAL DIAMETER CAUTION (One or more Journals Machined Undersize). See "Original Bearing Sizes" in Plymouth Special Data.*
Lower Bearing—Removable, precision type, steel-backed, thin babbitt-lined. No shims.
Clearance—.0005-.0015". **Sideplay**—.006-.011".

Bearing Adjustment: None (no shims). Replace bearings. *See "Connecting Rod & Bearings" in Plymouth Special Data.*
Journal Diameters—2.4995-2.5005". *See "Original Bearing Sizes" in Plymouth Special Data.*

Replacement Bearings: .001", .002", .003", .010", .012", .020" Undersize. *See "Original Bearing Sizes" in Plymouth Special Data.*

Installing Rods: Wide portion of bearing to rear (#1, 3, 5), to front (#2, 4, 6). Oil hole to camshaft.

CRANKSHAFT: 4 bearings, 7 integral counterweights, with vibration dampener on front end.

▷*1953 CRANKSHAFT CAUTION—Crankshaft is not interchangeable with previous models due to changes for new type oil seal.*

▷*1953 HY-DRIVE ENGINE SPECIAL REAR MAIN BEARING: See "Crankshaft & Main Bearings" in Plymouth Special Data.*

▷*THICKER-WALL BEARING & JOURNAL DIAMETER CAUTION—(One or More Journals Machined Undersize). See "Original Bearing Sizes" in Plymouth Special Data.*
Bearings—Removable, precision type, steel-backed, thin babbitt-lined. No shims.
Clearance—.0005-.0015".

Bearing Adjustment: None. Replace bearings. *See "Crankshaft & Main Bearings" in Plymouth Special Data.*

Replacement Main Bearing Caps: *See "Crankshaft & Main Bearings" in Plymouth Special Data.*

Replacement Bearings: .001", .002", .003", .010", .012", .020", .030", .040" Undersize. *See "Original Bearing Sizes" in Plymouth Special Data.*

End Thrust: Taken by flanged faces of #4 (rear) main bearing. **Endplay**—.003-.007".

Crankshaft Front & Rear Oil Seals: *See "Crankshaft and Main Bearings" in Plymouth Special Data.*

▷*1953 TIMING CHAIN COVER OIL SEAL PRODUCTION CHANGE*—To reduce oil leakage and hub wear, a new seal, Plymouth Part No. 1551061 is available for service replacement.

▷*1953 REAR MAIN OIL SEAL CAUTION—New type seals must be used with 1953 crankshaft and are NOT interchangeable with previous type seal.*

CAMSHAFT: 4 bearing. Non-adjustable chain drive.
Bearing Diameters—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1¼".
Bearings—Removable, steel-backed, babbitt-lined bushings (except #4—machined in crankcase).
Clearance—.001-.003".

End Thrust: Taken by thrust plate behind camshaft sprocket hub. **Endplay**—.002-.006".

Camshaft Removal & Installation: *See Plymouth Special Data.*

Timing Chain: Width 1". Pitch .500" (½"). Length 24" or 48 links.
Timing Chain Removal—*See "Timing Chain" in Plymouth Special Data.*

Camshaft Setting: Sprockets marked. Mesh chain with sprockets turned so that '0' marks are adjacent and in line with a straightedge across shaft centers.

VALVES:

	Head Diameter	Stem Diameter	Length
Intake	1 17/32"	.340-.341"	4 27/32"
Exhaust	1 13/32"	.340-.341"	4 27/32"

	Seat Angle	Lift	Stem Clearance
Intake	45°	⅜"	.001-.003"
Exhaust	45°	⅜"	.003-.005"

Exhaust Valve Seat Inserts—*See "Valve System" in Plymouth Special Data.*

Valve Guides: Remove from above. Press new guides in with stepped end down and upper end ⅞" below top of block, ream guides to inside diameter of .342-.343" (Intake), .344-.345" (Exhaust).

Valve Springs: Install with close-coil end to top.

Free Length 2".	Spring Pressure	Spring Length
Valve Closed	40-45 lbs.	1¾"
Valve Open	107-115 lbs.	1⅜"

Valve Lifters: Mushroom type (remove from below with camshaft out of engine). Stem diameter ⅜". Service by reaming lifter holes (work from above piloting reamer in valve guide) and installing oversize lifter furnished .001", .008", .030" Oversize.

VALVE TIMING

Tappet Clearance: .010" (All) Hot.
NOTE—Tappet screws self-locking type.

Valve Timing: See Camshaft Setting above.
Intake Valves—Open 12° BTDC. Close 44° ALDC.
Exhaust Valves—Open 50° BLDC. Close 6° ATDC.
Valve Timing Check—With .014" tappet clearance (Cold), #6 intake valve should open with #6 piston 5° to 17° BTDC (5th to 17th graduation before DC mark on impulse neutralizer aligned with pointer on chain case cover). Reset tappet clearance to running clearance .010" hot.

LUBRICATION

Engine Oiling System: Pressure to main and connecting rod bearings, camshaft bearing and timing chain. "Rotor" type oil pump.
Crankcase Capacity—5 qts. refill (Std. & Overdrive Cars), 10 qts. (Hy-Drive Trans. Cars).
NOTE—1 qt. addtl. required when filter changed.

▷*HY-DRIVE TRANSMISSION NOTE*—Engine and torque converter oil systems combined. Maintain engine oil level as indicated on crankcase oil level dipstick. Change oil twice each year regardless of mileage. See Hy-Drive Transmission data.
Normal Oil Pressure—40-60 lbs. above 30 MPH.
NOTE—On Hy-Drive Cars, idling oil pressure will be lower and running oil pressure higher than on other cars.
Oil Pressure Regulator—Under plug on left side of crankcase (below starter). Opens at 45 to 55 lbs. Serviced by replacing spring. (Std. spring Unpainted, Lighter—Red, Heavier—Green. *Use replacement spring of same color as original spring.*

▷*HY-DRIVE TRANS. CAR NOTE*—Engines have internal by-pass relief valve in oil pump cover (recirculates oil within pump) and oil filter by-pass valve on left side of crankcase (this valve opens at approx. 40 lbs. and allows oil to flow through filter).

Oil Pump: Rotor type. On right side of engine.
Oil Pump Removal & Overhaul: *See Plymouth Special Data.*

Oil Filter: On left side of engine above starter. Replace filter element at 8,000 miles (Cars without

Hy-Drive); every 5,000 miles (Cars with Hy-Drive). or more often if required by operating conditions.

Oil Pressure Gauge: Auto-Lite No. 12324A (Early 1952); No. 12781 (Late 1952); No. 13093A (1953).

COOLING

►***ENGINE COOLING CAUTION:*** Clearance between fan and radiator core should be ¾" to 1" (measured at bottom of core—check all fan blades for alignment and clearance). If clearance greater than 1", install spacers, Part No. 920544, as required, between fan and pulley using new screws No. 122017 (with one spacer), No. 122022 (with two spacers).

Cooling System: Pressure type with pressure valve and relief valve in filler cap, by-pass type thermostat, and water distribution tube in block.
Pressure Valve—In filler cap. Opens at 7 lbs.
Capacity—13 qts.

Radiator Core Removal: *See "Radiator" in Plymouth Special Data.*

Water Distribution Tube Servicing: *See "Cooling System" in Plymouth Special Data.*

Water Pump: Packless type with grease fitting.
See Water Pump Section for complete data.
Removal—Drain cooling system, remove fan belt, disconnect hoses at pump, remove pump mounting studs, lift fan and pump off.

Thermostat: In Cylinder head water outlet.
INSTALLING NOTE—Install thermostat with 2 ports facing front and 2 ports facing rear.
Setting—Starts to open 157-162°F. Fully open 183°F.

Temperature Gauge: Auto-Lite No. 12701A (Early 1952); No. 12782A (Late 1952 & 1953). Not electrical.

CLUTCH

Borg & Beck Model 9A7, Assembly No. 926 or Auburn Model No. 100052-1 (Std.). Borg & Beck Model 8.5A6, Assy. No. 1340 (Hy-Drive Cars). Borg & Beck Model 10A7 No. 957 or 11A6 No. 931 (Optl. Heavy Duty).
See Clutch Section for complete data.

►*1953 (HY-DRIVE CARS) CLUTCH NOISE CORRECTION: See Clutch Section for complete data.*
Facings—Molded type. **I.D.** 6" (Auburn), 6⅛" (926), 6½" (931), 7" (957), **O.D.** 8½" (1340), 9¼" (Auburn & 926), 10" (957), 11" (931). **Thickness** .115" (Auburn), .125" (All Borg & Beck).

Pedal Adjustment: Set pedal to just clear toeboard (stopscrew on lower end of pedal) and set for 1" free travel (adjust nut on connector link at fork). NOTE—Do not disturb turnbuckle on pedal link.

Removal: Remove Transmission (see Transmission Removal below), remove release fork pull-back spring and clutch housing underpan. Disconnect release fork from pivot, withdraw release bearing and sleeve from housing. Mark clutch and flywheel (to insure correct re-installation), remove all clutch cover mounting screws evenly, remove clutch cover assembly and driven member through opening at bottom of housing.

SYNCHRO-MESH TRANSMISSION

Own Make. All helical gear, constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).

►*1952 HARD SHIFTING CORRECTION—See "Chrysler, DeSoto, Dodge & Plymouth Synchro-mesh" in Transmission Section for complete data.*

►*OVERDRIVE TRANS. LOW-&-REVERSE SHIFT RAIL PRODUCTION CHANGE: See Transmission Section for complete data.*

Transmission Control: Remote control type with gearshift lever mounted on steering column.
See Transmission Section for complete data.

Removal: Jack up front end of car. Disconnect front universal by taking out bolts in shaft flange (if transmission to be dismantled, loosen flange retaining nut), and rear universal by removing bearing caps on rear axle yoke (wire bearing cups in place to prevent loss of bearing rollers). Disconnect speedometer cable, hand brake cable at brake band, gearshift control rod and selector rod at transmission case. Remove transmission mounting screws in clutch housing, pull transmission straight back to free clutch shaft, remove transmission from below. NOTE—When installing transmission, use pilot studs installed in upper mounting screw holes.

OVERDRIVE

Warner Model AS1-R10G. Optional equipment with Plymouth transmission. Solenoid operated overdrive (governor control and throttle kick-down).
See Transmission Section for complete data.
Overdrive Solenoid—Delco-Remy No. 1118155.
Governor—Auto-Lite No. TGE-4008 (1952 & Early 1953); No. TGE-4010 (Late 1953).
Control Relay—Auto-Lite No. HRT-4001A.

►*1953 OVERDRIVE RELAY RELOCATION (To Eliminate Short)—See "Warner R-10 Overdrive" in Transmission Section for complete data.*
Overdrive Fuse—20 ampere. On control relay.

Removal: Disconnect two wires from rail lockout switch, two wires from solenoid, wire from control lever. Then remove overdrive and transmission (see Transmission Removal above).

HY-DRIVE TRANSMISSION

Own Make (Optional Equipment)—Unit consists of Torque Converter and std. 3-speed transmission.
See Transmission Section for complete data.

Hy-Drive Control: Remote type with gearshift lever mounted on steering column.
See Transmission Section for complete data.

►**Neutral Safety Switch Checking & Adjusting**—Connect one end of a test wire to small terminal on solenoid switch. With transmission in neutral, ground wire to negative terminal of battery. If starter operates, remove neutral switch and check with a test lamp. Remove switch gasket if switch is satisfactory and apply sealer to switch threads. Reinstall switch. If test indicates switch is not making contact, machine .015-.020". off face of threads.

Lubrication: Two oil changes required per year (regardless of mileage). Drain engine and "Hy-Drive" Torque Converter separately. To refill, pour 10 qts. (11 qts. if filter changed) of correct viscosity oil into crankcase and run engine at fast idle for 5 minutes. Check engine oil level.
Capacity—10 qts. (1 qt. addtl. if filter changed).

►*OIL FILTER CHANGE CAUTION—On "Hy-Drive" Cars, oil filter element must be changed every 5,000 miles.*

REMOVAL: Disconnect battery cables and two wires leading to transmission neutral safety switch, drain crankcase and torque converter. Then proceed as follows:
1) Remove transmission. *See "Transmission Removal" on car model page.*
2) Remove clutch release fork, pull back spring and disconnect rear end of clutch fork rod assembly. Remove pivot bracket assembly from clutch housing, then remove torque shaft.
3) Remove rear engine-to-crossmember bolts, install engine support fixture Tool C-3162. Insert hooks of fixture firmly into holes on either side of frame sub side rails with support ends up against underside of cylinder block. Adjust support fixture adjusting bolt so it will support engine while removing rear engine crossmember. Remove crossmember-to-frame bolts, remove crossmember. Lower engine approximately 3 or 4 inches to permit access to upper clutch housing-to-torque converter housing bolts. Remove bolts and carefully remove clutch housing from underneath car.

►*CAUTION—Do not pry between housing flanges or pound housing to loosen. This would distort housing and result in misalignment.*
4) Punch mark clutch cover and clutch driving plate to insure reinstallation in same position. Remove clutch cover and pressure plate assembly and clutch disc from clutch driving plate.

►*CAUTION—Torque converter housing and clutch housing machined as assembly. If necessary to replace one or the other, replace both housings.*
5) Remove torque converter housing-to-adapter plate bolts and lockwashers. Three bolts are located on engine side of adapter plate. Housing is doweled to adapter plate and care should be exercised when removing housing. Do not pry between flanges to loosen as this will distort metal and result in misalignment. Carefully move housing straight back to avoid damage to torque converter impeller hub oil seal and turbine shaft oil seal ring. Remove seal rings between converter housing and adapter plate. Inspect mating surfaces of adapter plate and torque converter housing, remove burrs or rough spots with emery cloth.
6) Remove six bolts that hold metal dust shield to adapter plate, lift shield out. Remove eight nuts and lockwashers that hold converter unit to crankshaft (use Tool C-811). *The torque converter assembly is a welded unit and cannot be serviced except as an assembly.*
7) Remove bolts which hold adapter plate to engine block, carefully remove adapter plate. *Do not pry or pound on adapter plate to loosen it.* Remove oil rings and thoroughly inspect mating surfaces of adapter plate and engine block. Remove burrs and rough spots with emery cloth.

UNIVERSALS

Detroit. Ball-and-Trunnion type.

REAR AXLE

Own Make. Semi-floating, hypoid gear type with Hotchkiss Drive.
See Rear Axle Section for complete data.

	P-22	P-23	P-24
Standard Trans.	3.73-1	3.9-1	3.73-1
Overdrive	4.1-1	4.3-1	4.1-1
Hy-Drive			3.73-1
Optional①	4.1-1	4.3-1	4.1-1

①—Mountains & Hilly country.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Backlash—.006-.010".

Removal: Hoist rear end of car. Remove rear wheels. Disconnect brake hose at frame bracket, disconnect lower end of shock absorbers. Disconnect propeller shaft by removing capscrews from bearing caps on rear axle yoke (wire bearing caps in place to prevent loss of bearing rollers). Support axle housing, remove rear spring "U" bolts, lower axle assembly and remove from beneath car.

►*LIFTING CAUTION*—To avoid possibility of transmission oil leaking onto clutch, DO NOT hoist rear tires more than 25" above floor when lifting at rear axle, or rear bumper more than 35" from floor.

Axle Shaft Removal—Remove wheel, hub and drum assembly (use screw type hub puller—Tool C-845), block brake pedal, disconnect brake line at wheel cylinder, remove axle shaft key, install sleeve (Tool C-745) in oil seal, remove brake support and oil seal, pull shaft and bearing with C-499 puller.

Wheel Bearing Adjustment: Shims between backing plate and axle housing. With wheel and hub removed, check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims (furnished .010", .0125", .015" and .030" thick) equally at both wheels. **Endplay**—.003-.008".

SHOCK ABSORBERS

Own Make—"Oriflow" hydraulic, direct-acting, non-adjustable, non-refillable.

Plymouth Part Nos.	Front	Rear
Early 1952 (Std.)	1321127	1321128
Late 1952 & 1953 (Std.)	1326164	1326165
1952-53 (Heavy Duty)	1450041	1450075

►*1953 REAR SHOCK ABSORBER BRACKET PRODUCTION CHANGE & SERVICE REPLACEMENT—A new stronger shock absorber frame bracket Plymouth Part No. 1319554 used in production and for service replacement.*

FRONT SUSPENSION

Front Suspension: Independent, linked parallelogram type with coil springs and direct acting shocks.

►*CONTROL ARM & FRONT SPRING PRODUCTION CHANGE (Convertibles): See Front Suspension Section for complete data.*

Kingpin Inclination—5° to 6½° crosswise.

Camber—Neg. ⅜° to Pos. ⅜° (¼-½° higher on left).

Caster—0° preferred. Limits Neg. 1° to Pos. 1°.

Toe-In—0" preferred. Limits 0" to 1/16".

Toe-out on Turns—Inner wheel 21½° plus or minus 1° with outer wheel turned 20°.

STEERING GEAR

Own Make—Worm-and-roller type with "push-pull" adjustments. Same as Gemmer Model 305.

NOTE—See Gemmer Model 305 article for data.

See Steering Gear Section for complete data.

BRAKES

Service: Chrysler "Safe-guard" Lockheed Hydraulic.

Front Wheels—Two-cylinder type (front shoe anchored at bottom and actuated by upper cylinder, rear shoe actuated by lower cylinder.

Rear Wheels—Double anchor type with a single double-acting wheel cylinder.

See Brake Section for complete data.

►**Brake Squeak Correction**—*See "Chrysler Brakes" in Brake Section.*

Wheel Cylinders—Single-acting type (front) double-acting type (rear) with straight (1⅛") bore.

Drums—Centrifuse type. Diameter 10".

Lining—Molded asbestos. **Width** 2". **Thickness** .200". **Length per wheel**—21" (front), 18½" (rear).

Clearance—.006" at each end of all brake shoes.

Hand Brake: Independent type. Hand brake lever actuates band on drum at rear of transmission.

Drum Diameter—6". Cast iron.

Lining—**Width** 2". **Thickness** 5/32". **Length** 16 11/16".

Clearance—.015-.020" around band.

Adjustment—*See "Brake Notes" in Plymouth Special Data.*

MISC. MECHANICAL

CONVERTIBLE TOP CONTROL: Electrical-mechanical type. *See Miscellaneous Section for data.*

WINDSHIELD WIPERS: Auto-Lite or Redmond. Electric type. *See Miscellaneous Section for data.*

►*1952 IMPROVED WINDSHIELD WIPER ACTION: See 1953 Redmond and Auto-Lite Electric Windshield Wipers for installation of new type linkage.*

MODEL IDENTIFICATION

Series	1954	1955
Plaza	P-25-1	P-26-1
Savoy	P-25-2	P-26-2
Belvedere	P-25-3	P-26-3

SERIAL NUMBER: On left front door hinge pillar post.

Starting Serial Numbers

Assembly Plant	1954	1955
Detroit	13,506,001	13,835,001
Los Angeles	25,163,001	20,745,001
Evansville	20,658,001	25,180,001
San Leandro	25,590,001	

ENGINE NUMBER: Stamped on left front side of cylinder block.

Starting Engine Number—1001 up (each year).

►*ENGINE NOTE: Two engines used in 1954. 217 Cu. In. (4 3/8" Stroke) used in Early 1954. 230 Cu. In. (4 5/8" Stroke) used in Late 1954 and 1955.*

►*ENGINE NUMBER LETTERS & MARKS (Following Engine Number): Identified as follows:*

"A"—ALL cylinders .020" oversize.

"B"—ALL crankshaft journals .010" undersize.

"AB"—BOTH above conditions exist.

TUNE-UP

COMPRESSION PRESSURE: 105 lbs. (217" Engine); 120-150 lbs. (230" Engine). At cranking speed of 150 RPM. 10 lbs., maximum variation between cylinders.

VACUUM READING: Steady 18-21" at idling speed.

VALVE TAPPET CLEARANCE: .010", Intake and Exhaust. Engine must be hot and idling.

►*CONTINUOUS HIGH SPEED TAPPET CLEARANCE:* An additional .002" clearance for **exhaust** tappets is desirable.

MANIFOLD HEAT CONTRCL: Thermostatic coil type. See that valve operates freely. When installing coil, spring should be installed so that approximately ¾ turn is required to hook outer end of spring around stud.

IGNITION

FIRING ORDER: 1-5-3-6-2-4.

SPARK PLUG GAP: .035".

Plugs—Auto-Lite Resistor 4S-140, 14mm. Torque to 32 ft. lbs.

COIL: Auto-Lite CR-4001 (Early 1954); CR-6012C (Late 1954 & 1955). CR-6007B (Canada).

Ignition Current—2.25 amperes idling. 5.0 stopped.

DISTRIBUTOR: Auto-Lite IAT-4101 (Early 1954); IAT-4101C (Late 1954); IAT-4101B (Later 1954 & 1955); IAT-4012 (Canada).

Condenser—IAT-3076RA. **Capacity**—.250-.285 mfd.

Contact Point Set—Auto-Lite IGW-3028BS.

Breaker Gap—.018-.022". Set maximum gap to .020".

Cam Angle—36-42°. DO NOT exceed breaker gap limits

Breaker Arm Spring Tension—17-20 ozs.

Rotation—Clockwise viewed from above.

Automatic Advance—IAT-4101B

Degrees	Distr. RPM	Degrees	Eng. RPM
Start	400	0	800
1	525	2	1050
4	875	8	1750
7	1225	14	2450
8	1350	16	2700

Start	0	5-1/4
2	4	6-3/4
4	8	8-5/8
6	12	10-3/4
9	18	15

►*DISTRIBUTOR INSTALLATION CAUTION: Make sure that No. 1 piston is at TDC on compression stroke and that distributor rotor is in No. 1 firing position.*

IGNITION TIMING

Setting—2° BTDC.

Timing Mark—On crankshaft drive pulley or vibration dampener. Five marks on each side of "DC" mark. Each mark is 2°.

Manual Adjustment—Timing may be advanced to 6° BTDC with some premium fuels. Range of timing should not exceed plus or minus 4° from recommended factory setting.

CARBURETOR

►*CARBURETOR APPLICATION: Carter Carburetors used as follows:*

Model	Carter Model & No.
1954 (Early)—Standard ①	BB D6H2
1954 (Early)—Overdrive ①	BB D6U1
1954 (Early)—HyDrive ①	BB D6P2
1954 (Early)—City Traffic ①	BB D6N2
1954 (Early)—Standard ②	BBS 920S
1954 (Early)—Overdrive ②	BBS 993S
1954 (Early)—Hy-Drive ②	BBS 994S
1954 (Early)—City Traffic ②	BBS 2203S
1954 (Late) & 1955—Standard ②	BBS 2063S,SA
1954 (Late) & 1955—Overdrive ②	BBS 2062S,SA
1954 (Late) & 1955—Hy-Drive ②	BBS 2116S,SA
1954 (Late) & 1955—PowerFlite ②	BBS 2116S,SA
1954 (Late) & 1955—City Traffic ②	BBS 2215S

①—217" Engine (4 3/8" Stroke).

②—230" Engine (4 5/8" Stroke).

CARTER B & B

Idle Setting—1/2-1-1/2 turns open. Turn screw out for richer mixture.

Idle Speed—450-500 RPM.

Float Level—Top of float (not soldered seam) 5/64" plus or minus 1/64" below top edge of bowl.

Accelerating Pump—Long stroke for cold weather, short stroke for hot weather.

Fast Idle: No adjustment required.

Automatic Choke Setting: Insert gauge-pin-through-hole in automatic choke shaft, and hole in base flange to position shaft, loosen choke valve screw and position choke so that valve is tightly closed.

Slow Closing Throttle (Dashpot): (D6P2) Tighten adjusting screw (top of bowl cover), then turn counter-clockwise 4-1/2 turns. Further adjustment outward will increase action of dashpot.

Overdrive Kickdown Switch Adjustment: (D6U1) With throttle valve in wide open position, adjust hex nuts on switch to have 1/64-3/64" clearance between kickdown lever and switch stem guide.

►*OTHER DATA: See "Carter BB" in Carburetor Section.*

Fuel Pump Pressure: 4-5-1/2 lbs.

CARTER BBS

►*1954 METERING JET PRODUCTION CHANGE (Carburetor Nos. 920S, 993S, 994S): See "Carter BBS & BBD Jet Specifications" in Carburetion Section for later type jets.*

►*1955 CARBURETOR PRODUCTION CHANGE:* Clearance between throttle shaft and holes in throttle body have been reduced to improve fit of parts. These carburetors identified by letters "D-S" punched in brass tag attached to carburetor.

►*REPLACEMENT CARBURETOR NOTE:* Carter BBS 2249S is replacement for above carburetors. With Overdrive use Unitized Pkg. 192-33U (Kickdown Switch), and with PowerFlite Unitized Pkg. 202-80U (Dashpot).

Idle Setting—1/2—1-1/2 turns open. Turn screw out for richer mixture.

Idle Speed—450-500 RPM.

Float Level—7/32" from top surface of body casting to top of each float. If one float lower than other, adjust by bending float arm. If both floats require same correction, adjust by bending lip on float arm.

Accelerating Pump—Center hole. Distance from top of bowl cover to top of plunger shaft should be 54/64". Adjust by bending throttle connector rod at lower angle.

Fast Idle: .019-.023" (920S, 993S, 994S); .022-.026" (Others), clearance between throttle valve and bore of carburetor (side opposite idle port), with choke valve held tightly closed and throttle stop screw backed off.

Automatic Choke: Set on index.

Slow Closing Throttle (Dashpot): (994S, 2116S, SA) Maximum dashpot action is obtained by loosening locknut and adjusting dashpot unit so that dashpot plunger can be moved inward approximately 3/32" with throttle valve tightly closed.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Overdrive Kickdown Switch: (993S, 2062S, SA). With throttle valve in wide open position, adjust hex nuts on switch to have 1/64-3/64" clearance between kickdown lever and switch stem guide.

Throttle Linkage Adjustment (PowerFlite Cars): *See "PowerFlite" in Transmission Section.*

►*OTHER DATA: See Carter "BBS" in Carburetor Section.*

Fuel Pump Pressure: 4-5½ lbs.

CARB. EQUIPMENT

Fuel Pump: (1954)—AC diaphragm type. **Replacement Pump**—AC No. 588 or 9926. Fuel only.

Fuel Pump: (1955)—Carter diaphragm type. **Replacement Pump**— Carter No. M2242S.

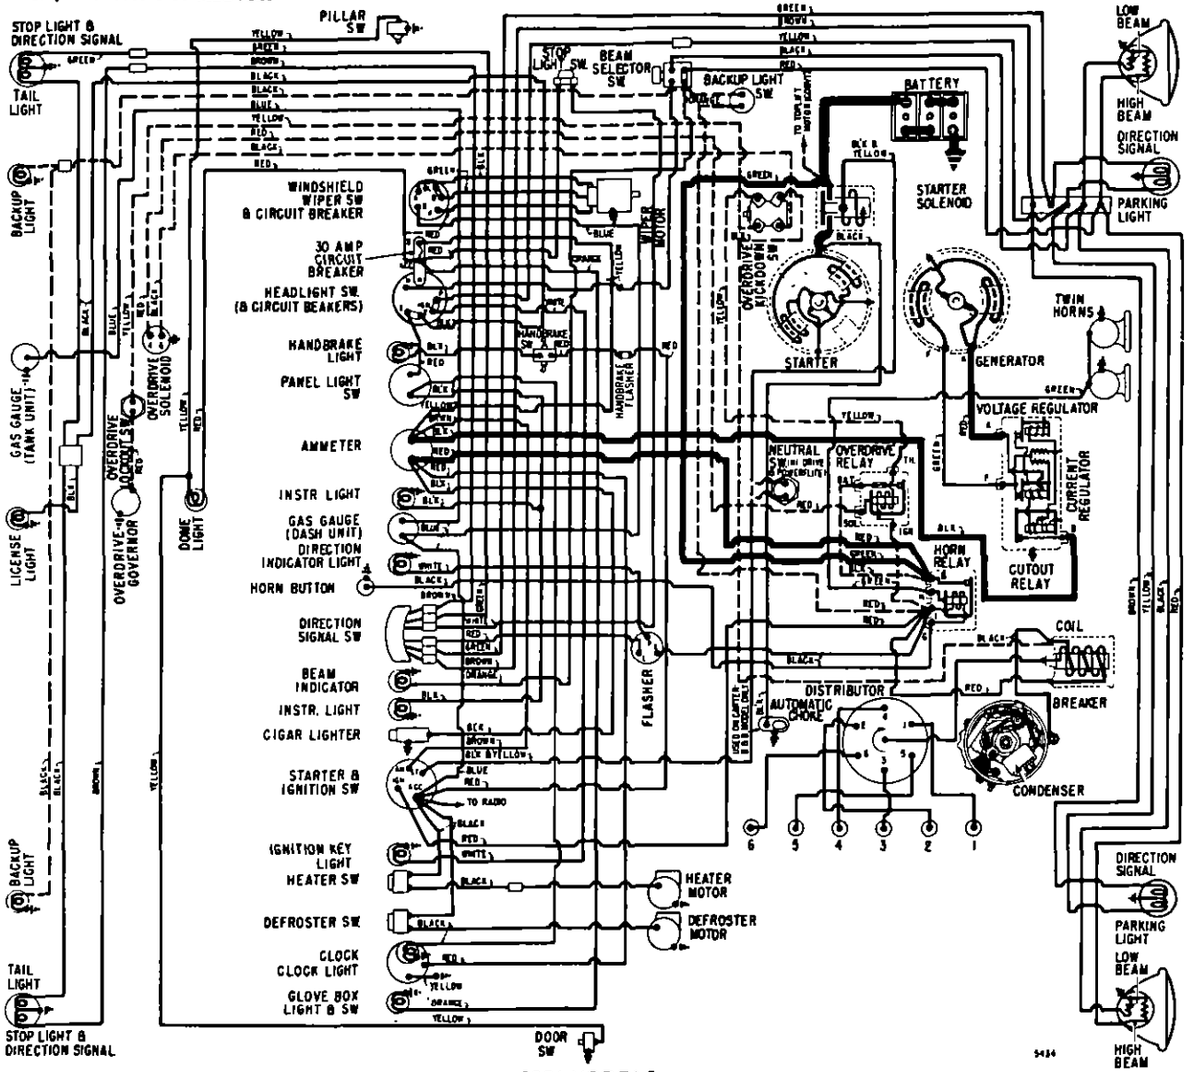
Pressure—4-5½ lbs.

See "Fuel Pumps" in Carburetion Section.

Gasoline Gauge: Auto-Lite electric type as follows.

NOTE—"Two Wire Thermostatic Type" used on Late 1954 Suburban. "One Wire Magnetic Type" used on all other models.

Dash Unit (1954)—Auto-Lite 12780A (Exc. Suburban); 13210A (Early Suburban); 13513A (Late Suburban).



Dash Unit (1955)—Auto-Lite 13753A.

Tank Unit (1954)—Auto-Lite 12617A (Exc. Suburban); 12904A (Early Suburban; 13514A (Late Suburban).

Tank Unit (1955)—Auto-Lite 13794A.

See "Fuel Gauges" in Carburetion Equipment Section.

►*1955 FUEL TANK CAP CAUTION:* A vented fuel tank filler cap now incorporated in production. Previous production filler pipe had "V" slot at top to provide fuel tank venting. Current production does not have slotted vent. Care must be taken to match right cap with each pipe to insure proper venting and unrestricted flow of fuel to engine. Failure to vent tank will result in its collapse. If this occurs, tank can be restored to original shape by light application of air pressure.

1954 MODELS

BATTERY

Auto-Lite 1M-100-D or Willard HW-1-100-C. 6 volt, 15 plate, 100 ampere hour capacity (20 hr. rate). **With PowerFlite**—Auto-Lite 2H-120-D. 6 volt, 120 ampere hour capacity (20 hr. rate).

Grounded Terminal—Positive.

Engine Ground—Left front of engine.

STARTER

Model	Auto-Lite No.	Armature
1954 (U.S.)	MCH-6205	MCH-2088
1955 (U.S.)	MCH-6305	MCH-2088
1954 (Canada)	MCH-6206	MCH-2088
1955 (Canada)	MCH-6204	MCH-2088

Drive—Bendix "Folo-thru" type.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—42-53 ozs. (with new brushes).

Performance Data—MCH

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4300 (Min.)	5.0	65
6.0 ft. lbs. (Min.)	Lock	2.0	335

Performance Data—MCL

Torque	RPM	Volts	Amperes
0 ft. lbs.	4900	5.0	65
8.0 ft. lbs.	Lock	2.0	410

Starting Switch: Auto-Lite SST-4006 (Std.), SST-4013 (PowerFlite). Magnetic type switch controlled by ignition switch. Neutral Safety Switch mounted on transmission on Automatic Transmission cars. *See "Starter Controls" in Electrical Equip. Section.*

Neutral Safety Switch Adjustment (Hy-Drive & PowerFlite Cars): *See "Hy-Drive" or "PowerFlite" Transmissions in Transmission Section.*

GENERATOR

Model	Auto-Lite Gen. No.	Armature No.

1955 Pow. St. ②	GGW-6016E	GGW-2090F

①—U.S. Cars. ②—Canada Cars.

►*SPECIAL GENERATOR NOTE:* GGJ, GGU, and GGW type generators used. Performance specifications below apply equally to all generators, within any one of the three groups specified.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Performance Data–GGJ

Amperes	Volts	Cold –R.P.M.–	Hot
0	6.4	600-700	650-750
50	8.0	1400-1600	1550-1750
55	8.0	1500-1700	1650-1850

Performance Data–GGU

Amperes	Volts	Cold –R.P.M.–	Hot
0	6.4	750-850	800-900
45	8.0	1450-1650	1650-1850
50	8.0	1550-1750	1750-1950

Performance Data–GGW

Amperes	Volts	Cold –R.P.M.–	Hot
0	6.4	870-970	950-1050
40	8.0	1800-2000	2150-2350
45	8.0	1925-2125	2350-2550

Brush Spring Tension–(GGJ) 34-41 ozs., (GGU, GGW) 35-53 ozs., with new brushes.
Field Current–(GGJ) 1.4-1.7 amperes, (GGU) 1.4-1.6 amperes, (GGW) 1.6-1.7 amperes, all at 5.0 volts
Motoring Current–(GGJ) 4.1-4.6 amperes, (GGU) 5.0-6.0 amperes, (GGW) 5.0-5.5 amperes, all at 5.0 volts.
Rotation–Counter-clockwise at commutator end.

Belt Adjustment: Approximately 1/4" slack (when pushed lightly with fingers from straight line between pulleys).

REGULATOR

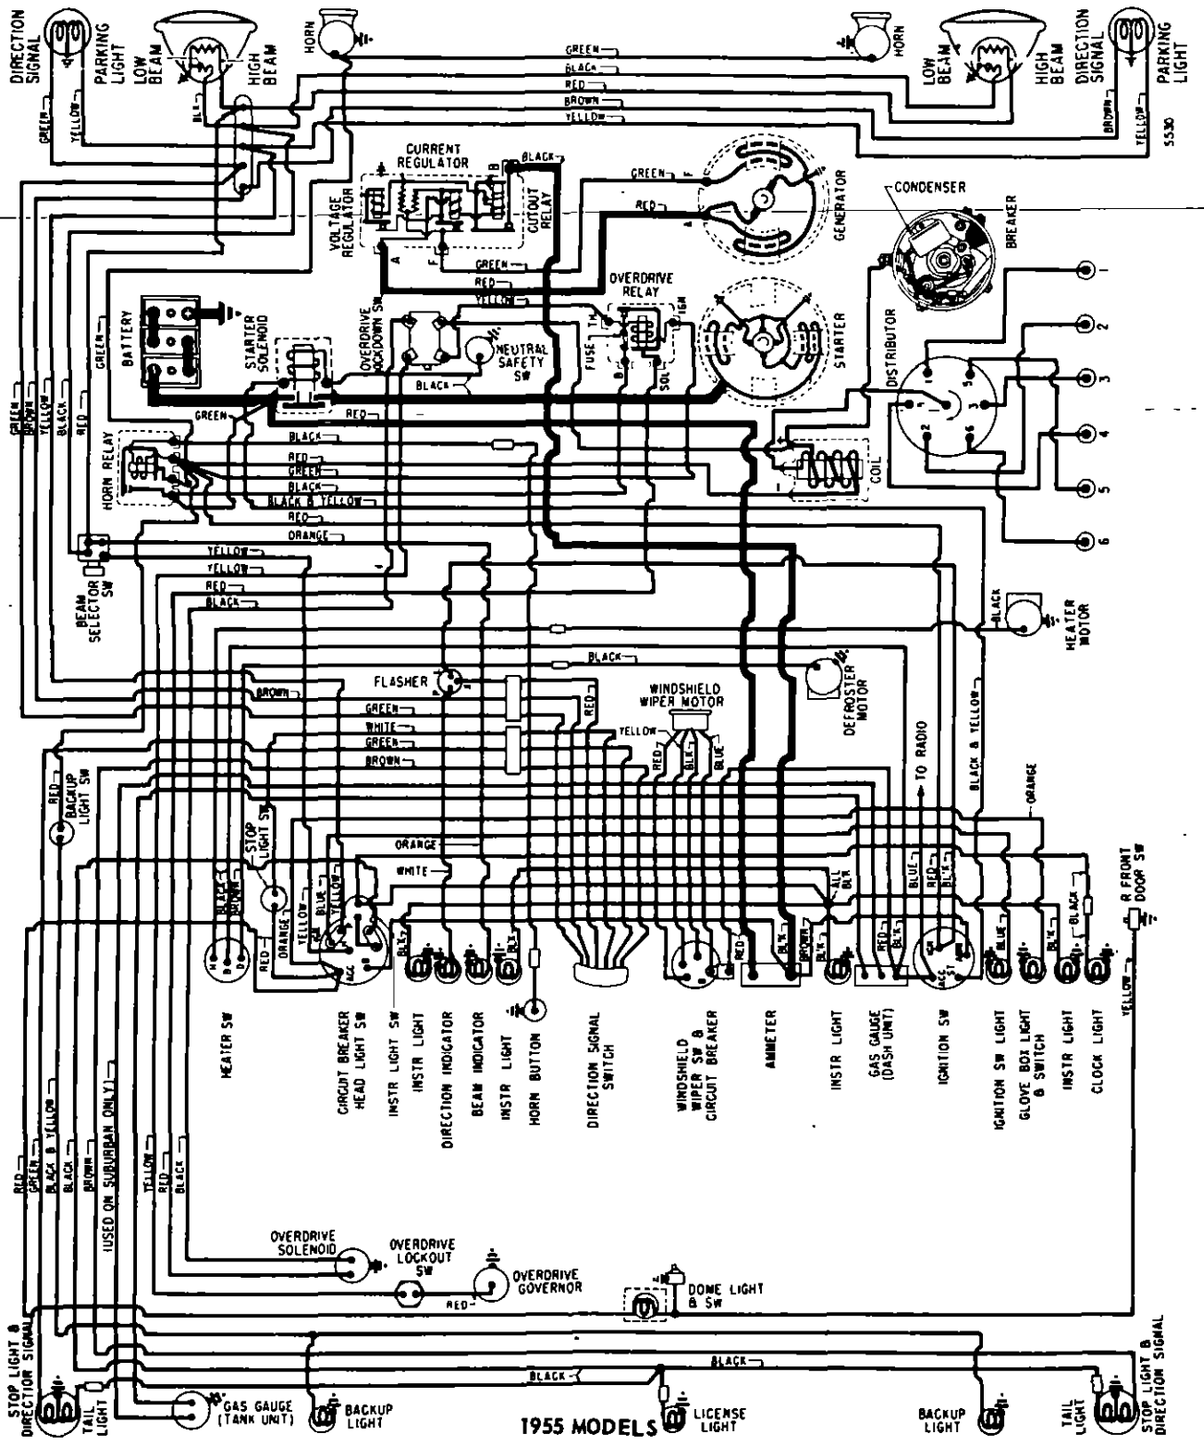
Auto-Lite Regulator No.	Generator
VBF-6001A	GGJ
VBF-6002A (Neg. Gd.)	GGJ
VAV-6001B	GGU
VAV-6002B (Neg. Gd.)	GGU
VBE-6001A	GGW

Cutout Relay

Cuts In–6.3-6.8 volts.
Cuts Out–4.1-4.8 volts.
Contact Gap–.015" minimum.
Air Gap–.031-.034" with contacts open (check at hinge end of core).

Voltage Regulator

Setting–7.1-7.4 volts at 70° F. *after 15 minutes operating charging at 1/2 maximum rate.*
Air Gap–.048-.052" with contacts just opening.
Checking & Adjusting–*See Electrical Equip. Section.*



Current Regulator

►*SETTING CAUTION: "Temperature Compensated" type. Set to following specifications at 70° F.*

	Test A –Operating Amperes–	Test B
VBE-6001A	52	45 (43-47)
VBF-6001A, 2A	66	55 (53-57)
VAV-6001B, 2B	55	50 (48-52)

Test A–After 15 minutes operating charging at 1/2 maximum rate.
Test B–After additional 15 minutes operation with current regulator operating (load applied to hold voltage down to 6.7-6.9 volts (VAV, VBE), 6.7-7.0 volts (VBF).
Air Gap–.048-.052" with contacts just opening.
Checking & Adjusting–*See Electrical Equip. Section.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Equip. Section.*
Direction Signal: *See Electrical Equip. Section.*
►*IGNITION STARTER SWITCH CAUTION: When installing accessories, use accessory terminal only on ignition-starter switch and not ammeter terminal post.*
Lighting & Panel Switch Removal: Remove knob (use small screwdriver to raise up special clip in knob, or remove small cross-head screw, depending on method used to hold knob). Remove hex nut and collar that holds assembly in place. Pry out switch (each switch has threaded sleeve with two flat sides. Sleeve fits snugly in respective switch hole in panel).
Stop Light Switch Location: (1954)–On frame left side rail. **(1955)**–On forward end of master cylinder.
CIRCUIT BREAKERS (1954): 30 amp. circuit breaker, part of light switch assembly, protects lighting circuits.
CIRCUIT BREAKERS (1955): Three circuit breakers located in lighting switch, as follows:
30 Amperes–Protects headlights, high beam indicator light and parking lights.
10 Amperes–Protects tail lights, license plate lights, clock and instrument panel lights.
10 Amperes–Protects stop lights, map light, dome light, glove box light, courtesy light, and trunk compartment light.
Windshield Wiper: 10 ampere circuit breaker located in wiper switch.
FUSES: Clock–3 amperes. In clock lead wire.
Radio–14 amperes. In feed behind radio.
Overdrive–20 ampere. On overdrive relay.
HORNS: Auto-Lite. Twin horns with relay.

Model	High Pitch	Low Pitch
1954 P-25-1 (Early) ①	HAB-4671	
1954 P-25-1 (Late) ①	HAB-4683	
1954 P-25-2 & 3	HAB-4656	HAB-4655
1954 Canada	HAB-4660	HAB-4659
1955 All Models	HAB-4702	HAB-4701
1955 Canada	HAB-4720	HAB-4719

①–Single horn used. Other models are dual horns.

Horn Relay: Auto-Lite HRL-4104 (Early 1954); RAF-4001 (Late 1954 & 1955).

ENGINE

ENGINE SPECIFICATIONS: Six Cylinder "L" head.
►*1954 ENGINE PRODUCTION CHANGE: 217" Engine (4 3/8" Stroke) replaced in production with 230" Engine (4 5/8" Stroke).*

Model	Bore	Stroke	Displacement
1954 (Early)	3¼"	4 3/8"	217.8 cu. Ins.
1954 (Late)	3¼"	4 5/8"	230.2 cu. Ins.
1955	3¼"	4 5/8"	230.2 cu. Ins.

Model	Compr. Ratio	Rated HP	Developed HP
1954 (Early)	7.1-1	25.35	100 at 3600 RPM
1954 (Late)	7.25-1	25.35	110 at 3600 RPM
1955	7.4-1	25.35	117 at 3600 RPM

Compression & Vacuum Reading–*See TUNE-UP.*
ENGINE REMOVAL: *See "Engine" in Plymouth Special Data.*
►*HARSH ENGINE VIBRATION CORRECTION (Due to Short Insulator Spacer): See "Engine Mountings" in Plymouth Special Data.*
OIL PAN REMOVAL: Remove clutch housing pan to prevent damaging oil pan gaskets on clutch housing pan dust seal. Turn crankshaft so No. 1 connecting rod journal is at bottom dead center. Remove tie rod. Remove oil level indicator. Drop pan and while holding up oil strainer so it clears baffle inside pan, slide pan to rear and remove. NOTE– New end gaskets should protrude 1/8" above oil pan. *Ends must not be cut off.*
ENGINE MOUNTINGS: *See "Engine Mountings" in Plymouth Special Data.*
CYLINDER HEAD: *See "Cylinder Head & Manifold" in Plymouth Special Data.*
►*MANIFOLD INSTALLATION CAUTION:* Two long capscrews extend into cylinder block water passage. Before installing, apply sealer to these capscrews. It is important that conical washers at flange ends of exhaust manifold be installed to permit expansion and contraction without loosening
TIGHTENING TORQUES: *See "Tightening Specifications" in Plymouth Special Data.*

PISTONS

Aluminum alloy, U-slot, cam ground type.
►*CYLINDER BORE OVERSIZE CAUTION: Engines with letter "A" following engine number indicates that cylinder bore .020" Oversize.*
Weight–16 ozs. (stripped).
Removal–Pistons and rods removed from above.
Fitting New Pistons: .0007" measured ¾" from the bottom on thrust face. With piston pin and rings removed, cylinder wall and piston dry and clean, insert piston, upside down, into cylinder bore, with feeler stock, .002" x 1/2", inserted between cylinder wall and piston, on high spot of piston contour. Pull to withdraw feeler should be 5-10 lbs.
Replacement Pistons: Std., .005", .020", .030", .040," .060" Oversize.
Installing Pistons: "U" slot away from valves.

PISTON PINS

Full floating type.
Diameter–55/64". **Length**– 2-3/4".
Pin Fit in Piston–.0000-.0005". TIGHT DOUBLE THUMB push fit at room temperature (70°F).
Pin Fit in Rod Bushing–.0001-.0002". TIGHT THUMB push fit at room temperature (70°F).
Replacement Pins: Std., .003", .008" Oversize.
NOTE–Fitted pins furnished with new pistons.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr. (#1)	3/32"	.010-.020"	.0025-.004"
Compr. (#2)	3/32"	.010-.020"	.002-.0035"
Oil (#3)	5/32"	.010-.020"	.001-.0025"
Oil (#4)	5/32"	.010-.020"	.001-.0025"

Replacement Rings: Std., .010", .020", .030", .040", .050", .060" Oversize.
Installing Rings: #1 Compression, with step on inner edge up. #2 Compression with step on inner edge up (step down, if step on outer edge).

CONNECTING RODS

Length (Center to Center)–7 15/16" (217" Engine); 7 13/16" (230" Engine).
Weight–31.1 ozs. (217" Engine); 27.9 ozs. (230" Engine).
►*THICKER WALL-BEARING & JOURNAL DIAMETER CAUTION (One or more Journals Machined Undersize). "See "CRANKSHAFT" below.*
Crankpin Journal Diameter–2.0625".
Maximum out-of-round and taper limits–.001".
Lower Bearings–Removable, precision type, thin babbitt on steel. No snims.
►*JOURNAL DIAMETER CAUTION: (ONE OR MORE Journals Machined UNDERSIZE)–See "CRANKSHAFT" below.*
Clearance–.0005-.0015".
Endplay–.006-.011".
Bearing Adjustment: None. Replace bearings.
Replacement Bearings: Std., .001", .002", .003", .010", .012", .020" Undersize.
Installing Rods: Oil metering hole toward valve side of engine.

CRANKSHAFT

Journal Diameter–2.4995-2.5005". Four bearing.
Bearing Type–Removable, precision type, thin babbitt on steel. No shims.
►*CRANKSHAFT JOURNAL UNDERSIZE CAUTION:* Engines with undersize journals identified as follows:
.010" UNDERSIZE (All Main & Connecting Rod Journals)–Letter "B" stamped with engine serial number indicates that ALL Main & Connecting Rod Journals are .010" Undersize.
.001" UNDERSIZE (ONE OR MORE Main & Connecting Rod Journals)–When replacing bearings, look for stamped number on middle throw arm of crankshaft. An "M" or "R" followed by a number indicates that a main or connecting rod bearing has a thicker-wall bearing. For example "M2" and "R1" means that .001" thicker-wall bearing inserts are used on the No. 2 main bearing and the No. 1 connecting rod bearing.
Clearance–.0005-.0015".
Replacement Bearings: Std., .001", .002", .003", .010", .012", .020", .030", .040" Undersize.
Crankshaft Rear Oil Seals: *See "Crankshaft & Main Bearings" in Plymouth Special Data.*
Crankshaft Front Oil Seal: *See "Engine Front Cover" in Plymouth Special Data.*
End Thrust: Taken by flanged faces on rear (#4) main bearing. **Endplay**–.003-.007".

CAMSHAFT

Journal Diameters–(1) 2", (2) 1-31/32", (3) 1-15/16", (4) 1-1/4".
Bearings–Removable, steel-backed babbitt lined bushings (exc. #4– machined in crankcase).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Clearance—.001-.003" NOTE—If clearance exceeds .005" (measure with dial indicator placed against cam lobe and pry toward indicator), install new camshaft for test and if clearance is greater than .0035", replace bearings.

Removal & Installation: *See "Camshaft & Bearings" in Plymouth Special Data.*

End Thrust: Taken by thrust plate behind camshaft sprocket hub. **Endplay**—.002-.006".

Timing Chain: Width—1". **Pitch**—.500". **Length**—24" or 48 links.

Camshaft Setting: Sprockets marked. Mesh chain in sprockets with "0" marks on sprockets adjacent and in line with straightedge across shaft centers.

Engine Front Cover Installation: *See "Engine Front Cover" in Plymouth Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Plymouth Special Data.*

VALVES

Tappet Clearance: .010" Intake. .010" Exhaust. Engine hot and idling. NOTE—.002" additional clearance on exhaust tappets if car driven at continuous high speed.

Valves	Head Diam.	Stem Diam.	Length
Intake	1-17/32"	.340-.341"	4-27/32"
Exhaust	1-13/32"	.340-.341"	4 25/32"

Valves	Seat Angle	Lift	Stem Clearance
Intake	45°	3/8"	.001-.003"
Exhaust	45°	3/8"	.003-.005"

Valve Seat Width—1/16-3/32". Runout .0015" maximum.

►*VALVE SEAT INSERT CAUTION: See "Valve System" in Plymouth Special Data.*

Valve Guides: Remove from above. Press new guides in with upper end 7/8" below top of block, ream guides to inside diameter of .342-.343" (Intake), .344-.345" (Exhaust). *CAUTION—Guides must be installed with counterbore end UP on exhaust valves and counterbore end DOWN on intake valves.*

Valve Springs: Can be installed with closely coiled end at either top or bottom. *NOTE—Springs are available in several colors. Colors do not refer to spring tension but merely identify the manufacturer.*
Free Length—2".

Valve Spring Specifications

	Spring Pressure	Length
Valve Closed	40-45 lbs.	1-3/4"
Valve Open	107-115 lbs.	1-3/8"

Valve Lifters: Mushroom type (remove from below).
Stem Diameter—5/8". Ream holes from above (pilot in guide). Oversizes .001", .008", .030".

Lifter Clearance in Block: .0002-.001"

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.
Intake Valves—Open 12° BTDC. Close 44° ALDC.
Exhaust Valves—Open 50° BLDC. Close 6° ATDC.

Valve Timing Check—With .014" (Cold) tappet clearance No. 6 intake valve should open with No. 6 piston 12-13° or .0766-.0770" BTDC. Reset tappet clearance to .010" HOT running clearance.

OILING SYSTEM

Crankcase Capacity: 5 qts. (Except 1954 Hy-Drive Models). 10 qts. (1954 Hy-Drive Models). Add one quart to above capacities when filter is changed.

Normal Oil Pressure: 40-50 lbs. at 25-30 MPH.

Oil Pressure Relief Valve—Two types used as follows:
Standard, Overdrive, & PowerFlite Models—Located under plug on left side of crankcase below starting motor. Three different springs may be found in relief valve (see below for identification and specifications). When replacing spring in relief valve, same color spring as the one removed should be used.
Hy-Drive Models—Located under cover of oil pump. The spring used in this valve is painted blue for identification, and should not be replaced by any other color spring. Spring tension is 22-24 lbs., with spring compressed to 1 25/32".

Relief Valve Spring Identification

Color Code	Free Height	①Spring Pressure
Red (Light)	1 13/16"	12.4-13.8 lbs.
Black (Standard)	1 13/16"	14.4-15.8 lbs.
Green (Heavy)	1 13/16"	16.2-17.8 lbs.

①—Pressure with spring compressed to 1¼".

Oil Pressure Gauge: Auto-Lite 13093A (1954); 13751A (1955). Not electric.

Oil Pump: Rotor type. On right side of crankcase.
Overhaul—*See "Oiling System" in Plymouth Special Data.*

Oil Filter: Shunt type On left side of engine above starter.
Servicing—Replace filter every 5000 miles or more often in dusty areas.

Crankcase Ventilation: Filter in oil filler pipe cap and air cleaner in crankcase ventilation outlet pipe.

COOLING

Water Capacity: 13 qts. (14 qts. with heater).

Pressure Valve: Plymouth No. 1373136. Radiator filler cap. Opens at 7 lbs.

Thermostat: By-pass type in cylinder head water outlet. Starts to open at 157-162° F.

Water Pump: *Packless type. Grease fitting for lubrication. See Water Pump Section for data.*
Pump Removal & Overhaul—*See Plymouth Special Data.*

Temperature Gauge: Auto-Lite 12782A. Not electric.

Water Distribution Tube: *See "Cooling System" in Plymouth Special Data.*

Temperature Gauge: Auto-Lite 12782A (1954); 13752A (1955). Not electric.

CLUTCH

1954 Models

Borg & Beck	Standard	Overdrive	Hy-Drive
Model	9A7	9A7	8.5A6
Assy. No. (Early)	926	926	1369
Assy. No. (Later)	951	951	1369
Disc No. (Early)	381843	382098	382094
Disc No. (Later)	382237	382237	382094

Heavy Duty—B&B 10A7, Assy. No. 957, Disc No. 381758.

1955 Models

Borg & Beck	Standard	Overdrive
Model	9A7	9A7
Assembly No. (U.S.)	361373	361373
Assembly No. (Can. Std.)	926	926
Disc No. (U.S.)	382237	382237
Disc No. (Can. O.D.)	381843	382098

Heavy Duty—B&B No. 10A7, Assy. No. 361368, Disc No. 381758 (U.S.), B&B No. 11A6, Assy. No. 931, Disc No. 381850 (Can.).
See "Borg & Beck" in Clutch Section.

Pedal Free Play Adjustment: *Adjust fork rod to secure* 1/8" to 5/32" (1954); 3/16" (1955) free movement of clutch fork outer end. This adjustment will provide 1" free pedal movement at pedal pad.

Over-Center Spring Adjustment (Hy-Drive Cars Only): Make certain clutch pedal free play is 1". Correctly position over-center spring bracket by loosening attaching nut and bolt. Then move bracket to position which will give desired over-center spring action. Retighten nut to hold bracket in place. Over-center spring tension is controlled by the spring eyebolt and bracket *adjusting nut. If clutch pedal action is soft and sluggish on return,* back off adjusting nut. If pedal action requires excessive effort, tighten nut until desired action is obtained.

Over-Center Spring Adjustment (1955 Models): Tighten eyebolt sleeve on clutch pedal over-center spring bolt finger tight with pedal in depressed position, then tighten four complete turns.

Removal: Disconnect propeller shaft, speedometer cable, parking brake cable, and gearshift control rods. Remove transmission (see Synchro-mesh Transmission). Mark clutch cover and flywheel (on cars with Hy-Drive mark clutch drive plate and clutch cover). Remove bolts holding clutch cover to flywheel, loosening each bolt a few turns at a time until cover is free. Remove clutch disc and pressure plate assembly.

SYNCHRO-MESH TRANSMISSION

Own. *See "Plymouth Synchro-mesh" Transmission in Transmission Section.*

Transmission Controls: *See "Transmission Controls" in Transmission Section.*

►***1955 SYNCHRO-MESH TRANSMISSION NOTE & REPLACEMENT PARTS CAUTION:*** **A new transmission identified by letters "CK" stamped on left side of case was used on some cars. This transmission has different gear ratios than other transmissions and the parts are not interchangeable.** ***See "Plymouth Synchro-mesh" in Transmission Section.***

Removal: Disconnect propeller shaft at front universal (if transmission is to be disassembled, loosen companion flange nut, by first applying parking brake to hold mainshaft). Disconnect speedometer cable, gear shift rods and overdrive control wires. On Hy-Drive equipped cars remove neutral safety switch. Disconnect hand brake cable. Remove nuts holding transmission to clutch housing. Pull transmission straight back until transmission shaft clears clutch disc before lowering transmission.

OVERDRIVE

Warner Type AS1-R10G. Planetary gear type with solenoid operation and accelerator pedal controlled kick-down.
See "Warner R10" Overdrive in Transmission Section.

Overdrive Controls: *See "Overdrive Controls" in Transmission Section.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Removal: Same as for Synchro-mesh Transmission (above) after control wiring and cable have been disconnected.

HY-DRIVE TRANSMISSION

Own. Torque Converter and Standard 3-speed Transmission.
See "Hy-Drive" in Transmission Section.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Hy-Drive" Transmission in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Hy-Drive" in Transmission Section.*

Dashpot Setting—See *TUNE-UP.*

Transmission Control: *See "Hy-Drive" Transmission in Transmission Section.*

Lubrication: Two oil changes required per year (regardless of mileage.) Drain engine and "Hy-Drive" Torque Converter separately. To refill, pour 10 qts. (11 qts. if filter changed) of correct viscosity oil into crankcase and run engine at fast idle for 5 minutes. Check engine oil level.
Capacity—10 qts. (11 qts. if filter changed).

►*OIL FILTER CHANGE CAUTION: On "Hy-Drive" cars, oil filter element must be changed every 5000 miles.*

►*OTHER "HY-DRIVE" SERVICE DATA: See "Hy-Drive" Transmission in Transmission Section.*

POWERFLITE TRANSMISSION

Torque. Converter and hydraulically operated planetary transmission.
See "PowerFlite" Transmission in Transmission Section.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "PowerFlite" Transmission in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "PowerFlite" Transmission in Transmission Section.*

Lubrication: Check fluid level every 1000 miles, drain and refill every 20,000 miles with Automatic Transmission Fluid (Type A).
Checking Fluid Level—Apply hand brake, place selector lever in neutral position. Allow engine to idle until normal operating temperature is reached. Shift selector lever through all ranges. Shift selector lever back to neutral and add Automatic Transmission Fluid to bring level to full mark on oil level indicator.

►*OTHER "POWERFLITE" SERVICE DATA: See "PowerFlite" Transmission in Transmission Section.*

UNIVERSALS

Detroit Universal. Ball and Trunnion Type.

REAR AXLE

►*REAR AXLE PINION CARRIER BUMPER PRODUCTION CHANGE (To Provide Fuller Contact & Additional Protection Under Severe Bottoming Conditions):* New bumper now incorporated in production. Available under Part No. 1311417 and can be installed on earlier cars.
Own. Semi-floating, hypoid gear type with Hotchkiss drive.
See "Plymouth Hypoid" in Rear Axle Section.

Transmission	Rear Axle Ratio
Standard	3.73-1 (41-11), 4.1-1 (41-10)
Overdrive	4.1-1 (41-10)
PowerFlite	3.73-1 (41-11)
Hy-Drive	3.73-1 (41-11)

Backlash—.006-.008".

Carrier Removal: Disconnect rear universal, remove axle shafts (see below), take out carrier capscrews, lift off carrier assembly.

Axle Shaft Removal: Remove wheel, drum, and hub assembly (use screw type hub puller—Tool C-845), block brake pedal, disconnect brake line at wheel cylinder, remove axle shaft key, install sleeve (Tool C-745) in oil seal, remove brake support (oil seal mounted in support), pull shaft and bearing (use C-499 Puller).

Wheel Bearing Adjustment: Shims between backing plate and axle housing. With wheel and hub removed, check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims (furnished .010", .0125", .015", .030" thick (equally at both wheels). **Endplay**—.003-.008".

SHOCK ABSORBERS

"Oriflow". Direct-acting, hydraulic type. Serviced by replacement.

Type	Plymouth Part No. Front	Rear
1954 Standard	1450629	1450632
1954 Hvy. Duty	1450041	1450635
1954 Special Hvy. Duty		1450075
1955 Standard	1614404	1450917
1955 Hvy. Duty	1617004	1450920
1955 Special Hvy. Duty		1450037

FRONT SUSPENSION

Independent. Coil springs and direct-acting shock absorbers. *See "Plymouth" in Front Suspension Section.*

1954 Models

Kingpin Inclination—5 1/2° at 0° camber.
Camber—Pos. 3/8° to Neg. 3/8° (Left side 1/4-1/2° greater than right side within these limits).
Caster—Neg. 1° to Pos. 1° (0° preferred).
Toe-In—0" to 1/16" (0" preferred).
Toe-Out on Turns—Inside wheel at 20° with outside wheel at 18-3/4°.

1955 Models

Kingpin Inclination—5—6½° at 0° camber.
Caster—Neg. 2° to 0° (Left side 0° to Neg. 3/4°, Right side 0° preferred).
Camber—Pos. 1/4° ±3/8° (Left side Pos. 1/2°, Right side 0° preferred).
Toe-In—0" to 1/16" (0" preferred).
Toe-Out on Turns—Inside wheel at 20° with outside wheel at 17-1/2—19°.

STEERING

Manual Steering Gear: Gemmer. Worm and three-tooth roller.
See "Gemmer Worm & Roller" in Steering Section.

Power Steering (1954): Monroe Linkage Type—Used with Standard steering gear.
See "Monroe Linkage Type" in Steering Section.

Power Steering (1955): Coaxial—Steering gear with built-in power unit.
See "Coaxial Power Steering" in Steering Section.

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Gemmer Worm & Roller" in Steering Section.*

Steering Gear Removal: *See "Gemmer Worm & Roller" in Steering Section.*

BRAKES

Service: Plymouth "Safe-Guard" Lockheed hydraulic.
See "Plymouth Safe-Guard" in Brake Section.
Drums—Cast iron. Diameter 10".
Wheel Cylinder Diameter—1-1/8". Single acting (front), double acting (rear wheels).
Lining—Molded asbestos (bonded to shoe).
Length—Primary (Front & Rear) 10.5", Secondary (Front) 10.5", Secondary (Rear) 8.0".
Width—2". **Thickness**—3/16".
Braking Power—60% Front, 40% Rear.
Clearance—.006" at end of all shoes.

Master Cylinder (1954): On frame at base of brake pedal.
Checking Fluid Level—Access hole at left of front floor pan.
Removal—Remove floor mat and toe board. Disconnect pushrod. Remove horseshoe clip and slide brake pedal off shaft. Disconnect brake line tubes at master cylinder fittings. Remove bolt retaining master cylinder to frame.

Master Cylinder (1955): On engine side of dash panel.
Checking Fluid—Access hole at top of master cylinder
Removal—Disconnect pushrod. Disconnect brake line tubes at master cylinder fittings. Remove four stud nuts from studs, remove master cylinder.

Power Brakes: Combination vacuum power unit and master cylinder. Unit mounted on engine side of firewall and replaces regular master cylinder. *See "Plymouth Power Unit" in Brake Section.*

Parking Brake: On shaft at rear of transmission. 6" external contracting type used with Synchro-mesh Trans. 7" internal expanding type is used with PowerFlite.
Adjustment—*See "Hand Brake Notes" in Plymouth Special Data.*

Lining—	Width	Thickness	Length
6" Ext. Type	2"	5/32"	① 16-11/16"
7" Int Type	2"	5/32"	13-1/16"

①—Two-piece molded lining, 15-3/8" long, optional.
Clearance (External Type)—.015-.020" around band.
Internal Type—Adjusting nut on shoe link backed off one notch from point where shoes just drag against drum, approximately .010".

MISC. MECHANICAL

Windshield Wipers: Auto-Lite EMD-4003B, Std. (1954); EMU-4101, Std. (1955); EMG-4102B, Two-Speed (1954); EMZ-4001, Two Speed (1955).
See "Auto-Lite" Electric Windshield Wipers in Miscellaneous Section.

Convertible Top Control: Electrical-Mechanical type.
See "Dodge & Plymouth" Top Controls in Miscellaneous Section.

Power Window Regulators: Electric type. Reversible type motor in each window. Controlled by door switch and master control switch. *See "Electric Window Regulators" in Misc. Section.*

Power Seat Adjusters: Electric type. *See "Power Seat Adjusters" in Miscellaneous Section.*

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

MODEL IDENTIFICATION

Series	Model Identification
Plaza	P-27-1
Savoy	P-27-3
Belvedere	P-27-2

SERIAL NUMBER: On plate attached to left front door hinge pillar post.

Starting Serial Nos.	Detroit	Evansville	Los Angeles
All Series	15663001	22182001	26524001

ENGINE NUMBER: On center of engine behind water pump

►*ENGINE NUMBER LETTERS & MARKS (Following Engine Number)—Identified as follows:*
"A"—ALL cylinders .020" oversize.
"B"—ALL Main & Connecting Rod Bearings .010" undersize.
"AB"—BOTH above conditions exist.
"DIAMOND" (3/8" high)—.008" oversize tappets used.

TUNE-UP

COMPRESSION PRESSURE: 125-155 lbs. at cranking speed of 150 RPM.

VACUUM READING: Steady 18-21" at idling speed.

VALVE TAPPET CLEARANCE: No adjustment required, except when valves are reconditioned (hydraulic).

MANIFOLD HEAT CONTROL: Thermostatic coil type, located in exhaust manifold of right cylinder block. Valve should operate freely. When installing coil, position shaft in extreme counter-clockwise position. Place coil spring in position over shaft slot, with outer (tongue) end of spring below shaft, horizontal and facing front of engine. Press inner end of coil into slot and seat firmly. Now move outer (tongue) end up, around (counter-clockwise) and hook under left stud (toward rear of engine). *See "Manifold Heat Control" in Plymouth Special Data.*

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2.
Cylinders—RIGHT BANK 2-4-6-8. LEFT BANK 1-3-5-7.

SPARK PLUG GAP: .040" (2259SB, 2260SB, 2261SB, 2274SA Carbs,), .035" (Others).
Plugs—Auto-Lite Resistor 4S-165, 14mm. Torque to 32 ft. lbs.

COIL: Auto-Lite CR-6012-C.
Ignition Current—2.25 amperes idling, 5.0 amperes stopped.

DISTRIBUTOR: Auto-Lite IAZ-4003C.
Condenser—Auto-Lite IBB-2015R. Capacity—.25-.28 microfarad.
Contact Point Set—Auto-Lite IGP-3028ZS.
Breaker Gap—.015-.018". Set maximum gap to .017".
Cam Angle—34° ± 3° (both sets of contacts). Do not adjust gap outside limits to obtain specified cam dwell.
Breaker Arm Spring Tension—17-20 ozs.
Rotation—Clockwise viewed from above.

Automatic Advance—IAZ-4003C

Degrees Distr.	R.P.M.	Degrees Eng.	R.P.M.
Start	350	0	700
1	370	2	740
5	450	10	900
17	1800	34	3600
18	1900	36	3800

Vacuum Spark Control: Auto-Lite. Integral type.

Vacuum Advance—IAZ-4003C

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	5-1/4
1	2	6
5	10	9-1/4
10	20	14-7/8
11.5	23	17

►*167 HP ENGINE VACUUM DIAPHRAGM CAUTICN:* When installing Carter BBD-2259SB, 2260SB, 2261SB, 2274SA carburetors or other Carter carburetors which have Carter Unitized Package 195-62U installed, it will be necessary to change vacuum diaphragm assembly with new diaphragm assembly (Plymouth No. 14339671, Auto-Lite No IAZ-2023RA). The spring, calibration washers, sealing washer and nut must be transferred from diaphragm assembly on distributor to new vacuum assembly *NOTE*—Maximum vacuum advance will be changed to 25° at 17" of vacuum *See "Carburetor" below for application.*

Distributor Basic Timing & Drive Shaft Bushing: *See "Ignition Notes" in Plymouth Special Data.*

IGNITION TIMING

Setting—4° BTDC. See Manual Adjustment below.
Timing Mark—On crankshaft drive pulley.
Manual Adjustment—Timing may be advanced with some premium fuels. Range of timing should not exceed plus or minus 4° from recommended factory setting.

CARBURETOR

►*CARBURETOR APPLICATION: Carter BBD 2-Barrel Carburetors are Std., Carter WCFB 4-Barrel Carburetor is Special Equipment (Power Package).*

►*167 HP ENGINE CARBURETOR PRODUCTION CHANGE (Carter BBD 2259S, 2260S, 2261S, 2274S to Improve Cold Starting, Part Throttle Loading, & Road Load Economy): NOTE—Later 2259SA, 2260SA, 2261SA carburetors have necessary parts installed. See Carter "BBD" in Carburetor Section for data.*

►*167 HP ENGINE CARBURETOR KIT (To Correct Poor Mileage):* Unitized Package 195-62U available to correct poor mileage. This kit should not be installed on carburetors already set on lean limit (leanness or surge may be experienced if installed). *NOTE—Later 2259SB, 2260SB, 2261SB, 2274SA carburetors have parts in Unitized Package 195-62U installed. See Carter "BBD" in Carburetor Section for data.*

CARTER 2-BARREL BBD

Transmission	Carter No.
Synchro-mesh (157 HP Eng.)	BBD-2141S
Overdrive (157 HP Eng.)	BBD-2154S
PowerFlite (157 HP Eng.)	BBD-2155S
Synchro-mesh (167 HP Eng.)	BBD-2259S, SA, SB
Overdrive (167 HP Eng.)	BBD-2260S, SA, SB
PowerFlite (167 HP Eng.)	BBD-2261S, SA, SB

►*REPLACEMENT CARBURETOR NOTE:* Carter BBD-2262S is replacement for 157 HP engine, BBD-2274S SA for 167 HP engine. Use with unitized Pkg. 192-34U (Overdrive Cars) or 202-83U (PowerFlite Cars). *See BBD-2274S change above.*

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyl. 2-3-5-8, LEFT Barrel 1-4-6-7.*

Idle Setting—1/2—1-1/2 turns open (157 HP Eng.), 1/4—1-1/4 turns open (167 HP Eng.). Adjust both screws alike. Turn screws out for richer mixture.
Idle Speed—450-500 RPM.
Float Level—7/32" (Gauge T109-239) from top surface of body casting to top of each float. If one float lower than other, equalize by bending float arm. If both floats require same correction, adjust by bending lip on float arm.
Accelerating Pump—Normal setting, outer hole (medium stroke).

Fast Idle: .009-.013" (157 HP Eng.—Gauge T109-200), .015-.019" (167 HP Eng.—Gauge T109-44), clearance between throttle valve and bore of carburetor (side opposite idle port), with throttle valve tightly closed. Adjust by bending choke connector rod at lower angle (Tool T109-213).

Unloader Adjustment: After Fast Idle adjusted, hold throttle valve wide open with choke valve fully closed. Clearance between upper edge of choke valve and air horn wall should be 1/4". Adjust by bending arm on choke trip lever (Tool T109-214).

Automatic Choke Setting: 2 Points Lean (157 HP Eng. Carbs.) & Carb. Models 2259S, 60S, 61S (167 HP Eng.). Centered (all other 167 HP Eng. Carbs.). *See "Carburetor Production Change" under CARBURETOR above.*

Kickdown Switch Adjustment (2154S, 2260S, SA): With throttle valves in wide open position adjust hex nuts on switch to have 1/64-3/64" clearance between kickdown lever and switch stem guide. To adjust, bend kickdown lever to contact switch stem.

Slow Closing Throttle (Dashpot) Adjustment (2155S, 2261S, SA): Loosen lock nut and adjust dashpot unit so that plunger shaft can be bottomed with a 1/16" gauge placed between shaft and operating lever with throttle valves tightly closed. Tighten lock nut.

Throttle Linkage Adjustment: *See "PowerFlite" Transmission in Transmission Section.*

►*OTHER DATA: See Carter "BBD" in Carburetor Section.*

CARTER 4-BARREL WCFB NO. 2253S

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyl. 2-3-5-8, LEFT barrels 1-4-6-7.*
Idle Setting—1/2—1-1/2 turns open. For richer mixture, turn screws out.
Idle Speed—450-500 RPM with selector lever in neutral.

Throttle Linkage Adjustment *See "PowerFlite" Transmission in Transmission Section.*

►*OTHER DATA: See Carter "WCFB 4-Barrel" Carburetor in Carburetor Section.*

Fuel Pump Pressure: 5-6½ lbs.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

CARB. EQUIPMENT

▷*FUEL TANK FILLER CAP CAUTION:* Vented fuel tank filler cap now incorporated in production. Previous production filler pipe had "V" slot at top to provide fuel tank venting. Current production does not have slotted vent. Care must be taken to match right cap with each type pipe to insure proper venting and unrestricted flow of fuel to engine. Failure to vent tank will result in its collapse. If this occurs, tank can be restored to original shape by light application of air pressure.

Fuel Pump: AC or Auto-Lite. Diaphragm type. **Replacement Pump**—AC No. 4280 or Auto-Lite FB-4006.
Pressure—5-6½ lbs.
See "Fuel Pumps" in Carburetion Equipment Section.

Gasoline Gauge: Auto-Lite.
Dash Unit—Auto-Lite 13753A.
Tank Unit—Auto-Lite 13794A.
See "Fuel Gauges" in Carburetion Equipment Section.

BATTERY

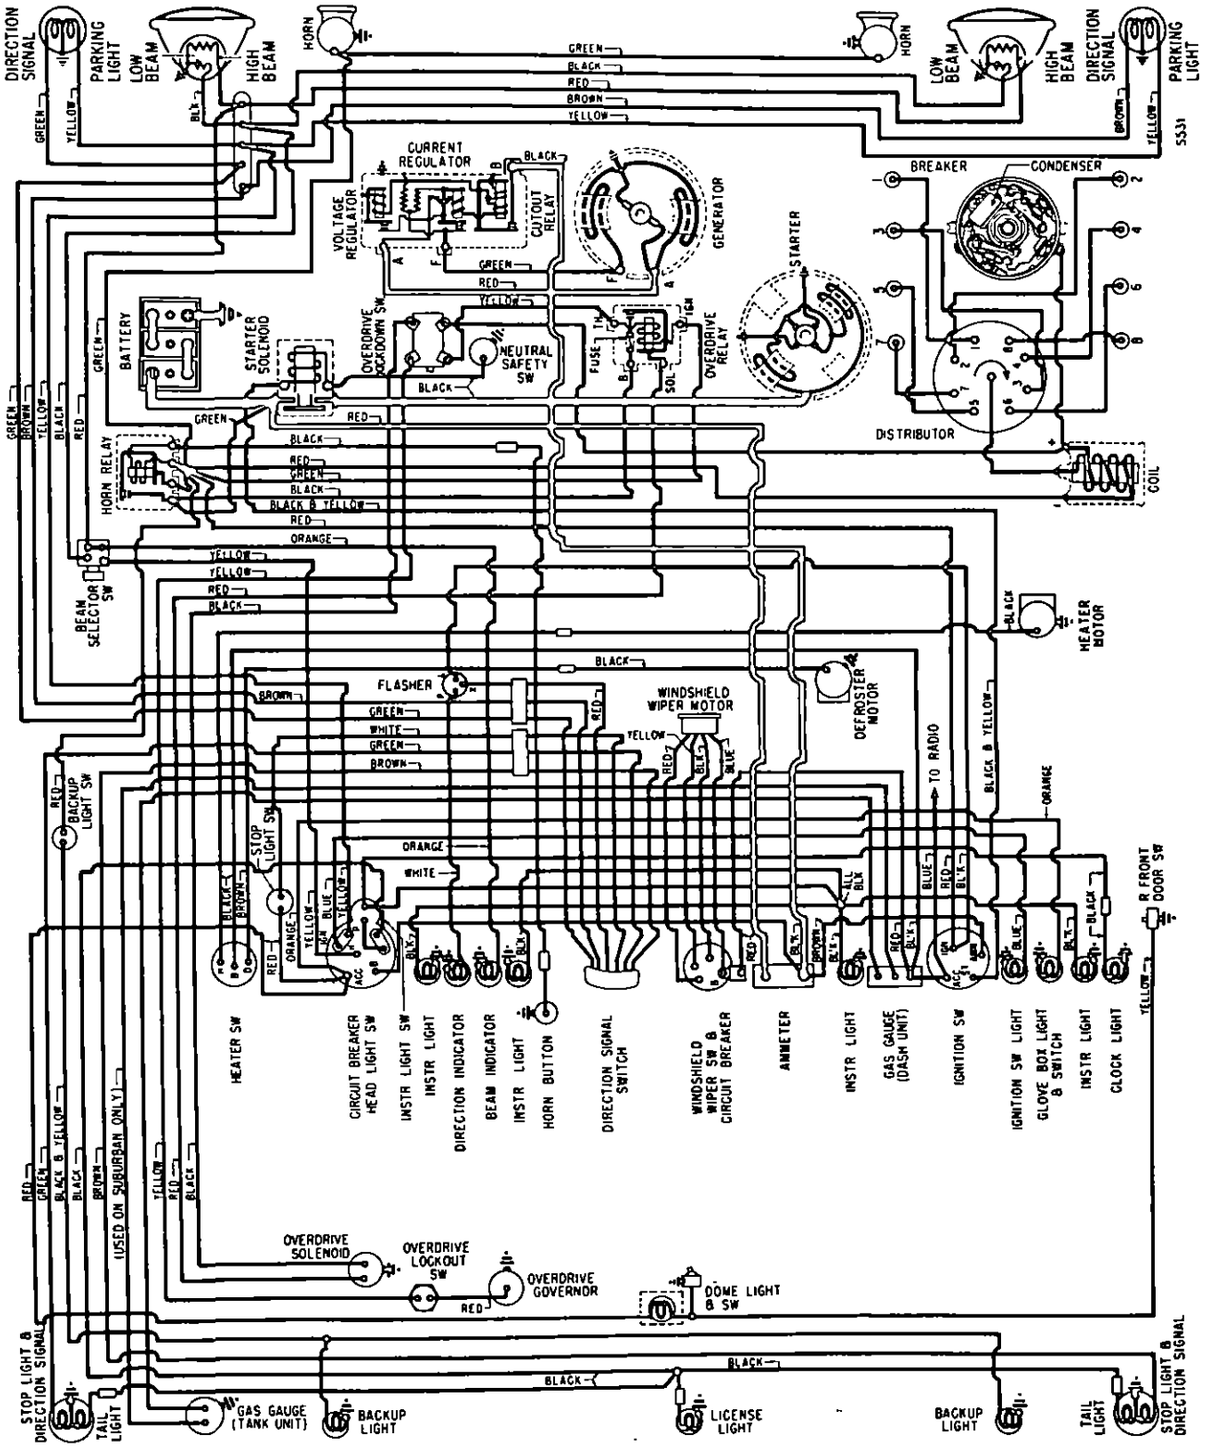
Auto-Lite 1M-100-D or Willard HW-1-100-C. 6 volt, 15 plate, 100 ampere hour capacity.
Grounded Terminal—Positive.
Engine Ground—Left front of engine.

STARTER

Auto-Lite MCH-6205. Armature—MCH-2088.
Drive—Bendix No. A3274. "Folo-thru" type.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—42-53 ozs (with new brushes).

Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4300 (Min.)	5.0	65
6.0 ft. lbs.	(Min.) Lock	2.0	335



Starting Switch: Auto-Lite SST-4006 (Std.), SST-4013 (PowerFlite). Magnetic type switch controlled by ignition switch. Neutral safety switch mounted on transmission of automatic transmission cars. *See "Starter Controls" in Electrical Equipment Section.*

GENERATOR

Auto-Lite Generator No.	Armature No.
GGW-6012-B (Std.)	GGW-2006F
GGJ-6005-A (Spec. Equip.)	GGJ-2101AF
GGJ-6005-D (Spec. Equip.)	GGJ-2101AF
GGW-6016-A (Pow. St.)	GGW-2090F
GGU-6013-D (Pow. St.)	GGU-2071F
GGW-6016-E (Pow. St. Can.)	GGW-2090F
GGW-6017-A (Air Cond.)	GGW-2098F
GGU-6008-C (Air Cond.)	GGU-2063F
GGJ-6001-K (Air Cond.)	GGJ-2101AF
GGW-6016-C (A.C. & Pow. St.)	GGW-2090F
GGU-6013-C (A.C. & Pow. St.)	GGU-2071F
GGW-6016-F (A.C. & P.S. Can)	GGW-2090F

▷*SPECIAL GENERATOR NOTE:* GGJ, GGU, and GGW type generators used. Performance specifications below apply equally to all generators, within any one of these groups.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Performance Data–GGJ

Amperes	Volts	Cold – R.P.M. – Hot
0	6.4	600-700 – 650-750
50	8.0	1400-1600 – 1550-1750
55	8.0	1500-1700 – 1650-1850

Performance Data-GGU

Amperes	Volts	Cold – R.P.M. – Hot
0	6.4	750-850 – 800-900
45	8.0	1450-1650 – 1650-1850
50	8.0	1550-1750 – 1750-1950

Performance Data-GGW

Amperes	Volts	Cold – R.P.M. – Hot
0	6.4	870-970 – 950-1050
40	8.0	1800-2000 – 2150-2350
45	8.0	1925-2125 – 2350-2550

Brush Spring Tension–(GGJ) 34-41 ozs., (GGU, GGW) 35-53 ozs., with new brushes.
Field Current–(GGJ) 1.4-1.7 amperes, (GGU) 1.4-1.6 amperes, (GGW) 1.6-1.7 amperes, all at 5.0 volts.
Motoring Current–(GGJ) 4.1-4.6 amperes, (GGU) 5.0-6.0 amperes, (GGW) 5.0-5.5 amperes, all at 5.0 volts.
Rotation–Counter-clockwise at commutator end.
Belt Adjustment: Approximately ½" slack (when pushed from a straight line midway between pulleys).

REGULATOR

Auto-Lite Regulator No.	Generator
VBF-6001A	GGJ
VBF-6002A (Neg. Gd.)	GGJ
VAV-6001B	GGU
VAV-6002B (Neg. Gd.)	GGU
VBE-6001A	GGW

Cutout Relay

Cuts In–6.3-6.8 volts.
Cuts Out–4.1-4.8 volts.
Contact Gap–.015" minimum.
Air Gap–.031-.034" with contacts open (check at hinge end of core).

Voltage Regulator

Setting–7.1-7.4 volts at 70°F. *after 15 minutes operation charging at ½ maximum rate.*
Air Gap–.048-.052" with contacts just opening.
Checking & Adjusting–*See Electrical Equip. Section.*

Current Regulator

►*SETTING CAUTION: "Temperature Compensated" type. Set to following specifications at 70°F.*

	Test A – Operating Amperes – Test B
VBE-6001A	52 – 45 (43-47)
VBF-6001A, 2A	66 – 55 (53-57)
VAV-6001B, 2B	55 – 50 (48-52)

Test A–After 15 minutes operation charging at ½ maximum rate.
Test B–After additional 15 minutes operation with current regulator operating (load applied to hold voltage to 6.7-6.9 volts (VAV, VBE), 6.7-7.0 volts (VBF).
Air Gap–.048-.052" with contacts just opening.
Checking & Adjusting–*See Electrical Equip. Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Equip. Section.*
Direction Signal: *See Electrical Equip. Section.*
►*IGNITION STARTER SWITCH CAUTION: When installing accessories, use accessory terminal only on ignition-starter switch and not ammeter terminal post.*
Lighting & Panel Switch Removal: Switches held in instrument panel by a common threaded sleeve and hex nut. Panel lamp knob indexes on its switch shaft by means of lugs in knob and slots in shaft. Headlamp knob is held on its shaft by a recessed hex screw.
Stop Light Switch (Location): On forward end of master cylinder.
FUSES: Clock–3 amperes. In clock lead wire.
Radio–14 amperes. In feed behind radio.
Overdrive–20 ampere. On overdrive relay.
LIGHTING CIRCUIT BREAKERS: Located in headlight switch assembly. Three in number, as follows:
30 Ampere Circuit Breaker–Protects headlights, high beam indicator light, and parking lights.
10 Ampere Circuit Breaker–Protects tail lights, license plate lights, clock light, and instrument panel light.
10 Ampere Circuit Breaker–Protects stop lights, map light, dome light, glove box light, courtesy light, and trunk compartment light.
HORNS: Auto-Lite. Twin horns with relay.
High Pitch–HAB-4702.
Low Pitch–HAB-4701.
Horn Relay: Auto-Lite RAF-4001.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*
►*TWO ENGINES USED AS FOLLOWS:* Both engines have polyspherical combustion chamber with lateral valves and single rocker arm shaft. Bore in two engines differs as indicated in ENGINE SPECIFICATIONS below.

ENGINE SPECIFICATIONS: 90° V8 (All Models).

Engine	Bore	Stroke	Displacement
157 HP	3-7/16"	3-¼"	241 cu. ins.
167 HP	3-9/16"	3-¼"	267 cu. ins.

Engine	Compr. Ratio	Rated HP	Developed HP
157 HP	7.6-1	37.9	157 at 4400 RPM
167 HP	7.6-1	40.6	①167 at 4400 RPM

①–177 at 4400 RPM with special Power Package.

Compression & Vacuum Reading–*See TUNE-UP.*
ENGINE REMOVAL: *See "Engine" in Plymouth Special Data.*
►*HARSH ENGINE VIBRATION CORRECTION (Due to Short Insulator Spacer): See "Engine Mountings" in Plymouth Special Data.*
ENGINE MOUNTS: *See "Engine Mountings" in Plymouth Special Data.*
OIL PAN REMOVAL: Remove oil level indicator, drain oil, disconnect steering linkage at idler arm support bracket, and allow linkage to drop. Remove bolts that hold oil pan to cylinder block and slide pan out, down, and away from engine.
CYLINDER HEAD: *See "Cylinder Head & Manifold" in Plymouth Special Data.*
TIGHTENING TORQUES: *See "Tightening Specifications" in Plymouth Special Data.*

PISTONS

Aluminum alloy, slipper type, elliptically turned, steel-banded, horizontal slot, tin-plated, with pin offset to right .006". **Weight**–16 ozs. (stripped).
Clearance–.001-.0015" (157 HP Eng.), .00075-.00125" (167 HP Eng.) at top of skirt, Pull to withdraw .0015" x ½" feeler between thrust face of piston and cylinder wall should be 5-10 lbs. at 70°F.
►*CYLINDER BORE OVERSIZE CAUTION: Engines with letter "A" following engine number indicates that cylinder bores are .020" oversize.*
Removal: Pistons and rods removed from above.
Replacement Pistons: Std., .005", .020", .030", .040", .060" oversize.
Installing Pistons: Assemble pistons to connecting rod on right hand cylinder bank (2-4-6-8) with indent on top of piston on side opposite to large chamfer at insert end of connecting rod. On left bank (1-3-5-7) assemble with indent on same side as large chamfer at insert end of connecting rod. *See Rod Installation.*

PISTON PINS

Full floating type.
Diameter–.8591-.8593". **Length**–2.880-2.890".
Clearance in Piston–.0000-.0005". Tight DOUBLE THUMB press fit at 70°F.
Clearance in Rod–.0001-.0004". Tight thumb press fit at 70°F.
Replacement Pins: Std., .003", .008" oversize.
NOTE: Fitted pins furnished with new pistons.
►*PISTON PIN INSTALLATION NOTE:* If pin cannot be installed as explained, use expansion reamer to enlarge hole. Use extreme care and take very light cuts, alternately reaming and fitting.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr. (#1)	3/32"	.010-.020"	.0015-.003"
Compr. (#2)	3/32"	.010-.020"	.001-.0025"
Oil (#3)	5/32"	.010-.020"	.001-.003"

Replacement Rings: Std., .010", .020", .030", .040", .050", .060" oversize.
Installing Rings: Compression rings with step on inner edge up.

CONNECTING RODS

Length (Center-to-Center)–5.94". **Weight**–21.1 ozs.
Crankpin Journal Diameter–1.9365-1.9375".
►*JOURNAL DIAMETER CAUTION: (ONE OR MORE Journals Machined UNDERSIZE)–See "CRANKSHAFT" below.*
Lower Bearing–Replaceable precision type.
Clearance–.0005-.0015" desired.
Endplay–.006-.014" (two rods).
Bearing Adjustment: None. Replace bearings.
Replacement Bearings: Std., .001", .002", .003", .010", .012" undersize.
Installing Rods–*See "Pistons (Installation)" above.* Install rod and piston assembly with indent on top of piston pointing toward front of engine. NOTE–Connecting rod bores are chamfered more on one side than the other. Larger chamfer must be installed toward crankshaft journal fillet.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*BEARING INSERT CAUTION:* When installing lower bearing insert, make certain that "V" groove in insert is in line with "V" groove in cap. Tighten bearing cap nuts to 45 ft. lbs. torque.

CRANKSHAFT

Journal Diameter–2.3745-2.3755". Five bearing.

►*CRANKSHAFT JOURNAL UNDERSIZE CAUTION:* Engines with undersize journals identified as follows:

.010" UNDERSIZE (Main & Connecting Rod Journals)–Letter "B" following engine number indicates that ALL Main & Connecting Rod Journals are .010" undersize.

.001" UNDERSIZE (ONE OR MORE Main & Connecting Rod Journals)–When replacing bearings, look for stamped number on middle throw arm of crankshaft. An "M" or "R" followed by a number indicates that a main or connecting rod bearing has a thicker wall bearing. For example, "M2" and "R1" means that .001" thicker wall bearing inserts are used on the No. 2 main bearing and the No. 1 connecting rod bearing.

Clearance–.0005-.0015".

Replacement Bearings: Std., .001", .002", .003", .012" undersize.

Crankshaft Rear Oil Seals: *See "Crankshaft & Main Bearings" in Plymouth Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Plymouth Special Data.*

End Thrust: Taken by center (No. 3) main bearing. **Endplay**–.002-.007".

CAMSHAFT

Journal Diameters–(1) 2", (2) 1 63/64", (3) 1 31/32", (4) 1 61/64", (5) 1 7/16".

Bearings–Removable, steel-backed babbitt lined bushings.

Clearance–.001-.003".

End Thrust: Taken by thrust plate behind camshaft sprocket hub. **Endplay**–.002-.006".

Timing Chain: Width–1.12". **Pitch**–.38". **Length**–68 links.

Camshaft Setting: Place crankshaft "Zero" mark exactly in line with center of camshaft. Temporarily install camshaft sprocket less chain, line up dowel pin holes in hub and gear, while at the same time positioning camshaft gear "Zero" mark exactly in line with center of crankshaft. (A straightedge should be used to check accuracy of this alignment). Remove camshaft gear and engage with timing chain. Place timing chain over crankshaft gear and at the same time, slide the camshaft gear over end of camshaft, keeping timing mark in position. With timing marks aligned, push gear on camshaft. Install fuel pump eccentric. Install nut.

Removal & Installation: *See "Camshaft & Bearings" in Plymouth Special Data.*

Engine Front Cover (Removal & Installation): *See "Engine Front Cover" in Plymouth Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Plymouth Special Data.*

VALVES

Tappet Clearance: None in service (hydraulic).

Valve	Head Diam.	Stem Diam.	Length
Intake	1-23/32"	.372-.373" ①	4 1/4"
Exhaust	1 15/32"	.371-.372" ①	4 13/64"

Valve	Seat Angle	Lift	Stem Clearance
Intake	45°	.360"	.001-.003"
Exhaust	45°	.360"	.002-.004"

①–Standard. See Valve Guides below.

Valve Seat Width–1/16-3/32" (Intake), 3/64-1/16" (Exhaust).

►*VALVE OVERSIZE NOTE:* "I" or "E" stamped on cylinder head at rock cover gasket boss, indicates that all intake or exhaust valves are oversize in that bank depending upon what letter is stamped.

►*VALVE GRINDING CAUTION:* If the position of the valve in the head has been changed (due to valve or valve seat grinding) so as to shorten the operating length of 1/32" or more from its factory installed position, the dimension from valve spring seat in the head to valve tip should be checked with gauge C-3436. If the valve tip exceeds the maximum allowable on the gauge, grind the tip as necessary (do not go below the minimum allowable on the gauge). Improper valve clearance at high speed will result if this condition is not corrected.

Valve Guides: Cast integral with cylinder head. Service as follows: When valve stem clearance excessive, use Reamer Tool Set to ream guides for NEXT OVERSIZE Valve as follows: Tool C-3433 (.005" O.S.), Tool C-3430 (.015" O.S.), Tool C-3427 (.030" O.S.). Valves furnished Std. and .005", .015", .030" Oversize.

Valve Springs: Both intake and exhaust valve springs should have 134-136 lbs. pressure when compressed to 1-5/16". **Free Length**–1-15/16".

►*VALVE SPRING HEIGHT CAUTION:* If valves or seats are reground, check **installed** height of spring. If height of spring is 1-11/16" or greater, install a 1/16" spacer (Part No. 1400482) in the head counterbore to bring spring height back to nominal 1 5/8–1 11/16".

►*VALVE SPRING NOISE CORRECTION (Caused by Spring Striking Head at Edge of Valve Recess):* To correct, bevel or chamfer edge of recess to provide necessary clearance for spring.

Valve Lifters: Hydraulic, one-piece integral type. *See "Hydraulic Valve Lifters" in Plymouth Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

Intake Valves–Open 17° BTDC. Close 47° ALDC.

Exhaust Valves–Open 55° BLDC. Close 9° ATDC.

OILING SYSTEM

Crankcase Capacity: 5 qts. (refill). Add one additional quart when filter changed.

Normal Oil Pressure–40-50 lbs. at 25-30 MPH.

Oil Pressure Relief Valve–Located in oil pump body. Adjustable by replacing springs (3 types). (1) Standard spring painted BLACK. (2) Lighter than standard spring painted RED. (3) Heavier than standard spring painted GREEN.

►*OIL PRESSURE RELIEF VALVE NOTE:* Springs identified as follows:

Color Code	Checking Height	Spring Pressure
Gray (Light)	3 1/32"	16.1-17.1 lbs.
Red (Standard)	2 27/32"	19.5-20.5 lbs.
Brown (Heavy)	2 31/32"	22.9-23.8 lbs.

Free Height–2 1/16".

Oil Pressure Gauge: Auto-Lite 13751A. Not electric.

Oil Pump: Rotor type. In crankcase at rear end. Mounted on rear bearing cap.

Overhaul–*See "Oiling System" in Plymouth Special Data.*

Priming Oil Pump (After Overhaul)–Prime oil pump before installing oil pump and strainer to rear main bearing cap.

Oil Filter: Shunt type. A portion of oil from oil pump is directed through this filter and the remainder flows directly into engine lubrication system.

Filter Element–Install new filter element and cover gasket at 5000 mile intervals (or earlier if required). Change oil at same time filter element is changed.

Crankcase Ventilation: Filter element in oil filler cap and air cleaner in crankcase ventilation outlet pipe.

COOLING

Water Capacity: 19 quarts (20 with heater).

Pressure Valve: Plymouth 1373136. Radiator filler cap. Opens at 7 lbs.

Thermostat: By-pass type in cylinder head water outlet. Starts to open at 159-165°F.

Water Pump: Packless type. Grease fitting for lubrication on early type only. *See Water Pump Note below. See Water Pump Section for data.*

Pump Removal–Drain cooling system, remove fan, belt, and pulley. Remove four water pump attaching bolts and remove water pump.

►*WATER PUMP NOTE:* Three types used. Early pump was bushing type with lubrication fitting. Two later types are ball-bearing, which are pre-lubricated and require no additional lubrication (have no lubrication fitting).

Temperature Gauge: Auto-Lite 13752A. Electric type.

CLUTCH

Borg & Beck	Model	Assy. No.	Disc No.
Standard	10A7	361368	382358
Heavy Duty	11A6	929	381850

See "Borg & Beck" Clutches in Clutch Section.

Pedal Adjustment: Turn clutch release fork rod adjusting nut until 3/16" free movement of clutch fork outer end is obtained. This adjustment will provide necessary 1" free play at pedal.

Over-Center Spring Adjustment: Tighten eyebolt sleeve on clutch pedal overcenter spring bolt finger tight with pedal in depressed position, then tighten four complete turns.

Removal: Disconnect propeller shaft, speedometer cable, parking brake cable, and gearshift control rods. Remove transmission (See Synchro-mesh Transmission). Mark clutch cover and flywheel. Remove bolts that hold clutch cover to flywheel; loosening each bolt a few turns (in succession) until cover is free. Remove clutch disc and pressure plate assembly from clutch housing.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

SYNCHRO-MESH TRANSMISSION

Own. Helical gear, constant mesh, synchro-mesh (second & high), sliding gear (low & reverse).
See "Plymouth Synchro-mesh" in Transmission Section.
Transmission Controls: *See "Transmission Controls" in Transmission Section.*
►*CAR-TOWING-CAUTION:* If car is to be towed long distances, disconnect propeller shaft at rear axle carrier.

Removal: Disconnect propeller shaft, speedometer cable, hand brake cable, and control rods. If transmission is to be disassembled, apply hand brake to hold mainshaft while loosening flange nut. This method will also prevent possible brinelling of bearings, or other damage caused by pounding on wrench. Remove transmission by pulling it straight back until pinion shaft clears clutch disc before lowering transmission. This precaution will avoid bending clutch disc.

OVERDRIVE

Warner Type R10. Planetary gear type with solenoid operation and accelerator pedal controlled kick-down.
See "Warner R10" Overdrive in Transmission Section.
Overdrive Controls: *See "Overdrive Controls" in Transmission Section.*

Removal: Same as for Synchro-mesh Transmission (above) after control wiring and cable have been disconnected.

POWERFLITE TRANSMISSION

Torque Converter and hydraulically operated planetary transmission.
See "PowerFlite" Transmission in Transmission Section.
►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "PowerFlite" Transmission in Transmission Section.*
►*TESTING & TROUBLE SHOOTING: See "PowerFlite" Transmission in Transmission Section.*

Lubrication: Check fluid level every 1000 miles, drain and refill every 20,000 miles with Automatic Transmission Fluid (Type A).
Checking Fluid Level—*Apply hand brake, place selector lever in neutral position. Allow engine to idle until normal operating temperature is reached. Shift selector lever through all ranges. Shift selector lever back to neutral and add Automatic Transmission Fluid (Type A) to bring level to full mark on oil level indicator.*
Oil Filler Tube (Location): At right rear of engine compartment.

►*CAUTION:* To prevent dirt from entering transmission make sure oil level indicator is properly seated in filler tube.

►*OTHER "POWERFLITE" SERVICE DATA: See "PowerFlite" Transmission in Transmission Section.*

UNIVERSALS

Detroit Universal. Ball and Trunnion Type.

REAR AXLE

Own. Separate carrier, semi-floating hypoid, with Hotchkiss Drive.

Transmission (Ratios)	Standard	Optional
Synchro-mesh	3.73-1	4.1-1
Overdrive	4.1-1	
PowerFlite	3.54-1	

►*REAR AXLE PINION CARRIER BUMPER PRODUCTION CHANGE (To Provide Fuller Contact & Additional Protection under Severe Bottoming Conditions): New bumper now incorporated in production. Available under Part No. 1311417 and can be installed on earlier cars.*
Backlash—.006-.010".

Carrier Removal: Disconnect rear universal, remove axle shafts (see below), take out carrier capscrews, lift off carrier assembly.

Axle Shaft Removal: Remove wheel, drum, and hub assembly (use screw type hub puller—Tool C-845), block brake pedal, disconnect brake line at wheel cylinder, remove axle shaft key, install sleeve (Tool C-745) in oil seal, remove brake support (oil seal mounted in support), pull shaft and bearing (use C-499 Puller). *NOTE*—Use Puller C-293-E to remove bearing from shaft, Puller C-748 or C-358 to remove inner oil seal, Drift C-359 to install seal. Use Tool C-452 to remove flange.

Wheel Bearing Adjustment: Shims between backing plate and axle housing. With wheel and hub removed, check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims (furnished .010", .0125", .015", .030" thick (equally at both wheels). **Endplay**—.003-.008".

SHOCK ABSORBERS

"Oriflow". Direct-acting, hydraulic type. Serviced by replacement.

Type	Plymouth Part No. Front	Rear
Standard	1614404	1450917
Heavy Duty	1617004	1450920
Heavy Duty (Spec.)		1450037

FRONT SUSPENSION

Independent. Coil springs and direct-acting shock absorbers. Shock absorbers located within coil springs.
Kingpin Inclination: 5—6½° at 0° camber.
Caster—Neg. 2° to 0° (Left side 0° to Neg. ¾° more than right side, Right side 0° preferred).
Camber—Neg. 1/8° to Pos. 5/8° (Left side Pos. ½°, Right side 0° preferred).
Toe-In—0" to Pos. 1/16" (0" preferred).
Toe-Out on Turns—With inside wheel at 20°, outside wheel should be 17½-19°.

STEERING

Manual: Gemmer. Worm and three-tooth roller.
See "Gemmer Worm & Roller" in Steering Section.
Power Steering: "Coaxial". Components encased in tubular housing which is located at bottom of, and concentrically around axis of steering column.
See "Coaxial" Power Steering in Steering Section.
Steering Linkage: *See "Steering Linkage" in Steering Section.*
Steering-Wheel-&-Horn-Button-Removal: *See "Gemmer Worm & Roller" in Steering Section.*
Steering Gear Removal: *See "Gemmer Worm & Roller" in Steering Section.*

BRAKES

Service: Plymouth "Safe-Guard" Lockheed hydraulic.
See "Plymouth Safe-Guard" in Brake Section.
Drum Diameter—11" (Front), 10" (Rear-Suburban only 11").
Wheel Cylinder Diameter—1 1/8". Single acting (front), double acting (rear wheels).
Lining—Molded asbestos (bonded to shoe).
Width—2". **Thickness**—3/16".
Braking Power—60% Front, 40% Rear.
Clearance—.006" at ends of all shoes.
Master Cylinder: On engine side of dash panel opposite base of brake pedal.
Checking Fluid—Filler plug at top of master cylinder (on dash panel in engine compartment).
Removal: Disconnect pushrod. Disconnect brake line tubes at master cylinder fittings. Remove four stud nuts from studs, remove master cylinder.
Power Brakes: Combination vacuum power unit and master cylinder Unit mounted on engine side of firewall and replaces regular master cylinder. *See "Plymouth Power Unit" in Brake Section.*
Parking Brake: On shaft at rear of transmission. 6" external contracting type used with Synchro-mesh Transmissions. 7" Internal expanding type used with Powerflite Transmission.
Adjustment—*See "Hand Brake Notes" in Plymouth Special Data.*

Lining—	Width	Thickness	Length
6" Ext. Type	2"	5/32"	15 3/8"
7" Int. Type	2"	5/32"	13 1/16"

Clearance (External Type)—.015-.020" around band.
Internal Type—Adjusting nut on shoe link backed off one notch from point where shoes just drag against drum, approximately .010".

MISC. MECHANICAL

Windshield Wipers: Auto-Lite EMU-4101 (Std.), EMZ-4001 (Two-speed—Optl.). *See "Auto-Lite Electric Windshield Wipers" in Miscellaneous Section.*
Air Conditioning: *See "Plymouth Airtemp" Air Conditioning in Miscellaneous Section.*
Power Window Regulators: Electric type. Reversible type motor in each window. Controlled by door switch and master control switch. *See "Electric Window Regulators" in Misc. Section.*
Power Seat Adjusters: Electric type. *See "Power Seat Adjusters" in Miscellaneous Section.*
Convertible Top Control: Electrical-hydraulic type. *See "Power Top Controls" in Miscellaneous Section.*

TIGHTENING SPECIFICATIONS

1946-54 MODELS

	Ft. Lbs.	In. Lbs.
Cylinder Head Capscrews	60	720
Main Bearing Capscrews①	95	1140
" (6 Cyl. Rear only)	120	1440
Connecting Rod Cap Nuts	45	540
Flywheel-to-Crankshaft②	105	1260
Piston Pin Lock Bolt	10-12	120-144
Frt. Eng. Mount-to-Support	60	720
Rear Eng. Mount-to-frame (SM)	35	420
Rear Eng. Mount-to-frame (HD)	60	720
Harmonic Balancer Bolt	95	1140
Spark Plugs	25-30	300-360

①—Except All 6 Cyl. & 1950 8 Cyl. Rear Main Bearing.
②—With self-locking bolts (no lockwashers), torque should be 100 ft. lbs. or 1200 in. lbs.
SM—Synchro-mesh Trans. cars.
HD—Hydra-Matic Drive Trans. cars.

1955 V8 MODELS

	Ft. Lbs.
Cylinder Head	95
Intake Manifold	40
Exhaust Manifold	25
Oil Pan	12
Main Bearing Caps (Exc. Rear)	95
Main Bearing Cap (Rear)	120
Flywheel	95
Con Rod Caps	45
Rocker Arm Cover	3
Pushrod Cover	10
Water Pump Mounting	15

ENGINE

1946-48 MODELS

POWER PLANT (ENGINE & TRANSMISSION) REMOVAL:—Remove hood, disconnect headlamp wires, take out radiator (see Radiator Core Removal). Drill out 4 rivets in fender support cross bar (when re-assembling bar use bolts in place of rivets). Disconnect engine front insulator at engine. Remove selector control rod from transmission, disconnect shift lever from transmission shifter shaft. Disconnect gas line from fuel pump, oil pressure gauge line, windshield wiper tube from manifold, throttle control rods, temperature gauge engine unit from head, engine ground strap, all wiring at generator and starter, etc., speedometer cable at transmission, clutch control bracket at flywheel housing, clutch throw-out fork, and exhaust pipe at manifold. Disconnect rear universal joint and remove propeller shaft (withdraw shaft from transmission). Disconnect front engine support (take out 2 bolts). Attach chain hoist to engine, remove bolts from rear engine mountings, lift engine free of rear support cross member, pull engine and transmission forward and remove from car. NOTE—When re-installing Power Plant, reverse Removal Procedure given above. Use new exhaust pipe gaskets. After engine installed, carefully adjust Safety-shift, Clutch Pedal, and Throttle Linkage.

1949-54 MODELS

POWER PLANT (ENGINE & TRANSMISSION) REMOVAL: Drain water, engine oil, and transmission lubricant, remove battery, remove hood. Then proceed as follows:

▷*ENGINE REMOVAL NOTE—On cars with Power Steering, remove pump belt, and pump with mounting bracket, leaving hose connected. Place pump in a position where it will not be damaged during engine removal.*

(1) Remove upper and lower radiator hoses, disconnect heater lines at cylinder head and radiator tank. Disconnect fuel line at fuel pump, oil line to pressure gauge at connection near rear of block, vacuum line at manifold or combination pump.

(2) Remove air cleaner, disconnect throttle linkage remove fuel pump-to-carburetor line, remove crankcase breather outlet pipe, disconnect exhaust pipe at manifold, free exhaust pipe bracket at flywheel housing.

(3) Disconnect following wires: Temperature gauge engine unit, coil primary lead, generator-to-regulator wires at generator (free wires from clips on side of engine), headlamp wire loom at junction block on right fender skirt (free loom from clips on fan shroud), all wires on starter solenoid.

(4) Disconnect control cable at hood latch. Remove radiator upper baffle assembly. Take out screws mounting fan shroud and radiator on radiator support, remove radiator, then remove shroud.

(5) Remove hood catch plate-to-radiator support brace. NOTE—Radiator support cross brace may be removed for extra clearance if desired (requires removal of four rivets—bolts can be used when brace replaced).

(6) Disconnect and remove gearshift linkage at transmission, disconnect clutch throw-out linkage at clutch fork, remove clutch control bracket from flywheel housing. Disconnect and remove propeller shaft.

(7) Attach hoist to engine (see Caution below), take out bolts attaching engine front insulator to frame. Lift weight of engine off rear insulators, remove bolts holding rear insulators to frame. Carefully hoist engine and transmission out of car, maintaining clearance at all points to prevent damaging parts.

▷*CAUTION*—If type of hoist used interferes with any engine accessories, remove following to prevent damage: Generator, Starter, Distributor, Carburetor, Fuel Pump.

▷**HYDRA-MATIC DRIVE NOTE**—On cars with Hydra-Matic Drive, remove frame cross-member on which engine rear insulators mounted and **use extreme care to prevent transmission swinging down when rear mountings disconnected (special precautions required due to extra weight of Hydra-Matic Drive).**

1955 V8 MODELS

ENGINE REMOVAL: *NOTE—The engine may be removed with the transmission attached, however if it is desired to remove transmission before removing engine, see "Transmission Removal" on Car Page.*

1) Drain engine oil, water, and transmission lubricant. With hood raised, remove hinge to cowl attaching screws and hinge to hood attaching screws, and remove hood. 2) Remove battery. Remove carburetor air cleaner and disconnect throttle linkage. On cars with power steering, remove power steering pump belt and pump with mounting bracket, leaving hoses connected. Place pump in position where it will not become damaged. Remove upper and lower radiator hoses and disconnect heater line from intake manifold and bottom of radiator. 3) Disconnect flex fuel line at fuel pump, oil pressure gauge line at connector near dash, and windshield wiper vacuum hose at rear of engine. Disconnect power brake vacuum hose at check valve to carburetor pipe. Remove thermo gauge unit from fitting in intake manifold. Disconnect coil primary lead at coil. Disconnect generator to regulator wires from generator (release from clips retaining to valve cover and pull clear of engine).

4) Disconnect wire loom running to right headlight across radiator at junction block on right side of radiator support to fender brace and release loom from clips retaining it to radiator. Remove fan, fan shroud, and radiator.

5) Remove engine right side apron and crankcase ventilator outlet pipe. Disconnect exhaust pipe from exhaust cross over pipe. Disconnect wiring from starter solenoid. Remove gearshift linkage at transmission. Disconnect linkage from clutch throwout fork and remove clutch control countershaft bracket from flywheel housing on synchromesh cars.

6) Hook a chain fall to intake manifold by means of a strong chain threaded through the openings in manifold just behind carburetor. Raise engine just enough to take weight off engine insulators. Remove screws holding front and rear insulators to frame crossmembers.

7) On Hydra-Matic Cars, support bottom of transmission with a jack and jack adapter J-2808 and remove frame crossmember to which engine rear insulators were fastened. *CAUTION*—Use care to prevent transmission swinging down when crossmember is removed.

8) Carefully hoist engine and transmission out of car checking frequently to see that sufficient clearance exists to prevent bending any parts.

ENGINE MOUNTINGS

1946-48 MODELS

ENGINE FRONT INSULATOR REMOVAL: Remove splash shields in back of radiator, disconnect exhaust pipe, remove two bolts from engine-to-mounting support, jack engine up enough at front end for access to insulator. Clean dirt off mounting from below, remove two screws holding mounting on frame, remove mounting. Reinstall in same manner and tighten all mounting bolts securely. Front insulator is designed to provide clearance for rebound clamp which is assembled over top of insulator. Insulator and clamp can be disassembled by clamping exposed ends of insulator with 'C' clamp.

1949-54 MODELS

ENGINE FRONT INSULATOR: Front mounting consists of a single assembly on cross-member bracket directly under front end of engine. Insulator has special rebound clamp assembled over top of insulator.

Removal & Disassembly: Drain cooling system, disconnect hoses at water pump and cylinder head. Remove front cross member-to-radiator cross member apron. Remove self-locking nuts from two front insulator-to-engine support bolts. Place jack under oil pan (use wood block to prevent damage to pan),

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

raise engine sufficiently to remove weight from insulator, take out two insulator-to-frame bolts, remove insulator and rebound clamp as an assembly. Remove rebound clamp by using two clamps to compress exposed ends of insulator so that clamp can be slipped off.

Installation: *Force new insulator into position in* rebound clamp. Install assembly on engine support with open side of rebound clamp forward, tighten self-locking nuts to 60 ft. lbs. Lower engine but do not install two insulator-to-frame bolts until after rear insulators have been installed and tightened (see below).

NOTE—Front insulator should not touch rebound clamp with engine weight on insulator (will be tight in clamp when off engine).

1949-53 MODELS

ENGINE REAR INSULATORS: Consist of separate rear mounting on each side of engine. These mountings locate engine (see Adjustment below).

Removal: Support engine at rear to remove engine weight from insulators. Take out two bolts attaching insulators to frame cross-member, then take out two bolts holding insulator on flywheel housing.

Installation & Adjustment: With rear of engine securely supported and **with front insulator-to-frame bolts removed,** install rear insulator to frame crossmember and to flywheel housing bolts. Then raise front of engine slightly so that all weight removed from front insulator (to permit engine to shift into correct alignment as determined by rear insulators), then install and tighten front insulator-to-frame bolts.

1955 V8 MODELS

FRONT INSULATOR: *NOTE—If new rear insulators are also to be installed, they should be installed first since the engine locates from the rear insulators.*

Removal: 1) Take weight of engine off insulators using suitable lifting equipment *(CAUTION—Do not use a jack under oil pan).* Remove screws fastening engine support to timing chain cover.

2) Remove screws which fasten insulator to frame front crossmember (these screws can be reached through an access hole in bottom of front crossmember). Raise engine just clear of insulator and support assembly.

3) Disconnect exhaust crossover pipe at both manifolds and exhaust pipe so it can be lowered to provide clearance for removing insulator. Remove insulator and assembly.

Installation: 1) Position insulator and support assembly against timing chain cover and install attaching screws with lockwashers. Tighten to 60 ft. lbs.

2) Connect exhaust crossover pipe to both exhaust manifolds and exhaust pipe, using all new gaskets. Use four thin (.075"), or two thick (.135") gaskets at each flange. Tighten attaching bolts securely. Lower engine and install frame to insulator screws with lockwashers and tighten.

1955 V8 MODELS

REAR INSULATOR: *NOTE—Rear insulator locates engine. Front insulator must be allowed to position itself after rear insulator installed.*

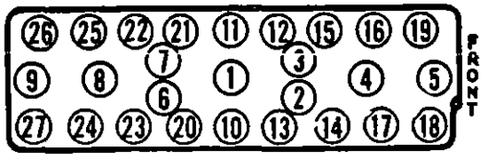
Removal: Remove two front insulator to frame bolts. Support engine securely at rear to remove engine weight from rear insulators. *(CAUTION—Do not use jack under oil pan).* Remove two bolts holding each rear insulator to frame crossmember, and then remove insulators by removing two bolts holding each insulator to flywheel housing. Disconnect exhaust pipe from exhaust crossover pipe so exhaust pipe can be moved to gain access to right insulator frame bolts.

Installation: Install new insulators on flywheel housing using lockwashers under each of two bolts holding insulator. Lower engine so rear insulators are resting on frame crossmember and insert insulator to frame bolts from top. Install self locking nuts and tighten to 35 ft. lbs. Raise front of engine slightly to take weight off front insulator, then lower engine completely so it rests on front insulator and install two front insulator to frame bolts (with lockwasher and flat washer on each).

1946-48 8 CYL. MODELS

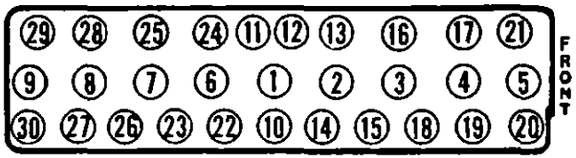
OIL PAN REMOVAL: All Eights. For access to attaching screws at front end of pan, remove radiator splash aprons as follows: Remove screws attaching aprons to front cross-member and radiator support, remove aprons from inside engine compartment by lifting aprons out with a circular motion (rotate right apron to right, and left apron to left, as they are being lifted out).

1949-54 MODELS



OIL PAN REMOVAL: Drain crankcase and cooling system, remove radiator hoses at water pump and cylinder head. Take out two bolts mounting steering idler arm support, drop steering linkage down to provide clearance at pan. Remove front cross member-to-radiator cross member apron. Take off two self-locking nuts mounting engine front insulator to engine support. Use jack under oil pan (place wood block on jack to prevent damage to pan) to raise front end of engine approximately 1" (CAUTION—do not raise engine more than necessary to remove front insulator), take out two bolts mounting front insulator and rebound clamp assembly on frame and remove assembly. Install block approximately 2½" high between frame and engine support, lower engine so that it rests securely on this block, remove jack from under pan. Take off flywheel housing lower cover. Remove oil pan (NOTE—Removal of one engine side apron may be necessary to provide clearance for removing the pan.

►***INSTALLATION CAUTION***—See Engine Front Insulator installation data under "Engine Mountings" on preceding page.



CYLINDER HEAD & MANIFOLD

1946-54 MODELS

CYLINDER HEAD INSTALLATION: Use torque indicating wrench to tighten cylinder head capscrews, tighten in correct sequence as shown in diagram. Cast iron heads should be tightened cold and rechecked after engine has been run sufficiently to bring all parts to normal operating temperature. **Tightening Torque**—See Tightening (Torque Wrench) Specifications.

1946-54 SIX CYLINDER HEAD

1946-54 EIGHT CYLINDER HEAD

1955 V8 MODELS

CYLINDER HEAD: Removal—Remove intake manifold and push rod cover. Remove rocker arm covers (On left bank, remove spark plug wires and wire support). Remove battery and engine ground straps, Hydra-Matic level indicator tube bracket and indicator. Loosen all rocker arm adjusting nuts and move rocker arms off pushrods. Remove pushrods and place in order so they can be reinstalled in the same position (*NOTE*—The rearmost pushrod on left bank (cars with defroster) cannot be removed, withdraw rod part way and tie to head. Remove exhaust crossover pipe to manifold attaching screws and remove screws from cylinder head water outlet fitting. Remove cylinder head (dowel pins will hold head in place) and remove head with exhaust manifold attached *(NOTE*—When left head being removed, raise head off dowels, move it forward and "jockey" the the head in order to clear defroster, power steering, and power brake equipment).

Installation: *(NOTE—Right and left cylinder heads are interchangeable except for water passage plug in end of water passage which must be installed in correct position if new head installed).* To install, reverse removal procedure and note the following: Head screws are three different lengths and when properly installed, all screws will project an equal distance from head. *Do not use sealer of any kind on threads.*

PISTONS

1946-54 M DELS

REPLACEMENT PISTONS (Standard Size): Standard size pistons are furnished in three sizes since there is an allowable tolerance on size of standard bores and pistons. It is important to select pistons to fit bores or hone bores to give proper piston fit (See Car Model Pages for piston fitting specifications).

►***1953 6 CYL. PISTON CHANGE CAUTION—See Car Model pages for piston changes.***

Oversize Replacement Pistons:—Finished pistons furnished in following oversizes: .005", .010", .020", .030". NOTE—All factory replacement pistons held to

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

uniform weight within 1/16 oz. and all oversize pistons up to .030" oversize are same weight as standard pistons.

CAUTION—Factory replacement pistons electorplated after being finished to size and must not be ground.

PISTON PINS

1946-EARLY 1952 MODELS
(CAST IRON PISTONS)

PISTON PIN FITTING (Pins with Setscrew Retainers —in Cast Iron Pistons): Oil bushings in connecting rod with light engine oil and coat piston pin bosses in piston with graphite grease. Rest piston on Block J-1325-1 so piston boss receiving lock screw is up. Place piston pin in position so slotted end first enters into boss receiving lock screw and also so slot in piston pin will be to side of piston boss when installed. Place Hydraulic Cylinder and Gauge J-1325-SA-1 on pin, and bring down press on hydraulic cylinder and gauge and force pin into piston. Reading on gauge should be 200-350 lbs. pressure. Install self locking piston pin lock screw and tighten to 10-12 ft. lbs. If pressure required to press pin into piston is not within the above limits with a standard size piston pin, use an oversize pin and hone piston and rod bushing as necessary.

▷*CAUTION—If hole in pin is not accurately aligned with hole in piston boss the taper of setscrew will wedge against taper of hole in pin, setting up a severe strain on piston boss which may cause piston breakage.*

LATE 1952 6 CYL MODELS
LATE 1952-54 8 CYL. MODELS

PISTON PIN FITTING (Pins with Snap Ring Retainers—in Cast Iron Pistons): Fit pins to pistons so that 150-250 lbs. pressure required to press pin through one boss (NOTE—With this fit pin will not remain permanently tight in engine, and high mileage engines may be found in which piston pins are free). Use special expansion reamer J-874-19 or similar tool to size piston holes to fit oversize pins. To install pins, coat bushing in connecting rod with light engine oil and insert rod in piston with piston skirt plug J-1325-3. Coat pin holes in piston with graphite grease. Position piston on Block J-1325-1 and press in piston pin. Install snap ring pin retainers making sure rings are fully seated in ring grooves.

1953-54 6 CYL. MODELS

PISTON PIN FITTING (Aluminum Pistons): Full floating pin used with a clearance of .0000-.0002". This clearance will be correct if pin can be pushed into place with the thumb. Clearance is excessive if pin will slide through of its own weight. Use special expansion reamer J-874-19 or similar tool to size piston pin holes to fit pins. Oil bushings in connecting rod and insert connecting rod in piston so oil hole in rod will be toward camshaft side of cylinder when "F" or notch in piston is toward front.

PISTON RINGS

1946-52 6 CYL. MODELS
1946-54 8 CYL. MODELS

REPLACEMENT PISTON RINGS: Regular Type. These rings should be used on engines where out-of-round does not exceed .003".

Sealed Power Type—Special piston ring sets furnished under Group No. 0.643 may be used where out-of-round is within limits of .003" to .009".

1953-54 6 CYL. MODELS

REPLACEMENT PISTON RINGS (6 CYL. MODELS): Two types of rings used in production (See Car Model Pages for fitting). LATER type only furnished for service replacement. Early type rings must not be used on later type pistons. These rings furnished in packages (sets of 6) as listed below and THESE RINGS SUPERSEDE FIRST OIL RING PACKAGES.

6 Cyl. Replacement Rings

	Top Compr.	Lower Compr.	Oil Ring
Standard	517266	517267	517863
.005" O.S.			517864
.010" O.S.	517364	517367	517865
.020" O.S.	517365	517368	517866
.030" O.S.	517366	517369	517867

1953-54 6 CYL. MODELS

OIL ECONOMY PISTON RINGS (6 CYL. HYDRA-MATIC CARS): For improved oil economy with either first or later type pistons, install special Oil Rings as listed below, together with special Oil Chamber Oil Baffles (see Oiling System for baffle installation).

Oil Control Ring (Part No. 517820)—These rings furnished in sets of six. Each ring consists of four pieces: 1 Spacer, 1 Spring, 2 Rails.

Compression (upper) (Part No. 517266)—Furnished singly, 6 required.

Compression (lower) (Part No. 517267)—Furnished singly, 6 required.

Valve Chamber Oil Baffle (Part No. 517877)—9 required. *See Oiling System for baffle installation.*

CONNECTING ROD & BEARINGS

1946-54 MODELS

CONNECTING ROD LOWER BEARING: Removable type. No adjustment. Shims should not be used or bearing caps filed. When replacing bearings check crankpins. If scored or out-of-round and taper exceeds .001" crankshaft should be replaced.

Checking Bearing Clearance (Brass Shim Method): Use .0015" brass shim stock ½" wide and ⅞" long. Remove cap and lay shim across bearing. Tighten cap (with shim in place). Check bearing fit as follows:—Rod should be locked when testing end movement by hand but should slide on crankpin when tapped lightly with hammer. With shim removed rod should move freely on pin. If rod can be moved by hand with shim in place install .001" undersize bearing.

Installation—Bearing shells fitted with tangs (Six —one to each edge of bearing. Eight—two on each edge). Install cap with tangs on opposite sides of rod (Six), on opposite ends of crankpin (Eight).

1946-54 M DELS

PISTON PIN FITTING (Connecting Rod Bushing): Press out old connecting rod bushing using Bushing Remover J-540-1 and Block J-526. Press new bushings into place using Bushing Replacer J-540-2 and Block J-526. This replacer tool must be used as the thin wall split bushings will distort on pressing into rod without support by shank of replacer tool. Swage or expand bushings into connecting rod by using Burnished Tool J-516 and Block J-526. (CAUTION—It is very essential that bushings be burnished into place as bushing may work out of connecting rod bore). Hone bushing to fit piston pin it is to be used with. A Sunnen hone or similar accurate equipment should be used for honing operation. **Do not use a hand reamer.**

1955 V8 MODELS

CONNECTING ROD BUSHING REPLACEMENT: Press out old bushing using Bushing Remover & Installer J-5753-3 and Block J-5753, (*NOTE*—For removal of bushing, the smallest diameter or third shoulder on tool is inserted in bushing). Press new bushing into place using same tools as for removal, but using opposite end of Bushing Remover & Installer. This tool must be used since the thin wall bushing will distort when pressed into rod unless supported by shank of tool. Drill a 5/32" hole in bushing through oil hole in top of rod, using care to prevent end of tool damaging opposite side of bushing. Swage or expand bushing into connecting rod using Burnisher Tool J-5753-1 and Block J-5753, pressing Burnisher Tool through bushing with connecting rod assembly supported on Block. Hone bushing to fit piston pin.

CRANKSHAFT & MAIN BEARINGS

1946-54 MODELS

Checking Bearing Clearance (Brass Shim Method): To check bearing fit, use .002" brass shim stock ½" wide and 1" long. With cap removed place shim across bearing. Tighten cap (with shim in place). Test bearing fit by rocking flywheel by hand. **Do not rock flywheel more than 1" in either direction** or bearing may be damaged by shim. If crankshaft locks with shim in place and rotates freely with shim removed bearing size correct. If shaft moves with shim in place use .001" undersize bearing. IMPORTANT—Do not file main bearing caps. These caps are not furnished separately.

1946-54 MODELS

MAIN BEARINGS: Removal. Remove the bearings with caps removed and crankshaft in place by inserting suitable tool (see NOTE following) in oil hole in shaft and rotating shaft in usual direction.

NOTE—Bearing Removal Tool can be made from ⅛"x1½" cotter key. Bend each end of key up 5/16" to make ⅝" long base. With this as a base, bend key to form 59° angle. With this tool inserted in place end will just protrude far enough to engage bearing.

Installation—Insert plain edge of bearing in indented side of bearing support, slowly rotate crankshaft until bearing seated.

1946-54 6 CYL. MODELS
1950-54 8 CYL. MODELS

REAR MAIN BEARING OIL SEAL: Seal consists of oil slinger on crankshaft to rear of main bearing, operating in groove formed in block and cap (drain hole in cap returns oil to crankcase) with asbestos seal

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

fitted in separate groove at rear. Edges of seal groove in cylinder block and rear main bearing cap are chamfered to reduce pressure between seal and crankshaft and prevent pinching of seal. One end of groove in bearing cap is recessed and a portion of seal should be worked into this recess to prevent seal turning in service.

Installation—Remove bearing cap and upper half of bearing insert from first main bearing forward of the rear main bearing. Remove all connecting rod bearing caps. Remove rear main cap and loosen remaining main bearing caps sufficiently to allow crankshaft to be lowered approximately 3/8" at rear. Remove upper half of rear main bearing oil seal and with rear main bearing cap on bench, remove oil seal and insert. Install new seal using tool J-1045, and trim flush. *(CAUTION*—Do not pack seal into locking recess). Carefully remove seal from cap and slide it into groove in block over crankshaft. *(Caution*—Take particular care to install seal so that end of seal which was at locking recess in cap during forming operation, will meet locking recess in cap when cap is installed). Install bearing inserts and cap on main bearing forward of the rear main and torque to 95 ft. lbs. to properly seat crankshaft against new oil seal. (NOTE—Make sure that upper half of seal in rear main is flush with edge of block). *(CAUTION*—If inspection shows seal to be an improper length, remove and discard it, and form a new seal as follows: Install a new seal in bearing cap using tool J-1045 and trim one end flush; carefully remove seal from cap and reinstall in cap, rotating it so that trimmed end is below or above edge of cap the proper distance to correct for the improper length of the first seal. Reseat the seal with tool J-1045 and trim the uncut end flush with edge of cap. Reinstall in block groove). Install new seal in rear main bearing cap using tool J-1045 and pack end of seal into locking recess. Trim the other end flush and replace inserts. Install cap and torque to 120 ft. lbs. Remove rear main bearing cap again and inspect break line between cap and block to be certain that none of the seal material has been compressed between the two. Scrape surfaces to insure seating of cap. Re-install and torque to 120 ft. lbs.

Bearing Cap Seal: After rear bearing cap installed, drive wooden wedge seal into groove on each side of bearing cap next to block. ***CAUTION—Use care not to split these wooden wedges.***

NOTE—1950 and later rear main bearing cap seals differ from previous types and are not interchangeable. Early type is wedge shaped, while later type is square with beveled edges.

1955 V8 MODELS

REAR MAIN BEARING OIL SEAL REPLACEMENT: 1) Drain oil and remove oil pan, oil pump, and oil pump drive shaft. Remove oil baffle and cylinder block to oil baffle tube (lower oil level indicator tube). Remove transmission (See Synchro-mesh Transmission Removal on Car Page or Hydra-Matic Drive in Transmission Section).

2) Remove rear center main bearing cap and upper half of rear center main bearing shell to allow crankshaft to be lowered and to prevent damage to thrust surfaces of bearing. Remove rear main bearing cap and loosen remaining bearing caps sufficiently to allow crankshaft to be lowered approximately 3/8" at rear.

3) With crankshaft lowered to provide clearance, remove upper half of rear main bearing oil seal and bearing shell.

4) Install seal in cap with one end flush with cap and compress seal using hammer and Seal Compressor J-3048-A. *Do not pack seal into locking recess in cap.* Remove seal from cap and install in groove in block-by-slipping-over-crankshaft-into-cavity-of-block. Insert end which was flush with cap first. Install rear main bearing cap with bearing shell and tighten to 95 ft. lbs., to pull crankshaft up into place against seal. Carefully trim both ends of seal flush with block.

5) Install a new seal in cap, as above, *except that Seal must be packed into locking recess in cap.* Trim seal flush with cap. Install cap with shell and tighten to 95 ft. lbs. Remove rear main bearing cap again and inspect split line to be certain that none of seal material has been compressed between cap and block. Make sure mating surfaces are clean.

6) Apply a bead of sealer (Permatex No. 2), 3/64" to 1/16" in diameter to mating surface of cap extending from packing seal groove outward to the groove for oil pan cork rear gasket. Install rear main bearing cap and tighten to 120 ft. lbs. torque.

7) Remove rear center main bearing cap and reinstall upper half of bearing shell. Install cap and tighten to 95 ft. lbs. Tighten remaining bearing caps to 95 ft. lbs. Replace transmission, oil pump, oil pump drive shaft, oil baffle, oil pan and flywheel lower cover and shield.

►*CAUTION:* Seal must be installed exactly as detailed above to prevent oil leaks at rear bearing. Make certain that seals not cut too short and that mating surfaces of bearing cap and block are free of any packing material, dirt or oiliness (except for Permatex bead on cap) and that they are not scratched or burred.

VIBRATION DAMPENER

1946-54 MODELS

HARMONIC BALANCER SERVICING: No service operations required. Do not attempt to disassemble balancer (serviced by replacement).

Removal & Installation—Drain cooling system and disconnect radiator hoses. Remove radiator (see Radiator Removal), loosen and remove fan belt. Remove harmonic balancer retaining bolt, lockwasher, and balancer washer. Use J-2582-A or similar puller to remove balancer from crankshaft. When installing balancer, see that key in place in shaft keyway and balancer washer installed under retaining bolt lockwasher. Tighten bolt to 95 ft. lbs.

1955 V8 MODELS

VIBRATION DAMPENER: Removal—Loosen generator at adjusting strap and remove fan belt from vibration dampener. On card equipped with power steering, also remove power steering pump belt. Position fan so wide angles will be at top and bottom allowing access to balancer. Remove dampener attaching screw (15/16" socket) and retaining washer, and slide dampener off shaft.

Installation: Reverse the removal procedure.

ENGINE FRONT COVER

1955 V8 M DELS

ENGINE FRONT COVER: Removal—1) Drain radiator. On cars with power steering, remove pump with mounting bracket from pad on top of engine front cover and lay it back on fender skirt where it will be out of the way. *(CAUTION—Disconnect battery ground strap).*

2) Disconnect wires from generator and remove generator and mounting bracket and adjusting strap. Remove fan belt, power steering pump belt, and fan and pulley. Disconnect upper and lower radiator hoses, remove fan shroud, and remove radiator. Remove water inlet elbows from cylinder heads (leave hose attached). Remove fuel pump and remove vibration dampener.

3) Take weight off engine front insulator using suitable engine lifting equipment. *(CAUTION—Do not use jack under oil pan).* Remove screws and lockwashers attaching front insulator to engine front cover. Remove four front oil pan-to-engine front cover screws. Remove engine front cover-to-block attaching screws and nuts. Pull cover forward to clear studs and remove.

Installation: See Crankshaft Oil Seal (below), Install new front oil pan gasket (cement gasket to oil pan), Position new front cover gasket over studs on front of block, position front cover on engine, install all capscrews and nuts with lockwashers and tighten securely. Install four oil pan-to-front cover capscrews and lockwashers, tighten these screws to 10-12 ft. lbs. Install front engine support-to-front cover screws loosely, then lower engine and tighten screws to correct torque of 60 ft. lbs. Reassemble engine by reversing removal procedure (above).

1955 V8 M DELS

CRANKSHAFT FRONT OIL SEAL REPLACEMENT: After front cover removed (above), slide old seal off end of crankshaft. Coat face of new seal with graphite lubricant and install on crankshaft before installing front cover.

FLYWHEEL

1955 V8 M DELS

FLYWHEEL INSTALLATION: Clean mating surfaces of flywheel and crankshaft thoroughly (use Acetone to clean old Pliobond 30 from surfaces). Apply a thin coat approximately ½" wide) of Pliobond 30 sealing compound on surface of crankshaft at bolt circle. Smooth seal compound around toward outer edge and allow to dry about one minute. (*CAUTION*—In no case will a fibre gasket be used between flywheel and crankshaft. Use only Pliobond 30 sealing compound). Install flywheel on crankshaft flange carefully and enter all flywheel bolts through plates. Tighten bolts diametrically opposite uniformly to correct torque. (*NOTE*—Draw flywheel on evenly during this operation to prevent leakage and excessive runout). Mount a dial indicator so stem or button rests on torus cover gasket seal area and check flywheel runout. Runout should not exceed .005".

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

CAMSHAFT & BEARINGS
1946-54 MODELS

CAMSHAFT: Removal. Remove Front Fender and Radiator Assembly (see above), remove fan belt, fan, and harmonic balancer (use Puller J-496). Support front end of engine with jack and remove front engine support, timing chain cover, chain, and sprockets. Remove cylinder head and valve covers, take out valves and lifters (lifters are barrel type and can be removed from above with valves out). Remove oil pump, fuel pump, and distributor. Take out screws and remove camshaft thrust plate, withdraw camshaft at front of engine. Re-install camshaft in same manner making certain that timing chain cover is properly centered (see Timing Chain Cover and Oil Seal data below). After camshaft installed, check Valve Timing, Ignition Timing, and Tappet Clearance.

CAMSHAFT BEARINGS: Use tool No. J-550 to remove and install camshaft bearings (rear bearing on Eight must be pulled out toward front as expansion plug at rear prevents driving on bearing from rear). Use driver to install all bearings making certain that oil hole in bearings is lined up with hole in block (holes are at bottom of bearings). Then line ream all bearings to finished sizes as follows:

Bearing Finished Size:	Six	Eight
#1 (Front)	1.9950-1.9955"	1.9950-1.9955"
#2	1.9637-1.9642"	1.9637-1.9642"
#3	1.9325-1.9330"	1.9325-1.9330"
#4	1.9012-1.9017"	1.9012-1.9017"
#5		1.8700-1.8705"

TIMING CHAIN
1946-54 MODELS

TIMING CHAIN REPLACEMENT: Timing chain must be installed "endless" with both sprockets off the engine as directed below. CAUTION—Any attempt to install the chain by removing only one sprocket will result in breaking of the chain.

Timing Chain Removal—Remove Front End Sheet Metal Assembly as a unit, remove fan belt and fan, remove Harmonic Balancer (see Vibration Dampener). Support front end of engine with support jack, remove front engine support (see Front Engine Insulator Removal), remove timing chain cover, timing chain and sprockets.

Timing Chain Installation—Mesh sprockets in chain with timing marks on both sprockets lined up for correct valve timing (see Camshaft Setting on car model pages), install both sprockets together being careful not to place any side strain on chain.

1946-54 MODELS

TIMING CHAIN COVER & OIL SEAL: Consists of cork seal and spring assembled on the crankshaft in front of the chain sprocket so that the cork bears against the inner face of the timing chain cover.

Installing New Cork Seal—Coat seal with graphite lubricant, rubbing lubricant well into the face of the cork, before installing seal in engine. This lubrication necessary to prevent noise at this point.

Installing Timing Chain Cover—Use J-546 tool to center timing chain cover before screws tightened.

NOTE: A timing chain bumper has been incorporated in the timing chain cover on the six cylinder engine. This bumper dampens timing chain vibration. The bumper consists of a synthetic rubber pad which is vulcanized to a steel bracket welded on the left edge of the timing chain cover on the driving side of the chain. The new cover is servicable as an assembly on past 6 cylinder engines.

1955 V8 MODELS

▷*TIMING CHAIN REMOVAL CAUTION:* **Do not rotate crankshaft with timing chain out of engine.** Damage to valves, pistons, or both will result due to piston striking valve. To rotate camshaft with timing chain off, crankshaft must be positioned so pistons are 45° before or after TDC, to avoid damage to valves.

TIMING CHAIN: Removal—Remove engine front cover (See Engine Front Cover above). Remove fuel pump eccentric. Align timing marks on sprockets. Slide timing chain and sprockets off camshaft and crankshaft.

Installation: Install new timing chain and sprockets making sure that marks on sprockets are aligned exactly on a straight line passing through shaft centers. Install fuel pump eccentric indexing pin on eccentric with hole in sprocket. Install retainer screw and retainer washer and tighten securely. Install engine front cover.

VALVE SYSTEM
1955 V8 MODELS

CHECKING VALVE STEM LENGTH: Position rocker arm on stud and hold in place using Rocker Arm Stud Installer J-5716. Slip valve into place and hold it against valve seat. While holding rocker arm and valve in position securely, insert Valve Train Gauge J-5710 through pushrod hole and seat snugly in pushrod seat of rocker arm. With all parts seated, step end of gauge should be at least flush with gasket face of head, but should not project past step on gauge. If gauge projects too far (indicating valve stem too long), grind off tip of valve stem as necessary. *CAUTION*—When grinding end of valve stem be careful not to overheat it which will soften the hardened stem.

ROCKER ARMS
1955 V8 MODELS

ROCKER ARM STUD REPLACEMENT: *NOTE—Use oversize stud (.003") only when original stud is found to be loose in cylinder head. Use Std. size stud for replacement when original stud threads are damaged).*

Removal: 1) Remove cylinder head from engine and remove rocker arm. Pull rocker arm stud out of cylinder head using washers or other suitable shims under a nut to extract stud. If oversize stud being installed, ream out stud hole with Reamer J-5715.

2) Remove plugs from ends of cylinder head oil gallery and thoroughly clean out metal deposits and foreign matter from cylinder head (head must be right side up so metal or foreign material will not lodge around studs).

Installation: 1) Position rocker arm on new rocker arm stud and place Rocker Arm Stud Installer J-5716 on stud in place of rocker arm ball. Carefully press stud into head using a 2-Ton press, until it is installed about half way (7/16").

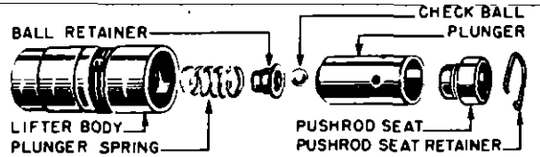
2) Position Valve Train Gauge J-5710 in pushrod hole so that it seats properly in the rocker arm. With valve seated, slowly press rocker arm stud into cylinder head until gauge projects about midway between end of gauge and step with respect to gasket surface of cylinder head.

3) Remove Rocker Arm Stud Installer, rocker arm and ball. Blow air through hole in new stud to insure that passage is not restricted, and blow air through oil gallery. Replace plugs in ends of oil gallery. Check oil passages from oil gallery to all studs. Install rocker arm and ball and install nut loosely. Replace cylinder head.

HYDRAULIC LIFTERS
1955 V8 MODELS

HYDRAULIC VALVE LIFTER OVERHAUL: Removal—Remove intake manifold, pushrod cover and rocker arm cover. Loosen rocker arm ball nut and move rocker arm off pushrod. Remove pushrods (rear lifter on left bank cannot be removed if car is equipped with defroster, but must be raised and moved out of way for removal of lifter). Remove lifter from bore in cylinder block.

Disassembly: Remove pushrod seat retaining ring by holding down seat with pushrod while dislodging spring from lifter body with pointed tool (*NOTE*—it may be necessary to unseat lifter ball, using plunger unloader J-5097, before plunger can be pushed down). Invert lifter and allow plunger to slide out of body. If plunger sticks, place lifter in large end of Hydraulic Valve Lifter Plunger Remover J-4160-A, with pushrod end of lifter downward. Hold tool firmly in hand with thumb over lifter body and strike sharply against a block of wood until plunger falls out (it may be necessary to soak a lifter with a stuck plunger in cleaning solvent to loosen plunger in body). *CAUTION—If more than one lifter is being disassembled at a time make very sure that parts for each individual lifter be kept together so that parts are not intermixed.*



Inspection: Wash individual lifters separately, keeping parts for each lifter together. If necessary, soak lifter in suitable carbon solvent to dissolve varnish and carbon. Using a lint free cloth, clean each part with a hard wiping action. Use a bristle brush if required. Do not use a wire brush or sandpaper. Inspect lifter body for scoring, and check cam surface at end of lifter for wear. Check plunger, and using a magnifying glass, inspect check ball seat for defects, and outer surface of plunger for scratches or scores. Inspect pushrod seat for roughness and make sure hole in seat is open. Inspect lifter ball for nicks or scoring. If any part of lifter is found defective, replace entire unit.

Assembly: Rinse all parts in clean kerosene before assembly and assemble without drying. Rinse plunger spring and ball retainer and position retainer in spring. Install ball in retainer (check ball spring not necessary, and is not found in later type lifters). Rinse plunger

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

and place on retainer so that seat on plunger mates with ball. Invert plunger with parts assembled thus far and, after rinsing body, install body over spring and plunger. Place lifter body on clean paper; rinse and install pushrod seat and retainer ring.

V8 HYDRAULIC LIFTER

Checking Leakdown Rate: Fill tester cup in Valve Lifter Leakdown Tester J-5790, to approximately 1 inch from top with special testing fluid. Swing weight arm up out of way, raise ram, and position lifter into boss in center of tester cup. Place ¼" steel ball in pushrod seat of lifter and lower ram onto ball. Adjust ram (with weight arm clear of ram) so that pointer is positioned on set line (marked "S"). Tighten jam nut to maintain setting. Operate lifter through full travel of plunger by pumping weight arm to fill lifter with test fluid and force out air. (Lifter must be completely submerged at all times). Continue pumping for several strokes after definite resistance is felt (*NOTE*–If noticeably weak resistance is felt during any one of last few strokes (of hard pumping), replace ball in lifter and repeat test to this point. Raise weight arm to allow plunger spring to expand fully, lower arm onto ram and commence turning crank slowly (1 revolution every 2 seconds). Time indicator travel from lower line (first line above set line) to line marked .094", while still rotating cup with crank. Lifter is satisfactory if rate is between 9 and 30 seconds. Retest all doubtful lifters.

Installation: *(CAUTION–If new lifter is to be installed, remove sealer coating from new lifter, making sure that hole in pushrod seat is not plugged with sealer coating. Check leakdown rate).* Place new lifter in lifter boss and replace pushrod exactly as removed (same end against rocker arm). Crank engine until lifter is on base circle of cam (completely off cam lobe). Position rocker arm on pushrod and adjust lifter plunger position as follows: Turn adjusting nut down until there is no axial movement (clearance between pushrod and rocker arm and lifter seats, making sure that plunger has not been depressed, **then turn nut down one complete turn.** Replace rocker arm cover, pushrod cover and intake manifold.

OILING SYSTEM

1946-54 MODELS

CRANKCASE OIL CLEANER: Pontiac type 'controlled flow' design consisting of settling chamber in oil inlet and filter screen housing in crankcase.

Servicing—No service required but Oil Cleaner should be removed and settling chamber cleaned out when oil pan removed for other work, or if car has been upset or turned over. Capacity of cleaner is 1 quart.

Removal & Installation—To remove cleaner with oil pan off engine, disconnect oil suction pipe from crankcase as a unit. Take out attaching screws and remove cleaner from bracket and suction pipe. Remove snap ring on bottom of cleaner and remove oil screen. Take out screws mounting cleaner head to housing shell and remove settling chamber from housing. Wash all parts in gasoline and scrape sediment from settling chamber. When reassembling cleaner see that all gaskets in good condition or use new gaskets. Turn head and housing shell upside down and insert 2 screws and place gasket inside shell, then set settling chamber in place and start screw threads, turn assembly right side up and install remainder of screws, tightening them securely. Assemble all other parts. Fill cleaner with fresh oil and install. CAUTION—Fill cleaner with fresh oil before installing in crankcase (avoids running bearings without oil when engine first started).

1953 6 CYL. MODELS

VALVE CHAMBER OIL BAFFLE INSTALLATION (6 CYL. CARS): Remove carburetor air cleaner (windshield washer jar and Autronic Eye Amplifier if so equipped). Remove valve covers and insert baffles in nine ventilating holes with open side of baffle toward wall of block. Press baffles down as far as possible. If baffle is loose in hole, spread the split round section to secure tight fit. Install all parts removed.

1946-54 MODELS

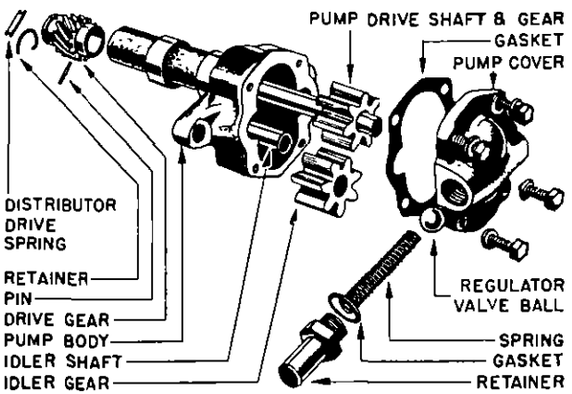
OIL FILLER CAP & CRANKCASE VENTILATOR CLEANER:—All oil filler caps (Std. & Heavy Duty type) serve as inlet for crankcase ventilating system and must be correctly installed on engine. Install cap with seam on side engaging groove in top of oil filler pipe and opening in cap toward fan. Standard Filler Cap—Wash copper gauze filter element in gasoline and re-oil by dipping in engine oil at 10,000 mile intervals (twice yearly) for ordinary conditions. Service at 2000 mile intervals, or more often if necessary, in dusty areas.

Heavy Duty Filler Cap—Used on cars with heavy duty (oil bath) type carburetor air cleaner. Similar to the standard cap except for greater cleaning capacity. Service in same manner as standard cap and always clean outlet pipe air cleaner at same time. **Crankcase Ventilator Outlet Pipe Air Cleaner**—Consists of a copper gauze filtering element in an elbow on the crankcase outlet pipe. Clean in same manner as filler cap (above). NOTE—No outlet pipe cleaner used on cars with Standard Filler Cap.

1955 V8 MODELS

OIL PASSAGE PLUG (IN CYLINDER HEAD) REPLACEMENT: *This plug is located on intake side of cylinder head bolt which feeds cylinder head oil gallery (toward rear of head on left bank, and toward front of head on right bank).*

Removal: Remove cylinder head bolt from hole which feeds oil gallery. Attach a piece of rag to a wire for removing rag, and push rag down into bolt hole past the oil passage in which plug is located. Drive old plug through passage into bolt hole where it will drop onto rag. Pull rag out pulling old plug with it.



Installation: Drive plug into place using a tool which bears into bottom of plug (½" x 3" bolt can be used) until outer edge of plug is flush with surrounding surface of head.

OIL PUMP

1946-54 MODELS

OIL PUMP SERVICING: Pump is gear type mounted externally on right side of engine.

Removal: Turn crankshaft so that #1 piston on top dead center of compression stroke with distributor rotor at #1 firing position. Remove steering idler arm and right hand engine side pan. Take out pump mounting bolts and remove pump.

1946-54 PONTIAC 6 & 8 OIL PUMP

Overhaul: Remove cover assembly, lift out oil pump driven gear. Take out wire retainer and remove three distributor drive springs. Support pump on bottom surface, press pump shaft out of distributor gear (use drift of slightly smaller diameter than shaft inserted in end of drive gear to press on end of shaft). Take out relief valve plug, remove relief valve parts. Clean all parts thoroughly, replace worn or damaged parts. When re-installing parts, note specifications listed below. NOTE—Oil pump drive gear and shaft furnished as an assembly; distributor drive gear, pump driven gear, and driven gear shaft furnished as individual parts.

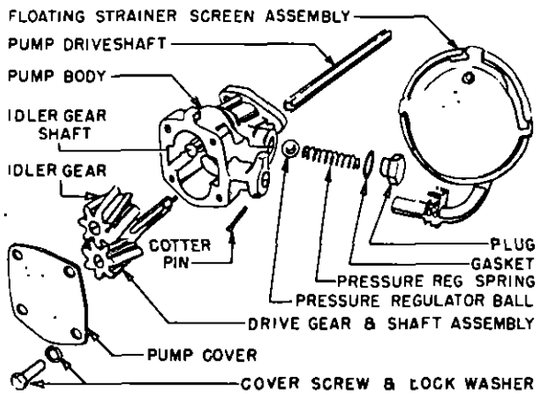
Pump Specifications—Driveshaft clearance in body .0025-.0005". Driven gear clearance on shaft .0020-.0005". Shaft fit in body .0025-.001" tight (press fit). Pump gear backlash .004-.006". Gear end clearance in body—Flush to .004" protrusion beyond cover surface of body (with gasket removed). Pump shaft end clearance .002-.006" (press distributor gear on shaft until clearance between gear and end of body is .002-.006".

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Relief Valve—Consists of a spring-loaded ball located under plug on pump cover. Not adjustable. Clean valve thoroughly and replace spring if length less than 2 5/16".

Distributor Drive Spring Installation—Install bank of three springs (with maximum thickness of .045" in end of distributor drive gear, install retainer ring with curved end hooked in hole in gear and ring seated in notches in both ends of springs. Check to see that drive springs slip readily in slot in distributor shaft when shaft entered in hole in distributor drive gear.



Installation: With crankshaft turned to #1 firing position, turn pump shaft so that drive springs in drive gear are parallel with center-line of crankshaft and punchmark on end of gear points downward (pump body positioned so that relief valve housing on pump cover toward rear of engine). Install pump in this position using new gasket on engine block.

1955 V8 MODELS

OIL PUMP OVERHAUL: Removal—Remove oil pan and remove oil pump attaching screws while holding pump in place. Carefully lower oil pump away from block with one hand while removing oil pump drive shaft with the other hand.

Disassembly: Remove cotter pin which retains floating screen to pump inlet and remove screen. Remove pressure regulator and spring retainer, spring and pressure regulator ball. Remove screws retaining cover to oil pump body and remove cover. Remove driven gear and drive gear with shaft.

Cleaning & Inspection: Clean all parts thoroughly (clean screen with Bendix Cleaner). Inspect pressure regulator spring for distortion, cracks, and wear on sides. Inspect pressure regulator ball for nicks or other damage. Inspect oil pump drive shaft (distributor to pump shaft) for wear or cracks. Inspect all other pump parts for wear. Replace parts as necessary.

PONTIAC V8 OIL PUMP

Assembly: Install drive and driven gears. Install cover and turn drive shaft by hand to insure that it turns freely and has a slight amount of endplay. Install pressure regulator ball, spring and retainer using a new gasket on retainer. *(CAUTION—Do not attempt to change oil pressure by varying length of pressure regulator spring).* Install screen assembly on oil pump and install new cotter pin retainer.

Installation: To install pump, position drive shaft into position in distributor and oil pump drive gear, then position oil pump in place on block, indexing drive shaft with pump drive gear shaft. Install two attaching screws with lockwashers and tighten securely. *(NOTE—*Removal and installation of pump does not disturb distributor timing). Install oil pan.

COOLING SYSTEM

1946-48 MODELS

RADIATOR CORE REMOVAL: Drain cooling system, disconnect radiator hoses, take out 3 capscrews at each side of radiator core and tip fan shroud back against front of engine. Lift radiator core up and out of shell, rotating fan to clear radiator outlet.

Water Distributing Tube Servicing—Consists of a metal tube installed in the engine block with closed end toward rear of engine which distributes cooling water through block. If engine overheats, check tube for corrosion or rust and replace tube. Install tube with closed end toward rear.

1946-48 Note—Water distributing tube beginning with 1946 engines is made of Brass to prevent corrosion.

1949-54 MODELS

RADIATOR CORE REMOVAL: Drain cooling system, remove upper and lower radiator hoses, disconnect heater return line at lower tank. Remove fan belt. Disconnect headlight wiring at right hand junction block, free wiring loom from top of fan shroud. Take out bolts attaching fan shroud to radiator and radiator to support. Turn fan so that blades clear outlet connections on radiator lower tank, lift the radiator out of support.

IGNITION NOTES

1949-53 MODELS

▷*1949-53 IGNITION DISTRIBUTOR CAP & HIGH TENSION CABLE CAUTIONS:* 1949 parts are different and are not interchangeable with 1950-53 parts because of different type radio interference suppression resistors used as follows:

1949 Distributor Cap & Cables—Distributor cap is special "High Tower" type with suppression resistance built-in the high tension cable terminal housing. Cap can be identified by the high towers and by word "Radio" embossed on lower flange. Cables used with this cap are conventional metallic-conductor type.

▷***CAUTION—Use only original type secondary cables with this "High Tower" distributor cap (1950 type cables MUST NOT BE USED).***

1950-53 Distributor Cap & Cables—Distributor cap is conventional "Low Tower" type without built-in suppression resistance. Ignition cables used with this cap are new "NON-METALLIC CONDUCTOR" type (conductors of graphite impregnated linen or rayon) with built-in suppression resistance. This 1950 cable can be identified by marking "RADIO-4000-GM" and individual cable resistances listed below.

▷***CAUTION—This "RADIO-4000-GM" 1950 cable must not be used on 1949 cars with "High Tower" distributor cap (combination will have excessive resistance).***

1950-53 Secondary Cable Resistance

▷Marked "Radio-4000-GM"

Cable	6 Cyl. (Ohms)	8 Cyl. (Ohms)
Ign. Coil Lead	2000-4400	2000-4400
#1	5200-12200	5200-12200
#2	4400-10300	5000-11500
#3	3600-8500	4200-10000
#4	4400-10300	4200-10000
#5	4400-10300	5500-13000
#6	5200-12200	6000-14000
#7		6300-14500
#8		7500-17500

▷***CABLE INSTALLATION CAUTION—Special procedure as given below necessary to secure good contact between cable conductors and terminals.***

Terminal Installation on 1950 Secondary Cables—Before installing terminals, insert piece of metal wire to depth of 7/8"" in end of cable to provide large area of contact with non-metallic conductor, bend end of wire across end of cable to provide good contact with metal of terminal, install conventional terminal on cable.

▷**Loose Spark Plug Cable Terminal Correction on early 1950 Cars (where cable terminal pops off spark plug and cylinder cuts out)**—On early cars with first type cable terminal (with single detent dimple on end), detent may not lock securely on later type spark plug nut (with single groove) allowing cable to pop off in service. If terminal bottoms on spark plug nut before detent snaps tightly in spark plug nut groove, **grind approximately 1/16" off end of cable terminal.**

NOTE—This trouble should not be experienced with "double detent" type cable terminals which have detent on each side.

FUEL SYSTEM NOTES

1955 V8 MODELS

FUEL FILTER (Draining & Cleaning): Remove drain plug and drain out dirt and water. If filter is excessively dirty remove filter from car and agitate it in a carburetor cleaner or solvent. Direct an air stream through the *outlet port* which will force water and dirt out through inlet port. Rinse filter in kerosene and again flush with air. Install drain plug and reinstall filter.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

EXCESSIVE FUEL PUMP PRESSURE (Causing Carburetor Flooding): If fuel pump pressure in excess of 5 lbs., check pump for incorrect diaphragm installation (insufficient slack) before replacing pump:

1) Mount pump in vise with fuel side up, loosen fuel pump cover screws two turns to free diaphragm.

2) Flex diaphragm by moving rocker arm up and down several times (use short piece of pipe fitted over rocker arm to provide leverage).

3) Hold rocker arm in extreme upper position while tightening all cover screws securely. This will provide slack in diaphragm.

4) Reinstall pump and check pressure. If pressure still in excess of 5 lbs., replace pump.

►*CARTER WGD CARBURETOR NOTE: See "Carter WGD Carburetor" in Carburetor Section for other recommended changes to correct flooding.*

CLUTCH NOTES

1946 MODELS

CLUTCH RELEASE BEARING NOISE CORRECTION: May be caused by excessive clearance of release bearing on support tube allowing bearing to move on tube, or by excessive run-out of clutch release fingers. Correct these conditions as follows:

Clutch Release Bearing Support—On cars with first type Release Bearing Support, Part No. 1308585 with tubular section diameter of 1.355-1.357", replace this bearing support with new type, Part No. 509158 with tubular section diameter of 1.368-1.371". Increased diameter of later type support will reduce excessive clearance of bearing on support and prevent bearing moving on tube.

Clutch Release Finger Runout—Maximum permissible runout of fingers is .030" on a 1 15/16" diameter circle (check with a dial indicator). NOTE—Release fingers are integral part of the diaphragm.

1946-54 MODELS

CLUTCH RELEASE BEARING & SUPPORT: Release bearing is new factory lubricated and sealed ball bearing type. Bearing is piloted on tubular support mounted in clutch housing and entirely enclosing transmission main drive gear shaft. This tubular support is installed and removed through rear face of clutch housing (with transmission off car) and a paper gasket is used between the support flange and the face of the housing. An oil slinger is provided on the main drive shaft ahead of the bearing in the transmission and a felt oil seal is installed against shoulder ahead of oil slinger retaining ring (in 1946 seal originally installed in groove on shaft).

Release Bearing Support Removal—When removing support, **do not pry on flange in clutch housing**, tap support out of housing from inside (do not strike tubular portion of support, tap bell end of support at rear lightly with soft hammer).

HOOD & HOOD LOCK ADJUSTMENT: *See Pontiac Special Data.*

FRONT END SHEET METAL ASSEMBLY REMOVAL: *See Pontiac Special Data.*

MODEL IDENTIFICATION

SERIAL NUMBER: First number 1001 (All Models) with Model & Plant prefix as shown below. Stamped on plate on left side of dash under hood.

Serial No. Prefix Plant	46-25	47-25	Torpedo 46-26	Streamliner 47-26
Pontiac, Mich.	P6LA	P6MA	P6LB	P6MB
South Gate, Calif.	C6LA	C6MA	C6LB	C6MB
Linden, N. J.	L6LA	L6MA	L6LB	L6MB
Wilmington, Del.	W6LA	W6MA	W6LB	W6MB
Kansas City, Kans.	K6LA	K6MA	K6LB	K6MB
Atlanta, Ga.	A6LA	A6MA	A6LB	A6MB
Framingh'm, Mas.	F6LA	F6MA	F6LB	F6MB

Serial No. Prefix Plant	Torpedo 48-25	Streamliner 48-26
Pontiac, Mich.	P6PA	P6PB
South Gate, Calif.	C6PA	C6PB
Linden, N. J.	L6PA	L6PB
Wilmington, Del.	W6PA	W6PB
Kansas City, Kans.	K6PA	K6PB
Atlanta, Ga.	A6PA	A6PB
Framingham, Mass.	F6PA	F6PB

ENGINE NUMBER: Same as Serial Number. Stamped on boss on left upper front corner of engine block.

TUNE-UP

COMPRESSION: Pressure—160 lbs. at 1000 RPM or 118-120 lbs. at cranking speed (Std. 6.5-1 Head), 191 lbs. at 1000 RPM. (Optl. 7.5-1 Head). NOTE—7.5-1 Head requires use of Ethyl fuel at low altitudes.

VACUUM READING: 18-20" steady idling at 7-8 MPH. (365-385 RPM. on Hydra-Matic cars).

FIRING ORDER: 1-5-3-6-2-4. See diagram.

SPARK PLUG GAPS: .025". Limits .023-.028".
Plug Type—AC No. 45. 14 mm. Metric.

IGNITION: *See Coil, Condenser, and Distributor.*
Breaker Gap—.020". Limits .018-.024".
Cam Angle or Dwell—35° closed, 25° open.
Breaker Arm Spring Tension—17-21 ounces.
Automatic & Vacuum Advance—*See Distributor.*

IGNITION TIMING: 6° BTDC.
Timing Procedure—*See Ignition Timing.*
Timing Mark—First line of flywheel mark "/IGN ONE/" at pointer in inspection hole in left front face of flywheel housing above starter.
Gaselector Setting—Set for barely audible ping when accelerating between 20-30 MPH. with wide open throttle.

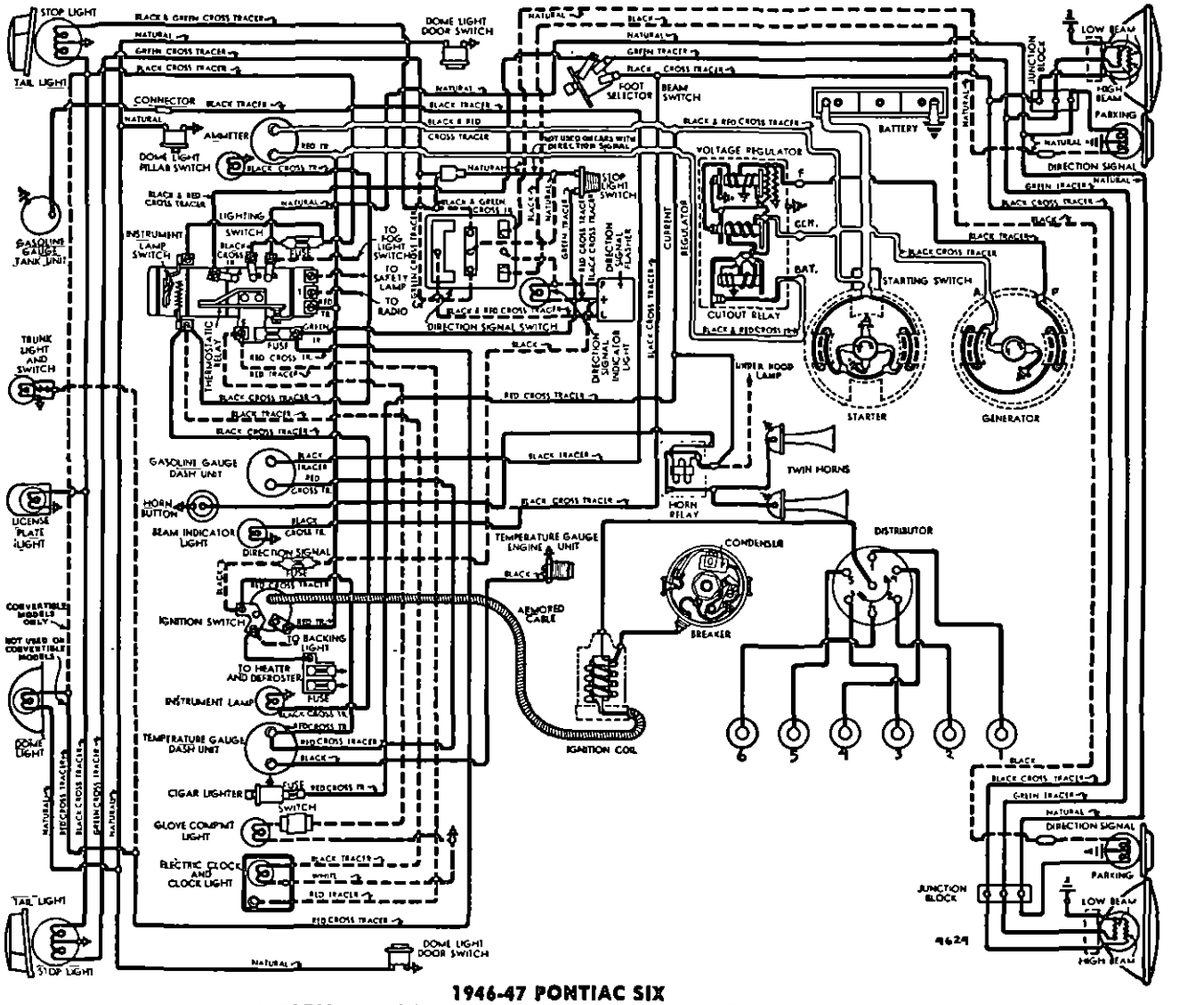
CARBURETION: *See Carburetor & Carb. Equipment.*
Idle Setting—Set idle adjusting screw 1-1¾ turns open. Turn screw out for richer mixture.
Idle Speed (standard)—450-475 RPM. or 7-8 MPH
Idle Speed (Hydra-Matic)—365-385 RPM.
Float Level—7/16" from machined projection on cover to top of soldered seam at free end (invert to check).
Accelerating Pump—Lower hole Normal Setting, Upper hole for greater charge, Inner hole less Fuel Pump Pressure: 4 lbs. (AH), 3¾ lbs. (AJ Comb.).

MANIFOLD HEAT CONTROL: Thermostatic coil type, non-adjustable (fixed anchor pin). Counterweight should be securely clamped to shaft in approximately vertical position with valve closed (cold).
NOTE—Valve shaft bushings are Stainless Steel.

VALVE TAPPET CLEARANCE: .011-.013" Hot All Valves. (.011" gauge "Go", .013" gauge "No Go." NOTE—013" Exhaust tappet clearance recommended for sustained high speed.
Valve Timing Check—*See Valve Timing.*

STARTING: *See Battery, Starter, Generator, Regulator.*

IGNITION



IGNITION SWITCH: Delco-Remy Nos. as follows:
1946-47—1116306 (LHD), 1116312 (RHD cars).
1948—1116455 (All cars).
NOTE—Armored cable not used on 1948 cars.
Ignition Lock Cylinder—Briggs & Stratton 45792. Key Series—8000 to 9499. Groove—No. 15.

COIL: Delco-Remy 1115126 ('46-47), 1115380 ('48). 1946 NOTE—Primary terminal on 6 Cyl. coils located on right side (toward front on 8 Cyl. cars). Some 6 Cyl. coils have primary terminal at front (as on 8 Cyl. coils), later coils of this type have figure "6" stenciled in red on coil. CAUTION—These coils should be used on 6 Cyl. cars only (coils must not be interchanged).
Ignition Current—2.5 amperes idling, 4.5 stopped.

CONDENSER: Delco-Remy No. 1869704.
Capacity—.18-.25 microfarad.

DISTRIBUTOR: Delco-Remy #647-D. Single breaker 6 lobe cam, full automatic advance type with auxiliary vacuum control and Gaselector adjustment.

▷**Late 1948 Distributor Cap**—Has built-in radio suppression. Can be identified by high wire towers and marks "Radio" on lower edge of cap on each side.

1946-47 PONTIAC SIX
▷EARLY 1946 WIRE COLORS NOT UNIFORM—SEE LIGHTING

Breaker Gap—.020". Limits .018-.024".
Cam Angle or Dwell—35° closed, 25° open.
Breaker Arm Spring Tension—17-21 ozs.
Rotation—Counter-clockwise viewed from above.

Automatic Advance

Distributor Degrees	Distributor R.P.M	Engine Degrees	Engine R.P.M.
Start	400	4	800
8	1050	16	2100
8.5	1450	17	2900
14.25	2000	28.5	4000

Gaselector—Manual adjustment providing 10° advance or retard from center '0' position. See Ignition Timing for Gaselector Adjustment.

Vacuum Spark Control: Delco-Remy Mod. No. 681-M (integral type linked directly to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit. **Plunger Travel**—9/64" total.

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	7-9"
7½	15°	13-16"①
7½-8½	15-17°	16-18"

①—At .125" plunger travel.

Removal:—Distributor mounted on left side of engine. To remove, disconnect vacuum line, take out screw in Gaselector arm, lift distributor out.

IGNITION TIMING

Std. Setting—As given below for Regular Fuel (Std. 6.5-1 Head), Ethyl Fuel (Optl. 7.5-1 Head). See Gaselector Setting (following) for correction for operating conditions and fuel regularly used.

	Flywheel Degrees	Piston Position
All Engines	6°BTDC	.0138"BTDC

Timing Mark Note—Two straight lines of ignition mark '/IGN.ONE/' indicate allowable timing range of 4° on flywheel. Use first (6°) line for setting ignition (second line is 2° before top dead center mark). NOTE—Manufacturer recommends use of HM-494 Timing Light or J-578 Synchroscope for Timing.

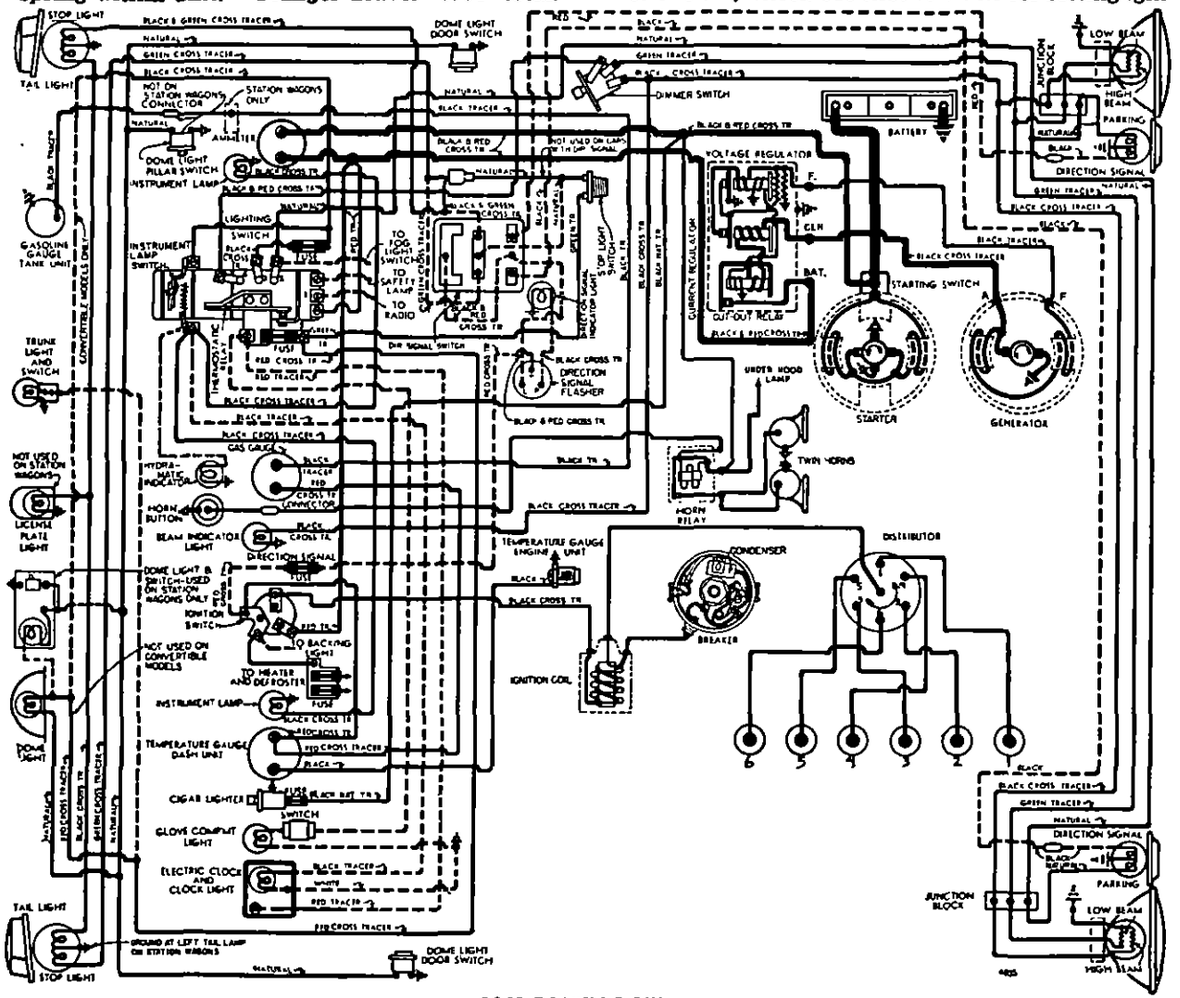
To Set Timing (With Timing Light)—Connect timing light between distributor terminal and ground, turn on ignition. With #1 piston on compression, turn engine over until piston is 6° or .0138" before top dead center with first line of ignition mark '/IGN.ONE/' lined up with pointer in inspection hole in left front face of flywheel housing above starter. Loosen Gaselector screw, center pointer scale ('0' mark at reference line), tighten screw. Loosen advance arm clamp bolt, rotate distributor until timing lamp lights (contacts just opening), tighten clamp bolt. Check Gaselector setting.

To Set Timing (With Synchroscope)—Connect synchroscope in series with #1 spark plug, fill in first line of ignition mark '/IGN.ONE/' with chalk or white paint, direct synchroscope light on flywheel (inspection hole on left side), idle engine at 6 MPH., adjust distributor as directed above.

Gaselector Setting—Should be set to provide best performance without spark knock or ping for particular operating conditions and octane rating of fuel used. To adjust, loosen Gaselector arm screw, move arm clockwise (toward 'ADV' end of scale) to advance spark, counter-clockwise (toward 'RET' end of scale) to retard spark, tighten locking screw.

CARBURETOR

Synchro-Mesh Trans......**Carter WA-1, No. 537S**
Hydra-Matic Drive.....**Carter WA-1, No. 652S**
1¼" single barrel downdraft types with Carter Climatic Control.
Casting No. on Flange—388 (537S), 592 (652S).
See Carburetor Section for complete data.



Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up data.*

Metering Rod & Jet—*See Carter Jet Table in Carburetor Section for complete data.*

► **Accelerator Pedal Service Note:** On new cars shipped from the factory, accelerator pedal hinge lockscrew is tightened only finger-tight (pedal must be removed for floor mat installation). **This screw must be securely tightened** (place screwdriver alongside locknut while turning screw in to lock hinge pin).

Accelerator Linkage Adjustment:—Must be set to provide correct 'throttle cracking' action for starting. To adjust, set carburetor idle speed at 450-475 RPM. (365-385 Hydra-Matic), disconnect battery cable at starting motor (to prevent starter cranking engine), insert 9/64" drill rod (or .138" diameter round steel rod) between throttle lever stopscrew and stop, fully depress starting pedal, adjust the adjusting screw on accelerator cross-shaft lug at idler lever (on Hydra-Matic, adjust throttle cracker lever mounted on throttle control lever—pin on starter lever must not strike throttle control lever) until gauge between the throttle stopscrew and stop just falls out with fast idle cam in slow idle position. NOTE—Before making this adjustment, check for full throttle opening with accelerator pedal fully depressed (adjust accelerator rod if required).

Hydra-Matic Throttle Adjustment: *See Hydra-Matic Drive article in Transmission Section.*

1948 PONTIAC SIX

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Fast Idle: Carter Single Barrel Carburetor type.
See Carburetion Equipment Section for data.
Setting—With fast idle cam in hot or slow idle position, close choke valve until throttle stopscrew is against (not on) first step of fast idle cam, adjust by bending connector rod offset so that choke valve opening is 5/8" (check opening with gauge T109-85).

Automatic Choke: Carter Climatic Control (single carburetor type).
See Carburetion Equipment Section for data.
Setting—3 Notches Rich.

CARB. EQUIPMENT

Fuel Pump (std.): AC Type AH. No. 1523985.
Optl. (Fuel-&-Vacuum)—AC Type AJ. No. 1523986.
Replacement Pump—AC No. 496 (for AH), 515 (AJ).
Pressure—4 lbs. (AH), 3¾ lbs. (AJ).
See Carburetion Equipment Section for data.

Gasoline Gauge: AC Electric type.
Dash Unit—(1946) AC No. 1516818, (1947) 1516946, (1948) 1517065.
Tank Unit—AC No. 1516316 (All).
See Carburetion Equipment Section for data.

Air Cleaner (std.—oil-wetted): AC No. 1529871.
Optl. (oil-bath)—AC No. 1542070.
Servicing (Oil-wetted Type)—Wash and re-oil filter element at 10000 mile intervals (twice yearly) or more often if required by operating conditions.
Servicing (Oil-bath Type)—Wash filter element, drain and refill lower oil base with 1 pint SAE No. 50 engine oil (SAE 20W for temperatures below freezing) at 10000 mile intervals or more often if required by operating conditions.

BATTERY

Delco Type 15E-2W. 6 Volt, 15 Plate, 100 Ampere Hour Capacity (20 hour rate).
Starting Capacity—120 amperes for 20 minutes.
Zero Capacity—300 amperes for 3.5 minutes. Five second voltage 4.25 volts.
Grounded Terminal—Negative (—) to engine.
Engine Ground (Conv. Coupe & Cars with Radio)—Strap from left rear corner of cylinder head to upper left starter pedal bracket-to-dash screw.
Location—On left side in engine compartment.

Police Battery Delco Type 19E-3. 6 Volt, 19 Plate, 130 ampere hour capacity (20 hour rate).
Starting Capacity—150 amperes for 20 minutes.
Grounded Ter. & Location—Same as 15E-2 above.

STARTER

1946-47.....**Delco-Remy 1107032**
1948.....**Delco-Remy 1107070**
RHD Cars.....**Delco-Remy 1107934**
Armature No.—Delco-Remy No. 1867897.
EARLY 1946 NOTE—Starters on these cars have oiler at commutator end, later starters have graphite-impregnated bronze bearing at this point (no lubrication required).

▷**Starter Pedal Sticking Correction:** Lubricate starter pedal plunger with engine oil whenever car serviced (lack of lubrication will cause wear, noise, and faulty operation—may result in damage to starter). NOTE—Check all new cars (plunger not lubricated on some cars).

▷**Hydra-Matic Starter Interlock Adjustment:** *See the Hydra-Matic Drive article in Transmission Section.*

▷**Clicking Noise Correction at Starter (Hydra-Matic):** Noise when starter engaged on early Hydra-Matic cars may be due to ends of the torus cover-to-flywheel bolts striking starter clutch cover (¾" long bolts were used, also lock washers broke on some bolts). To correct, replace damaged starter clutch assembly (No. 1873789) and install set (30) of new shorter torus cover-to-flywheel bolts (No. 511849). Remove flywheel pan, replace bolts one at a time (tighten to 30 ft. lbs.) so as not to disturb cover to flywheel seal.

Drive—Overrunning clutch and pinon shift. Manual type (1107032, 70), solenoid pinion shift (1107934).
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—24-28 ozs. each.
Cranking Engine—200 amperes at 5 volts.

Performance Data—1107032, 70

Torque		R.P.M.	Volts	Amperes
0 ft. lbs.		5000	5.0	65
12	"	Lock	3.37	525

Performance Data—1107934

0	ft. lbs.	6000	5.0	60
15	"	Lock	3.0	600

Removal:—Starter flange mounted on left front face of flywheel housing. To remove, take out flange mounting screws.

Starting Switch (1107032, 70): No. 820052. On top of starter and operated by starting pedal.
(1107934)—Delco-Remy Solenoid No. 1118102. Mounted on starter and controlled by Relay No. 269-G and pushbutton Switch No. 1996031 on instrument panel.
See Electrical Equipment Section for complete data.

GENERATOR

1946-47.....**Delco-Remy 1102665**
1948.....**Delco-Remy 1102701**
Police Cars.....**Delco-Remy 1106403**
Armature No.—Delco-Remy 1879002 (1102665 & 701). Two brush (shunt) types with voltage and current regulation. Ventilated by drive pulley fan.
Charging Rate Adjustment—None. Charging rate controlled by Voltage Regulator, maximum output by Current Regulator. See Regulator data below.
Maximum Charging Rate—30 amperes, 8.0 volts, 1170 RPM. (1102665, 701), 1040 RPM. (1106403 Gen.), 25 MPH. and above (Current Regulator Setting) with load or discharged battery. Actual charging rate controlled by Voltage Regulator and dependent on battery.

Performance Data—1102665 & 701

	Amperes	Volts	R.P.M.
Cold	30①	8.0	1750

Performance Data—1106403

Cold	35①	8.0	1040

①Not maximum output. See Current Regulator.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—25 ounces each.
Field Current—1.75-1.9 amperes (1102665 & 1102701), 1.77-2.0 amperes (1106403) at 6.0 volts.

Removal: Generator pivot mounted on left front of engine. To remove, take out pivot and clamp bolts.

Belt Adjustment: Belt deflection or sideplay midway between generator & pump pulley should be 1½".

REGULATOR

Delco-Remy 1118242.....**for 1102665 & 1102701 Gen.**
Delco-Remy 1118229.....**for 1106403 Generator**
Single Core Type. Vibrating type Voltage and Current Regulators in a single case with Cutout Relay.
See Electrical Equipment Section for complete data.
CAUTION—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

Cutout Relay

Cuts In—6.2-6.7 volts hot.
Cuts Out—0-4.0 amperage discharge current.
Contact Gap—.020" (same for both sets).
Air Gap—.020" (with contacts just closed).

Voltage Regulator

Setting—7.2-7.4 volts (1118242), 7.0-7.2 volts (1118229) hot (operating temperature). Regulator over-compensated for temperature. Should be checked with cover in place and hot.
Checking & Adjustment—*See Electrical Equip. Section.*
Air Gap—.070" between center of core and armature with contacts just closing (press down on armature to open contacts, release pressure, check gap at point where contacts just close).

Current Regulator

Setting—34-36 amperes hot (at operating temperature) for all models.
Checking & Adjustment—*See Electrical Equip. Section.*
Air Gap—.080" (check same as Voltage Regulator).

LIGHTING

1946-47 LIGHTING SYSTEM SERVICE NOTES

▷**Wiring Harness Wire Colors (1946)**—Some harnesses were used in which wires were incorrectly color-coded (tracers not as shown in wiring diagram). All such wires were marked by typed identification on paper sleeve attached to the wire. CAUTION—If these identification are removed from wires, it will be necessary to trace circuits for continuity.

▷**Chafing of Wiring Harness (causing a short in hot lead from starter terminal)**—Clearance between harness containing this lead and moving parts (Starter pedal lever, Accelerator pedal lever, Accelerator cross-shaft) must be ⅜-½". Make certain that harness is correctly installed (should pass down between starter and engine and then under starter), and that lower clamp-on clip on starter pedal bracket is closed tight so that harness cannot bend forward and rub on accelerator cross-shaft.

▷**Back-up Light Faulty Operation and Blown Fuses**—Faulty operation caused by bending of switch support by over-travel of gearshift lever on first cars with No. 5933752 switch support. Correct by installing new type flexible Switch Support, Part No. 509257, and Switch Actuating Stop, Part No. 509258. NOTE—New type Back-up Light Switch, Part No. 5936850 (with longer plunger) replaces No. 5933751.
Short-circuits causing Blown Fuses—May be caused by plastic tip of switch plunger cracking off on first type switches allowing plunger insert to short on switch stop. Install new switch No. 5936850.

▷**Cigar Lighter Faulty Operation and Short-circuits** Caused by Cowl Ventilator handle cutting into cigar lighter feed wire. Check open position of cowl ventilator, make certain that stop on handle is sufficiently high to prevent handle moving beyond open

position and cutting cigar lighter lead. Correct ineffective stops by drilling a #10 (.193") hole through the handle at the original stop point and installing fillister head machine screw (No. 100659), lockwasher (No. 138481), and nut (No. 120614) in hole.

►**Cigar Lighter Binding Correction (All Streamliner Models)**—This may be caused by misalignment of hole in instrument panel and hole in mounting bracket behind panel causing cigar lighter to stick in engaged position. Correct by installing special spacer, Part No. 509286, on mounting screw between instrument panel and bottom of bracket.

1948 LIGHTING SYSTEM SERVICE NOTES

►**Inoperative Stop Light (with Direction Signal):** On some early 1948 cars, 1 stop lamp (usually left) would not operate with brakes on and Direction Signal Switch in neutral due to misalignment at Direction Signal Switch. Correct by replacing direction signal base and wire assembly, part #5937832.

►**Underhood Light not turning off:** On some early 1948 cars, Underhood Light Switch improperly mounted resulting in light remaining on when hood closed. To correct, install lock washer between mounting nut and radiator baffle (was incorrectly assembled between switch and underside of radiator baffle which resulted in switch being set too low).

Headlamps: Guide "Sealed Beam" type. Upper and lower beams controlled by Beam Selector Switch on toeboard.
See Electrical Equipment Section for complete data.
Adjustment—Aim upper beams straight ahead (hot spot center 3" below lamp center height at 25 ft.).
Beam Indicator—Pontiac emblem on face of speedometer dial. Lighted when upper beams in use.

Direction Signal: *See Electrical Equipment Section.*
Direction Signal Indicator—Pilot bulb in Direction Signal Switch. Lighted whenever Right or Left Direction Signal operating.

Switches

Lighting—D-R Nos. ('46-47) 1995024, ('48) 1995035.
Instrument—Part of Lighting Switch. Rheostat operated by turning lighting switch knob.
Beam Selector—Delco-Remy No. 1997008.
Stop Light—Delco-Remy No. 1997725.

Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps		Sealed Beam
Park & Frt. Direc. Signal	21-3	1154
Park (Without Signal)	3	63
Instrument, Ign. Lock	1½	55
Beam & Direc. Signal Ind.	1	51
Stop & Tail	21-3	1154
Rear License Plate	3	63
Dome	15	88
Dome (Convertible)	1½	55

MISC. ELECTRICAL

THERMOSTATIC RELAY: Lighting. On switch. Contacts remain closed with 30 amperes, open in 3 minutes with current of 42 amperes at 70°F. Not adj.
Convertible Top—On rear of dash on right side. 30 ampere maximum capacity.

FUSES: Tail & Instrument Light. ('46-47) 9 ampere, ('48) SFE 14 ampere. In holder clipped to panel above lighting switch.
Stop & Dome Light—('46-47) 9 amp., ('48) SFE 14 ampere. On lighting switch.
Heater & Defroster—SFE 9 amp. each. In clip on instrument panel brace at steering column.
Direction Signal—SFE 9 amp. In connector in feed wire from ignition switch at panel brace.

HORNS: Delco-Remy No. 1999519 (Low Note), 1999520 (High Note). Vibrator type, blended tone, twin horns operated by relay.

Type	Current (at 6 volts)	Air Gap
1999519 (Low Note)	19-21 amperes	.044-.049"
1999520 (High Note)	18-20 amperes	.034-.039"

►**'46 Horn Ring Rattle & Failure of Horn to Blow (Deluxe Models) Correction**—*See Pontiac Shop Notes.*

►**'46 Horn Lead Wear Correction**—Blowing of horns when turning corners or when car is jarred may be caused by steering column shaft wearing through insulation of horn button lead at point where it enters steering column jacket. To correct this trouble (on first cars with rubber grommet in horn lead hole), remove and discard rubber grommet, install new horn button lead, No. 266918, which has 4-inch piece of protecting loom at point where wire enters jacket.

Horn Relay:—Delco-Remy No. 1116775.
Contact Gap—.025". **Air Gap**—.015" (closed).
Contacts Close—2.75-4.0 volts.

ENGINE

ENGINE SPECIFICATIONS: Own. Six Cylinder, "L" Head type.
Bore—3 9/16". **Stroke**—4".
Displacement—239.2 cu. ins. **Rated HP**—30.4.
Developed Horsepower—93½ at 3400 RPM.
Compression Ratio—6.5-1 Std., 7.5-1 Optl. iron hds.
Compression & Vacuum Reading—*See Tune-up data.*

POWER PLANT ASSEMBLY REMOVAL & FRONT INSULATOR REMOVAL: *See Pontiac Shop Notes.*

TIGHTENING TORQUES: *See Pontiac Shop Notes.*

CYLINDER HEAD: Tightening Torque & Cylinder Head Diagram—*See Pontiac Shop Notes.*

PISTONS: Chrome nickel alloy, electro-plated type. Pistons have 20 oil drain holes in oil ring groove (same as 1942 type). NOTE—Pistons are plated with lead-tin alloy or pure tin (lead-tin alloy darker color) and cannot be ground. Use finished replacement pistons.
Length 3 19/32". **Weight**—27.1 ozs. (stripped).
Removal—Pistons and rods removed from above.
Clearance—Top Land .0175-.0295". Skirt .002".

Fitting New Pistons:—Insert .0015" x ½" feeler between piston and cylinder wall. Pull to withdraw feeler must be 10-20 lbs. Taper and out-of-round limits—Piston .0005", Cylinder .0005" max. new.

Replacement Pistons: *See Pontiac Shop Notes.*

PISTON RINGS: Two tapered-face compression rings above pin, one slotted oil control ring below pin. Oil ring groove has 20 oil drain holes.
NOTE—Rings are cadmium-plated or tin-plated.

Ring	Width	End Gap	Side Clearance
Compr. (#1,2)	3/32"	.006-.013"	.0015-.003"
Oil (#3)	3/16"	.007-.017"	.001-.0025"

Installing Rings—Install compression rings with mark "TOP" upward.

Replacement Rings: Furnished in Oversizes of .005", .010", .020", .030". *See "Piston Rings" in Pontiac Special Data.*

PISTON PIN: Diameter 15/16". Length 3 1/16". Pin is shot-peened type (shot-peened before final grinding and lapping). Pin is locked in one piston boss by self-locking lockscrew and opposite end slotted to permit piston pin movement.
Pin Fit in Piston—*See Pontiac Shop Notes for data.*
Pin Fit in Rod Bushing—.0004-.0006" clearance.

Pin Removal & Installation: *See Pontiac Shop Notes.*

Replacement Pins:—.001" (red & brown), .003" (red), .005" (blue) oversize. Paint marked on end of pin.

CONNECTING ROD: Weight 37 ozs. Length 7 9/16".
Piston Pin Bushing (Upper Bearing)—Split aluminum bronze bushings. *See Pontiac Shop Notes for data.*
Crankpin Journal Diameter—2.1237-2.1247".
Lower Bearing—New thin type, interchangeable, steel-backed, babbitt-lined type.
Clearance—.0001-.0021". **Sideplay** .007-.030".

Bearing Adjustment: None (no shims). *See Pontiac Shop Notes for Fitting and Installing Bearings.*

Replacement Bearings: Standard size & .001" Undersize. NOTE—Bearings have small tongue which must engage groove in rod and cap.

Installing Rods: Not offset (install either way).
NOTE—Rods and bearing caps marked to insure correct reassembly (marks must be together). These marks do not indicate cylinder in which rod used. CAUTION—Keep each connecting rod and its bearing cap together.

CRANKSHAFT: Four bearing type with integral counterweights and vibration dampener on forward end.

►**Flywheel to Crankshaft Bolts (on Synchro-Mesh Transmission)**—¾" hex head bolts (No. 508463) or 1" hex head bolts (No. 510832) are used. Either type can be used for replacement but head sizes must be alike on all bolts or engine balance will be destroyed.

►**Vibration Dampener (Harmonic Balancer) Removal**—*See Pontiac Shop Notes.*
Journal Diameters—#1, 2.4982-2.4992"; #2, 2.5294-2.5304"; #3, 2.5919-2.5929"; #4, 2.6232-2.6242".
Bearings—Thin type, removable, steel-backed, babbitt-lined. Upper and lower bearing halves alike.
Clearance—.0003-.0023".

Bearing Adjustment:—None (no shims). *See Pontiac Shop Notes for Removal and Fitting of Bearings.*

►**Rear Main Bearing Oil Seal Renewal**—*See Pontiac Shop Notes.*

Replacement Bearings: Standard size & .001" Undersize.

End Thrust: Taken by #3 (rear intermediate) bearing. **Endplay**—.003-.007".

CAMSHAFT: Four bearing type with non-adjustable (two sprocket) chain drive.
Camshaft Removal & Timing Cover Oil Seal Servicing—*See Pontiac Shop Notes.*
Bearing Diameters—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1 29/32".
Bearings—Steel-backed, babbitt-lined bushings. *See Pontiac Shop Notes for bearing finished sizes.*
Clearance—.0015-.0025" (new).

End Thrust:—Steel thrust plate behind camshaft sprocket. Replace if worn. **Endplay**—.002-.005".

Timing Chain: Morse. Width 1". Pitch ⅜". Length 21" or 56 links.
Timing Chain Installation—*See Pontiac Shop Notes.*

Camshaft Setting:—Sprockets marked. Mesh chain with sprockets turned so that '0' marks are adjacent and in line with a straightedge across shaft centers.

CONTINUED ON NEXT PAGE

ENGINE

CONTINUED FROM PRECEDING PAGE

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 19/32"	.310-.311"	5.718"
Exhaust	1 15/32"	.310-.311"	5.718"

	Seat Angle	Lift	Stem Clearance
Intake	30°	19/64"	Free fit to .0006"①
Exhaust	45°	19/64"	Free fit to .0006"①

① Guides tapered (.0006" max. clearance at bottom).

Valve Guides:—Removable, tapered guides (.001" taper to the inch with greatest clearance at top). Use Tool J-2542 for removing valve guides.

Exhaust Guide Counterbore—Exhaust guides are counterbored to a depth of ¾". Use Tool Number J-2122 to clean out counterbore when servicing valves. This tool can be used to increase counterbore (from ½") if earlier type guides having this shallower counterbore are used.

▷NOTE—On 1946 cars before Eng. No. 6-39209, exhaust guide counterbore was 31/32" deep. Any stocks of this type guide, Part No. 509041 (with 31/32" counterbore), are satsifactory for service. New exhaust guides will have the shallower (¾" plus 1/32", minus 0") counterbore depth.

IMPORTANT—Measure clearance at bottom end. Valve should just fall through guide of own weight when started in guide. NOTE—Guides should be cleaned with Tool KMO-122 valve guide cleaner (blade type). Service guides straight cut, install guides and ream to provide proper stem clearance with P.R. 131 Reamer.

Valve Springs:—Intake and exhaust springs identical. Install with two closed coils at top and dampener on top of each spring. Use new dampeners whenever removed from spring. **Free Length**—2 9/16".

	Spring Pressure	Spring Length
Valved Closed	59½ lbs.	1 29/32"
Valve Open	101 lbs.	1 19/32"

Valve Lifters:—Barrel type, cast-iron. Guide holes reamed in block. Lifters furnished .005" oversize (use pilot reamer J-706-P when reaming holes to maintain alignment—valve guides must be removed, use Valve Guide Removing Tool J-2542).

Clearance—Free fit. Lifter should just move freely with finger touch.

VALVE TIMING

Tappet Clearance:—.011-.013" all valves (engine warm). Use .011" feeler as 'go' gauge, .013" as 'no go'.

NOTE—Car manufacturer recommends .013" exhaust clearance for sustained high speed driving.

Valve Timing:—See Camshaft Setting above.

Intake Valves—Open 5° BTDC. Close 39° ALDC.

Exhaust Valves—Open 45° BLDC. Close 5° ATDC.

Valve Timing Check—With .015" tappet clearance #6 intake valve should open with #6 piston 5° or .0096" before top dead center with first straight line of flywheel mark '/IGN.ONE/' slightly past indicator in left front face of flywheel housing. Reset tappet clearance .011-.013" (warm).

LUBRICATION

Engine Oiling System: Pressure to main bearings, connecting rod lower bearings and piston pins (rifle-drilled rods), camshaft bearings, and timing chain. Oil pump mounted externally on right side of crankcase.

Crankcase Capacity—5 qts. (refill), 6 qts. (dry).

Normal Oil Pressure—35-45 lbs. at 40 MPH. with warm oil (10-30 lbs. idling).

Oil Pressure Regulator—On oil pump. Opens at 40 lbs. Non-adjustable. NOTE—Replace regulator spring if free length less than 2 5/16".

Oil Pump: Gear type. On right side of crankcase.

Oil Pump Servicing—*See Pontiac Shop Notes.*

Oil Cleaner: Pontiac precipitation type (in crankcase). **Servicing**—*See Pontiac Shop Notes.*

Oil Pressure Gauge: AC ('46) 1506803, ('47) 1507056, ('48) 1507221. Bourden Tube (not electric).

Crankcase Ventilation: Filter element in oil filler cap (inlet). Outlet pipe at valve compt. cover on right rear side of engine (cars with oil bath air cleaner equipped with 3-piece outlet pipe containing filter element).

Oil Filler (Crankcase Ventilator) Cap Servicing—Wash filter element and re-oil by dipping in engine oil when servicing air cleaner.

CAUTION—Filler cap must be installed with air opening in cap toward front of car and seam in line with groove in tube (may cause excessive oil consumption if installed backward).

Crankcase Ventilator Outlet Pipe—On cars with Oil-bath type Air Cleaner, special 3-piece ventilator outlet pipe used which has copper gauze type air cleaner in container section. Wash and re-oil filter element when servicing air cleaner.

COOLING

Cooling System: Pressure type with pressure valve (relief valve) in radiator filler cap. Positive circulation with water pump on front of engine and water distributing tube in cylinder block.

Capacity—18 qts. (19¾ with Underseat Heater).

Pressure Valve AC No. 846740 (Radiator Filler Cap). Opens at 4 lbs. (3¼-4¼ lbs.).

Water Pump: Packless type with sealed ball bearing shaft. *See Water Pump Section for complete data.*

Removal—Drain cooling system, remove hose connection at pump, loosen belt adjustment and remove belt, take out water pump mounting bolts and lift pump out.

Belt Adjustment—*See Generator Belt Adjustment.*

Thermostat:—Harrison. In cylinder head outlet.

Setting—Starts to open 151° F. Fully open 173° F.

Radiator Removal: *See "Radiator" in Pontiac Special Data.*

Water Distributing Tube Servicing: *See "Cooling" in Pontiac Special Data.*

Temperature Gauge: AC Electric type.

Dash Unit—('46) 1511661, ('47) 1511874, ('48) 1512027.

Engine Unit—('46-47) 1511734, ('48) 1512015.

See Miscellaneous Section for complete data.

CLUTCH

Inland. Single Plate, "Diaphragm", dry disc type with Long Driven Member Model 9½CF-TS (except Taxicab), Model 10CF-CS (Taxicab).

See Clutch Section for complete data.

NOTE—Driven Members on 6 Cyl. and 8 Cyl. cars are same size but must not be interchanged. May be identified by stenciled notation on facings and color marking of torsional springs in hub as follows:

	Facing Mark	Spring Color
6 Cyl. Models	41-42 6 Cyl.	Orange & Dark Blue
8 Cyl. Models	41-42 8 Cyl.	Brown & Blue

Facings—Moulded type. 2 required. I. D. 6" (All Models); O. D. 9½" (except Taxicab), 10" (Taxicab); Thickness ⅛".

Pedal Adjustment:—Free travel ⅞-1⅛" (adjusting nut on link at clutch fork). Pedal height to lower face of pedal should be 4¾" (Torpedo), 5 3/16" (Streamliner). Adjust by means of stopscrew at lower end of pedal arm.

▷**1946 Clutch Pedal Shaft Installation Change**—*See Pontiac Shop Notes for new type mounting (used on later 1946 cars) to correct movement of clutch or brake pedal when other pedal is depressed.*

Removal: Remove Transmission (see Transmission Removal below), remove clutch bearing support spring washer (in rear face of clutch housing), remove clutch housing bottom cover and control shaft inner bracket. Remove release bearing support and release bearing (see Clutch Release Bearing & Support data), tapping the support from inside the clutch housing to aid in removing (CAUTION—avoid striking tubular portion of support). Mark flywheel and clutch cover (to insure reinstallation in same position to maintain balance), remove clutch cover mounting bolts evenly, move clutch assembly away from flywheel at bottom and withdraw Driven Member, lower cover assembly and withdraw it through bottom of housing.

▷**Removal of Excess Release Bearing Lubricant to correct clutch sticking**—If recess in bore on release bearing over-lubricated when clutch assembly installed, excess lubricant may be found causing clutch sticking. Clean our excess lubricant found at the following points: transmission drive gear, driven plate hub, clutch facings, pressure plate and and cover assembly, release bearing support tube, fulcrum points of release fork, and recess in bore on release bearing (do not wash bearing, bearing is "sealed" type). Lubricate clutch parts exactly as described under Installation Note following to avoid above condition.

Clutch Installation Note—Install new felt oil seal against shoulder ahead of oil slinger retaining ring on Transmission Main Drive Gear (will bear against flared end of release bearing support when installed). This supersedes original position (on 1946 cars) where seal fitted in recess on Drive Gear. Lubricate seal with engine oil before transmission installed. Coat entire length of outer diameter of release bearing support tube with grease. Lubricate release fork fulcrum points with a very light coat of grease. Apply light coat of Lubriplate on main driving gear splines. Use new paper gasket between support flange and clutch housing, make certain that flange is not bent or distorted (will cause misalignment of transmission).

Clutch Release Bearing & Support: *See Pontiac Shop Notes for description.*

TRANSMISSION

STANDARD

Own Make. All helical gear. Constant-mesh synchro-mesh (Second & High), sliding gear (Low & Reverse).

See Transmission Section for complete data.

Transmission Control: Pontiac "Safety-shift" remote control type with gearshift lever on steering column. *See Transmission Section for complete data.*

Removal:—Disconnect speedometer cable, gearshift selector and control rods from transmission. Disconnect rear universal (wire trunnions) and pull out propeller shaft. Remove upper transmission mounting screws, install guide pins (J-851), remove lower screws, pull transmission to rear and lower out of car.

Installation Note—Use guide pins installed in two upper transmission mounting holes to assist in sliding transmission straight forward into place (to avoid damage to clutch release bearing tubular support).

NOTE—These guide pins may be made from ½-13 American National Thread bolts by cutting heads off and reducing over-all length to 4¼".

HYDRA-MATIC DRIVE

OPTIONAL EQUIPMENT

Own Make. Consists of fluid coupling and 4 speed automatic transmission.

See Transmission Section for complete data including Testing & Trouble Shooting.

Lubrication—Check fluid level in transmission every 2000 miles (lubrication period). Drain and refill every 25,000 miles. Use only GM Hydra-Matic Drive Fluid.

Capacity—11 qts. (drain oil pan and torus cover and refill). **12 qts.** (drain, disassemble, assemble transmission and refill).

Checking Fluid Level—Roll back floor mat, remove cover on floor board, set hand brake and start engine, set control lever in "DR" position, allow to run about 2 minutes. Remove indicator, wipe dry, then return and check level of fluid with indicator. Add fluid until level is at "FULL" mark.

►*CAUTION—Always check oil level when oil is hot, engine idling, hand brake tightly set and control lever in "DR" position.*

►**Oil Level Indicator Change**—A new indicator, Part No. *8605800* (stamped on blade—earlier type not marked) reduces capacity approx. 1 pint providing slightly lower fluid operating level to reduce fluid foaming when oil is hot.

Hydra-Matic Linkage Adjustment—*See Hydra-Matic Drive article in Transmission Section.*

Removal: *See Hydra-Matic Drive article in Transmission Section.*

UNIVERSALS

Mechanics Model 2CR. Roller bearing type, 2 used.

►**1947-48 CAUTION**—Rear universal nut controls rear axle pinion bearing "pre-load" (must be adjusted whenever nut is loosened). *See Pontiac Rear Axle article in Rear Axle Section for complete data.*

NOTE—Driveshaft is one-piece type (slip joint on transmission mainshaft, ahead of front universal).

REAR AXLE

1946 Type—Same as 1942. Hypoid gear, semi-floating type. This type axle has three setscrews equally spaced around pinion housing.

See Rear Axle Section for complete data.

1947-48—New hypoid gear, semi-floating type. Design similar to 1946 type except that pinion is mounted on two taper roller bearings and companion flange nut controls pinion bearing "pre-load." No setscrews are used.

►CAUTION—Rear universal companion nut controls pinion bearing "pre-load".

See Rear Axle Section for complete data.

Ratios—As shown. Axles may be identified by paint mark on end of right hand axle shaft.

Model	Ratio	Ident. Paint Mark
Torpedo Std.	4.1-1	Green
Streamliner Std.	4.3-1	White
Hydra-Matic (All)	3.63-1	Violet
All (Econ.)	3.9-1	Red
All (Heavy Duty)	4.55-1	Yellow

Backlash—.003-.012" (new), slightly over .012" (worn).

Removal:—Disconnect rear universal and wire trunnions (do not disengage spline joint at transmission), remove axle shafts and carrier flange capscrews. Withdraw carrier assembly from housing.

►**1947-48 CAUTION**—Rear U-joint companion flange nut controls pinion bearing "pre-load" (must be adjusted whenever nut is loosened).

Axle Shaft Removal:—Remove wheel, brake drum, 4 backing plate bolt nuts, static collector, and loosen bearing retainer (do not move backing plate or brake line may be damaged). Pull shaft with puller J-942 (do not drag axle shaft on oil seal).

Wheel Bearing Adjustment—None.

SHOCK ABSORBERS

Delco Model 1947-C,D (front), Model 1044-V (rear). Hydraulic, double acting (front), direct (rear).

Adjustment: None (except by changing valve calibration).

Refilling: Requires dismantling of unit. See Shock Absorber article in Shock Absorber Section for directions.

FRONT SUSPENSION

Front Suspension: Independent, linked parallelogram type with coil springs.

See Front Suspension Section for complete data.

Kingpin Inclination—6½-8° crosswise.

Caster—Negative ¾°. Limits Neg. ½° to Neg. 1°.

Camber—0° preferred. Limits Neg. ¼° to Pos. ¼°.

Toe In—0-1/16". Adjust tie rod tubes equally.

Steering Geometry—Inner wheel 23° ± ½°. Outer 20°.

STEERING GEAR

Saginaw. Worm-and-Roller type.

See Steering Gear Section for complete data.

BRAKES

Service: Bendix Hydraulic, Duo-Servo, Single Anchor type with eccentric adjustment. Hand lever applies rear service brakes.

See Brake Section for complete data.

►IMPORTANT SERVICE NOTE—**Brake Drums**—Two different makes are used: 1) Kelsey-Hayes type can be identified by one-piece stamping and flange having a sharp edge; 2) Motor Wheel type consisting of two-stampings and rolled flange. **Each pair of drums (on opposite sides of car) front or rear must be the same type.**

	Brake Drum Part Numbers		
	Front Wheel		Rear
	Left	Right	Wheel
Kelsey-Hayes	507371	507370	505300
Motor Wheel	509221	509220	409176

Drums—Pressed steel with alloy iron liner. Diameter 11".

Clearance—.010" at heel and toe of each shoe.

Lining—Moulded. Width per wheel: 2" (front), 1¾" (rear). Thickness 3/16". Length per shoe: 9 11/32" (primary), 11 31/32" (secondary).

Braking Power—56% Front, 44% Rear.

Master Cylinder Filling Note—*New cars shipped from the factory have master cylinder filled to level ⅞" below top of filler neck and this level is satisfactory for service (cylinders were filled to ½" below top).*

Hand Brake: See Service Brakes above.

NoRol: Optional. *See Brake Section for complete data.*

MISC. MECHANICAL

Convertible Top Control: Hydro-lectric type (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders).

See Miscellaneous Section for complete data.

HOOD & HOOD LOCK ADJUSTMENT: *See Pontiac Special Data.*

FRONT END SHEET METAL ASSEMBLY REMOVAL: *See Pontiac Special Data.*

MODEL IDENTIFICATION

SERIAL NUMBER: First number 1001 (All Models) with Model & Plant prefix as shown below. Stamped on plate on left side of dash under engine hood.

Serial No. Prefix Plant	Torpedo 46-27	Torpedo 47-27	Streamliner 46-28	Streamliner 47-28
Pontiac, Mich.	P8LA	P8MA	P8LB	P8MB
South Gate, Calif.	C8LA	C8MA	C8LB	C8MB
Linden, N. J.	L8LA	L8MA	L8LB	L8MB
Wilmington, Del.	W8LA	W8MA	W8LB	W8MB
Kansas City, Kans.	K8LA	K8MA	K8LB	K8MB
Atlanta, Ga.	A8LA	A8MA	A8LB	A8MB
Framingham, Mass.	F8LA	F8MA	F8LB	F8MB

Serial No. Prefix— Plant	Torpedo 48-27	Streamliner 48-28
Pontiac, Mich.	P8PA	P8PB
South Gate, Calif.	C8PA	C8PB
Linden, N. J.	L8PA	L8PB
Wilmington, Del.	W8PA	W8PB
Kansas City, Kans.	K8PA	K8PB
Atlanta, Ga.	A8PA	A8PB
Framingham, Mass.	F8PA	F8PB

ENGINE NUMBER: Same as Serial Number. Stamped on boss on left upper front corner of engine block.

TUNE-UP

COMPRESSION: Pressure—158 lbs. at 1000 RPM. or 118-120 lbs. at cranking speed (Std. 6.5-1 Head), 189 lbs. at 1000 RPM. (Optl. 7.5-1 Head). NOTE—7.5-1 Head requires use of Ethyl fuel at low altitudes.

VACUUM READING: 18-20" steady idling at 7-8 MPH. (365-385 RPM. on Hydra-Matic Cars).

FIRING ORDER: 1-6-2-5-8-3-7-4. See diagram.

SPARK PLUG GAPS: .025". Limits .023-.028".
Plug Type—AC No. 45. 14 mm. Metric.

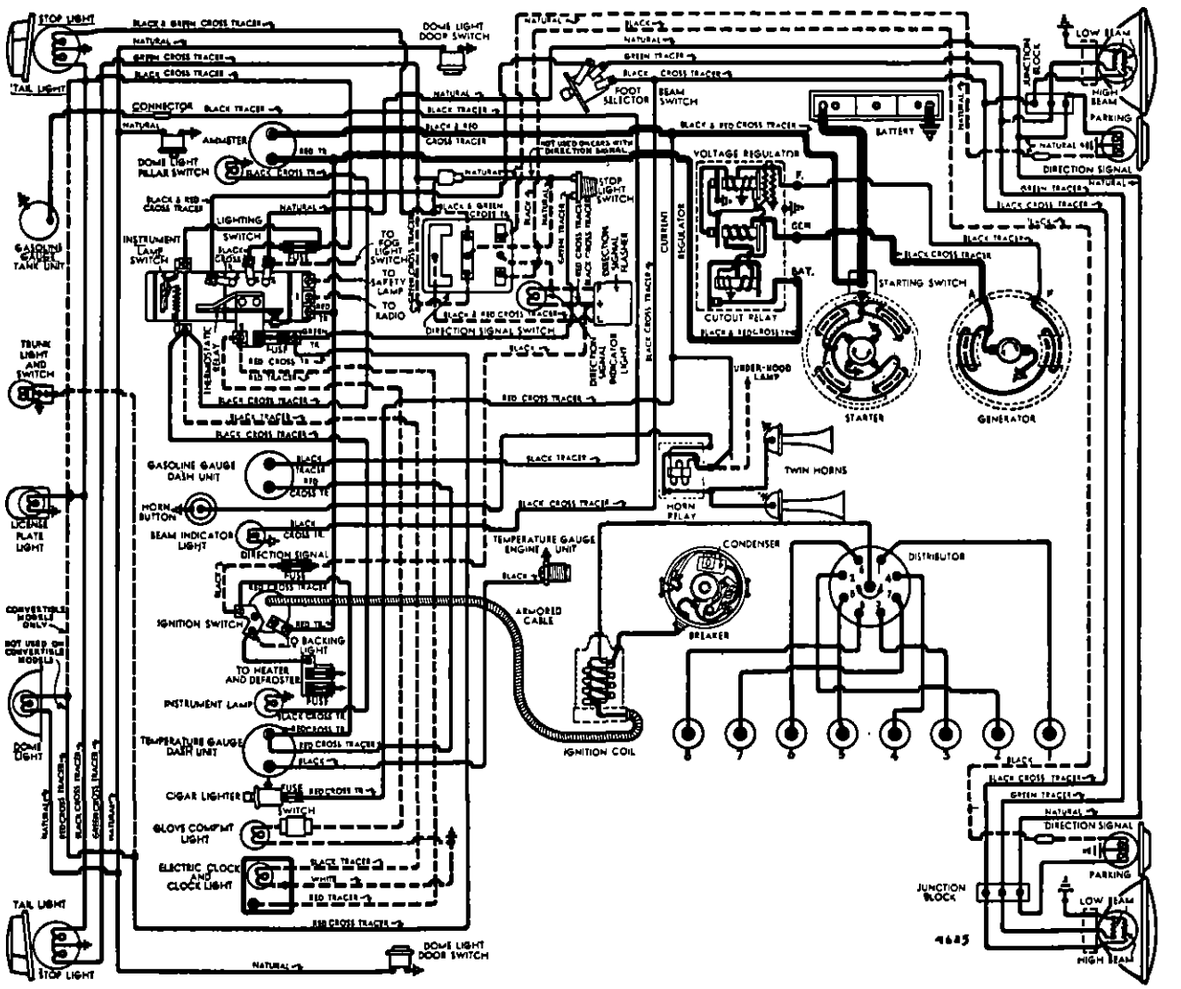
IGNITION: *See Coil, Condenser, and Distributor.*
Breaker Gap—.015". Limits .0125-.0175".
Cam Angle or Dwell—31° closed, 14° open.
Breaker Arm Spring Tension—19-23 ozs.
Automatic & Vacuum Advance—*See Distributor.*

IGNITION TIMING: 6° BTDC.
Timing Procedure—*See Ignition Timing.*
Timing Mark—First line of flywheel mark "/IGN. ONE/" at pointer in inspection hole in left front face of flywheel housing above starter.
Gaselector Setting—Set for barely audible ping when accelerating between 20-30 MPH. with wide open throttle.

CARBURETION: *See Carburetor & Carb. Equipment.*
Idle Setting—(1946 WDO Carb.) ¼-1¼ turns open, (1947-48 WCD Carb.) ¾-1¾ turns open, 2 screws, turning screws out gives richer mixture.
Idle Speed (standard)—450-475 RPM. or 7-8 MPH.
Idle Speed (Hydra-Matic)—365-385 RPM.
Float Level (1946 "WDO" Carb.)—5/16" from top of float to gasket seat on cover (invert to check).
Float Level (1947-48 "WCD")—3/16" from top of the float to gasket seat on bowl cover (Gauge T109-162). Sides of floats should barely touch vertical uprights on gauge (so float won't bind on sides of bowl).
Accelerating Pump—Lower Hole (min. stroke) Normal. Upper Hole (max. stroke)—if greater charge required.
Fuel Pump Pressure: 4¾ lbs. maximum.

MANIFOLD HEAT CONTROL: Thermostatic coil type, non-adjustable (fixed anchor pin). Counterweight should be securely clamped to shaft in approximately vertical position with valve closed (cold).
NOTE—Valve shaft bushings are Stainless Steel.

VALVE TAPPET CLEARANCE: .011-.013" Hot All Valves. (.011" gauge "Go", .013" gauge "No Go". NOTE—.013" Exhaust tappet clearance recommended for sustained high speed.
Valve Timing Check—*See Valve Timing.*



STARTING: *See Battery, Starter, Generator, Regulator.*

IGNITION

IGNITION SWITCH: Delco-Remy Nos. as follows:
1946-47—1116306 (LHD), 1116312 (RHD cars).
1948—1116455 (All cars).
NOTE—Armored cable not used on 1948 cars.
Ignition Lock Cylinder—Briggs & Stratton 45792. Key Series—8000 to 9499. Groove—No. 15.

COIL: Delco-Remy 1115126 ('46-47), 1115380 ('48).
1946 NOTE—Primary terminal on 8 Cylinder is toward front. Some coils for 6 Cyl. cars have primary terminal located in same position but these coils are now marked by figure "6" stenciled in red. CAUTION—Do not use coils marked "6" or coils with primary terminal on right side on 8 Cyl. cars.
Ignition Current—2.5 amperes idling, 4.5 stopped.

CONDENSER: Delco-Remy No. 1869704.
Capacity—.18-.25 microfarad.

1946-47 PONTIAC EIGHT
►EARLY 1946 WIRE COLORS NOT UNIFORM—SEE LIGHTING

DISTRIBUTOR: Delco-Remy 1110804. Single breaker, 8 lobe cam, full automatic advance type with auxiliary vacuum control and Gaselector adjustment.

►**Late 1948 Distributor Cap**—Has built-in radio suppression. Can be identified by high wire towers and marks "Radio" on lower edge of cap on each side.

Breaker Gap—.015". Limits .0125-.0175".

Cam Angle or Dwell—31° closed, 14° open.

Breaker Arm Spring Tension—19-23 ozs.

Rotation—Counter-clockwise viewed from above.

Automatic Advance

Distributor Degrees	R.P.M.	Engine Degrees	R.P.M.
Start	300	2	600
7	1100	14	2200
8½	1500	17	3000
13½	2100	27	4200

Gaselector—Manual adjustment providing 10° advance or retard from center '0' position. See Ignition Timing for Gaselector adjustment.

Vacuum Spark Control. Delco-Remy Model No. 1116-021. (integral type linked directly to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit. **Plunger Travel—7/32".**

Distr. Degrees	Vacuum Advance Eng. Degrees	Vacuum (" of HG)
Start	0°	7-9"
7½°	15°	13-16"
9-10°	18-20°	16-21"

Removal:—Distributor mounted on left side of engine. To remove, disconnect vacuum line, take out hold-down screw in Gaselector arm, lift distributor out.

IGNITION TIMING

Std. Setting—As given below for Regular Fuel (Std. 6.5-1 Head), Ethyl Fuel (Optl. 7.5-1 Head). See Gaselector Setting (following) for correction for operating conditions and fuel regularly used.

	Flywheel Degrees	Piston Position
All Engines	6° BTDC	.0128" BTDC.

Timing Mark Note—Two straight lines of ignition mark '/IGN.ONE/' indicate allowable timing range of 4° on flywheel. Use first (6°) line for setting ignition (second line is 2° before top dead center mark).

To Set Timing (With Timing Light)—Connect timing light between distributor terminal and ground, turn on ignition. With #1 piston on compression, turn engine over until piston is 6° or .0128" before top dead center with first line of ignition mark '/IGN.ONE/' lined up with pointer in inspection hole in left front face of flywheel housing above starter. Loosen Gaselector screw, center pointer scale ('0' mark at reference line), tighten screw. Loosen advance arm clamp bolt, rotate distributor until timing lamp lights (contacts just opening), tighten clamp bolt. Check Gaselector setting.

To Set Timing (With Synchroscope)—Connect synchroscope in series with #1 spark plug, fill in first line of ignition mark '/IGN.ONE/' with chalk or white paint, direct synchroscope light on flywheel (inspection hole on left side), idle engine at 6 MPH., adjust distributor as directed above.

Gaselector Setting—Should be set to provide best performance without spark knock or ping for particular operating conditions and octane rating of fuel used. To adjust, loosen Gaselector arm screw, move arm clockwise (toward 'ADV' end of scale) to advance spark, counter-clockwise (toward 'RET' end of scale) to retard spark, tighten locking screw.

1948 PONTIAC EIGHT

CARBURETOR

1946 TYPE "WDO"

Carter Type WDO, Model 548S. 1¼" Dual (double barrel), Downdraft type with Carter Climatic Control.

Casting No. on Flange—306.

See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up.*

Metering Rods Jets—*See Carter Jet Table in Carburetor Section for complete data.*

Accelerator Linkage Adjustment: See 1947-48 information listed below.

Fast Idle: Carter Dual (WDO) Carburetor type.

See Carburetion Equipment Section for complete data.

Setting—With the carburetor set for correct 7-8 MPH hot or slow idle speed, hold choke valve tightly closed, turn fast idle adjusting screw in until clearance between throttle lever stopscrew and stop on carburetor casting is .073". NOTE—This adjustment can also be made by backing off throttle stopscrew so that throttle valves tightly closed, then hold choke valve closed, turn fast idle screw in until it contacts high point of fast idle cam, then turn screw in until throttle opening is exactly .026".

Automatic Choke: Carter Climatic Control (dual carburetor type).

See Carburetion Equipment Section for complete data.

Setting—Coil housing 2 Notches Rich.

CARBURET R

1947-48 TYPE "WCD"

Carter WCD, No. 630S, SA, or SB (Standard).
Carter WCD, No. 653S (Hydra-Matic Drive Cars).
1¼" dual barrel downdraft types with Carter Climatic Control.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Casting No. on Flange—373 (630S), 550 (630SA & SB), 558 (653S).
See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up data.*
Metering Rods & Jets—*See Carter Jet Table in Carburetor Section for complete data.*

Accelerator Pedal Service Note: On new cars shipped from the factory, accelerator pedal hinge lockscrew is tightened only finger tight (pedal must be removed for floor mat installation). **This screw must be securely tightened** (place screwdriver alongside locknut to hold nut while turning screw in to lock hinge pin).

Accelerator Linkage Adjustment:—Must be set to provide correct 'throttle-cracking' action for starting. To adjust, set idle speed at 450-475 RPM. (365-385 RPM on Hydra-Matic), disconnect battery cable at starting motor (to prevent starter cranking engine), insert .115" flat gauge between throttle stopscrew and stop on carburetor, fully depress starting pedal, adjust the adjusting screw on the accelarator cross-shaft lug at idler lever (on Hydra-Matic adjust throttle cracker lever mounted on throttle control lever—pin on starter lever must not strike throttle control lever) until gauge between the throttle stopscrew and stop just falls out with fast idle cam in slow idle position. NOTE—Before making adjustment, check for full throttle opening with accelerator pedal fully depressed (adjust accelerator rod if required).

Hydra-Matic Throttle Adjustment: *See Hydra-Matic Drive article in Transmission Section.*

Fast Idle: Carter Dual (WCD) Carburetor type.
See Carburetion Equipment Section for data.
Setting—With the choke valve tightly closed and fast idle adjusting screw on highest step of fast idle cam, adjust fast idle screw until throttle opening is exactly .026" (use Gauge T109-189 between edge of throttle valve and carburetor wall on side opposite idle ports).

Automatic Choke: Carter Climatic Control (dual carburetor type).
See Carburetion Equipment Section for complete data.
Setting (630S, SA, SB)—Centered at index (for 6-547S air horn), One Point Lean (for 6-576S air horn—latest).
Setting (653S)—Centered at index.

CARB. EQUIPMENT

Fuel Pump (Fuel & Vacuum): AC Type AJ, No. 153717.
Replacement Pump—AC No. 539.
Pressure—4¾ lbs. maximum.
See Carburetion Equipment Section for data.

Gasoline Gauge: AC Electric type.
Dash Unit—(1946) AC No. 1516818, (1947) 1516946, (1948) 1517065.
Tank Unit—AC No. 1516316 (All).
See Carburetion Equipment Section for data.

Air Cleaner (std.—oil-wetted): AC No. 1529473.
Optl. (oil bath)—AC No. 1529474.
Servicing (Oil-wetted Type)—Wash and re-oil filter element at 10000 mile intervals (twice yearly) or more often if required by operating conditions.
Servicing (Oil-bath Type)—Wash filter element, drain and refill lower oil base with 1 pint SAE No. 50 engine oil (SAE 20W for temperatures below freezing) at 10000 mile intervals or more often if required by operating conditions.

BATTERY
1946

Delco Type 17E-2W. 6 volt, 17 Plate, 120 Ampere Hour Capacity (20 hour rate).
Starting Capacity—140 amperes for 20 minutes.
Zero Capacity—300 amperes for 4.5 minutes. Five second voltage 4.4 volts.
Grounded Terminal & Location—As given below.

BATTERY
1947-48

Delco Type 15E-2W. 6 Volt, 15 Plate, 100 Ampere Hour Capacity (20 hour rate).
Starting Capacity—120 amperes for 20 minutes.
Zero Capacity—300 amperes for 3.5 minutes. Five second voltage 4.25 volts.
Grounded Terminal—Negative (—) to engine.
Engine Ground (Conv. Coupe & Cars with Radio)—Strap from left rear corner of cylinder head to upper left hand starter pedal bracket-to-dash screw.
Location—On left side in engine compartment.

Police Battery: Delco Type 19E-3. 6 Volt, 19 Plate, 130 ampere hour capacity (20 hour rate).
Starting Capacity—150 amperes for 20 minutes.
Grounded Ter. & Location—Same as 15E-2 above.

STARTER

1946-47	Delco-Remy 1107921
1948	Delco-Remy 1107947
RHD Cars	Delco-Remy 1107934

Armature No.—Delco-Remy No. 1867897.
1946 NOTE—Starters on early cars have oiler at at commutator end, later starters have graphite-impregnated bronze bearing at this point (no lubrication required).

▷**Starter Pedal Sticking Correction:** Lubricate starter pedal plunger with engine oil whenever car serviced (lack of lubrication will cause wear, noise, and faulty operation—may result in damage to starter). NOTE—Check all new cars (plunger not lubricated on some cars).

▷**Hydra-Matic Starter Interlock Adjustment:** *See the Hydra-Matic Drive article in Transmission Section.*

▷**Clicking Noise Correction at Starter (Hydra-Matic):** Noise when starter engaged on early Hydra-Matic cars may be due to ends of the torus cover-to-flywheel bolts striking starter clutch cover (¾" long bolts were used, also lock washers broke on some bolts). To correct, replace damaged starter clutch assembly (No. 1873789) and install set (30) of new shorter torus cover-to-flywheel bolts (No. 511849). Remove flywheel pan, replace bolts one at a time (tighten to 30 ft. lbs.) so as not to disturb cover to flywheel seal.

Drive—Overrunning clutch and pinion shift. Manual (1107921, 47), solenoid pinion shift (1107934).
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—24-28 ozs. each.
Cranking Engine—220-225 amperes at 5 volts.

Performance Data

Torque	R.P.M	Volts	Amperes
0 ft. lbs.	6000	5.0	60
16 "	Lock	3.0	600

Removal:—Starter flange mounted on left front face of flywheel housing. To remove, take out flange mounting screws.

Starting Switch (1107921, 47): No. 820052. On top of starter and operated by starting pedal.
(1107934)—Delco-Remy Solenoid No. 1118102. Mounted on starter and controlled by Relay No. 269-G and pushbutton switch No. 1996031 on instrument panel.
See Electrical Equipment Section for complete data.

GENERATOR

1946-47	Delco-Remy 1102665
1948	Delco-Remy 1102701
Police Cars	Delco-Remy 1106403

Armature No.—Delco-Remy 1879002 (1102665 & 701). Two brush (shunt) types with voltage and current regulation. Ventilated by drive pulley fan.
Charging Rate Adjustment—None. Charging rate controlled by Voltage Regulator, maximum output by Current Regulator. See Regulator data below.
Maximum Charging Rate—30 amperes, 8.0 volts, 1170 RPM. (1102665, 701), 1040 RPM. (1106403 Gen.), and above (Current Regulator Setting) with load or discharged battery. Actual charging rate controlled by Regulator according to battery condition.

Performance Data—Cold

	Amperes①	Volts	R.P.M.
1102665, 1102701	30	8.0	1750
1106403	35	8.0	1040

①—Current Regulator Setting—See Regulator.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—25 ounces each.
Field Current—1.75-1.9 amperes (1102665 & 1102701), 1.77-2.0 amperes (1106403) at 6.0 volts.

Removal:—Generator pivot mounted on left front of engine. To remove, take out pivot and clamp bolts.

Belt Adjustment:—Belt deflection or sideplay midway between generator & pump pulley should be 1½".

REGULATOR

Delco-Remy 1118242.....for 1102665 & 1102701 Gen.
Delco-Remy 1118229.....for 1106403 Generator
Single Core Type. Vibrating type Voltage and Current Regulators in a single case with Cutout Relay.
See Electrical Equipment Section for complete data.
CAUTION—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

Cutout Relay

Cuts In—6.2-6.7 volts hot.
Cuts Out—0-4.0 ampere discharge current.
Contact Gap—.020" (same for both sets).
Air Gap—.020" (with contacts just closed).

Voltage Regulator

Setting—7.2-7.4 volts (1118242), 7.0-7.2 volts (1118-229) Hot (at operating temperature).
Checking & Adjustment—*See Electrical Equip. Section.*
Air Gap—.070" between center of core and armature with contacts just closing (press down on armature to open contacts, release pressure, check gap at point where contacts just close).

Current Regulator

Setting—34-36 amperes Hot (at operating temperature) for all models.
Checking & Adjustment—*See Electrical Equip. Section.*
Air Gap—.080" (check same as Voltage Regulator).

LI HTING

1946-47 LIGHTING SYSTEM SERVICE NOTES

►**Wiring Harness Wire Colors (1946)**—Some harnesses were used in which wires were incorrectly color-coded (tracers not as shown in wiring diagram). All such wires were marked by typed identification on paper sleeve attached to the wire. CAUTION—If these identification are removed from wires, it will be necessary to trace circuits for continuity.

►**Chafing of Wiring Harness (causing a short in hot lead from starter terminal)**—Clearance between harness containing this lead and moving parts (Starter pedal lever, Accelerator pedal lever, Accelerator cross-shaft) must be ⅜-½". Make certain that harness is correctly installed (should pass down between starter and engine and then under starter), and that lower clamp-on clip on starter pedal bracket is closed tight so that harness cannot bend forward and rub on accelerator cross-shaft.

►**Back-up Light Faulty Operation and Blown Fuses**—Faulty operation caused by bending of switch support by over-travel of gearshift lever on first cars with No. 5933752 switch support. Correct by installing new type flexible Switch Support, Part No. 509257, and Switch Actuating Stop, Part No. 509258. NOTE—New type Back-up Light Switch, Part No. 5936850 (with longer plunger) replaces No. 5933751.

Short-circuits causing Blown Fuses—May be caused by plastic tip of switch plunger cracking off on first type switches allowing plunger insert to short on switch stop. Install new switch No. 5936850.

►**Cigar Lighter Faulty Operation and Short-circuits** Caused by Cowl Ventilator handle cutting into cigar lighter feed wire. Check open position of cowl ventilator, make certain that stop on handle is sufficiently high to prevent handle moving beyond open position and cutting cigar lighter lead. Correct ineffective stops by drilling a #10 (.193") hole through the handle at the original stop point and installing fillister head machine screw (No. 100659), lockwasher (No. 138481), and nut (No. 120614) in hole.

Cigar Lighter Binding Correction (Streamliner Models)—This may be caused by misalignment of hole in instrument panel and hole in mounting bracket behind panel causing cigar lighter to stick in engaged position. Correct by installing special spacer, Part No. 509286, on mounting screw between instrument panel and bottom of bracket.

1948 LIGHTING SYSTEM SERVICE NOTES

►**Inoperative Stop Light (with Direction Signal):** On some early 1948 cars, 1 stop lamp (usually left) would not operate with brakes on and Direction Signal Switch in neutral due to misalignment at Direction Signal Switch. Correct by replacing direction signal base and wire assembly, part #5937832.

►**Underhood Light not turning off:** On some early 1948 cars, Underhood Light Switch improperly mounted resulting in light remaining on when hood closed. To correct, install lock washer between mounting nut and radiator baffle (was incorrectly assembled between switch and underside of radiator baffle which resulted in switch being set too low).

Headlamps: Guide "Sealed Beam" type. Upper and lower beams controlled by Beam Selector Switch on toeboard.
See Electrical Equipment Section for complete data.
Adjustment—Aim upper beams straight ahead (hot spot center 3" below lamp center height at 25 ft.).

Beam Indicator—Pontiac emblem on face of speedometer dial. Lighted when upper beams in use.

Direction Signal: *See Electrical Equipment Section.*
Direction Signal Indicator—Pilot bulb in Direction Signal Switch. Lighted whenever Right or Left Direction Signal operating.

Switches

Lighting—D-R Nos. ('46-47) 1995024, ('48) 1995035.
Instrument—Part of Lighting Switch. Rheostat operated by turning lighting switch knob.
Beam Selector—Delco-Remy No. 1997008.
Stop Light—Delco-Remy No. 1997725.

Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	
Park & Frt. Direc. Signal	21-3	1154
Park (Without Signal)	3	63
Instrument, Ign. Lock	1½	55
Beam & Direc. Signal Ind.	1	51
Stop & Tail	21-3	1154
Rear License Plate	3	63
Dome	15	88
Dome (Convertible)	1½	55

MISC. ELECTRICAL

THERMOSTATIC RELAY: Lighting. On switch. Contacts remain closed with 30 amperes, open in 3 minutes with current of 42 amperes at 70°F. Not adj. **Convertible Top**—On rear of dash on right side. 30 ampere maximum capacity.

FUSES: Tail & Instrument Light. (1946-47) 9 ampere, (1948) SFE 14 ampere. In holder clipped to panel above lighting switch.
Stop & Dome Light—('46-47) 9 amp., ('48) SFE 14 ampere. On lighting switch.
Heater & Defroster—SFE 9 amp. each. In clip on instrument panel brace at steering column.
Direction Signal—SFE 9 amp. In connector in feed wire from ignition switch at panel brace.

HORNS: Delco-Remy No. 1999519 (Low Note), 1999520 (High Note). Vibrator type, blended tone, twin horns operated by relay.

Type	Current (at 6 volts)	Air Gap
1999519 (Low Note)	19-21 amperes	.044-.049"
1999520 (High Note)	18-20 amperes	.034-.039"

►**'46 Horn Ring Rattle & Failure of Horn to Blow (Deluxe Models) Correction**—*See Pontiac Shop Notes.*

►**'46 Horn Lead Wear Correction**—Blowing of horns when turning corners or when car is jarred may be caused by steering column shaft wearing through insulation of horn button lead at point where it enters steering column jacket. To correct this trouble (on first cars with rubber grommet in horn lead hole), remove and discard rubber grommet, install new horn button lead, No. 266918, which has 4-inch piece of protecting loom at point where wire enters jacket.

Horn Relay: Delco-Remy No. 1116775.
Contact Gap—.025". **Air Gap**—.015" (closed).

ENGINE

ENGINE SPECIFICATIONS: Own. Eight Cylinder, "L" Head type.
Bore—3¼". **Stroke**—3¾".
Displacement—248.9 cubic ins. **Rated HP**—33.8.
Developed Horsepower—107½ at 3700 RPM.
Compression Ratio—6.5-1 Std. 7.5-1 Optl.
Compression & Vacuum Reading—*See Tune-up data.*

OIL PAN REMOVAL: *See Pontiac Special Data.*

POWER PLANT ASSEMBLY REMOVAL & FRONT INSULATOR REMOVAL: *See Pontiac Shop Notes.*

TIGHTENING TORQUES: *See Pontiac Shop Notes.*

CYLINDER HEAD: Tightening Torque & Cylinder Head Diagram—*See Pontiac Shop Notes.*

PISTONS: Chrome nickel alloy, electro-plated type. Pistons have 20 oil drain holes in oil ring groove (same as 1942 type). NOTE—Pistons are plated with lead-tin alloy or pure tin (lead-tin alloy darker color) and cannot be ground. Use finished replacement pistons.
Length—3 19/32". **Weight**—24.7 ozs. (stripped).
Removal—Pistons and rods removed from above.
Clearance—Top Land .0165-.0285". Skirt .002"

Fitting New Pistons:—Use .0015" x ½" feeler between piston and cylinder wall. Pull to withdraw feeler 10-20 lbs. Taper & out-of-round limits .0005" max.

Replacement Pistons: *See Pontiac Shop Notes.*

PISTON RINGS: Two tapered-face compression rings above pin, one slotted oil control ring below pin. Oil ring groove has 20 oil drain holes.
NOTE—Rings are cadmium-plated or tin-plated.

Ring	Width	End Gap	Side Clearance
Compr. (#1, 2)	3/32"	.008-.015"	.0015-.003"
Oil (#3)	3/16"	.006-.013"	.001-.0025"

Installing Rings—Install compression rings with mark "TOP" upward.

Replacement Rings: Furnished in Oversizes of .005", .010", .020", .030". *See "Piston Rings" in Pontiac Special Data.*

PISTON PIN: Diameter 15/16". Length 2⅞".
Pin is shot-peened type (shot-peened before final grinding and lapping). Pin is locked in one piston boss by self-locking lockscrew and opposite end slotted to permit piston pin movement.
Pin Fit in Piston—*See Pontiac Shop Notes for data.*
Pin Fit in Rod Bushing—.0004-.0006" clearance.

Pin Removal & Installation: *See Pontiac Shop Notes.*

Replacement Pins:—.001" (red & brown), .003" (red), .005" (blue) oversize. Paint marked on end of pin.

CONNECTING ROD: Weight 31.7 ozs. Length 7 9/16".
Piston Pin Bushing (Upper Bearing)—Split aluminum bronze bushings. *See Pontiac Shop Notes for data.*
Crankpin Journal Diameter—1.9987-1.9997".
Lower Bearing—Thin type, interchangeable steel-backed, babbitt-lined type.
Clearance—.0001-.0021". **Sideplay**—.007-.012".

Bearing Adjustment:—None (no shims). *Refer to Pontiac Shop Notes for Connecting Rod Lower Bearing.*

Installing Rods: No offset (can be installed either way).
NOTE—Rods and bearing caps marked to insure correct reassembly (marks must be together). These marks do not indicate cylinder in which rod used.
CAUTION—Keep each connecting rod and its bearing cap together.

CONTINUED ON NEXT PAGE

ENGINE

CONTINUED FROM PRECEDING PAGE

CRANKSHAFT: Five bearing type with integral counterweights and vibration dampener on forward end.

►**Flywheel to Crankshaft Bolts (on Synchro-Mesh Transmission)**—¾" hex head bolts (No. 508463) or 1" hex head bolts (No. 510832) are used. Either type can be used for replacement but head sizes must be alike on all bolts or engine balance will be destroyed.

►**Vibration Dampener (Harmonic Balancer) Remov—*See Pontiac Shop Notes.***

Journal Diameters—#1, 2.3732-2.3742"; #2, 2.4044-2.4054"; #3, 2.4357-2.4367"; #4, 2.4669-2.4679"; #5, 2.4982-2.4992".

Bearings—Thin type, removable, steel-backed, babbitt-lined. Upper and lower bearing halves alike. **Clearance**—.0003-.0023".

►**Rear Main Bearing Oil Seal Renewal**—*See Pontiac Shop Notes.*

Bearing Adjustment:—None (no shims). *Refer to Pontiac Shop Notes for Bearing Removal & Fitting.*

Replacement Bearings: Standard size & .001" Undersize.

End Thrust: Taken by #4 (rear intermediate) bearing. **Endplay**—.003-.008".

CAMSHAFT: Five bearing type with non-adjustable (two sprocket) chain drive.

Camshaft Removal & Timing Cover Oil Seal Servicing—*See Pontiac Shop Notes.*

Bearing Diameters—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1 29/32"; #5, 1⅞".

Bearings—Steel-backed, babbitt-lined bushings. *See Pontiac Shop Notes for bearing finished sizes.*

Clearance—.0015-.0025" (new).

End Thrust:—Steel thrust plate behind camshaft sprocket. Replace if worn. **Endplay**—.002-.005".

Timing Chain: Morse. Width ¾". Pitch ⅜". Length 21" or 56 links.

Timing Chain Installation—*See Pontiac Shop Notes.*

Camshaft Setting:—Sprockets marked. Mesh chain with sprockets turned so that '0' marks are adjacent and in line with a straightedge across shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 15/32"	.310-.311"	5.53"
Exhaust	1 11/32"	.310-.311"	5.53"

	Seat Angle	Lift	Stem Clearance
Intake	30°	19/64"	Free fit to .0006"①
Exhaust	45°	19/64"	Free fit to .0006"①

①Guides tapered (.0006" max. clearance at bottom).

Valve Guides:—Removable, tapered guides (.001" taper to the inch with greatest clearance at top). Use Tool J-2542 for removing valve guides.

Exhaust Guide Counterbore—Exhaust guides are counterbored to a depth of ¾". Use Tool Number J-2122 to clean out counterbore when servicing valves. This tool can be used to increase counterbore (from ½") if earlier type guides having this shallower counterbore are used.

►NOTE—On 1946 cars before Eng. No. 8-36900, exhaust guide counterbore was 31/32" deep. Any stocks of this type guide, Part No. 509041 (with 31/32" counterbore), are satsifactory for service. New exhaust guides will have the shallower (¾" plus 1/32". minus 0") counterbore depth.

IMPORTANT—Measure clearance at bottom end. Valve should just fall through guide of own weight when started in guide. NOTE—Guides should be cleaned with Tool KMO-122 valve guide cleaner (blade type). Service guides not tapered (install and ream to fit valve stems with Reamer P.R.131).

Valve Springs:—Intake and exhaust springs identical. Install with two closed coils at top and dampener on top of each spring. Use new dampeners whenever removed from spring. **Free Length**—2 9/16".

	Spring Pressure	Spring Length
Valved Closed	59½ lbs.	1 29/32"
Valve Open	101 lbs.	1 19/32"

Valve Lifters:—Barrel type, cast-iron. Guide holes reamed in block. Lifters furnished .005" oversize (use pilot reamer J-706-P when reaming holes to maintain alignment—valve guides must be removed, use Valve Guide Removing Tool J-2542).

Clearance—Free fit. Lifter should just move freely with finger touch.

VALVE TIMING

Tappet Clearance:—.011-.013" all valves (engine warm). Use .011" feeler as 'go' gauge, .013" as 'no go'. NOTE—Car manufacturer recommends .013" exhaust clearance for sustained high speed driving.

Valve Timing:—See Camshaft Setting above.

Intake Valves—Open 5° BTDC. Close 39° ALDC.

Exhaust Valves—Open 45° BLDC. Close 5° ATDC.

Valve Timing Check—With .015" tappet clearance #1 intake valve should open with #1 piston 5° or .0089" before top dead center with first straight line of flywheel mark '/IGN.ONE/' slightly past indicator in left front face of flywheel housing. Reset tappet clearance .011-.013" (warm).

LUBRICATION

Engine Oiling System: Pressure to main bearings, connecting rod lower bearings and piston pins (rifle-drilled rods), camshaft bearings, and timing chain. Oil pump mounted externally on right side of crankcase.

Crankcase Capacity—5 qts. (refill), 6 qts. (dry).

Normal Oil Pressure—35-45 lbs. at 40 MPH. with warm oil (10-30 lbs. idling).

Oil Pressure Regulator—On oil pump. Opens at 40 lbs. Non-adjustable. NOTE—Replace regulator spring if free length less than 2 5/16".

Oil Pump: Gear type. On right side of crankcase.

Oil Pump Servicing—*See Pontiac Shop Notes.*

Oil Cleaner: Pontiac precipitation type (in crankcase). **Servicing**—*See Pontiac Shop Notes.*

Oil Pressure Gauge: *AC ('46) 1506803, ('47) 1507056,* ('48) 1507221. Bourden Tube (not electric).

Crankcase Ventilation: Filter element in oil filler cap (inlet). Outlet pipe at valve compt. cover on right rear side of engine (cars with oil bath air cleaner equipped with 3-piece outlet pipe containing filter element).

Oil Filler (Crankcase Ventilator) Cap Servicing—Wash filter element and re-oil by dipping in engine oil when servicing air cleaner.

Filler cap must be installed with air opening in cap toward front of car and seam in line with groove in tube (may cause excessive oil consumption if installed backward).

Crankcase Ventilator Outlet Pipe—On cars with Oil-bath type Air Cleaner, special 3-piece ventilator outlet pipe used which has copper gauze type air cleaner in container section. Wash and re-oil filter element when servicing air cleaner.

COOLING

Cooling System: Pressure type with pressure valve (relief valve) in radiator filler cap. Positive circulation with water pump on front of engine and water distributing tube in cylinder block.
Capacity—19½ qts. (21¼ with Underseat Heater).
Pressure Valve AC No. 846740 (Radiator Filler Cap). Opens at 4 lbs. (3¼-4¼ lbs.).

Water Pump: Packless type with sealed ball bearing shaft. *See Water Pump Section for complete data.*
Removal—Drain cooling system, remove hose connection at pump, loosen belt adjustment and remove belt, take out water pump mounting bolts and lift pump out.
Belt Adjustment—*See Generator Belt Adjustment.*

Thermostat:—Harrison. In cylinder head outlet.
Setting—Starts to open 151° F. Fully open 173° F.

Radiator Removal: *See "Radiator" in Pontiac Special Data.*

Water Distributing Tube Servicing: *See "Cooling" in Pontiac Special Data.*

Temperature Gauge: AC Electric type.
Dash Unit—('46) 1511661, ('47) 1511874, ('48) 1512027.
Engine Unit—('46-47) 1511734, ('48) 1512015.
See Miscellaneous Section for complete data.

CLUTCH

Inland. Single Plate, "Diaphragm", dry disc type with Long Driven Member Model 9½CF-TS (except Taxicab), Model 10CF-CS (Taxicab).
See Clutch Section for complete data.

NOTE—Driven Members on 6 Cyl. and 8 Cyl. cars are same size but must not be interchanged. May be identified by stenciled notation on facings and color marking of torsional springs in hub as follows:

	Facing Mark	Spring Color
6 Cyl. Models	41-42 6 Cyl.	Orange & Dark Blue
8 Cyl. Models	41-42 8 Cyl.	Brown & Blue

Facings—Moulded type, 2 required. I. D. 6" (All Models); O. D. 9½" (except Taxicab), 10" (Taxicab); Thickness ⅛".

Pedal Adjustment:—Free travel ⅞-1⅛" (adjusting nut on link at clutch fork). Pedal height to lower face of pedal should be 4¾" (Torpedo), 5 3/16" (Streamliner). Adjust by means of stopscrew at lower end of pedal arm.

►**1946 Clutch Pedal Shaft Installation Change**—*See Pontiac Shop Notes for new type mounting (used on later 1946 cars) to correct movement of clutch or brake pedal when other pedal is depressed.*

Removal: Remove Transmission (see Transmission Removal below), remove clutch bearing support spring washer (in rear face of clutch housing), remove clutch housing bottom cover and control shaft inner bracket. Remove release bearing support and release bearing (see Clutch Release Bearing & Support data), tapping the support from inside the clutch housing to aid in removing (CAUTION—avoid striking tubular portion of support). Mark flywheel and clutch cover (to insure re-installation in same position to maintain balance),

remove clutch cover mounting bolts evenly, move clutch assembly away from flywheel at bottom and withdraw Driven Member, lower cover assembly and withdraw it through bottom of housing.

►**Removal of Excess Release Bearing Lubricant to correct clutch sticking**—If recess in bore on release bearing over-lubricated when clutch assembly installed, excess lubricant may be found causing clutch sticking. Clean our excess lubricant found at the following points: transmission drive gear, driven plate hub, clutch facings, pressure plate and and cover assembly, release bearing support tube, fulcrum points of release fork, and recess in bore on release bearing (do not wash bearing, bearing is "sealed" type). Lubricate clutch parts exactly as described under Installation Note following to avoid above condition.

Clutch Installation Note—Install new felt oil seal against shoulder ahead of oil slinger retaining ring on Transmission Main Drive Gear (will bear against flared end of release bearing support when installed). This supersedes original position (on 1946 cars) where seal fitted in recess on Drive Gear. Lubricate seal with engine oil before transmission installed. Coat entire length of outer diameter of release bearing support tube with grease. Lubricate release fork fulcrum points with a very light coat of grease. Apply light coat of Lubriplate on main driving gear splines. Use new paper gasket between support flange and clutch housing, make certain that flange is not bent or distorted (will cause misalignment of transmission).

Clutch Release Bearing & Support: *See Pontiac Shop Notes for description.*

TRANSMISSION

Own Make. All helical gear. Constant-mesh synchro-mesh (Second & High), sliding gear (Low & Reverse). *See Transmission Section for complete data.*

Transmission Control: Pontiac "Safety-shift" remote control type with gearshift lever on steering column. *See Transmission Section for complete data.*

Removal:—Disconnect speedometer cable, gearshift selector and control rods from transmission. Disconnect rear universal (wire trunnion) and pull out propeller shaft. Remove upper transmission mounting screws, install guide pins (J-851), remove lower screws, pull transmission to rear and lower out of car.

Installation Note—Use guide pins installed in two upper transmission mounting holes to assist in sliding transmission straight forward into place (to avoid damage to clutch release bearing support).

NOTE—These guide pins may be made from ½-13 American National Thread bolts by cutting heads off and reducing over-all length to 4¼".

HYDRA-MATIC DRIVE

OPTIONAL EQUIPMENT

Own Make. Consists of fluid coupling and 4 speed automatic transmission.
See Transmission Section for complete data including Testing & Trouble Shooting.

Lubrication—Check fluid level in transmission every 2000 miles (lubrication period). Drain and refill every 25,000 miles. Use only GM Hydra-Matic Drive Fluid.

Capacity—11 qts. (drain oil pan and torus cover and refill). 12 qts. (drain, disassemble, assemble transmission and refill).

Checking Fluid Level—Roll back floor mat, remove cover on floor board, set hand brake and start engine, set control lever in "DR" position, allow to run about 2 minutes. Remove indicator, wipe dry, then return and check level of fluid with indicator. Add fluid until level is at "FULL" mark.

►*CAUTION—Always check oil level when oil is hot, engine idling, hand brake tightly set and control lever in "DR" position.*

►**Oil Level Indicator Change**—A new indicator, Part No. 8605800 (stamped on blade—earlier type not marked) reduces capacity approx. 1 pint providing slightly lower fluid operating level to reduce fluid foaming when oil is hot.

Hydra-Matic Linkage Adjustment—*See Hydra-Matic Drive article in Transmission Section.*

Removal: *See Hydra-Matic Drive article in Transmission Section.*

UNIVERSALS

Mechanics Model 2CR. Roller bearing type, 2 used.

►**1947-48 CAUTION**—Rear universal nut controls rear axle pinion bearing "pre-load" (must be adjusted whenever nut is loosened). *See Pontiac Rear Axle article in Rear Axle Section for complete data.*

NOTE—Driveshaft is one-piece type (slip joint on transmission mainshaft, ahead of front universal).

REAR AXLE

1946 Type—Same as 1942. Hypoid gear, semi-floating type. This type axle has three setscrews equally spaced around pinion housing.
See Rear Axle Section for complete data.

1947-48—New hypoid gear, semi-floating type. Design similar to 1946 type except that pinion is mounted on two taper roller bearings and companion flange nut controls pinion bearing "pre-load." No setscrews are used.

►CAUTION—Rear universal companion nut controls pinion bearing "pre-load".
See Rear Axle Section for complete data.

Ratios—As shown. Axles may be identified by paint mark on end of right hand axle shaft.

Model	Ratio	Ident. Paint Mark
Torpedo Std.	4.1-1	Green
Streamliner Std.	4.3-1	White
Hydra-Matic (All)	3.63-1	Violet
All (Econ.)	3.9-1	Red
All (Heavy Duty)	4.55-1	Yellow

Backlash—.003-.012" (new), slightly over .012" (worn).

Removal:—Disconnect rear universal (wire trunnions, do not disengage spline joint at transmission), remove axle shafts, carrier flange mounting screws and carrier.

►**1947-48 CAUTION**—Rear U-joint companion flange nut controls pinion bearing "pre-load" (must be adjusted whenever nut is loosened).

Axle Shaft Removal:—Remove wheel, brake drum, 4 backing plate bolt nuts, static collector, and loosen bearing retainer (do not move backing plate or brake line may be damaged). Pull shaft with puller J-942 (do not drag axle shaft on oil seal).

Wheel Bearing Adjustment—None.

SHOCK ABS RBERS

Delco Model 1947-C,D (front), Model 1044-V (rear). Hydraulic, double acting (front), direct (rear).

FRONT SUSPENSION

Front Suspension: Independent, linked parallelogram type with coil springs.
See Front Suspension Section for complete data.

Kingpin Inclination—5½-6° crosswise.

Caster—Negative ¾°. Limits Neg. ½° to Neg. 1°.

Camber—0° preferred. Limits Neg. ¼° to Pos. ¼°.

Toe In—0-1/16". Adjust tie rod tubes equally.

Steering Geometry—Inner wheel 23° ± ½°. Outer 20°.

STEERING GEAR

Saginaw. Worm-and-Roller type.
See Steering Gear Section for complete data.

BRAKES

Service: Bendix Hydraulic, Duo-Servo, Single Anchor type with eccentric adjustment. Hand lever applies rear service brakes.
See Brake Section for complete data.

►IMPORTANT SERVICE NOTE—**Brake Drums**—Two different makes are used: 1) Kelsey-Hayes type can be identified by one-piece stamping and flange having a sharp edge; 2) Motor Wheel type consisting of two stampings and rolled flange. Each pair of drums (on opposite sides of car) front or rear must be of the same type.

Brake Drum Part Numbers	Front Wheel Left	Front Wheel Right	Rear Wheel
Kelsey-Hayes	507371	507370	505300
Motor Wheel	509221	509220	409176

Drums—Pressed steel with alloy iron liner. Diameter 11".

Clearance—.010" at heel and toe of each shoe.

Lining—Moulded. Width per wheel 2" (front), 1¾" (rear). Thickness 3/16". Length per shoe 9 11/32" (primary), 11 31/32" (secondary).

Braking Power—56% Front, 44% Rear.

Master Cylinder Filling Note—New cars shipped from the factory have master cylinder filled to level ⅞" below top of filler neck and this level is satisfactory for service (cylinders were filled to ½" below top).

Hand Brake: See Service Brakes above.

NoRol: Optional. *See Brake Section for complete data.*

MISC. MECHANICAL

Convertible Top Control: Hydro-lectric type (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders).
See Miscellaneous Section for complete data.

HOOD & HOOD LOCK ADJUSTMENT: *See Pontiac Special Data.*

FRONT END SHEET METAL ASSEMBLY REMOVAL: *See Pontiac Special Data.*

MODEL IDENTIFICATION

SERIAL NUMBER: On left front door hinge post.

1949 Numbers—P6RS-1001 Up .....Synchro-mesh Tr.
P6RH-1001 Up.....with Hydra-Matic Drive
1950 Numbers—P6TS-1001 Up.....Synchro-mesh Tr.
P6TH-1001 Up.....With Hydra-Matic Drive

▷*NOTE*—First prefix letter indicates Assembly Plant (below).

▷**Assembly Plant Prefix Letter. P**—Pontiac, Mich., **C**—South Gate, **L**—Linden, **W**—Wilmington, **K**—Kansas City, **A**—Atlanta, **F**—Framingham.

ENGINE NUMBER: Same as Serial Number. Stamped on boss on left upper front corner of engine block.

TUNE-UP

COMPRESSION PRESSURE: 118 to 135 lbs. at 200 RPM (Std. 6.5-1 Head). 135 to 153 lbs. at 200 RPM (Optl. 7.5-1 Head).

VACUUM READING: *18-20" steady* idling at 7-8 MPH. or 365-385 RPM. on Hydra-Matic cars.

FIRING ORDER: 1-5-3-6-2-4. See diagram.

SPARK PLUG GAPS: .025". Limits .023-.028".
Plugs—AC No. 45. 14 mm. Metric.

DISTRIBUTOR: Breaker Gap—.022" (new points), .020" (used points).

▷*CAUTION*—Dial indicator for setting point gap recommended by car manufacturer. ***Do not use feeler gauge for setting used points.***
Cam Angle—35°. Test limits with .022" gap 31-37°. ***See "Delco-Remy Cam Angle" in Electrical Equipment Section.***
Breaker Arm Spring Tension—17-21 ounces.
Automatic & Vacuum Advance—*See Ignition.*
Condenser Capacity—.18-.23 microfarad.

IGNITION TIMING: 6° BTDC (initial setting—See Gaselector Setting).
Timing Procedure—*See Ignition Timing.*
Timing Mark—First (6°) line on vibration dampener aligned with pointer on chain case cover (2nd line 2° or 3° BTDC, 3rd line TDC).
Gaselector Setting—Set for barely audible ping when accelerating at 20-30 MPH., full throttle.

CARBURETION: Carter WA-1.
Idle Setting—Set idle adjusting screw 1-1¾ turns open. Turning screw out gives richer mixture.
Idle Speed (standard)—450-475 RPM. or 7-8 MPH.
Idle Speed (Hydra-Matic)—365-385 RPM.
Float Level—7/16" from machined projection on cover (inverted) to top of soldered seam at free end.
Accelerating Pump—Lower hole Normal Setting, Upper hole max. charge, Inner hole min. charge.
Choke Setting: Coil housing 3 Points Rich.

CARBURETION: Rochester Model BC.
Idle Setting—Set idle adjusting screw 1½ turns out for preliminary setting. Adjust further for smooth engine performance. Turning screw out gives richer mixture.
Idle Speed (standard)—450-475 RPM. or 7-8 MPH.
Idle Speed (Hydra-Matic)—365-385 RPM.
Float Level—1½" from gasket to top of float seam with bowl cover inverted and needle valve seated. ***CAUTION—Do not damage lower seal on heat suction tube when removing bowl cover.***
Accelerating Pump—No adjustment.
Choke Setting—Index mark on choke cover centered on long center scale mark on air horn casting.

Fuel Pump Pressure: 4-4¾ lbs.

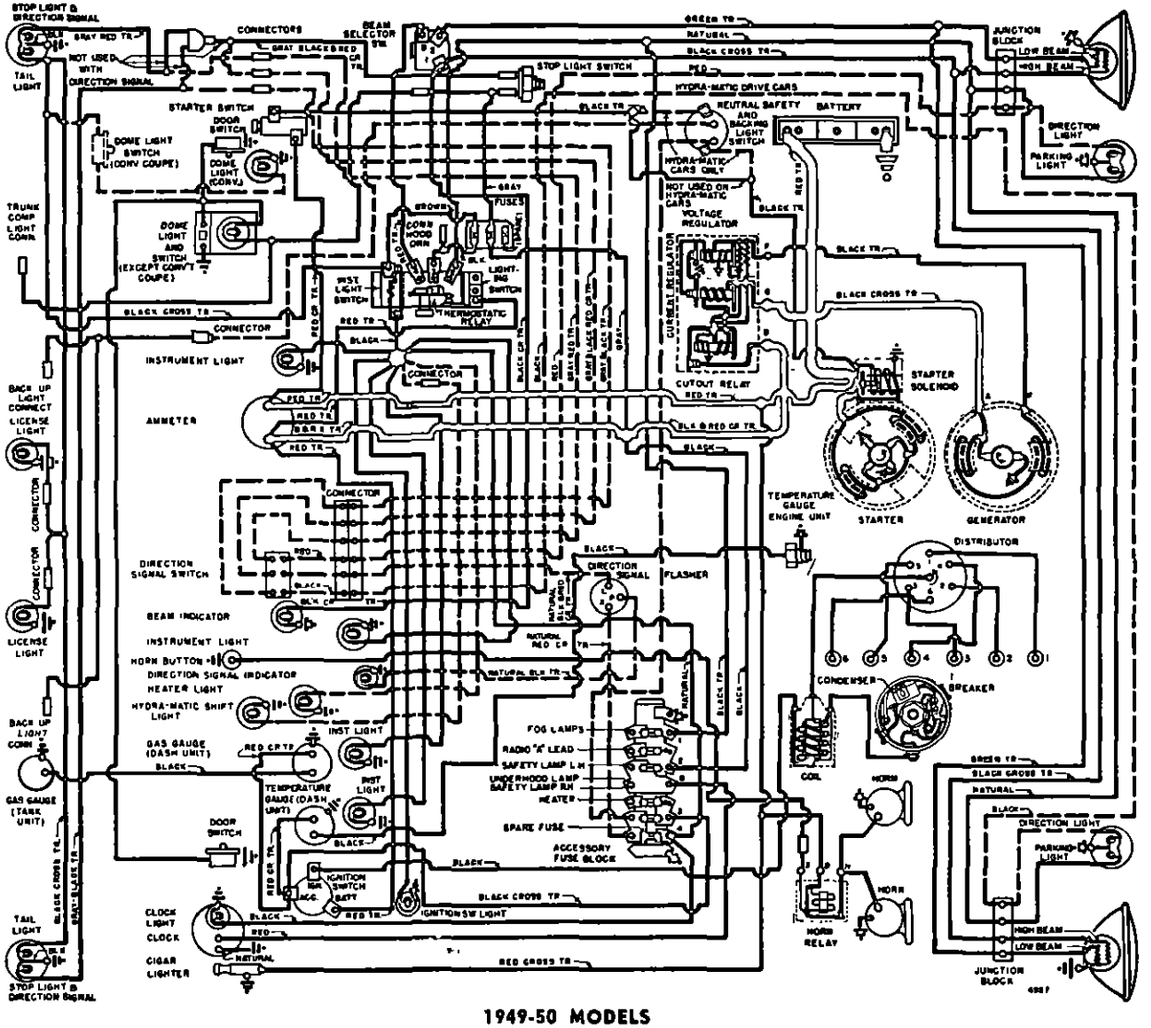
MANIFOLD HEAT CONTROL: Thermostatic coil type, non-adjustable (fixed anchor pin). Counterweight should be securely clamped to shaft in vertical position with valve closed (cold position).
NOTE—Valve shaft bushings are Stainless Steel.

VALVE TAPPET CLEARANCE: .011" to .013", Hot. .011" "Go" gauge, .013" "No Go" gauge.
High Speed Setting—.013" EXH. Hot.

▷**Cold Setting with Engine Stopped**—.012" to .014" Cold (room temperature). *CAUTION*—Check setting after engine warmed-up for limits of .011" to .013".

▷**NOTE**—A removable plate is installed in front fender skirt so tappets are accessible for adjustment.
Valve Timing Check—*See Valve Timing.*

IGNITION



▷*IGNITION HIGH TENSION CABLE CAUTION*—Special non-metallic conductor cables (with built-in suppression resistance). Marked "RADIO-4000-GM." ***See "Ignition Notes" in Pontiac Special Data for cable installation data.***

▷*CAUTION*—This high-resistance cable must not be used on 1949 cars with "High Tower" resistor type distributor caps.

IGNITION SWITCH: Delco-Remy No. (1949) 1116461, *(1950) 1116464.*
Ignition Lock—Briggs & Stratton or Delco-Remy.

COIL: Delco-Remy No. 1115380. Mounted on engine.
Ignition Current—2.5 amperes idling, 4.5 stopped.

CONDENSER: Delco-Remy No. 1869704.
Capacity—.18-.23 microfarad.

1949-50 MODELS

DISTRIBUTOR: Delco-Remy No. (1949) 1110219, (1950) 1110222. Automatic and vacuum advance type with "Center-Bearing" breaker plate.

►*CAUTION*—"High Tower" Distributor caps with built-in resistor used on 1949 distributor. "Low Tower" caps without resistor used on 1950-51 distributor. Never use a "High-Tower" cap with 1950 "High-Resistance" secondary cables.

►**Breaker Plate Bearing Assembly**—Plate rotates on 3 bakelite buttons on support plate with spring tension adjustment (shim washers) on underside of support plate. Pull required to move plate should be 8 oz. min., 16 oz. max. with breaker plate assembly out of housing.
See "Delco-Remy Center-Bearing Breaker Plate Distributor" in Electrical Equipment Section.
Breaker Gap—.022" (new points), .020" (used pts.).

►*CAUTION*—Dial indicator for setting point gap recommended by car manufacturer. *Do not use feeler gauge for setting used points.*
Cam Angle—35°. Test limits with .022" gap 31-37°.
See "Delco-Remy Cam Angle" in Electrical Equipment Section.
Breaker Arm Spring Tension—17-21 ounces.
Rotation—Counter-clockwise viewed from above.

Automatic Advance

Degrees	Distr.	R.P.M.	Degrees	Eng.	R.P.M.
Start		300	2		600
8.25		1100	16.5		2200
8.5		1400	17		2800
14		2050	28		4100

Gaselector—Manual adjustment at distributor. 10° advance or retard. See Ignition Timing.

Vacuum Spark Control: Delco-Remy (part of distr.).

Vacuum Advance—1110219

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	7-9"
6.5	13½°	13-16"

Vacuum Advance—1110222

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	7-9"
7½°	15°	14.5-16.5"

IGNITION TIMING

Std. Setting	Flywheel Degrees	Piston Pos.
All Engines①	6° BTDC	.0138" BTDC.

①—Regular Fuel—Std. Hd. Ethyl Fuel—7.5-1 Hd. High Comp. Head Engines set 3° BTDC at factory.
Timing Mark—Three lines on vibration dampener. First (6°) line on vibration dampener aligned with pointer on chain case cover (2nd line 2° or 3° BTDC, 3rd line TDC).
Timing (with Timing Light)—Loosen gaselector indicator arm-to-block clamp bolt, set arm at 0, tighten bolt. Connect Timing Light (KMO318) to No. 1 spark plug, idle engine. Loosen advance arm clamp bolt, rotate distributor until timing light shows pointer at timing mark on vibration dampener which indicates 6° BTDC (1st line). Tighten clamp screw. Check Gaselector Setting (see below).
Gaselector Setting—Set to give best performance without spark knock or ping for fuel used. Marked "ADV" and "RET", adjust according to these marks.

CARBURETOR

Carter WA-1, No. 717S.....**Synchro-Mesh Trans.**
Carter WA-1, No. 718S.....**Hydra-Matic Drive**
1¼" single barrel downdraft types with Carter Climatic Control.
Casting No. on Flange—(717S) 388, (718S) 592.
See Carburetor Section for complete data.
Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up.*
Metering Rod & Jet—*See Carter Jet Table in Carburetor Section.*
NOTE—No "throttle cracker" used.
Hydra-Matic Throttle Linkage Adjustment: *See Pontiac Hydra-Matic Drive in Transmission Section.*
Fast Idle: Carter Single Barrel Carburetor type.
Setting—⅝" clearance between choke valve and air horn (Gauge T109-85) with throttle valve closed and stopscrew against (not on) first step of fast idle cam. Adjust by bending connector link at lower offset (use Tool T109-41).
See Carburetion Equipment Section for complete data.
Automatic Choke: Carter Climatic Control (single barrel carburetors).
Setting—3 Points Rich.
See Carburetion Equipment Section for complete data.

CARB. EQUIPMENT

Air Cleaner: AC No. 1529871 oil-wetted type (std.), No. 1544486 heavy duty oil-bath type (optional).
Filter Element—AC #1 (std.), #21 (heavy duty).
Servicing—Clean and re-oil std. cleaner, or on heavy duty clean and refill reservoir with 1 pint SAE 50 (20W below freezing) oil, at 10,000 mile intervals (twice yearly) or more often if required.
Fuel Pump: (Std.) AC No. 1537352. (Optional) AC No. 1537317, (Fuel & Vacuum).
Replacement Pump—AC-539.
Pressure—4 to 4¾ lbs.
See Carburetion Equipment Section for complete data.
Gasoline Gauge: AC Electric type.
Dash Unit—(1949-50) AC No. 1517117.
Tank Unit—(1949) AC No. 1517083. (1950) AC No. 1517249. Sta. Wgn. AC No. 1517122.
See Carburetion Equipment Section for complete data.

BATTERY

Delco Type 15E4. 6 volt, 15 plate 100 ampere hour capacity.
Grounded Terminal—Negative (—) to engine.
Location—On left side of engine compartment.
Police Battery—Delco Type 19E4. 6 volt, 19 plate, 130 ampere hour capacity.

STARTER

LHD.....**Delco-Remy 1107079. Arm. No. 1867897.**
RHD.....**Delco-Remy 1107934. Arm. No. 1867897.**
►*CAUTION—LHD starter operates whenever pushbutton depressed (and shift lever in neutral on Hydra-Matic)*
Drive—Overrunning clutch (solenoid pinion shift).
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—24-28 ozs. each.

Performance Data—1107079

Torque	RPM	Volts	Amperes
0 ft. lbs.	5500	5.65	70
11 ft. lbs.	Lock	3.25	550

Performance Data—1107934

Torque	RPM	Volts	Amperes
0 ft. lbs.	5500	5.65	70
12 ft. lbs.	Lock	3.15	570

Removal: Flange mounted at left front of flywheel housing. To remove, take out mounting screws.
Starting Switch (1107079 Starter): Delco-Remy Solenoid 1118140 (no relay used) mounted on starter and controlled by Push Button Switch No. 1996037 and Neutral Safety Switch No. 1997846 (Hydra-Matic cars).
CAUTION—Overrunning clutch pinion clearance must be adjusted if solenoid removed from starter.
See Electrical Equipment Section for complete data.
(1107934)—Delco-Remy Solenoid 1118102 on starter and controlled by Relay No. 269-G and Pushbutton Switch No. 1996039 (and Neutral Safety Switch 1997846 on Hydra-Matic Drive cars).
See Electrical Equipment Section for complete data.
Neutral Safety Switch Adjustment—*See Pontiac Hydra-Matic Drive in Transmission Section.*

GENERATOR

Year	Generator Delco-Remy No.	Armature Delco-Remy No.
1949-50	1102711	1879002
Police	1106403	1880252

Two brush types with voltage and current regulation.

Performance Data—Cold

	Amperes	Volts	R.P.M.
1102711	30①	8.0	1750
1106403	35	8.0	1040

①—Not maximum output. See Current Regulator.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—28 ozs.
Field Current—(1102711) 1.75-1.9 amperes at 6.0 volts. (1106403) 1.77-2.0 amperes at 6.0 volts.
Belt Adjustment: Belt deflection or sideplay midway between generator & pump pulley should be 1½".

REGULATOR

Year	Regulator No.	For Generator No.
1949-50 (Std.)	1118301	1102711
Police	1118352	1106403

►*NEW "1118300 SERIES"* regulators have screw adjustment for settings and single regulator springs.
See Electrical Equipment Section for complete data.
CAUTION—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging or High Voltage.

Cutout Relay

Cuts In—5.9-6.8 volts hot (set to 6.4 volts hot).
Contact Gap—.020" (same for both contacts).
Air Gap—.020" (with contacts just closed).

Voltage Regulator

Setting—7.0-7.7 volts hot (set to 7.4 volts hot). Regulator is over-compensated for temperature. Should be checked with cover in place and hot.
Air Gap—.075" with armature pressed down to point where contacts are just touching.
Checking & Adjustment—*See Elec. Equip. Section.*

Current Regulator

Setting (1118301).....32-40 amps. hot (set at 36 hot)
Setting (1118352).....33-37 amps. hot (set at 35 hot)
Air Gap—.075" with armature pressed down to point where contacts are just touching.
Checking & Adjustment—*See Elec. Equip. Section.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

LIGHTING

Headlamps: Guide "Sealed Beam" type.
See Electrical Equipment Section for complete data.
Adjustment—Aim upper beam straight ahead (hot spot centered 3" below lamp center height at 25 ft.).
Beam Indicator—At speedometer. Lighted when upper beam in use.

Directional Signal: *See Electrical Equipment Section.*
Direction Signal Indicator—Red pilot light on speedometer dial. Flashes when signal in use.

Switches

Lighting—Delco-Remy No. 1995032.
Instrument—Part of lighting switch. Rheostat operated by turning Light Switch Knob.
Beam Selector—Delco-Remy No. 1997008.

MISC. ELECTRICAL

THERMOSTATIC CIRCUIT BREAKER: Delco-Remy. On back of light switch (part of switch assy.). Contacts remain closed with 30 amperes but open in 3 minutes with 42 amperes at 70°F. Not adjustable.

MAIN FUSE BLOCK: On left hand engine side of dash. Two fuses (plus 1 spare) as follows:
Tail Lamp—SFE 14 ampere. In gold colored fuse holder. Protects rear license, instrument, ignition key, and clock lamps (dome on convertible).
Stop Lamp—SFE 14 ampere. In gray colored fuse holder. Protects trunk light and dome light (except on Convertible).

ACCESSORY FUSE BLOCK: Six fuses mounted on fuse block on dash behind instrument panel. All fuses are 20 ampere except Radio fuse which is 14 ampere. (Spare Radio fuse on main fuse block on engine side of dash). Fuse identification printed inside fuse block cover.

HORNS: Delco-Remy No. 1999645 (Low Note). No. 1999646 (High Note). Vibrator types operated by relay.

Type	Current (at 6 volts)	Air Gap
Low Note	19-21 amperes	.047-.052"
High Note	18-20 amperes	.039-.044"

Horn Relay: Delco-Remy No. 1116775.
Contact Gap—.027". **Air Gap**—.014" (closed).
Contacts Close—2.75-4.0 volts (set to 3.5 volts).

ENGINE

ENGINE SPECIFICATIONS: Own. Six Cyl., "L" head.
Bore—3 9/16".
Stroke—4". **Displ.**—239.2 cu. ins. **Rated HP**—30.4.
Developed Horsepower—90 at 3400 RPM. (6.5-1 Head). 100 at 3400 (7.5-1 Head).
Compression Ratio—Std. 6.5-1. Optl. 7.5-1, iron hds.
Compression & Vacuum Reading—*See Tune-Up.*

ENGINE & OIL PAN REMOVAL: *See Pontiac Special Data.*

ENGINE FRONT MOUNTING REMOVAL: *See "Engine Mounting" in Pontiac Special Data.*

TIGHTENING TORQUES: *See Pontiac Special Data.*

CYLINDER HEAD: Tightening Torque & Cylinder Head Diagram—*See Pontiac Special Data.*

PISTONS: Chrome nickel alloy, electro-plated type. Pistons have 20 oil drain holes in oil ring groove.

▷*PISTON REPLACEMENT CAUTION—Late 1952 type pistons (with piston pin secured in piston with lock ring) can be used in 1949-50 engines in COMPLETE SETS ONLY.*
Length—3.572-3.582". **Weight**—27.1 ozs.
Removal—Pistons and rods removed from above.
Clearance—Top Land .015-.027". Skirt .002".

Fitting New Pistons: Insert .0015" X ½" feeler between piston and cylinder wall. Pull to withdraw feeler must be 10-20 lbs. **Taper and out-of-round limits**—Piston .0005". Cylinder .0005" max. new.

Replacement Pistons: *See Pontiac Special Data.*

PISTON RINGS: Two tapered-face compression rings above pin, one slotted oil control ring below pin. *NOTE*—Rings are cadmium-plated or tin-plated.

Ring	Width	End Gap	Side Clearance
Compr. (#1, 2)	3/32"	.007-.012"	.0015-.003"
Oil (#3)	3/16"	.007-.012"	.001-.0025"

Installing Compression Rings—Mark "TOP" up.

Replacement Rings: .005", .010", .020", .030" Oversize. *See Pontiac Special Data.*

PISTON PIN: Diameter—.9369-.9375". **Lgth**—3 1/16". *Pin is shot-peened type (shot-peened before final grinding and lapping).* Pin is locked in one piston boss by self-locking lockscrew and opposite end slotted to permit piston pin movement.
Pin Fit in Rod Bushing—.0004-.0006" clearance.

Piston Pin Removal & Installation: *See "Piston Pins" in Pontiac Special Data.*

Replacement Pins:—.001" (red & brown), .003" (red), .005" (blue) oversize. Paint marked on end of pin.

CONNECTING ROD: Weight 37 ozs. Length 7 9/16".
Crankpin Journal Diameter—2.1237-2.1247".
Lower Bearing—Thin type, interchangeable, steel-backed, babbitt-lined type.
Clearance—.0001-.0021". **Sideplay**—.007-.012".

Bearing Adjustment: None. Replace bearings. *See "Connecting Rods & Bearings" in Pontiac Special Data.*

Replacement Bearings: Standard size & .001" Undersize. *NOTE*—Bearings have small tongue which must engage groove in rod and cap.

Installing Rods: Not offset (install either way).
NOTE—Rods and bearing caps marked to insure correct reassembly (marks must be together). These marks do not indicate cylinder in which rod used.
CAUTION—Keep each connecting rod and its bearing cap together.

CRANKSHAFT: Four bearing type with integral counterweights and vibration dampener on forward end.

Vibration Dampener Removal & Installation: See "Vibration Dampener" in Pontiac Special Data.

▷**Flywheel to Crankshaft Bolts (Synchro-Mesh Transmission)**—¾" hex head bolts (No. 508463) or 1" hex head bolts (No. 510832) are used. Either type can be used for replacement but head sizes must be alike on all bolts or engine balance will be destroyed.
Journal Diameters—#1, 2.4982-2.4992"; #2, 2.5294-2.5304"; #3, 2.5919-2.5929"; #4, 2.6232-2.6242".
Bearings—Thin type, removable, steel-backed, babbitt-lined. Upper and lower bearing halves alike.
Clearance—.0003-.0023".
Rear Main Bearing Oil Seal Renewal—*See Pontiac Special Data.*

Replacement Bearings: Standard & .001" Undersize.

End Thrust: At #3 (rear intermediate) bearing.
Endplay—.003-.008".

CAMSHAFT: Four bearing, non-adjustable chain.

Camshaft Removal & Bearing Installation: *See "Camshaft & Bearings" in Pontiac Special Data.*
Clearance—.0015-.0025" (new).

End Thrust:—Steel thrust plate behind camshaft sprocket. Replace if worn. **Endplay**—.003-.007".

Timing Chain: Morse. Width 1". Pitch ⅜". Length 21" or 56 links. *NOTE:* 1951 cars equipped with a timing chain bumper to eliminate vibration.
Timing Chain Oil Cover Seal Installation—*See "Timing Chain" in Pontiac Special Data.*
Timing Chain Replacement—*See "Timing Chain" in Pontiac Special Data.*

Camshaft Setting:—Sprockets marked. Mesh chain with sprockets turned so that '0' marks are adjacent and in line with a straightedge across shaft centers.

VALVES:	Head Diam.	Stem Diam.	Length
Intake	1 19/32"	.310-.311"	5.718"
Exhaust	1 15/32"	.310-.311"	5.718"

	Seat Angle	Lift	Stem Clearance
Intake	30°	19/64"	Free fit to .0006"①
Exhaust	45°	19/64"	Free fit to .0006"①

①——Tapered (max. clearance at bottom .0006").

Valve Guides: Guides have tapered hole (.001" taper to inch—greatest clearance at top). Exhaust guides counterbored at top to depth of ¾".
Checking Valve Clearance in Guide—Clean guide with tool KMO122, clean counterbore in exhaust guide with Counterbore Cleaner J-2122. Valve should just fall through guide of own weight.
Installing Guides—Use Valve Guide Remover J-2542 to remove and install guides. Drive new guide down in block (counterbored end up on exhaust guides) until upper end 29/32" below top edge of valve seat. Ream guide with PR-131 tapered reamer and finish counterbore with Counterbore Cleaner J-2122 for correct clearance (see above).

▷*CAUTION*—Guides furnished with straight hole which must be taper reamed.
NOTE—Eight cylinder intake valve guide may be used on six cylinder cars.

Valve Springs:—Intake and exhaust springs identical. Install with two closed coils at top and dampener on top of each spring. Use new dampeners whenever removed from spring. **Free Length**—2 9/16".

	Spring Pressure	Length
Valve Closed	56-63 lbs.	1 29/32"
Valve Open	97-105 lbs.	1 19/32"

Valve Lifters:—Barrel type, cast-iron. Guide holes reamed in block. Lifters furnished .005" oversize (use pilot reamer J-706-P when reaming holes to maintain alignment—valve guides must be removed, use Valve Guide Removing Tool J-2542).
Clearance—Free fit. Lifter should just move freely with finger touch.

VALVE TIMING

Tappet Clearance: .011" to .013", All Valves, Hot. .011" "Go" gauge, .013" "No Go" gauge.
High Speed Setting—.013" EXH. Hot.
Cold Setting with Engine Stopped—*.012" to .014"* Cold (room temperature). *CAUTION*—Check setting after engine warmed-up for limits of .011" to .013".

▷**NOTE**—A removable plate is installed in front fender skirt so tappets are accessible for adjustment.

Valve Timing:—*See Camshaft Setting above.*
Intake Valves—Open 5° BTDC. Close 39° ALDC.
Exhaust Valves—Open 45° BLDC. Close 5° ATDC.
Valve Timing Check—With .015" tappet clearance #6 intake valve should open with #6 piston 5° or .0096" before top dead center with first straight line of dampener mark '/IGN.ONE/' slightly past pointer on left front face of chain cover. Reset tappet clearance .011-.013" (warm).

LUBRICATION

Engine Oiling System: Pressure to main bearings connecting rod lower bearings and piston pins (rifle-drilled rods), camshaft bearings, and chain.
Crankcase Capacity—5 qts. (refill), 6 qts. (dry).
Normal Oil Pressure—35-45 lbs. at 40 MPH. with warm oil (10-30 lbs. idling).
Oil Pressure Regulator—On oil pump. Opens at 40 lbs. Replace spring if free length less than 2 5/16".

Oil Pump: Gear type. On right side of crankcase.

Oil Cleaner: Precipitation type (in crankcase).

Oil Pressure Gauge: AC No. 1507535. Not electric.

Crankcase Ventilation: Filter element in oil filler cap (inlet). Outlet pipe at valve compt. cover on right rear side of engine (cars with oil bath air cleaner use 3-piece outlet pipe containing filter element). Wash filter element and re-oil by dipping in engine oil when servicing air cleaner.
CAUTION—Filler cap must be installed with air opening in cap toward front of car and seam in line with groove in tube (may cause excessive oil consumption if installed backward).
Crankcase Ventilator Outlet Pipe—On cars with Oil-bath type Air Cleaner, special 3-piece ventilator outlet pipe used with copper gauze air cleaner.

COOLING

Cooling System: Pressure type with pressure valve and vacuum valve (relief valve) in filler cap.

►*1951 WATER PUMP PRODUCTION CHANGE—Water pump changed to include lubrication hole. Earlier type pumps can be changed to lubricated type. See "Pontiac Water Pumps" in Water Pump Section.*
Capacity—18½ qts.
Pressure Valve—AC No. 850549 Filler Cap. Opens at 7 lbs. (6¼-7½ lbs.).

Water Pump: Packless, sealed ball-bearing shaft.
See Water Pump Section for complete data.
Removal—Drain cooling system, remove hose connection at pump, remove belt, take out water pump mounting bolts and lift pump out.
Belt Adjustment—*See Generator Belt Adjustment.*

Thermostat:—Harrison. In cylinder head outlet.
Setting—Starts to open 148-156°F. Fully open 176°F.

Radiator Removal: *See "Radiator" in Pontiac Special Data.*

Temperature Gauge: AC Electric type.
Dash Unit—AC No. (1949) 1512126, (1950) 1512287.
Engine Unit—AC No. 1512015.
See Miscellaneous Section for complete data.

CLUTCH

Inland. Single Plate, "Diaphragm", dry disc type with Long Driven Member Model 9½CF-TS (except Taxicab), Model 10CF-CS (Taxicab).
See Clutch Section for complete data.

►**Heavy Duty Clutch Note**—No separate 1950 Heavy Duty Clutch used. Std. 8 Cyl. clutch cover assembly used with special 6 Cyl. 10" driven member.
See Clutch Section for complete data.
Facings—Woven type, 2 required. I.D. 6" (All O.D. 9½" (exc. Taxi), 10" (Taxi), Thickness ⅛".

Pedal Adjustment:—Free travel ⅞-1⅛" (adjusting nut on link at clutch fork).

Removal: Remove Transmission (see Transmission Removal below), remove clutch bearing support spring washer (in rear face of clutch housing), remove clutch housing bottom cover and control shaft inner bracket. Remove release bearing support and release bearing (see Clutch Release Bearing & Support data), tapping the support from inside the clutch housing to aid in removing (*CAUTION*—avoid striking tubular portion of support). Mark flywheel and clutch cover (to insure re-installation in same position to maintain balance), remove clutch cover mounting bolts evenly, move clutch assembly away from flywheel at bottom and withdraw driven member, lower cover assy. out.

►**Clutch Sticking Correction (Removal of Excess Release Bearing Lubricant):** If recess in bore on bearing over-lubricated when clutch assembly installed, excess lubricant may be found causing clutch sticking. Clean out excess lubricant found at the following points: transmission drive gear, driven plate hub, clutch facings, pressure plate and cover assembly, release bearing support tube, fulcrum points of release fork, and recess in bore on release bearing (do not wash bearing, bearing is "sealed" type). Lubricate clutch parts exactly as described under Installation Note following:
Clutch Installation Note—Install new felt oil seal against shoulder ahead of oil slinger retaining ring on Transmission Main Drive Gear (will bear against flared end of release bearing support when installed). Lubricate seal with engine oil before transmission installed. Coat entire length of outer diameter of release bearing support tube with grease. Lubricate release fork fulcrum points with a very light coat of grease. Apply light coat of Lubriplate on main driving gear splines. Use new paper gasket between support flange and clutch housing, make certain that flange is not bent or distorted (will cause misalignment of transmission).

Clutch Release Bearing & Support: *See Pontiac Special Data for description.*

TRANSMISSION

Own Make. All helical gear. Constant-mesh synchro-mesh (Second & High), sliding gear (Low & Reverse). *See Transmission Section for data.*

Transmission Control: Pontiac "Safety-shift" remote control type with gearshift lever on steering column.
See Transmission Section for complete data.

Removal:—Disconnect speedometer cable, gearshift selector and control rods from transmission. Disconnect rear universal (wire trunnions) and pull out propeller shaft. Remove upper transmission mounting screws, install guide pins (J-851), remove lower screws, pull transmission to rear, down and out.
Installation Note—Use guide pins installed in two upper transmission mounting holes to assist in sliding transmission straight forward into place (to avoid damage to clutch release bearing support.

►**New Transmission Main Drive Gear Oil Seal**—*See Transmission Section for complete data.*

HYDRA-MATIC DRIVE

OPTIONAL EQUIPMENT

Four speed planetary type automatic transmission and fluid coupling.
See Transmission Section for complete data including Testing & Trouble Shooting.

►**NOTE:** *Different Hydra-Matic Transmission used as follows:*

	Hydra-Matic Model No.
1949 & First 10,000 cars 1950	185-49-P①
1950 (After 10,000 cars)	185-50-P②

①—P9 preceding Serial No. on black background.
②—P50 preceding Serial No. on black background.

►*NOTE:* P9, P50 also used on 8 cyl. cars. Check serial number plate.

►*CAUTION—P9 Transmission should not be used to replace P50 transmissions.*
See "Pontiac Hydra-Matic Drive" in Transmission Section.

Lubrication—Check fluid level in transmission every 2000 miles (at lubrication period). Drain and refill every 25,000 miles. Use only GM Hydramatic Fluid or "Automatic Transmission Fluid Type A."

Draining & Refilling—*See "Hydra-Matic Drive" in Transmission Section.*

Checking Fluid Level—Roll back right side of front floor mat. Clean all sand, lint, and dirt away from sheet metal cover in floor, remove cover, clean any dirt away from dipstick cover on transmission. **Set Hand Brake.** Run engine for approx. 1½ minutes at speed equivalent to 20 MPH. with selector lever in "Neutral." Reduce engine speed to **slow idle** and move selector lever to "Drive" position, measure level with dipstick, add fluid until level is at "FULL" mark with engine idling.

►*CAUTION—Engine must be idling slow and selector lever in "Drive" position when checking fluid level.*
Linkage Adjustment—*See "Hydra-Matic Drive" in Transmission Section.*

Removal: *See "Hydra-Matic Drive" in Transmission Section.*

UNIVERSALS

Mechanics Model 2CR lock ring retainer type or **Saginaw** clamp plate retainer type.

►*CAUTION*—Rear universal companion nut controls rear axle pinion bearing "pre-load" (must be adjusted whenever nut is loosened). *See Pontiac Rear Axle in Rear Axle Section.*

REAR AXLE

Own Make. Hypoid gear, semi-floating type with pinion mounted on two taper roller bearings.

►*CAUTION*—Rear Universal companion nut controls pinion bearing "pre-load" and must be adjusted each time nut is loosened.
See Rear Axle Section for complete data.

►**Filler Plug Production Change**—Moved from axle cover at rear to front face of carrier on right side

Model	Ratio	Paint Mark①
Hydra-Matic (All)	3.63-1	Violet or Blue
Synchro-Mesh	4.1-1	Green
Synchro-Mesh	3.9-1	Red
Synchro-Mesh	4.3-1	White
Synchro-Mesh	4.55-1	Yellow
Synchro-Mesh	3.63-1	Violet or Blue

①—On outer end of axle shafts.

Backlash—.003-.012" (new), slightly over .012" (worn).

Removal:—Disconnect rear universal and wire trunnions (do not disengage spline joint at transmission), remove axle shafts and carrier flange cap-screws. Withdraw carrier assembly from housing.

►CAUTION—Rear universal joint companion flange nut controls pinion bearing "pre-load" (must be adjusted whenever nut is loosened).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Axle Shaft Removal:—Remove wheel, brake drum, 4 backing plate bolt nuts, static collector, and loosen bearing retainer (do not move backing plate or brake line may be damaged). Pull shaft with puller J-942 —(do not drag axle shaft on oil seal).

Wheel Bearing Adjustment—None.

SHOCK ABSORBERS

Delco. Direct acting, non-adjustable, sealed (non-refilliable) type. Serviced by replacement.

Year	Standard Pontiac No.	Heavy Duty Pontiac No.
1949-50 (Front)	5513190	5513562
1949-50 (Rear)	5513200	5513201

FRONT SUSPENSION

Front Suspension: New linked parallelogram type with direct acting shock absorber mounted within each coil spring.

See Front Suspension Section for complete data.

Rebound Noise Correction—*See "1949-50 Pontiac" in Front Suspension Section.*

Kingpin Inclination—4¾° to 5¼° crosswise.

Caster—Neg. ¾°. Limits Neg. ½° to Neg. 1°. Adjustable.

Camber—0°. Limits Neg. ¼° to Pos. ¼°. Adjustable.

Toe In—0-1/16". Adjust rod sleeves equally.

STEERING GEAR

Saginaw. Worm-and-Roller type.

See Steering Gear Section for complete data.

BRAKES

Service Brakes: Bendix Hydraulic, duo-servo, single anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

See Brake Section for complete data.

Wheel Cylinder Bore—Front wheels 1 1/16". Rear ⅞"

Drums—Steel & cast-iron. Diameter 11".

Lining—Molded. Width 2¼" (front wheels), 1¾" (rear). Thickness 3/16". Length per shoe: 9 11/32" (primary), 11 31/32" (secondary).

Clearance—.015" at both ends of secondary (rear) shoe with primary shoe forced out against drum.

Braking Power—60% front wheels, 40% rear.

Hand Brake: See Service Brakes above.

MISC. MECHANICAL

Convertible Top Control: Hydro-Lectric type (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders).

See Miscellaneous Section for complete data.

Windshield Wiper: Vacuum Link-&-Crank Arm type

See Miscellaneous Section for complete data.

HOOD & HOOD LOCK ADJUSTMENT: *See Pontiac Special Data.*

FRONT END SHEET METAL ASSEMBLY REMOVAL: *See Pontiac Special Data.*

MODEL IDENTIFICATION

SERIAL NUMBER: On left front door hinge post.

1949 Numbers—P8TS-1001 Up .....Synchro-mesh Tr.
P8TH-1001 Up.....with Hydra-Matic Drive

1950 Numbers—P8TS-1001 Up.....Synchro-Mesh Tr.
P8TH-1001 Up.....with Hydra-Matic Drive

Prefix letter indicates Assembly Plant (below).

►**Assembly Plant Prefix Letter.** P—Pontiac, Mich., C—South Gate, L—Linden, W—Wilmington, K—Kansas City, A—Atlanta, F—Framingham.

ENGINE NUMBER: Same as Serial Number. Stamped on boss on left upper front corner of engine block.

TUNE-UP

COMPRESSION PRESSURE: (Std. 6.5-1 Head) 118-135 lbs. at 200 RPM. (Optl. 7.5-1 Head) 135-153 lbs. at 200 RPM.

VACUUM READING: 18-20" steady idling at 7-8 MPH. or 365-385 RPM. on Hydra-Matic cars.

FIRING ORDER: 1-6-2-5-8-3-7-4. See diagram.

SPARK PLUG GAPS: .025". Limits .023-.028".
Plugs—AC No. 45. 14 mm. Metric.

DISTRIBUTOR: Breaker Gap—.016" (new points), .015" (used points).

►*CAUTION*—Dial indicator for setting point gap recommended by car manufacturer. ***Do not use feeler gauge for setting used points.***

Cam Angle—26°. Test limits with .016" gap 21-30°. ***See "Delco-Remy Cam Angle" in Electrical Equipment Section.***

NOTE—If dial indicator not available when setting Breaker Gap on Used Points, car manufacturer recommends gap be set by cam angle at 28° closed.

Breaker Arm Spring Tension—19-23 ounces.

Automatic & Vacuum Advance—***See Ignition.***

Condenser Capacity—.18-.23 microfarad.

IGNITION TIMING: 6° BTDC (initial setting—See Gaselector Setting).

Timing Procedure—***See Ignition Timing.***

Timing Mark—First (6°) line on vibration dampener aligned with pointer on chain case cover (2nd line 2° or 3° BTDC, 3rd line TDC).

Gaselector Setting—Set for barely audible ping when accelerating at 20-30 MPH., full throttle.

CARBURETION:

Idle Setting—¾-1¼ turns open. Two screws—turning screws out gives richer mixture.

Idle Speed (standard)—450-475 RPM. or 7-8 MPH.

Idle Speed (Hydra-Matic)—365-385 RPM.

Float Level—3/16" from top of floats to gasket seat on bowl cover (Gauge T109-162). Sides of floats should barely touch vertical uprights on gauge (to avoid floats binding on sides of bowl).

Accelerating Pump—Lower Hole (minimum) Normal. Upper Hole (max.)—if more charge required.

Choke Setting: Centered at Index.

Fuel Pump Pressure: 4-4¾ lbs.

MANIFOLD HEAT CONTROL: Thermostatic coil type, non-adjustable (fixed anchor pin). Counterweight should be securely clamped to shaft in vertical position with valve closed (cold position).

VALVE TAPPET CLEARANCE: .011" to .013", Hot. .011" "Go" gauge, .013" "No Go" gauge.

High Speed Setting—.013" EXH. Hot.

►**Cold Setting with Engine Stopped**—.012" to .014" Cold (room temperature). *CAUTION*—Check setting after engine warmed-up for limits of .011" to .013".

►*NOTE*—A removable plate is installed in front fender skirt so tappets are accessible for adjustment.

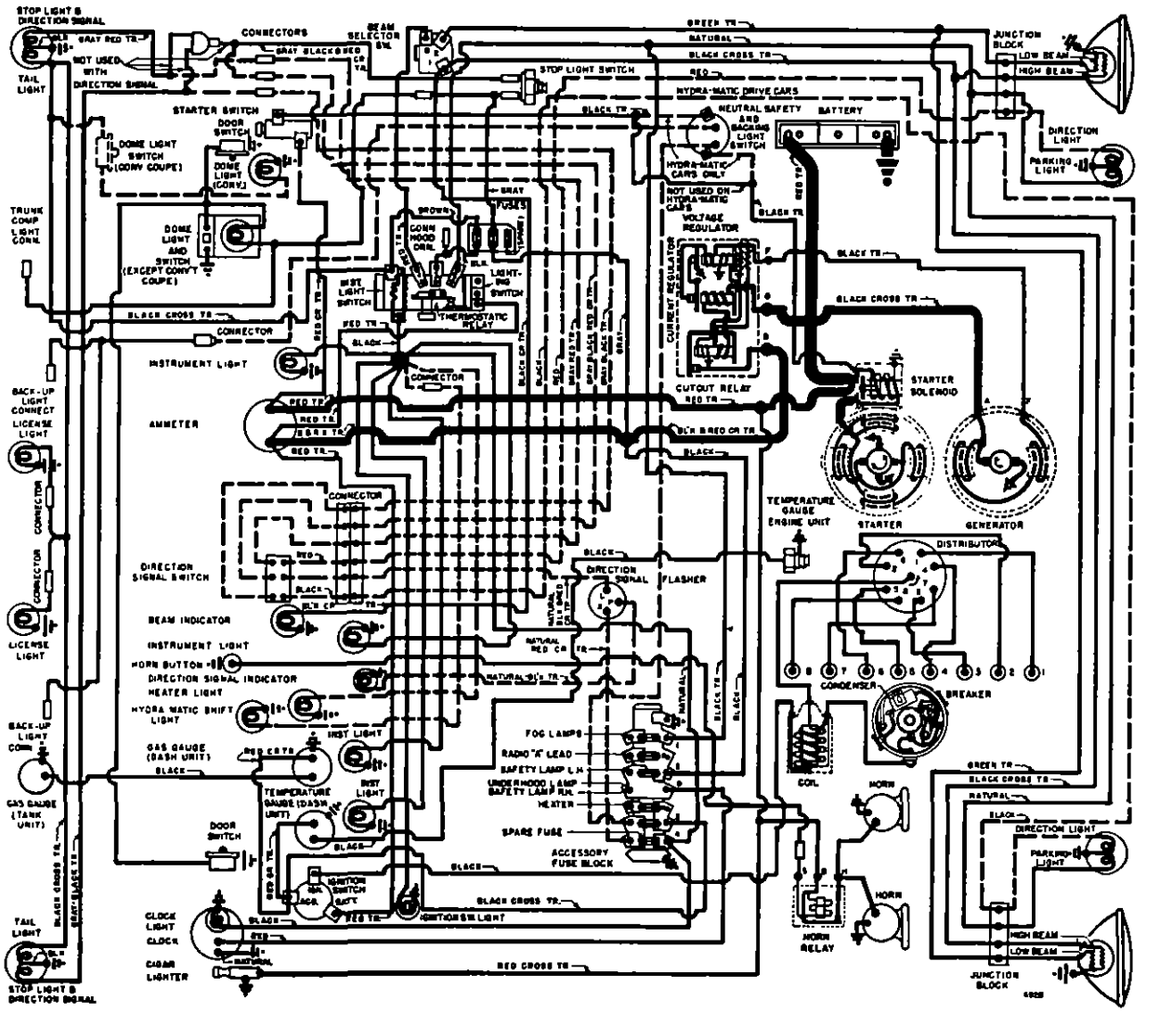
Valve Timing Check—***See Valve Timing.***

STARTING: ***See Batery, Starter, Generator, Regulator.***

IGNITION

►***IGNITION HIGH TENSION CABLE CAUTION***—Special non-metallic conductor cables (with built-in suppression resistance). Marked "RADIO-4000-GM." ***See "Ignition Notes" in Pontiac Special Data for cable installation data.***

►***CAUTION***—This high-resistance cable must not be used on 1949 cars with "High Tower" resistor type distributor caps.



IGNITION SWITCH: Delco-Remy No. (1949) 1116461, (1950) 1116464.

Ignition Lock—Briggs & Stratton Delco-Remy.

COIL: Delco-Remy No. 1115380. Mounted on engine.

Ignition Current—2.5 amperes idling, 4.5 stopped.

CONTINUED ON NEXT PAGE

1949-50 MODELS

CONTINUED FROM PRECEDING PAGE

CONDENSER: Delco-Remy No. 1869704.

Capacity—.18-.23 microfarad.

DISTRIBUTOR: Delco-Remy No. (1949) 1110816, (1950) 1110818. Automatic and vacuum advance type with "Center Bearing" breaker plate.

►**Breaker Plate Bearing Assembly**—Plate rotates on 3 bakelite buttons on support plate with spring tension adjustment (shim washers) on underside of support plate. Pull required to move plate should be 8 oz. min., 16 oz. max. with breaker plate assembly out of housing.

See "Delco-Remy Center-Bearing Breaker Plate Distributor" in Electrical Equipment Section.

Breaker Gap—.016" (new points), .015" (used pts.).

►*CAUTION*—Dial indicator for setting point gap recommended by car manufacturer. *Do not use feeler gauge for setting used points.*

Cam Angle—26°, Test limits with .016" gap 21-30°.

See "Delco-Remy Cam Angle" in Electrical Equipment Section.

Breaker Arm Spring Tension—19-23 ounces.

Rotation—Counter-clockwise viewed from above.

Automatic Advance

Degrees Distr.	R.P.M.	Degrees Eng.	R.P.M.
Start	250	2	500
7.5	1200	15	2400
8.25	1500	16.5	3000
13.5	2100	27	4200

Gaselector—Manual adjustment at distributor. 10° advance or retard. See Ignition Timing.

Vacuum Spark Control: Delco-Remy No. 1116050. Integral type linked directly to breaker plate.

Plunger Travel—7/32".

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	7-9"
10°	20°	17.5-19.5"

Distributor Removal: On left side of engine. Disconnect vacuum line, take out Gaselector screw, lift out.

IGNITI N TIMING

Std. Setting	Flywheel Degrees	Piston Pos.
All Engines①	6° BTDC	.0128" BTDC.

①—Regular Fuel—Std. Hd. Ethyl Fuel—7.5-1 Hd. High Comp. Head Engines set 3° BTDC at factory.

Timing Mark—Three lines on vibration dampener. First (6°) line on vibration dampener aligned with pointer on chain case cover (2nd line 2° or 3° BTDC, 3rd line TDC).

Timing (with Timing Light)—Loosen gaselector indicator arm-to-block clamp bolt, set arm at 0, tighten bolt. Connect Timing Light (KMO318) to No. 1 spark plug, idle engine. Loosen advance arm clamp bolt, rotate distributor until tming light shows pointer at timing mark on vibration dampener which indicates 6° BTDC (1st line). Tighten clamp screw. Check Gaselector Setting (see below).

Gaselector Setting—Set to give best performance without spark knock or ping for fuel used. Marked "ADV" and "RET", adjust according to these marks.

CARBURETOR

Carter WCD, No. 719S, SA.....**Synchro-mesh Trans.**
Carter WCD, No. 720S, SA.....**Hydra-Matic Drive**
1¼" dual downdraft with Carter Climatic Control. **Casting No.**—(719S, SA) 550, (720S, SA) 558.

►**Choke Valve anti-rattle correction:** *See "Carter WCD-719SA and WCD 720SA" in Carburetor Section. See Carburetor Section for complete data.*

Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up.*
Metering Rod & Jet—*See Carter Jet Table in Carburetor Section.*

Hydra-Matic Throttle Linkage Adjustment: *See Pontiac Hydra-Matic Drive in Transmission Section.*

Fast Idle: Carter Dual (WCD) Carburetor type.

Setting—.026" throttle opening (Gauge No. T109-189) with choke valve tightly closed. Adjust by turning fast idle screw.

See Carburetion Equipment Section for complete data.

Automatic Choke: Carter Climatic Control (Dual Carburetor).

Setting—Centered at Index.

See Carburetion Equipment Section for complete data.

CARB. EQUIPMENT

Air Cleaner: AC No. 1544256 oil-wetted type (standard), No. 1544530 heavy duty oil-bath type (optl.).
Filter Element—AC #6 (std.), #7-S (heavy duty).
Servicing—Clean and re-oil std. cleaner, or on heavy duty clean and refill reservoir with 1 pint SAE 50 (20W below freezing) oil every 10000 miles.

Fuel Pump (Fuel-&-Vacuum): AC Type AJ, 1537317.

Replacement Pump—AC No. 539.

Pressure—4-4¾ lbs.

See Carburetion Equipment Section for complete data.

Gasoline Gauge: AC Electric type.
Dash Unit—(1949-50) AC No. 1517117.
Tank Unit—(1949) AC No. 1517083. (1950) AC No. 1517249. Sta. Wgn. AC No. 1517122.

See Carburetion Equipment Section for complete data.

BATTERY

Delco Type 15E4. 6 volt, 15 plate 100 ampere hour capacity.

Grounded Terminal—Negative (—) to engine.

Location—On left side of engine compartment.

Police Battery—Delco Type 19E4. 6 volt, 19 plate, 130 ampere hour capacity.

Grounded Ter. & Location—Same as 15E-4 above.

STARTER

LHD .....**Delco-Remy 1107957. Arm. No. 1867897.**
RHD .....**Delco-Remy 1107934. Arm. No. 1867897.**

►*CAUTION—LHD starter operates whenever pushbutton depressed (and shift lever in neutral on Hydra-Matic)*

Drive—Overrunning clutch (solenoid pinion shift).

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—24-28 ozs. each.

Performance Data—1107957

Torque	RPM	Volts	Amperes
0 ft. lbs.	6000	5.0	60
15 ft. lbs.	Lock	3.0	600

Performance Data—1107934

Torque	RPM	Volts	Amperes
0 ft. lbs.	5500	5.65	70
12 ft. lbs.	Lock	3.15	570

Starting Switch (1107957 Starter): Delco-Remy solenoid 1118140 (no relay) mounted on starter and controlled by Pushbutton Switch No. 1996037 and Neutral Safety Switch No. 1997846 (Hydra-Matic Cars).

CAUTION—Overrunning clutch pinion clearance must be adjusted if solenoid removed from starter. *See Electrical Equipment Section for complete data.*

(1107934)—Delco-Remy Solenoid 1118102 on starter and controlled by Relay No. 269-G and Pushbutton Switch No. 1996039 (and Neutral Safety Switch 1997846 on Hydra-Matic Drive cars).

See Electrical Equipment Section for complete data.

Neutral Safety Switch Adjustment—*See Pontiac Hydra-Matic Drive in Transmission Section.*

GENERATOR

Year	Generator Delco-Remy No.	Armature Delco-Remy No.
1949-50	1102711	1879002
Police	1106403	1880252

Two brush types with voltage and current regulation.

Performance Data (Cold)

	Amperes	Volts	R.P.M.
1102711	30①	8.0	1750
1106403	35	8.0	1040

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—28 ozs.

Field Current—(1102711) 1.75-1.9 amperes at 6.0 volts. (1106403) 1.77-2.0 amperes at 6.0 volts.

Removal: Generator pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.

Belt Adjustment: Belt deflection or sideplay midway between generator & pump pulley should be 1½".

REGULATOR

Year	Regulator No.	For Generator No.
1949-50 (Std.)	1118301	1102711
Police	1118352	1106403

►*NEW "1118300 SERIES"* regulators have screw adjustment for settings and single regulator springs.

See Electrical Equipment Section for complete data.

CAUTION—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate of High Voltage.

Cutout Relay

Cuts In—5.9-6.8 volts hot (set to 6.4 volts hot).

Contact Gap—.020" (same for both contacts).

Air Gap—.020" (with contacts just closed).

Voltage Regulator

Setting—7.0-7.7 volts hot (set to 7.4 volts hot). Regulator is over-compensated for temperature. Should be checked with cover in place and hot.

Air Gap—.075" with armature pressed down to point where contacts are just touching.

Checking & Adjustment—*See Elec. Equip. Section.*

Current Regulator

Setting (1118301).....32-40 amps. hot (set at 36 hot)

Setting (1118352).....33-37 amps. hot (set at 35 hot)

Air Gap—.075" with armature pressed down to point where contacts are just touching.

Checking & Adjustment—*See Elec. Equip. Section.*

LIGHTING

Headlamps: Guide "Sealed Beam" type.

See Electrical Equipment Section for complete data.

Adjustment—Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.).

Beam Indicator—At speedometer. Lighted when upper beams in use.

Directional Signal: *See Electrical Equipment Section.*

Direction Signal Indicator—Red pilot light on speedometer dial. Flashes when signal in use.

Switches

Lighting—Delco-Remy No. 1995032.

Instrument—Part of Lighting Switch. Rheostat operated by turning Light Switch Knob.

Beam Selector—Delco-Remy No. 1997008.

MISC. ELECTRICAL

THERMOSTATIC CIRCUIT BREAKER: Delco-Remy. On back of light switch (part of switch assy.). Contacts remain closed with 30 amperes but open in 3 minutes with 42 amperes at 70°F. Not adjustable.

MAIN FUSE BLOCK: On left hand engine side of dash. Two fuses (plus 1 spare) as follows:

Tail Lamp—SFE 14 ampere. In gold colored fuse holder. Protects rear license, instrument, ignition key, and clock lamps (dome on convertible).

Stop Lamp—SFE 14 ampere. In gray colored fuse holder. Protects trunk light and dome light.

ACCESSORY FUSE BLOCK: Six fuses mounted on fuse block on dash behind instrument panel. All fuses are 20 ampere except Radio fuse which is 14 ampere. (Spare Radio fuse on main fuse block on engine side of dash). Fuse identification printed inside fuse block cover.

HORNS: Delco-Remy No. 1999645 (Low Note). No. 1999646 (High Note). Vibrator types operated by relay.

Type	Current (at 6 volts)	Air Gap
Low Note	19-21 amperes	.047-.052"
High Note	18-20 amperes	.039-.044"

Horn Relay: Delco-Remy No. 1116775.

Contact Gap—.027". **Air Gap**—.014" (closed).

Contacts Close—2.75-4.0 volts (set to 3.5 volts).

ENGINE

ENGINE SPECIFICATIONS: 8 cylinder, "L" head type.

	1949	1950
Bore	3¼"	3⅜"
Stroke	3¾"	3¾"
Displacement	248.9 cu. in.	268.2 cu. in.
Rated Horsepower	33.8	36.4
Developed Horsepower	104 at 3800	108 at 3600

Compression Ratio—Std. 6.5-1. Optl. 7.5-1, iron hds.

Compression & Vacuum Reading—*See Tune-Up.*

ENGINE & OIL PAN REMOVAL: *See Pontiac Special Data.*

ENGINE FRONT MOUNTING REMOVAL: *See "Engine Mounting" in Pontiac Special Data.*

TIGHTENING TORQUES: *See Pontiac Special Data.*

CYLINDER HEAD: Tightening Torque & Cylinder Head Diagram—*See Pontiac Special Data.*

►*CAUTION*—New cylinder heads and thinner gasket used on 1950 engine. Interchange of heads on 1949-50 engines will change compression ratio. **Do not use thinner 1950 gasket on 1949 engines.**

PISTONS: Chrome nickel alloy, electro-plated type. Pistons have 20 oil drain holes in oil ring groove.

►*PISTON REPLACEMENT CAUTION—Late 1952 type pistons (with piston pin secured in piston with lock rings) can be used in 1950 engines in COMPLETE SETS ONLY.*

Length—3.593-3.603".

Weight—(1949) 24.64 ozs. (1950-51) 26.7 ozs.

Removal—Pistons and rods removed from above.

Clearance—Top Land .0165-.0284". Skirt—See Fitting New Pistons.

Fitting New Pistons: Insert .0015" X ½" feeler between piston and cylinder wall. Pull to withdraw feeler must be 10-20 lbs. Taper and out-of-round limits—Piston .0005". Cylinder .0005" max. new.

Replacement Pistons: *See Pontiac Special Data.*

PISTON RINGS: Two tapered-face compression rings above pin, one slotted oil control ring below pin.

NOTE—Rings are cadmium-plated or tin-plated.

Ring	Width	End Gap	Side Clearance
Compr. (#1, 2)	3/32"	.008-.015"	.0015-.003"
Oil (#3)	3/16"	.008-.015"	.001-.0025"

Installing Compression Rings—Mark "TOP" up.

Replacement Rings: .005", .010", .020", .030" Oversize. *See Pontiac Special Data.*

PISTON PIN: Dia. .9369-.9375". Length—2⅞". Pin is shot-peened type (shot-peened before final grinding and lapping). Pin is locked in one piston boss by self-locking lockscrew and opposite end slotted to permit piston pin movement.

Pin Fit in Piston—*See Pontiac Special Data.*

Pin Fit in Rod Bushing—.0004-.0006" clearance.

Pin Removal & Installation: *See Pontiac Special Data.*

Replacement Pins:—.001" (red & brown), .003" (red), .005" (blue) oversize. Paint marked on end of pin.

CONNECTING ROD: Wt.—32 ozs. **Lgth.**—7.560-7.565".

Piston Pin Bushing (Upper Bearing)—Split aluminum bronze bushings. *See Pontiac Special Data.*

Crankpin Journal Diameter—1.9987-1.9997".

Lower Bearing—Thin type, interchangeable, steel-backed, babbitt-lined type.

Clearance—.0001-.0021". **Sideplay**—.007-.012".

Bearing Adjustment: None. Replace bearings. *See "Connecting Rods & Bearings" in Pontiac Special Data.*

Replacement Bearings: Standard size & .001" Undersize. *NOTE*—Bearings have small tongue which must engage groove in rod and cap.

Installing Rods: Not offset (install either way).

NOTE—Rods and bearing caps marked to insure correct reassembly (marks must be together). These marks do not indicate cylinder in which rod used. *CAUTION*—Keep each connecting rod and its bearing cap together.

CRANKSHAFT: Five bearing type with integral counterweights and vibration dampener on forward end.

Vibration Dampener Removal & Installation: See "Vibration Dampener" in Pontiac Special Data.

1949 Journal Diameters—#1, 2.3732-2.3742"; #2, 2.4044-2.4054"; #3, 2.4357-2.4367"; #4, 2.4669-2.4679"; #5, 2.4982-2.4992".

1950-51 Journal Diameters—#1, 2.3732-2.3742; #2, 2.4044-2.4054"; #3, 2.4357-2.4367"; #4, 2.4669-2.4679"; #5, 2.6232-2.6242".

Bearings—Thin type, removable, steel-backed, babbitt-lined. Upper and lower bearing halves alike.

Clearance—.0003-.0023".

See "Crankhaft & Main Bearings" in Pontiac Special Data.

Bearing Adjustment:—None (no shims). *See Pontiac Special Data for Removal and Fitting of Bearings.*

Rear Main Bearing Oil Seal Renewal—*See Pontiac Special Data.*

Replacement Bearings: Standard & .001" Undersize.

End Thrust: Taken by #4 (rear intermediate) bearing. Endplay—.003-.008".

CAMSHAFT: Five bearing, non-adjustable chain.

Timing Chain Cover Oil Seal Installation—*See "Timing Chain" in Pontiac Special Data.*

Bearing Diameters—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1 29/32"; #5, 1 7/8". *For Bearing Finished Sizes, see "Camshaft & Bearings" in Pontiac Special Data.*

Bearings—Steel-backed, babbitt-lined bushings.

Clearance—.0015-.0025" (new).

Camshaft Removal & Bearing Installation: *See "Camshaft & Bearings" in Pontiac Special Data.*

End Thrust: Steel thrust plate behind camshaft sprocket. Replace if worn. **Endplay**—.003-.007".

Timing Chain: Morse. Width 27/32". Pitch ⅜". Length 21" or 56 links.

Timing Chain Oil Cover Seal Installation—*See "Timing Chain" in Pontiac Special Data.*

Timing Chain Replacement—*See "Timing Chain" in Pontiac Special Data.*

Camshaft Setting: Sprockets marked. Mesh chain with sprockets turned so that "0" marks are adjacent and in line with straightedge across shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 15/32"	.310-.311"	5.53"
Exhaust	1 11/32"	.310-.311"	5.53"

	Seat Angle	Lift	Stem Clearance
Intake	30°	19/64"	Free fit to .0006"①
Exhaust	45°	19/64"	Free fit to .0006"①

①——Tapered (max. clearance at bottom .0006").

Valve Guides: Guides have tapered hole (.001" taper to inch—greatest clearance at top). Exhaust guides counterbored at top to depth of 9/16". Guides have valve spring seat at lower end.

Check Valve Clearance in Guide—Clean guide with tool KMO-122, clean counterbore in exhaust guide with Counterbore Cleaner J-2122 *(CAUTION—Set tool for 9/16")*. Valve should just fall through guide with own weight.

CONTINUED ON NEXT PAGE

ENGINE

CONTINUED FROM PRECEDING PAGE

Installing Guides—Use Valve Guide Remover J-2542 to remove and install guides. Drive new guide down in block (counterbored end up on exhaust guides) until upper end 29/32" (1949); 7/8" (1950) below top edge of valve seat. Ream guide with PR-131 tapered reamer and finish counter-bore with Counterbore cleaner J-2122 for correct clearance (see above).

▷*CAUTION*—Guides furnished with straight hole which must be taper reamed.

Valve Springs:—Intake and exhaust springs identical. Install with two closed coils at top and dampener on top of each spring. Use new dampeners whenever removed from spring. **Free Length—2 9/16".**

▷*CAUTION*—Dampeners located inside spring, with upper seat for spring located on valve guide. Eight cyl. guides not the same as the 6 cyl., but new 8 cyl. intake valve guides may be installed on 6 cyl.

1949 Valve Spring Specifications

	Spring Pressure	Spring Length
Valve Closed	59½ lbs.	1 29/32"
Valve Open	101 lbs.	1 19/32"

1950 Valve Spring Specifications

Valve Closed	62½ lbs.	1 23/32"
Valve Open	105 lbs.	1 13/32"

Valve Lifters:—Barrel type, cast-iron. Guide holes reamed in block. Lifters furnished .005" oversize (use pilot reamer J-706-P when reaming holes to maintain alignment—valve guides must be removed, use Valve Guide Removing Tool J-2542).

Clearance—Free fit. Lifter should just move freely with finger touch.

VALVE TIMING

Tappet Clearance: .011" to .013", All Valves, Hot. .011" "Go" gauge, .013" "No Go" gauge.

High Speed Setting—.013" EXH. Hot.

Cold Setting with Engine Stopped—.012" to .014" Cold (room temperature). *CAUTION*—Check setting after engine warmed-up for limits of .011" to .013".

▷*NOTE*—A removable plate is installed in front fender skirt so tappets are accessible for adjustment.

Valve Timing:—*See Camshaft Setting above.*

Intake Valves—Open 5° BTDC. Close 39° ALDC.

Exhaust Valves—Open 45° BLDC. Close 5° ATDC.

Valve Timing Check—With .015" tappet clearance #1 intake valve should open with #1 piston 5° or .0089" before top dead center with first straight line of dampener mark '/IGN.ONE/' slightly past pointer on left front face of chain cover. Reset tappet clearance .011-.013" (warm).

LUBRICATION

Engine Oiling System: Pressure to main bearings connecting rod lower bearings and piston pins (rifle-drilled rods), camshaft bearings, and chain.

Crankcase Capacity—5 qts. (refill), 6 qts. (dry).

Normal Oil Pressure—35-45 lbs. at 40 MPH. with warm oil (10-30 lbs. idling).

Oil Pressure Regulator—On oil pump. Opens at 40 lbs. Replace spring if free length less than 2 5/16".

Oil Pump: Gear type. On right side of crankcase.
Removal & Installation—*See Pontiac Special Data.*

Oil Cleaner: Precipitation type (in crankcase).
Removal & Installation—*See Pontiac Special Data.*

Oil Pressure Gauge: AC No. 1507350. Not electric.

Crankcase Ventilation: Filter element in oil filler cap (inlet). Outlet pipe at valve compt. cover on right rear side of engine (cars with oil bath air cleaner use 3-piece outlet pipe containing filter element).

Oil Filler (Crankcase Ventilator) Cap Cleaning—Wash filter element and re-oil by dipping in engine oil when servicing air cleaner.

CAUTION—Filler cap must be installed with air opening in cap toward front of car and seam in line with groove in tube (may cause excessive oil consumption if installed backward).

Crankcase Ventilator Outlet Pipe—On cars with Oil-bath type Air Cleaner, special 3-piece ventilator outlet pipe used which has copper gauze type air cleaner in container section. Wash and re-oil filter element when servicing air cleaner.

COOLING

Cooling System: Pressure type with pressure valve and vacuum valve (relief valve) in filler cap.

Capacity—19½ qts.

Capacity—18½ qts.

Pressure Valve—AC No. 850549 Filler Cap. Opens at 7 lbs. (6¼-7½ lbs.).

Water Pump: Packless, sealed ball-bearing shaft.

NOTE—Fan flange reversed over previous models. *See Water Pump Section for complete data.*

Removal—Drain cooling system, remove hose connection at pump, remove belt, take out water pump mounting bolts and lift pump out.

Belt Adjustment—*See Generator Belt Adjustment.*

Thermostat:—Harrison. In cylinder head outlet.
Setting—Starts to open 151°F. Fully open 173°F.

Radiator Removal: *See "Radiator" in Pontiac Special Data.*

Temperature Gauge: AC Electric type.
Dash Unit—AC No. (1949) 1512126, (1950) 1512287.
Engine Unit—AC No. 1512015.
See Miscellaneous Section for complete data.

CLUTCH

Inland. Single Plate, "Diaphragm," dry disc type with Long Driven Member Model 10CF-CS.
See Clutch Section for complete data.

Facings—Moulded type, 2 required. I.D. 6". O.D. 9½". Thickness 1/8".

Pedal Adjustment:—Free travel 7/8-1 1/8" (adjusting nut on link at clutch fork).

Removal: Remove transmission (see Transmission Removal below), remove clutch bearing support spring washer (in rear face of clutch housing), remove clutch housing bottom cover and control shaft inner bracket. Remove release bearing support and release bearing (see Clutch Release Bearing & Support data), tapping the support from inside the clutch housing to aid in removing. (*CAUTION*—avoid striking tubular portion of support). Mark flywheel and clutch cover (to insure re-installation in same position to maintain balance), remove clutch cover mounting bolts evenly, move clutch assembly away from flywheel at bottom and withdraw driven member, lower cover assembly out.

▷**Clutch Sticking Correction (Removal of Excess Release Bearing Lubricant):** If Recess in bore on bearing over-lubricated when clutch assembly installed, excess lubricant may be found causing clutch sticking. Clean out excess lubricant found at the following points: transmission drive gear, driven plate hub, clutch facings, pressure plate and cover assembly, release bearing support tube, fulcrum points of release fork, and recess in bore on release bearing (do not wash bearing, bearing is "sealed" type). Lubricate clutch parts exactly as described under Installation Note following:

Clutch Installation Note—Install new felt oil seal against shoulder ahead of oil slinger retaining ring on Transmission Main Drive Gear (will bear against flared end of release bearing support when installed). Lubricate seal with engine oil before transmission installed. Coat entire length of outer diameter of release bearing support tube with grease. Lubricate release fork fulcrum points with a very light coat of grease. Apply light coat of Lubriplate on main driving gear splines. Use new paper gasket between support flange and clutch housing, make certain that flange is not bent or distorted (will cause misalignment of transmission).

Clutch Release Bearing & Support: *See Pontiac Special Data for description.*

TRANSMISSION

Own Make. All helical gear. Constant-mesh synchro-mesh (Second & High), sliding gear (Low & Reverse). *See Transmission Section for data.*

Transmission Control: Pontiac "Safety-shift" remote control type with gearshift lever on steering column. *See Transmission Section for complete data.*

Removal:—Disconnect speedometer cable, gearshift selector and control rods from transmission. Disconnect rear universal (wire trunnions) and pull out propeller shaft. Remove upper transmission mounting screws, install guide pins (J-851), remove lower screws, pull transmission to rear, down and out.

Installation Note—Use guide pins installed in two upper transmission mounting holes to assist in sliding transmission straight forward into place (to avoid damage to clutch release bearing tubular support). *NOTE*—These guide pins may be made from ½-13 American National Thread bolts by cutting heads off and reducing over-all length to 4¼".

▷**New Transmission Main Drive Gear Oil Seal**—*See Transmission Section for complete data.*

HYDRA-MATIC DRIVE

OPTIONAL EQUIPMENT

Own Make. Consists of Fluid Coupling and automatic self-shifting 4-speed planetary transmission.
See Transmission Section for complete data including Testing & Trouble Shooting.

►**NOTE:** ***Different Hydra-Matic Transmission used as follows:***

	Hydra-Matic Model No.
1949 & First 10,000 cars 1950	185-49-P①
1950 (After 10,000 Cars)	185-50-P②
1950 (Late Production)	210-50-D③
1950 (Last 1000 cars)	210-51-D④

①—P9 preceding Serial No. on black background.
②—P50 preceding Serial No. on black background.
③—D50 preceding Serial No. on green background.
④—D51 preceding Serial No. on green background.

►***D-50 (Late 1950) HYDRAMATIC NOTE—Has Modulated Throttle Pressure.***

►***HYDRA-MATIC "BUZZING" CORRECTION***—Beginning with Hydra-Matic Serial No. D51-161050, a new front servo exhaust valve entered production to eliminate a buzzing sound encountered when shifting into reverse. This new assembly is interchangeable with previous part No. 8613116.

Lubrication—Check fluid level in transmission every 2000 miles (at lubrication period). Drain and refill every 25,000 miles. Use only GM Hydramatic Fluid or "Automatic Transmission Fluid Type A."

Draining & Refilling—***See "Hydra-Matic Drive" in Transmission Section.***

Checking Fluid Level—Roll back right side of front floor mat. Clean all sand, lint, and dirt away from sheet metal cover in floor, remove cover, clean any dirt away from dipstick cover on transmission. **Set Hand Brake.** Run engine for approx. 1½ minutes at speed equivalent to 20 MPH. with selector lever in "Neutral." Reduce engine speed to slow idle and move selector lever to "Drive" position; measure level with dipstick, add fluid until level is at "FULL" mark with engine idling.

►***CAUTION—Engine must be idling slow and selector lever in "Drive" position when checking fluid level.***

Linkage Adjustment—***See "Hydra-Matic Drive" in Transmission Section.***

Removal: ***See "Hydra-Matic Drive" in Transmission Section.***

UNIVERSALS

Mechanics Model 2CR lock ring retainer type or Saginaw clamp plate retainer type.

►***CAUTION***—Rear universal companion nut controls rear axle pinion bearing "pre-load" (must be adjusted whenever nut is loosened). ***See Pontiac Rear Axle in Rear Axle Section.***

REAR AXLE

Own Make. Hypoid gear, semi-floating type with pinion mounted on two taper roller bearings.

►***CAUTION***—Rear Universal companion nut controls pinion bearing "pre-load" and must be adjusted each time nut is loosened.

See Rear Axle Section for complete data.

►**Filler-Plug-Production-Change**—Moved from axle cover at rear to front face of carrier on right side on late cars.

Model	Ratio	Paint Mark①
Hydra-Matic (All)	3.63-1	Violet or Blue
Synchro-Mesh	4.1-1	Green
Synchro-Mesh	3.9-1	Red
Synchro-Mesh	4.3-1	White
Synchro-Mesh	4.55-1	Yellow
Synchro-Mesh	3.63-1	Violet or Blue

①—On outer end of axle shafts.

Backlash—.003-.012" (new), slightly over .012" (worn).

Removal:—Disconnect rear universal and wire trunnions (do not disengage spline joint at transmission), remove axle shafts and carrier flange capscrews. Withdraw carrier assembly from housing.

►CAUTION—Rear universal joint companion flange nut controls pinion bearing "pre-load" (must be adjusted whenever nut is loosened).

Axle Shaft Removal:—Remove wheel, brake drum, 4 backing plate bolt nuts, static collector, and loosen bearing retainer (do not move backing plate or brake line may be damaged). Pull shaft with puller J-942 —(do not drag axle shaft on oil seal).

Wheel Bearing Adjustment—None.

SHOCK ABSORBERS

Delco. Direct acting, non-adjustable, sealed (non-refillable) type. Serviced by replacement.

Year	Standard Pontiac No.	Heavy Duty Pontiac No.
1949-50 (Front)	5513190	5513562
1949-50 (Rear)	5513200	5513201

FRONT SUSPENSION

Front Suspension: New linked parallelogram type with direct acting shock absorber mounted within each coil spring.

See Front Suspension Section for complete data.

Rebound Noise Correction—***See "1949-50 Pontiac" in Front Suspension Section.***

Kingpin Inclination—4¾° to 5¼° crosswise.

Caster—Neg. ¾°. Limits Neg. ½° to Neg. 1°. Adjustable.

Camber—0°. Limits Neg. ¼° to Pos. ¼°. Adjustable

Toe In—0-1/16". Adjust rod sleeves equally.

STEERING GEAR

Saginaw. Worm-and-Roller type.

See Steering Gear Section for complete data.

BRAKES

Service Brakes: Bendix Hydraulic, duo-servo, single anchor type **without eccentric adjustment.** Hand lever applies rear wheel service brakes.

See Brake Section for complete data.

Wheel Cylinder Bore—Front wheels 1 1/16". Rear ⅞"

Drums—Steel & cast-iron. Diameter 11".

Lining—Molded. Width 2¼" (front wheels), 1¾" (rear). Thickness 3/16". Length per shoe: 9 11/32" (primary), 11 31/32" (secondary).

Clearance—.015" at both ends of secondary (rear) shoe with primary shoe forced out against drum.

Braking Power—60% front wheels, 40% rear.

Hand Brake: See Service Brakes above.

MISC. MECHANICAL

Convertible Top Control: Hydro-Lectric type (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders).

See Miscellaneous Section for complete data.

Windshield Wiper: Vacuum Link-&-Crank Arm type

See Miscellaneous Section for complete data.

HOOD & HOOD LOCK ADJUSTMENT: *See Pontiac Special Data.*

FRONT END SHEET METAL ASSEMBLY REMOVAL: *See Pontiac Special Data.*

MODEL IDENTIFICATION

SERIAL & ENGINE NUMBERS: (Numbers are the same)—On left front door hinge post.

Starting Numbers	1951	1952
Synchro-mesh Trans.	6US-1001 Up	6 WS-1001 Up
Hydra-Matic Trans.	6UH-1001 Up	6 WH-1001 Up

▷*NOTE*—First letter of serial number prefix indicates assembly plant (below).

▷**Assembly Plant Prefix Letter—P**—Pontiac, Mich., **C**—South Gate, **L**—Linden, **W**—Wilmington, **K**—Kansas City, **A**—Atlanta, **F**—Framingham.

TUNE-UP

COMPRESSION PRESSURE: At cranking speed.

Head	Compr. Pressure
1951 Std. 6.5-1	118-135 lbs.
1951 High Compression 7.5-1	135-153 lbs.
1952 Synchro-mesh 6.8-1	123-141 lbs.
1952 Hydra-Matic 7.7-1	139-158 lbs.

VACUUM READING: 18-20" steady idling at 7-8 MPH. or 365-385 RPM. on Hydra-Matic cars.

FIRING ORDER: 1-5-3-6-2-4. See diagram.

SPARK PLUG GAPS: .025". Limits .023-.028".
Plugs—AC No. (1951) 45, (1952) 44-5. 14 mm. Metric.

DISTRIBUTOR: Delco-Remy No. 1110222. Automatic and vacuum advance type with "Center Bearing" breaker plate.
Breaker Gap—.022" (new points), .020" (used pts.).

▷*CAUTION*—Dial indicator for setting point gap recommended by car manufacturer. *Do not use feeler gauge for setting used points.*
Cam Angle—35°. Test limits with .022" gap 31-37°. *See "Delco-Remy Cam Angle" in Electrical Equipment Section.*
NOTE—If dial indicator not available when setting Breaker Gap on Used Points, car manufacturer recommends gap be set by cam angle at 35° closed.
Breaker Arm Spring Tension—17-21 ounces.
Automatic & Vacuum Advance—*See Ignition.*

COIL: Delco-Remy No. 1115380.
Ignition Current—2.5 amperes idling, 4.5 stopped.

CONDENSER: Delco-Remy No. 1869704.
Capacity—.18-.23 microfarad.

IGNITION TIMING: (With 7.5-1 & 7.7-1 heads) 6° **BTDC.** (With 6.5 & 6.8 Heads) 3° **BTDC.** Initial Setting—see Gaselector Setting. Check for slight ping on road.
Timing Mark—Three lines on vibration dampener. First is 6° BTDC, second is 3°, third is TDC.
Gaselector Setting—Set to give best performance without ping for fuel used.
Timing Procedure—*See Ignition Timing.*

CARBURETION: Rochester Model BC. No. 7002870. For Synchro-mesh and Hydra-Matic Drive.
THROTTLE LEVER NOTE—Throttle rod is connected to long arm of throttle lever for Synchro-mesh cars; to short arm of throttle lever for cars with Hydra-Matic.
Idle Setting—Set idle adjusting screw 1½ turns out (preliminary setting), then adjust for smooth performance (turn screw out for richer mixture).
Idle Speed (standard)—450-475 RPM. or 7-8 MPH.
Idle Speed (Hydra-Matic)—365-385 RPM.
Accelerating Pump—No adjustment.
Float Level—1½" from gasket to top of float seam with bowl cover inverted and needle valve seated. *CAUTION—Do not damage lower seal on heat suction tube when removing bowl cover.*

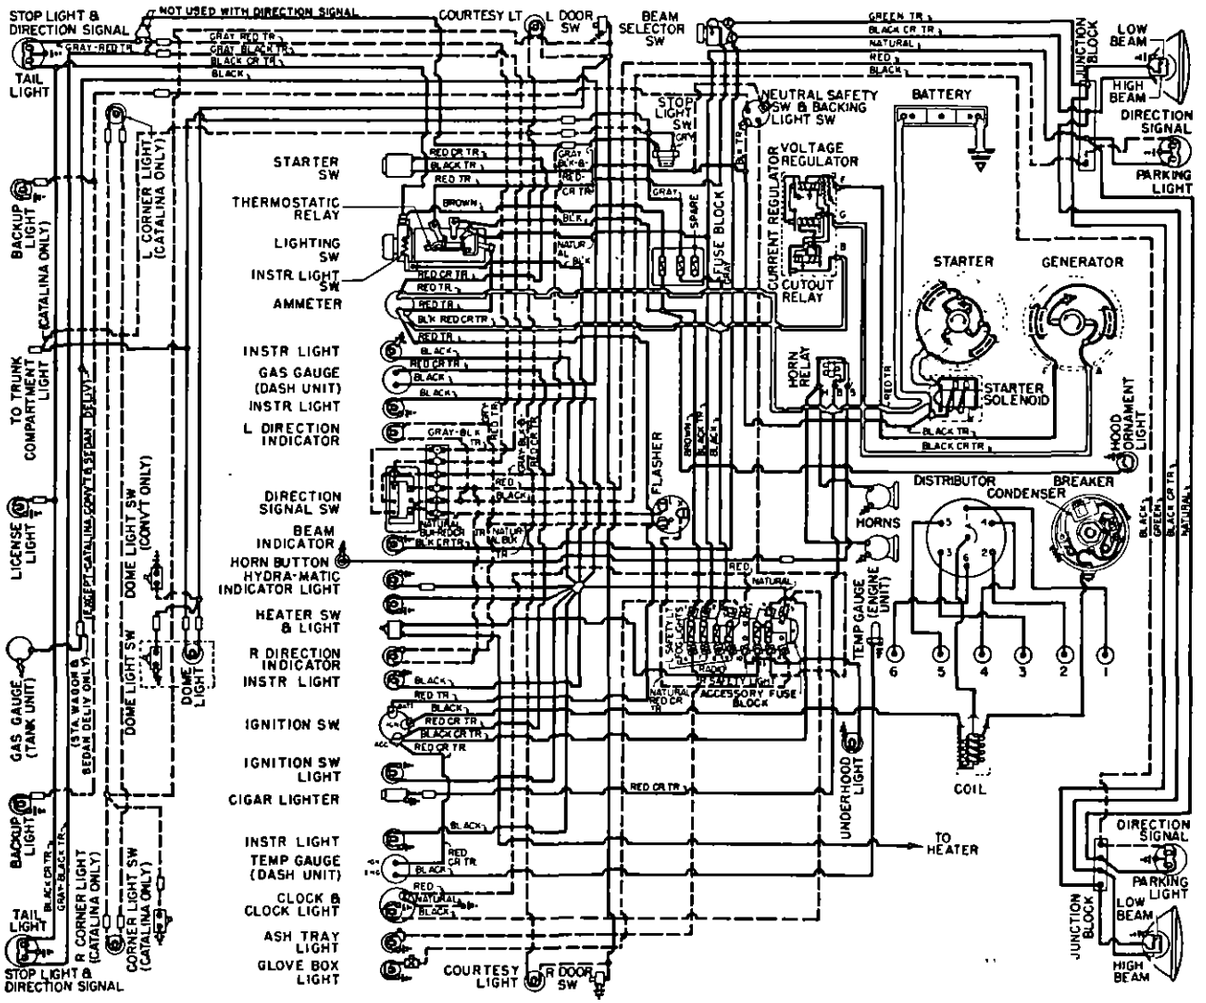
Fast Idle Setting: With choke cover indexed, turn idle screw in to contact second step of fast idle cam. Hold screw against cam and bend choke rod at dog leg to give .059" clearance between choke valve and air horn.

Choke Adjustment: Index mark on choke cover centered on long center scale mark on air horn.

Fuel Pump Pressure—4-4¾ lbs.

MANIFOLD HEAT CONTROL: Thermostatic coil type, non-adjustable (fixed anchor pin). Counterweight should be securely clamped to shaft in vertical position with valve closed (cold position).

VALVE TAPPET CLEARANCE: 011" to .013" HOT. Use .001" "Go" gauge, .013" "No Go" gauge.
High Speed Setting—.013" (exhaust valves, HOT).



▷**Cold Setting with Engine Stopped**—.012" to .014". Check for .011" to .013" clearance with engine hot. *NOTE*—A removable plate is installed in front fender skirt so tappets are accessible for adjustment.

IGNITION

▷*IGNITION HIGH TENSION CABLE CAUTION*—Special non-metallic conductor cables (with built-in suppression resistance). Marked "RADIO-4000-GM." Distributor cap is conventional type without built-in resistors. *DO NOT substitute other type ignition cables for these special cables.*

IGNITION SWITCH: Delco-Remy No. 1116464.
Ignition Lock—Briggs & Stratton or Delco-Remy.

COIL: Delco-Remy No. 1115380. Mounted on engine.
Ignition Current—2.5 amperes idling, 4.5 stopped.

1951 MODELS

CONDENSER: Delco-Remy No. 1869704.

Capacity—.18-.23 microfarad.

DISTRIBUTOR: Delco-Remy No. 1110222. Automatic and vacuum advance type with "Center Bearing" breaker plate.

See "Delco-Remy Center-Bearing Breaker Plate Distributor" in Electrical Equipment Section.

Breaker Gap—.022" (new points), .020" (used pts.).

►***CAUTION***—Dial-indicator-for-setting-point-gap recommended by car manufacturer. ***Do not use feeler gauge for setting used points.***

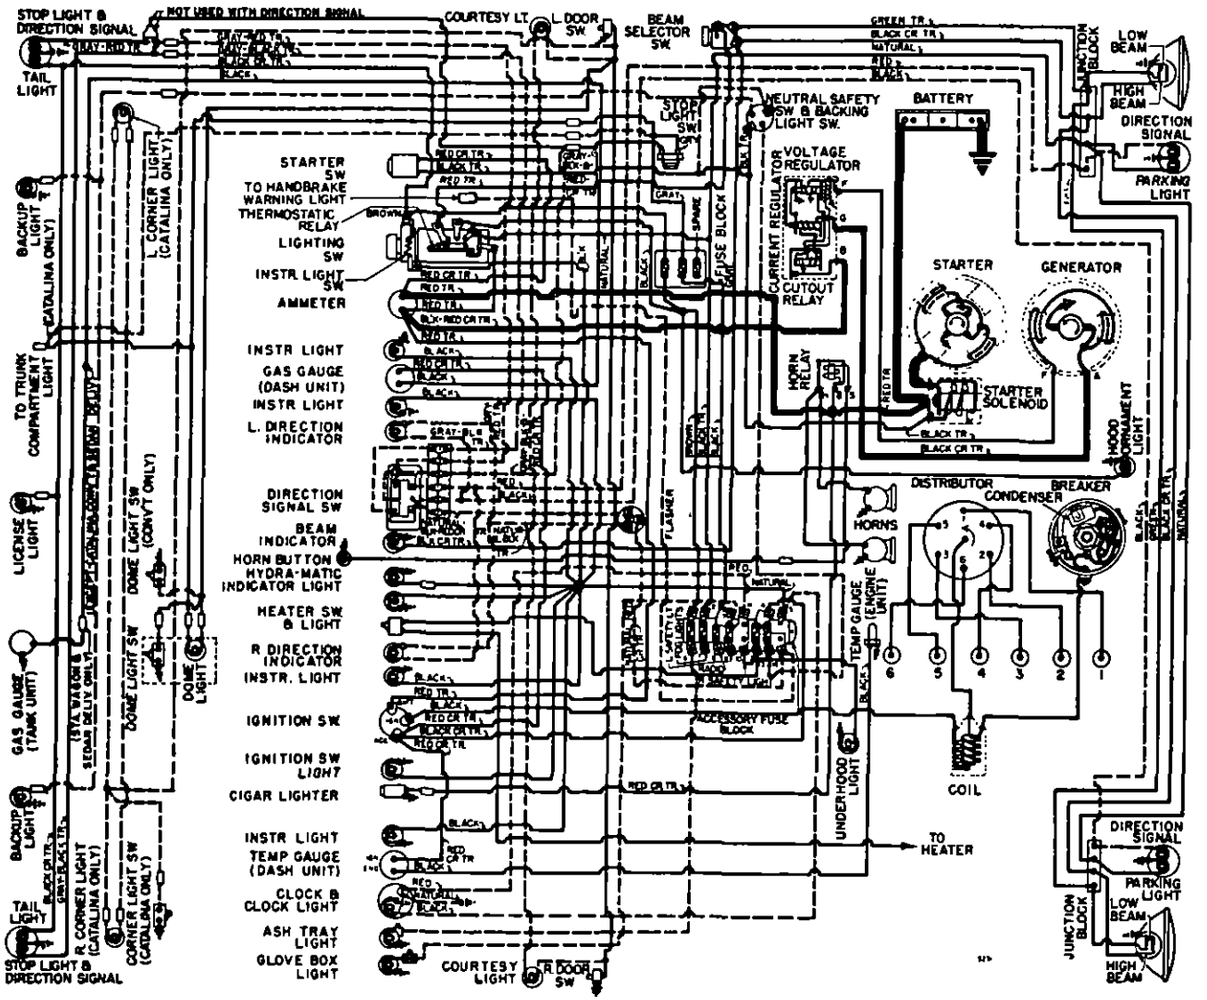
Cam Angle—35°. Test limits with .022" gap 31-37°. ***See "Delco-Remy Cam Angle" in Electrical Equipment Section.***

Breaker Arm Spring Tension—17-21 ounces.

Rotation—Counter-clockwise viewed from above.

Automatic Advance

Degrees Distr.	R.P.M.	Degrees Eng.	R.P.M.
0-2	450	0-4	900
6.25-8.25	1100	12.5-16.5	2200
6.25-8.25	1300	12.5-16.5	2600
7-9	1500	14-18	3000
11.5-13.5	2000	23-27	4000



Gaselector—Manual adjustment at distributor. 10° advance or retard. See Ignition Timing.

Vacuum Spark Control—Delco-Remy No. 1116051.

Plunger Travel—9/64".

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	7-9"
7½°	15°	14.5-16.5"

1952 MODELS

IGNITION TIMING

Standard Setting	Flywheel Degrees
1951 Std. 6.5-1 Head①	3° BTDC
1951 High Compression 7.5-1 Head②	6° BTDC
1952 Synchro-mesh 6.8-1 Head①	3° BTDC
1952 Hydra-Matic 7.7-1 Head②	6° BTDC

①—Regular fuel; ②—Ethyl fuel.

Timing Mark—Three lines on vibration dampener. For cars with 7.7-1 and 7.5-1 Heads align first (6°) line on dampener with pointer on chain case cover. For cars with other heads (6.5 &6.8) align second (3°) line on dampener with pointer. Third line to pass pointer with engine turning over is TDC.

Timing (with Timing Light)—Loosen gaselector indicator arm-to-block clamp bolt, set arm at 0, tighten bolt. Connect Timing Light (KMO318) to No. 1 spark plug, idle engine. Loosen advance arm clamp bolt, rotate distributor until timing light shows pointer at correct timing mark on vibration dampener (see Standard Setting above). Tighten clampscrew. Check Gaselector Setting (see below).

Gaselector Setting—Set to give best performance without spark knock or ping for fuel used. Marked "ADV" and "RET", adjust according to these marks.

CARBURETOR

Rochester Model BC, No. 7002870. *Synchro-mesh* and Hydra-Matic Drive cars.
1¼" single barrel downdraft with automatic choke. ***See Carburetor Section for complete data.***

Settings (Idle Setting, Float Level, and Accelerating Pump): ***See Tune-Up.***

Hydra-Matic Throttle Linkage Adjustment: ***See Pontiac Hydra-Matic Linkage Adjustment in Transmission Section.***

Fast Idle: Rochester "GM" Carburetor type.

Setting—With choke cover indexed, turn idle screw in to contact second step of fast idle cam. Hold screw against cam and bend choke rod at dog leg to give .059" clearance between choke valve and air horn.

See Carburetion Equipment Section for complete data.

Automatic Choke: Rochester "GM" Carburetor type. ***See Carburetion Equipment Section for complete data.***

Setting—Index centered on air horn center mark.

CARB. EQUIPMENT

Air Cleaner: AC oil-wetted type (std.), oil-bath type (optional).

Filter Element—AC #1 (std.), #24 (heavy duty).

Servicing—Clean and re-oil std. cleaner, or on heavy duty clean and refill reservoir with 1 pint SAE 50 (20W below freezing) oil, at 10,000 mile intervals (twice yearly) or more often if required.

Fuel Pump: AC Fuel & Vacuum type.

Replacement Pump—(Early 1951) AC-539, (Late 1951, 1952) AC-9640.

Pressure—4-4¾ lbs.

See Carburetion Equipment Section for complete data.

Gasoline Gauge: AC Electric type.

Dash Unit—AC No. 1517378.

Tank Unit—AC No. 1517411; Station Wagon, AC No. 1517410.

See Carburetion Equipment Section for complete data.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

BATTERY

Delco Model 15E6W. 6 volt, 15 plate, 100 ampere hour capacity (20 hr. rate).
Police Battery—Delco Model 19E6W. 6 volt, 19 plate, 130 ampere hour capacity (20 hr. rate).
Grounded Terminal—Negative (—) to engine.

►*ENGINE GROUND STRAP*—Ground strap is installed between rear end of cylinder head and dash on later cars and CAN BE INSTALLED ON EARLIER CARS.

Location—On left side of engine compartment.

NOTE—The "E6" battery is "Low Gravity Type." Specific gravity range of electrolyte at full charge is 1.260-1.280 "E4" models 1.275-1.290.

STARTER

Model	Starter No.	Armature No.
Early 1951 (LHD)	1107079	1867897
Late 1951 & 1952 (LHD)	1107107	1917855
1951, 52 (RHD)	1107934	1867897

Drive—Overrunning clutch (solenoid pinion shift).
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—24-28 ozs.

Performance Data—1107079 & 1107107

Torque	RPM	Volts	Amperes
0 ft. lbs.	5500	5.65	70
11 "	Lock	3.25	550

Performance Data—1107934

Torque	RPM	Volts	Amperes
0 ft. lbs.	5500	5.65	70
12 ft. lbs.	Lock	3.15	570

Starting Switch (1107079 & 1107107 Starters): Delco-Remy Solenoid No. 1118140 (no relay) mounted on starter and controlled by Pushbutton Switch No. 1996045 (Early 1951); No. 1996053 (Late 1951 & 1952). Neutral Safety Switch No. 1997846 used on Hydra-Matic cars.

Starting Switch (1107934 Starters): Delco-Remy Solenoid No. 1118102 (with relay) mounted on starter and controlled by Pushbutton Switch No 1996039. Neutral Safety Switch No. 1997846 used on Hydra-Matic cars.

Starter Solenoid Relay—Delco-Remy No. 269-G.

►*CAUTION*—Overrunning clutch pinion clearance must be adjusted if solenoid removed from starter. *See Electrical Equipment Section for complete data.*

Neutral Safety Switch Adjustment—*See Pontiac Hydra-Matic Linkage Adjustment in Transmission Section.*

GENERATOR

Car Model	Delco-Remy No.
1951 Std. (Early)	1102750
1951 Std. (Later)	1102775
1952 Std.	1102769
1951 Heavy Duty (Early)	1106403
1951 (Late), 1952 Heavy Duty	1105900

Delco-Remy Armature No.	For Generator No.
1912599	1102750
1921621	1102775
1923069	1102769
1880252	1106403
1918009	1105900

►*1951 GENERATOR & REGULATOR CHANGE*—Later Delco-Remy Regulator No. 1118725 must be used with later 45 ampere Generators and Delco-Remy Regulator No. 1118722 must be used with later Heavy Duty Generator No. 1105900 (50 ampere).

►*1951-52 GENERATOR TESTING CAUTION—See "Delco-Remy Generators" in Electrical Equipment Section for special ALTERNATE WOUND ARMATURE generator data.*

Maximum Charging Rate—*See Current Regulator.*

Performance Data—Cold

	Amperes①	Volts	RPM
1102750	40	8.0	2150
1102775	45	8.0	2450
1102769	45	8.0	2450
1106403	35	8.0	1040
1105900	50	7.0	2100

①—Not maximum output. See Current Regulator.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—(1106403) 25 ozs. (Others) 28 ozs.

Field Current—(1102750, 2769, 2775) 1.87-2.00 amperes, (1106403) 1.77-2.00 amperes, (1105900) 1.77-1.93 amperes. All at 6.0 volts.

Belt Adjustment: Belt deflection or sideplay should be ¼" midway between generator and pump pulleys.

REGULATOR

Delco-Remy Regulator No.	For Generator No.
1118300	1102750
1118725	1102769, 75
1118352	1106403
1118722	1105900

Voltage and current regulation.

►*1951 GENERATOR & REGULATOR CHANGE—See Generator above.*

►*ENGINE GROUND STRAP INSTALLATION (To correct clicking or oscillating of relay points): See Battery (above).*

See Electrical Equipment Section for complete data.

CAUTION—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

Cutout Relay

Cuts In—5.9-6.7 volts hot (set to 6.4 volts hot).
Contact Gap—.020" (same for both contacts).
Air Gap—.020" (with contacts just closed).

Voltage Regulator

Setting—7.0-7.7 volts hot (set to 7.4).
Regulator is over-compensated for temperature. Should be checked with cover in place and hot.

Air Gap—.075" with armature pressed down to point where contacts are just touching.

Checking & Adjustment—*See Elec. Equip. Section.*

Current Regulator

Setting (1118300)—40-46 amps. hot (set to 42 hot).
Setting (1118725)—45-51 amps. hot (set to 47 hot).
Setting (1118352)—33-37 amps. hot (set to 35 hot).
Setting (1118722)—48-52 amps. hot (set to 50 hot).

Air Gap—.075" with armature pressed down to point where contacts are just opening.

Checking & Adjusting—*See Elec. Equip. Section.*

LIGHTING

Headlamps: Guide "Sealed Beam" type.
See Electrical Equipment Section for complete data.

Beam Indicator—At speedometer. Lighted when upper beam in use.

Direction Signal: *See Electrical Equipment Section.*

Direction Signal Indicator—Red pilot light on speedometer dial. Flashes when signal in use.

Switches

Lighting—Delco-Remy No. 1995032.
Beam Selector—Delco-Remy No. 1997008.
Instrument—Part of lighting switch. Rheostat operated by turning Light Switch Knob.
Direction Signal—Pontiac No. 5943132.
Stop Light—Delco-Remy No. 1997725.

MISC. ELECTRICAL

THERMOSTATIC CIRCUIT BREAKER: Delco-Remy. On back of light switch (part of switch assy.). Contacts remain closed with 30 amperes but open in 3 minutes with 42 amperes at 70°F. Not adjustable.

MAIN FUSE BLOCK: On left hand engine side of dash. Two fuses (plus 1 spare) as follows:

Tail Lamp—SFE 14 ampere. In gold colored fuse holder. Protects rear license, instrument, ignition key, and clock lamps (dome on convertible).

Stop Lamp—SFE 14 ampere. In gray colored fuse holder. Protects trunk light and dome light (except on Convertible).

ACCESSORY FUSE BLOCK: Six fuses mounted on fuse block on dash behind instrument panel. All fuses are 20 ampere except Radio fuse which is 14 ampere. (Spare Radio fuse on main fuse block on engine side of dash.)

HORNS: Delco-Remy No. 1999645 (Low Note). No. 1999646 (High Note). Vibrator types operated by relay.

Type	Current (at 6 volts)	Air Gap
Low Note	19-21 amperes	.047-.052"
High Note	18-20 amperes	.039-.044"

Horn Relay: Delco-Remy No. 1116775.
Contact Gap—.027". **Air Gap**—.014" (closed).
Contacts Close—2.75-4.0 volts (set to 3.5 volts).

ENGINE

ENGINE SPECIFICATIONS: Own. Six cyl., "L" head.
Bore—3 9/16". **Stroke**—4".
Displacement—239.2 cu. in. **Rated H.P.**—30.46.

Developed Horsepower—(At 3400 R.P.M.)	H.P.
1951 Std. 6.5-1 Head	96
1951 High Compr. 7.5-1 Head	100
1952 Synchro-mesh 6.8-1 Head	100
1952 Hydra-Matic 7.7-1 Head	102

Compression Ratio—	Ratio
1951 Standard	6.5-1
1951 High Compression	7.5-1
1952 Synchro-mesh	6.8-1
1952 Hydra-Matic	7.7-1

Compression & Vacuum Reading—*See Tune-Up.*

ENGINE & OIL PAN REMOVAL: *See Pontiac Special Data.*

ENGINE FRONT MOUNTING REMOVAL: *See "Engine Mounting" in Pontiac Special Data.*

CYLINDER HEAD & TIGHTENING TORQUES: *See Pontiac Special Data.*

PISTONS: Chrome-nickel alloy, electro-plated type.

►*1952 PISTON PRODUCTION CHANGE CAUTION*—Two types of pistons are used. **Early Type**—Piston pin is locked in piston with lock bolt in one piston boss. **Late Type**—Piston pin is secured in piston with lock rings at each end of pin. *LATE TYPE PISTONS ARE NOT INTERCHANGEABLE WITH PISTONS IN EARLIER ENGINES, EXCEPT IN SETS.*

CONTINUED ON NEXT PAGE

ENGINE

CONTINUED FROM PRECEDING PAGE

►*IDENTIFICATION NOTE*—Engine with later type pistons are identified by an "X" following the production engine number (this number will be found on raised pad at left rear corner of engine near the fire wall).

Original Bore & Pistons—*See Pontiac Special Data.*

Removal—Pistons and rods removed from above.

Clearance—Top Land .015-.027". Skirt .002".

Fitting New Pistons: Insert .0015" x ½" feeler between piston and cylinder wall. Pull to withdraw feeler must be 10-20 lbs. Taper and out-of-round limits—Piston .0005", Cylinder .0005" after reconditioning.

Replacement Pistons—*See Pontiac Special Data.*

PISTON RINGS: Two tapered-face compression rings above pin, one slotted oil control ring below pin.

NOTE—Rings are cadmium-plated or tin-plated.

Ring	Width	End Gap	Side Clearance
Compr. (#1, 2)	3/32"	.006-.013"	.0015-.003"
Oil (#3)	3/16"	.006-.013"	.001-.0025"

Installing Compression Rings—Mark "TOP" up.

Replacement Rings: .005", .010", .020", .030" Oversize.

PISTON PIN: *TWO TYPES USED—See Pistons (above).*

►*CAUTION—Early and Late type pin fitting in piston is DIFFERENT:* **Pin Fit in Piston (Early Type)**—Pin is locked in one piston boss by self-locking screw, and pressure required to press pin into piston should be 200-350 lbs. **(Late Type)**—Pin retained in piston by locking ring at each end and pressure required to press pin into piston should be 150-250 lbs. *Other pin fitting instructions unchanged from previous models.*

Diameter—.9369-.9375" (selective fit). **Length**—3 1/16".

Pin Clearance in Rod Bushing—.0004-.0006".

Replacement Pins: Early Type—.001" (red & brown), .003" (red), .005" (blue) oversize. **Late Type**—.001" (green), .003" (red), .005" (blue) oversize. Paint mark on end of pin.

Piston Pin Removal & Installation: *See "Piston Pins" in Pontiac Special Data.*

CONNECTING ROD: Weight—37 ozs. **Length**—7 9/16".

Piston Pin Bushing (Upper Bearing)—Split aluminum bronze bushings. *See Pontiac Special Data.*

Crankpin Journal Diameter—2.137-2.1247".

Lower Bearing—Thin type, interchangeable, steel-backed, babbitt-lined type.

Clearance—.0001-.0021". **Sideplay**—.007-.012".

Bearing Adjustment: None. Replace bearings. *See "Connecting Rod & Bearings" in Pontiac Special Data.*

Replacement Bearings: Standard size and .001" and .002" Undersize. *NOTE*—Bearings have small tongue which must engage groove in rod and cap.

Installing Rods: Not offset (install either way).

NOTE—Rods and bearing caps marked to insure correct reassembly (marks must be together). These marks do not indicate cylinder in which rod used.

CRANKSHAFT: Four bearing type with integral counterweights and vibration dampener on forward end.

Vibration Dampener Removal & Installation: *See "Vibration Dampener" in Pontiac Special Data.*

►**Flywheel to Crankshaft Bolts (Synchro-Mesh Transmission)**—¾" hex head bolts (No. 508463) or 1" hex head bolts (No. 510832) are used. Either type can be used for replacement but **head sizes must be alike on all bolts or engine balance will be destroyed.**

Journal Diameter—#1, 2.4982-2.4992"; #2, 2.5294-2.5304"; #3, 2.5919-2.5929"; #4, 2.6232-2.6242".

Bearings—Thin type, removable, steel-backed, babbitt-lined. Upper and lower bearing halves alike.

Clearance—.0003-.0023".

Rear Main Bearing Oil Seal Renewel—*See Pontiac Special Data.*

Replacement Bearings: Std. & .001", .002", Undersize.

End Thrust: At #3 (rear intermediate) bearing.

Endplay—.003-.008".

CAMSHAFT: Four-bearing, non-adjustable chain.

Timing Chain Cover Oil Seal Installation—*See "Timing Chain" in Pontiac Special Data.*

Bearing Diameters—*See Pontiac Special Data.*

Clearance—.0015-.0025" (new).

Camshaft Removal & Bearing Installation: *See "Camshaft & Bearings" in Pontiac Special Data.*

End Thrust: Steel thrust plate behind camshaft sprocket. Replace if worn. **Endplay**—.003-.007".

Timing Chain: Morse. Width 1". Pitch ⅜". Length 21" or 56 links. Timing chain bumper is installed to eliminate vibration.

Timing Chain Oil Cover Seal Installation—*See "Timing Chain" in Pontiac Special Data.*

Timing Chain Replacement—*See "Timing Chain" in Pontiac Special Data.*

Camshaft Setting: Sprockets marked. Mesh chain with sprockets turned so that '0' marks are adjacent and in line with a straightedge across shaft centers.

VALVES:	Head Diam.	Stem Diam.	Length
Intake	1 19/32"	.310-.311"	5.718"
Exhaust	1 15/32"	.310-.311"	5.718"

	Seat Angle	Lift	Stem Clearance
Intake	30°	.19/64"	Free fit to .0006"①
Exhaust	45°	.19/64"	Free fit to .0006"①

①—Tapered (max. clearance at bottom .0006").

Valve Guides: Guides have tapered hole (.001" taper to inch—greatest clearance at top). Exhaust guides counterbored at top to depth of ¾".

Checking Valve Clearance in Guide—Clean guide with tool KMO122, clean counterbore in exhaust guide with Counterbore Cleaner J-2122. Valve should just fall through guide of own weight.

Installing Guides—Use Valve Guide Remover J-2542 to remove and install guides. Drive new guide down in block (counterbored end up on exhaust guides) until upper end 29/32" below top edge of valve seat. Ream guide with PR-131 tapered reamer and finish counterbore with Counterbore Cleaner J-2122 for correct clearance (see above).

►**CAUTION**—Guides furnished with straight hole which must be taper reamed.

NOTE—Eight cylinder intake valve guides may be used on six cylinder cars.

Valve Springs: Intake and exhaust springs identical. Install with two closed coils at top and dampener on top of each spring. Use new dampeners whenever removed from spring. **Free Length**—2 11/32".

	Spring Pressure	Length
Valve Closed	56-63 lbs.	1 29/32"
Valve Open	97-105 lbs.	1 19/32"

Valve Lifters: Barrel type, cast-iron. Guide holes reamed in block. Lifters furnished .005" oversize (use pilot reamer J-706-P when reaming holes to maintain alignment—valve guides must be removed, use Valve Guide Removing Tool J-2542).

Clearance—Free fit. Lifter should just move freely with finger touch.

VALVE TIMING

Tappet Clearance: .011" to .013", All Valves, Hot. .011"-"Go" gauge, .013"-"No-Go" gauge.

High Speed Setting—.013" EXH., Hot.

Cold Setting with Engine Stopped—.012-.014" Cold (room temperature). *CAUTION*—Check setting after engine warmed up for limits of .011" to .013".

NOTE—A removable plate is installed in front fender skirt so tappets are accessible for adjustment.

Valve Timing—*See Camshaft Setting above.*

Intake Valves—Open 5° BTDC. Close 39° ALDC.

Exhaust Valves—Open 45° BLDC. Close 5° ATDC.

Valve Timing Check—With .015" tappet clearance #1 intake valve should open with #1 piston 5° or .0096" before top dead center with first straight line of dampener mark '/IGN.ONE/' slightly past pointer on left front face of chain cover. Reset tappet clearance .011-.013" (warm).

LUBRICATION

Engine Oiling System: Pressure to main bearings connecting rod lower bearings and piston pins (rifle-drilled rods), camshaft bearings, and chain.

Crankcase Capacity—5 qts. (refill), 6 qts. (dry).

Normal Oil Pressure—35-45 lbs. at 40 MPH. with warm oil (10-30 lbs. idling).

Oil Pressure Regulator—On oil pump. Opens at 40 lbs. Replace spring if free length less than 2 5/16".

Oil Pump: Gear type. On right side of crankcase.

Removal & Installation—*See Pontiac Special Data.*

Oil Cleaner: Precipitation type (in crankcase).

Removal & Installation—*See Pontiac Special Data.*

Oil Pressure Gauge: AC No. 1507535. Not electric.

Crankcase Ventilation: Filter element in oil filler cap (inlet). Outlet pipe at valve compt. cover on right rear side of engine (cars with oil bath air cleaner use 3-piece outlet pipe containing filter element). Wash filter element and re-oil by dipping in engine oil when servicing air cleaner.

CAUTION—Filler cap must be installed with air opening in cap toward front of car and seam in line with groove in tube (may cause excessive oil consumption if installed backward).

Crankcase Ventilator Outlet Pipe—On cars with Oil-bath type Air Cleaner, special 3-piece ventilator outlet pipe used with copper gauze air cleaner.

COOLING

Cooling System: Pressure type with pressure valve and vacuum valve (relief valve) in filler cap.

Capacity—18½ qts.

Pressure Valve—AC No. 850549 Filler Cap. Opens at 7 lbs. (6½-7½ lbs.)

Water Pump—Packless, sealed ball-bearing shaft.

►*WATER PUMP PRODUCTION CHANGE—Water pump body bore reduced to give .0015-.0025" press fit for water pump bearing on late 1952 pumps. Bearing is*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

same for both early and late pumps. NOTE—Bearing should be pressed in until outer race flush with end of pump body (no lockwire used on these pumps with press-fit bearing).

Removal—Drain cooling system, remove hose connection at pump, remove belt, take out water pump mounting bolts and lift pump out.

Belt Adjustment—*See Generator Belt Adjustment.*

Thermostat: Harrison. In cylinder head outlet.
Setting—(Std. 151°) Starts to open 148-156°F. Fully open 176°F. Two other thermostats available for use with permanent anti-freeze, 160° and 170°.

Radiator Removal: *See "Radiator" in Pontiac Special Data.*

Temperature Gauge: AC Electric type.
Dash Unit—AC No. 1512287.
Engine Unit—AC No. 1512015.
See Miscellaneous Section for complete data.

CLUTCH

Inland. Single Plate, "Diaphragm," dry disc type with Long Driven Member Model 9½CF-TS (except Taxicab), Model 10CF-CS (Taxicab).
See Clutch Section for complete data.

▷**Heavy Duty Clutch Note**—No separate Heavy Duty Clutch used. Std. 8 cyl. clutch cover assembly used with special 6 cyl. 10" driven member.

Facings—Woven type, 2 required. I.D. (exc. Taxi) 6", (Taxi) 6¾". O.D. (exc. Taxi) 9½", (Taxi) 10". Thickness ⅛".

Pedal Adjustment: Free travel ⅞-1⅛" (adjusting nut on link at clutch fork).

Removal: Remove Transmission (see Transmission Removal below), remove clutch bearing support spring washer (in rear face of clutch housing), remove clutch housing bottom cover and control shaft inner bracket. Remove release bearing support and release bearing (see Clutch Release Bearing & Support data), tapping the support from inside the clutch housing to aid in removing (*CAUTION*—avoid striking tubular portion of support). Mark flywheel and clutch cover (to insure reinstallation in same position to maintain balance), remove clutch cover mounting bolts evenly, move clutch assembly away from flywheel at bottom and withdraw driven member, lower cover assy. out.

Clutch Installation Note—Install new felt oil seal against shoulder ahead of oil slinger retaining ring on Transmission Main Drive Gear (will bear against flared end of release bearing support when installed). Lubricate seal with engine oil before installing transmission. Coat entire length of outer diameter of release bearing support tube with grease. Lubricate release fork fulcrum points with a very light coat of grease. Apply light coat of Lubriplate on main driving gear splines. Use new paper gasket between support flange and clutch housing, make certain that flange is not bent or distorted (will cause misalignment of transmission).

TRANSMISSION

Own Make. All helical gear. Constant-mesh synchro-mesh (Second & High), sliding gear (Low & Reverse). *See Transmission Section for data.*

Transmission Control: Pontiac "Safety-shift" remote control type with gearshift lever on steering column.
See Transmission Section for complete data.

Removal: Disconnect speedometer cable, gearshift selector and control rods from transmission. Disconnect rear universal (wire trunnions) and pull out propeller shaft. Remove upper transmission mounting screws, install guide pins (J-851), remove lower screws, pull transmission to rear, down and out.

Installation Note—Use guide pins installed in two upper transmission mounting holes to assist in sliding transmission straight forward into place (to avoid damage to clutch release bearing support).

HYDRA-MATIC DRIVE

Optional equipment. Four-Speed planetary type automatic transmission and fluid coupling. Modulated throttle pressure and hydraulically operated reverse mechanism. 1952 model is "Dual Range" type.

▷*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION—See "Hydra-Matic Drive" in Transmission Section.*

▷*TESTING & TROUBLE SHOOTING—See Transmission Section.*

Lubrication—Check fluid every 2000 miles. Add fluid as required to maintain level at "F" mark on dipstick. Drain and refill every 25,000 miles. Use Hydra-Matic fluid (Automatic Transmission Fluid type "A").

Checking Fluid Level—Set hand brake, place selector lever in "N" position, start engine and idle for a minimum of two minutes **after** transmission has reached normal operating temperature. With selector lever in "N," remove dipstick and check fluid level (dipstick located under right front floor plate). Add the necessary amount of fluid to bring fluid level to "F" mark. *CAUTION—Use care not to allow dirt or lint to enter transmission.*

▷*CAUTION—Do not fill above "F" mark on dipstick.*

Capacity—Approximately **11 quarts** (refilling after draining). **12 quarts** (when transmission disassembled).

▷*OTHER HYDRA-MATIC SERVICE DATA—See "Hydra-Matic Drive" in Transmission Section.*

UNIVERSALS

Mechanics or Saginaw. 'Mechanics' is lock ring retainer type and 'Saginaw' clamp plate retainer type.

▷*CHANGE NOTE*—Universals on 1952 cars are changed from previous models. Interchangeable as **complete** units.

▷*CAUTION*—Rear universal companion nut controls rear axle pinion bearing "pre-load" (must be adjusted whenever nut is loosened). *See Pontiac Rear Axle in Rear Axle Section.*

REAR AXLE

Own Make. Hypoid gear, semi-floating type with pinion mounted on two taper roller bearings.

▷*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See Rear Axle Section for complete data.*

Rear Axle Ratios— Hydra-Matic			
Model	**Ratio**	**Code No.①**	**Color②**
1951	3.63-1	6	Blue
1952 (Dual Range)	3.08-1	0	Yellow
Synchro-mesh			
1951-52 Standard	4.10-1	3	Green
1951-52 Mountain	4.30-1	2	White
1951-52 Plains	3.90-1	4	Red

①—Stamped on pad on differential carrier.
②—On end of axle shaft.

Backlash—.003-.012" (new), .012" (worn).

Removal: Disconnect rear universal and wire trunnions (do not disengage spline joint at transmission), remove axle shafts and carrier flange capscrews. Withdraw carrier assembly from housing.

▷*CAUTION*—Rear universal joint companion flange nut controls pinion bearing "pre-load" (must be adjusted whenever nut is loosened).

Axle Shaft Removal: Remove wheel, brake drum, 4 backing plate bolt nuts, static collector, and loosen bearing retainer (do not move backing plate or brake line may be damaged). Pull shaft with puller J-942—do not drag axle shaft on oil seal.

Wheel Bearing Adjustment—None.

SHOCK ABSORBERS

Delco. Direct-acting, non-adjustable, sealed (non-refillable) type. Serviced by replacement.

Shock Absorber Part Nos.	Front	Rear
Standard	5516126	5516127
Taxicab & Police Cars	5513562	5513563

FRONT SUSPENSION

Front Suspension: Linked parallelogram type with shock absorber mounted within each coil spring.
See Front Suspension Section for complete data.

Kingpin Inclination—5° at 0° camber.
Caster— —¾° ± ½°.
Camber— 0° ± ½°.
Toe-In—0-1/16". Adjust rod sleeves equally.
Toe-out on Turns—Inner wheel 20°, Outer wheel 18-19°.

STEERING GEAR

Saginaw. Worm-and-Roller type.
See Steering Gear Section for complete data.

BRAKES

Service Brakes: Bendix Hydraulic, duo-servo, single anchor type **without eccentric adjustment.** Hand lever applies rear wheel service brakes.
See Brake Section for complete data.

▷*SQUEAKING BRAKE CORRECTION: See Brake Section for installation of Brake Drum Silencer Springs.*

Wheel Cylinders—Front Whls. 1 1/16". Rear ⅞".
Drums—Cast-iron. Diameter 11".
Lining—Molded. Width 2¼" (front wheels), 1¾" (rear). Thickness 3/16". Length per shoe: 9 11/32" (primary), 12 1/32" (secondary).
Clearance—.015" at both ends of secondary (rear) shoe with primary shoe forced out against drum.
Braking Power—60% front wheels, 40% rear.

Hand Brake: See Service Brakes above.

MISC. MECHANICAL

Convertible Top Control: Hydro-Lectric type (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders).
See Miscellaneous Section for complete data.

Windshield Wiper: Vacuum Link-&-Crank Arm type.
See Miscellaneous Section for complete data.

HOOD & HOOD LOCK ADJUSTMENT: *See Pontiac Special Data.*

FRONT END SHEET METAL ASSEMBLY REMOVAL: *See Pontiac Special Data.*

MODEL IDENTIFICATION

SERIAL & ENGINE NUMBERS: (Numbers are the same)—On left front door hinge post.

Starting Numbers—	1951	1952
Synchro-mesh Trans.	8US-1001-Up	8WS-1001-Up
Hydra-Matic Trans.	8UH-1001 Up	8WH-1001 Up

►*NOTE*—First letter of serial number prefix indicates assembly plant (below).

►**Assembly Plant Prefix Letter—P**—Pontiac, Mich., **C**—South Gate, **L**—Linden, **W**—Wilmington, **K**—Kansas City, **A**—Atlanta, **F**—Framingham.

TUNE-UP

COMPRESSION PRESSURE: At cranking speed.

Head	Compr. Pressure
1951 Std. 6.5-1	118-135 lbs.
1951 High Compression 7.5-1	135-153 lbs.
1952 Synchro-mesh 6.8-1	123-141 lbs.
1952 Hydra-Matic 7.7-1	139-158 lbs.

VACUUM READING: 18-20" steady idling at 7-8 MPH, or 365-385 RPM on Hydra-Matic cars.

FIRING ORDER: 1-6-2-5-8-3-7-4. See Diagram.

SPARK PLUG GAPS: .025". Limits .023-.028".
Plugs—AC No. (1951) 45, (1952) 44-5. 14 mm. Metric.

DISTRIBUTOR Delco-Remy No. (1951) **1110818,** (1952) **1110831.** Automatic and vacuum advance type with "Center Bearing" breaker plate.
Breaker Gap—.016" (new points), .015" (used).

►*CAUTION*—Dial indicator for setting point gap recommended by car manufacturer. *Do not use feeler gauge for setting used points.*
Cam Angle—26°. Test limits with .016" gap 21-30°. *See "Delco-Remy Cam Angle" in Electrical Equipment Section.*
NOTE—If dial indicator not available when setting Breaker Gap on Used Points, car manufacturer *recommends gap be set by cam angle at 28° closed.*
Breaker Arm Spring Tension—19-23 ounces.
Automatic & Vacuum Advance—*See Ignition.*

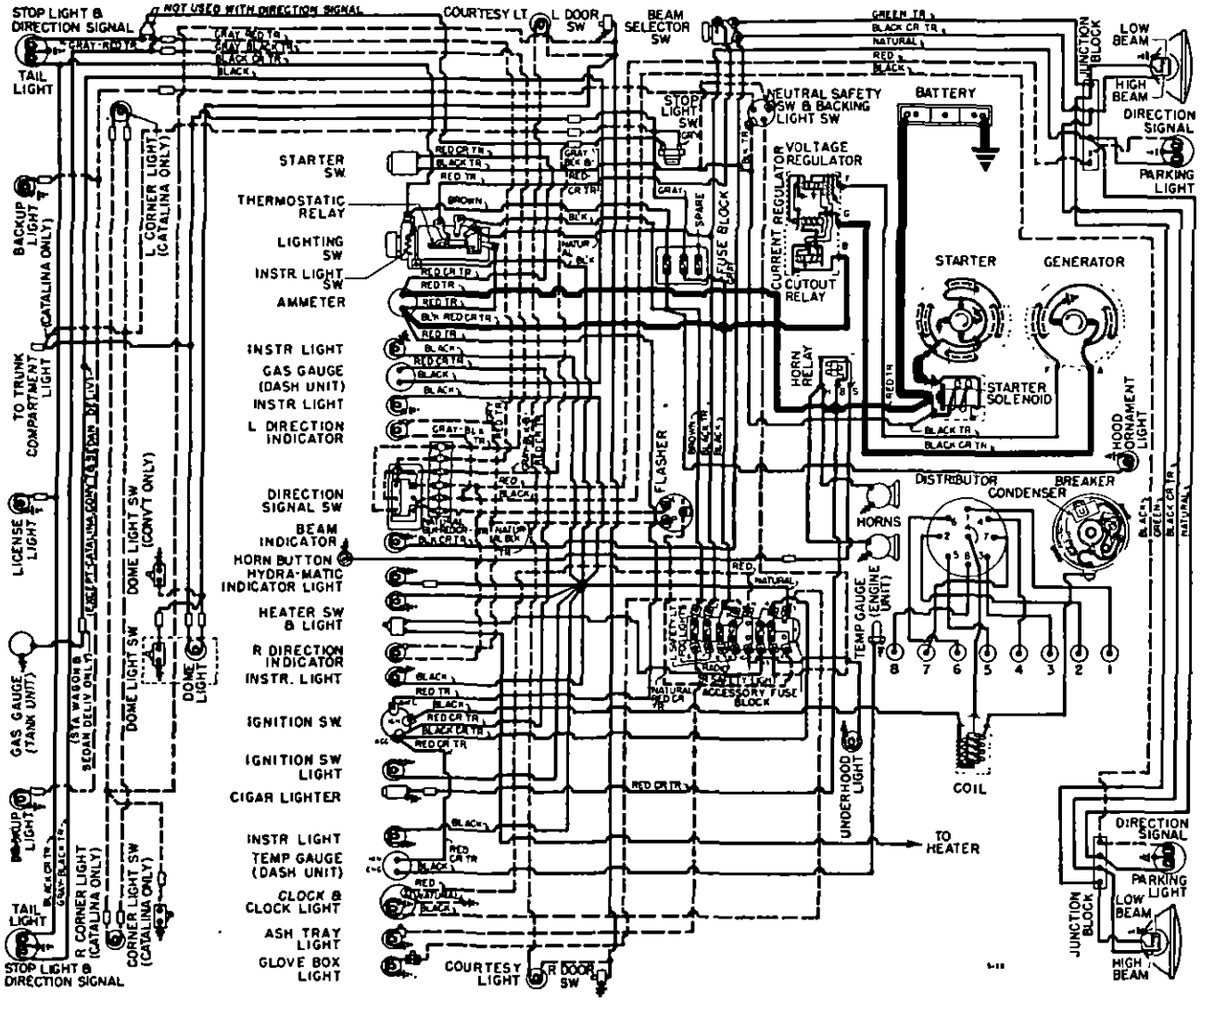
COIL: Delco-Remy No. 1115380.
Ignition Current—2.5 amperes idling, 4.5 stopped.

CONDENSER: Delco-Remy No. 1869704.
Capacity—.18-.23 microfarad.

IGNITION TIMING: (With 6.5-1 & 6.8-1 Heads) 6° BTDC. (With 7.5-1 & 7.7-1 Heads) 3° BTDC. (Initial Settings—See Gaselector Setting).
Timing Mark—Three lines on vibration dampener. First is 6° BTDC, second is 3°, third is TDC.
Gaselector Setting—Set to give best performance without ping for fuel used.
Timing Procedure—*See Ignition Timing.*

CARBURETION: Carter WCD-719SA (Synchro-mesh); WCD-720SA (Hydra-Matic). 1¼" Dual downdraft type with Climatic Control.
Idle Setting—¾-1¼ turns open. Two screws, adjust equally, turn out for richer mixture.
Idle Speed (Synchro-mesh)—450-475 RPM or 7-8 MPH. *(Hydra-Matic Cars)*—365-385 RPM.
Float Level—3/16" from top of float to gasket seat on bowl cover. (Gauge T109-162). Sides of floats should barely touch vertical uprights on gauge to avoid floats binding on sides of bowl.
Accelerating Pump—Lower hole (minimum) normal. Upper hole (maximum) if more charge required.

Choke Setting: Center at index.



Fast Idle Setting: .026" throttle opening (Gauge T109-189) with choke valve tightly closed. Adjust by turning fast idle screw.

Fuel Pump Pressure: 4-4¾ lbs.

MANIFOLD HEAT CONTROL: Thermostatic coil type, non-adjustable (fixed anchor pin). Counterweight should be securely clamped to shaft in vertical position with valve closed (cold position).
NOTE—Valve shaft bushings are Stainless Steel.

VALVE TAPPET CLEARANCE: .011" to .013" Hot. .011" "Go" gauge, .013" "No Go" gauge.
High Speed Setting—.013" EXH. Hot.

►***Cold Setting with Engine Stopped***—*.012" to .014".* Check for .011" to .013" clearance with engine hot.
NOTE—A removable plate is installed in front fender skirt so tappets are accessible for adjustment.

1951 MODELS

IGNITION

►*IGNITION HIGH TENSION CABLE CAUTION*—Non-metallic conductor cables (with built-in suppression resistance). Marked "RADIO-4000-GM." Distributor cap is conventional type without built-in resistor. *DO NOT substitute other type ignition cables for these special cables.*

IGNITION SWITCH: Delco-Remy No. 1116464.
Ignition Lock—Briggs & Stratton or Delco-Remy.

COIL: Delco-Remy No. 1115380. Mounted on engine.
Ignition Current—2.5 amperes idling, 4.5 stopped.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

CONDENSER: Delco-Remy No. 1869704.
Capacity—.18-.23 microfarad.

DISTRIBUTOR: Delco-Remy No. (1951) 1110818, (1952) 1110831. Automatic and vacuum advance type with "Center Bearing" breaker plate.
See "Delco-Remy Center-Bearing Breaker Plate Distributor" in Electrical Equipment Section.
Breaker Gap—.016" (new points), .015" (used pts.).

▷*CAUTION*—Dial indicator for setting point gap recommended by car manufacturer. *Do not use feeler gauge for setting used points.*
Cam Angle—26°. Test limits with .016" gap 21-30°. *See "Delco-Remy Cam Angle" in Electrical Equipment Section.*
Breaker Arm Spring Tension—19-23 ounces.
Rotation—Counter-clockwise viewed from above.

Automatic Advance—1110818

Degrees	Distr.	RPM	Degrees	Eng.	RPM
0-2		400	0-4		800
5.5-7.5		1200	11-15		2400
6-8		1500	12-16		3000
10.5-12.5		2000	21-25		4000

Automatic Advance—1110831

Degrees	Distr.	RPM	Degrees	Eng.	RPM
0-2		400	0-4		800
5.5-7.5		1200	11-15		2400
6-8		1400	12-16		2800
7-9		1600	14-18		3200
10-12		1950	20-24		3900

Gaselector—Manual adjustment at distributor. 10° advance or retard. See Ignition Timing.

Vacuum Spark Control: Delco-Remy No. 1116050. Integral type linked directly to breaker plate.
Plunger Travel—7/32".

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	7-9"
10°	20°	17.5-19.5"

IGNITION TIMING

Std. Setting	Flywheel Degrees
1951 Std. 6.5-1 Head①	6° BTDC
1951 High Compression 7.5-1 Head②	3° BTDC
1952 Synchro-mesh 6.8-1 Head①	6° BTDC
1952 Hydra-Matic 7.7-1 Head②	3° BTDC

①—Regular fuel; ②—Ethyl fuel.

Timing Mark—Three lines on vibration dampener. For cars with 7.5-1 and 7.7-1 heads align second (3°) line on dampener with pointer on chain case cover. For cars with other heads (6.5-1 & 6.8-1) align first (6°) line on dampener with pointer. Third line to pass pointer with engine turning over is TDC.

Timing (with Timing Light)—Loosen gaselector indicator arm-to-block clamp bolt, set arm at 0, tighten bolt. Connect Timing Light (KMO318) to No. 1 spark plug, idle engine. Loosen advance arm clamp bolt, rotate distributor until timing light shows pointer at correct timing mark on vibration dampener (see Standard Setting above). Tighten clampscrew. Check Gaselector Setting (below).

CARBURETOR

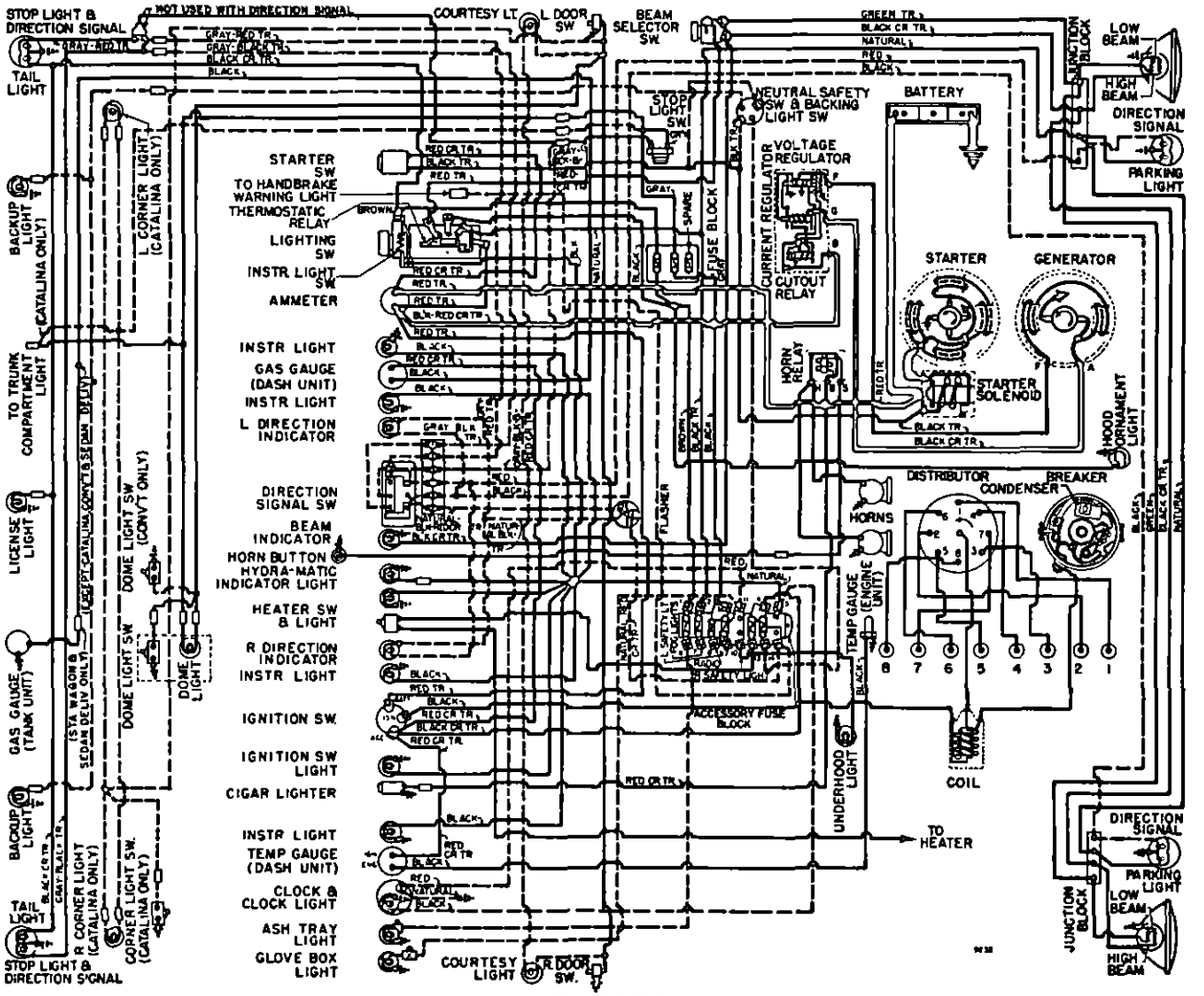
Carter WCD-719SA..... **Synchro-mesh Trans.**
Carter WCD-720SA..... **Hydra-Matic Trans.**
1¼" dual downdraft with Carter Climatic Control.
Casting No.—(719S, SA) 550, (720S, SA) 558.

▷**Choke Valve anti-rattle correction:** *See "Carter WCD-719SA and WCD 720SA" in Carburetor Section. See Carburetor Section for complete data.*

Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up.*
Metering Rod & Jet—*See Carter Jet Table in Carburetor Section.*

Hydra-Matic Throttle Linkage Adjustment: *See Pontiac Hydra-Matic Drive in Transmission Section.*

Fast Idle: Carter Dual (WCD) Carburetor type.
Setting—.026" throttle opening (Gauge No. T109-189) with choke valve tightly closed. Adjust by turning fast idle screw.
See Carburetor Equipment Section for complete data.



Automatic Choke: Carter Climatic Control (Dual Carburetor).
Setting—Centered at Index.
See Carburetion Equipment Section for complete data.

CARB. EQUIPMENT

Air Cleaner: AC oil-wetted type (std.), oil-bath type (optional).
Filter Element—AC #6 (std.), #20 (heavy duty).
Servicing—Clean and re-oil std. cleaner, or on heavy duty clean and refill reservoir with 1 pint SAE 50 (20W below freezing) oil every 10,000 miles.

Fuel Pump: AC Fuel & Vacuum Type.
Replacement Pump—(Early 1951) AC-539, (Late 1951, 1952) AC-9640.
Pressure—4 to 4¾ lbs.
See Carburetion Equipment Section for complete data.

Gasoline Gauge: AC Electric type.
Dash Unit—AC No. 1517378.
Tank Unit—AC No. 1517411; Station Wagon, AC No. 1517410.
See Carburetion Equipment Section for complete data.

1952 MODELS

BATTERY

Delco Model 15E6W. 6 volt, 15 plate, 100 ampere hour capacity (20 hr. rate).
Police Battery—Delco Model 19E6W. 6 volt, 19 plate, 130 ampere hour capacity (20 hr. rate).
Grounded Terminal—Negative (—) to engine.

►***ENGINE GROUND STRAP***—Ground strap is installed between rear end of cylinder head and dash on later cars and CAN BE INSTALLED ON EARLIER CARS.
Location—On left side of engine compartment.
NOTE—"E6" battery is "Low Gravity Type." Specific gravity at full charge is 1.260-1.280.

STARTER

Standard (LHD) ..... **Delco-Remy 1107957**
Optional (RHD) ..... **Delco-Remy 1107994**
Delco-Remy No. 1107934
Armature—Delco-Remy No. (1107957) 1867897, (1107994) 1917855.
Drive—Overrunning clutch (sollenoid pinion shift).
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—(1107957) 24-28 ozs. (1107994) 36-40 ozs.

Performance Data—1107957

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	6000	5.0	60
15 ft. lbs.	Lock	3.0	600

Performance Data—1107934, 1107994

Torque	RPM	Volts	Amperes
0 ft. lbs	5500	5.65	70
12 ft. lbs	Lock	3.15	570

Starting Switch (1107954, 1107994 Starters): Delco-Remy Solenoid No. 1118140 (no relay) mounted on starter and controlled by Pushbutton Switch No. *1996045 (Early 1951); No. 1996053 (Late 1951 & 1952).* Neutral Safety Switch No. 1997846 used on Hydra-Matic cars.

Starting Switch (1107934 Starter): Delco-Remy Solenoid No. 1118102 (with relay) mounted on starter and controlled by Pushbutton Switch No. 1996039. Neutral Safety Switch No. 1997846 used on Hydra-Matic cars.
Starter Solenoid Relay—Delco-Remy No. 269-G.

►***CAUTION***—Overrunning clutch pinion clearance must be adjusted if solenoid removed from starter. ***See Electrical Equipment Section for complete data.***
Neutral Safety Switch Adjustment—***See Pontiac Hydra-Matic Linkage Adjustment in Transmission Section.***

GENERATOR

Car Model	Delco-Remy No.
1951 Std. (Early)	1102750
1951 Std. (Later)	1102775
1952 Std.	1102769
1951 Heavy Duty (Early)	1106403
1951 (Late), 1952 Heavy Duty	1105900

Delco-Remy Armature No.	For Generator No.
1912599	1102750
1921621	1102775
1923069	1102769
1880252	1106403
1918009	1105900

►***1951 GENERATOR & REGULATOR CHANGE***—Later Delco-Remy Regulator No. 1118725 must be used with later 45 ampere Generators and Delco-Remy Regulator No. 1118722 must be used with later Heavy Duty Generator No. 1105900 (50 ampere).

►***1951-52 GENERATOR TESTING CAUTION—See "Delco-Remy Generators" in Electrical Equipment Section for special ALTERNATE WOUND ARMATURE generator data.***
Maximum Charging Rate—***See Current Regulator.***

Performance Data—Cold

	Amperes①	Volts	RPM.
1102750	40	8.0	2150
1102775	45	8.0	2450
1102769	45	8.0	2450
1106403	35	8.0	1040
1105900	50	7.0	2100

①—Not maximum output See Current Regulator.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—(1106403) 25 ozs. (Others) 28 ozs.
Field Current—(1102750, 69, 75) 1.87-2.00 amperes, (1106403) 1.77-2.00 amperes, (1105900) 1.77-1.93 amperes. All at 6.0 volts.
Belt Adjustment: Belt deflection or sideplay should be ¼" midway between generator and pump pulleys.

REGULATOR

Delco-Remy Regulator No.	For Generator No.
1118300	1102750
1118725	1102769, 75
1118352	1106403
1118722	1105900

Voltage and current regulation.

►***1951 GENERATOR & REGULATOR CHANGE—See Generator above.***

►***ENGINE GROUND STRAP INSTALLATION (To correct click or oscillating of relay points): See Battery. See Electrical Equipment Section for complete data.***
CAUTION—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

Cutout Relay

Cuts In—5.9-6.7 volts hot (set to 6.4 volts hot).
Contact Gap—.020" (same for both contacts).
Air Gap—.020" (with contacts just closed).

Voltage Regulator

Setting—7.0-7.7 volts hot (set to 7.4).
Regulator is over-compensated for temperature. Should be checked with cover in place and hot.
Air Gap—.075" with armature pressed down to point where contacts are just touching.
Checking & Adjustment—***See Elec. Equip. Section.***

Current Regulator

Setting (1118300)—40-46 ams. hot (set to 42 hot).
Setting (1118725)—45-51 amps. hot (set to 47 hot).
Setting (1118352)—33-37 amps. hot (set to 35 hot).
Setting (1118722)—48-52 amps. hot (set to 50 hot).
Air Gap—.075" with armature pressed down to point where contacts are just touching.
Checking & Adjustment—***See Elec. Equip. Section.***

LIGHTING

Headlamps: Guide "Sealed Beam" type.
See Electrical Equipment Section for complete data.
Beam Indicator—At Speedometer. Lighted when upper beam in use.
Direction Signal: ***See Electrical Equipment Section.***
Direction Signal Indicator—Red pilot light on speedometer dial. Flashes when signal in use.

Switches

Lighting—Delco-Remy No. 1995032.
Beam Selector—Delco-Remy No. 1997008.
Instrument—Part of lighting switch. Rheostat operated by turning Light Switch knob.
Direction Signal—Pontiac No. 5943132.
Stop Light—Delco-Remy No. 1997725.

MISC. ELECTRICAL

THERMOSTATIC CIRCUIT BREAKER: Delco-Remy. On back of light switch (part of switch assy.). Contacts remain closed with 30 amperes but open in 3 minutes with 42 amperes at 70°F.—Not adjustable.

MAIN FUSE BLOCK: On left hand engine side of dash. Two fuses (plus 1 spare) as follows:
Tail Lamp—SFE 14 ampere. In gold colored fuse holder. Protects rear license, instrument, ignition key, and clock lamps (dome on convertible).
Stop Lamp—SFE 14 ampere. In gray colored fuse holder. Protects trunk light and dome light.

ACCESSORY FUSE BLOCK: Six fuses mounted on fuse block on dash behind instrument panel. All fuses are 20 ampere except Radio fuse which is 14 ampere. (Spare Radio fuse on main fuse block on engine side of dash). Fuse identification printed inside fuse block cover.

HORNS: Delco-Remy No. 1999645 (Low Note). No. 1999646 (High Note). Vibrator types operated by relay.

Type	Current (at 6 volts)	Air Gap
Low Note	19-21 amperes	.047-.052"
High Note	18-20 amperes	.039-.044"

Horn Relay: Delco-Remy No. 1116775.
Contact Gap—.027". **Air Gap**—.014" (closed).
Contacts Close—2.75-4.0 volts (set to 3.5 volts).

ENGINE

ENGINE SPECIFICATIONS: 8 cylinder, "L" head type.
Bore—3⅜". **Stroke**—3¾".
Displacement—268.4 cu. ins. **Rated H.P.**—36.45.

Developed Horsepower—(At 3600 RPM.)	H.P.
1951 Standard 6.5-1 Head	116
1951 High Compression 7.5-1 Head	120
1952 Synchro-mesh 6.8-1 Head	118
1952 Hydra-Matic 7.7-1 Head	122

Compression Ratio—	Ratio
1951 Standard	6.5-1
1951 High Compression	7.5-1
1952 Synchro-mesh	6.8-1
1952 Hydra-Matic	7.7-1

Compression & Vacuum Reading—***See Tune-Up.***

ENGINE & OIL PAN REMOVAL: ***See Pontiac Special Data.***

ENGINE FRONT MOUNTING REMOVAL: ***See "Engine Mounting" in Pontiac Special Data.***

CYLINDER HEAD & TIGHTENING TORQUES: ***See Pontiac Special Data.***

PISTONS: Chrome-nickel alloy, electro-plated type.

►***1952 PISTON PRODUCTION CHANGE CAUTION***—Two types of pistons are used. **Early Type**—Piston pin is locked in piston with lock bolt in one piston boss. **Late Type**—Piston pin is secured in piston with lock rings at each end of the pin. ***LATE TYPE PISTONS ARE NOT INTERCHANGEABLE WITH PISTONS IN EARLIER ENGINES, EXCEPT IN COMPLETE SETS.***

►***IDENTIFICATION NOTE***—Engine with later type pistons are identified by an "X" following the pro-

CONTINUED ON NEXT PAGE

ENGINE

CONTINUED FROM PRECEDING PAGE

duction engine number (this number will be found on raised pad at left rear corner of engine near fire wall).

Original Bore & Pistons—*See Pontiac Special Data.*

Removal—Pistons and rods removed from above.

Clearance—Top Land .015-.027". Skirt .002".

Fitting New Pistons: Insert .0015" x ½" feeler between piston and cylinder wall. Pull to withdraw feeler must be 10-20 lbs. Taper and out-of-round limits—Piston .0005", Cylinder .0005" after reconditioning.

Replacement Pistons: *See Pontiac Special Data.*

PISTON RINGS: Two tapered-face compression rings above pin, one slotted oil control ring below pin.

NOTE—Rings are cadmium-plated or tin-plated.

Ring	Width	End Gap	Side Clearance
Compr. (#1, 2)	3/32"	.008-.015"	.0015-.003"
Oil (#3)	3/16"	.008-.015"	.001-.0025"

Installing Compression Rings—Mark "TOP" up.

Replacement Rings: .005", .010", .020", .030" oversize.

PISTON PIN: *TWO TYPES USED—See Pistons (above).*

▷*CAUTION—Early and Late type pin fitting in piston is DIFERENT:* **Pin Fit in Piston (Early Type)**—Pin is locked in one piston boss by self-locking screw, and pressure required to press pin into piston should be 200-350 lbs. **(Late Type)**—Pin retained in piston by locking ring at each end and pressure required to press pin into piston should be 150-250 lbs. *Other pin fitting instructions unchanged from previous models.*

Pin Clearance in Rod Bushing—.0004-.0006".

Replacement Pins: Early Type—.001" (red & brown), .003" (red), .005" (blue) oversize. **Late Type**—.001" (green), .003" (red), .005" (blue) oversize. Paint mark on end of pin.

Piston Pin Removal & Installation: *See "Piston Pins" in Pontiac Special Data.*

CONNECTING ROD: Wt.—32 ozs. **Lgth.**—7.560-7.565".

Piston Pin Bushing (Upper Bearing)—Split aluminum bronze bushings. *See Pontiac Special Data.*

Crankpin Journal Diameter—1.9987-1.9997". *See "Crankshaft & Main Bearings" in Pontiac Special Data.*

Lower Bearing—Thin type, interchangeable, steel-backed babbitt-lined type.

Clearance—.0001-.0021". **Sideplay**—.007-.012".

Bearing Adjustment: None. Replace bearings. *See "Connecting Rod & Bearings" in Pontiac Special Data.*

Replacement Bearings: Standard size and .001" and .002" undersize. *NOTE*—Bearings have small tongue which must engage groove in rod and cap.

Installing Rods: Not offset (install either way). *NOTE*—Rods and bearing caps marked to insure correct reassembly (marks must be together). These marks do not indicate cylinder in which rod used.

CRANKSHAFT: Five bearing type with integral counterweights and vibration dampener on forward end.

Vibration Dampener Removal & Installation: *See "Vibration Dampener" in Pontiac Special Data.*

Journal Diameters—#1, 2.3732-2.3742"; #2, 2.4044-2.4054"; #3, 2.4357-2.4367"; #4, 2.4669-2.4679"; #5, 2.6232-2.6242".

Bearings—Thin type, removable, steel-backed, babbitt-lined. Upper and lower bearing halves alike.

Clearance—.0003-.0023".

See "Crankshaft & Main Bearings" in Pontiac Special Data.

Bearing Adjustment: None (no shims). *See Pontiac Special Data for Removal and Fitting of Bearings.*

Rear Main Bearing Oil Seal Renewal—*See Pontiac Special Data.*

Replacement Bearings: Std. & .001", .002" Undersize.

End Thrust: Taken by #4 (rear intermediate) bearing. **Endplay**—.003-.008".

CAMSHAFT: Five bearing, non-adjustable chain.

Timing Chain Cover Oil Seal Installation—*See "Timing Chain" in Pontiac Special Data.*

Bearing Diameters—*See Pontiac Special Data.*

Bearings—Steel-backed, babbitt-lined bushings.

Clearance—.0015-.0025" (new).

Camshaft Removal & Bearing Installation: *See "Camshaft & Bearings" in Pontiac Special Data.*

End Thrust: Steel thrust plate behind camshaft sprocket. Replace if worn. **Endplay**—.003-.007".

Timing Chain: Morse. Width 27/32". Pitch ⅜". Length 21" or 56 links.

Timing Chain Oil Cover Seal Installation—*See "Timing Chain" in Pontiac Special Data.*

Timing Chain Replacement—*See "Timing Chain" in Pontiac Special Data.*

Camshaft Setting: Sprockets marked. Mesh chain with sprockets turned so that "0" marks are adjacent and in line with straightedge across shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 15/32"	.310-.311"	5.53"
Exhaust	1 11/32"	.310-.311"	5.53"

	Seat Angle	Lift	Stem Clearance
Intake	30°	19/64"	Free fit to .0006"①
Exhaust	45°	19/64"	Free fit to .0006①

①—Tapered (max. clearance at bottom .0006").

Valve Guides: Guides have tapered hole (.001" taper to inch—greatest clearance at top). Exhaust guides counterbored at top to depth of 9/16". Guides have valve spring seat at lower end.

Check Valve Clearance in Guide—Clean guide with tool KMO-122, clean counterbore in exhaust guide with Counterbore Cleaner J-2122 (If necessary, deepen counterbore to ¾"). Valve should just fall through guide with own weight.

Installing Guides—Use Valve Guide Remover J-2542 to remove and install guides. Drive new guide down in block (counterbored end up on exhaust guides) until upper end ⅞" below top edge of valve seat. Ream guide with PR-131 tapered reamer and finish counterbore with Counterbore Cleaner J-2122 for correct clearance (see above).

▷*CAUTION*—Guides furnished with straight hole which must be taper reamed.

Valve Springs: Intake and exhaust springs identical. Install with two closed coils at top and dampener on top of each spring. Use new dampeners whenever removed from spring. **Free Length**—2 3/16".

▷*CAUTION*—Dampeners located inside spring, with upper seat for spring located on valve guide.

Valve Spring Specifications

	Spring Pressure	Spring Length
Valve Closed	59-66 lbs.	1 23/32"
Valve Open	100-110 lbs.	1 13/32"

Valve Lifters: Barrel type, cast-iron. Guide holes reamed in block. Lifters furnished .005" oversize (use pilot reamer J-706-P when reaming holes to maintain alignment—valve guides must be removed, use Valve Guide Removing Tool J-2542).

Clearance—Free fit. Lifter should just move freely with finger touch.

VALVE TIMING

Tappet Clearance: .001" to .013", all Valves, Hot. .011" "Go" gauge, .013" "No Go" gauge.

High Speed Setting—.013" EXH. Hot.

Cold Setting with Engine Stopped—.012-.014". Cold (room temperature). *CAUTION*—Check setting for limits of .011-.013" after engine warmed up.

▷*NOTE*—A removable plate is installed in front fender skirt so tappets are accessible for adjustment.

Valve Timing: *See Camshaft Setting above.*

Intake Valves—Open 5° BTDC. Close 39° ALDC.

Exhaust Valves—Open 45° BLDC. Close 5° ATDC.

Valve Timing Check—With .015" clearance #1 intake valve should open with #1 piston 5° BTDC with first straight line of dampener mark 'IGN. ONE' slightly past pointer on chain cover. Reset tappet clearance .011-.013" (warm).

LUBRICATION

Engine Oiling System: Pressure to main bearings connecting rod lower bearings and piston pins (rifle-drilled rods), camshaft bearings, and chain.

Crankcase Capacity—5 qts. (refill), 6 qts. (dry).

Normal Oil Pressure—35-45 lbs. at 40 MPH. with warm oil (10-30 lbs. idling).

Oil Pressure Regulator—On oil pump. Opens at 40 lbs. Replace spring if free length less than 2 5/16".

Oil Pump: Gear type. On right side of crankcase.

Removal & Installation—*See Pontiac Special Data.*

Oil Cleaner: Precipitation type (in crankcase).

Removal & Installation—*See Pontiac Special Data.*

Oil Pressure Gauge: AC No. 1507535. Not electric.

Crankcase Ventilation: Filter element in oil filler cap (inlet). Outlet pipe at valve compt. cover on right rear side of engine (cars with oil bath air cleaner use 3-piece outlet pipe containing filter element).

Oil Filler (Crankcase Ventilator) Cap Cleaning—Wash filter element and re-oil by dipping in engine oil when servicing air cleaner.

CAUTION—Filler cap must be installed with air opening in cap toward front of car and seam in line with groove in tube (may cause excessive oil consumption if installed backward).

Crankcase Ventilator Outlet Pipe—On cars with Oil-bath type Air Cleaner, special 3-piece ventilator outlet pipe used which has copper gauze type air cleaner in container section. Wash and re-oil filter element when servicing air cleaner.

COOLING

Cooling System: Pressure type with pressure valve and vacuum valve (relief valve) in filler cap.

Capacity—19½ qts.

Pressure Valve—AC No. 850549 Filler Cap. Opens at 7 lbs. (6½-7½ lbs).

Water Pump: Packless, sealed ball-bearing shaft.

▷*WATER PUMP PRODUCTION CHANGE—Water pump body bore reduced to give .0015-.0025" press fit for water pump bearing on late 1952 pumps. Bearing is same for both early and late pumps. NOTE*—Bearing should be pressed in until outer race flush with end of pump body (no lockwire used on these pumps with press-fit bearing).

Removal—Drain cooling system, remove hose connection at pump, remove belt, take out water pump mounting bolts and lift pump out.
Belt Adjustment—*See Generator Belt Adjustment.*

Thermostat: Harrison. In cylinder head outlet.
Setting—Starts to open 151°F. Fully open 173°F.

Radiator Removal: *See "Radiator" in Pontiac Special Data.*

Temperature Gauge: AC Electric type.
Dash Unit—AC No. 1512287.
Engine Unit—AC No. 1512015.

CLUTCH

Inland. Single plate, "Diaphragm" dry disc type with Long Driven Member Model 10CF-CS.
See Clutch Section for complete data.
Facings—Woven type, 2 required. I.D. 6¾". O.D. 10". Thickness ⅛".

Pedal Adjustment: Free travel ⅞-1⅛" (adjusting nut on link at clutch fork).

Removal: Remove transmission (see Transmission Removal below), remove clutch bearing support spring washer (in rear face of clutch housing), remove clutch housing bottom cover and control shaft inner bracket. Remove release bearing support and release bearing (see Clutch Release Bearing & Support data), tapping the support from inside the clutch housing to aid in removing. *(CAUTION*—avoid striking tubular portion of support). Mark flywheel and clutch cover (to insure re-installation in same position to maintain balance), remove clutch cover mounting bolts evenly, move clutch assembly away from flywheel at bottom and withdraw driven member, lower cover assembly out.
Clutch Installation Note—Install new felt oil seal against shoulder ahead of oil slinger retaining ring on Transmission Main Drive Gear (will bear against flared end of release bearing support when installed). Lubricate seal with engine oil before transmission installed. Coat entire length of outer diameter of release bearing support tube with grease. Lubricate release fork fulcrum points with a very light coat of grease. Apply light coat of Lubriplate on main driving gear splines. Use new paper gasket between support flange and clutch housing, make certain that flange is not bent or distorted (will cause misalignment of transmission).

TRANSMISSION

Own Make. All helical gear. Constant-mesh synchro-mesh (Second & High), sliding gear (Low & Reverse). *See Transmission Section for data.*

Transmission Control: Pontiac "Safety-shift" remote control type with gearshift lever on steering column. *See Transmission Section for complete data.*

Removal: Disconnect speedometer cable, gearshift selector and control rods from transmission. Disconnect rear universal (wire trunnions) and pull out propeller shaft. Remove upper transmission mounting screws, install guide pins (J-851), remove lower screws, pull transmission to rear, down and out.
Installation Note—Use guide pins installed in two upper transmission mounting holes to assist in sliding transmission straight forward into place (to avoid damage to clutch release bearing tubular support). *NOTE*—These guide pins may be made from ½-13 American National Thread bolts by cutting heads off and reducing over-all length to 4¼".

HYDRA-MATIC TRANSMISSION

Optional equipment. Four-speed planetary type automatic transmission and fluid coupling. Modulated throttle pressure and hydraulically operated reverse mechanism. 1952 model is "Dual-Range" type.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION—See "Hydra-Matic" Drive in Transmission Section.*

►*TESTING & TROUBLE SHOOTING—See Transmission Section.*

Lubrication—Check fluid every 1000 miles. Add fluid as required to maintain level at "F" mark on dipstick. Drain and refill every 25,000 miles. Use Hydra-Matic fluid (Automatic Transmission Fluid type "A").
Checking Fluid Level—Set hand brake, place selector lever in "N" position, start engine and idle for a minimum of two minutes **after** transmission has reached normal operating temperature. With selector lever in "N," remove dipstick and check fluid level (dipstick located under right front floor plate). Add the necessary amount of fluid to bring the fluid level to "F" mark. *CAUTION—Use care not to allow dirt or lint to enter transmission.*

►*CAUTION—Do not fill above "F" mark on dipstick.*
Capacity—Approximately **11 quarts** (refilling after draining). **12 quarts** (when transmission disassembled).

►*OTHER HYDRA-MATIC SERVICE DATA—See "Hydra-Matic Drive" in Transmission Section.*

UNIVERSALS

Mechanics Model 2CR lock ring retainer type or **Saginaw** clamp plate retainer type.

CHANGE NOTE—Universals on 1952 cars are changed from previous models. Interchangeable as **complete** units.

►*CAUTION*—Rear universal companion nut controls rear axle pinion bearing "pre-load" (must be adjusted whenever nut is loosened). *See Pontiac Rear Axle in Rear Axle Section.*

REAR AXLE

Own Make. Hypoid gear, semi-floating type with pinion mounted on two taper roller bearings.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See Rear Axle Section for complete data.*

Rear Axle Ratios— Hydra-Matic Model	Ratio	Code No.①	Color②
1951	3.63-1	6	Blue
1952 (Dual Range)	3.08-1.	0	Yellow
Synchro-mesh			
1951-52 Standard	3.90-1	4	Red
1951-52 Mountain	4.10-1	3	Green
1951-52 Plains	3.63-1	6	Blue

①—Stamped on pad on differential carrier.
②—On end of axle shaft.
Backlash—.003-.012" (new), .012" (worn).

Removal: Disconnect rear universal and wire trunnions (do not disengage spline joint at transmission), remove axle shafts and carrier flange capscrews. Withdraw carrier assembly from housing.

►*CAUTION*—Rear universal joint companion flange nut controls pinion bearing "pre-load" (must be adjusted whenever nut is loosened).

Axle Shaft Removal: Remove wheel, brake drum, 4 backing plate bolt nuts, static collector, and loosen bearing retainer (do not move backing plate or brake line may be damaged). Pull shaft with puller J-942—(do not drag axle shaft on oil seal).
Wheel Bearing Adjustment—None.

SHOCK ABSORBERS

Delco. Direct acting, non-adjustable, sealed (non-refillable) type. Serviced by replacement.

Shock Absorber Part Nos.	Front	Rear
Standard	5516126	5516127
Taxicab & Police Cars	5513562	5513563

FRONT SUSPENSION

Front Suspension: Linked parallelogram type with shock absorber mounted within each coil spring. *See Front Suspension Section for complete data.*
Kingpin Inclination—5° at 0° camber.
Caster—¾° ± ½°.
Camber—0° ± ½°.
Toe-In—0-1/16". Adjust rod sleeves equally.
Toe-out on Turns—Inner wheel 20°, Outer wheel 18-19°.

STEERING GEAR

Saginaw—Worm-and-Roller type.
See Steering Gear Section for complete data.

BRAKES

Service Brakes: Bendix Hydraulic, duo-servo, single anchor type **without eccentric adjustment.** Hand lever applies rear wheel service brakes.

►*SQUEAKING BRAKE CORRECTION: See Brake Section for installation of Brake Drum Silencer Springs. See Brake Section for complete data.*

Wheel Cylinders—Front Whls. 1 1/16". Rear ⅞".
Drums—Cast iron. Diameter 11".
Lining—Molded. Width 2¼" (front wheels), 1¾" (rear). Thickness 3/16". Length per shoe: 9 11/32" (primary), 12 1/32" (secondary).
Clearance—.015" at both ends of secondary (rear) shoe with primary shoe forced out against drum.
Braking Power—60% front wheels, 40% rear.

Hand Brake: See Service Brakes above.

MISC. MECHANICAL

Convertible Top Control: Hydro-Lectric type (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders).
See Miscellaneous Section for complete data.

Windshield Wiper: Vacuum Link-&-Crank Arm type.
See Miscellaneous Section for complete data.

HOOD & HOOD LOCK ADJUSTMENT: *See Pontiac Special Data.*

FRONT END SHEET METAL ASSEMBLY REMOVAL: *See Pontiac Special Data.*

MODEL IDENTIFICATION

SERIAL & ENGINE NUMBERS: (Numbers are the same). On left front hinge pillar post and on raised pad at front of left side of cylinder block.

Starting Serial & Engine Number. 1001 Up.

►*SERIAL & ENGINE NUMBER NOTE–Serial & Engine number (example C6ZS-1001) includes following identification in sequence).*

Assy. Plant	No. of Cyls.	Model ① Year	Trans.② Type	Serial No.
See below...	6	Z	S	1001 Up

①–X designates 1953. Z designates 1954.
②–S and C are Synchro-mesh Transmissions. H and A are Hydra-Matic Transmissions.

Assembly Plant Designations

A–Atlanta	L–Linden
C–South Gate	T–Arlington
F–Framingham	W–Wilmington
K–Kansas City	

TUNE-UP

►*1953 ENGINE ROUGHNESS ON POWERGLIDE CARS:* May be caused by incorrect adjustment of Engine Side Supports (used only on Powerglide Cars). *See Pontiac Transmission Installation in "1954 Chevrolet Powerglide" in Transmission Section for Side Support Adjustment.*

COMPRESSION PRESSURE: 123-141 lbs. (Synchro-mesh), 139-158 lbs. (Hydra-Matic), both at cranking speed of 200 RPM.

VACUUM READING: 18-20" idling at 520-540 RPM (Synchro-mesh), at 365-385 RPM (Hydra-Matic).

VALVE TAPPET CLEARANCE: .011" to .013", HOT. Use .011" "Go" gauge, .013" "No Go" gauge. **High Speed Setting**–.013" (Exhaust Valve, Hot).
Cold Setting With Engine Stopped–.012-.014". Check for .011-.013" after engine warm.

MANIFOLD HEAT CONTROL: Thermostatic coil type, non-adjustable (fixed anchor pin). Counterweight should be securely clamped to shaft in vertical position with valve closed (cold position).

IGNITION

►*IGNITION HIGH TENSION CABLE CAUTION:* Non-metallic conductor cables (with built-in suppression resistance). Marked "Radio-4000 GM". Distributor cap is conventional type without built-in resistor. *Do not substitute other type cables.*

FIRING ORDER: 1-5-3-6-2-4. See diagram.

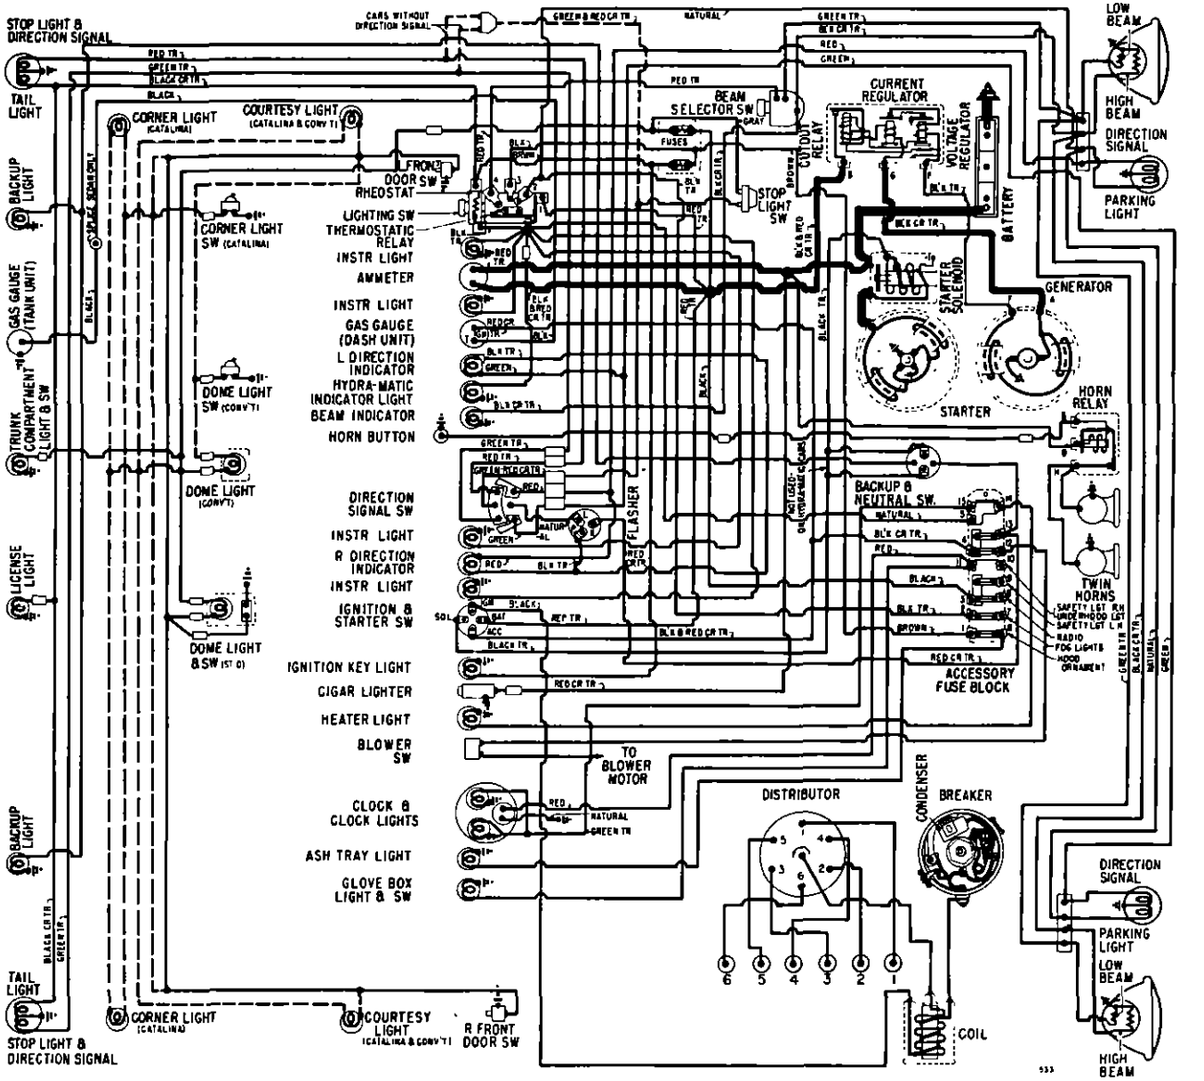
SPARK PLUG GAP: .025" (.023-.028").

Spark Plug–AC No. 44-5 14mm. Tighten to 25 ft. lbs.

COIL: Delco-Remy 1115378 (1953); 1115380 (1954). Ignition Current–2.5 amps. idling. 4.5 stopped.

DISTRIBUTOR (1953): Delco-Remy 1110232 (Early Synchro-mesh Cars & All Hydra-Matic Cars). No. 1110233 (Late Synchro-mesh Cars).

►*1953 DISTRIBUTOR NO. 1110232 PRODUCTION CHANGE: Early distributor with BLACK cap retaining clips has different Automatic & Vacuum Advance Specifications than later distributor with CADMIUM clips. See below.*



DISTRIBUTOR (1954): 1110235 (Synchro-mesh), No. 1110234 (Hydra-Matic).

Condenser–Delco-Remy 1869704. **Capacity**–.18-.23 mfd.
Contact Point Set–Delco-Remy 1871678.
Breaker Gap–.016".
Cam Angle–38°-45°.
Breaker Arm Spring Tension–19-23 ozs.
Rotation–Counter-clockwise viewed from above.

Automatic Advance–First 1110232 ►(Black Retaining Clips)

Degrees	Distr.	RPM	Degrees	Eng.	RPM
Start		450	0-4		900
5-7		1200	10-14		2400
9-10		1800	18-20		3600

Start	0	4-6"
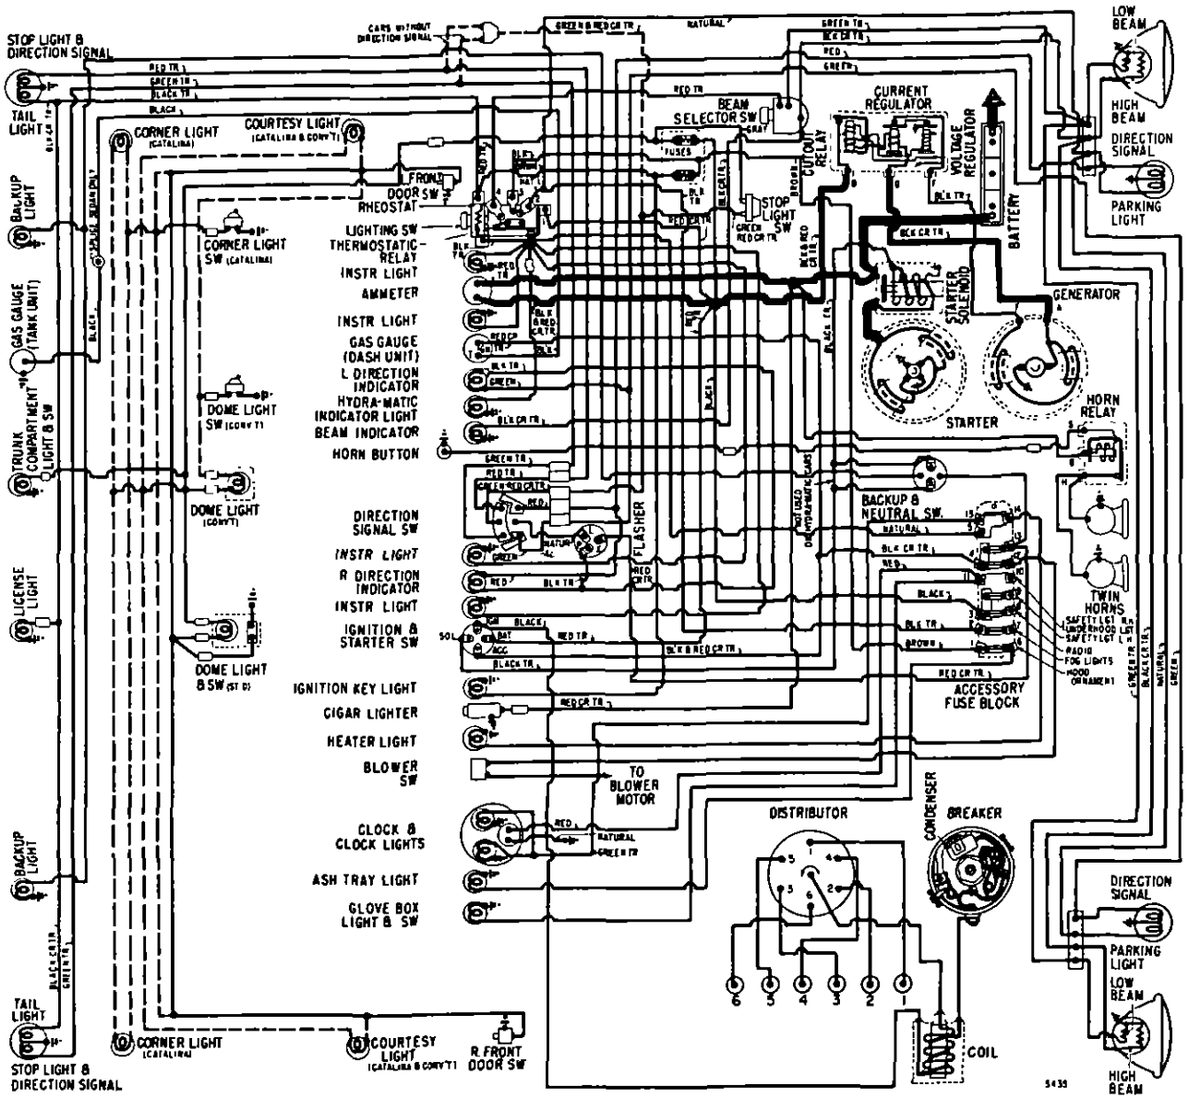
11	22	19-20.5"

IGNITION TIMING

Setting—3° BTDC.
Timing Marks—Timing marks on dampener indicating **TDC. - 3° BTDC. - 6° BTDC.** Pointer on chain case cover aligned with correct mark on dampener (See Ignition Timing above).

CARBURETOR

►*1954 CHOKE SETTING CHANGE (To Correct "Loading" During Engine Warm-up):* Change setting from center index to **2 points lean.**



►*1953 ACCELERATION FLAT SPOT CORRECTION & PRODUCTION CHANGE:* This condition is noticeable when car is accelerated from part throttle to full throttle. New metering rods (Carter No. 75-910) have been installed to correct the condition in production. All carburetors code marked "C3" and later have the new type metering rods.

►*1953 CARBURETOR PRODUCTION CHANGE CAUTION:* Early carburetors have TWO idle adjusting screws, later carburetors have ONE screw only. Adjust as follows: First set idle mixture screws 1¼ turns open from lightly seated position (two screws on early carburetors; one screw on later carburetors). With engine warm and idling at correct idle speed, turn idle screw (FRONT screw only on early carburetors) in until engine falters from lean mixture, then turn screw out until engine idle speed is at maximum. *CAUTION—Do not adjust REAR screw on early carburetors.*

THROTTLE LINKAGE ADJUSTMENT (ALL MODELS): *Adjust exactly as follows:*

1) **Carburetor Throttle Rod**—Disconnect throttle rod at throttle lever on left side of transmission case. Check and adjust engine idle speed to 365-385 RPM, hot or slow idle with engine at normal operating temperature, transmission warm, and selector lever in "N" position. Install adjusting pin J-2544 through holes in carburdtor intermediate lever on left side of cylinder head and lever bracket. Adjust nuts at trunnion on carburetor throttle rod (back off one nut, tighten opposite nut) until adjusting pin is free with carburetor throttle lever stopscrew against its stop. Tighten trunnion nuts but **do not remove adjusting pin.**

CONTINUED ON NEXT PAGE

1954 MODELS

CONTINUED FROM PRECEDING PAGE

2) Transmission Throttle Front Rod—Check adjustment by inserting a second J-2544 adjusting pin through holes in idler lever (left side of crankcase below starter) and lever bracket. If pin does not enter both holes freely, adjust length of transmission throttle front rod at trunnion on upper end of this rod, then tighten both locknuts securely, and remove both adjusting pins.

3) Accelerator Pedal Rod—Loosen front locknut on pedal rod at throttle control idler lever on left side of engine, depress accelerator pedal until carburetor throttle is just wide open. Check clearance between lower face of accelerator pedal and floor mat. If clearance is not ¼" at closest point, adjust pedal by turning rear nut at trunnion on forward end of rod in or out as required, then tighten front nut securely.

CARTER

Carter WCD 2010S. Dual downdraft type with automatic choke.

Idle Setting—First set screw 1¼ turns open from lightly seated position. With engine warm and idling at correct idle speed, turn idle screw in until engine falters from lean mixture, then turn screw out until engine speed is at maximum. One idle screw only.

Idle Speed—520-540 RPM (Synchro-mesh Cars), 365-385 RPM (Hydra-Matic Cars).

Float Level—*NOTE—Floats operate independently of each other, but are adjusted the same as a single type float.* 5/32" from top of float to gasket seat on bowl cover (with gasket removed) using Gauge T109-196. Sides of float should barely touch vertical uprights on gauge to avoid floats binding on sides of bowl.

Accelerating Pump—No seasonal adjustment.

Fast Idle: With choke valve tightly closed and fast idle screw on high step of fast idle cam, tighten adjusting screw until there is .026" clearance between throttle valve and bore of carburetor on side opposite idle ports.

Automatic Choke Setting: 2 points lean; *NOTE—Supersedes previous setting (Centered at index) to correct "Loading" during engine warm-up).*

►*OTHER DATA—See "Carter WCD Carburetors" in Carburetor Section.*

Hydra-Matic Throttle Linkage Adjustment: *See "Carburetor" above.*

Fuel Pump Pressure: 4-4¾ lbs.

CARB. EQUIPMENT

Fuel Pump: AC. **Replacement No. 9630** (Fuel & Vacuum).
Pressure—4-4¾ lbs.
See "Fuel Pumps" in Carburetion Equipment Section.
Gasoline Gauge: AC Electric type.
Dash Unit—AC No. 1517603.

Tank Unit—AC No. 1517411 (1953); No. 1518093 (1954).
See "Fuel Gauges" in Carburetion Equipment Section.

BATTERY

Delco. 15E6W. 6 volt, 15 plate, 100 ampere hour capacity (20 hr. rate).
Battery Ground—Negative, to engine.

STARTER

Delco-Remy 1107107. Armature—1917855.
Drive—Overrunning clutch (solenoid pinion shift).
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—24-28 ozs.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	5500	5.65	70
11 ft. lbs.	Lock	3.25	550

Starting Switch: Delco-Remy Solenoid No. 1118140 (no relay) mounted on starter and controlled by Ignition Switch (combination starting & ignition). Neutral Safety Switch used on Hydra-Matic Cars.
See "Starter Controls" in Electrical Equipment Section.
Neutral Safety & Back-up Light Switch: Delco-Remy 1998039. At lower end of steering column. Connected in starter control circuit so that starter operates only when selector lever in "N" (Neutral).
Adjustment—*See "Hydra-Matic Drive" in Transmission Section.*

GENERATOR

Delco-Remy 1102794 (Std.), 1105900 (Hvy. Duty & Police).
Armature—Delco-Remy 1912599 (Std.), 1918009 (Hvy. Duty & Police).

Performance Data—Cold

Gen. No.	Amperes ①	Volts	RPM
1102794	45	8.0	2350
1105900	50	7.0	2100

①—Not maximum. See Regulator.

Brush Spring Tension—28 ozs.
Field Current—1.87-2.00 amps. (1102794), 1.77-1.93 amps. (1105900).
Rotation—Counter-clockwise at commutator end.
Belt Adjustment: Belt deflection midway between generator and fan pulleys should be ½" with 10 lb. force applied.

REGULATOR

1953 Models

Delco-Remy 1118725 (1102794 Gen.).1118722 (1105900 Gen.). Voltage & current type.
See Electrical Equipment Section for complete data.

Cutout Relay

Cuts In—5.9-6.7 volts hot (set to 6.4 volts).
Contact Gap—.020" (same for both contacts).
Air Gap—.020" (with contacts just closed).

Voltage Regulator

Setting (1118725)—7.0-7.7 volts hot (set to 7.4).
Setting (1118722)—6.8-7.5 volts hot (set to 7.2).
►*NOTE: Regulator is compensated for temperature. Check with cover in place and hot.*
Air Gap—.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator

Setting (1118725)—45-51 amps. hot (set at 47 amps.).
Setting (1118722)—48-52 amps. hot (set at 50 amps.).
Air Gap—.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting—*See Electrical Equip. Section.*

1954 Models

Delco-Remy 1118827 (1102794 Gen.), 1118835 (1105900 Gen.). New "1118825 Series" Regulator.
►*1954 REGULATOR NOTE: Checking procedure is different than for previous models. See "Delco-Remy 1118825 Series Regulator" in Electrical Equipment Section. Following specifications are "Normal" settings.*

Cutout Relay

Cuts In—6.4 volts (hot).
Contact Gap—.020".
Air Gap—.020" (with contacts just closed).

Voltage Regulator

Setting—7.3 volts (hot).
Air Gap—.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator

Setting—47 amps. (1118827), 52 amps (1118835), hot.
Air Gap—.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting—*See Electrical Equip. Section.*

MISC. ELECTRICAL

►*1953 WIRING HARNESS INTERFERENCE (CONVERTIBLE): Make sure that wire harness is secured behind clip in left door hinge lower hinge box. If not enough slack, remove kick-pad for access to harness clips.*

Headlamps: Sealed Beam. *See Electrical Equip. Section.*
Autronic Eye: *See "Autronic Eye" in Electrical Equipment Section.*
Direction Signal: *See "Direction Signals" in Electrical Equipment Section.*

Lighting Switch Removal: Remove one battery cable from battery. Pull headlight switch knob to "on" position, push latch button on side of switch assembly and pull out switch knob assembly. Screw bushing from switch assembly allowing switch assembly to be removed from instrument panel.
Stop Light Switch Location: On brake master cylinder located on left frame side rail forward of brake pedal.

FUSES: Main Fuse Block—Left hand side of firewall in engine compartment. Two fuses (plus 1 spare) as follows:

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Gold Color Fuse Holder—14 amp. Protects tail, rear license light, instrument lights, ignition key light, and clock light (dome light on Conv.).

Grey Color Fuse Holder—14 amp. Protects trunk and dome lights (exc. dome light on Conv.).

Accessory-Fuse-Block—Six-fuses-mounted-on-fuse-behind instrument panel. All fuses are 20 amperes except Radio fuse which is 14 amperes. (Spare Radio fuse on main fuse block on engine side of firewall).

CIRCUIT BREAKER: 42 amps. Located in headlight switch.

HORNS: Delco-Remy 1999645 (Low note), 1999646 (High note).

Horn Relay: Delco-Remy 1116775.

Contacts Close—2.75-4.0 volts (set to 3.5 volts). **Contact Gap**—.027". **Air Gap**—.014" (closed).

ENGINE

►*1953 ENGINE ROUGHNESS CORRECTION (POWERGLIDE CARS): See "1954 Chevrolet Powerglide" in Transmission Section for Engine Side Support Adjustment.*

ENGINE SPECIFICATIONS: Own. 6 Cylinder "L" head. **Bore**—3 9/16". **Stroke**—4".
Displacement—239.2 cu. in. **Rated H.P.**—30.46.
Developed H.P.—115 at 3800 RPM (7.0-1 Head). 118 at 3800 (7.7-1 Head).
Compression Ratio—7.0-1 (Std. Head, Synchro-mesh). **7.7-1** (Optional Head used with Hydra-Matic).
Compression & Vacuum Reading—See *Tune-Up.*

ENGINE REMOVAL: *See Pontiac Special Data.*

OIL PAN REMOVAL: *See Pontiac Special Data.*

CYLINDER HEAD: *See Pontiac Special Data.*

TIGHTENING TORQUES: *See Pontiac Special Data.*

FRONT END ASSEMBLY REMOVAL: *See Pontiac Special Data.*

ENGINE FRONT MOUNTING REMOVAL: *See Pontiac Special Data.*

PISTONS

Aluminum alloy, tin plate, cam ground, Autothermic Steel Strut type.

►*1953 PISTON PRODUCTION CHANGE CAUTION:* Two types of pistons are used. *EARLY TYPE*—Area around piston boss is "strut" type with four openings on each side of piston. *LATER TYPE*-Area around piston pin boss is solid with two drilled openings on each side. *PISTONS ARE NOT INTERCHANGEABLE EXCEPT IN SETS.*

►*PISTON IDENTIFICATION NOTE:* Engines with later type pistons are identified by a "K" stamped after production engine number (this number will be found on raised pad at left rear corner of engine near the firewall). This letter should be stamped on Production Engine Number pad whenever new type pistons are used to replace the early type.

Removal—*Pistons and rods removed from above.*

Fitting New Pistons: Clearance .0005-.0010". If micrometer used on pistons, measure perpendicular to piston pin hole and just far enough above bottom of skirt to make sure micrometer is in full contact. Use .0015" x ½" feeler gauge inserted between piston and cylinder wall at right angles to piston pin. Pull to withdraw *feeler must be 8-15 lbs.*

Replacement Pistons: Std. size and .005", .010", .020" .030" oversize.

►*REPLACEMENT PISTON NOTE: All replacement pistons are same as late 1953 type (see note above).*

Installing Pistons: Piston pin offset in piston: Install piston to connecting rod with "F" on front of piston and notch on top of piston toward front of engine. Oil squirt hole in connecting rod must be toward camshaft side of engine.

PISTON PINS

Full floating type retained in piston with lock rings at both ends.
Diameter—.9369-.9375" selective. **Length**—3 1/16".
Clearance in Piston—.0000-.0002". Clearance will be correct if piston pin can be pushed through piston with thumb, excessive clearance if pin slides through of own weight.
Clearance in Connecting Rod—.0004-.0006".

Replacement Pins: .001" (green), .003" (red), .005" (blue) Oversize. Paint code marked on end of pin.

PISTON RINGS

►*1953 PISTON RING PRODUCTION CHANGE CAUTION: Two types of piston rings used as follows: EARLY TYPE*—Top compression ring chrome plated taper face with corners rounded and beveled on inner diameter. Lower compression ring Lubrite-coated taper face without rounded corners and beveled on inner diameter. Oil ring Lubrite-coated symmetrical ring with expander spring. *LATER TYPE*—Top compression ring chrome plated with slightly chamfered corners on outer face. Lower compression ring tin plated without chamfered corners on outer face. Oil ring is symmetrical and is used with expander spring. *DO NOT USE FIRST TYPE OIL RING WITH LATER TYPE 1953 PISTONS.*

Early 1953 Type Rings

Ring	End Gap	Side Clearance
Compr.	.008-.016"	.001-.003"
Oil	.012-.020"	.001-.004"

Late 1953 & 1954 Type Rings

Ring	End Gap	Side Clearance
Compr.	.008-.016"	.0015-.003"
Oil	.005-.015"	.002-.004"

Installing Rings: Install compression rings with marks "TOP" or "T" toward top of piston. Oil ring can be installed either way.

Replacement Rings: Std. .005", .010", .020", .030" Oversize.

CONNECTING RODS

Length—7.560-7.565" (center-to-center).
Weight—37 ozs. (less bearings).
Crankpin Journal Diameter—2.1237-2.1247".
Piston Pin Bushing (Upper Bearing)—Split bushings.
See "Connecting Rods & Bearings" in Pontiac Special Data.
Lower Bearing—Steel-backed, babbitt-lined-insert.
Clearance—.0001-.0021". **Sideplay**—.007-.012".
Replacement Bearings: Std. .001", .002" Undersize.
Installing Rods: Oil squirt hole in lower end must be toward camshaft side. Marks on rods must be together (marks do not indicate in which cylinder rod is used).

CRANKSHAFT

►*CRANKSHAFT TO FLYWHEEL BOLT REPLACEMENT & INSTALLATION CAUTION (Synchro-mesh Cars):* ¾" hex head bolts (No. 508463) or 1" hex head bolts (No. 510832) are used. *Either type can be used for replacement but head size must be the same on all bolts or engine balance will be destroyed.*

Journal Diameters—(1) 2.4982-2.4992", (2) 2.5294-2.5304", (3) 2.5919-2.5929", (4) 2.6232-2.6242".
Bearings—Thin type, removable, steel backed, babbitt lined. Upper and lower halves are interchangeable.
Clearance—.0003-.0023".

Replacement Bearings: Std. .001", .002" Undersize.
End Thrust: At No. 3 (rear intermediate) bearing.
Endplay—.003-.008".

Rear Main Bearing Oil Seal Renewal: *See "Crankshaft & Main Bearings" in Pontiac Special Data.*
Vibration Dampener Removal & Installation: *See "Vibration Dampener" in Pontiac Special Data.*

CAMSHAFT

Bearing Diameter & Installation: *See "Camshaft" in Pontiac Special Data.*
Clearance—.0015-.0025" (new).
End Thrust: Steel plate behind camshaft sprocket. Replace if worn. **End Play**—.003-.007".

Timing Chain: Morse. Width 1", Pitch 3/8". Length 21", or 56 links. Timing chain bumper is installed to eliminate vibration.

Chain Installation—*See "Timing Chain" in Pontiac Special Data.*
Camshaft Setting: Sprockets marked. Mesh chain with sprockets turned so that 'O' marks are adjacent and in line with straightedge across centers.
Timing Chain Cover Oil Seal Installation: *See "Timing Chain" in Pontiac Special Data.*

CONTINUED FROM PRECEDING PAGE

VALVES

Tappet Clearance: .011-.013" HOT. Use .011" "Go" gauge, .013" "No Go" gauge. High Speed Setting—.013" (exhaust valve, Hot).

Valve	Head Diam.	Stem Diam.	Length
Intake	1 19/32"	.310-.311"	5 23/32"
Exhaust	1 15/32"	.310-.311"	5 23/32"

Valve	Seat Angle	Lift	Stem Clearance
Intake	30°	19/64"	①Free Fit to .0006"
Exhaust	45°	19/64"	①Free Fit to .0006"

①—Tapered (max. clearance at bottom .0006").

Valve Seq. Width—1/16".

Valve Springs: Intake and exhaust springs identical. Install with two closed coils at top and dampener on top of each spring. Use new dampeners whenever removed from spring. **Free Length**—2 11/32".

Spring Specifications

	Spring Pressure	Length
Valve Closed	59-66 lbs.	1 29/32"
Valve Open	97-105 lbs.	1 19/32"

Valve Guides: Guides have tapered hole (.001" taper to inch—greatest clearance at top). Exhaust guides counterbored at top to depth of ¾".

Checking Valve Clearance in Guide—Clean guide with tool KMO-122, clean counterbore in exhaust guide with Counterbore Cleaner J-2122. Valve should just fall through guide of own weight.

Installing Guides—Use Valve Guide Remover J-2542 to remove and install guides. Drive new guide down in block (counterbored end up on exhaust guides) until upper end 29/32" below top edge of valve seat. Ream guide with PR-131 tapered reamer and finish counterbore with Counterbore Cleaner J-2122.

►*CAUTION—Guides furnished with straight hole which must be taper reamed.*

Valve Lifters: Barrel type, cast iron. Guide holes reamed in block. Lifters furnished .005" Oversize (use pilot reamer J-706-P when reaming holes to maintain alignment—valve guides must be removed).

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

Intake Valves—Open 12°30' BTDC. Close 52°30' ALDC.

Exhaust Valves—Open 52°30' BLDC. Close 12°30' ATDC.

Valve Timing Check—With .0166" tappet clearance #6 valve should open with #6 piston 12°30' before top dead center. Reset tappet clearance to .011-.013".

OILING SYSTEM

Crankcase Capacity: 5 qts. (refill), 6 qts. (dry).

Normal Oil Pressure: 30-45 lbs. at 40 MPH.

Pressure Regulator—On oil pump. Opens at 40 lbs. Replace spring if free length less than 2 5/16".

Oil Pressure Gauge—AC No. 1507707. Not electric.

Oil Pump: Gear type. On right side of crankcase

Pump Overhaul—*See "Oil Pump" in Pontiac Special Data.*

Oil Cleaner: Precipitation type (in crankcase).

Removal & Installation—*See "Oiling System" in Pontiac Special Data.*

Crankcase Ventilation: Filter element in oil filler cap (inlet). Outlet pipe at valve compartment cover on right rear side of engine (cars with oil bath air cleaner use a 3-piece outlet pipe containing filter element).

►*CAUTION:* Filler cap must be installed with air opening in cap toward front of car and seam in line with groove in tube (may cause excessive oil consumption if installed backwards).

COOLING

Water Capacity: 18¾ qts (without heater), 20½ qts. (with heater).

Pressure Valve: AC No. 850549 Filler cap. Opens at 7 lbs. (6¼-7½ lbs.).

Thermostat: Harrison "Bellows" type. In cylinder head outlet. **(Std.)** Pontiac No. 3126560 opens at 151°. **(High Temp.)** Pontiac No. 3126562 opens at 160° Pontiac No. 3126562 opens at 160°.

Water Pump: Packless, sealed ball bearing shaft. *See "Pontiac" in Water Pump Section.*

Pump Removal—Drain cooling system, remove hose connections at pump, remove belt, take out water pump mounting bolts and lift pump out.

Temperature Gauge: AC No. 1512458. Not electric. *See "Temperature Gauges" in Miscellaneous Section.*

CLUTCH

Inland. Single plate, "Diaphragm", dry disc type with Long driven member. *See "Inland" in Clutch Section.*

Clutch Disc No. —Pontiac No. 508403 (Std.), No. 513582 (Heavy Duty).

Pedal Adjustment: Free travel 7/8-1 1/8" (adjusting nut on link at clutch fork).

Removal: Remove transmission (see Transmission Removal below), remove clutch bearing support spring washer (in rear face of clutch housing) remove clutch housing bottom cover and control shaft inner bracket. Remove release bearing support and release bearing. Tap bearing support from inside clutch housing to aid removal. (CAUTION—Avoid striking tubular portion of support). Mark flywheel and clutch cover (to insure reinstallation in same position to maintain balance), remove clutch cover bolts evenly, move clutch assembly away from flywheel at bottom and withdraw driven member, lower cover assembly out.

Clutch Installation Note—Install new felt oil seal against shoulder ahead of oil slinger retainer ring on transmission main drive gear (will bear against flared end of release bearing support when installed). Lubricate seal with engine oil before transmission installed. Coat entire length of outer diameter of release bearing support tube with grease. Lubricate release fork fulcrum points with a very light coat of grease. Apply light coat of Lubriplate on main driving gear splines. Use new paper gasket between support flange and clutch housing, make certain that flange is not bent or distorted (will cause misalignment of transmission).

SYNCHRO-MESH TRANSMISSION

Own. All helical gear. *See "Pontiac Synchro-Mesh" in Transmission Section.*

Transmission Control: *See "Transmission Controls" in Transmission Section.*

Removal: Disconnect speedometer cable, gearshift selector and control rods from transmission. Disconnect rear universal (wire trunnions) and pull out propeller shaft. Remove upper transmission mounting screws, install guide pins (J-851), remove lower screws, pull transmission to rear, down and out.

Installation Note—Use guide pins installed in two upper transmission mounting holes to assist in sliding transmission straight forward into place (to avoid damage to clutch release bearing tubular support). NOTE—These guide pins may be made from 1/2"-13 American National Thread bolts by cutting heads off and reducing overall length to 4¼".

POWERGLIDE TRANSMISSION

►*FOR 1953 CARS WITH POWERGLIDE TRANSMISSION: See "Chevrolet Powerglide" in Transmission Section.*

HYDRA-MATIC DRIVE

Dual-Range" four speed automatic transmission and fluid coupling.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Hydra-Matic Drive" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Hydra-Matic Drive" in Transmission Section.*

Lubrication—Check fluid level every 2000 miles, drain and refill at 25,000 mile intervals.

Checking Fluid Level—Run engine for approximately 1½ minutes at speed equivalent to 20 MPH with selector lever in "N". Reduce engine speed to **slow idle** and move selector lever to "D" position, measure level with dipstick, add fluid until level is at "FULL" mark with engine idling.

Capacity—Approximately 11 qts. (refill).

Recommended Fluid—Use G.M. Hydra-Matic Fluid or Automatic Transmission Fluid Type A.

►*OTHER HYDRA-MATIC SERVICE DATA—See "Hydra-Matic Drive" in Transmission Section.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

UNIVERSALS

Mechanics or Saginaw. Needle bearing type.

►*CAUTION:* Rear universal companion flange nut controls rear axle pinion bearing "pre-load" (must be adjusted whenever nut is loosened). *See "Pontiac Hypoid" in Rear Axle Section.*

REAR AXLE

Own. Hypoid gear, semi-floating with Hotchkiss Drive.
See "Pontiac Hypoid" in Rear Axle Section.
Axle Identification—Code mark stamped on pad at forwardside of differential carrier between bottom web and right hand horizontal web. Axle shaft also marked with daub of paint on end of shaft to indicate ratio. See Code and Paint Markings in table below:

Axle Ratios & Code Marking

Ratio	Gear Teeth	①Code Mark	②Code Color
3.08-1③	40:13	0	Yellow
3.63-1④	40:11	6	Blue
3.9-1⑤	39:10	4	Red
4.1-1④	41:10	3	Green
4.3-1⑤	43:10	2	White
3.42-1⑤	41:12	8	Aluminum

①—See Axle Identification above.
②—Paint daub on end of axle shaft.
③—Hydra-Matic Drive Cars.
④—Synchro-mesh Transmission Cars.
⑤—Optional (for standard fuel engine).

Backlash—.003-.012" (new), .012" (used).

Axle Shaft Removal: Remove wheel, brake drum, four brake backing plate bolt nuts, static collector, and loosen bearing retainer (do not move backing plate or brake line may be damaged). Pull shaft with Puller J-942 (do not drag axle shaft on oil seal).

Wheel Bearing Adjustment: None.

Differential Carrier Assembly Removal: Disconnect rear universal and wire trunnion in place (do not disengage spline joint at transmission), remove axle shafts, and carrier flange capscrews. Withdraw carrier assembly from housing.

►*CAUTION: Rear universal joint companion flange controls pinion bearing preload. Readjust whenever nut loosened.*

SHOCK ABSORBERS

Delco. Direct acting, non-adjustable, sealed (non-refillable). Serviced by replacement.

Model	Front	Rear
Standard	5303492	5303290
Taxi & Police Cars	5519438	5519439

FRONT SUSPENSION

Independent. Shock absorber mounted within front coil springs.
See "Pontiac" in Front Suspension Section.
Kingpin Inclination—4½° at ½° camber.
Caster—0° ± ½°.
Camber—Pos. ½° ± ½°.
Toe-In—0-1/16" measured 9" above floor.
Toe-Out on Turns—With inner wheel at 20°, outer wheel should be 18° 30'.

STEERING

Manual: Saginaw Worm & Roller. *See "Saginaw Worm & Roller" in Steering Section.*

Power Steering: Saginaw (GM) Hydraulic. Recirculating ball nut and worm type plus extended pitman shaft with gear sector in mesh with power rack. Power rack pinned to piston rod of hydraulic cylinder. *See "Saginaw (GM) Power Steering" in Steering Section.*

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Worm & Roller" in Steering Section.*

Steering Gear Removal: *See "Saginaw Worm & Roller" in Steering Section.*

BRAKES

Bendix Hydraulic. Duo-servo, single anchor **(without eccentric adjustment)**. Hand lever applies rear wheel service brakes.
See "Bendix Brakes" in Brake Section.

►*1954 BRAKE PEDAL & MASTER CYLINDER CONNECTING ROD INTERFERENCE CORRECTION:* Difficulty may be experienced in getting correct pedal height adjustment due to interference between master cylinder connecting rod clevis and brake pedal. If pedal height of 4 3/8-4 5/8" cannot be obtained it can be corrected by grinding a relief in master cylinder connecting rod clevis on the lower side at a point approximately 2" from rod end and extending toward clevis end for 1".

►*1953 SQUEAKING BRAKE CORRECTION: See Brake Section for installation of Brake Drum Silencer Springs.*

Drums—Diameter 11".

Wheel Cylinder Diameter—Front 1 1/16". Rear 7/8".

Lining Width & Thickness

	Width	Thickness
Front	2½"	3/16"
Rear	1¾"	3/16"

Clearance—Tighten adjusting "Star Wheel" to point where wheel can just be turned by hand, then back off star wheel 14 notches.

Braking Power—60% front wheels. 40% rear wheels.

Standard Master Cylinder: Forward of brake pedal on bracket attached to engine rear cross member.

Checking Fluid—Fluid reservoir is part of master cylinder. Maintain fluid level to top of reservoir.

Removal—Remove from engine compartment. Not necessary to disturb other parts.

Power Brakes: Bendix Vacuum Power Unit (combination vacuum power unit and hydraulic master cylinder). Unit mounted on underside of toe board and replaces regular master cylinder.

See "Bendix Power Unit" in Brake Section.

Checking Fluid—Same as for standard master cylinder.

Removal of Power Unit—Disconnect upper end of vacuum hose attached to inlet tube of master cylinder, and hydraulic line from hydraulic cylinder. Remove stop light switch wires. Disconnect push rod from brake pedal and remove brake pedal from pivot bracket. Remove clutch pedal and steering column seals. Remove vacuum cylinder mounting plate screws while holding power unit by push rod. Remove mounting plate, working it over clutch pedal while holding power brake unit in position. Remove power brake unit.

MISC. MECHANICAL

Windshield Wipers: Cable operated Vacuum type. *See "Windshield Wipers" in Miscellaneous Section.*

►*1953 WINDSHIELD WIPER DRIVE PRODUCTION CHANGE & ADJUSTMENT CAUTION: See Miscellaneous Section for data.*

Window Regulators: Electric. Reversible motor in each window. Available on front doors only. *See "Window Regulators" in Miscellaneous Section.*

Power Top Control: Hydro-Lectric with reversible pump motor. *See "Power Top Controls" in Miscellaneous Section.*

HOOD & HOOD LOCK ADJUSTMENT: *See Pontiac Special Data.*

FRONT END SHEET METAL ASSEMBLY REMOVAL: *See Pontiac Special Data.*

►*1954 AIR-CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air-conditioning equipment or lines. See "Air Conditioning Service Cautions" in Miscellaneous Section.*

MODEL IDENTIFICATION

SERIAL & ENGINE NUMBERS (Numbers are the same): On left front hinge pillar post and on raised pad at front of left side of cylinder block.

Starting Serial & Engine Number—1001 Up.

►*ENGINE & SERIAL NUMBER NOTE—Engine & Serial number (example C8ZS-1001) includes following identification in sequence:*

Assy. Plant	No. of Cyls.	Model ① Year	Trans. ② Type	Serial No.
See below.	8	Z	S	1001 Up

①—X designates 1953. Z designates 1954.

②—S and C are Synchro-mesh Transmissions, H and A are Hydra-Matic Transmissions.

Assembly Plant Designations

A—Atlanta	**L**—Linden
C—South Gate	**T**—Arlington
F—Framingham	**W**—Wilmington
K—Kansas City	

TUNE-UP

COMPRESSION:PRESSURE: 123-141 lbs. (Synchro-mesh), 139-158 lbs. (Hydra-Matic), both at cranking speed of 200 RPM.

VACUUM READING: 18-20" idling at 450-475 RPM (Synchromesh), 365-385 RPM (Hydra-Matic).

VALVE TAPPET CLEARANCE: .011" to .013" HOT. Use .011" "Go" gauge, .013" "No Go" gauge. **High Speed Setting**—.013" (Exhaust Valve, Hot).

►*VALVE TAPPET NOTE (AIR-CONDITIONED CARS):* An access door is provided in right front fender splash apron to eliminate necessity of removing air-conditioner compressor or lines.

Cold Setting With Engine Stopped—.012-.014". Check for .011-.013" after engine warm.

MANIFOLD HEAT CONTROL: Thermostatic coil type, non-adjustable (fixed anchor pin). Counterweight should be securely clamped to shaft in vertical position with valve closed (cold position).

IGNITION

►*1953 ENGINE ROUGHNESS ON POWERGLIDE CARS:* May be caused by incorrect adjustment of Engine Side Supports (used only on Powerglide Cars). *See Pontiac Transmission Installation in "1954 Chevrolet Powerglide" in Transmission Section for Side Support Adjustment.*

►*IGNITION HIGH TENSION CABLE CAUTION:* Non-metallic cables (with built-in suppression resistance). Marked "Radio-4000 GM". Distributor cap is conventional type without built in resistor. *Do not substitute other type cables.*

FIRING ORDER: 1-6-2-5-8-3-7-4. See diagram.

SPARK PLUG GAP: .025" (.023-.028").

Spark Plug—AC No. 44-5, 14mm. Tighten to 25 ft. lbs.

COIL: Delco-Remy 1115380.

Ignition Current—2.5 amperes idling, 4.5 stopped.

DISTRIBUTOR: Delco-Remy 1110831.

Condenser—Delco-Remy 1869704. **Capacity** .18-.23 mfd.

Contact Point Set—Delco-Remy 1918148.

Breaker Gap—.016".

Cam Angle—21°-30°.

Breaker Arm Spring Tension—19-23 ozs.

Rotation—Counter-clockwise viewed from above.

Automatic Advance

Degrees	Distr. RPM	Degrees	Eng. RPM
0-2	400	0-4	800
5.5-7.5	1200	11-15	2400
6-8	1400	12-16	2800
10-12	1950	20-24	3900

Vacuum Spark Control: Delco-Remy 1116050.

Plunger Travel—7/32".

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	7-9"
10	20	17.5-19.5"

IGNITION TIMING

Setting—6° BTDC (Synchro-mesh Cars). **3° BTDC** (Hydra-Matic Cars).

Timing Marks—Timing marks on dampener indicating **TDC.—3° BTDC.—6° BTDC.** Pointer on chain case cover aligned with correct mark on dampener (See Ignition Timing above).

CARBURETOR

Idle Speed-Up Control Adjustment (Cars With Air-Conditioning): With engine at normal operating temperature and slow idle adjustment completed, turn air-conditioner "ON", and place transmission selector lever in "N" neutral position. Adjust engine idle speed to 750 RPM by loosening locknut on diaphragm shaft and turning knurled nut to obtain specified RPM. Tighten locknut.

Speed-Up Control Switch (Hydra-Matic Cars)—*See (Hydra-Matic Drive Linkage Adjustment) in Transmission Section.*

Speed-Up Control Switch (Synchro-mesh Cars) Two switches used. Adjust as follows:

Gearshift Lever Speed-Up Control Switch—With Air-Conditioner turned "ON" and gear selector lever in neutral position, loosen nut retaining lower gearshift lever-to-switch rod at switch arm. Move switch arm so Speed-Up Control operates engine at fast idle with clutch pedal out (clutch engaged).

Clutch Pedal Speed-Up Control Switch—With Air-Conditioner turned "ON" and gear selector lever in neutral position, loosen bolts retaining clutch switch and move switch so Speed-Up Control operates engine at fast idle with clutch pedal out (clutch engaged), and at normal idle with clutch pedal in (clutch disengaged).

THROTTLE LINKAGE ADJUSTMENT (ALL MODELS): *Adjust exactly as follows:*

1) Carburetor Throttle Rod—Disconnect throttle rod at throttle lever on left side of transmission case. Check and adjust engine idle speed to 365-385 RPM (Cars without Air Conditioning); 460-480 RPM (Cars with Air Conditioning), hot or slow idle with engine at normal operating temperature, transmission warm, and selector lever in "N" position. Install adjusting pin J-2544 through holes in carburetor intermediate lever on left side of cylinder head and lever bracket. Adjust nuts at trunnion on carburetor throttle rod (back off one nut, tighten opposite nut) until adjusting pin is free with carburetor throttle lever stopscrew against its stop. Tighten trunnion nuts but **do not remove adjusting pin.**

2) Transmission Throttle Front Rod—Check adjustment by inserting a second J-2544 adjusting pin through holes in idler lever (left side of crankcase below starter) and lever bracket. If pin does not enter both holes freely, adjust length of transmission throttle front rod at trunnion on upper end of this rod, then tighten both locknuts securely and remove both adjusting pins.

3) Accelerator Pedal Rod—Loosen front locknut on pedal rod at throttle control idler lever on left side of engine, depress accelerator pedal until carburetor throttle is just wide open. Check clearance between lower face of accelerator pedal and floor mat. If clearance is not ¼" at closest point, adjust pedal by turning rear nut at trunnion on forward end of rod in or out as required, then tighten front nut securely.

CARTER

Carter WCD Models. Dual downdraft type with automatic choke control as follows:

Model	Carter No.
1953 Synchro-mesh	7195A
1953 Hydra-Matic	7205A
1954 Synchro-mesh (Early)	7195A
1954 Synchro-mesh (Late)	①7205A
1954 Hydra-Matic	2122S

①—Approximately 15,000 used on Hydra-Matic Drive cars.

Idle Setting—7195A, 7205A)—¾-1¼ turns open. Turn screw out for richer mixture. NOTE—Two idle screws used.

Idle Setting (2122S)—¾-1¾ turns open. Turn screw out for richer mixture. NOTE—Single idle screw on this carburetor.

Idle Speed—Different settings as follows:

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Model	Idle Speed
Synchro-Mesh Cars	450-475 RPM
Hydra-Matic Cars (without Air-Cond.)	365-385 RPM
Hydra-Matic Cars (with Air-Cond.) ①	460-480 RPM

①—This setting supersedes previous specifications which were same as for cars without air-conditioner.

Float Level—3/16" from top of float to gasket seat on bowl cover (with gasket removed) using gauge T109-162. Sides of float should barely touch vertical uprights on gauge to avoid floats binding on sides of bowl.

Accelerating Pump—Lower hole (min.) Normal.

Fast Idle Setting: With choke valve tightly closed and fast idle screw on high step of fast idle cam, tighten adjusting screw until there is .026" clearance between throttle valve and bore of carburetor on side opposite idle port.

Automatic Choke Setting: Centered (at index).

Hydra-Matic Throttle Linkage Adjustment: *See "Carburetor" above.*

Idle Speed-up Control (Air Conditioned Cars): *See "Carburetor" above.*

Hydra-Matic Throttle Linkage Adjustment: *See "Hydra-Matic Drive" in Transmission Section.*

►*OTHER DATA: See "Carter WCD" Carburetors in Carburetor Section.*

Fuel Pump Pressure: 4-4¾lbs.

CARB. EQUIPMENT

Fuel Pump: AC. Replacement No. 9640 (Without Air-Conditioner), No. 539 (With Air-Conditioner). Fuel & Vacuum.

Pressure—4-4¾lbs.

See "Fuel Pumps" in Carburetion Equipment Section.

Gasoline Gauge: AC Electric type.

Dash Unit—AC No. 1517603.

Tank Unit—AC No. 1517411 (1953); No. 1518093 (1954).

See "Fuel Gauges" in Carburetion Equipment Section.

BATTERY

Standard—Delco 15E6W. 6 volt, 15 plate, 100 ampere hour capacity (20 hr. rate).

Air-Conditioned Car—Delco 19E6W. 6 volt, 19 plate, 130 ampere hour capacity (20 hr. rate).

Battery Ground—Negative to engine.

Engine Ground—Rear of engine to firewall.

STARTER

Delco-Remy 1107957. Armature—1917855.

Drive—Overrunning clutch (solenoid pinion shift).

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—24-28 ozs.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	6000	5.0	60
15 ft. lbs.	Lock	3.0	600

Starting Switch: Delco-Remy Solenoid No. 1118140 (no relay) mounted on starter and controlled by Ignition Switch (combination starting & ignition). Neutral Safety Switch used on Hydra-Matic Cars.

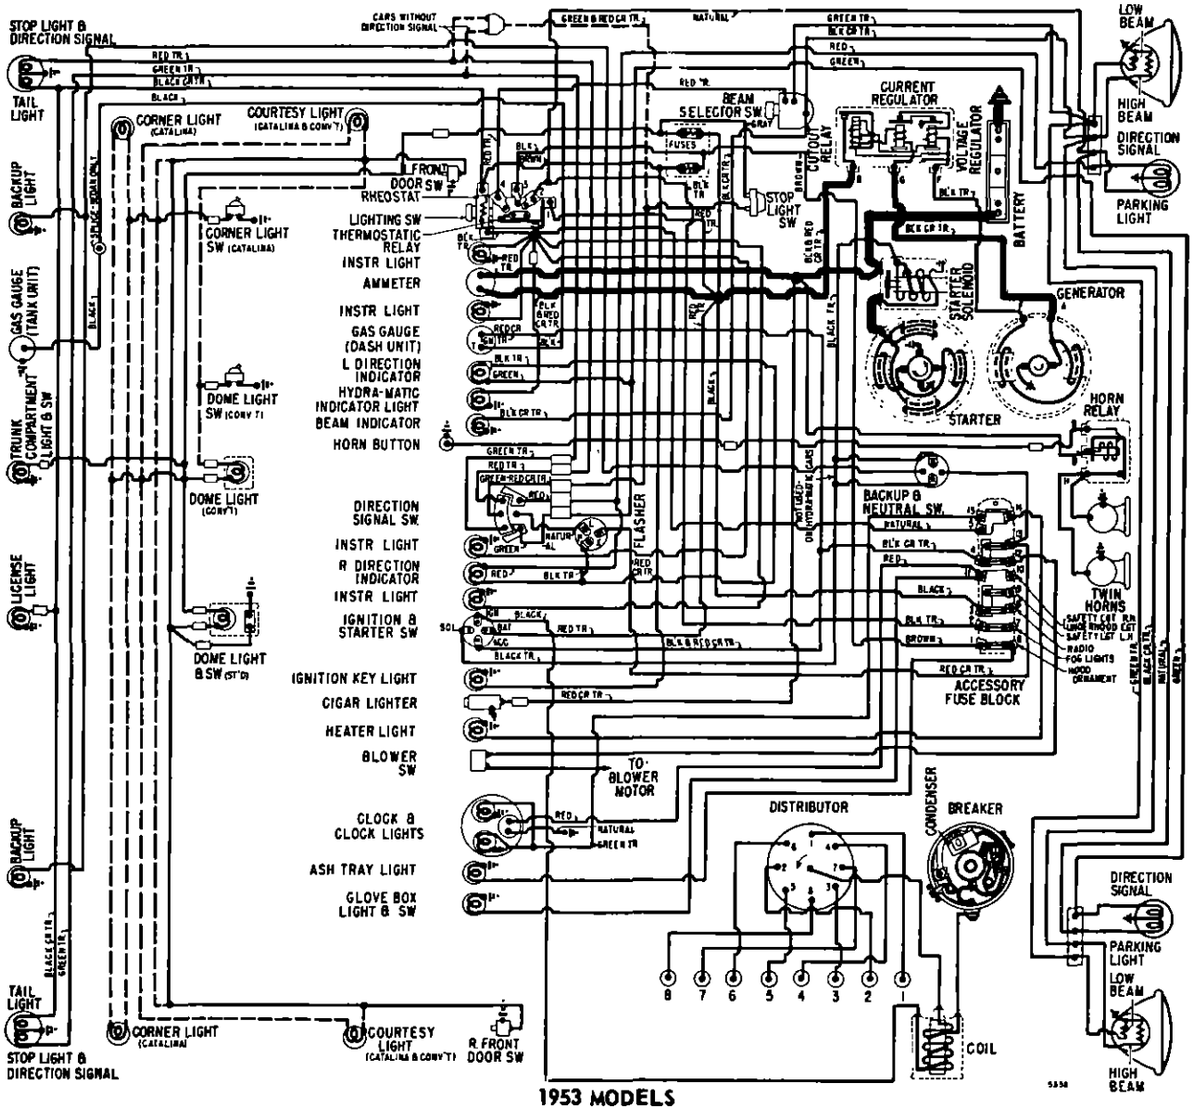
See "Starter Controls" in Electrical Equipment Section.

Neutral Safety & Backup Light Switch: Delco-Remy 1998039. At lower end of steering column. Connected in starter control circuit so that starter operates only when selector lever in "N" (Neutral).

Adjustment—*See "Hydra-Matic Drive" in Transmission Section.*

GENERATOR

Delco-Remy. Different generators used as follows:



Model	Generator No.	Armature No.
Standard	1102794	1912599
Air Conditioned	1105015	
Hvy. Duty & Police	1105900	1918009

Performance Data

Gen. No.	Amperes ①	Volts	RPM
1102794	45	8.0	2350
1105015	50	7.0	2100
1105900	50	7.0	2100

①—Not maximum. See Regulator.

CONTINUED ON NEXT PAGE

1953 MODELS

CONTINUED FROM PRECEDING PAGE

Brush Spring Tension—28 ozs.
Field Current—1.87-2.00 amps. (1102794), 1.77-1.93 amps. (1105015 & 1105900). At 6.0 volts.
Rotation—Counter-clockwise at commutator end.
Belt Adjustment: Belt deflection midway between generator and fan pulleys should be ¼" with 10 lb. force applied.

REGULATOR

1953 Models

Delco-Remy—1118725 (1102794 Gen.). 1118722 (1105900 Gen.). Voltage & current type.
See Electrical Equipment Section for complete data.

Cutout Relay

Cuts In—5.9-6.7 volts hot (set to 6.4).
Contact Gap—.020" (same for both contacts).
Air Gap—.020" (with contacts just closed).

Voltage Regulator

Setting (1118725)—7.0-7.7 volts hot (set to 7.4).
Setting (1118722)—6.8-7.5 volts hot (set to 7.2).
▷*NOTE: Regulator is compensated for temperature. Check with cover in place and hot.*
Air Gap—.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator

Setting (1118725)—45-51 amps. hot (set at 47 amps.).
Setting (1118722)—48-52 amps. hot (set at 50 amps.).
Air Gap—.075" with contacts pressed down to point where contacts just touching.
Checking & Adjusting—*See Electrical Equip. Section.*

1954 Models

Delco-Remy 1118827 (1102794 Gen.). 1118835 (1105015 & 1105900 Gen.). New "1118825 Series" Regulator.
▷*1954 REGULATOR NOTE: Checking procedure is different than for previous models. See "Delco-Remy 1118825 Series Regulator" in Electrical Equipment Section. Following Specifications are "Normal" settings.*

Cutout Relay

Cuts In—6.4 volts (hot).
Contact Gap—.020".
Air Gap—.020" (with contacts just closed).

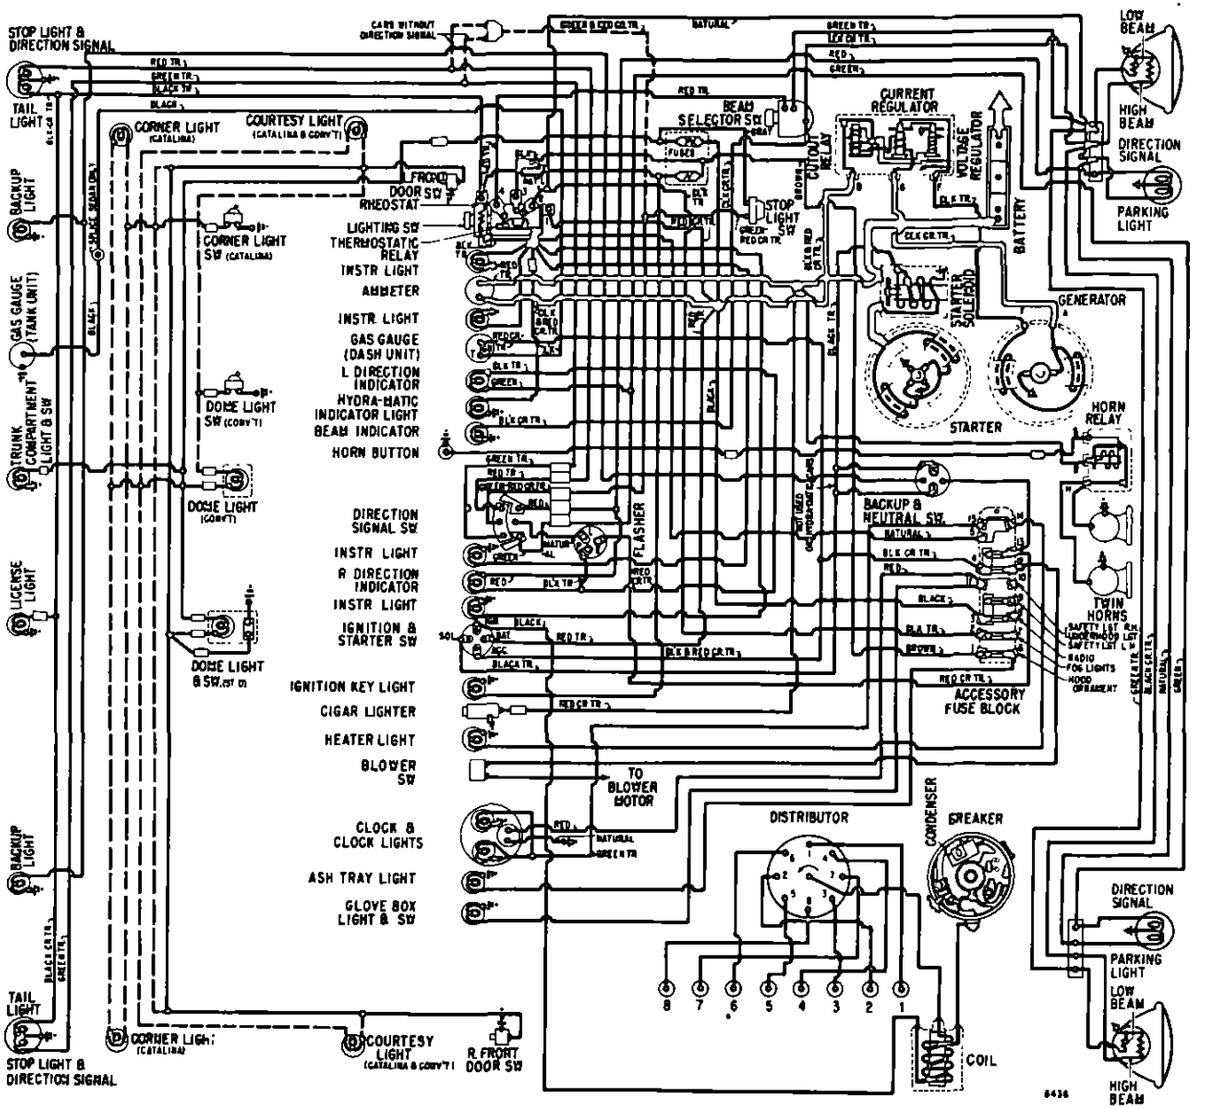
Voltage Regulator

Setting—7.3 volts (hot)
Air Gap—.075" with armature pressed down to point where contact just touching.
Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator

Setting—47 amps. (1118827), 52 amps. (1118835), hot.
Air Gap—.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting—*See Electrical Equip. Section.*

MISC. ELECTRICAL



▷*1953 WIRING HARNESS INTERFERENCE (CONVERTIBLE): Make sure that wire harness is secured behind clip in left door hinge lower hinge box. If not enough slack, remove kick-pad for access to harness clips.*

Headlamps: Sealed Beam. *See Electrical Equip. Section.*
Autronic Eye: *See "Autronic Eye" in Electrical Equipment Section.*
Direction Signal: *See "Direction Signals" in Electrical Equipment Section.*

Lighting Switch Removal: Remove one battery cable from battery. Pull headlight switch knob to "on" position, push latch button on side of switch assembly and pull out switch knob assembly. Screw bushing from switch assembly allowing switch assembly to be removed from instrument panel.

Stop Light Switch Location: On brake master cylinder located on left frame side rail forward of brake pedal.

CONTINUED ON NEXT PAGE

1954 MODELS

CONTINUED FROM PRECEDING PAGE

FUSES: Main Fuse Block—Left hand side of firewall in engine compartment. Two fuses (plus 1 spare) as follows:

Gold Color Fuse Holder—14 amp. Protects tail, rear license light, instrument lights, ignition key light, and clock light (dome light on Conv.).

Grey Color Fuse Holder—Protects trunk and dome lights (exc. dome light on Conv.).

Accessory Fuse Block—Six fuses mounted on fuse block behind instrument panel. All fuses 20 amps., except radio fuse which is 14 amps. (Spare Radio fuse on main fuse block on engine side of firewall).

CIRCUIT BREAKER: 42 amps. Located in headlight switch.

HORNS: Delco-Remy 1999645 (Low note), 1999646 (High note).

Horn Relay: Delco-Remy 1116775.

Contacts Close—2.75-4.0 volts (set to 3.5 volts).

Contact Gap—.027". **Air Gap**—014" (closed)

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning system. See "Air Conditioning Service Cautions" in Miscellaneous Section.*

►*1953 ENGINE ROUGHNESS CORRECTION (POWERGLIDE CARS): See "1954 Chevrolet Powerglide" in Transmission Section for Engine Side Support Adjustment.*

ENGINE SPECIFICATIONS: Own. 8 Cylinder "L" head.

Bore—3 3/8". **Stroke**—3 3/4".

Displacement—268.4. cu. ins. **Rated HP**—36.45.

Developed HP (1953)—118 at 3600 RPM (6.8-1 Head). 122 at 3600 (7.7-1 Head).

Developed HP (1954)—122 at 3800 RPM (6.8-1 Head). 127 at 3800 RPM (7.7-1 Head).

Displacement—268.4 cu. in. **Rated H.P.**—30.46.

Developed H.P.—122 at 3800 RPM (6.8-1 Head). 127 at 3800 RPM (7.7-1 Head).

Compression Ratio—6.8-1 (Std. Head with Synchro-mesh), 7.7-1 (Optl. Head with Hydra-Matic).

Compression & Vacuum Reading—*See Tune-Up.*

ENGINE REMOVAL: *See Pontiac Special Data.*

OIL PAN REMOVAL: *See Pontiac Special Data.*

CYLINDER HEAD: *See Pontiac Special Data.*

TIGHTENING TORQUES: *See Pontiac Special Data.*

FRONT END ASSEMBLY REMOVAL: *See Pontiac Special Data.*

ENGINE FRONT MOUNTING REMOVAL: *See Pontiac Special Data.*

PISTONS

Chrome-nickel alloy iron, tin plated.

Removal—Pistons and rods removed from above.

Taper and Out-of-Round Limits—.001".

Fitting New Pistons: Insert .0015" x ½" feeler gauge between piston and cylinder wall on thrust side. Pull to withdraw feeler must be 10-20 lbs.

Replacement Pistons: Std. size and .010", .020", .030" Oversize.

PISTON PINS

Pressed into pistons and retained in place with retainer rings at each end, floating in connecting rod bushing.

Diameter—.9369-.9375" selective. **Length**—2 7/8".

Pin Fitting in Piston—*See "Piston Pins" in Pontiac Special Data.*

Pin Clearance in Rod Bushing— .0004- .0006".

Piston Pin Removal & Installation—*See "Piston Pins" in Pontiac Special Data.*

Replacement Pins: .001" (green), .003" (red), .005" (blue) Oversize. Paint code marked on end of pin.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Comp. (#1, #2)	3/32"	.008-.015"	.0015-.003"
Oil (#3)	3/16"	.008-.015"	.001-.0025"

Installing Rings: Install compression rings with marks "TOP" or "T" toward top of piston. Oil ring can be installed either way.

Replacement Rings: Std. size, .005", .010", .020", .030" Oversize.

CONNECTING RODS

Length—7.560-7.565" (center-to-center).

Weight—32 ozs. (less bearings).

Crankpin Journal Diameter—1.9987-1.9997".

Piston Pin Bushing (Upper Bearing)—Split aluminum bronze bushing. *See "Connecting Rod & Bearings" in Pontiac Special Data.*

Lower Bearing—Steel backed, babbitt lined insert. No shims.

Clearance—.0001-.0021". **Sideplay**—.007-.012".

Replacement Bearings: Std. .001", .002" Undersize.

Installing Rods: Not offset, install either way. Marks on rods and caps must be together (marks do not indicate in which cylinder rod is used).

CRANKSHAFT

Journal Diameters—(1) 2.3732-2.3742"; (2) 2.4044-2.4054"; (3) 2.4357-2.4367"; (4) 2.4469-2.4679"; (5) 2.6232-2.6242".

Bearings—Steel backed babbitt lined inserts. No shims. Upper and lower halves are interchangeable.

Clearance—.003-.0023".

Replacement Bearings: Std. .001", .002" undersize.

End Thrust: Taken at #4 (rear intermediate) bearing.

Endplay—.003-.008".

Rear Main Bearing Oil Seal Renewal: *See "Crankshaft & Main Bearings" in Pontiac Special Data.*

Vibration Dampener Removal & Installation: *See "Vibration Dampener" in Pontiac Special Data.*

CAMSHAFT

Bearing Diameter & Installation: *See "Camshaft" in Pontiac Special Data.*

Clearance—.0015-.0025" (new).

End Thrust: Steel plate behind camshaft sprocket. Replace if worn. **End Play**—.003-.007".

Timing Chain: Morse. Width 27/32". Pitch 3/8". Length 21" or 56 links.

Chain Installation—*See "Timing Chain" in Pontiac Special Data.*

Camshaft Setting: Sprockets marked. Mesh chain with sprockets turned so that "O" marks are adjacent and in line with straightedge across shaft centers.

Timing Chain Cover Oil Seal Installation: *See "Timing Chain" in Pontiac Special Data.*

VALVES

►*AIR-CONDITIONED CAR NOTE—An access hole is provided in right front fender apron for valve adjustment.*

Tappet Clearance: .011-.013" HOT. Use .011" "Go" gauge .013" "No Go" gauge. High Speed Setting-.013" (exhaust valve).

Valve	Head Diam.	Stem Diam.	Length
Intake	1 15/32"	.310-.311"	5.53"
Exhaust	1 11/32"	.310-.311"	5.53"

Valve	Seat Angle	Lift	Stem Clearance
Intake	30°	.19/64"	Ⓒ Free Fit to .0006"
Exhaust	45°	.19/64"	Ⓒ Free Fit to .0006"

Ⓒ—Tapered (max. clearance at bottom .0006").

Valve Seat Width—1/16".

Valve Springs: Intake and exhaust valve spring identical. Install with two closed coils at top and dampener on top of each spring. Use new dampeners whenever removed from spring.

Spring Specifications

	Spring Pressure	Length
Valve Closed	59-66 lbs.	1 29/32"
Valve Open	97-105 lbs.	1 19/32"

Valve Guides: Valve guides have tapered hole (.001" taper to inch - greatest clearance at top) Exhaust guides counterbored at top to depth of 3/4".

Checking Valve Clearance in Guide—Clean guide with tool KMO-122, clean counterbore in exhaust guide with Counterbore Cleaner J-2122. Valve should just fall through guide of own weight.

Installing Guides—Use Valve Guide Remover J-2542 to remove and install guides. Drive new guide down in block (counterbored end up on exhaust guides) until upper end 29/32" below top edge of valve seat. Ream guide with PR-131 tapered reamer and finish counterbore with Counterbore Cleaner J-2122.

►*CAUTION—Guides furnished with straight hole which must be taper reamed.*

Valve Lifters: Barrel type, cast iron. Guide holes reamed in block. Lifters furnished .005" oversize (use pilot reamer J-706-P when reaming holes to maintain alignment - valve guides must be removed).

Clearance—Free fit. Lifter should just move freely with finger touch.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.
Intake Valves—Open 5° BTDC. Close 39° ALDC.
Exhaust Valves—Open 45° BLDC. Close 5° ATDC.
Valve Timing Check—With .015" clearance, #1 intake valve should open with #1 piston 5° BTDC with first straight line of dampener mark (6°) slightly past pointer on chain cover. Reset Tappet clearance.

OILING SYSTEM

Crankcase Capacity: 5 qts. (refill), 6 qts. (dry).
Normal Oil Pressure: 30-45 lbs. at 40 MPH.
Pressure Regulator—On oil pump. Opens at 40 lbs. Replace spring if free length less than 2 5/16".
Oil Pressure Gauge—AC No. 1507707. Not electric.

Oil Pump: Gear type. On right side of crankcase.
Pump Overhaul—*See "Oil Pump" in Pontiac Special Data.*

Oil Cleaner: Precipitation type (in crankcase).
Removal & Installation—*See "Oiling System" in Pontiac Special Data.*
Crankcase Ventilation: Filter element in oil filler cap (inlet). Outlet pipe at valve compartment cover on right rear side of engine (cars with oil bath air cleaner use a 3-piece outlet pipe containing filter element).
►*CAUTION:* Filler cap must be installed with air opening in cap toward front of car and seam in line with groove in tube (may cause excessive oil consumption if installed backwards).

COOLING

►*AIR-CONDITIONED CAR NOTE: Radiator and radiator hoses used on these cars are of heavier construction than standard models.*
Water Capacity: (Without Air-Conditioner): 18¾ qts. (without heater). 20½ qts. (with heater).
With Air-Conditioner—20 qts. (without heater). 21 3/4 qts. (with heater).
Pressure Valve: AC No. 850549 (Without Air-Cond.) opens at 7 lbs. AC No. 850559 (With Air-Cond.) opens at 13 lbs.
►*PRESSURE VALVE CAUTION: Do not use 7 lb. pressure cap with Air-Conditioning.*
Thermostat: Harrison "Pellet" type. In cylinder head outlet. Pontiac No 3132436 opens at 160°.
►*CAUTION: Install with marks "front" & "to rad." toward radiator.*
Water Pump: Packless, sealed ball bearing shaft. *See "Pontiac" in Water Pump Section.*
Pump Removal—Drain cooling system, remove hose connections at pump, remove belt, take out water pump mounting bolts and lift pump out.
Temperature Gauge: AC No. 1512458. Not electric.
See "Temperature Gauges" in Miscellaneous Section.

CLUTCH

Inland. Single plate, "Diaphragm", dry disc type with Long driven member.
See "Inland" in Clutch Section.
Clutch Disc No.—Pontiac No. 513583.
Pedal Adjustment: *7/8-1 1/8" (adjusting nut on link at clutch fork).*
Removal: Remove transmission (see Transmission Removal below), remove clutch bearing support spring washer (in rear face of clutch housing) and remove clutch housing bottom cover and control shaft inner bracket. Remove release bearing support and release bearing. Tap bearing support from inside clutch housing to aid removal (CAUTION—Avoid striking tubular portion of support). Mark flywheel and clutch cover (to insure installation in same position to maintain balance), remove clutch cover bolts evenly, move clutch assembly away from flywheel at bottom and withdraw driven member, lower clutch cover assembly out.
Clutch Installation Note—Install new felt oil seal against shoulder ahead of oil slinger retainer ring on transmission main drive gear (will bear against flared end of release bearing support when installed). Lubricate seal with engine oil before transmission installed. Coat entire length of outer diameter of release bearing support tube with grease. Lubricate release fork fulcrum points with a very light coat of grease. Apply light coat of Lubriplate on main driving gear splines. Use new paper gasket between support flange and clutch housing, make certain that flange is not bent or distorted (will cause misalignment of transmission).
►*CLUTCH PEDAL SPEED-UP CONTROL SWITCH ADJUSTMENT (AIR-CONDITIONED CARS): See "Speed-Up Control Switch" under CARBURETOR above.*

SYNCHRO-MESH TRANSMISSION

Own. All helical gear.
See "Pontiac Synchro-Mesh" in Transmission Section.
Transmission Controls: *See "Transmission Controls" in Transmission Section.*
Removal: Disconnect speedometer cable, gearshift selector and control rods from transmission. Disconnect rear universal (wire trunnions) and pull out propeller shaft. Remove upper transmission mounting screws, install guide pins (J-851), remove lower screws, pull transmission to rear, down and out.

Installation Note—Use guide pins installed in two upper transmission mounting holes to assist in sliding transmission straight forward into place (to avoid damage to clutch release bearing tubular support). NOTE—These guide pins may be made from ½"-13 American National Thread bolts by cutting heads off and reducing overall length to 4¼".

►*GEARSHIFT LEVER SPEED-UP CONTROL SWITCH ADJUSTMENT (AIR-CONDITIONED CARS): See "Speed Up Control Switch" under CARBURETOR above.*

POWERGLIDE TRANSMISSION

►*FOR 1953 CARS WITH POWERGLIDE TRANSMISSION: See "Chevrolet Powerglide" in Transmission Section.*

HYDRA-MATIC DRIVE

"Dual-Range" four speed automatic transmission and fluid coupling.
►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Hydra-Matic Drive" in Transmission Section.*
►*TESTING & TROUBLE SHOOTING: See "Hydra-Matic Drive" in Transmission Section.*
Lubrication—Check fluid level every 2000 miles, drain and refill at 25,000 mile intervals.
Checking Fluid Level—Run engine for approximately 1½ minutes at speed equivalent to 20 MPH. with selector lever in "N". Reduce engine speed to **slow idle** and move selector lever to "D" position, measure level with dipstick, add fluid until level is at "FULL" mark with engine idling.
Capacity—Approximately 11 qts. (refill).
Recommended Fluid—Use G.M. Hydra-Matic Fluid or Automatic Transmission Fluid Type A.
►*OTHER HYDRA-MATIC SERVICE DATA—See "Hydra-Matic Drive" in Transmission Section.*

UNIVERSALS

Mechanics or Saginaw. Needle bearing type.

►*CAUTION:* Rear universal companion flange nut controls rear axle pinion bearing "preload" (must be adjusted whenever nut is loosened). *See "Pontiac Hypoid" in Rear Axle Section.*

REAR AXLE

Own. Hypoid gear, semi-floating with Hotchkiss Drive.
See "Pontiac Hypoid" in Rear Axle Section.
Axle Identification—Code mark stamped on pad at forward side of differential carrier between bottom web and right hand horizontal web. Axle shaft also marked with daub of paint on end of shaft to indicate ratio. See Code and Paint Markings in table below:

Axle Ratios & Code Marking

Ratio	Gear Teeth	① Code Mark	② Code Color
3.08-1 ③	40:13	0	Yellow
3.23-1 ③	42:13	9	Brown
3.42-1 ③	41:12	8	Aluminum
3.63-1 ④	40:11	6	Blue
3.9-1 ④	39:10	4	Red
4.1-1 ④	41:10	3	Green

①—See Axle Identification above.
②—Paint daub on end of axle shaft.
③—Hydra-Matic Drive Cars.
④—Synchro-mesh Transmission Cars.
⑤—Optional (for standard fuel engines).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Backlash—.003-.012" (new), .012" (used).

Axle Shaft Removal: Removal wheel, brake drum, four brake backing plate bolt nuts, static collector, and loosen bearing retainer (do not move backing plate or brake line may be damaged). Pull shaft with Puller J-942 (do not drag axle shaft on seal).

Wheel Bearing Adjustment: None.

Differential Carrier Assembly Removal: Disconnect rear universal and wire trunnion in place (do not disengage spline joint at transmission), remove axle shafts, and carrier flange capscrews. Withdraw carrier assembly from housing.

►*CAUTION: Rear universal joint companion flange controls pinion bearing preload. Readjust whenever nut loosened.*

SHOCK ABSORBERS

Delco. Direct acting, non-adjustable, sealed (non-refillable). Service by replacement.

Model	Front	Rear
Standard	5303492	5303290
Taxi & Police Cars.	5519438	5519439

FRONT SUSPENSION

►*FRONT SPRING NOTE—Heavier springs used on cars with Air-Conditioning.*

Independent. Shock absorber mounted within front coil springs.

See "Pontiac" in Front Suspension Section.

Kingpin Inclination—4½° at ½° camber.

Caster—0° ± ½°.

Camber—½° ± ½°

Toe-In—0-1/16" measured 9" from floor.

Toe-Out on Turns—With inner wheel at 20°, outer wheel should be 18° 30'.

STEERING

Manual: Saginaw Worm & Roller. *See "Saginaw Worm & Roller" in Steering Section.*

Power Steering: Saginaw (GM) Hydraulic. Recirculating ball nut and worm type plus extended pitman shaft with gear sector in mesh with power rack. Power rack pinned to piston rod of hydraulic cylinder. *See "Saginaw (GM) Power Steering" in Steering Section.*

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Worm & Roller" in Steering Section.*

Steering Gear Removal: *See "Saginaw Worm & Roller" in Steering Section.*

BRAKES

Bendix Hydraulic. Duo-servo, single anchor (without eccentric adjustment). Hand lever applies rear wheel service brakes.

See "Bendix Hydraulic Single Anchor (Without Eccentric)" in Brake Section.

►*1954 BRAKE PEDAL & MASTER CYLINDER CONNECTING ROD INTERFERENCE CORRECTION:* Difficulty may be experienced in getting correct pedal height adjustment due to interference between master cylinder connecting rod clevis and brake pedal. If pedal height of 4 3/8-4 5/8" cannot be obtained it can be corrected by grinding a relief in master cylinder connecting rod clevis on the lower side at a point approximately 2" from rod end and extending toward clevis end for 1".

►*1953 SQUEAKING BRAKE CORRECTION: See Brake Section for installation of Brake Drum Silencer Springs.*

Drums—Diameter 11".

Wheel Cylinder Diameter—Front 1 1/16". Rear 7/8".

Lining Width & Thickness	Width	Thickness
Front	2¼"	3/16"
Rear	1¾"	3/16"

Clearance—Tighten adjusting "Star Wheel" to point where wheel can just be turned by hand, then back off star wheel 14 notches.

Braking Power—60% front wheels. 40% rear wheels.

Standard Master Cylinder: Forward of brake pedal on bracket attached to engine rear cross member.

Checking Fluid—Fluid reservoir is part of master cylinder. Maintain fluid level to top of reservoir.

Removal—Remove from engine compartment. Not necessary to disturb other parts.

Power Brakes: Bendix Vacuum Power Unit (combination vacuum power unit and hydraulic master cylinder). Unit mounted on underside of toe board and replaces regular master cylinder.

See "Bendix Power Unit" in Brake Section.

Checking Fluid—Same as for standard master cylinder.

Removal of Power Unit—Disconnect upper end of vacuum hose attached to inlet tube of master cylinder, and hydraulic lines from hydraulic cylinder. Remove stop light wires. Disconnect push rod from brake pedal and remove brake pedal from pivot bracket. Remove clutch pedal and steering column seals. Remove vacuum cylinder mounting plate screws while holding power unit push rod. Remove mounting plate, working it over clutch pedal while holding power unit in position. Remove power brake unit.

MISC. MECHANICAL

Windshield Wipers: Cable operated Vacuum type. *See "Windshield Wipers" in Miscellaneous Section.*

►*1953 WINDSHIELD WIPER DRIVE PRODUCTION CHANGE & ADJUSTMENT CAUTION: See Miscellaneous Section for data.*

Air-Conditioning: Harrison type with magnetic compressor clutch (compressor operates only with air-conditioner switch turned on). *See "Harrison" Air-Conditioning in Miscellaneous Section.*

Window Regulators: Electric. Reversible motor in each window. Available on front doors only. *See "Window Regulators" in Miscellaneous Section.*

Power Top Control: Hydro-Lectric with reversible pump motor. *See "Power Top Controls" in Miscellaneous Section.*

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

MODEL IDENTIFICATION

SERIAL & ENGINE NUMBERS (Numbers are the same): On left front hinge pillar post and on raised pad at front of right hand cylinder block.

Starting Serial & Engine Number—1001 with prefix as indicated below.

►*ENGINE & SERIAL NUMBER NOTE: Engine and Serial number (example P755H 1001) includes following identification data in sequence:*

Assy. Plant	Model ①	Model Year	Trans. ② Type	Serial No.
See below	7	55	H	1001

① —7—27 Series. 8—28 Series.
② —H—Hydra-Matic Trans. S—Synchro-mesh Trans.

Assembly Plant Designations

P—Pontiac	K—Kansas City
C—South Gate	L—Linden
W—Wilmington	A—Atlanta
F—Framingham	T—Arlington

►*7.5-1 COMPRESSION RATIO ENGINE IDENTIFICATION: On Synchro-mesh Cars with 7.5-1 compression ratio, an "L" is stamped on engine number pad.*

TUNE-UP

COMPRESSION PRESSURE: 135-145 lbs. at cranking speed.

VALVE TAPPET CLEARANCE: None in service (hydraulic).

►*ADJUSTMENT (When Cylinder Head or Valve System disturbed): See Valve Tappet Adjustment under "Valves" in ENGINE data.*

MANIFOLD HEAT CONTROL: Thermostatic coil type mounted in right hand exhaust manifold.

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2.
Cylinders—RIGHT BANK 2-4-6-8. LEFT BANK 1-3-5-7.

SPARK PLUG GAP: .033-.038".
Spark Plugs—AC No. 44-5. 14 mm.

COIL: Delco-Remy 1115087. *12 Volt.*
Resistor—Delco-Remy 1927809.

►*COIL RESISTOR NOTE:* Resistor is connected in lead from ignition switch-to-coil. This resistor is by-passed during cranking by lead from starter solenoid-to-coil.

DISTRIBUTOR: Delco-Remy 1110828. *12 Volt.*
Condenser—Delco-Remy 1869704. **Capacity** .18-.23 mfd.
Contact Point Set—Delco-Remy 1918148.
Breaker Gap—.016".
Cam Angle—26-33°.
Breaker Arm Spring Tension—19-23 ozs.
Rotation—Counterclockwise viewed from above.

Automatic Advance

Degrees Distr.	RPM	Degrees Eng.	RPM
0-2	325	0-4	650
10.5-12.5	1200	21-25	2400
12-14	1400	24-28	2800
14-16	1700	28-32	3400

Vacuum Spark Control: Delco-Remy 1116080.
Plunger Travel—11/64-3/16".

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	4-6"
8	16	12.5-13.5"

IGNITION TIMING

Setting—5° BTDC. With engine running at 400 RPM (Hydra-Matic Cars), 450 RPM (Synchro-mesh Cars).

Timing Marks—Three marks on harmonic balancer indicating **TDC—3° BTDC-5° BTDC.** Pointer on chain case cover aligned with correct mark on balancer.

CARBURETOR

►*CARBURETOR APPLICATION: Rochester and Carter 2-Barrel used on Hydra-Matic Drive Cars. Carter 2-Barrel used on Synchro-mesh Cars. Carter 4-Barrel WCFB or Rochester 4-Barrel 4GC are optional equipment (Power Pack).*

►*ENGINE LOADING CORRECTION (Cars with Rochester 2GC 2-Barrel Carburetor): New choke piston can be installed to provide greater initial choke opening to prevent loading. See "Rochester 2GC Carburetor" in Carburetor Section.*

►*CARBURETOR FLOODING (Due to Excessive Fuel Pump Pressure): See "Fuel System Notes" in Pontiac Special Data.*

►*HARD STARTING DUE TO UNSATISFACTORY UNLOADER OPERATION AFTER FLOODING (Cars with Carter WCFB 4-Barrel Carburetor): See "Carter WCFB 4-Barrel" in Carburetor Section for recommended rework of Carburetor and Throttle Linkage.*

►*CARBURETOR REPLACEMENT CAUTION:* First type intake manifolds with a curved section at rear of mounting flange will accomodate **Carter carburetors only.** Later manifolds with a fairly straight section at this point will accomodate either Rochester or Carter carburetors. A high vacuum leak will occur if Rochester carburetor used with first type intake manifold.

►*LOST MOTION OR LOOSENESS IN THROTTLE LINKAGE (EARLY SYNCHRO-MESH CARS):* Check distance between throttle rod hole center-lines and if found to be greater than 11.420", indicating an early type rod, increase bend in the rod so that distance between hole center-lines is 11.380-11.420".

►*HYDRA-MATIC TRANSMISSION THROTTLE ROD PRODUCTION CHANGE:* Transmission throttle control rod installed in lower hole on later cars and in upper hole on early cars. To decrease throttle valve pressure and increase accelerator linkage free travel, the rod on early cars can be installed in lower hole. *CAUTION*—When making this change, make sure that rod does not touch left rear engine mount at any point in its travel.

THROTTLE LINKAGE ADJUSTMENT: (HYDRA-MATIC DRIVE CARS): With engine at normal operating temperature, idle speed set at 390-410 RPM, and with transmission selector lever in neutral, install linkage adjustment pin J-2544 through holes in lever and bracket at rear of left engine block. Pin should fit free in holes without lever movement. If free fit not obtained, adjust trunnion nuts on carburetor throttle rod until pin is free, then lock nuts securely. Leave gauge pin in hole. Loosen trunnion nuts on transmission throttle control rod and push rod downward until control outer lever is felt to touch end of its travel (top nut must not be touching trunnion). **Shorten throttle control rod two turns** by loosening lower nut two turns and tightening upper nut 2 turns *Remove gauge pin. With* carburetor throttle in full open positive and Downshift Return Spring fully extended, adjust throttle control intermediate rod trunnion (at lever on engine bracket) so that accelerator pedal clears floor mat by approximately ¼" at closest point, tighten trunnion locknuts. *NOTE—See Hard Starting Correction in "Carter WCFB 4-Barrel" in Carburetor Section for special setting on cars with this carburetor.*

ROCHESTER 2GC 2-BARREL

Rochester Model 2GC No. 7006100 (Hydra-Matic Drive Cars).

►*CARBURETOR CHOKE PISTON CHANGE (to correct Engine Loading): See "Rochester 2GC Carburetor" in Carburetor Section.*

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyl. 2-3-5-8, LEFT barrel 1-4-6-7.*

Idle Setting—1-1/2 turns open from lightly seated position (turn screws out for richer mixture). Adjust as necessary from this preliminary setting to give a smooth idle at correct idle speed (see below).

Idle Speed (Synchro-mesh Cars)—450-470 RPM.
Idle Speed (Hydra-Matic Cars)—390-410 RPM.

►*AIR-CONDITIONED CAR NOTE: Adjust idle speed with Air Conditioner turned "ON".*

Float Level—1-15/64" from air-horn gasket to top of float with assembly inverted. Use Gauge BT-105 so it rests against power piston shaft with outer leg in line with center of float. Adjust by bending float arm between pivot and float with Tool BT-69.

Float Drop—1-29/32" *between air-horn gasket and* lowest point on bottom of float with air-horn held upright (Gauge BT-105). Adjust by bending float tang toward float needle seat to lessen drop, and away from seat to increase drop.

Fast Idle: No adjustment of fast idle speed is provided. It is necessary however to correct relationship between fast idle cam position and choke valve position. Check & adjust as follows: Place end of idle adjusting screw on next to highest step of fast idle cam. Using Gauge J-5920, slide small end between upper edge of choke valve and carburetor bore, with gauge held vertically. If necessary, bend choke rod until correct clearance is obtained.

Unloader Adjustment—With throttle in wide open position and choke thermostat cover set at index, bend tang on throttle lever so that large end of Tool J-5920 just fits between upper edge of choke valve and inner side of air horn.

Automatic Choke Setting: Centered (at index).

►*OTHER DATA: See "Rochester 2GC Carburetor" in Carburetor Section.*

Fuel Pump Pressure: 4-5 lbs. *CAUTION—Pressure in excess of 5 lbs. will cause carburetor to flood. See "Fuel System Notes" in Pontiac Special Data.*

►*FUEL PUMP, ARM WEAR CORRECTION: See "Camshaft" below.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

CARTER WGD 2-BARREL

Model	Carter No.
Synchro-mesh (Early)	2207S
Synchro-mesh (Late)	2207SB
Hydra-Matic (Early)	2182S
Hydra-Matic (Later)	2182SA
Hydra-Matic (Late)	2182SB

►*CARBURETOR FLOODING CORRECTION: See "Fuel System Notes" in Pontiac Special Data for excessive fuel pump pressure. See also "Carter WGD Carburetor" in Carburetor Section for other recommended changes.*

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyl. 2-3-5-8, LEFT barrel 1-4-6-7.*

Idle Setting (2207-S & SB)–1/2–1-1/2 turns open. Turn screws out for richer mixture.
Idle Setting (2182S, SA & SB)–1-1/4–2-1/4 turns open. Turn screws out for richer mixture.
Idle Speed (Synchro-mesh Cars)–450-475 RPM.
Idle Speed (Hydra-Matic Cars)–390-410 RPM.

►*AIR-CONDITIONED CAR NOTE: Adjust idle speed with Air-Conditioner turned "ON".*

Float Level: 7/32" from top of float to gasket seat on bowl cover (with gasket removed). Use Gauge T109-106. Adjust by bending float arm.

Accelerating Pump–No seasonal adjustment.

Fast Idle Setting: .026" throttle opening or clearance between valve and wall on side opposite idle ports with choke valve tightly closed. Adjust by bending choke connector rod at lower angle.

Unloader Adjustment–With fast idle adjustment completed, hold throttle valve wide open and close choke valve as far as possible (do not force choke valve closed). Clearance between upper edge of choke valve and inner wall of air horn should be 5/16" (Gauge T109-154). Adjust by bending choke shaft unloader arm.

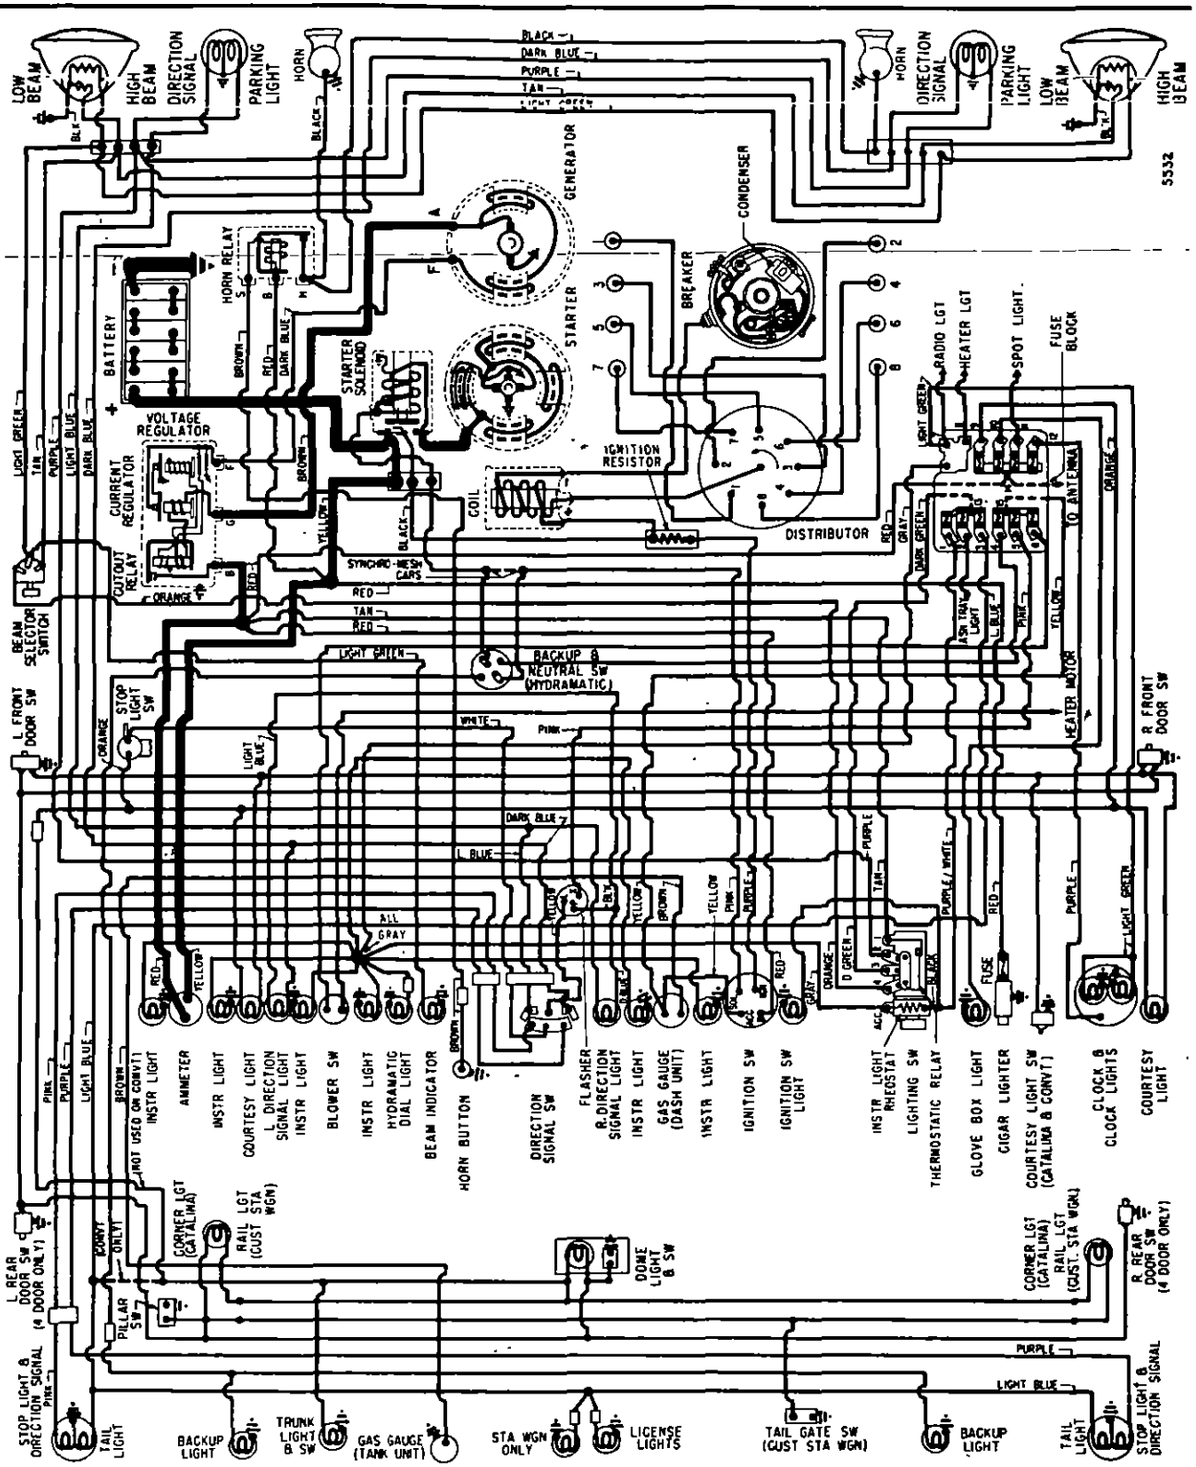
Automatic Choke Setting: *CAUTION–2 Settings used.*
(Synchro-mesh Cars–2207S, SB)–1 Point Lean.
(Hydra-Matic Cars–2182S, SA, SB)–1 Point Rich.

►*OTHER DATA: See "Carter WGD Carburetor" in Carburetor Section.*

Hydra-Matic Throttle Linkage Adjustment: *See "Carburetor" above.*

Fuel Pump Pressure: 4-5 lbs. *CAUTION–Pressure in excess of 5 lbs. will cause carburetor to flood. See "Fuel System Notes" in Pontiac Special Data.*

►*FUEL PUMP ARM WEAR CORRECTION: See "Camshaft" below.*



ROCHESTER 4GC 4-BARREL

Rochester 4GC No. 7007800 (Hydra-Matic Drive Cars).

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyl. 2-3-5-8, LEFT barrels 1-4-6-7.*

Idle Setting–1½ turns open (preliminary setting). For final setting (with engine at normal operating temperature), adjust both idle mixture screws equally to give a smooth idle at specified RPM. Turn screws out for richer mixture.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Idle Speed (Synchro-mesh Cars)–450-470 RPM.
Idle Speed (Hydra-Matic Drive Cars)–390-410 RPM.

►*AIR CONDITIONED CAR NOTE: Adjust idle speed with Air Conditioner turned "ON".*

►*OTHER DATA: See "Rochester 4GC 4-Barrel Carburetor" in Carburetor Section.*

Hydra-Matic Throttle Linkage Adjustment: *See "Carburetor" above.*

Fuel Pump Pressure: 4-5 lbs. *CAUTION–Pressure in excess of 5 lbs. will cause carburetor to flood. See "Fuel System Notes" in Pontiac Special Data.*

►*FUEL PUMP ARM WEAR CORRECTION: See "Camshaft" below.*

CARTER WCFB 4-BARREL

Model	Carter No.
Synchro-mesh	2283S
Hydra-Matic	2268S

►*CARBURETOR UNLOADER IMPROVEMENT (to correct Hard Starting due to unsatisfactory Unloader Operation): See "Carter WCFB 4-Barrel" in Carburetor Section for installation of new throttle lever flex spring.*

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyl. 2-3-5-8, LEFT barrel 1-4-6-7.*

Idle Setting–3/4–1-3/4 turns open. Turn screws out for richer mixture.
Idle Speed (Synchro-mesh Cars)–450-470 RPM.
Idle Speed (Hydra-Matic Cars)–390-410 RPM.

►*AIR CONDITIONED CAR NOTE: Adjust idle speed with Air Conditioner turned "ON".*

►*OTHER DATA: See "Carter WCFB 4-Barrel Carburetor" in Carburetor Section.*

Hydra-Matic Throttle Linkage Adjustment: *See "Carburetor" above.*

Fuel Pump Pressure: 4-5 lbs. *CAUTION–Pressure in excess of 5 lbs. will cause carburetor to flood. See "Fuel System Notes" in Pontiac Special Data.*

►*FUEL PUMP ARM WEAR CORRECTION: See "Camshaft" below.*

CARB. EQUIPMENT

►*HIGH FUEL PUMP PRESSURE CORRECTION (Causing Carburetor to Flood):* May be caused by the diaphragm being installed with insufficient slack. *See "Fuel System Notes" in Pontiac Special Data.*

►*FUEL PUMP ARM & ECCENTRIC WEAR CORRECTION & INSTALLATION CAUTION: See "Camshaft" below. See "Fuel Pumps" in Carburetion Equipment Section.*

Fuel Pump: AC. Replacement No. 4123 (Fuel & Vacuum). **Pressure**–4-5 lbs. *CAUTION–Fuel pump pressure must not exceed 5 lbs. pressure.*

Fuel Filter: Std. Equipment. This unit is a disc type filter which requires periodic service. *See "Fuel System Notes" in Pontiac Special Data.*

Gasoline Gauge: AC Electric type.
Dash Unit–AC No. 1518131.
Tank Unit–AC No. 1518093 (Exc. Sta. Wgn.). No. 1518250 (Sta. Wgn.).
See "Fuel Gauges" in Carburetion Equipment Section.

BATTERY

Air Conditioned Cars–Delco 3SM70. *12 Volt,* 11 plate, 70 ampere hour capacity (20 hr. rate).
Except Air Conditioned Cars–Delco 2SM50. *12 Volt,* 9 plate, 50 ampere hour capacity (20 hr. rate).
Battery Ground–Negative.
Engine Ground–Between engine and fender at battery ground.

STARTER

Delco-Remy 1107631 (Std.), 1107632 (With Power Steering). *12 Volt.*
Armature–Delco-Remy 1926626.
Drive–Overrunning clutch (solenoid pinion shift).
Rotation–Counter-clockwise at commutator end.
Brush Spring Tension–35 ozs. minimum.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	3500	10.1	95
10.5 ft. lbs.	Lock	5.4	470

Starting Switch: Delco-Remy Solenoid 1119760 (no relay) mounted on starter and controlled by Ignition & Starter Switch, Delco-Remy No. 1116472. Neutral Safety Switch used on Hydra-Matic Drive Cars.

Neutral Safety & Back-up Light Switch: Delco-Remy 1998039. At lower end of steering column. Connected in starter control circuit so that starter operates only when selector lever in "N" (Neutral).

Adjustment–*See "Hydra-Matic Drive" in Transmission Section.*

GENERATOR

Delco-Remy Model:	Gen. No.	Armature No.
Standard	1100304	1928952
Hvy. Duty (1st type)	1102012	1923535
Hvy. Duty (2nd type)	1102018	1923535
Hvy. Duty (3rd type)	1102035	
Air. Cond. Car (1st type)	1105944	① 1932900
Air Cond. Car (2nd type)	1102027	②
Air Cond. Car (3rd type)	1102039	

①–Replaces Armature No. 1930814.
②–Replace Generator assembly with No. 1102039.

Maximum Charging Rate–*See Voltage Regulator.*

Performance Data–Cold

Generator	Amperes	Volts	RPM
1100304	25	14.0	2780
1102012	30	14.0	2150
1102018	30	14.0	2150
1102035	35	14.0	
1105944	35	14:0	2150
1102027	35	14:0	2350
1102039	35	14.0	

Rotation–Counter-clockwise at commutator end.
Brush Spring Tension–28 ozs.
Field Current–1.5-1.62 amps. (1100304); 1.48-1.62 amps. (1102012 & 1102018); 1.64-1.82 amps. (1102027); 1.54-1.67 amps. (1105944), all at 12 volts.

Belt Adjustment: ¼" belt deflection with approximately 8 lbs. pressure midway between pulleys.

REGULATOR

Delco-Remy Regulator No.	Use With Gen. No.
1118945	1100304
1118826	1102012 & 1102018
1118967	1102027 & 1102035
1118956	1105944

►*NOTE: Regulator is "1118825 Series". Specifications below are for "Normal" settings.*

Cut-Out Relay

Cuts In–11.8-13.5 volts (hot).
Contact Gap–.020".
Air Gap–.020" (with contacts just closed).

Voltage Regulator

Setting–13.8-14.8 volts (hot).
Air Gap–.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting–*See "Delco-Remy 1118825 Series Regulator" in Electrical Equipment Section.*

Current Regulator

Setting (1118945)–23-27 amperes (hot).
Setting (1118826)–27-33 amperes (hot).
Setting (1118956 & 1118967)–32-37 amperes (hot).
Air Gap–.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting–*See "Delco-Remy 1118825 Series Regulator" in Electrical Equipment Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Equip. Section.*
►*LAMP BULB CAUTION: All lights are 12 Volts.*

Autronic Eye: *See "Autronic Eye" in Electrical Equipment Section.*

Direction Signal: *See "Direction Signals" in Electrical Equipment Section.*

►*DIRECTION SIGNAL SHORT CIRCUITING CORRECTION:* Direction signal wiring harness contacts gearshift lever support at upper end of steering column and in some instances may cause a short circuit. To correct, remove direction signal control assembly and replace the wiring harness and switch base assembly. Route the new harness in the guide clamp and push it down through clamp until it lies flush against underside of housing, then bend clamp around harness to hold it securely. Before installing control assembly, bend the clamp and harness toward center of housing to make sure it will not contact gearshift lever support.

Lighting Switch Removal: Remove one battery cable from battery. Pull headlight switch knob to "on" position, push latch button on side of switch assembly and pull out switch knob assembly. Screw bushing from switch

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

assembly allowing switch assembly to be removed from instrument panel.

Stop Light Switch Location: Mechanical type switch located on bracket attached to steering column behind instrument panel.

Back-Up Light Switch: Located on left rear side of transmission case.

FUSES: Fuses listed below (except as noted) are located on a fuse block behind instrument panel on dash to left of steering column.

Instrument Panel–4 amps.
Hood Ornament & Ash Tray–7½ amps.
Stop Lights, Dome & Courtesy Lights–7½ amps.
Tail Lights–7½ amps.
Back-up Light–7½ amps.
Glove Box & Underhood Light–7½ amps.
Direction Signal & Brake Light–7½ amps.
Spot Lights–7½ amps.
Heater & Defroster–7½ amps.
Radio & Clock–7½ amps.
Air Conditioner–30 amp. Located in a line holder either on defroster core housing or if car not equipped with defroster, on front of dash where defroster should be.

LIGHTING THERMOSTATIC CIRCUIT BREAKER: *12 Volt*, 22 amperes. Located on lighting switch.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines see "Air Conditioning Service Cautions" in Miscellaneous Section.*

►*ENGINE "CLICKING" NOISE WHEN IDLING CAUTION:* May be caused by loose rivets in Vibration Dampener and is sometimes diagnosed as Hydraulic Lifter noise. Check vibration dampener before working on lifters. Correct by replacing Vibration Dampener. *See "Vibration Dampener" in Pontiac Special Data.*

►*GRINDING SOUND IN ENGINE CORRECTION:* Check oil pump drive shaft for evidence of shaft rubbing against hole in cylinder block. This evidence can be seen on outer diameter of shaft above the upset "nibs". Correct by grinding or turning the shaft for clearance. *CAUTION–Do not grind off the "nibs".*

►*OIL CONSUMPTION AT HIGH SPEED CORRECTION:* This condition may be caused by incorrectly installed crankcase ventilator outlet pipe. If ventilator pipe is pushed too far into push rod cover, high velocity air will carry oil directly out through pipe. Make sure that pipe is not forced past the two locating points on outlet pipe.

ENGINE SPECIFICATIONS: Own. V8 Valve-in-head.

Bore	Stroke	Displacement	Rated HP
3.75"	3.25"	287.3 cu. ins.	45

Engine	① Compr. Ratio	Developed HP
Standard	8.0-1	② 180 at 4600 RPM
With Power Pack	8.0-1	200 at 4600 RPM

①–7.5-1 optional compression ratio obtained by using different pistons. "L" stamped on engine number pad indicates low compression engine.
②–173 HP at 4400 RPM on "Low Compression" engine.

Compression & Vacuum Reading–*See Tune-Up.*

ENGINE REMOVAL: *See "Engine" in Pontiac Special Data.*

OIL PAN REMOVAL: Remove right and left engine side side aprons. Remove steering idler-lever support attaching screws and lower steering linkage as far as possible. Disconnect exhaust crossover pipe and jockey it around to a position where it can be removed without forcing. Remove flywheel housing lower cover and front shield. Loosen crankcase ventilator outlet pipe brace and swing brace out of way.

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Pontiac Special Data.*

Oil Passage Plug (In Cylinder Head) Replacement: *See "Oiling System" in Pontiac Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Pontiac Special Data.*

INTAKE MANIFOLD: With **Special** flat washers under attaching nuts, tighten nuts evenly to 40-45 ft. lbs.

ENGINE MOUNTINGS: *See "Engine Mountings" in Pontiac Special Data.*

PISTONS

Cast aluminum alloy, slipper skirt, with piston pin offset 1/16" toward right side of engine.

►*DIFFERENT PISTONS USED IN "HIGH" & "LOW" COMPRESSION ENGINES:* Pistons identified as follows: High compression pistons are flat on top, and low compression pistons are "dished" out. Low compression pistons also have an "L" stamped on rear side near pin boss.

Removal–Pistons and rods removed from above.

Replacement Pistons: Std. size, and .005", .010", .020", .030" Oversize.

Fitting New Pistons: Clearance .0007-.0012" (measured just far enough above bottom of skirt to make sure micrometer is in full contact, and perpendicular to piston pin boss). Use a .0015" x ½" feeler gauge and spring scale. With piston and cylinder clean and dry, insert inverted piston and feeler gauge into lower half of cylinder (feeler 90° from pin hole). Pull required to withdraw feeler should be 8-15 lbs.

Installing Pistons: Install with notch in piston head and "F" mark on side of piston toward front of engine. *See Rod Installation.*

PISTON PINS

Pin is floating in piston and connecting rod and is retained by snap rings at each end.

Diameter–.9803-.9807".

Pin Fit in Piston–.0000"-.0002" loose with piston and pin at room temperature. When pin is toward high limit (.0002") pin can be inserted with light hand pressure, *pin should not fall through of its own weight.* When pin toward low limit (.0000"), considerable hand pressure will be required (a brass drift can be used to tap pin into place with light pressure).

Pin Fit in Connecting Rod–.0003"-.0005" loose.

Replacement Pins: Std. size, .001", .003", .005" Oversize.

PISTON RINGS

Upper compression ring is chrome plated. Both compression rings are taper faced and have either a chamfer or a step on inside diameter of top side.

Ring	Width	End Gap	Side Clearance
Upper Compr.	.078"	.010-.020"	.0012-.0027"
Lower Compr.	.078"	.008-.020"	.0012-.0032"
Oil	.183"	.015-.035"	.0025-.0095"

Installing Rings: Install compression rings with chamfer or step (on inside diameter) toward top of cylinder. Oil ring can be installed either way.

Replacement Rings: Std. size, .005", .010", .020", .030" Oversize.

CONNECTING RODS

Length–6.623-6.627" (center-to-center).
Crankpin Journal Diameter–2.2488-2.2498".
Connecting Rod Upper Bushing (Piston Pin) Removal & Installation–*See "Connecting Rods & Bearings" in Pontiac Special Data.*
Lower Bearing–Replaceable precision type.
Clearance–.0009-.0029" (new).
Sideplay–.006-.011".

Replacement Bearings: Std. size, .001", .002" Undersize.

Installing Rods: Install rods **2-4-6-8 (right bank)** with machined boss at lower end of rod toward the **rear.** Install rods **1-3-5-7 (left bank)** with boss toward the **front** of engine. When installed, machined bosses on rods will face each other. *See Pistons above.*

CRANKSHAFT

►*FRONT MAIN BEARING NOISE CORRECTION (POWER STEERING CARS):* Noticeable when engine warm and when power steering pump drive belt tightened to the high limit. Check by loosening belt below specified ft. lb. reading. DO NOT LEAVE BELT LOOSE. If noise not eliminated with belt tightened to low limit 58-65 ft. lbs., (new belt); 51-53 ft. lbs., (used belt) using Tool J-5574; decrease clearance between crankshaft and main bearing shells on front main bearing to a clearance of .001-.002".

►*MAIN BEARING CAP PRODUCTION CHANGE:* New bearing caps used in later production are heavier and have the bolt boss length increased. *Lockwashers are not used under attaching screws.*

Journal Diameter–2.2498-2.2499". Five bearings.
Bearings–Steel backed babbitt lined inserts. No shims.
Clearance–.0005-.003" (Except Rear), .0008-.0033" *(Rear).*

End Thrust: Taken by No. 4 (rear center) main bearing.
Endplay–.0035-.0085".

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Replacement Bearings: Std. size, .001", .002" Undersize.

Crankshaft Rear Main Bearing Oil Seal Installation: *See "Crankshaft & Main Bearings" in Pontiac Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Pontiac Special Data.*

Vibration Dampener Removal & Installation: *See "Vibration Dampener" in Pontiac Special Data.*

FLYWHEEL REPLACEMENT: *See "Flywheel" in Pontiac Special Data.*

CAMSHAFT

►*FUEL PUMP ARM & ECCENTRIC WEAR CORRECTION & INSTALLATION CAUTION:* If wear is found at the fuel pump arm or eccentric, replace 1½" inside diameter thrust plate with the later type having a 1 9/16" inside diameter. All service replacement thrust plates are 1 9/16" type.

Journal Diameters—1.8992-1.8997". Five bearings. **Clearance**—.0015-.0025".

End Thrust: Steel thrust plate located behind camshaft sprocket. Replace if worn or grooved. **Endplay**—.003-.007".

Timing Chain: Length—60 links. **Timing Chain Installation**—*See "Timing Chain" in Pontiac Special Data.*

Camshaft Setting: Both sprockets marked '0'. Mesh chain with sprockets turned so that marks are adjacent and in line with straight edge across shaft centers.

Engine Front Cover Oil Seal (Crankshaft Front Seal) Installation: *See "Engine Front Cover" in Pontiac Special Data.*

VALVES

►*INTAKE VALVE STEM OIL SPLASH SHIELD PRODUCTION CHANGE:* Beginning with Engine No. 54487, Oil Splash Shield, Part No. 520996 is installed over top of inner intake valve spring. Splash shields may be installed on early 1955 engines.

Tappet Clearance: None in service (hydraulic). *See "Initial Tappet Adjustment" below if cylinder head removed or valve system disturbed.*

Valve	Head Diam.	Stem Diam.	Length
Intake	1.778-1.784"	.3407-.3417"	5.250"
Exhaust	1.497-1.503"	.3407-.3417"	5.230"

Valve	Seat Angle	Lift	①Stem Clearance
Intake	29°	.327"	.0003-.0006"
Exhaust	44°	.327"	.0003-.0006"

①—In small end of taper reamed hole in guide. Correct fit of valve stem in valve guide is when valve will just drop through of its own weight and with no perceptible side play.

Valve Seat Width—3/64-1/16" (Intake), 1/16" (Exhaust).

Valve Stem Oil Seal: Neoprene type installed in second groove of intake valve stems. Later engines have an oil baffle installed over inner valve spring. *See "Intake Valve Stem Oil Splash Shield Production Change" above.*

Initial Tappet Adjustment: If cylinder head removed or valve assembly disturbed, adjust valve tappets as follows: Adjust valves for one cylinder at a time with piston in firing position (both valves completely closed). Loosen rocker arm ball nuts until pushrod is free to rotate, then tighten ball nut just until there is no axial movement (do not depress lifter plunger). **Tighten ball nut one complete turn.** Repeat this procedure for each cylinder.

Checking Valve Stem Length: *See "Valve System" in Pontiac Special Data.*

Valve Springs: Inner and outer valve springs used.

Valve Spring Specifications

Inner Spring Pressure	Inner Spring Length	Outer Spring Pressure	Outer Spring Length
54-60 lbs.	1.153"	98-106"	1.203"
23-29 lbs.	1.483"	55-61"	1.533"

Valve Guides: Pressed into cylinder head. Guides have tapered hole (.0015" taper to inch), with greater clearance at rocker arm end.

Valve Clearance in Guide—Valve should just fall through guide of own weight and with no perceptible side play.

Guide Replacement—Drive old guide out from combustion chamber side using Tool J-2542. Start chamfered end of guide into cylinder head and drive into place using Tool J-2542 until end of guide is 1 1/32" below roof of combustion chamber. Ream guides with taper reamer J-5713-2.

►*CAUTION: Guides furnished with straight hole which must be taper-reamed.*

Valve Lifters: Hydraulic type.

►*HYDRAULIC VALVE LIFTER REPLACEMENT CAUTION:* Lifters are coated with a plastic "wrap" at the factory and in some instances this coating may flow into hole in pushrod seat. Make sure that all traces of "wrap" are removed before installation.

►*VALVE LIFTER BALL CHECK VALVE SPRING PRODUCTION CHANGE;* This spring has been eliminated in early production and is not used on any of the succeeding type lifters.

►*HYDRAULIC VALVE LIFTER PRODUCTION CHANGE:* Three types of lifters have been used in production as follows: **1st Type**—Narrow groove in body (.219" wide), and undercut section at camshaft end. **2nd Type**—Wide groove (.400" wide), and undercut section at camshaft end. **3rd Type**—Wide groove (.400" wide), without undercut section. *All types are interchangeable in all respects.*
Diameter—.8420-.8427". **Length**—2.000".
Clearance (In Lifter Boss)—.0005-.0018".

Hydraulic Valve Lifter Overhaul: *See "Valve System" in Pontiac Special Data.*

Rocker Arms: Mounted individually on studs pressed into cylinder head.

Rocker Arm Stud Replacement—*See "Valve System" in Pontiac Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.
Intake Valves—Open 22° BTDC. Close 67° ALDC.
Exhaust Valves—Open 63° BLDC. Close 27° ATDC.

OILING SYSTEM

Crankcase Capacity: 5 qts. (refill), 6 qts. (when filter changed).

Normal Oil Pressure: 35-45 lbs.
Pressure Regulator—In oil pump body. Not adjustable.

Oil Pump: Gear type, located on right rear bottom of cylinder crankcase and driven by distributor drive gear. Distributor timing is not affected by removal and installation of pump.

►*OIL PUMP NOISE:* "Grinding" noise may be caused by upper end of oil pump drive shaft rubbing in hole in cylinder block. Examine outer diameter of shaft above upset nibs for rubbing and correct by reducing shaft diameter in this area by grinding or turning in a lathe. *CAUTION*—Do not remove nibs on shaft.

Pump Overhaul—*See "Oiling System" in Pontiac Special Data.*

Oil Filter: "Full Flow" type (optional). Replace filter element once every year or every 10,000 miles. *Use only AC Type PF-122 filter element.*

Oil Passage Plug (In Cylinder Head) Replacement: *See "Oiling System" in Pontiac Special Data.*

Crankcase Ventilator Air Filters: Located in oil filler cap and in ventilator outlet pipe. Clean and re-oil every 10,000 miles or oftener if necessary.

►*VENTILATOR OUTLET PIPE CAUTION: If pipe is removed from pushrod cover, make sure that when it is installed, it is not pushed into cover beyond the two locating points on pipe. Excessive oil consumption at high speed will result.*

Oil Pressure Gauge: AC No. 1508195. Not electric. *See "Oil Gauges" in Miscellaneous Section.*

COOLING

►*LOWER RADIATOR HOSE STRIKING FRAME FRONT CROSSMEMBER CORRECTION: Slot radiator mounting holes vertically and raise radiator so there is a minimum clearance of ¼" between hose and crossmember.*

Water Capacity (Without Air Conditioning): 22¾ qts. (without heater), 24½ qts. (with heater).
With Air Conditioning—23 qts. (without heater), 25 qts. (with heater).

Pressure Valve: AC No. 850549, 7 lbs.

Thermostat: Harrison No. 3133595 (151°), 3133596 (160°), 3133597 (170°).

Water Pump: Packless, sealed ball bearing shaft. *See "Pontiac" in Water Pump Section.*

Pump Removal—Drain radiator and engine block. Loosen generator adjusting strap and remove fan belt, fan, and

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

pulley. Remove water pump retaining nuts and lockwashers and remove pump.

Temperature Gauge: AC No. 1512874: Not electric.
See "Temperature Gauges" in Miscellaneous Section.

CLUTCH

Inland. *Single plate, "Diaphragm", dry disc type with* Long driven member.
See "Inland" in Clutch Section.
Clutch Disc No.—Pontiac No. 518130.

Pedal Adjustment: 3/4-1 1/8". Adjust at clutch fork-to-countershaft rod.

Overcenter Spring Adjustment—Remove overcenter spring, spring extension, and pushrod. Loosen lock screw which clamps spring lever to countershaft. Install Gauge J-5819, inserting pins which are closest together into holes in overcenter spring link and lever from which pushrod was removed. Then, while applying rotation to clutch countershaft to hold clutch pedal against stop, rotate overcenter spring lever until third pin in gauge can be inserted into overcenter spring lever. Tighten lockscrew securely, and replace spring, spring extension, and pushrod.

Removal: Remove transmission (see Transmission Removal below), remove clutch bearing support spring washer (in rear face of clutch housing) and remove clutch housing bottom cover and control shaft inner bracket. Remove release bearing support and release bearing. Tap bearing support from inside clutch housing to aid removal (*CAUTION*—Avoid striking tubular portion of support). Mark flywheel and clutch cover (to insure installation in same manner to maintain balance), remove clutch cover bolts evenly, move clutch assembly away from flywheel at bottom and withdraw driven member. Lower clutch assembly out of car.

Clutch Installation Note—Install new felt oil seal against shoulder ahead of oil slinger retainer ring on transmission main drive gear (will bear against flared end of release bearing support when installed). Lubricate seal with engine oil before transmission installed. Coat entire length of outer diameter of release bearing support tube with grease. Lubricate release fork fulcrum points with a very light coat of grease. Apply light coat of Lubriplate on main driving gear splines. Use new paper gasket between support flange and clutch housing, make certain that flange is not bent or distorted (will cause misalignment of transmission).

SYNCHRO-MESH TRANSMISSION

Own. All helical gear type.
See "Pontiac Synchro-Mesh" in Transmission Section.

Transmission Controls: *See "Transmission Controls" in Transmission Section.*

►*TRANSMISSION SELECTOR LEVER INTERFERENCE CORRECTION (Causing inability to shift gears):* If trunnion pin at steering column end strikes exhaust manifold, reverse pin in trunnion so that it points toward center of car.

Removal: 1) Disconnect speedometer cable, gearshift selector rod, control rod and backup lamp switch wires from transmission.

2) Disconnect rear universal joint (use a wire or rubber band to prevent trunnions from slipping off spider). Remove propeller shaft by sliding it to rear off transmission mainshaft splines.

3) To give clearance for removing upper capscrew holding transmission to clutch housing, remove transmission shift lever spring yoke and extension. Remove shift lever screw while holding shift lever in neutral (center position) to avoid damage to shift levers on shaft inside transmission. Remove shift lever.

4) To give clearance for removing lower capscrew holding transmission to clutch housing, remove transmission outer lever. Remove transmission upper capscrews and install two transmission guide pins (pins can be made by cutting the heads off two transmission capscrews and sawing a screw driver slot in the ends). *CAUTION*—Guide pins must be used since they support transmission and prevent distortion of clutch driven plate hub when lower transmission capscrews are removed.

5) Remove lower capscrews and move transmission to rear, bringing rear bearing extension into intersection of frame "X" members until main drive gear is free, then lower to floor. *CAUTION*—Use care to avoid getting dirt into front bearing when pulling transmission away from clutch housing.

Installation Note: Use guide pins installed in two upper transmission mounting holes to assist in sliding transmission straight forward into place (to avoid damage to clutch release bearing tubular support).

HYDRA-MATIC DRIVE

"Dual-Range" four speed automatic transmission and fluid coupling.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Hydra-Matic Drive" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Hydra-Matic Drive" in Transmission Section.*

Lubrication—Check fluid level every 2000 miles, drain and refill at 25,000 mile intervals.

Checking Fluid Level—Run engine 1½ minutes at a speed equivalent to 20 MPH with selector lever in "N". Reduce speed to **slow idle** and move selector lever to "D" position. Measure oil level on dipstick (under hood). Add fluid through dipstick tube until level is at "FULL" mark.

Capacity—Approximately 11 qts. (refill).
Recommended Fluid—Use G.M. Hydra-Matic Fluid or Automatic Transmission Fluid Type A.

►*OTHER HYDRA-MATIC SERVICE DATA: See "Hydra-Matic Drive" in Transmission Section.*

UNIVERSALS

Mechanics or Saginaw. Needle bearing type.

►*CAUTION:* Rear universal joint companion flange nut controls rear axle pinion bearing preload (must be adjusted whenever nut is loosened). *See "Pontiac Hypoid" in Rear Axle Section.*

REAR AXLE

►*REAR SPRING SHACKLE TO FRAME INTERFERENCE CORRECTION:* Make sure spring upper frame bushing is flush with frame bracket toward car centerline. If spring clamp is touching frame, bend as necessary for clearance.

Own. Hypoid gear, semi-floating with Hotchkiss Drive.
See "Pontiac Hypoid" in Rear Axle Section.
Axle Identification—Code mark stamped on pad at forward side of differential carrier between bottom web and right hand horizontal web. Axle shaft also marked with daub of paint on end of shaft to indicate ratio. See Code & Paint Markings in table below.

Axle Ratios & Code Marking

Ratio	Gear Teeth	①Code Mark	②Code Color
3.08-1③④⑤	40:13	0	Yellow
3.23-1③⑥	42:13	9	Brown
3.64-1⑦	40:11	6	Blue
3.90-1⑧	39:10	4	Red

①—See Rear Axle Identification.
②—Paint daub on end of axle shaft.
③—Hydra-Matic Drive
④—Chieftain (27 Series).
⑤—Except Station Wagon.
⑥—Star Chief (28 Series), & Station Wagons.
⑦—Synchro-mesh Transmission (Standard).
⑧—Synchro-mesh Transmission (Optional).

Backlash—.003-.012" (new), .012" (used).

Axle Shaft Removal: Remove wheel, brake drum, four brake backing plate bolt nuts, static collector, and loosen bearing retainer (do not move backing plate or brake line may be damaged). Pull shaft with Puller J-942 (do not drag axle shaft on seal).

Wheel Bearing Adjustment: None.

Differential Carrier Assembly Removal: Disconnect rear universal and wire trunnion in place (do not disengage spline joint at transmission), remove axle shafts and carrier flange capscrews. Withdraw carrier assembly from housing.

►*CAUTION: Rear universal joint companion flange nut controls rear axle pinion bearing preload. Readjust whenever nut loosened.*

SHOCK ABSORBERS

Delco. Direct acting, non-adjustable, sealed (not refillable). Service by replacement.

Model	Front	Rear
Standard	5352225	5513345
Taxi & Police Cars	5352226	5513346

FRONT SUSPENSION

Independent. Shock absorber mounted within front coil spring.
See "Pontiac" in Front Suspension Section.

Kingpin Inclination—4½° at ½° camber.

Caster—Neg. 1° ±½°.

Camber—Pos. ½° ±½°.

Toe-In—0" to 1/16".

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Toe-out on Turns—With inner wheel at 20°, outer wheel should be 18° 30'.

STEERING

Manual: Saginaw Worm & Roller. *See "Saginaw Worm & Roller" in Steering Section.*

Power Steering: Saginaw (GM) Hydraulic. Recirculating ball nut and worm type plus extended pitman shaft with gear sector in mesh with power rack. Power rack pinned to piston rod of hydraulic cylinder. *See "Saginaw (GM) Power Steering" in Steering Section.*

►*POWER STEERING NOISE CORRECTION: See "Saginaw (GM) Power Steering" in Steering Section.*

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Worm & Roller" in Steering Section.*

Steering Gear Removal: *See "Saginaw Worm & Roller" in Steering Section.*

BRAKES

Bendix Hydraulic. Duo-servo, single anchor (without eccentric adjustment). Hand brake applies rear wheel service brakes.

See "Bendix Hydraulic Single Anchor (Without Eccentric)" in Brake Section.

Drum Diameter—12" (front), 11" (rear).
Wheel Cyl. Diameter—1 1/16" (front), 15/16" (rear).

Lining Width—2½" (front wheels), 1¾" (rear wheels). **Thickness**—13/64".

Clearance—Tighten adjusting "star wheel" to point where wheel can just be turned by hand, then back off star wheel 14 notches.

Standard Master Cylinder: Forward of brake pedal on engine side of fire wall.

Checking Fluid Level—Maintain fluid level in master cylinder reservoir to 7/8" from gasket surface of filler neck.

Power Brakes: Bendix or Moraine Power Unit. *See "Moraine Power Unit" or "Bendix Power Unit" in Brake Section.*

Checking Fluid Level—Maintain fluid level in master cylinder reservoir to within ½" of top of filler cap opening.

Removal of Power Unit—Disconnect upper end of vacuum hose attached to inlet at vacuum cylinder, and hydraulic lines at master cylinder. Disconnect pushrod from pedal and wires from stop light switch. Remove nuts from U-bolt retaining pedal pivot bracket to steering column and remove pedal and bracket (with stop light switch assembly attached). Remove clutch pedal and steering column seals at floorboard. On Hydra-Matic cars, remove screws retaining power brake unit to floor pan and remove mounting plate with power unit attached. On Synchro-mesh cars, remove screws retaining power unit to mounting plate (power unit will rest on frame). Remove screws attaching mounting plate to floor pan and remove mounting plate, "jockeying" it as necessary to clear clutch pedal. Remove power unit. *CAUTION*—Do not carry or support brake unit by pushrod as pushrod may be pulled out of cylinder.

MISC. MECHANICAL

Windshield Wipers: Cable operated vacuum type.
See "Windshield Wipers" in Miscellaneous Section.

Air Conditioner: Harrison type with magnetic compressor clutch (compressor operates only with air conditioning switch turned on). *See "Pontiac Air Conditioning" in Miscellaneous Section.*

►*AIR CONDITIONING COMPRESSOR DRIVE BELT MISALIGNMENT CORRECTION: See "Pontiac Air Conditioning" in Miscellaneous Section.*

Power Top Control: Hydro-Lectric with reversible pump motor,
See "Power Top Controls" in Miscellaneous Section.

Power Window Regulators: Electric. Reversible motor in each window. Available on front and rear door windows. *See "Power Window Regulators" in Miscellaneous Section.*

Form 288—1954-M

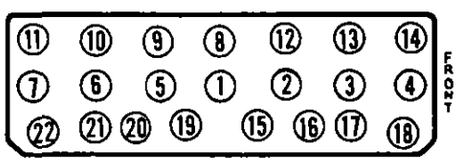
TIGHTENING SPECIFICATIONS

1950-54 MODELS

	Ft. Lbs.
Cylinder Head Nuts	57-60
Con. Rod Cap Nuts	27-30
Main Bearing Capscrews	65-70
Spark Plugs	30 max.

1955 MODELS

	Ft. Lbs.
Cylinder Head Stud Nuts	50-60
Con. Rod Cap Nuts	27-30
Main Bearing Cap Screws	66-70
Piston Pin Clamp Screw	18-22
Flywheel Retaining Cap Screw	100-110
Camshaft Sprocket Screw	50-55
Vibration Dampener Retaining Screw	65-70



ENGINE

ENGINE REMOVAL: Engine is removed from below car. Place car on lift or place two high jacks under body sills just behind the rear engine support crossmember. Remove hood top and radiator core. Disconnect fuel line at fuel pump, and remove fuel line to carburetor. Disconnect wires at generator and oil and heat indicator engine units. Disconnect throttle linkage. Remove exhaust manifold and fasten out of the way against the side panel. Disconnect steering cross tie rod, shift rods at transmission, clutch linkage to clutch beam, speedometer cable (and Overdrive wiring if used). Place lifting fixture to head studs and lift engine just enough to support it. Remove four bolts holding front crossmember to side sills. Remove rear engine diagonal mounting braces and the four bolts holding the rear engine support crossmember to body sills. Engine will now be supported by the lifting device. Lower the engine slightly and move forward enough to slide the front universal off the transmission. Engine can now be lowered and removed from beneath the car.

CYLINDER HEAD & MANIFOLD

CYLINDER HEAD INSTALLATION: Use torque indicating wrench to tighten cylinder head stud nuts in sequence shown in cylinder head diagram. Torque specifications are for engine at operating temperature.

Cast Iron Heads—Tighten heads COLD, then recheck after engine has been run and thoroughly warmed up. **Aluminum Heads**—Tighten heads at room temperature, recheck again after period of operation, with engine at room temperature.

RAMBLER CYLINDER HEAD

Cylinder Head Gasket—Always use new gasket. Coat gasket with very light application of Perfect Seal Gasket Paste to insure tight seal between cylinder head and block.

ORIGINAL BORE & PISTONS

ORIGINAL BORE & CRANKSHAFT LETTER CODE: A three letter code stamped adjacent to engine number indicates as follows:

Letter Sequence Code

First letter	Size of Bore
Second letter	Size of Main Bearings
Third letter	Size of Con. Rod Bearings

Letter Size Code

Letter "A"	Standard
Letter "B"	.010" Undersize
Letter "C"	.010" Oversize
Letter "D"	.001" Undersize

ENGINES NOT MARKED ARE STANDARD.

ORIGINAL BEARING SIZES

ORIGINAL BORE & CRANKSHAFT LETTER CODE: A three letter code stamped adjacent to engine number indicates as follows:

Letter Sequence Code

First letter	Size of Bore
Second letter	Size of Main Bearings
Third letter	Size of Con. Rod Bearings

Letter Size Code

Letter "A"	Standard
Letter "B"	.010" Undersize
Letter "C"	.010" Oversize
Letter "D"	.001" Undersize

ENGINES NOT MARKED ARE STANDARD.

CONNECTING ROD & BEARINGS

CONNECTING ROD: Bearing Removal & Installation. Removable bearing shells used. To remove bearings, take off bearing caps, remove bearings from rod and cap. Fit bearings as directed below. When installing bearings, oil hole in upper half should register with oil spit hole in rod. Tongue on each bearing should engage groove in rod and cap.

Fitting Bearings—Use Plastigage across width of bearing cap. Tighten cap nuts to specified torque.

CRANKSHAFT & MAIN BEARINGS

MAIN BEARING REMOVAL & INSTALLING: Upper bearing halve may be 'rotated' out by inserting pin in oil hole in crankshaft and turning shaft in the direction of locating tongue on bearing. Bearings can be installed by reversing removal procedure.

Fitting Bearings—Use Plastigage across full length of bearing insert and tighten cap to 66-70 ft. lbs.

CRANKSHAFT END THRUST PLATE: Crankshaft end thrust taken by flanged edges of front bearing. A steel thrust plate is assembled between rear face of timing chain sprocket and flanged face of front bearing. Plate keyed to shaft by Woodruff key which also secures sprocket on shaft. When plate installed, chamfered edge on inner diameter should face toward the rear for tight fit against bearing journal.

Adjustment—If endplay not correct with all parts correctly assembled, replace front main bearings or thrust plate.

REAR OIL SEAL: Install new oil seal with rear main bearing cap off (crankshaft out of engine when replacing upper half). Packing in groove in block and cap behind oil slinger on crankshaft. Cap sealed with rubber plugs in groove on each side where cap fitted in the recess in the block. Use Tool J-1610 to install packing in groove in block and cap. Place packing in groove (with bearing shell removed), place small diameter of tool over packing, hit end of tool with lead hammer to seat packing, cut ends of packing flush with bearing cap seat, remove tool. Repeat operation for groove in block. Install rubber seal plugs on each side of bearing cap (where angle seal used, make certain that seal also seated in horizontal groove in block).

VIBRATION DAMPENER

REMOVAL & INSTALLATION: Non-adjustable, rubber cushioned type. To install hub assembly: Lock hub on shaft with woodruff key, install large lockwasher with notches on inner edge, cork seal ring, rubber seal ring and hub retainer in recess in hub. Install hex head lock screw with helical lockwasher under it in screw hole in end of crankshaft and tighten screw to 65-70 ft. lbs. torque. Rubber block retaining bolt nuts on front face of dampener hub must be drawn up tight.

►*CAUTION:* When installing vibration dampener on hub, timing marks must be aligned with the hub keyway and on same side.

ENGINE FRONT COVER

CRANKSHAFT FRONT OIL SEAL: A felt seal is fitted in the timing chain cover which bears against vibration dampener hub. Seal seat in hub has inner edge turned up to form a shedder on inside of cover. An oil slinger is assembled behind vibration dampener hub which extends over outer edge of oil shedder. Use Tool J-1430 installed on end of crankshaft when tightening timing chain cover screws to align seal properly. *NOTE*—A cork seal and rubber seal ring is assembled

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

behind vibration dampener to seal front end of crankshaft. *See VIBRATION DAMPENER above.*

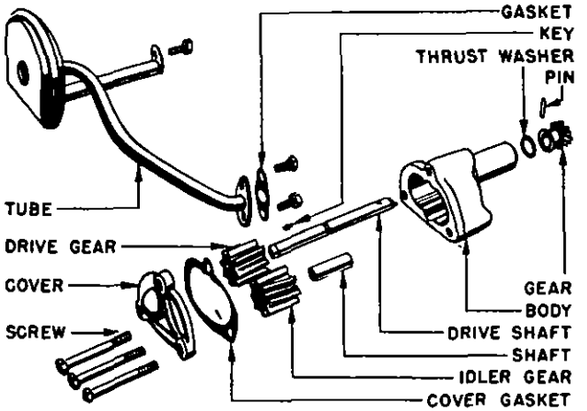
FLYWHEEL

►*FLYWHEEL REPLACEMENT CAUTION (Std. & Overdrive Trans. Cars):* Flywheel on which starter ring gear is installed is balanced as an assembly with crankshaft and vibration dampener. When flywheel is replaced, it is important that balance holes be duplicated as to size, depth, and angular location. After replacing flywheel, tighten crankshaft to flywheel stud nuts with a torque wrench.

CAMSHAFT & BEARINGS

REMOVAL: *Engine must be removed from chassis.* Remove fan assembly and cylinder head. Remove valve tappet covers and vibration dampener. Remove valves and valve springs, retain tappets with wire. Remove timing chain cover and oil slinger. Position engine with timing marks adjacent and in line across camshaft and crankshaft centers. Remove camshaft sprocket retaining screw and remove timing chain and sprockets. Sprockets can be pried off shafts.

End Play—Check endplay with dial indicator or feeler gauge placed between the rear of the camshaft sprocket and front face of camshaft thrust plate.



OIL PAN REMOVAL

OIL PAN REMOVAL: Remove steering linkage cross tie rod and front suspension pivot bar brace to permit removal of engine oil pan.

OIL PUMP

REMOVAL: Note position of pump drive gear keyway before removing oil pump and install in same position to retain distributor timing. Engine is properly timed when No. 1 cylinder is at TDC in firing position and the oil pump drive gear keyway is approximately at three-thirty o'clock position when viewed from lower section of pump body.

OVERHAUL: Remove capscrews, cover and gasket, then drive gear (in pump) and idler gear and their shafts. Remove key from keyway on drive shaft. Remove drive shaft and drive gear (camshaft end) assembly from pump body. (NOTE—Drive gear (camshaft end) is held on drive shaft by a pin). Remove thrust washer from drive shaft. To assemble, reverse disassembly procedures.

RAMBLER OIL PUMP

RAPPING CORRECTION

►*"RAPPING" NOISE CORRECTION (EARLY 1951 CARS):* In some cases, insufficient clearance may exist between the transmission at the drain plug boss and the rear engine support crossmember. This may result in a metallic rapping noise when driving over rough roads and may be diagnosed as a front suspension noise. Correct by lowering front crossmember, thereby raising rear end of transmission and providing sufficient clearance.

NOTE—Slotted holes in front crossmember will permit lowering the member.

SUSPENSION NOTES

►*1954 DRIVE LINE OR ROAD NOISE CORRECTION:* When this noise cannot be traced directly to the rear axle assembly it is advisable to install New Tension Shackle Package, Rambler No. 3117468, in conjunction with rear springs No. 3141137. This package consists of rear spring hanger (rear) right and left, rear spring rear shackle, rear spring front eye bushing, rear spring rear hanger bracket with attaching screws, nut and lockwashers.

Installation—Attach new bracket on frame side rail using rear bumper back bar front bolt for proper location. Drill 21/64" holes through bracket reinforcement at the first and third holes from front on underside as guides. Tap holes for 3/8"-24 thread and install screws to secure bracket to sill. Arc weld bracket to sill at both ends and sides, attach hanger to bracket.

MODEL IDENTIFICATI N

SERIAL NUMBER: On plate located on front wheelhouse panel at right side under hood.
1950 Numbers—D-1001 Up.
1951 Numbers—D-12501 Up.

ENGINE NUMBER: Stamped on right side of engine block above exhaust pipe.
1950 Numbers—F-1001 Up.
1951 Numbers—F-13001 Up.

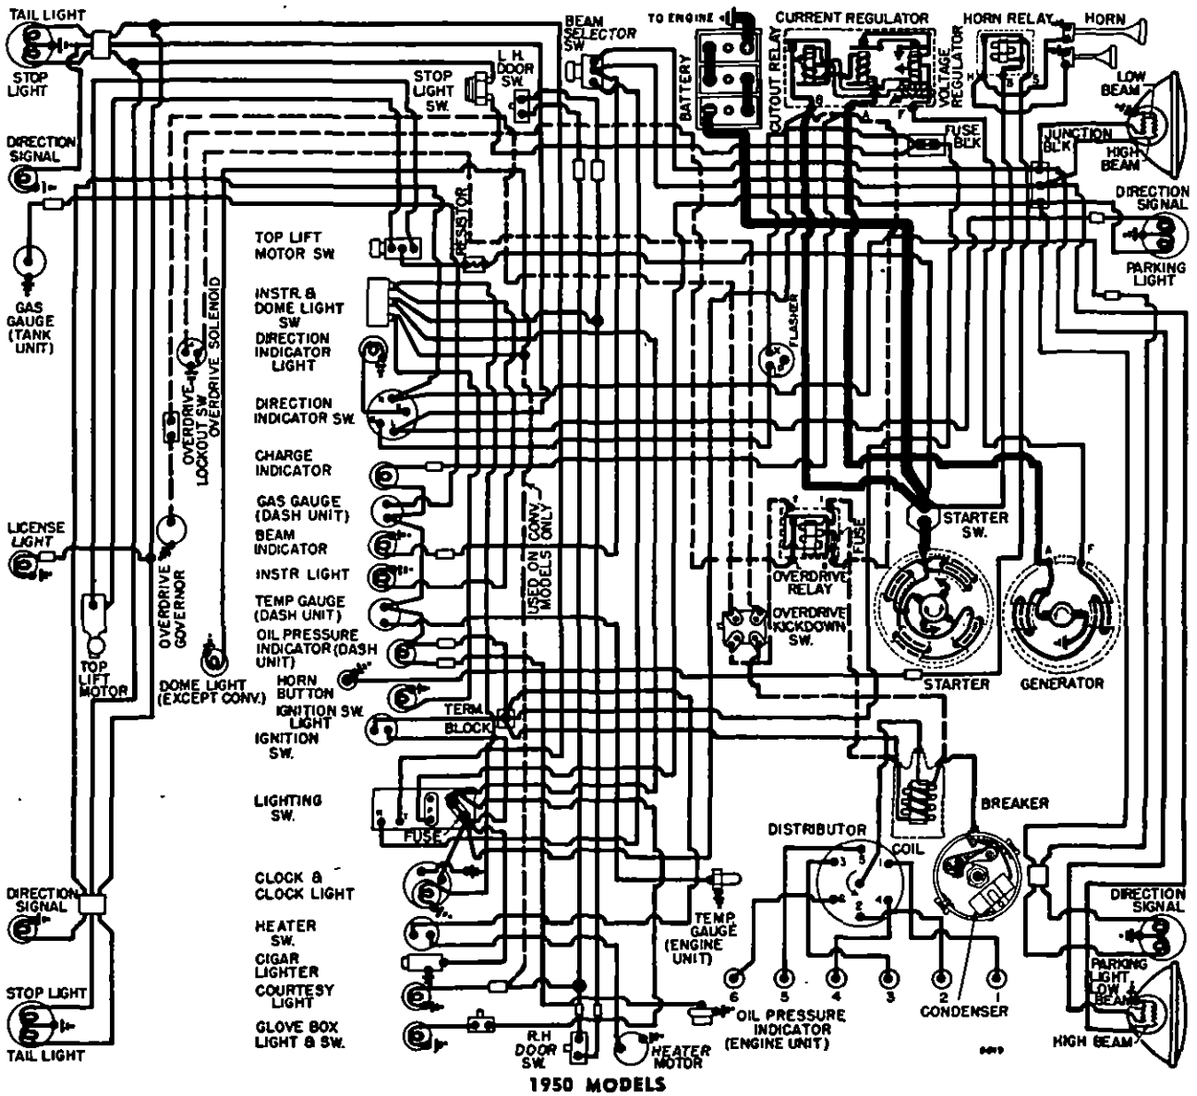
TUNE-UP

COMPRESSION PRESSURE: 120 lbs. at cranking speed.
VACUUM READING: Steady 18-21", 450-500 RPM idle.
FIRING ORDER: 1-5-3-6-2-4. See diagram.
SPARK PLUG GAPS: .030".
Plugs—Auto-Lite A-7. 14 mm. Metric.
DISTRIBUTOR: Breaker Gap—.018-.024".
Cam Angle—35°. Test limit with .022" gap 31-37°.
Breaker Arm Spring Tension—17-21 ozs.
Automatic & Vacuum Advance—*See Ignition.*
Condenser Capacity—.18-.23 microfarad.
IGNITION TIMING: TDC. (At top dead center).
Timing Mark—"/" mark on dampener aligned with pointer on chain cover above dampener.
Timing Procedure—*See Ignition Timing.*
CARBURETION: (Early 1950) Carter 694S.
Idle Setting—Idle screw ¾-1¾ turns open. One screw—turning screw out gives richer mixture.
Idle Speed—450-500 RPM.
Float Level—½" from top of projection on underside of bowl cover to top of seam on free end of float (invert bowl cover and float to check level).
Accelerating Pump—Medium stroke (lower, outer hole) Normal, Inner (min.), Upper (max. stroke).
Choke Setting: 2 points rich.
Fuel Pump Pressure: 3-4½ lbs. (6 lbs. maximum).
CARBURETION: (Late 1950 & Early 1951) Carter 757S, SA, SB. (Late 1951) Carter No. 876S & SA.
►*CARBURETOR RECOMMENDED CHANGE FOR SMOOTHER ENGINE PERFORMANCE—See Carburetor Section for complete data.*
Idle Setting—(757S, SA, SB) 1 to 2 turns open. (876S, SA) ½ to 1½ turns open. For richer mixture, turn screw out.
Idle Speed—450-500 RPM.
Float Level—(757S, SA SB) ½", (876S) 5/16", (876SA) ½". Measure from underside of bowl cover to top of float with bowl cover inverted and weight of float on needle valve.
►*FLOAT NEEDLE & SEAT ASSEMBLY CHANGE—Solid type needle valve (876SA), Spring type needle valve (876S).*
Accelerating Pump—No seasonal adjustment provided and no pump stroke setting required.
Choke Setting—(757S, SA, SB) Center on index. (876S, SB) Set 1 point lean.
Fuel Pump Pressure—3-4½ lbs. (5 lbs. maximum).
VALVE TAPPET CLEARANCE: .015" Hot, all valves.
Cold Setting—Intake .016". Exhaust .018".
NOTE—Tappet adjusting screws self-locking type.

IGNITION

IGNITION SWITCH: Nash No. 3123588.
COIL: Delco-Remy No. (1950) 1115328, (1951) 1115380.
CONDENSER: Delco-Remy Part No. 1869704.
Capacity—.18-.23 microfarad.

DISTRIBUTOR: Delco-Remy No. 1112351. Full automatic advance type with separate vacuum spark control and octane selector adjustment.
Breaker Gap—.018-.024".
Cam Angle—35°. Test limits with .022" gap 31-37°.
Breaker Arm Spring Tension—17-21 ozs.
Rotation—Counter-clockwise viewed from above.



Automatic Advance

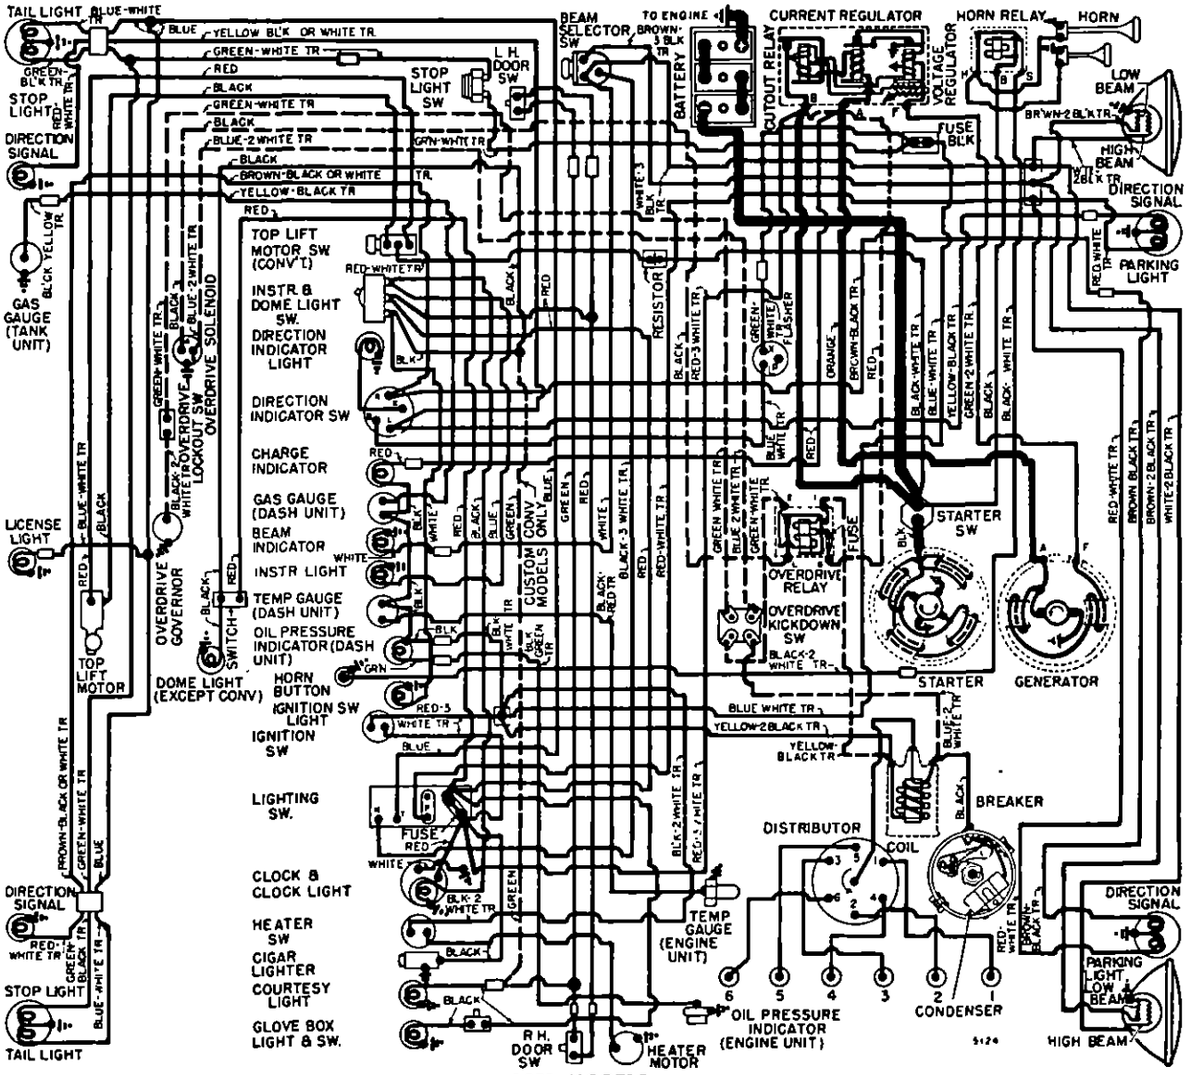
Degrees Distr.	R.P.M.	Degrees Eng.	R.P.M.
Start	300	2	600
5½	400	11	800
11	1400	22	2800

Vacuum Spark Control: Delco-Remy No. 1116045. Separate unit mounted on hold-down plate and linked to advance arm.
Plunger Travel—23/64".

	Vacuum Advance	
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	3.5"
7½°	15°	14-16"

Distributor Removal: (Early 1950 Cars). Disconnect vacuum line, take out hold-down screw. Remove distributor cap and rotate shaft until flat side of shaft is toward bottom. Tilt engine toward right by prying with a bar sufficiently to withdraw distributor.
►*DISTRIBUTOR PRODUCTION CHANGE NOTE*—Late 1950 & 1951 engines have been changed to give the distributor more clearance, and it is not necessary to tilt the engine.

1950 MODELS



IGNITION TIMING

Std. Setting.....**At TDC.**
NOTE—Use of Neon Timing Light recommended.
Timing (Using Neon Timing Light)—Align ⅛" holes in clamp arm and distributor support and insert pin. Loosen distributor hold-down screw and center octane selector scale, tighten screw. Clip Neon Timing Light to #1 spark plug, direct light at vibration dampener at timing chain cover pointer. Idle engine at 450-500 RPM., loosen clamp arm bolt, rotate distributor until "/" mark on dampener aligned with pointer, tighten clamp bolt, remove ⅛" pin in support. Check Octane Selector Setting.
Octane Selector Setting—Loosen hold-down screw in distributor, adjust at scale for slight ping accelerating 10-15 MPH. with wide open throttle.

CARBURETOR

EARLY 1950 CARTER WA-1

Carter 694S. (Early 1950) 1¼" Single Barrel downdraft with Climatic Control.
See Carburetor Section for complete data.
Settings (Idle Setting, Float Level, and Accelerating Pump Setting): ***See Tune-Up data.***
Metering Rods & Jets—***See Carter Jet Table in the Carburetor Section.***
Fast Idle: Carter Single Barrel Carburetor type.
Setting—⅝" clearance between choke valve and air horn (Gauge T109-85) with throttle valve closed and stopscrew against (not on) first step of fast idle cam (bend connector link at lower offset).
See Carburetion Equipment Section for complete data.

1951 MODELS

Automatic Choke: Carter Climatic Control (Single Barrel Carburetor).
Setting—2 points rich.
See Carburetion Equipment Section for complete data.

1950-51 CARTER YF

Carter 757S, SA, SB (Late 1950 & Early 1951). Carter 876S, SA (Late 1951). 1¼" Single barrel downdraft with Climatic Control.
See Carburetor Section for complete data.
Settings (Idle Setting, Float Level, and Accelerating Pump): ***See Tune-Up data.***
►***CARBURETOR RECOMMENDED CHANGE FOR SMOOTHER ENGINE PERFORMANCE—See Carburetor Section for complete data.***
Metering Rods & Jets—***See Carter Jet Table in the Carburetor Section for complete data.***
Fast Idle: .054" between throttle valve and bore of carburetor (side opposite port). Remove thermostatic coil housing and baffle plate. Crack throttle valve and hold choke valve fully closed, then close throttle. Fast idle cam will revolve to fast idle position. With choke valve held tightly closed, and slight tension on throttle lever, check throttle opening. Adjust by bending connector link at lower bend.
See Carburetion Equipment Section for complete data.
Automatic Choke: Carter Climatic Control (Single Barrel Carburetor).
Setting—**(757S, SA, SB)** Centered on index. **(876S, SA)** Set 1 point lean.
See Carburetion Equipment Section for complete data.

CARB. EQUIPMENT

Air Cleaner: Oil-wetted (Std.), oil-bath (Optl.).
Fuel Pump: Carter No. M-774-S. Diaphragm type, Std.
Opt'l (with Overdrive) No. M-797-S.
Pressure—4-5¼ lbs. at 1800 RPM.
See Carburetion Equipment Section for complete data.
Gasoline Gauge: King-Seeley Electric type.
Dash Unit—KS-42951 (1950 Custom, & 1951 Std.). KS-42751 (1950 Std.).
Tank Unit—**KS No. 42760.**
See Carburetion Equipment Section for complete data.

BATTERY

Auto-Lite Type IH-90D—6 volt, 13 plate, 90 Ampere Hour capacity (20 hour rate).
Starting Capacity—114 amperes for 20 minutes.
Grounded Terminal—Positive (+) grounded to wheelhouse (engine grounded at same point).
Location—Left side in engine compt. under hood.

STARTER

Delco-Remy No. (1950) 1109459, (1951) 1109463.
Armature—Delco-Remy No. 1915056 (for 1109459), 1917887 (for 1109463).
Drive—Delco-Remy No. 1915041 (for 1109459), 1917888 (for 1109463).
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—24-28 ounces.

Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs	6000	5.7	60
11.5 "	Lock	3.3	540

Starting Switch: Delco-Remy No. 1996476. Mounted on toeboard, actuated by fully depressing clutch pedal.
Removal: Flange mounted on left front face of flywheel housing. To remove, work from above under

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

hood, disconnect shift rods at shift levers, disconnect starter cable, take out mounting screws.

GENERATOR

Delco-Remy No. (Std.) 1102730, (Optional) 1102748. Two brush with voltage and current regulation.
Armature—Delco-Remy No. 1913597 (for 1102730), **1917175** (for 1102748).
Car Speed for maximum charging rate—19 MPH up.
Charging Rate Adjustment—See Regulator.

Performance Data—1102730

	Amperes	Volts	R.P.M.
Cold	30①	8.0	1750

Performance Data—1102748

	Amperes	Volts	R.P.M.
Cold	40	8.0	1950

①—Not maximum output. See Current Regulator.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—28 ozs.
Field Current—1.75-1.9 amperes (for 1102730), **1.90-2.05 amperes** (for 1102748). All at 6.0 volts.
Belt Adjustment: Adjust belt so that 25 lbs. pressure midway between fan and generator shaft pulley will deflect belt ½". To adjust, loosen fan mounting bracket screws, raise fan, tighten screws. Belt misalignment corrected by shims back of fan bracket.

REGULATOR

Delco-Remy No. 1118302 (for 1102730), **No. 1118382** (for 1102748). Voltage and current regulator.
►"*1118300 SERIES*" regulators have screw adjustment for settings and single regulator springs.
See Electrical Equipment Section for complete data.
CAUTION—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

Cutout Relay

Cuts In—5.9-6.8 volts hot (set to 6.4 volts hot).
Contact Gap—.020" (same for both sets).
Air Gap—.020" (with contacts just closed).

Voltage Regulator

Setting—7.0-7.7 volts hot (set to 7.4 volts hot). Regulator is over-compensated for temperature. Should be checked with cover in place and hot.
Air Gap—.075" with armature pressed down to point where contacts are just touching.
Checking & Adjustment—*See Electrical Equipment Section.*

Current Regulator

Setting—(1118302) 32-40 amperes hot (set to 36 hot).
Setting—(1118382) 40-46 amperes hot (set to 42 hot).
Air Gap—.075" with armature pressed down to point where contacts are just touching.
Checking & Adjustment—*See Electrical Equipment Section.*

LIGHTING

Headlamps: Hall "Sealed Beam." Upper and lower beams controlled by selector switch on toeboard.
See Electrical Equipment Section for complete data.
Beam Indicator—Red jewel located in speedometer.

Switches

Lighting—Nash No. 3130348.
Beam Selector—Nash No. 3130120.
Instrument Light—Part of Lighting Switch.

MISC. ELECTRICAL

GENERATOR CHARGE INDICATOR: Indicator light in instrument cluster. Lights when ignition turned on, should go out when generator begins to charge.
LOW OIL PRESSURE INDICATOR: See "Oil Pressure Gauge" under LUBRICATION.
FUSES: Lighting—30 ampere on lighting switch.
Stop & Directional Signal—30 ampere located on left front wheelhouse panel.
Overdrive: 30 ampere on overdrive relay.
HORNS: E. A. Laboratories. Vibrator type twin horns.
Horn Current—12 amperes per horn.
Contact Gap—.031" ± .010".
Horn Relay: E.A. Laboratories. On horn bracket.

ENGINE

ENGINE SPECIFICATIONS: 6 cylinder, "L" head type. Cylinder cast Enbloc with intake manifold cast in block (Iso-thermal fuel intake system).
Bore—3⅛". Stroke—3¾".
Displacement—172.6 cubic ins.
Rated Horsepower—23.44.
Developed Horsepower—82 at 3800 RPM.
Compression Ratio—7.25-1 std. cast-iron head.
Compression & Vacuum Reading—*See Tune-Up.*
CYLINDER HEAD & TIGHTENING TORQUES: *See Rambler Special Data.*
ENGINE REMOVAL: *See Rambler Special Data.*
OIL PAN REMOVAL: *See Rambler Special Data.*
PISTONS: Aluminum alloy, Cam Ground, Tin plated, strut type with solid skirt. **Length—3⅜".**
Removal—Pistons and rods removed from above.
Clearance—.001-.002". See Fitting New Pistons.
NOTE—Cylinder out-of-round & taper limits .004".
Original Piston & Bore Sizes: *See Rambler Special Data.*
Fitting New Pistons: With all parts clean and dry, fit pistons so that piston will support its own weight in any portion of cylinder. If feeler gauge used, insert .002" x ½" feeler at right angles to pin bosses, pull to withdraw feeler must be 12-18 lbs.
Replacement Pistons: Furnished Std., and .002", .005", .010", .020" and Semi-finished.
Piston Installation: Pin hole in piston offset 1/16" from center-line. Install piston with heavy side away from camshaft (pin offset toward camshaft).
PISTON RINGS: 2 compression, 1 slotted oil and 1 Thompson U-Flex oil ring, (U-Flex ring in #4 groove), per piston. All rings above pin. Oil groove drilled with oil drain holes.

Ring	Width	End Gap	Side Clearance
Compression	3/32"①	.010-.015"	.002-.004"
Oil Control	5/32"②	.010-.015"③	.002-.004"

①—.0930" ± .0005". ②—.15475" ± .00025".
③—No end gap on Thompson U-Flex ring.
Installing Rings—Stepped inner edge of both compression rings must be UP.
PISTON PIN: Diameter—.8593-.8595". **Length—2¾".** Floating type with lock ring at each end.
Pin Fit in Piston—Thumb press fit or .0003" max. loose fit at room temperature (70°F.).
Pin Fit in Rod Bushing—Light thumb push fit at room temperature.
CONNECTING ROD: Length 6⅝". Weight—25 ozs.
Crankpin Journal Diameter—2 3/32" (2.094-2.095").
See "Original Bearing Sizes" in Rambler Special Data.
Lower Bearing—Removable steel-backed, babbitt lined type. No shims.
Clearance—.001-.002". **Sideplay**—.006-.014".
Bearing Adjustment: None. Replace bearings. *See "Connecting Rods & Bearings" in Rambler Special Data.*
Installing Rods: Oil squirt hole in lower end of rod toward right (camshaft side) of engine.
CRANKSHAFT: Four bearing, counter-weighted type with vibration dampener mounted on front end.
Vibration Dampener—*See Rambler Special Data.*
Journal Diameters—2 31/64" (2.479"). *See "Original Bearing Sizes" in Rambler Special Data.*
Bearings—Removable, steel-backed, micro-babbitt.
Clearance—.0007-.002".
Bearing Adjustment: None (no shims). Replace bearings. *See "Crankshaft & Main Bearings" in Rambler Special Data.*
Crankshaft Oil Seal: *See "Crankshaft & Main Bearings" in Rambler Special Data.*
End Thrust: Taken by front (#1) bearing (thrust plate on shaft ahead of flanged bearing).
Endplay Adjustment—*See "Crankshaft & Main Bearings" in Rambler Special Data.*
Endplay—.006-.008".
►*FLYWHEEL REPLACEMENT CAUTION (Std. & Overdrive Cars)*—*See "Flywheel" in Rambler Special Data.*
CAMSHAFT: 4 bearing. Non-adjustable chain drive.
Camshaft Removal—*See Rambler Special Data.*
Bearings—Steel-backed, babbitted bushings.
Clearance—.002".
End Thrust: Thrust plate assembled on front face of engine between #1 bearing and camshaft sprocket. Endplay controlled by position of timing chain sprocket (press fit on shaft). **Endplay** .004-.006".
CAUTION—Thrust plate has long oil groove on rear face which provides valve tappet lubrication from #1 camshaft bearing. Short groove on front face of plate lubricates timing chain and sprockets.
Timing Chain: Morse. Non-adjustable type. Width 1". Pitch ⅜". Length 22½" or 60 links.
Camshaft Setting: Install chain with punch mark on camshaft sprocket and inverted "V" mark on crankshaft sprocket adjacent and in line with straight-edge across shaft centers. To check, turn engine until camshaft sprocket mark at "1 o'clock" and crankshaft sprocket mark just meshing with chain, there should be 9½ links or 19 pins between marks.

VALVES	Head Diam.	Stem Diam.	Length
Intake	1 15/32"	.3407-.3412"	4 25/32"
Exhaust	1 9/32"	.3407-.3412"	4 25/32"

	Seat Angle	Lift	Stem Clearance
All Valves	①	.300"	.002-.003"

①—Valve face angle 44°. Valve angle in block 45°.
Valve Guides: Pressed in block. Remove guides using Tool J-2814. Install guides using Tool J-1429-A with adapter J-1429-4.
Valve Springs: Install springs with closed-coil end up against cylinder block and seated in counterbore in block. Spring free length 2 3/32".
►*CAUTION—Excessive wear of valve stem and guides will result if springs not properly seated in counterbore.*

	Spring Pressure	Length
Valve Closed	37-41 lbs.	1 3/4"
Valve Open	80-86 lbs.	1 7/16"

Valve Lifters: Mushroom type operating in reamed holes in block. Lifters removed from below with camshaft out of engine.

VALVE TIMING

Tappet Clearance: .015" Hot, running clearance.
Cold Setting—Intake .016". Exhaust .018".
Valve Timing: See Camshaft Setting above.
Intake Valves—Open 6° BTDC. Close 50° ALDC.
Exhaust Valves—Open 46° BLDC. Close 10° ATDC.
Valve Timing Check—With tappet clearance set at .019", #1 exhaust valve should close with piston 10°

after top dead center and "DC" mark on vibration dampener 5/8" past pointer on timing chain cover. Reset tappet clearance at .015" Hot.

LUBRICATION

Engine Oiling System: Pressure to main, connecting rod, and camshaft bearings, valve tappets, and timing chain.
Crankcase Capacity—5 quarts.
Normal Oil Pressure—50 lbs. at 35 MPH.
Oil Pressure Regulator—Spring-loaded release valve under plug to rear of oil pump on lower edge of crankcase. Non-adjustable. Opens at 50-58 lbs.
Oil Pump: Gear type. Mounted externally on right side of crankcase.
Oil Filter: Optional. Replace cartridge every 8000 miles, or oftener if necessary.
Oil Pressure Gauge: King-Seeley Electric type.
Dash Unit—Warning indicator light used. Light goes on when ignition switch is turned on, and goes out when oil pressure exceeds 13 pounds.
Engine Unit—King-Seeley No. 47100.
See Miscellaneous Section for complete data.

COOLING

Cooling System: Pressure type with pressure valve and vacuum valve (relief valves) in filler cap, and positive circulation with water pump.
Capacity—12 quarts (13 quarts with heater).
Pressure Valve—AC #850501 Cap. Opens 4½ lbs.
▷*PRESSURE VALVE CHANGE NOTE*—Effective at car serial No. D-41833, a 7 lb. pressure radiator cap entered production.
Water Pump: New sealed-in, non-adjustable seal assembly. Grease fitting for bushing lubrication. Centrifugal pump driven from generator shaft.
See Water Pump Section for complete data.
Belt Adjustment—*See Generator Belt Adjustment.*
Removal—Drain cooling system, disconnect pump drive coupling (remove rear bolt), disconnect inlet hose, remove two pump mounting capscrews.
Thermostat: Dole. In cylinder head water outlet.
Setting—Starts to open 162-168°F. and should be fully open 20° above opening point.
Temperature Gauge: King-Seeley Electric type.
Dash Unit—KS No. 42735 (Std. Red dial).
No. 42953 (Custom Alum. dial).
Engine Unit—KS No. 42550.
See Miscellaneous Section for complete data.

CLUTCH

Borg & Beck Model 8A7—Single plate, dry disc type.
See Clutch Section for complete data.
Facings—Woven (flywheel side). Molded (pressure plate side). I.D. 5⅜". O.D. 8". Thickness ⅛".
Adjustment: Pedal free travel ½-¾". Adjust by loosening locknut and turning adjusting nut on connector link at clutch fork.
▷*CAUTION—Do not disturb adjustment of clutch beam lever-to-pedal rod.*
Removal: Remove transmission (see below), disconnect clutch pedal linkage, remove clutch housing and pan, punchmark flywheel, clutch cover and pressure plate (reassemble to same marks), take out clutch fork and mounting screws in cover flange.

TRANSMISSION

Warner AS35-T96 (Std.), AS36-T96 (Optl.—with Overdrive). Constant-mesh, synchro-mesh, all helical gear type.
See Transmission Section for complete data.
Transmission Control: Mech. steering column shift.
See Transmission Section for complete data.
Removal: Move rear axle back (see Universals for procedure) to slip front universal joint off transmission. Disconnect shift levers and speedometer cable, remove two upper transmission to bell housing bolts, and install special guide bolts in their place. Remove lower bolts, slide transmission out.

OVERDRIVE

Warner R10 Type (part of AS36-T96 Transmission). New centered ring gear type. Governor controlled with electrical solenoid operation and throttle operated kick-down switch.
See Transmission Section for complete data.
Overdrive Fuse—30 ampere on overdrive relay.
Removal: Remove as a unit with transmission after disconnecting control cable and all wiring on overdrive case. See Transmission Removal (above).

UNIVERSALS

Mechanics or Saginaw. Needle bearing, cross type. Front joint slips on transmission mainshaft.

Lubrication—Pre-packed. Service every 15000 miles.
Propeller Shaft: Open drive line with front and rear universal joints.
▷*FRONT UNIVERSAL JOINT SPLINED FLANGE CAUTION*—Two types used in production. SHORT TYPE (3 13/16" from centerline of universal joint bore to end of flange) for cars **WITH OVERDRIVE.** LONG TYPE (4 7/32" from centerline of universal joint to end of flange) for cars **WITHOUT OVERDRIVE.**
Removal—Support rear of car at body side sills and rear axle at the housing. Loosen propeller shaft coupling nut by turning nut clockwise (facing rear of car) with Tool J-4486 (Shaft holding and Coupling wrenches). Disconnect rear shocks at axle tube, parking brake cable at adjusting yoke, and disconnect rear brake hose clip from body floor pan. Remove rear spring front bracket mounting nuts and lower the rear axle (continue to support body). Push rear axle assembly to rear; sliding propeller shaft yoke off transmission main shaft splines. Remove propeller shaft from pinion shaft by tapping with a soft hammer.
Installation—Install propeller shaft (coupling) onto pinion shaft until center of "U" joint is 4 3/16" from front face of rear axle housing. Push axle assembly to rear and slide front "U" joint onto transmission main shaft. Move the propeller shaft forward until front universal joint "bottoms" on the transmission main shaft; MARK THE YOKE AT THE TRANSMISSION REAR OIL SEAL; THEN ADJUST THE PROPELLER SHAFT SO THE MARK IS 5/32" TO THE REAR OF THE OIL SEAL. Loosen rear spring front eye bolt and tilt front bracket so rear holes are aligned with bolts in floor pan. Raise axle assembly, aligning rear spring front bracket with mounting bolts and secure the mounting nuts. TIGHTEN THE COUPLING NUT TO 300 FOOT POUNDS TORQUE with the use of tool J-4486 and 3' extensions applied to wrench handles. Reinstall brake clip. Connect rear shock absorbers.

REAR AXLE

Own Make. Semi-floating, hypoid gear type with Hotchkiss Drive.
See Rear Axle Section for complete data.
Ratio—**(Std.)** 3.8-1 (9-34), **(Overdrive)** 4.4-1 (8-35), **(Optional ratio with overdrive)** 4.1-1 (9-37). (Sta. Wgn.) 4.4-1 (8-35).
Backlash—.004-.006". Shim adjustment.
Removal: Raise and support rear end of body. Remove rear wheels, axle shaft nuts, and rear hub and drums. Disconnect parking brake cables at rear wheels, brake hose and shock absorbers. Remove rear spring clips and rear spring front eye brackets. Move axle to rear which will pull the front universal off the transmission mainshaft spline. Rear axle and propeller shaft now removed as an assy.
Axle Shaft Removal & Wheel Bearing Adjustment: See "1950-51 Nash Statesman" data.
Endplay—.002-.004".

SHOCK ABSORBERS

Delco. Direct acting, hydraulic type.

FRONT SUSPENSION

Front Suspension: New design, parallelogram type with coil springs and direct acting shock absorbers.
▷*"RAPPING" SOUND FROM FRONT END—See "Rapping Correction" in Rambler Special Data.*
▷*FRONT SUSPENSION BRACE NOTE—Effective with car serial No. D-66777, a front suspension brace entered production. This brace can be installed on all previous models.*
See Front Suspension Section for complete data.
Kingpin Inclination—8½° crosswise.
Caster—Pos. ¾° to 1¼° (1° preferred).
Camber—Pos. ¼° to ¾° (½° preferred).
Toe-In—⅛" to ¼". ¼" preferred.

STEERING GEAR

Gemmer Model 305. Worm-and-roller type with "push-pull" adjustments.
See Steering Gear Section for complete data.

BRAKES

Service Brakes: Bendix (Lockheed) Hydraulic, self-centering (floating shoe) type. Hand lever applies rear wheel service brakes.
NOTE—No anchor pin adjustment on these brakes.
See Brake Section for complete data.
Wheel Cylinders—Front wheels 1", Rear 13/16".
Drums—Cast iron. Diameter 8".
Lining—Molded. **Lining Thickness** 3/16" (all).
▷*Lining—CAUTION—Different width and length used on each shoe in each wheel as follows:*

Lining	Length	Front—Width—Rear
Primary Shoes	8"	1¾"—1¼"
Secondary Shoe	8"	1½"—1"

Clearance—All shoes just free of drag with brakes centralized (by hard brake application and releasing pedal). Eccentric adjustment for each shoe.
Braking Power—60.2% front wheels, 39.8% rear.
Hand Brake: See Service Brakes (above).

MISC. MECHANICAL

CONVERTIBLE TOP CONTROL: Electric. Cable operated with electric motor operating winding drum behind rear seat.
See Miscellaneous Section for complete data.
WINDSHIELD WIPER: Vacuum type, cable operated.
See Miscellaneous Section for complete data.

MODEL IDENTIFICATION

SERIAL NUMBER: (1952 & Early 1953)—On plate attached to right front wheelhouse panel under hood.

Late 1953—On plate attached to center of cowl panel under hood.

Starting Serial Number—	1952	1953
Kenosha	D-79501	D-127501
El Segundo	DC-4101	DC-9001
Toronto	DT-1001	DT-1901

ENGINE NUMBER: Stamped on right side of engine above exhaust pipe.

Starting Engine Number—	1952	1953
Without Hydra-Matic	F-85001	F-140001
With Hydra-Matic		H-1001

►***ENGINE NOTE (HYDRA-MATIC DRIVE CARS)—STATESMAN ENGINE USED in cars with Hydra-Matic Drive. See Statesman Car Pages for engine specifications and data.***

TUNE-UP

COMPRESSION PRESSURE: 120 lbs. at cranking spd.

VACUUM READING: *Steady 18-21", 500-550 RPM idle.*

FIRING ORDER: 1-5-3-6-2-4.

SPARK PLUG GAPS: .030".

Plugs—Auto-Lite A-7 or AN-7, 14 mm. Tighten to 30 ft. lbs.

DISTRIBUTOR: Delco-Remy No. 1112382. Full automatic advance type with separate vacuum spark control and octane selector adjustment.
Breaker Gap—.018-.024". (Set to .022").
Cam Angle—31-37°. DO NOT exceed Breaker Gap limits of .018-.024" to obtain dwell.
Breaker Arm Spring Tension—17-21 ozs. ***NOTE—Tension for high speed points 19-23 ozs.***
Rotation—Counter-clockwise viewed from above.
Automatic & Vacuum Advance—*See Ignition.*

►***DISTRIBUTOR REMOVAL CAUTION (HYDRA-MATIC DRIVE CARS):*** Align Timing Mark on crankshaft vibration dampener with indicator on timing chain cover before removing distributor. Damage to No. 3 & No. 4 piston may result if this is not done.

COIL: Delco-Remy No. 1115380. Mounted on engine.
Ignition Current—2.3 amps. idling. 5 amps. stopped.

CONDENSER: Delco-Remy No. 1869704.
Capacity—.18-.23 microfarad.

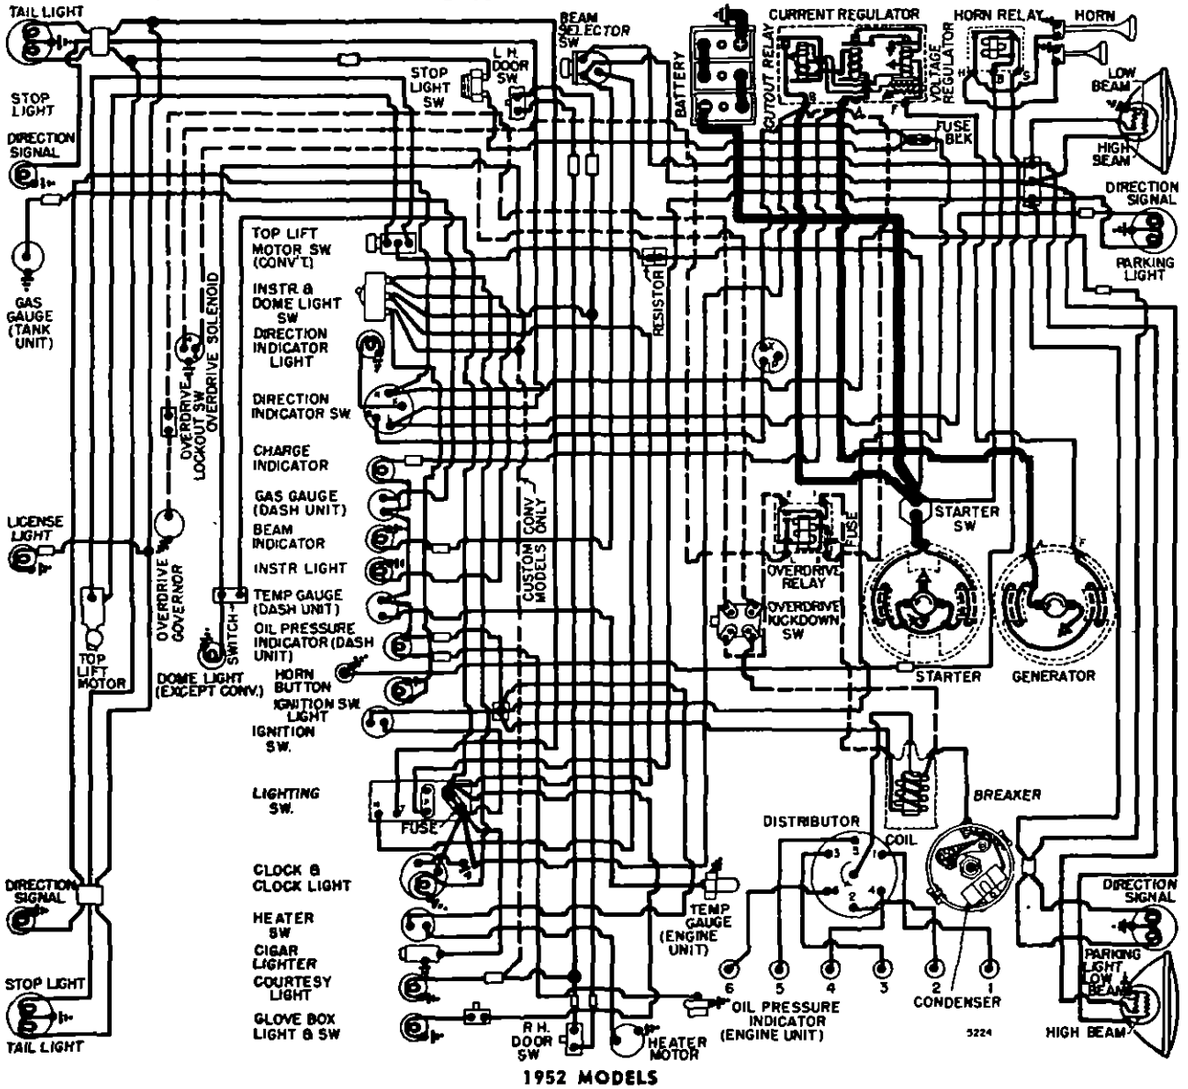
IGNITION TIMING: ***CAUTION—Different ignition timing on some models as follows:***

Model	Ignition Timing
1952 (All Models)	TDC
1953 (100" W.B.—Exc. Hydra-Matic)	TDC
1953 (100" W.B.—With Hydra-Matic)	4° ATDC
1953 (108" W.B.—All Models)	4° ATDC

Timing Mark—TDC mark is heavy milled line on vibration dampener, with lighter milled lines on either side indicating degrees. Pointer located on timing chain cover.
Timing Procedure—*See Ignition Timing.*

CARBURETION: Carter YF (1952 & Early 1953) No. 876SA, (Late 1953) No. 2014S. Single barrel downdraft type with Climatic Control.
Idle Setting—½-1½ turns open. Turn screws out for richer mixture.
Idle Speed—(Std. & O.D. Trans. Cars) 550 RPM., (Hydra-Matic Cars) 375 RPM. with selector lever in Neutral "N" position.
Float Level—½". Measure from underside of bowl cover to top of float with bowl cover inverted and weight of float on needle valve.
Hydra-Matic Throttle Linkage Adjustment: *See "Hydra-Matic Drive" in Transmission Section.*
Fast Idle: .054" between throttle valve and bore of carburetor (side opposite port). Remove thermostatic coil housing and baffle plate. Adjust by bending connector link at lower end.
Choke Adjustment: Set one point lean.
Fuel Pump Pressure: 3-4½ lbs.

VALVE TAPPET CLEARANCE: ***Hot Setting***—.015" All Valves. ***Cold Setting***—.016" Intake, .018" Exhaust. NOTE—Tappet screws are self-locking type.



IGNITION

IGNITION SWITCH: Nash No. 3132762.

COIL: Delco-Remy No. 1115380. Mounted on engine.
Ignition Current—2.3 amps. idling. 5 amps. stopped.

CONDENSER: Delco-Remy No. 1869704.
Capacity—.18-.23 microfarad.

DISTRIBUTOR: Delco-Remy No. 1112382. Full automatic advance type, with separate vacuum spark control and octane selector adjustment.
Breaker Gap—.018-.024" (set to .022").
Cam Angle—31-37°. DO NOT exceed Breaker Gap limits of .018-.024" to obtain dwell.
Breaker Arm Spring Tension—17-21 ozs. ***NOTE—Tension for high speed points 19-23 ozs.***
Rotation—Counter-clockwise viewed from above.

1952 MODELS

Automatic Advance

Degrees	Distr. RPM	Degrees	Eng. RPM
0-2	325	0-4	650
3.5-5.5	400	7-11	800
7-9	950	14-18	1900
10-12	1400	20-24	2800

Vacuum Spark Control: Delco-Remy No. 1116045 (Early 1952). No. 1116072 (Late 1952 & 1953). Separate unit mounted on hold-down plate and linked to advance arm.

Plunger Travel—(1116045) 11/32-3/8". (1110672) 13/64-1/4".

Vacuum Advance—1116045

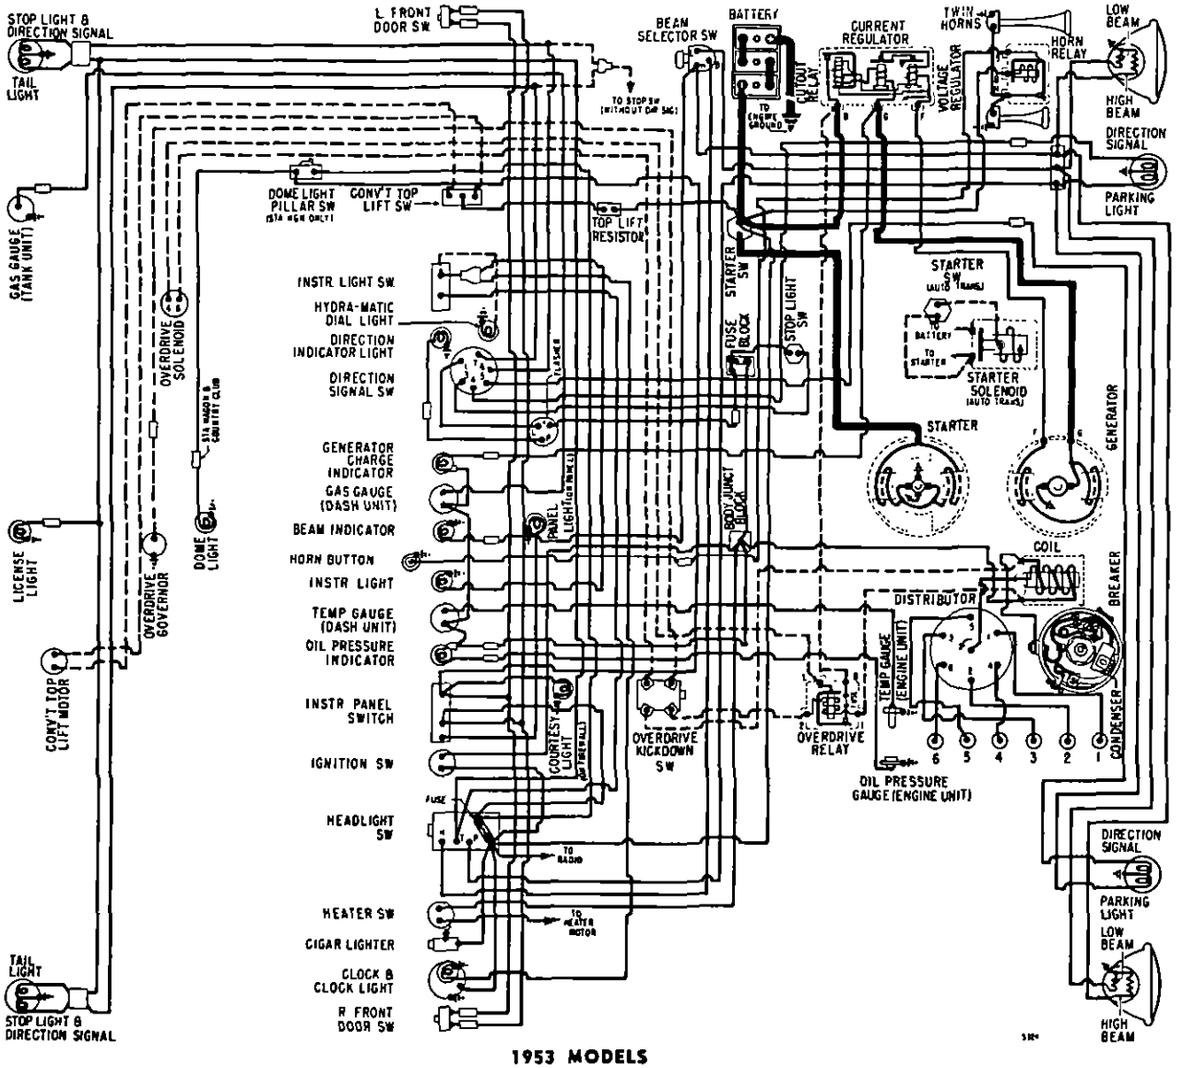
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	3-5"
8.5°	17°	13-17"

Vacuum Advance—1116072

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	4-6"
5.5°	11°	11"

Octane Selector Setting—Loosen hold-down screw in distributor, adjust so that slight ping secured at 10-15 MPH, with wide open throttle.

►***DISTRIBUTOR REMOVAL CAUTION (HYDRA-MATIC DRIVE CARS):*** Align timing mark on crankshaft vibration dampener with indicator on timing chain cover before removing distributor. ***Damage to No. 3 & No. 4 piston may result if this is not done.***



IGNITION TIMING

Standard Setting—***CAUTION—Different ignition timing on some models as follows:***

Model	Ignition Timing
1952 (All Models)	TDC
1953 (100" W.B.—Exc. Hydra-Matic)	TDC
1953 (100" W.B.—With Hydra-Matic)	4° ATDC
1953 (108" W.B.—All Models)	4° ATDC

Timing Mark—TDC mark is heavy milled line on vibration dampener, with lighter milled lines on either side indicating degrees. Pointer located on timing chain cover.

Timing (Using Timing Light)—Align 1/8" holes in clamp arm and distributor support and insert pin. Loosen distributor hold-down screw and center octane selector scale, tighten screw. Clip neon timing light to No. 1 spark plug, direct light at vibration damper at timing chain cover pointer. Idle engine at 400-500 RPM, loosen clamp arm bolt, rotate distributor until correct mark (see Standard Setting above) on dampener aligned with the pointer, tighten clamp arm bolt, remove 1/8" pin in support. Check Octane Selector Setting.

1953 MODELS

CARBURETOR

Carter YF 876SA (1952 & Early 1953), No. 2014S (Late 1953). Single barrel downdraft type with Climatic Control.

See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump): ***See Tune-Up.***

Metering Rods & Jets—***See Carter Jet Tables in Carburetor Section.***

Hydra-Matic Throttle Linkage Adjustment: ***See "Hydra-Matic Drive" in Transmission Section.***

Fast Idle: .054" between throttle valve and bore of carburetor (side opposite port). Remove thermostatic coil housing and baffle plate, adjust by bending connector link at lower end.

See Carburetion Equipment Section for complete data.

Automatic Choke: Carter Climatic Control (Single Barrel Carburetor).

Setting—Set 1 point lean.

See Carburetion Equipment Section for complete data.

CARB. EQUIPMENT

Air Cleaner: AC Oil-wetted type Std. Oil-bath type Optl. Filter Element AC No. 30 (std. type).

Fuel Pump: Carter No. M-744S (Std.) Fuel only. No. M-797S (Optional) Fuel & Vacuum Pump.

Pressure—3-4½ lbs.

See Carburetion Equipment Section for complete data.

Gasoline Gauge: King-Seeley Electric type. (Not "CV").

Dash Unit—(1952) K-S No. 42951, Nash No. 311387. (1953) K-S No. 46321, Nash No. 3116294.

Tank Unit—K-S No. 42760. Nash No. 3128741.

See Carburetion Equipment Section for complete data.

BATTERY

Auto-Lite Type 1M-100. 6 volt, 15 plate, 100 ampere hour capacity.

Grounded Terminal—Positive (+) terminal grounded to cylinder head.

BODY GROUND—SEPARATE ground strap connected between transmission and rear engine cross-member.

Location—Left side in engine compartment.

STARTER

Delco-Remy Numbers	Starter	Armature
Std. Trans. (LHD Cars)	1107119	1923018
Std. Trans. (RHD Cars)	1107120	1923018
Hydra-Matic Trans.	1107136	1925939

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Drive (Std.) Delco-Remy 1923008. Automatic type.
Drive (Hydra-Matic)—Delco-Remy No. 1923043.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—24-28 ozs.

Performance Data

Torque		R.P.M.	Volts	Amperes
0	ft. lbs.	5500	5.65	70
11	"	Lock	3.25	550

Starting Switch (Std. Trans.): Delco-Remy No. 1996478. Mounted on toe-board, actuated by fully depressing clutch.

Starting Switch (Hydra-Matics Cars): Switch, Nash No. 3137292 mounted on left front fender apron, controlled by Control Switch mounted on steering column and operated by Hydra-Matic Selector lever (operative in "N" by lifting lever).

Control Switch: Delco-Remy No. 1996077.

Starter Control Switch Removal (Hydra-Matic Cars)—Disconnect both wires and battery cable from switch, remove switch from bracket using a ¼" drive ratchet handle and pronged socket on threaded bushing retaining switch on bracket.

GENERATOR

Delco-Remy No. (1952) 1102776, (1953) 1100021. Two brush type with current and voltage regulation.
Armature—Delco-Remy No. 1913597 (for 1102776 Gen.), 192590 (for 1100021 Gen.)

Performance Data—1102776

	Amperes	Volts	R.P.M.
Cold	30①	8.0	2050

Performance Data—1100021

	Amperes	Volts	R.P.M.
Cold	35①	8.0	2650

①—Maximum output controlled by current regulator.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—28 ozs.
Field Current—(1102776 Gen.) 1.75-1.95 amps., (1100021 Gen.) 1.85-2.03 amps., at 6 volts.

Belt Adjustment: ½" deflection in belt midway between fan and generator pulley with an application of 25 lbs. pressure.

REGULATOR

Delco-Remy No. 1118731. Voltage and current regulator. Test units at full operating temperature. *See Electrical Equipment Section for complete data.*

►*TESTING NOTE—To obtain operating temperature, run regulator not less than 15 minutes with a charge rate of 8-10 amperes.*

►*CAUTION*—Check generator for grounded field coils and leads before changing regulator settings to correct for high charging rate or high voltage.

Cutout Relay

Cuts In—5.9-6.7 volts hot. (Set to 6.4 volts hot).
Contact Gap—.020" (same for both sets).
Air Gap—.020" (with contacts just closed).

Voltage Regulator

Setting—7.0-7.7 volts hot (set to 6.4 volts hot). Regulator is over compensated for temperature. Should be checked with cover in place and hot.
Air Gap—.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator

Setting—34-42 amperes hot (set to 38 hot).
Air Gap—.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting—*See Electrical Equip. Section.*

LIGHTING

Headlamps: "Sealed Beam" type. Upper and lower beam controlled by selector switch on floor.
Beam Indicator—Red jewel located in speedometer.
Direction Signal:—*See Electrical Equipment Section.*
Direction Indicator—Bulb in direction signal switch handle. Lights when direction signals flashing.

Switches

Lighting—Nash No. 3130348.
Beam Selector—Nash No. 3130120.
Directional Signal—Nash No. (1952) 3128974, (1953) 3136368.
Instrument Light—Nash No. (1952) 3128971, (1953) 4368765.
Stop Light—Nash No. 99469.
Glove Box (1952)—Nash No. 4367923.
Dome Light (1952)—Nash No. 3128971.
Courtesy Lights (1953)—Nash No. 4373297.

MISC. ELECTRICAL

GENERATOR CHARGE INDICATOR: Indicator light in instrument cluster. Lights when ignition turned on, should go out when generator begins to charge.

LOW OIL PRESSURE INDICATOR: *See "Oil Pressure Gauge" under LUBRICATION.*

FUSES: (Main Lighting)—30 amp., on light switch.
Stop & Directional Lights—30 amps., under hood near voltage regulator.
Overdrive—20 amps., under hood on Overdrive relay.
Radio—10 amps., lower left hand corner of radio chassis.

HORNS: E.A. Laboratories. Vibrator type twin horns.
E.A. No. 7340 (Low Note), **E.A. No. 7341** (High Note).
Horn Current—12 amperes per horn.
Contact Gap—.031", (±) .010".

Horn Relay: E.A. Laboratories. On horn bracket.

ENGINE

►*ENGINE NOTE (HYDRA-MATIC DRIVE CARS)—STATESMAN ENGINE (With Different Cylinder Head) used in cars with Hydra-Matic Drive. See Rambler Engine (following) for Developed Horsepower and Compression ratio, and STATESMAN CAR PAGES for other Engine specifications.*

ENGINE SPECIFICATIONS: 6 cylinder "L" head type. Cylinders cast Enbloc with intake manifold cast in block (Iso-thermal fuel intake system).

Model	Bore	Stroke	Displacement
1952	3⅛"	3¾"	172.6 cu. ins.
1953 (Std. Trans.)	3⅛"	4"	184 cu. ins.
1953 (Hydra-Matic)	3⅛"	4¼"	195.6 cu. ins.

Rated Horsepower—23.44.

	Compr. Ratio	Developed H.P.
Std. Trans. (1952)	7.25-1	82 at 3800 RPM.
Std. Trans. (1953)	7.25-1	85 at 3800 RPM.
Hydra-Matic Trans.	7.30-1.	90 at 3800 RPM.

Compression & Vacuum Reading—*See Tune-Up.*
See STATESMAN for all other Hydra-Matic Engine data.

CYLINDER HEAD & TIGHTENING TORQUES: *See Rambler Special Data.*

ENGINE REMOVAL: *See Rambler Special Data.*

OIL PAN REMOVAL: Remove steering linkage cross-tie rod before removing oil pan.

PISTONS: Aluminum alloy, cam ground, tin plated, strut type with solid skirt.

►*PISTON NOTE—Piston pin is offset in piston, and should be installed with the heavy side toward the camshaft (measured across the top, side of piston having greatest measurement should be installed toward camshaft).*
Removal—Piston and rod removed from above.
Clearance—.001-.002". See Fitting Pistons.
Cylinder Out-of-Round & Taper Limits—.004". Rebore cylinder if taper exceeds .009".

Original Piston & Bore Sizes: *See Rambler Special Data.*

Fitting New Pistons: With all parts clean and dry, fit piston so that piston will support its own weight in any portion of cylinder. If feeler gauge used, insert .002 x ½" feeler at right angles to pin bosses, pull to withdraw feeler must be 12-18 lbs.

Replacement Pistons: Furnished Standard, .002", .005", .010", .020" and semi-finished.

Installing Pistons: Pin offset in piston. Install with side of piston having greatest measurement from pin centerline to side of piston (measured across top), toward camshaft. See Connecting Rod Installation.

PISTON RINGS: 2 compression, 1 slotted oil ring and 1 Thompson U-Flex ring, (U-Flex ring in No. 4 groove), per piston. All rings above pin. Oil ring grooves drilled with oil drain holes.

Ring	Width	End Gap
Top Compression	.0930-.0935"	.010-.020"
Lower Compression	.0930-.0935"	.010-.020"
Upper Oil	.1545-.1550"	.010-.020"
Lower Oil	.154-.155"	①

①—No end gap with U-Flex oil rings.
Ring Side Clearance—.002-.004" (all rings).

Installing Rings: Stepped inner edges of both compression rings must be UP.

PISTON PINS: Diameter—.8593-.8594". Length 2¾". Locked in rod.
Pin Fit in Piston—Thumb push fit or .0003" maximum loose fit at room temperature (70°F.).

Replacement Pins: Standard, .001", .003" oversize.

CONNECTING ROD: Length—6⅝" (6.623-6.627").
Weight—25 ozs.
Crankpin Journal Diameter—2 3/32" (2.094-2.095"). *See "Original Bearing Sizes" in Rambler Special Data.*
Lower Bearing—Steel backed, babbitt lined type.
Clearance—.001-.002". **Sideplay**—.005-.015".

Bearing Adjustment: None. Replace bearings. *See "Connecting Rod & Bearings" in Rambler Special Data. NOTE—Tang on bearing shells must engage slots in rods and caps. Palnuts used on rod bolt nuts. Replace with new Palnuts each time nuts are removed.*

Replacement Bearings: Furnished Standard, .002", .010", .012" undersize.

Installing Rods: Numbers on rod and bearing cap should be together and rod installed in same numbered cylinder with numbers toward camshaft side of engine.
NOTE—Rods and bearing caps are NOW assembled with identifying mark (raised dot on side) of rod toward front of engine, and bearing cap toward rear of engine.

►*CAUTION—See Piston Note above for piston installation.*

CRANKSHAFT: Four bearing counter-weighted type with vibration damper mounted on front end.

ENGINE

CONTINUED FROM PRECEDING PAGE

▷*CRANKSHAFT REPLACEMENT NOTE—Replacement crankshaft furnished complete with vibration damper and flywheel. Assembly is balanced as a unit.*
Journal Diameters—2 31/64" (2.479").
See "Original Bearing Sizes" in Rambler Special Data.
Bearings—Removable steel backed, micro-babbitt.
Clearance—.0007-.0029".

Bearing Adjustment: None. Replace bearing. *See "Crankshaft Main Bearings" in Rambler Special Data.*
NOTE—Upper bearing halves can be rotated in and out without removing crankshaft.

Replacement Bearings: Furnished Standard, .002", .010", .012" undersize.

Crankshaft Oil Seal: *See "Crankshaft & Main Bearings" in Rambler Special Data.*

End Thrust: Taken by front (No. 1) bearing. (Thrust plate on shaft ahead of flanged bearing).
Endplay Adjustment—*See "Crankshaft & Main Bearings" in Rambler Special Data.*
Endplay—.006-.008".

Vibration Dampener Removal & Installation: *See Rambler Special Data.*

CAMSHAFT: 4 bearing. Non-adjustable chain drive.
Camshaft Removal— *See Rambler Special Data.*
Bearings—Steel backed babbitted bushing.
Clearance—.002".

End Thrust: Thrust plate assembled on front face of block between No. 1 bearing and camshaft sprocket.
Endplay—.004-.006".
CAUTION—Thrust plate has long groove on rear face which provides valve tappet lubrication from No. 1 crankshaft bearing. Short groove on front face of plate lubricates timing chain and sprockets.

Timing Chain: Morse. Non-adjustable type. Width 1", Pitch ⅜". Length 22½" or 60 links.

Camshaft Setting: Install chain with the marked teeth of camshaft and crankshaft sprockets adjacent and in line with a straightedge across shaft centers. Check setting as follows: Turn engine over until punch mark on camshaft at 1 o'clock position, with mark on crankshaft sprocket just beginning to mesh with chain. There should be 9½ links or 19 pins (2 pins to each link) between marks.

VALVES:	Head Diam. 1952	Head Diam. 1953	Stem. Diam. 1952-53	Seat Angle 1952-53
Intake	1.469"	1.594"	3.407-3.412"	①
Exhaust	1.281"	1.343"	3.407-3.412"	①

	Lift 1952	Lift 1953	Stem Clearance 1952	Stem Clearance 1953
Intake	.300"	.340"	.0013-.0047"	.002-.003"
Exhaust	.300"	.300"	.0013-.0047"	.002-.003"

①—Valve Face Angle 44°. Seat Angle in Block 45°.

Valve Guides: Pressed in block. Remove guides using tool J-2814. Install guides using tool J-1429-A with adapter J-1429-4.

Valve Springs: Install springs with closed coil end up against cylinder block and seated in counter-bore in block. **Spring Free Length**—2 5/32".
CAUTION—Excessive wear of valve stem and guide will result if springs not properly seated in counter-bore.

	Spring Pressure	Length
Valve Closed	37-41 lbs.	1 3/4"
Valve Open	75-82 lbs.	1 7/16"

Valve Lifters: Mushroom type operating in reamed holes in block. Lifters removed from below with camshaft out of engine. *See "Camshaft & Bearings" in Rambler Special Data.*

VALVE TIMING

Tappet Clearance: Hot Setting—.015" All Valves.
Cold Setting—.016" Intake, .018" Exhaust.
NOTE—Tappet adjusting screws are self-locking.

Valve Timing: See Camshaft Setting above.

1952 Models

Intake Valves—Open 6° BTDC. Close 50° ALDC.
Exhaust Valves—Open 46° BLDC. Close 10° ATDC.

1953 Models

Intake Valves—Open 10° BTDC. Close 58° ALDC.
Exhaust Valves—Open 46° BLDC. Close 10° ATDC.

Valve Timing Check—Set No. 6 piston on TDC in firing position, then set valves on No. 1 cylinder to .003" clearance. Slowly rock crankshaft back and forth. If timing is set correctly, the exhaust valve should open before the "DC" mark on vibration damper lines up with the pointer. **Note this distance.** Intake valve should open an equal distance after the "DC" mark passes the pointer.

LUBRICATION

Engine Oiling System: Pressure to main, connecting rod, and camshaft bearings, valve tappets, and timing chain. Oil pump mounted on right of engine.

▷*FLASHING OF LOW OIL PRESSURE WARNING LIGHT AT IDLING SPEED: See Oil Pressure Warning Light.*
Crankcase Capacity—4 quarts.

▷*1952 CRANKCASE CAPACITY PRODUCTION CHANGE—Cars before Engine No. F-113390 requires 5 quarts of oil to bring level to "F" mark on dipstick. See Oiling System" in Rambler Special Data.*
Normal Oil Pressure—50 lbs. at 30 MPH.
Oil Pressure Regulator—Spring loaded release valve under plug to rear of oil pump on lower edge of crankcase. Non-adjustable, opens at 50-58 lbs.

Oil Pump: Gear type pump mounted on right side of engine, driven by inclined shaft.

Oil Filter: Optional. Replace cartridge at 8000 miles or more often if necessary.

Oil Pressure Warning Light: King-Seeley type pressure switch controlling light on instrument panel. **Dash Unit**—Warning light on instrument panel. Lights when ignition turned on, goes out when engine oil pressure sufficient to open engine unit contacts.

▷*FLASHING OF WARNING LIGHT AT IDLING SPEED (1952 & EARLY 1953 CARS)—If light indicates low oil pressure at idling speed (using light oil) and conditions not due to worn bearings or excessive clearances, Engine Unit—Carter No. A954S (Nash No. 3134704) should be used to replace original pressure switch.*
Engine Unit—(1952) King-Seeley No. 47100 or Carter No. A815S. (Early 1953) K-S No. 47130 or Carter No. A954S. (Late 1953) Carter No. A954S.

COOLING

Cooling System: Pressure type with pressure valve and vacuum valve located in filler cap, and positive circulation with water pump.
Capacity—11 qts. (12 qts. with heater).
Pressure Valve—Nash No. (1952) 3112649, (1953) 3136627. In filler cap, opens at 7 lbs.

Water Pump: Sealed packing & bushing type. Not adjustable.
See Water Pump Section for complete data.
Removal—Drain cooling system, remove distributor, disconnect pump drive coupling (remove rear bolt), disconnect inlet hose, remove pump mounting screws.

Belt Adjustment: *See Generator Belt Adjustment.*

Thermostat: Dole. In water outlet in cylinder head. **Setting**—Starts to open at 167-173°, and should be fully open 20° above starting point.

Temperature Gauge: King-Seeley Electric type. (Not "CV").

Dash Unit—	King-Seeley No.	Nash No.
1952	42953	311388
1953	46325	3116293
Engine Unit—		
1952	42550	3112940
1953	45780	3133688

See Miscellaneous Section for complete data.

CLUTCH

Borg & Beck Model 8A7, Assy. No. 987. Single plate dry disc type.
See Clutch Section for complete data.
Facings—Inside Diameter—5⅜". Outside Diameter —8". Thickness—⅛".

Adjustment: Pedal free travel ½-¾". Adjust by loosening locknut and turning adjusting nut on connector link at clutch fork.
CAUTION—Do not disturb adjustment of clutch beam lever-to-pedal rod.

Removal: Remove transmission (see below), disconnect clutch pedal linkage, remove clutch housing and pan, punchmark flywheel, clutch cover, and pressure plate. (Reassemble to same marks), take out clutch fork and mounting screws in cover flange.

SYNCHRO-MESH TRANSMISSION

Warner AS35-T96 (Std.), AS36-T96 (Optional with Overdrive). Constant mesh, synchro-mesh, all helical gear type.

▷*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Warner Transmission" in Transmission Section.*

Transmission Control: Steering column shift.
See Transmission Section for complete data.

Removal: Move rear axle back (see Universals for procedure) to slip front universal joint off transmission. Disconnect shift levers and speedometer cable, remove two upper transmission to bell housing bolts, and install special guide bolts in their place. Remove lower bolts, slide transmission out.

OVERDRIVE

Warner R10 Type (part of AS36-T96 Transmission). Centered ring gear type. Governor controlled with electrical solenoid operation and throttle operated kick-down switch.
See Transmission Section for complete data.

▷*LOCKOUT SWITCH CHANGE (1953):* Switch not used on later cars (mounting hole on transmission closed by plate, and two switch leads connected together). *NOTE*—If switch inoperative on early

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

cars, cut switch out of circuit by connecting both switch leads to same terminal.

Overdrive Solenoid—Delco-Remy No. 1118155.
Governor—Auto-Lite No. TGE-4004.
Control Relay—Nash No. 3123721.
Overdrive Fuse—30 ampere. On BAT terminal of overdrive relay.

Removal: Remove as a unit with transmission after disconnecting control cable and all wiring on overdrive case. See Transmission Removal above.

HYDRA-MATIC TRANSMISSION

"Dual Range", Four-Speed Planetary type automatic transmission and fluid coupling, Modulated Throttle Pressure, and hydraulically operated reverse mechanism.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTIONS: See "Hydra-Matic Drive" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See Transmission Section.*

Lubrication—Check fluid every 1000 miles. Add fluid as required to maintain level at "F" mark on dipstick. Drain and refill every 25,000 miles. Use Hydra-Matic Fluid (Automatic Transmission Fluid type "A").

Checking Fluid Level—Set hand brake, place selector lever in "N" position, start engine and idle for a minimum of two minutes after transmission has reached normal operating temperature. With selector lever in "N", remove dipstick and check fluid level (dipstick located under right front floor plate). Add the necessary amount of fluid to bring fluid level to "F" mark. *CAUTION—Use care not to allow dirt or lint to enter transmission.*

►*CAUTION—Do not fill above "F" mark on dipstick.*

Capacity—Approximately 8½ qts. (refilling after draining), 9½ qts. (when reassembled after overhaul).

OTHER HYDRA-MATIC SERVICE DATA—See "Hydra-Matic Drive" in Transmission Section.

UNIVERSALS

Mechanics or Saginaw. Needle bearing, cross type. Front joint slips on transmission main shaft.

Lubrication—Pre-packed. Disassemble and lubricate every 15000 miles.

Propeller Shaft: Open drive line with front and rear universal joints.

►*FRONT SPLINED FLANGE CAUTION*—Two types used in production. **Short Type** (3 13/16" from centerline of universal joint bore to end of flange) for cars with Overdrive. **Long Type** (4 7/32" from centerline to end of flange) for cars without Overdrive.

Removal: Support rear of car at body side sills and rear axle at the housing. Loosen propeller shaft coupling nut by turning nut clockwise (facing rear of car) with Tool J-4486 (Shaft holding and Coupling Wrenches). Disconnect rear shocks at axle tube, parking brake cable at adjusting yoke, and disconnect rear brake hose from body floor pan. Remove rear spring front bracket mounting nuts and lower rear axle (continue to support body). Push rear axle assembly to rear; sliding propeller shaft yoke off transmission main shaft splines. Remove propeller shaft from pinion shaft by tapping with a soft hammer.

Installation: Install propeller shaft (coupling) onto pinion shaft until center of "U" joint is 4 3/16" from front face of rear axle housing. Push axle assembly to rear and slide front "U" joint onto transmission main shaft. Move the propeller shaft forward until front universal joint "bottoms" on transmission main shaft. MARK THE YOKE AT THE TRANSMISSION REAR OIL SEAL, THEN ADJUST THE PROPELLER SHAFT SO THE MARK IS 5/32" TO THE REAR OF THE OIL SEAL. Loosen the rear spring front eye bolt and tilt front bracket so rear holes are aligned with bolts in floor pan. Raise axle assembly, aligning rear spring front bracket with mounting bolts and secure the mounting nuts. TIGHTEN THE COUPLING NUT TO 300 FT.LBS. TORQUE with the use of Tool J-4486 and 3 ft. extensions applied to wrench handles. Reinstall brake clip. Connect shock absorbers.

REAR AXLE

Own Make. Semi-floating, hyppid gear type with Hotchkiss Drive.
See Rear Axle Section for complete data.

Axle Ratios

Transmission	Ratio
Standard	3.8-1 (9-34)
Overdrive	4.4-1 (8-35)
Overdrive (Optional)	4.1-1 (9-37)
Hydra-Matic	3.3-1 (13-43)

Backlash—.002-.006". Shim adjustment.

Removal: Raise and support rear end of body. Remove rear wheels, axle shaft nuts, and rear hub and drums. Disconnect parking brake cables at rear wheels, brake hose and shock absorbers. Remove rear spring clips and rear spring front eye brackets. Move axle to rear which will pull the front universal off the transmission mainshaft spline. Rear axle and propeller shaft now removed as an assembly.

Axle Shaft Removal & Wheel Bearing Adjustment: Remove wheel, pull drum (use hub puller J-1644). Disconnect brake line and cable. Remove backing plate mounting bolt nuts, take off oil seal retainer, backing plate and wheel bearing adjusting shims. Withdraw axle using puller J-2498, do not drag shaft on inner oil seal.
Endplay—.002-.004".

SHOCK ABSORBERS

Delco. Direct acting type. Serviced by replacement. **Front**—Nash No. (1952 Early) 3133972, (1952 Late-1953) 3135447. **Rear**—Nash No. (1952 Early) 3130121, (1952 Late-1953) 3135448.

FRONT SUSPENSION

Front Suspension: Independent type with coil springs located between upper ends of steering knuckle pin and seat in outer wheelhouse panel.

►*FRONT SPRING PRODUCTION CHANGE (Hydra-Matic Cars): See "Nash Front Suspension" in Front Suspension Section.*

►*STEERING LINKAGE TIE-ROD CAUTION—Tie-rod adjusting tube clamp bolt must be located at bottom side of adjusting tube to prevent interference with steering arms on extreme turns.*

Kingpin Inclination—8½° crosswise.
Caster—Pos. ¾° to 1¼° (1° preferred).
Camber—Pos. ¼° to ¾°. (½° preferred).
Toe-In—⅛" to ¼". (¼" preferred).
Toe-Out on Turns—Outer wheel turned 20°, inner wheel should be turned 22½°.

STEERING GEAR

Gemmer Model 305. Worm-and-Roller type with "push-pull" adjustments.
See Steering Gear Section for complete data.

BRAKES

Service Brakes: Bendix (Lockheed) Hydraulic, self centering (floating shoe) type. Hand lever applies rear wheel service brakes.

►*1953 FRONT BRAKE NOTE (HYDRA-MATIC DRIVE CARS)—Larger front wheel brakes used on cars with Hydra-Matic Drive. See Brake Specifications following:*

NOTE—No anchor pin adjustment.
See Brake Section for complete data.

Wheel Cylinders—Front Wheels 1". Rear 13/16".
Drums—8" (1952 & 1953—Except Front Wheels on 1953 Hydra-Matic Drive Cars). 9" (Front Wheels 1953 Hydra-Matic Drive Cars).
Lining—Molded type. **Thickness**—.214", (all shoes)

Lining Dimensions
1953 Hydra-Matic Drive Cars

Wheel & Shoe	Length	Width
Front Whl. Primary	9 7/8"	2"
Front Whl. Secondary	7 11/16"	1 3/4"
Rear Whl. Primary	8 27/64"	1 1/4"
Rear Whl. Secondary	8 27/64"	1"

Lining Dimensions
(Cars Without Hydra-Matic Drive)

Wheel & Shoe	Length	Width
Front Whl. Primary	8"	1 3/4"
Front Whl. Secondary	8"	1 1/2"
Rear Whl. Primary	8"	1 1/4"
Rear Whl. Secondary	8"	1"

Clearance—Eccentric adjustment for each shoe. Shoes should just be free of drag (*CAUTION*—make hard brake application to centralize shoes and release brakes before making adjustments).

Hand Brake: See Service Brakes above.

MISC. MECHANICAL

CONVERTIBLE TOP CONTROL: Cable operated type with motor operating winding drum behind rear seat.
See Miscellaneous Section for complete data.

WINDSHIELD WIPER: Vacuum type, cable operated.
See Miscellaneous Section for complete data.

►*AIR CONDITIONING CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

MODEL IDENTIFICATION

Model	Model Designation
1954	5410
1955	5510

SERIAL NUMBER: Stamped on plate located on right side of cowl under hood.

Starting Serial Numbers

Model	Kenosha	El Segundo
1954	D-171501	DC-12301
1955	D-205001	DC-15001

ENGINE NUMBER: Stamped on machined surface on right side of cylinder block above exhaust pipe. Starting numbers as follows:
1954 (4" Stroke Engine)–F-17001.
1955 (4½" Stroke Engine)–H-12001.
1955-H-45001.

►*ENGINE NUMBER NOTE:* Three code letters adjacent to engine number indicates special bore or bearing sizes. *See "ORIGINAL BORE & PISTONS AND ORIGINAL BEARING SIZES" in Rambler Special Data.*

TUNE-UP

COMPRESSION PRESSURE: 120 lbs. at cranking speed. Variation limit 10 lbs.

VACUUM READING: Steady 18-21" at idling speed.

VALVE TAPPET CLEARANCE: .015" Hot, All Valves.

MANIFOLD HEAT CONTROL: None used.

IGNITION

FIRING ORDER: 1-5-3-6-2-4.

SPARK PLUG GAP: .030".

Spark Plug–Auto-Lite A7. Tighten to 30 ft. lbs.

COIL: Delco-Remy 1115380.
Ignition Current–2.3 amps. idling, 5 amps. stopped

DISTRIBUTOR: Delco-Remy 1112382.
Condenser–Delco-Remy 1869704. **Capacity.** .18-.23 mfd.
Contact Point Set–Delco-Remy 1855720.
Breaker Gap– 018-.024".
Cam Angle–31-37°.
Breaker Arm Spring Tension–17-21 ozs.
Rotation–Counter-clockwise viewed from above.

►*DISTRIBUTOR REMOVAL CAUTION: Align timing mark on crankshaft vibration damper with indicator on timing chain cover before removing distributor. Damage to No. 3 & 4 pistons may result if this is not done.*

Automatic Advance

Degrees Distr.	RPM	Degrees Eng.	RPM
0-2	325	0-4	650
3.5-5.5	400	7-11	800
7-9	950	14-18	1900
10-12	1400	20-24	2800

Vacuum Spark Control: Delco-Remy 1116072
Plunger Travel–13/64-¼".

Vacuum Advance

Distr. Degrees	Engine Degrees	Vacuum (" of Hg)
Start	0	4-6
5.5	11	11

IGNITION TIMING

Setting–TDC (4" Stroke Engine). **4° ATDC** (4½" Stroke Engine).

Timing Mark–Groove on damper aligned with pointer on chain cover.

CARBURETOR

►*R.H.D. CAR NOTE:* **Carter WA1 7805 Carburetor.** *See "Carter WA1" Carburetor in Carburetor Section.*
Carter YF 2014S–Single barrel downdraft with automatic choke.
Idle Setting–½-1½ turns open. Turn screw out for richer mixture.

Idle Speed (1954 Without Air Conditioning)–550 RPM (Synchro-mesh & O.D.). 475 RPM (Hydra-Matic, in "N").

Idle Speed (1955 Without Air Conditioning)–500-550 *RPM (Synchro-mesh & O.D.). 450 RPM (Hydra-Matic,* in "N").

Idle Speed (With Air Conditioning)–500 RPM with compressor operating (All transmissions, Hydra-Matic in neutral).

Float Level–½". Measure from under side of bowl cover to top of float with bowl inverted and weight of float on *needle valve.*

Accelerating Pump–No seasonal adjustment,

Fast Idle: .054" between throttle valve and bore of carburetor (side opposite port). Remove thermostatic coil housing and baffle plate. Adjust by bending connector link at lower end.

Automatic Choke Setting: One point lean.

Throttle Linkage Adjustment (Hydra-Matic): Adjust engine idle speed at 450 RPM (with air conditioning, 500 RPM compressor running) with engine temperature at 150-160°F., transmission warm and selector lever in neutral. Disconnect throttle rod, at throttle lever at side of transmission. Clean machined surface at back of transmission case and place throttle lever checking gauge J-2545-C flush against surface with edge of gauge against transmission side cover. The throttle lever stud should fit freely in notch of gauge. If gauge does not pass over throttle lever stud freely, use bending tool J-3310 and bend to proper location. Gauge notch must slide freely on stud pin. Adjust transmission throttle rod (which is threaded into upper throttle rod yoke) to fit freely on throttle lever stud; then shorten rod approximately two turns. Install rod on stud and replace wave washer, flat washer and cotterkey.

►*OTHER DATA: See "Carter YF Carburetor" in Carburetor Section.*

Fuel Pump Pressure: 3½-5¼ lbs. at 500 RPM.

CARB. EQUIPMENT

Fuel Pump: Carter M-774S (Fuel only); M-797SA (Fuel & Vacuum).

Fuel Pump Pressure–3½-5¼ lbs. at 500 RPM.
See "Fuel Pumps" in Carburetion Equipment Section.

Gasoline Gauge: King-Seeley Electric (Not "CV").
Dash Unit–King-Seeley 46321.
Tank Unit–King-Seeley 42760.
See "Fuel Gauges" in Carburetion Equipment Section.

BATTERY

Auto-Lite 1M-100. 6 volt 15 plate, 100 Ampere hour capacity (20 hr. rate).
Battery Ground–Positive. Battery to cylinder head.
Engine Ground–Flywheel housing to frame crossmember, right side.

►*ENGINE GROUND NOTE (1954 Convertible):* Engine ground is from timing chain cover to front engine support bolt.

STARTER

Delco-Remy Numbers	Starter	Armature
Std. Trans. (LHD)	1107119	1923018
Std. Trans. (RHD)	1107120	1923018
Hydra-Matic Trans.	1107136	1925939

Drive–Delco-Remy Automatic Drive or Bendix "Folo-thru" type.
Synchro-mesh & OD Cars–Delco-Remy 1923008 or Bendix A3283.
Hydra-Matic Cars–Delco-Remy 1923043 or Bendix A3338.
Rotation–Counter-clockwise at commutator end.
Brush Spring Tension–24-28 ozs.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	5500	5.65	70
11.0 ft. lbs.	Lock	3.25	550

Starting Switch: Two types used as follows:
Synchro-mesh & Overdrive Cars–Delco-Remy 1996478. Mounted on toeboard, actuated by fully depressing clutch pedal.

Hydra-Matic Cars–Rambler No. 3137192 Magnetic Switch mounted on left fender apron, actuated by Delco-Remy Control Switch 1996077 mounted on steering column and operated by lifting Hydra-Matic Selector lever in "N" position.
Control Switch Adjustment–*See "Hydra-Matic Drive Linkage Adjustment" in Transmission Section.*

GENERATOR

Delco-Remy Numbers	Generator	Armature
1954-55 (Std.)	1100021	1925960
1954-55 (Air Cond.) ℂ	1102777	1921981
1955 (Air.Cond.) ℂ	1102815	1921981

ℂ–Used before 1955 Serial No. H-56919.
ℂ–Used after 1955 Serial No. H-56919.

Performance Data–Cold

Generator No.	Amperes ℂ	Volts	RPM
1100021	35	8.0	2650
1102777	45	8.0	2450
1102815	45	8.0	2450

ℂ–Maximum output controlled by regulator.
Brush Spring Tension–28 ozs.
Field Current–1.85-2.03 amps. (1100021); 1.87-2.0 amps. (1102777 & 1102815). All at 6.0 volts.

Rotation–Counter-clockwise at commutator end.
Belt Adjustment: ½" deflection in belt midway between fan and generator pulleys with an application of 25 *lbs. pressure.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

REGULATOR

Delco-Remy 1118841 (Gen. 1100021); **1118828**(Gen. 1102777 & 1102815).

►*REGULATOR NOTE: Checking procedure is different than for previous models. See "Delco-Remy 1118825 Series Regulators" in Electrical Equipment Section. All Specifications are "Normal" Settings.*

Cutout Relay

Cuts In–6.4 volts (Hot).
Contact Gap–.020".
Air Gap–.020" (With contacts just closed).

Voltage Regulator

Setting–7.3 volts (Hot).
Air Gap–.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting–See *Electrical Equip. Section.*

Current Regulator

Setting–34-39 amps. (1118841); 42-47 amps. (1118828).

Air Gap–.075" with armature pressed down to point where contacts just touching.

Checking & Adjusting–See *Electrical Equip. Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Equip. Section.*
Directional Signals: *See Electrical Equip. Section.*
Lighting Switch Removal: Disconnect instrument switch panel from dash panel. With switch in full "ON" position insert stiff wire in hole on side of switch to release switch shaft and knob. Remove (French) nut.
Stop Light Switch: Located at tee fitting in front brake line.
FUSES: Located as follows:
Main Lights–30 Ampere at light switch.
Stop & Directional–30 Ampere on left front wheelhouse panel.
Overdrive–30 Ampere on Overdrive relay.
Radio–10 Ampere, lower left hand corner of radio chassis.
HORNS: Jubilee. Rambler No. (Left side) 3117124, (Right side) 3117125.
Horn Relay–Rambler No. 3113989.

ENGINE

►*AIR CONDITIONING CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine. See "Air Conditioning Service Cautions" in Miscellaneous Section*

►*1954 ENGINE OIL CLEARANCE PRODUCTION CHANGE: Crankpin journal diameter increased .0005" beginning with Engine No. H-20966 (Synchro-mesh); H-20995 (Hydra-Matic).*

►*1954 ENGINE PRODUCTION CHANGE: 4" Stroke Engine used on early cars with Synchro-mesh or Overdrive Transmission. 4½" Stroke Engine used on all other models.*

ENGINE SPECIFICATIONS: 6 Cyl. "L" head. Two engines as follows:

Engine	Bore	Stroke	Displacement
"F" ①	3 1/8"	4"	184.0 cu. ins.
"H" ②	3 1/8"	4½"	195.6 cu. ins.

Engine	Compr. Ratio	Rated HP	Developed HP
"F" ①	7.25-1	23.44	85 at 3800 RPM
"H" ②	7.32-1	23.44	90 at 3800 RPM

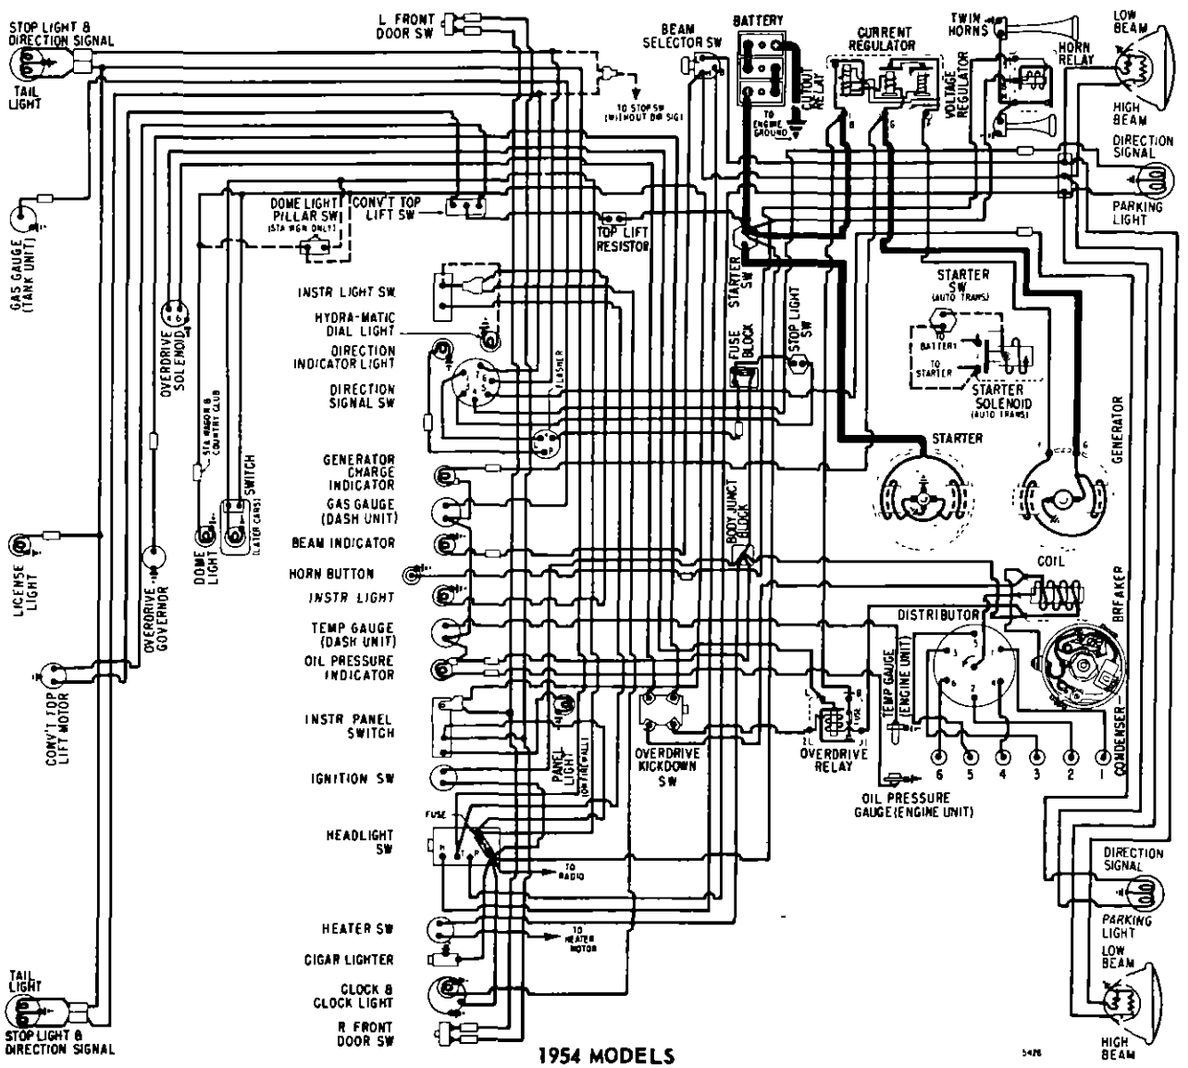
①–4" Stroke Engine. "F" Engine Number Prefix.
②–4½" Stroke Engine. "H" Engine Number Prefix.

Compression & Vacuum Reading–*See TUNE-UP.*

ENGINE REMOVAL: *See "Engine" in Rambler Special Data.*

OIL PAN REMOVAL: *Remove steering linkage cross tie rod before removing pan.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Rambler Special Data.*



CYLINDER HEAD & MANIFOLD: *See "Cylinder Head & Manifold" in Rambler Special Data.*

PISTONS

Cam ground, aluminum alloy, tin-plated with steel strut and solid skirt.

►*CYLINDER BORE OVERSIZE CAUTION: Code letter adjacent to engine nymber indicates cylinder bores .010' oversize. See "Original Bore & Pistons" in Rambler Special Data.*

CONTINUED ON NEXT PAGE

1954 MODELS

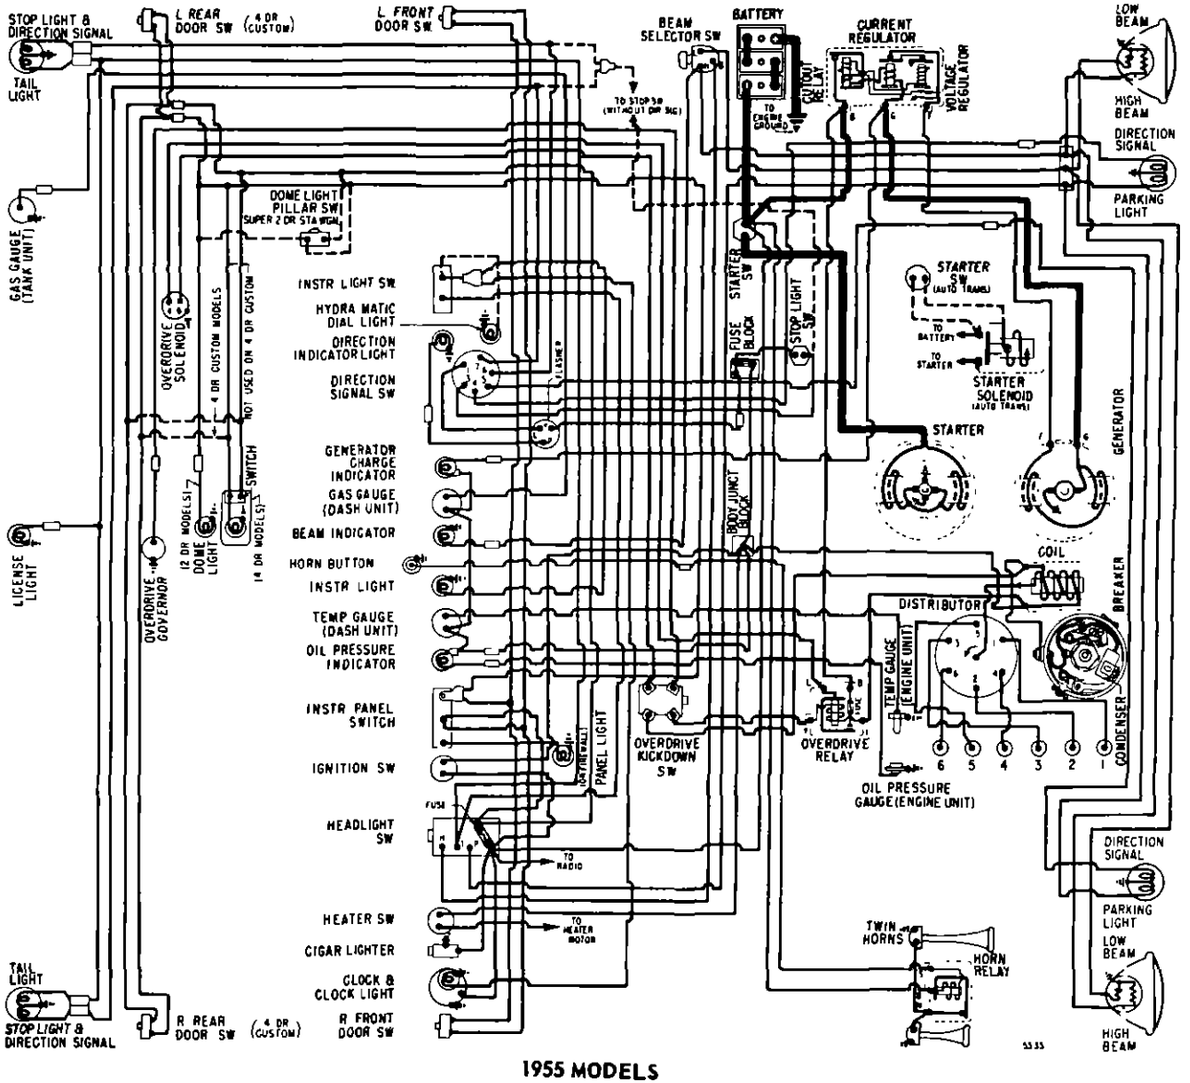
CONTINUED FROM PRECEDING PAGE

Weight–13.59 ozs.
Removal–Pistons & rods removed from above.

Fitting New Pistons: Piston to bore clearance .0006"-.0012". Piston properly fitted should support its own weight with piston and bore dry.

Replacement Pistons: Standard, .002", .005", .010" .020", .030" and .040" oversize.

Installing Pistons: Install piston with notch on top perimeter toward front of engine.



PISTON PINS

Locked in connecting rod by means of locking bolt.
Diameter– .8598-.8595". Length 2.755".
Clearance in Piston–.0002" maximum. Thumb push fit at 70°F.
Replacement Pins: Std., .001", .003" Oversize.
NOTE–Fitted pins furnished with pistons.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr. (#1&2)	.0930-.0935"	.010-.020"	.002-.004"
Oil (#3)	.1545-.1550"	.010-.020"	.002-.004"
Oil (#4 U-flex)	.1545-.1550'		.002-.004"

Replacement Rings: Sets of Std. & .020" oversize.
Installing Rings: Stepped inner edges of both compression rings must be up.

1955 MODELS

PISTON PINS

Locked in connecting rod by means of locking bolt.
Diameter– .8598-.8595". Length 2.755".
Clearance in Piston–.0002" maximum. Thumb push fit at 70°F.
Replacement Pins: Std., .001", .003" Oversize.
NOTE–Fitted pins furnished with pistons.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr. (#1&2)	.0930-.0935"	.010-.020"	.002-.004"
Oil (#3)	.1545-.1550"	.010-.020"	.002-.004"
Oil (#4 U-flex)	.1545-.1550'		.002-.004"

Replacement Rings: Sets of Std. & .020" oversize.
Installing Rings: Stepped inner edges of both compression rings must be up.

CONNECTING RODS

►*1954 OIL CLEARANCE PRODUCTION CHANGE: Crankpin diameter increased .0005" on later engines to reduce oil clearance. See Journal Diameters below.*

►*CONNECTING ROD JOURNAL UNDERSIZE CAUTION: Code letter adjacent to engine number indicates journals are undersize. See "Original Bearing Sizes" in Rambler Special Data.*

Length–6.625" center-to-center. **Weight**–25 ozs.
Crankpin Journal Diameter–2.0943-2.095" (Before 1954 Eng. No. H-20966, Synchro-mesh, and H-20995, Hydra-Matic). **2.0948-2.0955** " (After above Eng. Nos.).

Original Bearing Sizes–*See "Original Bearing Sizes" in Rambler Special Data.*
Bearings–Steel-backed babbitt. No shims.
Clearance–.001"-.0015". **Side Play**–.005"-.015".
Replacement Bearings: Std., .001", .002", .010", .012" Undersize.
Installing Rods: Identification marks (raised surface on center of rod and cap) toward front of engine.

CRANKSHAFT

►*CRANKSHAFT JOURNAL DIAMETER CAUTION: Code letter adjacent to engine number indicates main & connecting rod journals undersize. See "Original Bearing Sizes" in Rambler Special Data.*

Journal Diameter–2.4791"-2.4798". Four Bearing.
Original Bearing Sizes–*See "Original Bearing Sizes" in Rambler Special Data.*
Bearings–Steel backed babbitt. No shims.
Clearance–.001"-.0015".
Replacement Bearings: Std., .002", .010", .012" Undersize.
End Thrust: Taken by flanged front main bearing.
End Play–.003"-.008".
Rear Bearing Oil Seal Installation: *See "Crankshaft & Main Bearings" in Rambler Special Data.*
Crankshaft Front Oil Seal: *See "Engine Front Cover" in Rambler Special Data.*
FLYWHEEL REPLACEMENT: *See "Flywheel" in Rambler Special Data.*
VIBRATION DAMPENER REMOVAL & INSTALLATION: *See "Vibration Dampener" in Rambler Special Data.*

CAMSHAFT

Bearings–Steel-backed babbitt bushings.
Clearance–.002".
Camshaft Removal–*See "Camshaft & Bearings" in Rambler Special Data.*
End Thrust: Thrust plate on front face of engine between No. 1 bearing and camshaft sprocket. Endplay controlled by sprocket on shaft. (Press fit on shaft). **Endplay** .004-.006".
Timing Chain: Morse non-adjustable type. **Width** 1", **Pitch** 3/8", **Length** 22½" or 60 links.
Camshaft Setting: Install chain with punch mark on camshaft sprocket and mark on crankshaft sprocket adjacent and in line with each other across centerline of sprockets.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Rambler Special Data.*

VALVES

Tappet Clearance: Hot .015", Intake and Exhaust. Cold .016" Intake, .018" Exhaust.

Valve	Head Diameter	Stem Diameter	Length
Intake	1.594"	.3407-.3412"	4 25/32"
Exhaust	1.343"	.3407-.3412"	4 25/32"

Valve	Seat Angle	Lift	Stem Clearance
Intake	45° ①	.340"	.0018-.0033"
Exhaust	45° ①	.340"	.0018-.0033"

①—Valve face angle 44° (Intake & Exhaust).

►*VALVE GRINDING CAUTION:* Replace valve when refacing reduces distance from top of valve face to top of valve to 1/32"

Valve Springs: Install springs with closed coil end up against cylinder block and seated in counterbore in block.

Valve Spring Specifications

Valve	Lbs. Press.	Length
Closed	37-41	1 3/4"
Open	75-82	1 7/16"

Valve Guides: Use Tool J-2814 to remove guides, Tool J-1429-A to install guides. Drive guides flush with opening of guide bore in block.

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

Intake Valves—Open 10° BTDC, close 58° ALDC.

Exhaust Valves—Open 49° BLDC, close 19° ATDC.

NOTE—Above readings with .019" valve lash.

Valve Timing Check—Set valves on No. 1 cylinder at .003" lash. With No. 6 piston at TDC in firing position, timing will be correct if exhaust valve opens the same amount before DC on vibration dampener as intake valve opens after DC mark.

OILING SYSTEM

Crankcase Capacity: 4 qts. (refill).

Normal Oil Pressure: 30 lbs. at 20 MPH, 12 lbs. minimum at 600 RPM.

Pressure Regulator Valve—Non-adjustable spring loaded release valve located under plug near oil pump. Opens at 50-58 P.S.I.

Oil Pressure Indicator—Light goes on when Ignition switch is turned "ON". Goes out as oil pressure reaches 5-8 lbs. Electric Switch Rambler No. 3142826 is located on right side of crankcase.

Oil Pump: Gear type mounted on right side of engine driven by inclined shaft.

Oil Pump Installation—*See "Oil Pump" in Rambler Special Data.*

Oil Filter: Partial flow type. Replace element every 5000 miles or less as needed.

Replacement Filter Element—Rambler No. 3113312.

Crankcase Ventilation: Breather pipe in Valve Cover and filter in crankcase filler cap.

COOLING

Water Capacity: 11 qts. (1954); 12 qts. (1955). Add 1 qt. for heater.

Pressure Valve: 7 lb. radiator filler cap (std.) Rambler No. 3142965. 14 lb. cap Rambler No. 3141371, used on cars equipped with Air Conditioning.

Thermostat: Choke type. Rambler No. 3131817 (167-173°F), No. 3132708 (150°F), 3131985 (177-182°F) for use with Permanent Type Anti-freeze only.

Water Pump: Sealed packing and bushing type.

►*WATER PUMP LUBRICATION CHANGE:* Starting engine number H-57911 water pump lubrication fitting was eliminated and prelubricated water pump seal cartridge was used.

See "Rambler" in Water Pump Section.

Pump Removal—Drain cooling system, remove distributor, disconnect pump drive coupling (take out rear bolt), disconnect inlet hose, remove pump mounting screws.

Temperature Gauge: King-Seeley Electric (not "CV").

Dash Unit—King-Seeley 46325.

Engine Unit—King-Seeley 45780.

See "Temperature Gauges" in Miscellaneous Section.

CLUTCH

Borg & Beck 8A7. Assembly No. 987. Single plate.

See "Borg & Beck" in Clutch Section.

Clutch Disc Nos.	Borg & Beck No.	Nash No.
1954 (Std. Trans.)	381770	3133046
1954 (Overdrive Trans.)	381926	3133048
1955 (Std. & O.D.)	382347	3142241

Pedal Adjustment: Pedal free travel ½-¾". Adjust by loosening locknut and turning adjusting nut on connector link at clutch fork.

►*CAUTION: The pedal to beam rod should never be disturbed in service.* With pedal against floor board, outer end of beam lever should project ½" from beam toward the rear to provide proper leverage.

Removal: Remove transmission (see below), disconnect clutch pedal linkage, remove clutch housing and pan, punch mark flywheel, clutch cover and pressure plate. (Reassemble to same marks), take out clutch fork and mounting screws in cover flange.

SYNCHRO-MESH TRANSMISSION

Warner AS35-T96. 3 speed, helical gear type.

See "Warner Transmissions" in Transmission Section.

Transmission Controls: *See "Transmission Controls" in Transmission Section.*

Removal: (100" wheelbase cars and 108" wheelbase cars with Hydra-Matic Drive)—Move rear axle back, see "Removal" under REAR AXLE below, sliding propellor shaft universal joint from transmission. (108" wheelbase cars with Std. & Overdrive transmissions)—Disconnect center bearing crossmember from side rails, lower propeller shaft sufficiently to separate front section from transmission main shaft. Disconnect shift levers and speedometer cable, remove two upper transmission to bell housing bolts and install guide bolts in their place. Remove lower bolts and slide transmission out.

OVERDRIVE

Warner R10—*See "Warner R10" in Transmission Section.*

Overdrive Control: *See "Warner R10-R11 Overdrive Controls" in Transmission Section.*

HYDRA-MATIC DRIVE

Dual Range four speed automatic transmission with fluid coupling.

See "Hydra-Matic Drive" in Transmission Section.

►*PRODUCTION CHANGES AND REPLACEMENT PARTS CAUTION: See "Hydra-Matic Drive" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Hydra-Matic Drive" in Transmission Section.*

Lubrication—Check fluid every 1000 miles, drain and refill at 25,000 mile intervals.

Capacity—8½ qts. (9½ qts. after overhaul).

Checking Fluid Level—Set hand brake, place selector lever in "N" position, start engine and idle for a minimum of 2 minutes after transmission has reached normal operating temperature. With selector lever in "N" position, remove dipstick and check fluid level (dipstick located under right front floor plate). Add fluid to bring level to "F" mark.

►*CAUTION:* Do not check oil level when transmission is excessively hot and do not fill above "F" mark on dipstick.

►*OTHER HYDRA-MATIC SERVICE DATA: See "Hydra-Matic Drive" in Transmission Section.*

UNIVERSALS

Spicer, Mechanics, or Detroit—Two used on 100" wheelbase and 108" with Hydra-Matic transmission. Three used with 108" wheelbase with Synchro-mesh and Overdrive. (Two propeller shafts).

REAR AXLE

Own. Semi-floating, hypoid type with Hotchkiss drive.

See "Rambler Rear Axles" in Rear Axle Section.

Axle Ratio—Std. 3.8-1 (9-34), Overdrive 4.4-1 (8-35) Hydra-Matic 3.3-1 (13-43).

Backlash—.002-.006". Shim adjustment.

Axle Shaft Removal: Remove wheel, pull drum (use hub puller J-1644). Disconnect brake line and cable. Remove backing plate mounting bolt nuts, take off oil seal retainer, backing plate and wheel bearing adjusting shims. Withdraw axle using puller J-2498. Do not drag shaft on inner oil seal.

Rear Axle Assembly Removal: Raise and support rear end of body. Remove rear wheels, axle shaft nut and rear hub and drum. Disconnect parking brake cables at rear wheels, brake hose and shock absorbers. Remove rear spring clips and rear spring front eye brackets. Move axle to rear which will pull the front

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

universal off the transmission mainshaft spline. *NOTE*–On 108" wheelbase cars with two propeller shafts, remove the rear propeller shaft coupling nut from the coupling and tap the coupling off the splines of the pinion shaft with a soft hammer. The rear axle assembly in both cases may now be removed.

Wheel Bearing Adjustment: Shims behind brake backing plate.

SHOCK ABSORBERS

Delco. Direct acting type. Serviced by replacement. **Front**–Rambler No. 3117361. **Rear**–3117362.

FRONT SUSPENSION

►*FRONT SUSPENSION NOTE:* Heavier spring for air conditioned cars. See "Rambler" in Front Suspension.

Independent. Linked parallelogram type with coil springs located between upper end of steering knuckle pin and seat in outer wheel house panel.
See "Rambler" in Front Suspension.

King Pin Inclination–8½°.
Caster–Pos. 1° desired (limits Pos. ¾° to Pos. 1¼°).
Camber–Pos. ½° desired (limits Pos. ¼° to Pos. ¾°).
Toe-in–⅛" (1/8" to 1/4").
Toe-in Adjustment Note–Turn adjusting tubes in opposite directions to change toe-in. Turn adjusting tubes in same direction to align steering wheel when toe-in is correct. In either case turn adjusting tubes equally.
Toe-out on Turns–Outer wheel 20°, Inner wheel 22½° +½° or -0°.

STEERING

►*INTERMITTANT HORN OPERATION NOTE:* Horn button retainer plate ground wire can be installed between steering wheel nut and lower spring retainer attaching screw. Use a piece of No. 14 wire, with the insulation removed.
Gemmer. Worm & Roller with push-pull adjustments. *See "Gemmer Worm & Roller" in Steering Section.*
Steering Linkage: *See "Steering Linkage" in Steering Section.*
Steering Wheel & Horn Button Removal: *See "Gemmer Steering Gears" in Steering Section.*
Steering Gear Removal: *See "Gemmer Steering Gears" in Steering Section.*

BRAKES

Bendix (Lockheed) Hydraulic. Self centering (floating shoe) type. Hand lever applies rear wheel service brakes.
See "Bendix (Lockheed) Self-centering" in Brake Section.

►*1955 BRAKE SQUEAK CORRECTION: See "Bendix (Lockheed) Self-Centering" in Brake Section.*

►*1954 BRAKE PRODUCTION CHANGE (100" Wheelbase Synchro-mesh & Overdrive Trans. Cars):* Front wheel brake drums increased from 8" to 9" in diameter, beginning with Serial No. D-185770.
Drum Diameter–(Front Wheels) 9" (8" diameter on some early cars. See Production Change above).
Rear Wheels–8" (All Cars).
Wheel Cylinder Diameter–1" (front); 13/16" (rear).

Lining Width x Length

Primary Shoes	Front Wheels	Rear Wheels
Early 100" WB. ①	1¾" x 8 27/64"	1¼" x 8 27/64"
Other Cars ②	2" x 9 7/8"	1¼" x 8 27/64"

Secondary Shoes	Front Wheels	Rear Wheels
Early 100" WB. ①	1½" x 8 27/64"	1" x 8 27/64"
Other Cars ②	1¾" x 7 11/16"	1" x 8 27/64"

①–Synchro-mesh & Overdrive Cars only (see Production Change above).
②–Includes Early Hydra-Matic Drive & 108" WB. Cars, and all later cars.
Lining Thickness–.214" (All Cars).
Braking Power–(Early 100" WB. with 8" Front Drums) 60.2% Front, 39.8% Rear. (All Cars with 9" Front Drums) 63.7% Front, 36.3% Rear.
Clearance–All shoes just free of drag with brakes centralized (by hard application and releasing pedal). Eccentric adjustment for each shoe.

Standard Master Cylinder: In engine compartment under steering column.
Checking Fluid–Raise hood and fill from engine compartment. Check at 1000 mile intervals.
Removal–Remove from beneath car. Not necessary to disturb other parts.

MISC. MECHANICAL

Windshield Wipers: Vacuum Link & Arm type. *See "Windshield Wipers" in Miscellaneous Section.*
Air Conditioning: Nash-Hudson Air Conditioning. Thermostatic control with magnetic clutch on compressor unit. Switch has two positions "LOW" and "HIGH".
See "Nash-Hudson Air Conditioning" in Miscellaneous Section.

Power Operated Top (Convertible Models): Electric type with reversible motor.
See "Power Operated Tops" in Miscellaneous Section.

TIGHTENING SPECIFICATIONS

1947-50 COMMANDER

	Ft. Lbs.

ENGINE

1947-49 CHAMPION

ENGINE REMOVAL: For Oil Pan Removal & Engine Servicing. Drain cooling system, position car under chain hoist, disconnect and remove parts as follows:

1. Remove hood (disconnect at hinge arms).
2. Remove center cylinder head capscrew and install lifting eyebolt (cylinder head must be in place on block). Attach chain hoist to eyebolt and take up slack in hoist chain.
3. Remove two clutch housing to engine rear plate dowel bolts and nuts, and 4 housing to engine plate bolts and nuts on lower edge. Remove 3 capscrews at top of housing by working through opening in front floor (housing will be secured by one bolt and nut at oil pressure pipe).
4. Disconnect battery ground at battery.
5. Remove 3 radiator core-to-core support screws on left side and free headlamp wiring harness from clips on radiator and fender.
6. Remove 2 water outlet-to-cylinder head capscrews.
7. Disconnect wires at generator and primary lead at ignition coil.
8. Disconnect accelerator cross shaft from push rod and heat indicator from cylinder head.
9. Take off starter (not necessary to disconnect wires) and place to left of hand brake cable.
10. Remove water pump inlet hose and 3 radiator core-to-core support screws on right side.
11. Take out radiator core, rotate fan and move headlamp wiring harness to clear radiator inlet and outlet.
12. Remove 4 fan capscrews, remove fan and pulley. Lay headlamp harness on top of core support.
13. Disconnect flexible fuel pump connection from front gasoline line, and exhaust pipe from manifold, lower pipe off manifold studs.
14. Loosen engine breather pipe capscrew. Disconnect windshield wiper hose at manifold and flexible line from upper oil pressure gauge pipe.
15. Remove one bolt and nut on clutch housing at oil pressure pipe.
16. Remove front engine support from front frame cross-member and front engine insulator.
17. Push car to rear to free engine from clutch housing, slowly raise engine while moving forward, tilting engine until clutch clears transmission main drive gear shaft, and engine rear plate clears center tie rod, then push engine to rear, turning engine 45° to right, finally hoist engine slowly from chassis.

NOTE—Engine should be placed on an engine stand for ease in performing service work.

Engine Installation Note: When installing engine, align clutch driven plate with pilot bearing and lubricate bearing with wheel bearing grease. Place car in high gear so that transmission main drive gear can be rotated by moving car for engaging clutch driven member. Use two ¼" x 8" tapered drifts to align clutch housing and engine rear plate, coat two clutch housing dowel bolts with white lead, install these bolts and tighten in place with nuts.

CAUTION—Do not drive these dowel bolts into place.

Engine Rear Mounting Note—See same note for Commander model (below) for rear engine mounting installation directions.

1947-49 COMMANDER

ENGINE REMOVAL: For Oil Pan Removal & Engine Servicing. Drain cooling system, position car under chain hoist, disconnect and remove parts as follows:

1. Remove hood (disconnect at hinge arms).
2. Disconnect battery ground from cylinder head.
3. Remove exhaust pipe hanger ahead of muffler and bracket and clamp from pipe at clutch housing. Disconnect exhaust pipe at manifold.
4. Remove transmission (see Transmission Removal on car model page).
5. Disconnect clutch operating shaft from throwout shaft by taking out cotter pin and inner clevis pin from sleeve next to clutch housing and pulling shaft and sleeve toward frame.
6. Take out mounting bolts and remove rear engine mounting lower cushions and spacers and front engine mounting insulator-to-support bolts.
7. Remove center cylinder head capscrew and install lifting eyebolt (cylinder head must be in place on block). Attach chain hoist to eyebolt and take up weight of engine.
8. Remove right horn from cowl (not necessary to disconnect horn wires) and place on wiper motor.
9. Remove engine breather pipe. Disconnect windshield wiper hose at manifold and flexible line from upper oil pressure gauge pipe. Disconnect flexible fuel line coupling at fuel pump.
10. Disconnect radiator inlet and outlet hoses. Remove 6 radiator core-to-core support screws and free headlamp wiring harness from clips on radiator and fender.
11. Take out radiator core, rotate fan to clear radiator inlet and outlet. Remove fan and pulley.
12. Disconnect wires at generator and primary lead at ignition coil. Remove magnetic switch from starter without disconnecting wires and place switch to left of hand brake cable.
13. Disconnect accelerator cross shaft at push rod and heat indicator from cylinder head.
14. Push car to rear slowly, raise front of engine and maneuver front end into core support opening, then push engine to rear (swing rear end to right), finally hoist engine slowly from chassis.

NOTE—Engine should be placed on an engine stand for ease in performing service work.

Engine Installation Note: When installing engine, align clutch driven plate with pilot bearing and lubricate pilot bearing with wheel bearing grease.

Engine Rear Mounting Note—When installing rear mountings, make certain that spacer tube in place in biscuit type rubber mountings and tighten these mounting bolts with torque of 25-30 ft. lbs.

CAUTION—Spacer tube regulates compression of the rubber biscuits and must not be shortened or omitted. Excessive tightening of the bolts will damage spacer tubes.

1950-52 CHAMPION
1950 COMMANDER

ENGINE REMOVAL: Drain cooling system and disconnect water outlet from cylinder head. Remove hood and disconnect battery ground strap. Proceed as follows:

1. Disconnect inlet hose from water pump.
2. On Commander, remove radiator brace.
3. Remove fan blades and pulley.
4. Remove radiator and shroud assembly.
5. Remove center cylinder head capscrew and replace with an engine lifting eyebolt. Attach hoist and take up slack in chain.
6. On the Commander, remove stabilizer shaft assembly with frame brackets attached and turn steering wheel all the way to the right.
7. On the Champion, remove both clutch housing-to-engine rear plate dowel bolts and on the Commander, drive or pull out the dowel rings. Then remove bolts holding clutch housing to rear engine plate.
8. Remove clutch housing cover plate from floor pan and remove clutch housing-to-block capscrews.
9. Disconnect exhaust pipe front support clamp and then remove exhaust pipe flange-to-manifold nuts and lower pipe off manifold studs.
10. Disconnect windshield wiper hose and disconnect upper pressure pipe from flexible coupling.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

11. Remove distributor assembly and on the Champion, also remove oil level gauge adapter.
12. Remove starter (without disconnecting wires) and tie to left hood hinge.
13. Disconnect accelerator cross shaft from crank rod, and disconnect all other wiring from engine.
14. Disconnect fuel pump flex lines.
15. Remove front engine support insulator-to-crossmember (crossmember bracket on Champion) and also disconnect engine ground strap.
16. Roll car rearward and separate engine rear plate from clutch housing. Slowly pull engine up and forward, keeping engine tilted until clutch pressure plate clears transmission pinion. Move engine toward rear and turn engine to the right, then slowly lift engine out of chassis.

Engine Installation Note: Lubricate pilot bearing and make sure clutch driven plate is aligned with it. Locate chain hoist so lift chain will exert a rearward force on engine as it is lowered into position. On the Commander, place a hydraulic jack under rear of transmission and raise it so pinion is near its normal operating position. Slowly lower engine into chassis, tilting rear of engine downward, engage pinion and clutch release bearing. After end of pinion has entered clutch assembly, engage pinion shaft and driven plate splines. Temporarily align clutch housing with engine rear plate by means of two tapered drifts, then install dowel bolts of the Champion or the dowel rings of the Commander. Draw dowel bolts into place by tightening the nuts. ***CAUTION—Do not drive dowels into place.*** Install bolts which retain clutch housing to rear engine plate. Install clutch housing-to-block cap screws and install clutch housing cover plate. Complete installation by reversing removal procedure.

1951-52 COMMANDER

ENGINE REMOVAL: Remove battery. Remove hood. Drain coolant. Remove lock wire from hood latch. and remove the wiring harness from radiator air deflector clips. Disconnect the horn wires at the relay and push them through the hole in air deflector. Remove air deflector and radiator. Disconnect Climatizer hoses from water pump and swing them back out of the way. Remove Climatizer blower assembly from fire wall and swing back out of way. Remove carburetor air cleaner. Disconnect the throttle cross shaft-to-throttle control rod. Disconnect fuel line to pump coupling. Disconnect the vacuum line from vacuum advance. Disconnect coil to distributor wires and remove wires from spark plugs. Remove the spark plug wire retaining brackets from valve covers and remove distributor. Disconnect starter cable, heat indicator wire from cylinder head. Disconnect oil pressure gauge pipe. Remove the cotter pin from inner end of clutch operating shaft sleeve and move shaft away from the clutch release shaft. Remove transmission. *See Transmission Removal on Studebaker car page.*

▷*NOTE—Automatic Transmission Removal, see "Studebaker Automatic Transmission" in Transmission Section for complete data.*

Attach lifting hooks to the exhaust manifolds and take up the slack in the chain. Disconnect engine ground strap from frame front crossmember. Disconnect both front engine supports. Remove the two crossmember to engine rear support bolts. Disconnect exhaust pipe flange and remove exhaust pipe bracket. Raise engine until the exhaust connection and cross-over pipe can be slipped off the manifold studs. Remove manifold heater valve at this time. Lift the engine and at the same time pull the engine forward so that the clutch clears the fire wall. Tilt engine up at front and remove it from the car.

1953-54 MODELS

ENGINE REMOVAL: Drain cooling system and crankcase, and remove radiator inlet hose. Remove wiring junction block and horn relay from fan shroud. Pry open wiring harness clips and move harness out of way. Remove fan blades and pulley. Remove cap screws which hold radiator core to support, remove core. Disconnect Climatizer hoses (if so equipped) from water pump and cylinder head. Disconnect and remove battery. Remove carburetor air cleaner, fuel pipe between pump and carburetor. Disconnect fuel pipe-to-pump, and oil pressure gauge flexible couplings, windshield wiper hose (if used), and electric cables. Separate horn cable at connector. (On V8 remove spark modifier pipe between distributor and carburetor, remove distributor.) Disconnect accelerator cross shaft. Remove upper stud nuts from engine front support insulators. Disconnect engine ground strap from right front engine support bracket. Disconnect flexible coupling in fuel line. Remove exhaust pipe flange-to-manifold nuts and U-clamp at clutch or converter housing bracket. Lower pipe off manifold studs. (On V8 remove exhaust cross-over pipe.) Disconnect front propeller shaft from transmission companion flange and remove propeller shaft stud nuts. Slide propeller shaft assembly rearward on slip yoke splines. Tape bearings to hold in place. Move shaft to one side as far as possible and tie in position. Disconnect transmission linkage and remove speedometer cable and pinion from transmission case. Disconnect rod from clutch release shaft lever. Remove two screws holding clutch operating shaft, bracket and bearing assembly to transmission case and pull bracket and bearing assembly off shaft. **(Automatic Drive)** Remove four engine rear support screws which hold insulators to converter housing. **(Standard or Overdrive)** Remove two bolts which hold insulator and cage assembly to engine rear support crossmember. Turn wheels to right to clear oil pan. (On Champion replace center, No. 1, cylinder head cap screw with engine lifting eyebolt.) (On V8 attach sling to intake manifold and hoist.) Slowly hoist engine up and forward until transmission clears rear support crossmember, remove engine.

1955 CHAMPION

ENGINE REMOVAL: *NOTE*–If same engine block is to be reinstalled, engine should be disconnected at junction of clutch housing or torque converter housing (torque converter should be disconnected from engine drive plate so that converter will remain on transmission splines when engine removed). If new block to be installed, clutch housing or converter housing can be removed with engine, after removing transmission (this will allow housing alignment to be checked before engine reinstalled).

1) Remove hood and upper air deflector. On sedans and station wagons, remove radiator core. Disconnect Climatizer hoses (if so equipped) from water pump and cylinder head elbows. On coupe and hardtop models, remove fan blade assembly and fan shroud. Disconnect and remove battery and remove carburetor air cleaner.
2) Disconnect windshield wiper hose and oil pressure gauge line from the flexible coupling. Disconnect cables from generator, starter solenoid, ignition coil, and heat indicator engine unit.
3) Remove cotter key and take out clevis pin connecting accelerator cross shaft to bellcrank rod. Remove lower stud nut from engine front support insulators and disconnect engine ground strap from right front engine support bracket.
4) Remove exhaust pipe flange to manifold nuts, remove U-clamp at clutch or converter housing bracket, and lower exhaust pipe off manifold studs. Remove starter motor. On coupes and hardtops turn front wheels all the way to the right. On sedans and station wagons, disconnect one end of the front tie rod, remove shaft from steering bellcrank and remove bellcrank out of way to provide clearance for oil pan. Disconnect gas tank to fuel pump line at flexible coupling.
5) Remove center (No. 1) cylinder head capscrew and replace it with an engine lifting eyebolt. Attach lifting device and raise engine just enough to take weight off front supports.
6) On Automatic Drive models, disconnect wire from anti-creep switch and disconnect accelerator bellcrank to transmission rod. Remove converter housing lower plate, and disconnect torque converter from torque converter drive plate (*see "Studebaker Automatic Transmission" in Transmission Section*).
7) Remove clutch housing to engine bolts and drive out clutch housing dowel pins. Raise engine slightly and move it forward sharply to break it loose from clutch housing. Continue to push engine forward until transmission spline clears clutch assembly, then lift engine out of car.

1955 V8 MODELS

ENGINE REMOVAL: *NOTE*–If same engine block is to be reinstalled, engine should be disconnected at junction of clutch housing or torque converter housing (torque converter should be disconnected from engine drive plate so that converter will remain on transmission splines when engine removed). If new block to be installed, clutch housing should be removed with the engine for checking alignment.

1) Remove hood, upper air deflector and fan shroud. Disconnect and remove battery. On sedan and station wagon models, remove radiator core and water pump manifold. On coupe and hardtop models, remove fan blade assembly. Disconnect Climatizer hoses (if so equipped) from water manifold. Remove generator and fan belt.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

2) Remove starter and remove exhaust crossover pipe. On sedan and station wagon models, remove steering bellcrank shaft. On coupe and hardtop models, turn steering gear all the way to left to provide clearance.

3) Remove carburetor air cleaner, fuel pump to carburetor pipe, and the spark modifier pipe. Unhook spark plug wires, remove spark plug cable support brackets from rocker arm cover, remove distributor clamp screw and remove distributor. Disconnect fuel pump inlet line at flexible coupling, and disconnect any vacuum connections at intake manifold.

4) Disconnect oil pressure gauge line at flexible coupling and disconnect wires at heat indicator gauge and ignition coil. Disconnect accelerator pushrod at throttle control bellcrank. On cars equipped with overdrive, disconnect wire at kick-down switch. On cars with Automatic Drive, disconnect the wire at anti-creep switch and disconnect accelerator bellcrank to transmission rod at bellcrank. Remove converter drive plate to torque converter bolts (see *"Studebaker Automatic Transmission" in Transmission Section*).

5) Remove upper stud nuts from engine front support insulators and disconnect engine ground strap. Place a sling under intake manifold, attach hoist and raise engine just enough to take weight off engine supports. Remove clutch housing to engine bolts and take off the clutch housing front cover plate.

6) If clutch housing to be removed with engine, remove transmission. Remove the two capscrews holding clutch operating shaft, bracket, and bearing assembly to transmission case. Remove cotter key and clevis pin from inner end of clutch operating shaft sleeve and move clutch operating shaft away from clutch release shaft.

7) On models equipped with Automatic Transmission, remove the four engine rear support insulator capscrews which hold insulators to converter housing. On models equipped with overdrive or standard transmission, remove the two bolts which hold insulator and cage assembly to engine rear support crossmember.

8) On coupe and hardtop models, turn wheels to right to move steering bellcrank off to the side to provide additional clearance for oil pan. Push engine sharply forward to disengage clutch housing dowels. Continue to push engine forward until transmission spline is clear, then raise engine out of car.

ENGINE MOUNTINGS

1951-52 CHAMPION

1951-52 CHAMPION ENGINE MOUNT CHANGE (To Correct Low-speed Engine Vibration): When this vibration caused by rapid movement of engine in mountings when engine suddenly accelerated (but not due to rough engine in need of tune-up), this low-speed vibration can be reduced by installing new type engine mountings as follows:

(1) Front Support Insulator Spacer No. 519917. These spacers have been lengthened 3/32" (overall length 1 27/32"). Use with following insulators:

(2) Engine Front Insulators No. 514711 (Upper), No. 513104 (Lower). These insulators are of 40 durometer rating and are stamped "40" (previous type insulators were 50 rating).

(3) Engine Rear Support Insulator No. 532238. This insulator has same durometer rating as previous type but center block on lower or compression side has been removed (end blocks unchanged). If new insulator not available, previous type No. 529338 insulator can be modified by removing this center block.

CAUTION—When correcting vibration, make certain that no metal-to-metal contact exists between top of rear mounting insulator retainer and underside of clutch housing. If clearance at this point not adequate, install spacer washers against the spotfaced bolt holes in the housing.

OIL PAN

1947-49 MODELS

OIL PAN REMOVAL: Car manufacturer recommends that engine be removed from chassis. See ENGINE REMOVAL (preceding).

1947-49 CHAMPION

OIL PAN INSTALLATION: Check engine front plate gasket and replace if required. Install pan side gaskets with tight fit against front plate gasket. Next install oil pan filler block gasket (use only iron filler blocks on these cars). Do not tighten timing cover to block screws. Install rear oil pan gasket and guide oil pan into place using pilot screws. Tighten oil pan screws. Finally tighten oil pan filler block screws on timing gear cover.

1950-54 CHAMPION

OIL PAN REMOVAL & INSTALLATION: ***NOTE—it is not necessary to remove engine to remove oil pan.***

Removal: Remove oil level gauge. Raise car and support it with stands, and drain oil from crankcase. On 1953 Long Wheelbase models, swing wheels to right and remove oil pan screws and remove pan. On other models, disconnect tie rods and reach rod from steering bell-crank. Remove retaining pinch bolt and remove bell-crank from shaft. On 1950-52 models, remove shaft and bracket assembly from bell-crank and swing bell-crank to left as far as possible. If necessary, remove front splash pans for access to front screws in oil pan. Remove screws and oil pan.

Installation: Filler block should be removed for proper installation of oil pan side gaskets. Remove the four filler block block-to-engine plate screws and remove filler block. If filler block adheres to front engine plate gasket, use a thin spatula and carefully separate gasket and filler block. If gasket is damaged, cut away exposed section, then cut the amount required from a new gasket and fit it into place. Clean oil pan and mounting flanges of block. Apply Perfect Seal or its equivalent to flanges and position new side gaskets. Place filler block on front plate and install a screw in one of the upper holes. Using a hardwood stick, pry upward against filler block and install opposite screw. Install two remaining screws and tighten until heads of screws just engage lock washers. With all gaskets in position, install oil pan. After tightening oil pan screws securely, tighten the four support-to-filler block screws. Install front splash pan.

1950 COMMANDER

►**OIL PAN REMOVAL & INSTALLATION**—***Not necessary to remove engine from car.***

Removal: Drain oil, remove oil level gauge stick. Disconnect and remove front stabilizer shaft by disassembling link assembly at each side and taking *off shaft bushing retainer at each frame side rail.* Disconnect both tie rods at steering knuckle arms, remove steering bell crank shaft and bracket assembly by loosening clamp bolt holding bellcrank on shaft and taking out bracket mounting bolts. Swing bellcrank and tie rods toward left side of car and tie up out of the way. Remove lower right clutch housing bolt for clearance in removing pan. Remove engine front support-to-crossmember bolts. Place hydraulic jack under oil pan mounting flanges at each side of engine and as far forward as possible (CAUTION—do not place jack under center of pan), raise engine so that front support is 1½" from top of front crossmember and insert a block of wood to hold engine in this position. Remove jacks. Take out oil pan screws and remove pan.

Installation: After installing oil pan, raise engine just enough to remove wood block, then lower engine and reassemble all disconnected parts.

1951-54 V8 MODELS

►*1953 LONG WHEELBASE MODELS (EXCEPT LAND-CRUISER)*—Swing wheels to right to move steering bell-crank out of way and remove oil pan.

OIL PAN REMOVAL: Support car on jacks and drain the oil. Disconnect one of the battery cables and remove the starter. Disconnect one end of the right tie rod and the reach rod from the steering bellcrank. Remove the steering bellcrank shaft and bracket and swing the bellcrank out of the way to the left side of the car. Remove the exhaust crossover pipe. Remove oil pan screws and drop the pan.

Installation Oil Pan Gaskets: The front filler block must be removed to install the side pan gaskets. Remove the four screws holding the filler block to the timing gear cover, and using a thin spatula carefully separate the filler block from the timing gear cover gasket. If this gasket is damaged, cut away the exposed portion of the gasket and then from a new gasket, cut the required amount and fit it to the timing gear cover using Perfect Seal or its equivalent. Clean oil pan and oil pan mounting flanges of the block. Apply sealer to the flanges and place new gaskets on the side flanges. Place filler block against timing gear cover and install a screw in one of the upper holes. Using a hardwood stick, pry upward against the filler block and install the opposite upper screw. Install the remaining two screws and tighten until the heads just touch the lock washers. With all the gaskets in position install the oil pan and tighten the pan screws evenly. Then tighten the four timing gear cover-to-filler block screws.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

1955 CHAMPION

OIL PAN REMOVAL (CHAMPION): Remove oil level gauge. Raise car and support it with stands, drain oil, and remove splash pans. On sedans, and station wagons, swing wheels to right to move steering bellcrank out of the way. Remove oil pan screws and remove pan.

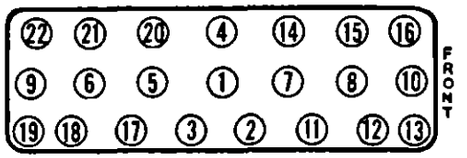
1955 V8 MODELS

OIL PAN REMOVAL (COMMANDER & PRESIDENT): Remove oil level gauge and adapter tube. Disconnect one battery cable. Raise car, drain oil and remove starter. On coupe and hardtop models, swing wheels to right to move steering bellcrank out of way. On sedans and station wagons, remove steering bellcrank assembly. Remove exhaust crossover pipe. Remove oil pan cap screws and remove pan.

1955 ALL MODELS

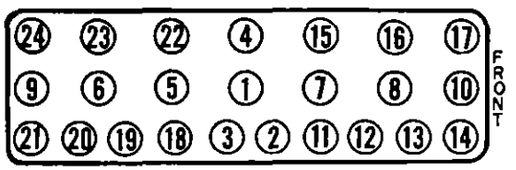
INSTALLATION (ALL MODELS): For installation of oil pan, the filler block must be removed. Remove the four screws holding filler block to engine front cover (V8), or to engine front plate (6 Cyl.). With a thin spatula or putty knife, carefully separate filler block from engine front cover gasket (V8) or engine front plate gasket (6 Cyl.). If this gasket is damaged, cut away the exposed portion of the gasket. Then cut the required amount from a new gasket and fit it in place as necessary using Perfect Seal or its equivalent to secure gasket in place. Apply a sealer to threads of the four front cover or front plate to filler block cap screws. Install filler block with a screw in one of the upper holes. Using a hardwood stick, pry upward against filler block and install a screw in the opposite upper hole. Install two remaining screws and tighten all four screws until heads just contact lockwasher. With all gaskets in position, install the oil pan and tighten the screws evenly. Then tighten the four filler block screws. Complete the installation by reversing removal procedure.

CYLINDER HEAD & MANIFOLD



ALL MODELS

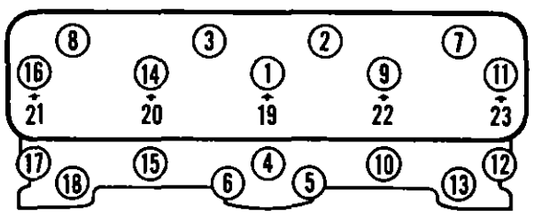
CYLINDER HEAD GASKET: Coat lower face of gasket and face of cylinder head with Perfect Seal gasket cement before installing (use sparingly and see that it does not enter screw holes and water passage openings).



1947-55 MODELS (EXC. V8)

CYLINDER HEAD INSTALLATION: Use Torque Indicating Wrench to tighten cylinder head capscrews, tighten in correct sequence as shown in diagram. With engine cold, tighten all nuts evenly to correct tension. Then run engine until it is thoroughly warmed up and recheck all capscrews (additional tightening may be necessary for correct tension).

Tightening Torques—*See "Tightening Specifications" above.*



CHAMPION CYLINDER HEAD

1947-50 COMMANDER

V8 MODELS

CYLINDER HEAD INTERCHANGEABILITY (RIGHT TO LEFT BANK): Both cylinder heads are identical (water pump ports are provided at front and rear of all heads). It is necessary to block off the rear port not in use with a dummy plate and gasket. *NOTE*—Heat indicator engine unit must be mounted in the water outlet opening cover plate at rear of the left bank cylinder head.

V8 CYLINDER HEAD

V8 MODELS

CYLINDER HEAD INSTALLATION: Clean all threads using a tap and die. Check head for warping *(NOTE—* If necessary, head can be planed .015". Apply gasket compound to gasket and install. *(CAUTION—Be sure main oil gallery-to-rocker arm assembly oil passage at rear of the right bank (on front of left bank) is not blocked by gasket).* Install cylinder head on the hollow dowel. Dip capscrews in engine oil and install the nine short screws in the two outer rows of holes and the five medium length screws in the center row of holes and tighten finger tight. Install rocker arm assembly (see "Rocker Arm Assembly"). Install and tighten long head screws finger tight. Insert rocker arm assembly capscrews through rocker arm brackets. Tighten all cylinder head capscrews in correct sequence as shown in diagram. Tighten water pump manifold screws alternately until they are tight.

Tightening Torques—*See "Tightening Specifications" above.*

ORIGINAL BORE & PISTONS

1947-54 MODELS

ORIGINAL BORE & PISTON SIZES: Bore Sizes: Marked by figure stamped on top face of cylinder block next to each cylinder bore as follows:

Champion		6 Cyl. Commander	
Mark	Size	Mark	Size
0	3.000"	25	3.3125"
05	3.0005"	3	3.313"
1	3.001"	35	3.3135"
15	3.0015"	4	3.314"
2	3.002"	45	3.3145"
25	3.0025"	5	3.315"

Commander V8

Mark	Size
50	3.375"
55	3.3755"
60	3.376"
65	3.3765"
70	3.377"

Original Pistons—Stamped with size of cylinder bore in which pistons are installed.

Replacement Pistons—Stamped figure on top indicates actual size of piston. Pistons furnished std. & .002", .004", .010", .015", .020", .030" oversize.

1955 MODELS

ORIGINAL BORE & PISTON SIZES: Cylinder bore sizes are marked by a figure stamped on top face of cylinder block next to each cylinder bore as indicated below. Replacement pistons corresponding to these sizes are available under the part number for standard size pistons. The oversize is marked on the top of each piston. *NOTE—When replacing pistons in an engine which has been in use, the cylinder bore markings can no longer be used as a guide. It is important that pistons be selected to fit the cylinder bore.* See *"Fitting Pistons" on car model page.*

Cylinder & Piston Markings: Cylinder bores may vary in size from Standard to .0025" oversize in increments of .0005". Champion bore sizes vary from 3.000" (stamped "O"), to 3.0025" (stamped "25"). Commander and President bore sizes vary from 3.5625" (stamped "25"), to 3.5645" (stamped "45").

PISTON PINS

ALL MODELS

PISTON PIN REMOVAL & INSTALLATION: Use tool J-1293-A (Champion) J-1293-C (Comm. & Pres.).

Removal—Place rod and piston assembly on assembling fixture. Remove lock nut and star washer from clamp screw, and by tightening lock nut on other end of clamp screw, remove clamp screw, remove the

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

screw from connecting rod. Then slide piston and connecting rod off piston pin.

Installation—Place piston pin on assembling fixture, slide piston and connecting rod into position. (Oil squirt hole and number on connecting rod should be on the solid side of the piston). Insert piston pin clamp screw in connecting rod, install star washer and lock nut, and tighten nut securely. On connecting rod Nos. 1, 3, & 5, the clampscrew nut is installed on the T-slot side of the piston. On Nos. 2, 4, & 6 the nut is installed on the solid side of the piston. When installing the screw regardless of the number of the rod, if the rod is held with the offset of the rod to the left and the screw is inserted from the front, the nut will be located on the correct side in relation to the piston. Be sure to align the flat surface on the piston pin with the flat surface on the clamp screw.

PISTON RINGS

1954-55 MODELS

Replacement Rings: Three types of Perfect Circle piston rings available for service replacement:

Standard Production Type Sets—Plain iron rings without chrome plating. To be used on relatively new engines. Furnished Std. and .020", .030", .040" Oversize.

Chrome Top Ring Sets—Same as standard ring set except that top ring is solid chrome-plated to increase ring life and oil control. Used on relatively new engines or after a rebore job, especially where heavy duty service is anticipated. Furnished Std. and .020", .030", .040" O.S.

"2 in 1" Chrome Sets—Set contains solid chrome-plated top ring and, in addition, an oil ring assembly made up of two chrome-plated steel rails, one cast iron separator or spacer and two complete sets of expander rings, one "Normal Pressure" set and one "Hi-Pressure" set. "Normal Pressure" set used where taper of bore does not exceed .006". "Hi-Pressure" set used where taper exceeds this limit. In general, use "2 in 1" set for all except new and rebored engines. Furnished Std. & .020", .030" O.S.

"2 IN 1" CHROME RING SET INSTALLATION CAUTION: Distribute oil control ring expander, separator, and ring rail gaps as follows: Place expander spring in ring groove with gap positioned above end of piston pin. Install one steel section with gap approximately 90° from spring gap. Install cast iron separator with gap approximately 90° from steel rail gap. Install remaining steel section with gap approximately 180° from gap of first steel rail. *NOTE*—Gap in rails and separator must not straddle humps on expander spring.

CRANKSHAFT & MAIN BEARINGS

V8 MODELS

►*V8 ENGINE OIL LEAK AT REAR OF ENGINE:* May be caused by step on rear bearing cap interfering with oil pan and preventing pan from compressing gasket properly. Check step on right rear corner of bearing cap and eliminate interference by grinding step down to a depth of 1/8" or even with crankcase flange (start grinding at rear of cap and extend relief forward to approximately center of capscrew boss).

►*V8 ENGINE REAR MAIN BEARING OIL SEAL PRODUCTION CHANGE & SERVICE INSTALLATION NOTE:* A revised type seal is being used in production and for service replacement. Later type seal can be identified by **two raised dots** immediately ahead of "Brummer Stude 530311" marking on seal (old seal had one dot). New seal has same Studebaker part number as old seal.

►*CHAMPION REAR MAIN BEARING OIL SEAL SERVICE INSTALLATION CHANGE:* It is recommended that new seals be installed "dry". Also it is not necessary to rotate seal halves as in the past, at time of installation. They may be installed horizontally in line with joint of bearing halves.

1949-50 COMMANDER

REAR MAIN BEARING OIL SEAL INSTALLATION: Seal assembly consists of bearing cap side seals, and "Brummer" type crankshaft seal.

Installation: "Brummer type" Oil Seal. Loosen the bearing capscrews of the three intermediate bearings two turns until the "Brummer" seal has been installed. If these screws are loosened too much while the front bearing screws are tight, the front bearing will be damaged. Place the neoprene seal in the cross grooves of the main bearing cap so that the inner end of each seal is flush with or inset not more than 1/16" from the inner end of the grooves. Thoroughly clean the channel just forward of the rear flange using a swab saturated with alcohol and pulling it through the channel several times. Dry the channel thoroughly. Dip the ends of the seal in liquid soap and spread the liquid soap throughout the inside of the center groove. Carefully insert the end of one half of the seal between the crankshaft and the cylinder block at the crankshaft rear flange. Work the seal around the crankshaft until the end emerges on the opposite side. Place the ends of the other half of the seal against the ends of the half that is in the engine. Then work both halves of the seal around the crankshaft until the exposed joint is approximately 45° from the lower surface of the block. During the installation procedure, great care must be taken to avoid scuffing the soft center sealing cushion at the bottom of the groove of the seal. Apply oil between the compression flange of the seal and the crankshaft journal. Install the bearing cap and the two neoprene seals. Be sure that the exposed part of the "Brummer" oil seal smoothly straddles the rear flange of the bearing cap. Install the bearing capscrews and tighten all capscrews to the specified torque of 88-93 ft. lbs. Lockwire all screw heads. Trim the end of the neoprene seal that protrudes past the cap flush with the side of the cap. Install new cork seals being sure seals are not damaged during the installation. Run the engine for 45 minutes then check for oil leaks.

1949-55 CHAMPION
1951-55 V8 MODELS

REAR MAIN BEARING OIL SEAL INSTALLATION: *NOTE*—Seal assembly consists of three types used together: (1) Cork Seals between sides of bearing cap and block, (2) Neoprene seals in groove in face of bearing cap, (3) "Brummer" type seal on crankshaft journal (installed in block and bearing cap). Install seals as follows:

Neoprene Seals—Place new seals in cross grooves of bearing cap with inner end of seal not more than 1/16" from inner end of groove, press seals firmly and uniformly into grooves and trim outer ends flush with sides of bearing cap. *CAUTION*—Seals must not be more than 1/16" from inner edge of bearing cap and must not be so long as to interfere with Brummer seal.

"Brummer" Type Seal—Remove old seal, thoroughly clean seal channel just forward of rear flange by using a swab saturated with alcohol or similar solvent, dry channel thoroughly. Blunt the sharp edge of the flange on which the seal is mounted using the flat side of a screwdriver blade or similar tool (this will prevent scuffing inner edge of seal during installation). Install seal DRY as follows: Insert upper half between crankshaft and block at the rear flange with the wiping lip of the seal pointing forward or away from the flywheel, work seal around crankshaft until ends are horizontal and in line with the bearing cap face (see V8 Engine Note below), use great care to avoid scuffing the soft center sealing cushion at the bottom of the seal groove. Install lower half of seal on bearing cap flange, oil wiping edge of seal and crankshaft journal, install bearing cap and tighten bearing cap bolts to correct torque.

Cork Seals—After bearing cap installed, drive new cork seals down into grooves between sides of bearing cap and block (use drift and light hammer). *CAUTION*—Use care not to split or damage these seals.

Oil Leak Check—After installing new seals, run engine for approximately 45 minutes, then check for oil leaks.

►*V8 ENGINE NOTE:* To facilitate installation of the upper half of the Brummer seal, the three intermediate bearing cap screws can be loosened two turns. *CAUTION*—Do not loosen these intermediate bearing caps more than indicated or front bearing may be damaged.

VIBRATION DAMPENER

ALL MODELS

VIBRATION DAMPENER & PULLEY ASSEMBLY: (Removal)—Remove fan shroud. Straighten edges of capscrew lock plate and remove vibration dampener capscrew and washer. Remove the six nuts from bolts in fan belt pulley hub and remove capscrew lock plate, pulley, and vibration dampener from bolts.

Installation—When assembling rubber cushions and dampener flywheel, be certain the cushions are seated in dampener to assure proper vibration control. Dampener and pulley must be assembled with bolt holes aligned. When installing vibration dampener on bolts, place lock plate against rubber cushion with mark on lock plate facing away from

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

flywheel and pointing toward "IGN" mark on flywheel. Then install dampener on bolts so "IGN" mark is approximately aligned with keyway in hub. When pushing dampener on the bolts, lockplate prevents rubber cushion from being pushed out of flywheel holes. Place pulley on bolts and install capscrew lock plate (be sure lockplate is not installed on the offset bolts as it will interfere with installation of one of the nuts). Install and tighten vibration dampener nuts to 13-17 ft. lbs.

ENGINE FRONT COVER

1947-55 CHAMPION

ENGINE FRONT COVER: Removal—Remove fan shroud, radiator core, and vibration dampener. Using Puller Set HM-925, remove the crankshaft pulley (use HM-925-13 to prevent damage to crankshaft threads). Take out cover retaining screws and bolts and remove the cover.

Engine Front Cover Seal (Crankshaft Front Seal) Installation: Install new felt oil seal in cover, using hub of crankshaft pulley to seat it in recess in cover.

Engine Front Cover Installation: Install cover on engine using a new gasket. Install all the retaining bolts, leaving them finger tight so cover can center itself as the crankshaft pulley is installed. Using Pusher Set J-4704, press crankshaft pulley into position. Tighten cover bolts and screws securely and install vibration dampener, radiator core and shroud.

V8 MODELS

ENGINE FRONT COVER: Removal—Drain cooling system and remove fan shroud and radiator core. Remove fan belt and power steering belt (if so equipped). Remove fan blade assembly and take off the water manifold. Remove fuel pump to carburetor pipe and remove fuel pump. Remove vibration dampener and fan pulley hub (on Power Steering cars a second pulley is used). Remove cover screws and remove cover.

Engine Front Cover Seal (Crankshaft Front Seal) Installation: Remove felt oil seal with an ice pick and clean out the recess in cover before installing new seal *(NOTE—Do not remove the four self tapping screws holding the seal retainer plate in position).* Install a new seal and wet it with clean engine oil. Insert crankshaft pulley hub to locate seal in center position.

Engine Front Cover Installation: Install cover on engine, using a new gasket, and install cover screws, but do not tighten. Using Pusher Set J-4704, install crankshaft pulley hub to locate hub and center cover properly. Tighten cover screws. Install fuel pump and the fuel pump to carburetor pipe. Assemble and install vibration dampener and tighten retaining screws to proper torque. Install water manifold assembly using new gaskets, and replace fan blade assembly. Install fan belt and adjust it to proper tension. Install power steering belt (if so equipped) and adjust it to proper tension. Install radiator core and fan shroud.

CAMSHAFT & BEARINGS

1947-54 CHAMPION
1947-50 COMMANDER

CAMSHAFT (Removal—With Engine Out of Car): Remove vibration dampener assembly, and then remove fan drive pulley, using Universal Puller HM-925. Remove timing gear cover, and using Universal Puller, remove crankshaft gear (do not remove camshaft gear). Remove cylinder head, valves, and valve springs, and oil pump, and invert engine so lifters will not interfere with camshaft removal. Remove capscrews and lockwashers attaching timing gear thrust plate to cylinder block. Remove camshaft carefully to avoid damaging bearings.

Installation—Reverse removal procedure outlined above. Adjust camshaft endplay (see Camshaft Endplay following). Make sure that camshaft and crankshaft gears are aligned with marked tooth on camshaft gear meshed between two marked teeth on crankshaft gear.

1951-54 V8 MODELS

CAMSHAFT (Removal): Turn crankshaft until timing marks show "IGN" mark **directly** under pointer on timing gear cover, and the distributor rotor is in the No. 6 firing position. Remove rocker arm assemblies, push rods, and valve lifters. Remove timing gear cover. Turn camshaft just enough to expose thrust plate retaining screws (do not remove camshaft gear), and remove thrust plate screws (turn camshaft back to align timing marks of the two gears). Remove gear and shaft as a unit. CAUTION—After camshaft removed, be very careful not to disturb position of distributor rotor.

Installation—Install camshaft, positioning "O" mark on camshaft gear between timing marks on crankshaft gear. Check distributor rotor to make sure it is pointing directly to rear (No. 6 firing position). Turn camshaft to expose thrust plate screw holes in block. Position thrust plate and install capscrews and lockwashers. Check camshaft endplay (see Camshaft Endplay following): Install timing gear cover, valve lifters, rocker arm assemblies and pushrods.

1951-52 V8 MODELS

1951-52 REPLACEMENT CAMSHAFT (For Engines Before 1952 No. V-164807): *CAUTION—TWO DIFFERENT CAMSHAFT KITS HAVE BEEN FURNISHED. DATA BELOW APPLIES TO LATEST KIT No. 532310 (superseding Kit No. 532178).* Kit consists of one camshaft and additional parts listed below which must be INSTALLED AS A UNIT WITH THE CAMSHAFT. See installation directions below.

CAMSHAFT KIT No. 532310—Contains one camshaft (not furnished separately), 16 Adjusting Screws, and two Valve Tappet Clearance Setting Plates as follows:

Camshaft—This camshaft has smaller (1 1/16") base circle cams than original type, and increased (55° instead of 37°) cam ramp than 2nd type camshaft (as included in Kit No. 532178).

CAMSHAFT IDENTIFICATION—Above camshaft can be identified by either of the following marks: (1) 5/8" counterbore in forward end of shaft at camshaft gear retaining screw hole, OR (2) Two grooves machined in front end face of shaft.

CAUTION—All camshafts with above markings have increased cam ramp and REQUIRE SPECIAL TAPPET CLEARANCE as specified below.

Adjusting Screws—No. 531161. These screws are 1/16" longer than previous type and must be used with new camshaft (to compensate for decreased size of cam). These screws have wider oil groove to insure groove registering with rocker arm oil passage and CAN BE USED IN ALL ENGINES (regardless of camshaft type).

Valve Clearance Setting Instruction Plate—No. 532260 (2 furnished). These plates are designed to be attached to two center rocker arm shaft support studs on EACH cylinder head and specify special tappet clearance as follows: "Valve Clearance—.023-.025" Cold-Standing, .021-.023" Hot-Running."

VALVE LIFTER REPLACEMENT—*NEW LIFTERS MUST BE INSTALLED WHEN NEW CAMSHAFT INSTALLED.* Use new type lifters as listed below (these lifters have increased crown on lower face to move contact area away from edge of lifter). Select lifters for proper fit in guide holes in block as directed under Camshaft Installation below.

Part No.	V8 Valve Lifters	Size
531696		Standard
531721		.0005" Oversize
531722		.001" Oversize

Camshaft Installation: When camshaft being replaced to correct cam lobe wear, ENGINE MUST BE CAREFULLY CLEANED (see below), correct type Adjusting Screws and Valve Lifters must be installed (see "Valve System" following), and valve lifters must be selected for proper fit.

Cleaning Engine (when replacing Camshaft): With the engine out of the chassis and the old camshaft removed, remove engine oil pan and oil pressure regulator valve parts, then thoroughly clean engine as follows **with a flushing gun:**

1() Clean engine oil pan.
(2) Remove plugs from rocker arm shafts, clean oil passages with a rifle brush, thoroughly clean entire overhead valve mechanism.
(3) Remove pipe plug slightly to rear of distributor mounting pad, pipe plug in main oil gallery at rear of engine, pipe plug in cross-drilled passage of main oil gallery at right rear of engine, clean all oil passages.
(4) Clean all of the followng parts: Oil Pressure Relief Valve parts and oil passages, Camshaft bearing bores, Valve Lifter bores and valve lifter chamber, Timing Gear case and cover, inside of rocker arm covers and engine crankcase.
(5) Remove oil filter cartridge, thoroughly clean filter case, install NEW filter cartridge.
(6) After engine has been reassembled and installed in car, run 4 quarts of flushing oil through engine for approximately 5 minutes, then drain flushing oil and install correct quantity of NEW ENGINE OIL in crankcase.

Valve Clearance Setting Instruction Plate Installation THESE PLATES MUST BE INSTALLED ON ALL ENGINES WITH NEW CAMSHAFT (which has increased cam ramp) to insure correct tappet clearance being used on these engines.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*TAPPET CLEARANCE SETTING CAUTION*—All engines with the new camshaft must have tappet clearance set in accordance with the above instruction plate. ***See Tune-up and Valve Timing Data on Studebaker Commander V8 car pages for correct tappet clearance for each engine.***

1955-CHAMPION

CAMSHAFT REMOVAL (Champion): *NOTE—Camshaft can be removed with the engine in the chassis by removing fender, grille, and radiator core as an assembly.* Remove cylinder head, manifold assembly and valve cover plates. Take out valve locks, valves and valve spring retainers. Turn cylinder block over so that valve lifters will fall free of camshaft. If engine not removed from car, tie or block valve lifters so they will not interfere with cam lobes during removal. Remove oil pan, oil pump, and oil pump drive shaft. Remove vibration dampener, fan drive pulley and engine front cover. Unless camshaft is to be replaced, it is not necessary to remove camshaft gear. Turn crankshaft until camshaft thrust plate cap screws are visible through spokes of timing gear. Remove capscrews and lockwashers retaining thrust plate and carefully slide camshaft and gear out of cylinder block, being careful not to nick or scratch camshaft journals, lobes, or bearings.

1955 V8 MODELS

CAMSHAFT REMOVAL (Commander & President): With engine in car, camshaft can be removed as follows: Turn crankshaft until timing mark shows directly under pointer on engine front cover and distributor rotor is in the No. 6 firing position (in this position the timing mark on the camshaft gear is aligned between the marks on the crankshaft gear). On coupe and hardtop models, remove the fan shroud. On all models remove the radiator core, fan blade assembly and water manifold. Remove rocker arm covers, rocker arm assemblies and pushrods. Remove carburetor and intake manifold assembly. Remove breather pipe, valve lifter cover, and take out the valve lifters. Remove fuel pump and take off engine front cover (see "Engine Front Cover" above). Turn camshaft just enough to expose thrust plate retaining screws and remove screws. Turn gear back to align timing marks of the two gears. Remove camshaft and gear as an assembly, being careful not to damage camshaft bearings. *CAUTION—With camshaft removed, do not move crankshaft or disturb position of distributor rotor.*

1947-55 MODELS

CAMSHAFT ENDPLAY: Endplay regulated by thickness of spacer installed on camshaft directly behind timing gear and is equal to amount by which thickness of spacer exceeds thickness of thrust plate bolted on cylinder block. When installing new parts, measure both thrust plate and spacer with a micrometer, select parts so that endplay is .004-.006" (1947-48); .003-.006" (1949-55 Except V8 Models); .005-.007" (1951-54 V8 Models); .003-.006" (1955 V8 Models). The endplay is the difference in thickness of spacer and thrust plate, with the thrust plate being the thicker.

TIMING GEARS

ALL MODELS

TIMING GEARS: Camshaft Gears (All Models)—Holes provided in gears for gear puller to remove gears. Use Tool HM-925 Universal Puller. To install gears, use gear pusher Tool HM-861Y. *CAUTION*—Do not drive gear on with hammer which will loosen gear at hub.

Replacement Camshaft Gears: Furnished in three sizes. 'S'—Standard. 'H'—High Limit. When replacing gear on engine with considerable service, install next largest camshaft gear size. For reconditioned engines with new camshaft and main bearings, use same size gear as one removed. Crankshaft gear furnished in standard size only.

►**Crankshaft Gear Removal & Installation Note**—Use same puller and replacer tools as used for cmashaft gear.

VALVE SYSTEM

1947-55 MODELS (EXC. V8)

VALVE CHAMBER BAFFLES: *Oil baffle plates* are provided to prevent excessive oil splash in valve spring chamber. One baffle is used in each half of the chamber. Baffles straddle lifters. Champion baffles are same for both halves of the chamber and are interchangeable. Commander baffles are marked front and rear (install as marked).

Installation—Insert baffle so curved portion is upward, with notch aligned with cover plate screw hole. Install cover plate, making sure notches straddle cover plate screws. With cover installed, baffle is held tightly in place against cover and cover plate screws.

VALVE STEM SEALS

V8 MODELS

VALVE STEM SEAL TESTING: Using vacuum equipment on distributor analyzer, remove valve covers and rocker arm assembly. Wipe excess oil from top of valve spring retainers. Adjust vacuum control on analyzer to indicate 15" with hose closed off. Using a high tension cable nipple as an adapter on the end of the vacuum hose, place adapter in center of valve spring retainer, over valve stem. Vacuum on gauge should read 15" if seal is in good condition. *NOTE*—A fast check of seals can be made by compressing a small vacuum cup over valve spring retainer. If there is leakage, vacuum cup will not stay compressed.

VALVE SPRINGS

1947-55 MODELS (EXC. V8)

VALVE SPRING INSTALLATION: Springs should be installed with closed-coil end of spring upward.

Valve Lifter Tension Spring. Consists of 'U' shaped flat spring installed so as to engage lower end of valve stem and upper end of lifter (spring tension keeps lifter on cam lobe). Make certain that tension springs in place when valves and springs installed.

Spring Dampeners (Commander 6 Cyl.)—Consist of open sided cages installed on upper (closed coil) end of each valve spring. Make certain that dampeners in place when spring installed.

V8 MODELS

VALVE SPRING ASSEMBLY INSTALLATION: Install dampers on "closed coil" end of spring so that damper fingers contact sides of spring. Place springs on valve stem so damper is next to the cylinder head. Install the valve spring retainers on the springs making sure the retainers with the skirts are on the intake valves. Compress the spring until the retainer is past the inner groove of the valve stem far enough to permit installing the rubber seal. Place the keepers in position and slowly release the spring.

►*CAUTION*—Always install new rubber seals whenever valve springs have been removed.

VALVE GUIDES

V8 MODELS

VALVE GUIDE REMOVAL AND INSTALLATION: Valve guide tool J-4673 is used to remove and install the valve guides. Drive guide out of cylinder head from the combustion chamber side.

Installation—Coat valve guide lightly with white lead and start chamfered end into cylinder head from the combustion chamber side. Place the installing plate on the face of the head so that the long side of the plate is paraliel to the end of the head and the bore of the plate centered over the guide bore. The plate is marked "Intake" on one side and "Exhaust" on the other side. Be sure that the exposed mark of the plate corresponds to the valve guide being installed so that the depth of the counterbore of the plate will control the depth to which the guide is driven into the head. Insert the driver through the plate and into the guide. Drive the guide into the head until the shoulder of the driver contacts the bottom of the counterbore in the plate.

ROCKER ARMS

V8 MODELS

ROCKER ARM ASSEMBLY: Two identical hollow steel shafts (ends plugged) are used. Four removable supports doweled to each shaft with cylinder head capscrews. Three springs used to position rocker arms against supports. Lubrication is supplied by oil from the main oil galleys to a passage in the cylinder head which leads the oil up around the relieved capscrew shank in the rocker arm front support on the left bank and the rocker arm rear support on the right bank. The bracket is drilled to connect the capscrew hole with the rocker arm shaft hole. The oil flows under pressure to the rocker arms and through holes drilled in the rocker arms to the adjusting screws and through the center of the adjusting screws to the push rods.

►*DISASSEMBLY CAUTION:* Mark rocker arms, brackets, and the rocker arm shaft so that they can be reassembled in their original position.

CONTINUED ON NEXT PAGE

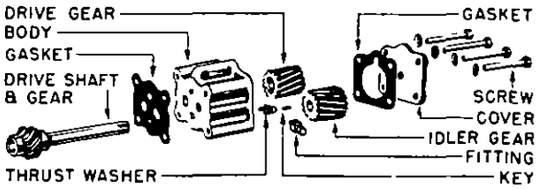
CONTINUED FROM PRECEDING PAGE

Reassembly—Make certain the oil holes and grooves in the rocker arm shaft and the oil holes in the brackets, rocker arms and adjusting screws are clean. Check rocker arms and shaft clearance which should be .0005" to .0025". Test springs. It should require 9-1/2 to 10-1/2 lbs. to compress springs to 2-1/32". If not within these limits, replace spring. Place a spring washer between two flat washers and install on one end of the rocker arm shaft and install a new cotter pin in the shaft. Place a rocker arm on the shaft next to the inner flat washer. *(CAUTION*—The oil groove side of the shaft must be at the bottom of the rocker arm and the adjusting screw end of the rocker arm be on the same side of the shaft as the cylinder head capscrew groove in the shaft). Place a shaft bracket on the shaft so that the bottom of the bracket is on the oil groove side of the shaft and align the cylinder head capscrew hole in the bracket with the capscrew groove in the shaft. Insert a capscrew through the bracket. Clamp the bracket in a vise, and install the second rocker arm on the shaft, positioning it in the same way as the first rocker arm. Slide a spacer spring on the shaft and, holding the spring compressed, slide the third rocker arm and the second bracket on the shaft and position it in the same way as the first bracket. Align the screw hole in the bracket with the groove in the shaft, insert a capscrew and release the spring. Install the rest of the rocker arms, springs and brackets in the same manner. Slip the two flat washers with the spring washer between them, on the end of the shaft and install a new cotter pin in the shaft. If correctly assembled, when installed on the engine, the flat side on the end of the rocker arm shaft will be at the rear on the right bank and at the front on the left bank.

VALVE LIFTER ALL MODELS

VALVE LIFTER INSTALLATION: Thoroughly clean lifter bores in cylinder block and inspect for smoothness. With lifter and bore clean and dry, check lifter fit and select correct lifter size. Lifters furnished Std., .001", .005" oversize. See ".005" Oversize Lifter Installation" below.

Checking Lifter Fit in Bore—When properly fitted, the valve lifter should just slide into place from its own weight. If .001" oversize lifter does not restore proper clearance, bore must be reamed to .005" oversize, and .005" oversize lifters installed.



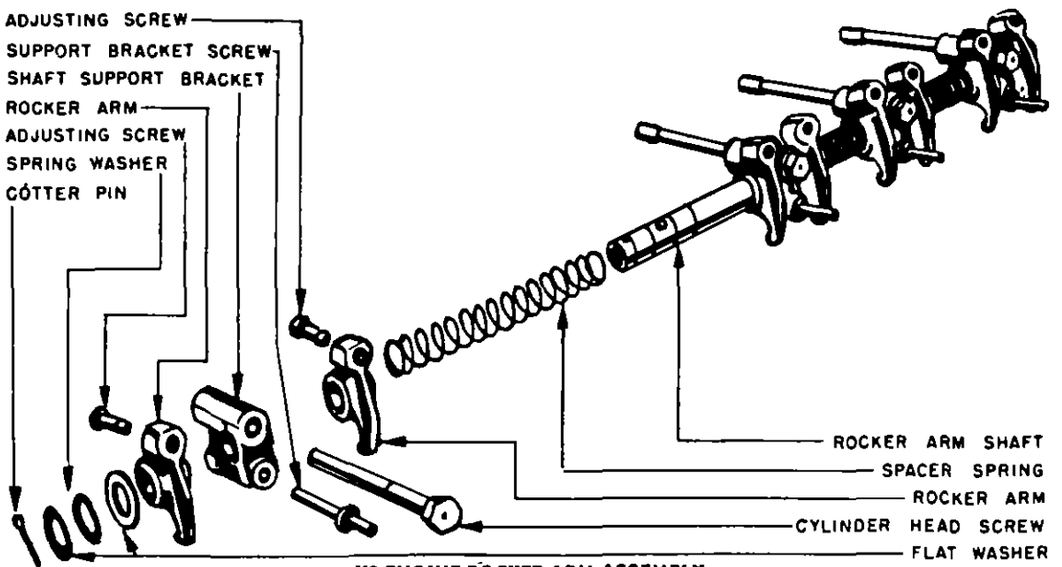
1949-55 MODELS

.005" OVERSIZE VALVE LIFTER INSTALLATION (1949-55 MODELS): .005" oversize service replacement valve lifters are available for all models (1949-55). Special reamers are required for reaming engine block lifter bores as follows: 32L-STB (1949-55 Champion & 1949-50 Commander 6); 1356-STB (1951-54 Commander V8); 1352-STB (1955 Commander & President V8).

OILING SYSTEM

1947-55 CHAMPION

OIL PUMP: Removal & Disassembly—Disconnect oil pressure pipe. After removing four cover screws and washers, remove pump body cover, gasket and idler gear. Remove drive gear using tool J-2959. Remove Woodruff key and horseshoe shaped thrust washer to permit removal of oil pump body and gasket. If it is necessary to remove pump drive shaft and gear, the oil pan must be removed. Remove distributor and push oil pump drive shaft inward, and remove it from the crankcase. To remove gear from oil pump drive shaft, press out the gear-to-shaft pin and then press shaft out of gear.



CHAMPION OIL PUMP

Inspection: Inspect pump cover for flatness and deep scratches or score marks. Check clearance between oil pump gears and pump body by placing a .005" feeler gauge between teeth of oil pump gear and body on each side of pump. The pump should be locked tight. The total clearance should not exceed .010". If pump gears can be rotated with the two .005" feelers in place, the pump body is worn and should be replaced. Check gears for smoothness, deep scratches and score marks. Replace all defective parts. Clearance between end of gears and cover plate must not exceed .007". To check this clearance, the lower ends of the gears should be exactly flush with the lower surface of pump body when gears are resting against the upper part of pump body. A new gasket .004-.006" thick, when compressed will provide proper clearance.

Installation & Reassembly: *(CAUTION—If oil pump drive shaft removed, install EXACTLY as described below to obtain correct ignition timing).*

Oil Pump Drive Shaft Installation—Install drive shaft, temporarily engaging camshaft gear and oil pump drive gear in any position. Then turn the crankshaft until No. 1 piston is on a compression stroke and the "UDC 1-6" mark on vibration dampener is directly under pointer on engine front cover. Slide the oil pump drive shaft away from camshaft to disengage the camshaft gear and turn drive shaft until keyway is pointing directly upward when the two gears start to engage. Pull the shaft into position so that the two gears fully mesh (the drive shaft will rotate so that the keyway is toward rear of engine). Install distributor to hold oil pump drive shaft in position while installing remainder of pump assembly (with slot in end of distributor shaft engaged, rotor should line up with No. 1 terminal in distributor cap).

Oil Pump Assembly—Dip each part of pump in clean engine oil before assembly. Place a new gasket and oil pump body over pump shaft and install horseshoe washer, woodruff key, and drive gear. Install idler gear, new cover gasket, and pump body cover. Secure entire assembly in place with the four cover screws.

V8 ENGINE ROCKER ARM ASSEMBLY

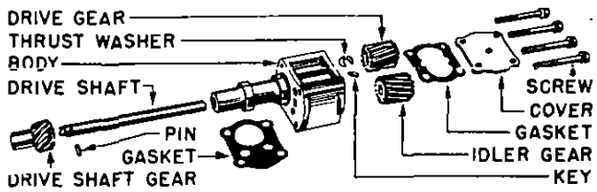
CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Remove oil pressure pipe fitting from pump body and prime pump with clean engine oil. Install fitting and oil pressure pipe.

COMMANDER (1947-48)

OIL PUMP REMOVAL: Car manufacturer recommends following procedure for oil pump removal (and vacuum booster pump on 1947 models) with engine in chassis:



1. Drain radiator. Remove hood (disconnect at hinge arms). Position car under chain hoist with hook slightly to left of engine and turn front wheels to extreme right. Disconnect front engine insulator from engine support (take out bolts and nuts).
2. Remove center cylinder head capscrew and install lifting eyebolt. Attach chain hoist hook to eyebolt.

IMPORTANT—Upper end of chain hoist should be approx. 15° to left of engine.

3. Take off starter (not necessary to disconnect wires) and place to left of hand brake cable.
4. Disconnect clutch operating shaft from throwout shaft by taking out cotter pin and inner clevis pin from sleeve next to clutch housing and pulling shaft and sleeve toward frame.
5. Take out mounting bolts and remove rear engine mounting lower cushions and spacers.
6. Remove radiator inlet and outlet hoses.
7. Disconnect oil gauge pipe at pump. Loosen opposite end at flexible coupling and move pipe for clearance (do not bend pipe). On 1947 models with booster pump, remove pipe between vacuum booster (on outer end of oil pump) and manifold tee.
8. Hoist engine until bottom of right side of front engine support insulator is 1⅝" above support. With engine in this position, right front corner of cylinder head should be 17¼" from closest point on right fender skirt (if necessary engine can be levered and blocked into position for this clearance).
9. **On 1947 models,** remove booster body, gasket, and vane, by taking out 8 mounting screws (use 5/32" Allen wrench). Pull rotor off shaft using 3/16" drift punch inserted in hole on side of rotor. Take off booster base plate and gasket. Remove 4 screws in booster adapter plate (use 7/32" Allen wrench), take off plate, gasket and idler gear. **On 1948 models,** remove 4 oil pump cover plate screws, take off plate, gasket, and idler gear.
10. Pull pump out of engine with twisting action, keeping pump toward front of engine as far as possible (outer end of shaft will pass between ends of steering knuckle upper control arm-to-frame rear bracket bolts).
11. Remove pin from driveshaft gear, press shaft out of gear and pump body. Pump gear can then be removed from shaft by pressing on outer end of shaft.

Disassembly of Pump: With pump cover off, remove cover gasket, lift out idler gear, drive out pin in pump driveshaft gear, press shaft and gear out of driving gear in an arbor press. Then press pump gear off shaft, remove thrust "C" washer and woodruff key from shaft.

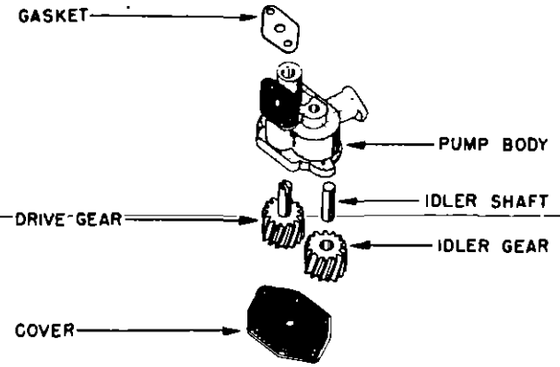
Reassembly of Pump: Install thrust "C" washer on shaft and woodruff key in slot adjacent to "C" washer groove, press oil pump drive gear on shaft. Install shaft with gear in pump body. Press driveshaft gear on opposite end of shaft with pin hole in shaft and gear in alignment. Use new 3/16" pin to lock gear to shaft (peen pin securely). If new driveshaft and driveshaft gear installed, proper endplay secured by pressing shaft on gear with .003" feeler inserted between gear and upper end of pump body, drill hole in shaft using hole in gear as a guide, ream hole to 3/16", use new 3/16" pin to lock gear (peen pin securely). Use new gaskets throughout. Install pump on engine, prime pump with engine oil by disconnecting oil gauge line at elbow on pump.

1947-50 COMMANDER OIL PUMP

Installation: Use new pump body gasket. Turn pump shaft so that pump drive gear keyway faces toward rear of car, make certain that crankshaft turned to #1 piston firing position with mark "UDC.1-6" at timing pointer, engage pump drive shaft gear with camshaft gear. With pump in position against engine block, keyway should point almost straight downward. Use new cover gasket when installing cover, reassemble all parts disconnected when removing pump.

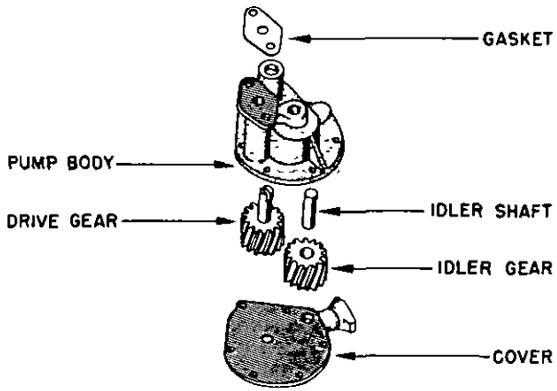
1949-50 COMMANDER

OIL PUMP REMOVAL: Disconnect battery, turn crankshaft to #1 piston firing position with mark "UDC.1-6" at timing pointer. Proceed as follows:



1)—Take out starter mounting capscrews, tie starter up out of the way (not necessary to disconnect cables and wires).
2)—Use jack to raise rear end of engine just enough to remove weight from rear engine mountings, remove support mountings from cross-member, remove clutch operating shaft bracket-to-crossmember bolts.
3)—Place hydraulic jack between right frame side rail and base of engine block with ram of jack just to rear of breather tube, move rear of engine about 2" to left.
4)—Disconnect oil pressure gauge line at oil pump cover elbow.
5)—Take out four capscrews in pump cover which mount pump body on engine, remove cover and pump body assembly.

Disassembly, Reassembly & Installation of Pump: *See 1947-48 Commander (above).*



V8 MODELS

OIL PUMP: Removal—Remove oil pan and take out the two oil pump retaining nuts and lockwashers. Slip pump assembly off mounting pad studs and remove gasket.

Disassembly: Remove cotter key retaining floating oil strainer pipe in pump body and remove strainer. (NOTE—the floating oil strainer is serviced only as an assembly and should not be disassembled). Remove cover screws and pump body cover. Remove idler gear, drive gear and shaft (do not disassemble drive gear and shaft). Clean oil strainer with solvent and dry it thoroughly.

1953-55 V8 ENGINE OIL PUMP

1951-52 V8 ENGINE OIL PUMP

Inspection: Inspect pump cover for deep scratches or scores and for flatness. Check clearance between oil pump gears and pump body by placing a .005" feeler gauge between teeth of oil pump gear and body on each side of pump. If pump gears can be rotated with the two .005" feelers in place, the pump body is worn and should be replaced. Check gears for smoothness, deep scratches and score marks. Replace all defective parts. With weight of gears resting against upper part of pump body, place a straightedge across face of pump body and measure distance between gear face and straightedge. This clearance should not exceed .007".

Reassembly: Place drive gear and shaft assembly in pump body. Install idler gear on idler shaft. Install pump body cover and cover screws (no gasket is used

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

between body and cover). Insert pipe of floating oil strainer in cover inlet, making sure ears of strainer flange straddle projection on pump cover inlet and install cotter key. *CAUTION—Do not use a cotter key smaller than 1/8". If a smaller key is used float can become disengaged from pump, causing damage to engine.*

Installation: Clean all trace of old gasket off pump mounting flange and rear bearing cap pad. Install a new gasket and position slot in pump drive gear shaft so it will mate with tongue of the oil pump drive shaft and coupling, and install pump on mounting studs. Install nuts and lockwashers and tighten securely to 13-17 ft. lbs.

COOLING SYSTEM

1954 MODELS

►***COUPE & HARDTOP FAN SHROUD REWORK (To Prevent Interference With Radiator Core):*** On cars prior to Serial Nos. G-1288410 (15G) and 8364361 (5H) lower flange should be turned down. To make this correction support shroud on work bench and use a hammer to tap the flange evenly along its full length until turned edge is in approximate plane with shroud mounting flanges. When installing shroud, locate it upward as far as mounting holes permit.

IGNITION NOTES

V8 MODELS

DISTRIBUTOR DRIVE SHAFT ASSEMBLY: Removal—Turn crankshaft until "IGN" mark on vibration dampener is directly under pointer on engine front cover and distributor rotor is in line with No. 1 spark plug terminal of cap. Remove cap from distributor housing and carburetor air cleaner from carburetor. Disconnect coil-to-distributor secondary cable at coil. Remove spark plug cables, cable brackets and distributor cap as a unit. Disconnect coil-to-distributor primary wire at distributor. Disconnect spark modifier pipe. Remove distributor clamp capscrew and lift distributor out of cylinder block.

Installation: The "IGN" mark on vibration dampener must be directly beneath pointer. Position distributor so that spark modifier is to front and pointing slightly toward right. Turn rotor approximately 30° clockwise and insert the oil pump drive shaft and coupling into cylinder block opening. When the teeth on the distributor shaft gear contact the teeth on the camshaft gear, the rotor will turn counter-clockwise, and as the teeth mesh, the distributor assembly will seat on the cylinder block. At the same time the tongue of the oil pump drive shaft will enter the groove of the oil pump shaft. The rotor will now point directly forward and be in line with the No. 1 terminal of the distributor cap. (NOTE—Very slight misalignment may cause difficulty in engaging the oil pump drive shaft tongue with the groove of the oil pump shaft). After the distributor gear is in mesh with the camshaft gear, the engine may be cranked to give proper alignment. Maintain a light pressure on the distributor while cranking the engine to facilitate the engagement. Install distributor clamp and capscrew. Connect the coil-to-distributor cable. Connect spark modifier pipe. Install spark plug cables, cable brackets and secure cap with retainer springs. Connect coil-to-distributor secondary cable. Install carburetor air cleaner. Check timing.

FUEL SYSTEM NOTES

1951-54 V8 MODELS

►**FUEL PUMP SUPPORT BRACKET PRODUCTION CHANGE:** Several changes have been made during production as follows:

Support Change (Beginning Eng. No. V-96218): Part No. 531650. design changed to provide for closer or dowel fit of attaching bolts to provide uniform location of pump on support for better control of pump stroke.

Support Gasket Change (Beginning Eng. No. V-97480): New gasket, Part No. 531640, which is .007" thick used to insure support being firmly bolted in place and to provide desired fuel pump stroke. This gasket should always be used with Support No. 531650.

CAUTION—Whenever this No. 531640 gasket used with previous type fuel pump support, make certain that support is not positioned too close to block which **might result in excessive fuel pump stroke and damage to the pump.**

1951-54 V8 MODELS

FUEL PUMP SUPPORT BRACKET CHECKING: Check support to assure correct fuel pump stroke as follows: Place support on flat surface and measure height from bottom of support perpendicularly to line across bottom of pump mounting holes. This distance must be 4 35/64". *CAUTION*—Gasket No. 531640 (.007" thick) must be used when installing support on engine.

Fuel Pump Push Rod Checking—When support removed, check push rod for straightness and evidence of scoring.. If rod scored, polish scored areas until rod slides freely in guide bore. If rod bent, replace with new rod No. 529123.

CLUTCH NOTES

1950 CHAMPION

CLUTCH CHATTER (Champion Early 1950)—When clutch chatter in the 1950 Champion (prior to Serial No. G-573846) is the result of engine movement when car is being accelerated from low speed, newly designed clutch linkage should be installed. Remove old Clutch Operating Shaft and Lever assembly, Support Bracket and Clutch Pedal Shaft-to-Operating Shaft Rod. Mount new Support Bracket, Part No. 537911, on new Operating Shaft, Part No. 527893, using a new Bearing and Retainer Kit, Part No. 527424. Insert end of operating shaft in shaft sleeve and secure support bracket on frame cross-member with the upper bolts. Align hole in operating shaft with hole in sleeve and install retaining pin. Position Brake Cable Bracket, Part No. 527909, (with cable loop upward) on the forward side of frame cross-member, securing it with support bracket side mounting bolt. Attach front end of pedal shaft-to-clutch operating shaft rod, and then bend back half of rod to align it with clutch pedal lever. Adjust pedal free travel.

1950 CHAMPION & COMMANDER

CLUTCH OPERATING SHAFT RATTLE CORRECTION (Commander & Champion Early 1950)—Remove clutch operating shaft bracket and bearing and install neoprene washer Part No. 527281 between bushing and felt washer on each side of bushing. Thoroughly lubricate with SAE 30 motor oil and reassemble bracket and shaft.

1954 MODELS

►***CLUTCH PEDAL REWORK (To Prevent Spring Breakage):*** Hook of clutch pedal pull-back spring tends to open each time pedal is depressed, rather than slip in groove of anchor stud, causing spring end of hook to bend a slight amount and eventually causing spring wire fatigue and hook breakage. To prevent recurrence of condition with a new spring, it is necessary only to reduce contact area between anchor stud and the hook by cutting away the metal of the stud as follows: Start two 30° chamfers at two opposite ridges of hexagonal stud ½" from shoulder, and toward end of stud. Cut these chamfers equally to a point where a ⅛" thick section of the grooved end of the stud remains when metal toward end of stud and on each side of ⅛" section is cut away.

ALL MODELS

PROPELLER SHAFT & SUPPORT BEARING ASSEMBLY: Propeller shaft is a two unit type (separate front & rear shafts) with intermediate bearing in Support Assembly on frame crossmember.

Propeller Shaft & Support Bearing Removal: Mark yokes of universal joints to assure original position at reassembly. Disconnect rear propeller shaft from rear axle companion flange. Remove shaft support stud nuts, lock washers, and plain washers. Disconnect front propeller shaft from transmission companion flange. Remove bearing cups and bearings or tape them securely in place on joint crosses. Then move assembly rearward, slipping the shaft support off the cushions and threading the front shaft rearward through center crossmember.

Installation—Reverse removal procedure.

Rear Shaft Removal: Straighten ear of lockplate, loosen grease washer nut and unscrew it from shaft. Mark universal joint flange and rear axle companion flange to assure original position and balance at reassembly. Remove U-bolts holding rear joint bearing cups and cross to rear axle flange. Shift shaft forward and separate joint by prying with a suitable bar between companion flange and universal cross. Hold bearing cups on the cross while separating joint to avoid dropping cups and spilling bearings. Then remove bearing cups and bearings or tape them securely in place on cross.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Slide shaft rearward, slipping end of slip yoke out of splines of front shaft. To remove grease washer nut from slip yoke, first remove cork grease washer and washer retainer from within the nut and slide nut off slip yoke. Cork grease washer and washer retainer are split to facilitate removal.

Installation—Reverse removal procedure. Tighten U-bolts and nuts to 20-22 ft. lbs. torque.

Front Shaft Removal: Remove rear shaft and shaft support assembly. Mark front shaft universal joint flange and transmission companion flange. Remove U-bolts holding joint bearing cups and cross to transmission companion flange. Separate joint by prying with suitable bar between companion flange and universal cross. Hold bearing cups on cross while separating joint to avoid spilling bearings. Remove bearing cups and bearings or tape them in place on the cross. Then slide rear end of shaft out of crossmember and remove from chassis.

Installation—Reverse removal procedure. Tighten U-bolts and nuts to 20-22 ft. lbs. torque.

Support Bearing Servicing: Bearing is sealed type (prepacked with lubricant) **and must never be washed in gasoline or other solvents.**

►*CAUTION: Do not re-install support bearing which has been washed in gasoline or solvent.*

Support Bearing Removal: Remove rear shaft. Remove lock plate and spacer from projecting end of front shaft, and remove shield. Remove shaft support stud nuts, lockwashers, and plain washers. Slide bearing and support assembly off front shaft and support cushions. Remove dust shields from front shaft. To remove support bearing from support use a suitable tube which will fit the outer race of the bearing and, with an arbor press, remove the bearing. NOTE—Use care not to damage bearing seal.

Installation—Reverse removal procedure. NOTE—Press bearing into support so that it is laterally centered in the support. Install dust shields on front shaft with concave side of shield against shoulder on shaft. If shaft support cushions removed, be sure to install studs in same holes from which removed.

1951-55 MODELS

PROPELLER SHAFT ALIGNMENT CHECKING (To Correct Vibration): Check propeller shaft with dial indicator at three positions as follows: Front end of shaft, center of shaft, and rear end of shaft. For accuracy, shaft should be sandpapered at all positions, and measurements should be taken approximately 1½" back of welded joint on shaft. Maximum run-out for the front propeller shaft is .010" at any of the three positions. Maximum run-out for rear shaft is .010" (front & rear end), and .015" at the center. Check transmission and differential flanges by checking run-out of propeller shaft at the flange. Note amount of run-out and mark high side on propeller shaft. Change shaft location 180° in flange and again check shaft run-out. If run-out follows position marked on shaft and is approximately the same amount of run-out, it can be assumed that flange is satisfactory. If run-out remains on same side of flange as formerly, although not necessarily in the same amount, it can be assumed flange is causing the run-out. If checking indicates that shaft run-out is not within limits indicated above, replace shaft, flange, or both.

SUSPENSION NOTES

1950 CHAMPION

CHAMPION FRONT END TROUBLE CORRECTION (1950 Cars): To correct conditions such as Excessive Right Front Tire Wear, Front End Vibration or Shimmy, Unstable Steering etc., check and correct following points:

1) Auxiliary Arm Bracket Distortion—Install special brace which will prevent bending or distortion of the bracket: No. 530284 Auxiliary Arm Bracket Brace, 520259 Spacer, 2-0734 Bolt, 2-0626 Bolt, and 361-07 Plain Washer. To install brace, remove right rear outer lower control arm innershaft mounting bolt and both auxiliary steering arm-to-bracket mounting bolts. Install the brace with the single hole to lower control arm and place spacer between the brace and frame cross-member flange. Install the 2-0734 bolt, flat washer, lockwasher and nut. Tighten nut loosely. Install both auxiliary steering arm-to-bracket bolts (use 2-0626 bolt in lower hole with bracket on outside of auxiliary steering arm), tighten bolts securely, then tighten control arm mounting bolt securely. Check front end alignment.

2) Worn or Loose Parts—Check and adjust or replace (end fittings, bushings, insulators, etc.).

3) Steering Gear Adjustment—Adjust if necessary.

4) Caster, Camber, Toe-In & Auxiliary Tie Rod Alignment—*See Front Suspension data.*

MODEL IDENTIFICATION

SERIAL NUMBER: Stamped on plate on left front door lock pillar post.

	South Bend	Los Angeles
1947 Numbers	G-212,501 Up	G-824,001 Up
1948 Numbers	G-314,501 Up	G-827,301 Up
1949 Numbers①	G-400,501 Up	G-839,701 Up

①—G-703,101 Up (Hamilton).

Body Symbol Letter—Used with model designation (and on body number plate) to indicate body type as follows: C, 5-Pass. Coupe; F, 2-Door Sedan; Q, 3-Pass. Coupe; S, Convertible; W, 4-Door Sedan.

ENGINE NUMBER: Stamped on pad on upper front left corner of engine block.

1947 Numbers—236,001 Up; **1948 Numbers**—432,001 Up; **1949 Numbers**—441,001 Up (South Bend & Los Angeles), C-4101 Up (1949 Hamilton).

NOTE—Letter "A" following engine number indicates crankshaft main bearing journals .005" Undersize.

TUNE-UP

COMPRESSION PRESSURE: 105 lbs. at 150 RPM.

VACUUM READING: Steady 17-18" idling at 8 MPH.

FIRING ORDER: 1-5-3-6-2-4. See diagram.

SPARK PLUG GAPS: .025" Limits .0225-.0275".

Plug Type—Champion Type J7 or J9. 14 mm.

DISTRIBUTOR: Breaker Gap—.020". Limits .018-.022".

Cam Angle—38° Closed, 22° Open.

Breaker Arm Spring Tension—17-20 ozs.

Automatic & Vacuum Advance—*See Ignition.*

Condenser Capacity—.20-.25 microfarad.

IGNITION TIMING: 2° BTDC.

Timing Procedure—*See Ignition Timing.*

Timing Mark—Vibration dampener mark "IGN/" aligned with pointer on left side of engine. NOTE—Insert .020" feeler between modifier control arm and clamp arm before tightening clampscrew.

Octane Selector Setting—Set to just eliminate ping when engine hot and pulling hard.

CARBURETION:

Idle Setting—½-1½ turns open. Turn screw out for richer mixture.

Idle Speed—8-10 MPH. at normal operating temp.

Float Level—¼" (532S), ⅜" (661S, 715S). Measured from top of projection on bowl cover to top of soldered seam on free end of float with needle valve seated and bowl cover assembly inverted.

Accelerating Pump—No seasonal adjustment.

Choke Setting: *CAUTION*—Different settings used:

Setting (532S)—Centered (cover centered on scale).

Setting (661S)—1 Point Lean.

Setting (715S)—Centered (at index).

Fuel Pump Pressure: 4-5 lbs. maximum.

MANIFOLD HEAT CONTROL: Automatic thermostatic type operating in stainless steel bushings.

Setting—To test coil tension, free outer end of coil from anchor post. With valve closed (counterweight up), hooked end of coil should be approx. 90° from anchor post with coil at 70°F. NOTE—To overcome sticking, lubricate valve shaft with kerosene and soda solution or Bendix Carburetor Cleaner. If necessary, shaft diameter can be reduced for .005" clearance in bushings (do not ream bushings).

VALVE TAPPET CLEARANCE: .016" All Valves, Cold.

Valve Timing Check—*See Valve Timing.*

STARTING: *See Battery, Starter, Generator, Regulator.*

IGNITION

IGNITION SWITCH: Mitchellock Switch Model 42-R. No. E-10336 (for Y & T lock) or E-10522.

Ignition Lock—Yale & Towne

COIL: Auto-Lite (Early '47) CE-4032, (Late '47 & '48-49) CE-6007. Mounted on engine above distributor (under spark plug cable bracket).

Ignition Current—½-1½ amps. idling, 4-5 stopped.

CONDENSER: Auto-Lite Part No. IG-2671.

Capacity—.20-.25 microfarad.

DISTRIBUTOR: Auto-Lite Model IGC-4805. Full automatic advance type with vacuum spark control.

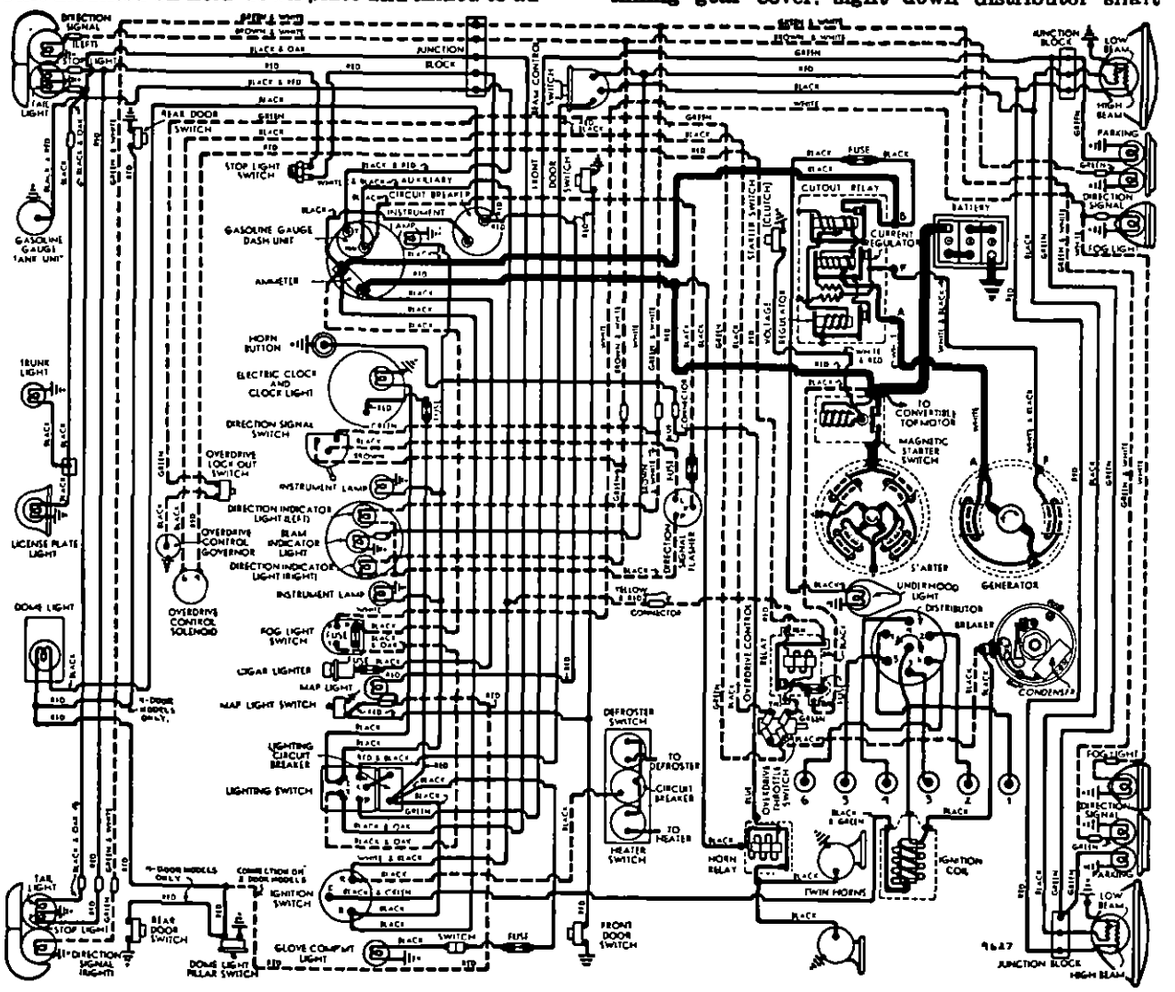
Breaker Gap—.020". Limits .018-.022".

Cam Angle—38° closed, 22° open.

Breaker Arm Spring Tension—17-20 ozs.

Rotation—Counter-clockwise viewed from above.

Distributor Degrees	Automatic Advance R.P.M.	Engine Degrees	R.P.M.
Start	400	0	800
2	680	4	1360
4	975	8	1950
6	1265	12	2530
7	1400	14	2800



Vacuum Spark Control: Auto-Lite Model VC-4011. Unit mounted on hold-down plate and linked to advance plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring in unit.

Vacuum Advance			
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)	
Start	0°		4"
2°	4°		5½"
5°	10°		7¾"
7°	14°		11¼"
9°	18°		14¾"

Octane Selector—Provides manual adjustment at distributor (hold-down plate marked with scale) for variation in timing depending on fuel regularly used. See Ignition Timing following for adjustment.

Distributor Removal: —Mounted on left side of engine. To remove, disconnect vacuum line, take out bolt in clamp arm, lift distributor off.

Installation Note—When installing distributor, crank engine to firing position for #1 cylinder (dampener mark 'IGN' in line with pointer on the timing gear cover, sight down distributor shaft

hole (distributor out) and see that distributor drive tongue in oil pump drive gear is parallel to and narrow half of offset toward camshaft. turn rotor to #1 segment, install distributor (insert .020" feeler between modifier control arm and clamp arm before tightening the clamp, to prevent binding).

IGNITION TIMING

Std. Setting	Flywheel Degrees	Piston Pos.
All Engines	2° BTDC	.0016" BTDC

This setting correct for regular fuel (See Octane Selector Setting for service and fuel modification).

Timing (With Neon Timing Light)—Clip timing light lead in series with #1 spark plug, direct light on vibration dampener at front of engine. Loosen hold-down plate screw, center octane selector pointer on scale, tighten hold-down screw. Run engine at idle speed, loosen clamp arm, rotate distributor until "IGN/" mark on dampener appears in line with pointer on left side of timing gear cover, tighten clamp screw. Check Octane Selector setting. CAUTION—Insert .020" feeler between modifier arm and clamp arm when tightening clamp arm

Timing (Without Neon Timing Light)—With #1 piston on compression, turn engine over until "IGN/" mark on vibration dampener lines up with pointer on left side of timing gear case. Adjust distributor as directed above.

Octane Selector Setting—After setting timing (above), loosen selector hold-down screw, advance timing by turning distributor clockwise (move pointer toward "A" end of scale) until engine "pings" when hot and pulling hard, then retard timing by turning distributor counter-clockwise (move pointer toward "R") until ping disappears.

CARBURETOR

1947 Before Eng. #350,841.....**Carter WE-532S**
1947 After Eng. #350,841 & 1948.....**Carter WE-661S**
1949.....**Carter WE-715S**

1¼" single barrel, downdraft, with Carter Climatic Control.

Casting No. on Flange—375 (532S, 661S), 620 (715S). *See Carburetor Section for complete data.*

Settings (Idle Setting, Float Level, & Accelerating Pump): *See Tune-Up.*

Metering Rods & Jets—*See Carter Jet Table in Carburetor Section.*

Fast Idle: Carter Single Barrel Carburetor type. *See Carburetion Equipment Section for data.*

Setting (532S, 661S)—.054" throttle valve opening with choke valve closed. To check, open throttle wide to make certain fast idle cam drops into position, then with choke valve closed measure clearance between edge of throttle valve and carburetor wall on side opposite idle port (valve closed to fast idle position). To adjust, turn adjusting sleeve on connector link.

Setting (715S)—.046" between throttle valve and bore of carburetor. To check, remove thermostatic coil housing, gasket and baffle plate. Crack throttle valve and hold choke valve closed. Close throttle. Adjust by bending connector rod at lower angle.

Automatic Choke: Carter Climatic Control (Single Carburetor type). *See Carburetion Equipment Section for data.*

►*CAUTION—Setting different on each type carburetor.*

Setting (532S)—Centered (cover centered on scale).
Setting (661S)—1 Point Lean.
Setting (715S)—Centered (at index).

CARB. EQUIPMENT

Air Cleaner: AC No. 1543970 Oil-wetted type Std. Filter Element AC #1. Oil-bath Air Cleaner Optl.
Servicing (Oil-wetted type)—Clean and re-oil filter element at 1000 mile intervals.
Servicing (Oil-bath type)—Clean filter element and oil reservoir, fill reservoir to indicated level mark with SAE No. 40 or 50 engine oil at intervals as required by operating conditions.

Fuel Pump (Std.): AC #1539092 or AC #1539416.
Optl. Fuel & Vacuum (1948-49)—AC #1539218 or 1539528.
Exchange Pump—AC No. 576 (Std.), 9218 (Optl.).
Pressure—4-5 lbs. maximum.
See Carburetion Equipment Section for data.

Gasoline Gauge: Stewart-Warner Electric type.
Dash Unit—Studebaker No. 522177.
Tank Unit (1947-48)—Stude. No. 519423, (1949) 525548.
See Carburetion Equipment Section for data.

BATTERY

Willard Type HW-1-100, 6 volt, 15 plate, 100 Ampere Hour Capacity (20 hour rate).
Starting Capacity—120 amperes for 20 minutes.
Zero Capacity—300 amperes for 3.5 minutes. Five Second Voltage 4.3 volts.
Grounded Terminal—Positive (+) to cyl. head.
Location—In engine compartment on left side.

STARTER

1947.....**Auto-Lite MZ-4136. Arm. No. MZ-2211**
1947, 48, 49.....**Auto-Lite MZ-4151. Arm. No. MZ-2211**
Drive—Barrel type Bendix Drive No. A1792.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—42-53 ozs. (new brushes).
Cranking Engine—150 amperes, 5.2 volts, 150 RPM.

Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4300	5.5	70
2.55 "	1325	5.0	200
7.65 "	220	4.0	400
7.8 "	Lock	3.0	420

Starting Switch: Magnetic switch mounted on starter and controlled by Auto-Lite Model SW-4016 manual switch on toeboard operated by clutch pedal.
Removal:—Flange mounted on engine rear plate at left side. To remove, take out flange mounting screws, take off starter and switch assembly.

GENERATOR

Auto-Lite Model GDZ-4804A. Armature No. GDZ-2006F. Two brush type with current-voltage control.
Charging Rate Adjustment—None. See Regulator.
Maximum Charging Rate—35 amperes, 8.0 volts, 2250 Gen. RPM (hot), at car speed of 24 MPH & above with load or discharged battery (regulator setting).

Cold Performance Data			Hot Performance Data		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	925	0	6.4	1000
8	6.75	1140	8	6.75	1235
16	7.15	1370	16	7.15	1460
24	7.5	1590	24	7.5	1730
28	7.7	1710	28	7.7	1900
35	8.0	1900	35	8.0	2250

Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—35-53 ozs. (new brushes).
Field Current—1.60-1.78 amperes at 6.0 volts.
Motoring Current—4.16-4.60 amperes at 6.0 volts.
Removal:—Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.
Belt Adjustment:—Loosen pivot and clamp bolts, move generator out until ⅜-½" belt deflection midway between generator and fan pulleys is obtained

REGULATOR

Auto-Lite Model VRP-4004F. Voltage & Current Type. Consists of Cutout Relay and vibrating type Voltage & Current Regulators in case on dash. *See Electrical Equipment Section for complete data.*
NOTE—Regulator case cover is sealed. Serviced on exchange basis if seals not broken (to remove cover).

Cutout Relay

Cuts In—6.4-7.0 volts (set to 6.4-6.6 volts), 10.4 MPH.
Cuts Out—4.1-4.8 volts (approx. 4-6 amps. disch.).
Contact Gap—.015" minimum.
Air Gap—.031-.034" with contacts open (check at hinge end of core).

Voltage Regulator

Setting—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.
Checking (without breaking seal) & Adjustment—*See Electrical Equipment Section.*
Contact Gap—.012" min. (armature against stop pin).
Air Gap—.048-.052" with contacts just opening.

Current Regulator

Setting—34-36 amperes (marked '35' on the cover).
Checking (without breaking seal) & Adjustment—*See Electrical Equipment Section.*
Contact Gap & Air Gap—Same as Voltage Regulator.

LIGHTING

Headlamps: Corcoran-Brown "Sealed Beam" type. *See Electrical Equipment Section for complete data.*
Adjustment—Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.).
Beam Indicator—At center of speedometer dial. Lighted whenever Country (upper) beams in use.
Direction Signal: *See Electrical Equipment Section.*
Direction Signal Indicators—In face of Speedometer dial. Left or right indicator lighted when corresponding direction signal is in operation.

Switches

Lighting—Douglas. Studebaker No. 519798.
Beam Selector—Delco-Remy No. 1997008, Studebaker No. 519246.
Stop Light—Studebaker No. 666858.
Direction Signal—Studebaker No. 520304.

MISC. ELECTRICAL

LIGHTING CIRCUIT BREAKER (On Light Switch): Studebaker No. 522014. 30-ampere thermostatic type. Protects Headlamps, Parking, Tail, & Instrument Lamps by vibrating to limit current.
Auxiliary Circuit Breaker (On Panel): No. 523056, 15-ampere thermostatic type. Protects Body & Stop Lamps by vibrating to limit current.
ACCESSORY CIRCUIT BREAKER: One 15-ampere type used on cars with Climatizer and Defroster.
FUSES: Clock—3 ampere. In clock lead.
Direction Signal—14 ampere. In Flasher lead.
Overdrive—20 ampere. On Overdrive Relay.
Glove Compt. Light—5 ampere. In lamp lead.
Under Hood Light—5 ampere. In lamp lead.
Fog Lights—20 ampere. On Fog Light Switch.
HORNS: Sparton or Delco-Remy No. 1999610 (High Note), 1999611 (Low Note). Twin Airtone type horns operated by relay. **Horn Current**—12-15 ams. (each).
Horn Relay: Delco-Remy No. 1116775.
Contacts Close—2.75-4.0 volts.
Contact Gap—.025" Air Gap—.015" (closed)

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

ENGINE

ENGINE REMOVAL for Oil Pan Removal and all major engine work: *See Studebaker Shop Notes.*

ENGINE SPECIFICATIONS: Six cylinder, "L" Head.
Bore—3". Stroke—4".
Displacement ('47-48)—169.6, ('49)—170 cu. ins.
Rated Horsepower—21.6.
Developed Horsepower—80 at 4000 RPM.
Compression Ratio—6.5-1 Std. 7.0-1 Opti. iron hds.
NOTE—7.0-1 Head for 5000 ft. & higher altitudes.
Compression & Vacuum Reading—*See Tune-up data.*

ORIGINAL BORE & PISTONS: *See Studebaker Shop Notes.*

TIGHTENING TORQUES: *See Studebaker Shop Notes.*

CYLINDER HEAD INSTALLATION: *See Studebaker Shop Notes.*

PISTONS: Lynite aluminum alloy, Cam ground, T-slot, bearing-metal plated type. **Length—2 29/32". Weight—8.48 ozs.** (without rings or pin).
Clearance—Selective fit (see Fitting Pistons).
Removal—Pistons and rods removed from above.

Fitting New Pistons: Insert .002" feeler, 1" wide, between piston and cylinder wall on camshaft side (piston pin parallel to camshaft, slot away from camshaft). Pull required to withdraw feeler should be 11-16 lbs

Replacement Pistons: *See Studebaker Shop Notes.*

Installing Pistons: T-slot away from camshaft.

PISTON RINGS: Two compression (Perfect Circle #200 Top, #70 —2nd), one Oil Control (#85).

Ring	Width	End Gap	Side Clearance
Compr. #1	3/32"	.007-.017"	.0015-.002"
Compr. #2	1/8"	.007-.017"	.0015-.002"
Oil Contr. (#3)	.5/32"	.007-.017"	.0015-.002"

Installing Rings: Step up top ring, step down 2nd ring.

Replacement Rings: Sets furnished Std. size and .020", .030", .040" Oversize. Single rings Std. size and .010", .020", .030", .040" Oversize.

PISTON PIN: Diameter .7491-.7495". Length 2⅝". Pin is locked in rod by tapered pin and locknut.
Pin Fit in Piston—.0001-.0003" clearance or light finger-push fit at room temperature (70°F).

Installing Pins: Use Pin Assembly Tool J-1293. Install clamp bolt nut and star washer on heavy boss side of rod. NOTE—Threads on opposite end of clamp bolt used only to remove bolt from rod (install nut on this end, tighten nut to pull bolt out of rod).

Replacement Pins: Std. & .0025", .005" oversize. Use Hone No. PH-1 to obtain proper piston pin fit.
NOTE—Replacement pistons fitted with pins.

CONNECTING ROD: Length 6⅜". Weight 20.48 ozs.
Crankpin Journal Diameter—1.81175-1.81275"
Lower Bearing—Interchangeable steel-backed, micro-babbitt lined type. No shims.
Clearance—.0005-.002" Sideplay—.005-.009".

Bearing Adjustment: None (no shims). Replace bearings. Do not file rods or bearing caps.
NOTE—Make certain that small tongue on bearing shells engage grooves. Palnuts used on bolt nuts.

Replacement Bearings: Bearings furnished Std. Size and .001", .005", .010", .020" Undersize.

Installing Rods: Lower bearings "offset". Install rods with narrow portion of bearing toward front of engine (#1, 3, 5), toward rear (#2, 4, 6). Numbers on rods and bearing caps must be together and installed in same numbered cylinder with number and oil hole in lower end of rod toward camshaft side.

CRANKSHAFT: Four bearing type with integral counterweights. Vibration dampener on front end.
Vibration Dampener—*See Studebaker Shop Notes.*
Journal Diameters—2.4370-2.4375" (All) Std.
▷*CAUTION—Journals are .005" Undersize on engines with letter "A" following Engine Number.*
Bearing Type—Removable type, steel-backed, micro-babbitt lined. *No shims.*
Clearance—.0005-.0025".
Rear Bearing Oil Seals—Consists of rubber ring, Studebaker No. 521544 (after 1948 Serial No. 284200), on crankshaft; two rubber seal strips, Studebaker No. 522144, in grooves on top of bearing cap; and two specially treated wood strips, Studebaker No. 197178, in grooves in side of bearing cap.
Seal Installation—*See "Crankshaft Oil Seals" in Studebaker Special Data.*
▷*CAUTION—Install new wood oil seals (above) each time rear main bearing cap removed and re-installed.*

Bearing Adjustment: None (no shims). Replace bearings. Do not file bearing caps.
NOTE—Front oil pan seal block may be removed for access to front main bearing cap by removing four lower timing gear cover retaining screws. Use only malleable iron type filler block on these cars.
▷*CAUTION—Do not securely tighten timing gear cover to-filler block screws until after oil pan screws tightened uniformly and securely.*

Replacement Bearings: Furnished as sets or single bearings Std. & .001", .005", .010", .020", .030" U. S.

End Thrust: Taken by thrust washer assembled between front main bearing and crankshaft gear. Controlled by shims between thrust washer and main bearing journal. Adjust by changing shims (.003", .005", .007" thick). **Endplay—.003-.006".**

CAMSHAFT: Four bearing type. Helical gear drive.
Journal Diameters—#1, 1.7475-1.7480"; #2, 1.7162-1.7170"; #3, 1.6857-1.6865"; #4, 1.6232-1.6240".
Bearings—Split, steel-backed, babbitted bushings.
Clearance—.0007-.0022" (#1), .0010-.0027" (others).

Bearing Adjustment: None. Replace bushings with camshaft removed. NOTE - Align bushing oil hole with oil hole in block.

Camshaft Removal: *See "Camshaft & Bearings" in Studebaker Shop Notes.*

End Thrust: Taken by thrust plate assembled on front face of engine block behind camshaft gear (spacer assembled on shaft behind gear hub).
Endplay—.003-.006". *See "Camshaft & Bearings" in Studebaker Special Data.*

Timing Gears: Crankshaft gear Cast Iron, Camshaft gear Celoron with steel hub.
Backlash—.001-.003".
Replacement Gears—Camshaft gear furnished in three sizes: Standard (marked "S"), High Limit (marked "H"), Low Limit (marked "L"). Crankshaft gear furnished Standard size only.
Timing Gear Removal & Installation—*See "Timing Gears" in Studebaker Shop Notes.*

Camshaft Setting: Mesh marked tooth of camshaft gear between two marked teeth of crankshaft gear.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 11/32"	5/16"	4 11/32"
Exhaust	1 9/32"	5/16"	4 11/32"

	Seat Angle	Lift	Stem Clearance
All 1947-48	45°	5/16"	.0015-.0035"
All 1949	45°	11/32"	.0015-.0035"

Valve Guides: Pressed in block from above with top of guide 1 3/16" below top of block. Finish ream guides to inside diameter of .312-3125". Use Valve Stem Guide Remover and Replacer Tool J-2034. Replace worn guides if clearance greater than .0035".

Valve Springs: Install with closed coil end up. Replace springs if more than 10% weaker than test pressure of 77-85 lbs. at 1 7/16" (U-15 or other accredited tester). Spring free length 2 3/32".

	Spring Pressure	Spring Length
Valve Closed (All)	52-56 lbs.	1 21/32"
Valve Open ('47-48)	90-94 lbs.	1 11/32"
Valve Open ('49)	93-103 lbs.	1 5/16"

NOTE—Install valve spring retainer with flange engaging flat surface on lower coil and tongue on inner diameter engaging groove in spring lock.

Valve Lifters: Mushroom type. Remove from below with camshaft out of engine. *For Camshaft Removal directions, refer to Studebaker Shop Notes.*
Valve Lifter Tension Spring—*See "Valve System" in Studebaker Shop Notes.*
Clearance—.0005-.00175".
Replacement Lifters—Furnished Std. size and .0005", .001" Oversize.

VALVE TIMING

Tappet Clearance: .016" All Valves, Engine cold.
NOTE - Self-locking tappet adjusting screws used. Tappet screw tension should be 25 in. lbs. minimum.

Valve Timing: See Camshaft Setting above.
Intake Valves—Open 15° BTDC. Close 49° ALDC.
Exhaust Valves—Open 54° BLDC. Close 10° ATDC.
Valve Timing Check—With .020" tappet clearance, #1 intake valve should open with #1 piston 15° or .0893" BTDC. with vibration dampener mark "IN. OP .1-6/" in line with pointer on left side of timing gear cover. Reset tappet clearance to .016" Cold

LUBRICATION

Lubrication System: Pressure to crankshaft, connecting rod, and camshaft bearings and to valve lifters. Timing gears lubricated by oil by-passed by pump.
Crankcase Capacity - 5 qts. ("Add Oil" point on oil level indicator stick is 3 qt. level).
Normal Oil Pressure—20-40 lbs. at 40 MPH.
Oil Pressure Relief Valve—On lower right front corner of engine. Opens at 40 lbs. Adjustable by inserting shims between outer end of spring and plug.

Oil Pan Removal: *See Engine Removal in Studebaker Shop Notes (recommended for pan removal).*

Oil Pump: Helical gear type. Mounted externally on right hand side of crankcase.
Oil Pump Removal & Installation—*See "Oil Pump" in Studebaker Shop Notes.*

Oil Filter (Opti.): Fram Model F3-P2 (Std. Service), F4-P2 (Heavy Duty). Replacement Cartridge Kit Studebaker No. 520829 (F3-P2), 520830 (F4-P2).

Oil Pressure Gauge: Stewart-Warner Bourden tube (not electric) type. Studebaker No. 522179.

Crankcase Ventilation: Filter element in oil filler cap (air intake) and in breather pipe on left rear of engine (air outlet).
Servicing—Wash both filter elements in kerosene and re-oil at regular intervals. NOTE—Filter in outlet pipe removed by taking out cotter pin.

COOLING

Cooling System: Positive circulation with water pump mounted on front of block with fan.
Capacity—11 quarts.

Water Pump: Packless, sealed ball bearing type.
See Water Pump Section for complete data.
Removal—Slack off drive belt, take out capscrews in the fan pulley hub & remove fan blades. Disconnect hose connection, take out mounting screws in pump body flange, withdraw pump from engine
Belt Adjustment—*See Generator Belt Adjustment.*

Thermostat: Bishop & Babcock. In water outlet on cylinder head.
Setting—Starts to open at 151-155°F.

Temperature Gauge: Stewart-Warner Bourden tube type (not electric). Studebaker No. 522180.

CLUTCH

Borg & Beck Model 8A7 with Borglite Driven Member. Single plate, dry disc type. NOTE—Clutch assembly marked by number 980 stamped on cover.
See Clutch Section for complete data.
Facings—Moulded Metallic type, 2 required. I.D. 5⅜". O.D. 8". Thickness ⅛".

►*CAUTION—Special driven member used on cars with Overdrive. Identify each type by hub damper spring color as follows:* Damper Spring Color.
Cars with Conventional Trans.....2 Lavender, 2 Black
Cars with Overdrive Trans. ..... 4 Lavender

Pedal Adjustment: Pedal free travel ½" to 1". To adjust, unhook pull-back spring on outside of frame rail, loosen locknut at adjusting clevis and remove clevis pin at inner end of pedal shaft, turn clevis on rear end of pedal shaft-to-operating shaft rod for correct clearance, reassemble linkage.
Cars before Serial No. G-217064—Pedal free travel must be set to ½" to ¾" on these cars.
Hill-Holder Note—Check setting whenever clutch pedal adjusted and adjust Hill-holder to release just as clutch engages.

Hill-Holder Adjustment: *See Studebaker Shop Notes.*

Removal: Car manufacturer recommends Engine (with clutch attached) be removed. *See "Engine Removal" in Studebaker Shop Notes.* Block release levers. Remove six mounting screws in clutch cover flange, lift off clutch assembly and driven member.

TRANSMISSION

Warner Model AS1-T96 (Std.), AS2-T96 (Optl. 1948-49), AS24-T96 (Optl. Late 1949). Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse), all helical gear type. *NOTE—Optl. AS2 & AS24 Transmissions have R10 type Overdrive.*
See Transmission Section for complete data.

Transmission Control: Remote control type with gearshift lever mounted on steering column.
See Transmission Section for complete data.

Removal: Drain transmission. Disconnect hand brake cable and move out of way for clearance. Disconnect front universal at transmission (wire caps or use clamp to prevent losing rollers). Take out center support bearing mounting bolts. Push front shaft and support to rear (will slide on splines on rear shaft). Disconnect shift rods from levers on case and speedometer cable (remove speedometer pinion). On Overdrive transmission disconnect all control wires and cable. Take out transmission to clutch housing capscrews, pull transmission straight back and remove from car.

OVERDRIVE

Warner R10 Type (part of AS2-T96 & AS24-T96 Transmission). Optl. Governor controlled type with electrical solenoid operation and throttle operated kick-down switch. *NOTE*—Overdrive in AS24-T96 assembly is new "centered ring gear" type.
See Transmission Section for complete data.
Overdrive Solenoid—Warner Model No. 3AR10B-62, Studebaker No. 521429.
Overdrive Governor—Warner Model No. AR10B-72, Studebaker No. 520454.
Control Relay—Auto-Lite HRT-4001, Studebaker No. 523297.
Throttle Kick-down Switch—Studebaker 515667.
Lock-out Switch—Studebaker No. 521436.
Fuse—20 ampere. On Overdrive Relay.

Removal: See Std. Transmission Removal data

UNIVERSALS

Spicer Model 1268-110X (Front & Rear), 1261-102X intermediate). Needle bearing type. Three used with intermediate universal at propeller shaft support bearing on crossmember (see Propeller Shaft)

Propeller Shaft & Support Bearing: Two shafts used: 1) Front Shaft with intermediate universal yoke bolted on rear end (no slip-joint).
2) Rear Shaft with slip-joint on forward end at intermediate universal.

Propeller Shaft & Support Bearing Removal & Servicing—*See "Propeller Shaft" in Studebaker Shop Notes.*

REAR AXLE

Spicer Salisbury Model 23. *Semi-floating, Hypoid* Gear type with Hotchkiss Drive.
See Rear Axle Section for complete data.

Ratio—4.1-1 Std. 4.56-1 Optl. (Std. with Overdrive).
NOTE—Rear axle ratio stamped on plate attached to axle by cover capscrew.

Backlash—.003-.006". Shim adjustment.

Removal: Remove hub caps, take out cotter pin from axle nut, loosen rear wheel nuts. Place car on stands on frame just ahead of rear springs. Remove wheels, hubs and drums. Disconnect hand brake cable. Take out backing plate bolts from backing plates, free hydraulic brake line from axle housing clips (do not disconnect brake line). Backing plates and adjusting shims can then be wired to frame (do not disconnect brake line from wheel cylinders). Disconnect rear universal (wire caps or use clamp to prevent losing rollers). Remove rear spring "U" bolts, disconnect lower shock absorber links, remove rear axle assembly from car.

Axle Shaft Removal—Remove wheel, remove wheel hub (use puller J-446-A). Take out backing plate retaining bolts, remove outer oil seal. Pull backing plate out over end of axle shaft and wire plate to frame (CAUTION—do not lose adjusting shims located between backing plate and axle housing flange), pull axle shaft with Puller HM-931.

Wheel Bearing Adjustment: Use dial indicator to check axle shaft endplay. Adjust by removing backing plate (see Axle Shaft Removal above), and adding or removing shims located between backing plate and axle housing flange (shims .003", .005", .010", .030" thick). **Endplay**—.001-.005".

SHOCK ABSORBERS

Houde (Houdaille). Double acting, hydraulic type.
Front—Houde No. A-14269, Studebaker 523646.
Rear—Houde No. A-11478 (Left), A-11477 (Right), Studebaker No. 517696 (Left), 517695 (Right).

Adjustment: Adjusting pointer on end of shaft should be lined up with scribed line on end of shaft. Turn pointer clockwise for firmer action, counter-clockwise for softer action (not more than 1/32-1/16").

Refilling: Check at 5000 mile intervals. Fill to bottom of filler plug hole. CAUTION—Use only Houdaille Shock Absorber Fluid No. L-1404 (new type fluid for shock absorbers with new circular top filler plug

FRONT SUSPENSION

Front Suspension: Planar type independent suspension with transverse spring. NOTE—Suspension system has lower control arms (with leaf spring).
See Front Suspension Section for complete data.
Kingpin Inclination—5½° crosswise.
Caster (1947-48)—0° to Positive 1°. Not adjustable.
Caster (1949)—+½° to +1½°.
Camber (1947-48)—½° ± ½°, (1949) 0° to 1°. Shim adjustment (shims between upper control arm brackets and frame). One thin shim changes setting approx. ¼°. Thick shim equals 4 thin shims.
CAUTION—Add or remove shims equally at front and rear brackets when adjusting Camber.
Toe In—1/16-⅛". Adjust right hand tie rod only for toe in after left hand tie rod has been adjusted for wheel straight-ahead position (with steering wheel centered) and center auxiliary tie rod has been adjusted so that steering gear arm and auxiliary steering arm parallel. **RHD Car Note**—Make toe-in adjustments on left hand tie rod.

STEERING GEAR

Ross Model T-12 Cam-and-Twin Lever type.
See Steering Gear Section for complete data.

BRAKES

Service: Lockheed (Wagner Electric) Hydraulic, Self-centering, Self-adjusting type. Brakes are new design with automatic spring-loaded adjusting wedge controlled by contact plug projecting through hole in lining of forward shoe (plug contacts drum when brakes applied). Hand lever applies rear wheel service brakes. NOTE—New type actuating spring used on brake shoe contact plug on 1948-49 cars (replaces hairpin locks and contact plug coil spring).
See Brake Section for complete data.
Drums—Composite type. Diameter 9".
Clearance—Adjustment necessary only when new linings installed. *See Brake article in Brake Section.*
Lining—Moulded type (all shoes). Width 2". Thickness 3/16". Length per wheel 18.5".
Braking Power—57% Front. 43% Rear.

Hand Brake: See Service Brake data (above).

Hill-Holder: Optional Equipment on all models.
See Brake Section for complete data.

MISC. MECHANICAL

CONVERTIBLE TOP CONTROL: Electric type with motor mounted on left hand lift assembly (right hand lift assembly driven through flexible drive
See Miscellaneous Section for complete data.

Windshield Wiper: Vacuum type—cable operated.
See Miscellaneous Section for complete data.

M DEL IDENTIFICATION

SERIAL NUMBER: Stamped on plate on left front door lock pillar post.

	South Bend	Los Angeles
1947 Numbers	4232501 Up	4815501 Up
1948 Numbers	4287001 Up	4820501 Up
1949 Numbers	4361001 Up	4832701 Up

Body Symbol Letter—Used with model designation (and on body number plate) to indicate body type as follows: C, 5-Pass. Coupe; F, 2-Door Sedan; Q, 3-Pass. Coupe; S, Convertible; W, 4-Door Sedan; Y, Land Cruiser.

ENGINE NUMBER: Stamped on pad on upper front left corner of engine block.
1947 Numbers—H-182001 Up. **1948 Nos.** H-239001 Up.
1949 Numbers—H-326001 Up.

TUNE-UP

COMPRESSION PRESSURE: 105 lbs. at 150 RPM. cranking speed for Std. 6.5-1 Head.

VACUUM READING: Steady 18-20" idling at 8 MPH.

FIRING ORDER: 1-5-3-6-2-4. See diagram.

SPARK PLUG GAPS: .025" Limits .0225-.0275".
Plug Type—Champion Type J7 or J9. 14 mm.

DISTRIBUTOR: Breaker Gap—.020". Limits .018-.022".
Cam Angle—38° Closed. 22° Open.
Breaker Arm Spring Tension—17-20 ozs.
Condenser Capacity—.20-.25 microfarad.

IGNITION TIMING: 2° BTDC.
Timing Procedure—*See Ignition Timing.*
Timing Mark—Vibration Dampener mark "IGN/" aligned with pointer on gear case cover. NOTE—Insert .020" feeler between modifier control arm and clamp arm before tightening clampscrew (to prevent binding).
Octane Selector Setting—Set to just eliminate ping when engine hot and pulling hard.

CARBURETION:
Idle Setting—Idle screw set for smooth idle. Turn screw out for richer mixture.
Idle Speed—8-10 MPH. at normal operating temp.
Float Level—Fuel level 5/8" below top edge of float bowl with engine idling.
Accelerating Pump—Center hole (med. stroke) Normal all-season setting. Inner hole (min.)—Summer, Outer hole (max.)—Winter used for temperature extremes.

Choke Setting: Centered (at index).
Fuel Pump Pressure: 4-5 lbs. maximum.

MANIFOLD HEAT CONTROL: Automatic thermostatic type operating in stainless steel bushings.
Setting—To test coil tension, free outer end of coil from bracket on manifold. With valve closed, hooked end of coil should be approx. 90° from bracket at 70°F. Replace coil if incorrect.
NOTE—To overcome sticking, lubricate valve shaft with kerosene and soda solution or Bendix Carburetor Cleaner. If necessary, shaft diameter can be reduced for .005" clearance in bushings.

VALVE TAPPET CLEARANCE: .016" All Valves, Cold.
NOTE—Self-locking tappet screws used.
Valve Timing Check—*See Valve Timing.*

STARTING: *See Battery, Starter, Generator, Regulator.*

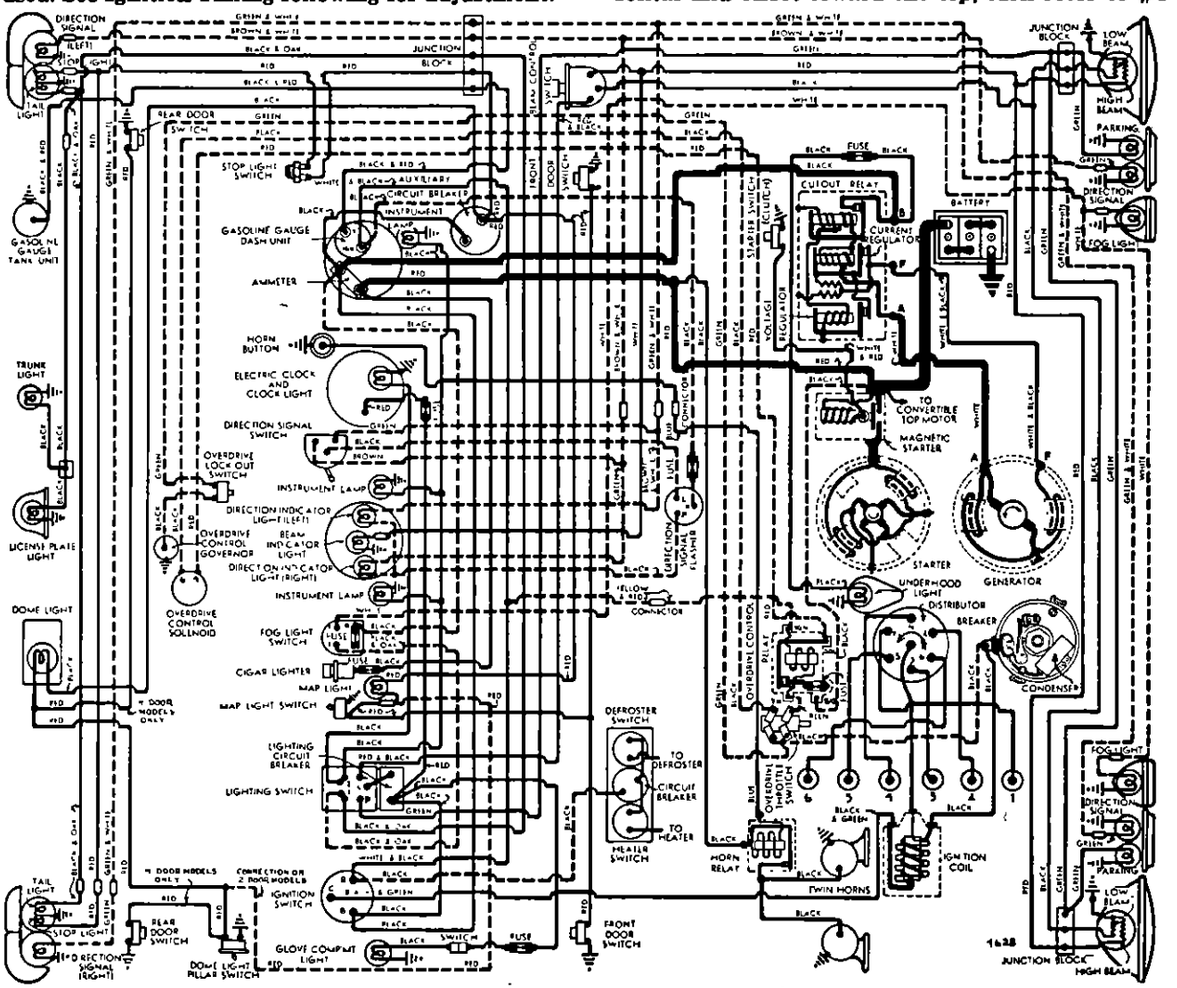
IGNITION

IGNITION SWITCH: Mitchellock Switch Model 42-R. No. E-10336 (for Y & T lock) or E-10522.
Ignition Lock—Yale & Towne.

COIL: Auto-Lite (Early '47) CE-4032, (Late '47 & '48-49) CE-6007. Mounted on engine above distributor (under spark plug cable bracket).
Ignition Current—½-1½ amps. idling, 4-5 stopped.

CONDENSER: Auto-Lite Part No. IG-2671.
Capacity—.20-.25 microfarad

DISTRIBUTOR: Auto-Lite Model IGC-4802. Full au-
Breaker Gap—.020". Limits .018-.022".
Cam Angle—38° closed, 22° open.
Breaker Arm Spring Tension—17-20 ozs.
Rotation—Counter-clockwise viewed from above.



Distr. Degrees	Automatic Advance R.P.M.	Eng. Degrees	R.P.M.
Start	400	0	800
2	600	4	1200
5	900	10	1800
8	1200	16	2400
10	1400	20	2800

Octane Selector—Provides manual adjustment at distributor (hold-down plate marked with scale) for variation in timing depending on fuel regularly used. See Ignition Timing following for adjustment.

Vacuum Spark Control: Auto-Lite VC-4004. On hold-down plate and linked to advance plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle (spark retarded by return spring).

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
	Vacuum Advance	
Start	0°	3"
2°	4°	5"
3°	6°	6"
5°	10°	10"
6°	12°	12"

Distributor Removal:—Mounted on left side of engine. To remove, disconnect vacuum line, take out bolt in clamp arm, lift distributor off.
Installation Note—When installing distributor, crank engine to firing position for #1 cylinder ('IGN' on vibration dampener in line with pointer on timing gear cover), sight down distributor shaft hole (distributor out) and see that distributor drive tongue in oil pump drive gear is 30° from the horizontal and offset toward the top, turn rotor to #1

segment, install distributor (insert .020" feeler between modifier control arm and clamp arm before tightening clamp, to prevent binding), check timing.

IGNITION TIMING

Std. Setting — **Flywheel Degrees**
All Engines ..... 2° BTDC.
This setting correct for regular fuel (see Octane Selector Setting for service and fuel modification)
Timing (with Neon Timing Light)—Neon Light No. 890-recommended. Clip Neon light lead in series with #1 spark plug, idle engine and direct light on vibration dampener (at pointer on timing gear cover). Loosen hold-down plate screw, center scale on pointer, tighten screw. Loosen clamp arm, rotate distributor until 'IGN' mark on vibration dampener lines up with pointer on timing gear cover. Insert .020" feeler between modifier control arm and clamp arm before tightening clamp (to insure clearance for modifier control arm). Check Octane Selector
Timing (without Neon Timing Light)—Turn engine over to firing position for #1 piston with 'IGN' mark on vibration dampener in line with pointer on timing gear cover and distributor rotor opposite #1 segment in distributor cap. Adjust distributor.
Octane Selector Setting—After setting ignition timing (above), loosen selector hold-down screw, advance selector (move toward 'A' end of scale) until motor 'pings' when it is hot and pulling hard. Then retard until ping just disappears.

CARBURETOR

Stromberg Model BXOV-26. 1¼" Single Barrel, Downdraft, with Fast Idle & Automatic Choke.
Code No. (on bowl cover)—6-104.
See Carburetor Section for complete data.
Settings (Idle Setting, Float Level, & Accelerating Pump): *See Tune-Up data.*
Metering Jet—*Refer to Carburetor Index for Stromberg Downdraft Carburetor Jet Specification Table.*
Fast Idle: Stromberg BXOV-26 carburetor type.
See Carburetion Equipment Section for data.
Fast Idle Setting—To check, hold stopscrew against lowest step of fast idle cam, move choke valve as far as possible toward closed position, check valve opening with 11/32" drill. Adjust by bending connector
Automatic Choke:—Stromberg BXOV-26 type.
See Carburetion Equipment Section for data.
Automatic Choke Setting—'R' mark on thermostat cover in line with highest projection on housing. Shift to 'M' if engine loads up or overchokes. Use 'H' setting only if highly volatile fuels used.

CARB. EQUIPMENT

Air Cleaner: AC No. 1544024 Oil-wetted type Std. Filter Element AC #6. Oil-bath Cleaner Optl.
Servicing (Oil-wetted Type)—Clean and re-oil filter element at 1000 mile intervals or as required.
Servicing (Oil-bath Type)—Clean filter element and oil reservoir, fill reservoir to indicated level mark with SAE No. 40 or 50 engine oil at intervals as required by operating conditions.
Fuel Pump (1947): AC #1537378, 1539415 or 1539067.
Fuel Pump (1948-49): AC #1539217 or 1539502, Combination fuel-and-vacuum pumps.
Pressure—4-5 lbs. maximum.
Exchange Pump (1947): 540, **(1948-49)**—9217.
►*NOTE—Oil pump vacuum booster (for windshield wiper operation) used on 1947 cars only.*
See Carburetion Equipment Section for data.
Gasoline Gauge: Stewart-Warner Electric type.
Dash Unit—Studebaker No. 522177.
Tank Unit—Stude. No. 519423 ('47-48), 525548 ('49).
See Carburetion Equipment Section for data.

BATTERY

Willard Type HW-1-100. 6 volt, 15 Plate, 100 Ampere Hour Capacity (20 hour rate).
Starting Capacity—120 amperes for 20 minutes.
Zero Capacity—300 amperes for 3.5 minutes. Five Second Voltage 4.3 volts.
Grounded Terminal—Positive (+) to cylinder head.
Dimensions—Length 9 3/64". Width 6 13/16". Height 8⅝".
Location—In engine compartment on left side.

STARTER

1947.....Auto-Lite MAW-4020, A. Arm. No. MAW-2091
1947-48-49 Auto-Lite MCH-4001. Arm. No. MCH-2006
Drive—Barrel Type Bendix Drive No. A1729 (MAW Starters), No. A1792 (MCH Starter).
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—42-53 ozs. (new brushes).
Cranking Engine—130 RPM, approx. 175 amperes at 5.0-5.5 volts.

Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.5	65
2.75 "	1480	5.0	200
5.45 "	820	4.5	300
8.50 "	400	4.0	400
11.55 "	110	3.5	500
18.0 "	Lock	4.0	670

Removal:—Starter flange mounted on engine rear plate, on left side. To remove, take out flange mounting screws, remove starter assembly.
Starting Switch: Magnetic switch mounted on starter and controlled by Auto-Lite Model SW-4016 manual switch. Manual switch is mounted on toeboard and operated by clutch pedal when fully depressed.

GENERATOR

Auto-Lite Model GDZ-4805A. Armature No. GDZ-2006F. Two brush type with current-voltage control.
Charging Rate Adjustment—None. See Regulator.
Maximum Charging Rate—35 amperes, 8.0 volts, 2250 Gen. RPM (hot), at car speed 25.8 MPH and up with load or discharged battery (regulator setting).

Performance Data

Cold Amperes	Cold Volts	Cold R.P.M.	Hot Amperes	Hot Volts	Hot R.P.M.
0	6.4	925	0	6.4	1000
4	6.6	1035	4	6.6	1120
8	6.75	1140	8	6.75	1235
12	6.95	1250	12	6.95	1350
16	7.15	1370	16	7.15	1460
20	7.3	1480	20	7.3	1590
24	7.5	1590	24	7.5	1730
28	7.7	1710	28	7.7	1900
32	7.9	1820	32	7.9	2090
35	8.0	1900	35	8.0	2250

Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—35-53 ozs. (new brushes).
Field Current—1.60-1.78 amperes at 6.0 volts.
Motoring Current—4.16-4.60 amperes at 6.0 volts.
Removal:—Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.
Belt Adjustment:—Loosen pivot and clamp bolts, move generator out until ⅜-½" belt deflection midway between generator and fan pulleys is obtained.

REGULATOR

Auto-Lite Model VRP-4004F. Voltage & Current Type. Consists of Cutout Relay and vibrating type Voltage & Current Regulators in case on dash.
See Electrical Equipment Section for complete data.
NOTE—Regulator case cover is sealed. Serviced on exchange basis if seals not broken (to remove cover).

Cutout Relay

Cuts In—6.4-7.0 volts (set to 6.4-6.6 volts), 10.4 MPH.
Cuts Out—4.1-4.8 volts (approx. 4-6 amps. disch.).
Contact Gap—.015" minimum.
Air Gap—.031-.034" with contacts open (check at hinge end of core).

Voltage Regulator

Setting—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.
Checking (without breaking seal) & Adjustment—*See Electrical Equipment Section.*
Contact Gap—.012" min. (armature against stop pin).
Air Gap—.048-.052" with contacts just opening.

Current Regulator

Setting—34-36 amperes (marked '35' on the cover).
Checking (without breaking seal) & Adjustment—*See Electrical Equipment Section.*
Contact Gap & Air Gap—Same as Voltage Regulator.

LIGHTIN

Headlamps: Corcoran-Brown "Sealed Beam" type.
See Electrical Equipment Section for complete data.
Adjustment—Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.).
Beam Indicator—At center of speedometer dial. Lighted whenever Country (upper) beams in use.
Direction Signal: *See Electrical Equipment Section.*
Direction Signal Indicators—In face of Speedometer dial. Left or right indicator lighted when corresponding direction signal is in operation.

Switches

Lighting—Douglas, Studebaker No. 519798.
Beam Selector—Delco-Remy No. 1997008, Studebaker No. 519246.
Stop Light—Studebaker No. 666858.
Direction Signal—Studebaker No. 520304.

MISC. ELECTRICAL

LIGHTING CIRCUIT BREAKER (On Light Switch): Studebaker No. 522014. 30-ampere thermostatic type. Protects Headlamps, Parking, Tail, & Instrument Lamps by vibrating to limit current.
Auxiliary Circuit Breaker (On Panel): No. 523056, 15-ampere type. Protects Body & Stop Lamps.
ACCESSORY CIRCUIT BREAKER: One 15-ampere type used on cars with Climatizer and Defroster.
FUSES: Clock—3 ampere. In clock lead.
Direction Signal—14 ampere. In Fasher lead.
Overdrive—20 ampere. On Overdrive Relay.
Glove Compt. Light—5 ampere. In lamp lead.
Under Hood Light—5 ampere. In lamp lead.
Fog Lights—20 ampere. On Fog Light Switch.
HORNS: Sparton or Delco-Remy No. 1999610 (High Note), 1999611 (Low Note). Twin Airtone type horns operated by relay. **Horn Current**—12-15 amps (ea.).
Horn Relay: Delco-Remy No. 1116775.
Contacts Close—2.75-4.0 volts.
Contact Gap—.025". **Air Gap**—.015" (contacts closed).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

ENGINE

ENGINE REMOVAL for Oil Pan Removal and all major engine work: *See Studebaker Shop Notes.*

ENGINE SPECIFICATIONS: Six cylinder, "L" Head. Bore—3 5/16". Stroke ('47-48)—4 3/8", ('49)—4¾" Displacement ('47-48)—226.2, ('49)—245.6 cu. ins. Rated Horsepower—26.35. Developed Horsepower ('47-48)—94 at 3600 RPM., ('49)—100 at 3400 RPM. Compression Ratio—6.5-1 Std. 7.0-1 Optl. iron hds. *NOTE—7.0-1 Head for 5000 ft. & higher altitudes.*

Compression & Vacuum Reading—*See Tune-up data.*

ORIGINAL BORE & PISTONS: *See Studebaker Shop Notes.*

TIGHTENING TORQUES: *See Studebaker Shop Notes.*

CYLINDER HEAD INSTALLATION: *See Studebaker Shop Notes.*

PISTONS: Lynite aluminum alloy, Cam-ground, T-slot, bearing-metal plated type. Length 3¾". Weight—14.4 ozs. (stripped). Clearance—Selective Fit (see Fitting Pistons). Removal—Pistons and rods removed from above.

Fitting New Pistons: Insert .002" feeler, 1" wide, between piston and cylinder wall on camshaft side (piston pin parallel to camshaft, slot away from camshaft). Pull required to withdraw feeler should be 14-19 lbs.

Replacement Pistons: *See Studebaker Shop Notes.*

Installing Pistons: T-slot away from camshaft.

PISTON RINGS: Two compression, one oil control ring per piston, all above pin. Oil drain holes provided in oil ring groove.

Ring	Width	End Gap	Side Clearance
Comp. (#1,2)	3/32"	.009-.014"	.0015-.002"
Oil Contr. (#3)	3/16"	.009-.014"	.0015-.002"

Installing Rings: Beveled side of compression rings (Sealed Power) up.

Replacement Rings: Sets furnished Std. size and .020", .030", .040" Oversize. Single rings Std. size and .010", .020", .030", .040" Oversize.

PISTON PIN: Diameter .8741-.8745". Length 2⅞". Pin is locked in rod by tapered pin and locknut.

Installing Pins: Use Pin Assembly Tool J-1293. Install clamp bolt nut and star washer on heavy boss side of rod. NOTE—Threads on opposite end of clamp bolt used only to remove bolt from rod (install nut on this end, tighten nut to pull bolt out of rod). Pin Fit in Piston—.0001-.0003" clearance or light finger push fit at room temperature (70°F).

Replacement Pins: Std. & .0025", .005" Oversize. Use Hone PH-1 to obtain proper piston pin fit. NOTE—Replacement pistons fitted with pins.

CONNECTING ROD: Lgth. ('47-48) 8⅛", ('49) 7 15/16" Weight—33.3 ounces. Crankpin Journal Diameter—2.18675-2.18775". Lower Bearing—Interchangeable steel-backed, micro-babbitt lined type. No shims. Clearance—.0005-.002". Sideplay .005-.009".

Bearing Adjustment: None (no shims). Replace bearings. Do not file rods or caps. NOTE—Make certain that small tongue on bearing shells engage grooves. Palnuts used on bolt nuts.

Replacement Bearings: Bearings furnished Std. size and .001", .005", .010", .020" Undersize.

Installing Rods: Lower bearings "offset". Install rods with narrow portion of bearing toward front of engine (#1, 3, 5), toward rear (#2, 4, 6). Numbers on rods and bearing caps must be together and installed in same numbered cylinder with number and oil hole in lower end of rod toward camshaft

CRANKSHAFT: 4 bearing, 5 integral counterweights. Vibration dampener mounted on forward end.

Vibration Dampener—*See Studebaker Shop Notes.*

Journal Diameters ('47-48)—2.4995-2.5000", ('49)—2.8745-2.8750".

Bearings—Removable steel backed, babbitt-lined type. No shims. Clearance ('47-48)—.0005-.0025", ('49)—.0006-.0027". Rear Bearing Oil Seals—Consists of rubber ring, Studebaker No. 523134 (After 1948 Engine No. H-269-723), on crankshaft; two rubber seal strips, Studebaker No. 522144, in grooves on top of bearing cap; and two specially treated wood strips, Studebaker No. 187106, in grooves on sides of bearing cap. Seal Installation—*See "Crankshaft Oil Seals" in Studebaker Special Data.***

►***CAUTION—Install new wood oil seals (above) each time rear main bearing cap removed and re-installed.***

Bearing Adjustment: None (no shims). Replace bearings. Do not file bearing caps.

Replacement Bearings: Furnished as sets or single bearings in Std. Size and .001", .010", .020", .030" U.S.

End Thrust: Taken by thrust plate assembled between front main bearing and crankshaft gear. Controlled by shims between thrust plate and main bearing journal. Adjust by changing shims furnished .003", .005", .007" thick. Endplay—.003-.006".

CAMSHAFT: *Four bearing, helical gear drive.*

Journal Diameters—#1, 1.9975-1.9980"; #2, 1.9662-1.9670"; #3, 1.9357-1.9365"; #4, 1.1232-1.1240". Bearings—Split steel-backed, babbitted bushings. NOTE—Oil hole in bushings must be aligned with oil holes in engine block. Clearance—.0007-.0022" (#1), .0010-.0027" (others).

Camshaft Removal: *See "Camshaft & Bearings" in Studebaker Shop Notes.*

End Thrust: Taken by thrust plate assembled on front face of engine behind camshaft gear (spacer assembled back of gear hub). Endplay—.003-.006". *See "Camshaft & Bearings" in Studebaker Special Data.*

Timing Gears: Crankshaft gear Cast Iron. Camshaft gear Celeron with steel hub. Backlash—.001-.003". Replacement Gears—Camshaft gear furnished in three sizes: Standard (marked "S"), High Limit (marked "H"), Low Limit (marked "L"). Crankshaft gear furnished Standard size only. Timing Gear Removal & Installation—*See "Timing Gears" in Studebaker Shop Notes.*

Camshaft Setting: Mesh marked tooth of camshaft gear between two marked teeth on crankshaft gear.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 15/32"	11/32"	5 7/32"
Exhaust	1 9/32"	11/32"	5 7/32"

	Seat Angle	Lift	Stem Clearance
All Valves	45°	11/32"	.0015-.0035"

Valve Guides: Pressed in block from above with upper end 1 5/32" below upper edge of valve seat and stepped end down. Ream guides to inside diameter of .3425-3445". Replace worn guides when clearance exceeds .0035".

Valve Springs: Install with closed-coil end up. Replace springs if more than 10% weaker than test pressure of 125-135 lbs. at 1¾" (U-15 or other accredited tester). Spring free length 2½".

	Spring Pressure	Length
Valve Closed	54-60 lbs.	2 3/32"
Valve Open	125-145 lbs.	1 3/4"

NOTE—Dampeners used on top of all springs.

Valve Lifters: Mushroom type. Remove from below with camshaft out of engine. ***For camshaft removal directions, see Studebaker Shop Notes.***

Valve Lifter Tension Spring—*See "Valve System" in Studebaker Shop Notes.*

Diameter—.624". Clearance—.0005-.00175".

Replacement Lifters—Std. & .0005", .001" O. S.

VALVE TIMING

Tappet Clearance: .016" All Valves, Engine Cold. NOTE—Self-locking tappet adjusting screws used. Tappet screw tension should be 25 in. lbs. minimum.

Valve Timing: See Camshaft Setting above.

Intake Valves—Open 15° BTDC. Close 49° ALDC.

Exhaust Valves—Open 54° BLDC. Close 10° ATDC.

Valve Timing Check—With .020" tappet clearance, No. 1 intake valve should open with No. 1 piston 15° BTDC. with the vibration dampener mark "IN. OP. 1-6/" aligned with pointer on timing gear cover. Reset tappet clearance at .016" Cold.

LUBRICATION

Engine Oiling System: Pressure to crankshaft, connecting rod, and camshaft bearings, and to valve lifters. Timing gears lubricated by oil by-passed by pump. Oil pump mounted externally on right side

Crankcase Capacity—6 quarts.

Normal Oil Pressure—20-40 lbs. at 40 MPH.

Oil Pressure Regulator—On lower right front corner of engine. Opens at 40 lbs. Adjustable by inserting shims between outer end of spring and plug.

Oil Pan Removal: *See "Engine Removal" in Studebaker Shop Notes (recommended for pan removal).*

Oil Pump: Helical gear type mounted externally on right side of engine.

NOTE—Oil pump vacuum booster (for windshield wiper operation) used on 1947 cars only.

Oil Pump Removal & Installation—*See "Oil Pump" in Studebaker Shop Notes.*

Oil Filter: Fram Model F4 or F30S. Replacement Cartridge Kit Studebaker No. 521948 (F4), 520831 (F30S).

Oil Pressure Gauge: Stewart-Warner Bourden Tube (not electric) type. Studebaker No. 522179.

Crankcase Ventilation: Filter element in oil filler cap (air intake) and in breather pipe on left rear of engine (air outlet). Servicing—Wash both filter elements in kerosene and re-oil at regular intervals. NOTE—Filter in outlet pipe removed by taking out cotter pin.

COOLING

Cooling System: Positive circulation with water pump mounted on front of block with fan. Capacity—13 qts. (14 qts. with Climatizer).

Water Pump: Packless type. No lubrication required. ***See Water Pump Section for complete data.***

Removal—Slack off drive belt, take out capscrews in fan pulley hub and remove blades. Disconnect hose connection, take out mounting screws in pump

Belt Adjustment—*See Generator Belt Adjustment.*

Thermostat: Fulton or Bishop & Babcock. In water outlet on cylinder head.
Setting—Starts to open at 151-155°F.
Temperature Gauge: Stewart-Warner Bourden Tube type (not electric). Studebaker No. 522180.

CLUTCH

Borg & Beck Model No. 9A7 with Borglite Driven Member. Single plate, dry disc type.
NOTE—Clutch Assembly marked by number 943
See Clutch Section for complete data.

Facings—Moulded-metallic, 2 required. I.D. 6". O.D. 9¼". Thickness ⅛".

Adjustment: Pedal free travel ½ to 1". To adjust, unhook pull-back spring on outside of frame rail, loosen locknut at adjusting clevis and remove clevis pin at inner end of pedal shaft, turn clevis on rear end of pedal shaft-to-operating shaft rod for correct clearance, reassemble linkage.
Hill-Holder Note—Check setting whenever clutch pedal adjusted and adjust Hill-holder to release just as clutch engages. Adjusting nut and locknut at end of Hill-holder operating rod.

Hill-Holder Adjustment: *See Studebaker Shop Notes.*

Removal: Jack up rear end of car and rest on stands under rear axle. Remove transmission (see TRANSMISSION following). Disconnect one battery cable at battery take off starter and hang it clear of clutch housing. Remove clutch housing mounting capscrews and bolts at top, working through opening in front floor. Free speedometer cable from frame cross-member and wire it up out of the way. Support rear end of engine with jack placed under oil pan at rear (CAUTION—Do not damage oil pan). Disconnect rear engine mounting by taking off nuts, bolts with insulators, washers, and spacers. Disconnect parking brake cable at bracket, clutch operating shaft from release shaft, and brake pedal return spring. Loosen exhaust pipe flange nuts at manifold, take off exhaust pipe support bracket at housing, loosen clamp and turn bracket for clearance. Remove rear engine support cross member. Take out clutch housing mounting bolts and remove housing. Block clutch release levers. Remove six mounting screws in clutch cover flange, lift off clutch assembly and driven member.

TRANSMISSION

Warner Model AS1-T86E (Std.), AS2-T86E (Optl. 1948-49), AS32-T86E (Optl. Late 1949). Constant-mesh, synchro-mesh (Second & High), sliding gear (Low and Reverse), all helical gear type. *NOTE—Optl. AS2 & AS32 Transmissions have R10 type Overdrive.*
See Transmission Section for complete data.

Transmission Control: Remote control type with gearshift lever mounted on steering column.
See Transmission Section for complete data.

Removal: Drain transmission. Disconnect hand brake cable and move out of way for clearance. Disconnect front universal at transmission (wire caps or use clamp to prevent losing rollers). Take out center support bearing mounting bolts. Push front shaft and support to rear (will slide on splines on rear shaft). Disconnect shift rods from levers on case and speedometer cable (remove speedometer pinion). On Overdrive transmission disconnect all control wires and cable. Take out transmission to clutch housing capscrews, pull transmission straight back and remove from car.

VERDRIVE

Warner R10 Type (part of AS2-T86E & AS32-T86E Transmission). Optl. Governor controlled type with electrical solenoid operation and throttle operated kick-down switch. *NOTE*—Overdrive in AS32-T86E assembly is new "centered ring gear" type.
See Transmission Section for complete data.

Overdrive Control Units—*Same as Champion. See Champion (1947-48-49) page for data.*

Removal: See Std. Transmission Removal data

UNIVERSALS

Spicer Model 1268-111X (Front & Rear), 1261-102X Intermediate). Needle bearing type. Three used with intermediate universal at propeller shaft support bearing on crossmember (see Propeller Shaft)

Propeller Shaft & Support Bearing: Two shafts used: 1) Front Shaft with intermediate universal yoke 2) Rear Shaft with slip-joint on forward end at intermediate universal.

Propeller Shaft & Support Bearing Removal & Servicing—*See Studebaker Shop Notes.*

REAR AXLE

Spicer Salisbury Model 41-2. Semi-floating, Hypoid Gear type with Hotchkiss Drive.
See Rear Axle Section for complete data.

Ratio—4.09-1 Std., 4.55-1 Optl. (Std. with Overdr.). NOTE—Rear axle ratio stamped on plate attached to axle by cover capscrew.
Backlash—.003-.006". Shim adjustment.

Removal: Remove hub caps, take out cotter pin from axle nut, loosen rear wheel nuts. Place car on stands on frame just ahead of rear springs. Remove wheels, hubs and drums. Disconnect hand brake cable. Take out backing plate bolts from backing plates, free hydraulic brake line from axle housing clips (do not disconnect brake line). Backing plates and adjusting shims can then be wired to frame (do not disconnect brake line from wheel cylinders). Disconnect rear universal (wire caps or use clamp to prevent losing rollers). Remove rear spring "U" bolts, disconnect lower shock absorber links, remove rear axle assembly from car.
Axle Shaft Removal—*Remove wheel, remove wheel hub (use puller J-596-A). Take out backing plate retaining bolts, remove outer oil seal. Pull backing plate out over end of axle shaft and wire plate to frame (CAUTION—do not lose adjusting shims located between backing plate and axle housing flange). Pull axle shaft assembly (Puller HM-931).*

Wheel Bearing Adjustment: Use dial indicator to check axle shaft endplay. Adjust by removing backing plate (see Axle Shaft Removal above), and adding or removing shims located between backing plate and axle housing flange (shims .003", .005", .010", .030" thick). **Endplay**—.001-.005".

SHOCK ABSORBERS

Houde (Houdaille)—Double acting, hydraulic type. Adjustable type with thermostatic control on rear.
Front (All)—Houde No. A-14269, Studebaker 523646.
Rear (exc. Convt.)—Houde No. A-14174, Studebaker 523497.
Rear (Convertible only)—Studebaker No. 523538 (Right), 523539 (Left).

Adjustment (Front): Pointer on end of shaft should be lined up with scribed line on end of shaft. Turn pointer clockwise for firmer action, counter-clockwise for softer action (not more than 1/32-1/16"). **(Rear Shocks)**—Remove cap on end of shaft to expose adjusting screw. Slot aligned with scribe mark between "0" and "S" mark is original factory setting. Use special tool No. T-2860 (do not use screwdriver). Turn screw clockwise (toward "S") for firmer action, counter-clockwise (toward "0") for softer action (not more than 1/32" at a time).

Refilling: Check at 5000 mile intervals. Fill to bottom of filler plug hole. CAUTION—Use only Houdaille Shock Absorber Fluid No. L-1404 (new type fluid for shock absorbers with new circular top filler plug

FRONT SUSPENSION

Front Suspension: Planar type independent suspension with transverse spring. NOTE—Suspension system has lower control arms (with leaf spring).
See Front Suspension Section for complete data.
Kingpin Inclination—5½° crosswise.
Caster—(Early 1947) 0° to Pos. ½°. Not adjustable. **(Late '47 & '48-49)** Neg. 2° to Neg. 3°. No adjustm't.
►1947 Serial Numbers when Caster Changed—*See Front Suspension Section for complete data.*
Camber—(1947-48) ½° ± ¼°. (1949) 0° to +1°. Shim adjustment (shims between upper control arm brackets and frame). One thin shim changes setting approx. ¼°. Thick shim equals 4 thin shims.
CAUTION—Add or remove shims equally at front and rear brackets when adjusting Camber.
Toe In—1/16-⅛". Adjust **right hand tie rod only** for toe in after left hand tie rod has been adjusted for wheel straight-ahead position (with steering wheel centered) and center auxiliary tie rod has been adjusted so that steering gear arm and auxiliary steering arm parallel. **RHD Car Note**—Make toe-in adjustments on left hand tie rod.

STEERING EAR

Ross Model T-14 Cam-and-Twin Lever type.
See Steering Gear Section for complete data.

BRAKES

Service: Lockheed (Wagner Electric) Hydraulic, Self-centering, Self-adjusting type. Brakes are new design with automatic spring-loaded adjusting wedge controlled by contact plug projecting through hole in lining of forward shoe (plug contacts drum when brakes applied). Hand lever applies rear wheel service brakes. NOTE—New type actuating spring used on brake shoe contact plug on 1948-49 cars (replaces hairpin locks and contact plug coil spring).
See Brake Section for complete data.
Drums—Composite type. Diameter 11".
Clearance—Adjustment necessary only when new linings installed. *See Brake article in Brake Section.*
Lining—Moulded type (all shoes). Width 2". Thickness 3/16". Length per wheel 22¼".
Braking Power—57% Front, 43% Rear.
Hand Brake: See Service Brake data (above).
Hill-Holder: Std. *See Brake Section for complete data.*

MISC. MECHANICAL

CONVERTIBLE TOP CONTROL: Electric type with motor mounted on left hand lift assembly (right hand lift assembly driven through flexible drive
See Miscellaneous Section for complete data.

Windshield Wiper: Vacuum type—cable operated.
See Miscellaneous Section for complete data.

MODEL IDENTIFICATION

SERIAL NUMBER: Stamped on plate on left front door lock pillar post.

	1950	1951
South Bend	G-468101	G-1,000,001
Los Angeles	G-851801	G-889101
Hamilton	G-709401	G-724501

ENGINE NUMBER: Stamped on pad on upper front left corner of engine block.

	1950	1951
South Bend & Los Angeles	521001	778001
Hamilton	C-10501	C-25501

NOTE—Letter "A" following engine number indicates crankshaft main bearing journals .005" Undersize.

TUNE-UP

COMPRESSION PRESSURE: 120-140 lbs. at 150 RPM.

VACUUM READING: Steady 17-18" idling at 8 MPH.

FIRING ORDER: 1-5-3-6-2-4. See diagram.

SPARK PLUG GAPS: .025" Limits .0225-.0275".
Plug Type—Champion Type J7. 14 mm.

DISTRIBUTOR: Breaker Gap—.020". Limits .018-.022".
Cam Angle—38° Closed, 22° Open.
Breaker Arm Spring Tension—17-20 ozs.
Automatic & Vacuum Advance—*See Ignition.*
Condenser Capacity—.20-.24 mfd. (IGC-4805), .21-.25 mfd. (IAT-4001).

IGNITION TIMING: 2° BTDC.
Timing Procedure—*See Ignition Timing.*
Timing Mark—Vibration dampener mark "IGN/" aligned with pointer on left side of engine.

►*CAUTION*—On IGC-4805 Distr., insert .020" feeler between modifier arm and clamp arm when tightening clamp arm to prevent binding.
Octane Selector Setting—Set to just eliminate ping when engine hot and pulling hard.

CARBURETION:
Idle Setting—½-1½ turns open. Turn screw out for richer mixture.
Idle Speed (Standard Trans.) —8-10 MPH. at normal operating temperature.
Idle Speed (Automatic Trans.)—500-550 RPM. with selector lever in "N". Adjust by turning idle adjusting screw in or out.
Float Level—⅜". Measured from top of projection on bowl cover to top of soldered seam on free end of float with needle valve seated and bowl cover assembly inverted.
Accelerating Pump—No seasonal adjustment.
Choke Setting—(Early Production Cover 170P-77S) Centered on index. (Late Production Cover 170-U 61S) 1 point lean.

Fuel Pump Pressure: 4-5 lbs. maximum.

MANIFOLD HEAT CONTROL: Automatic thermostatic type operating in stainless steel bushings.
Setting—To test coil tension, free outer end of coil from anchor post. With valve closed (counterweight up), hooked end of coil should be approx. 90° from anchor post with coil at 70°F. NOTE—To overcome sticking, lubricate valve shaft with kerosene and soda solution or Bendix Carburetor Cleaner. If necessary, shaft diameter can be reduced for .005" clearance in bushings (do not ream bushings).

VALVE TAPPET CLEARANCE: .016" All Valves, Cold.
Valve Timing Check—*See Valve Timing.*

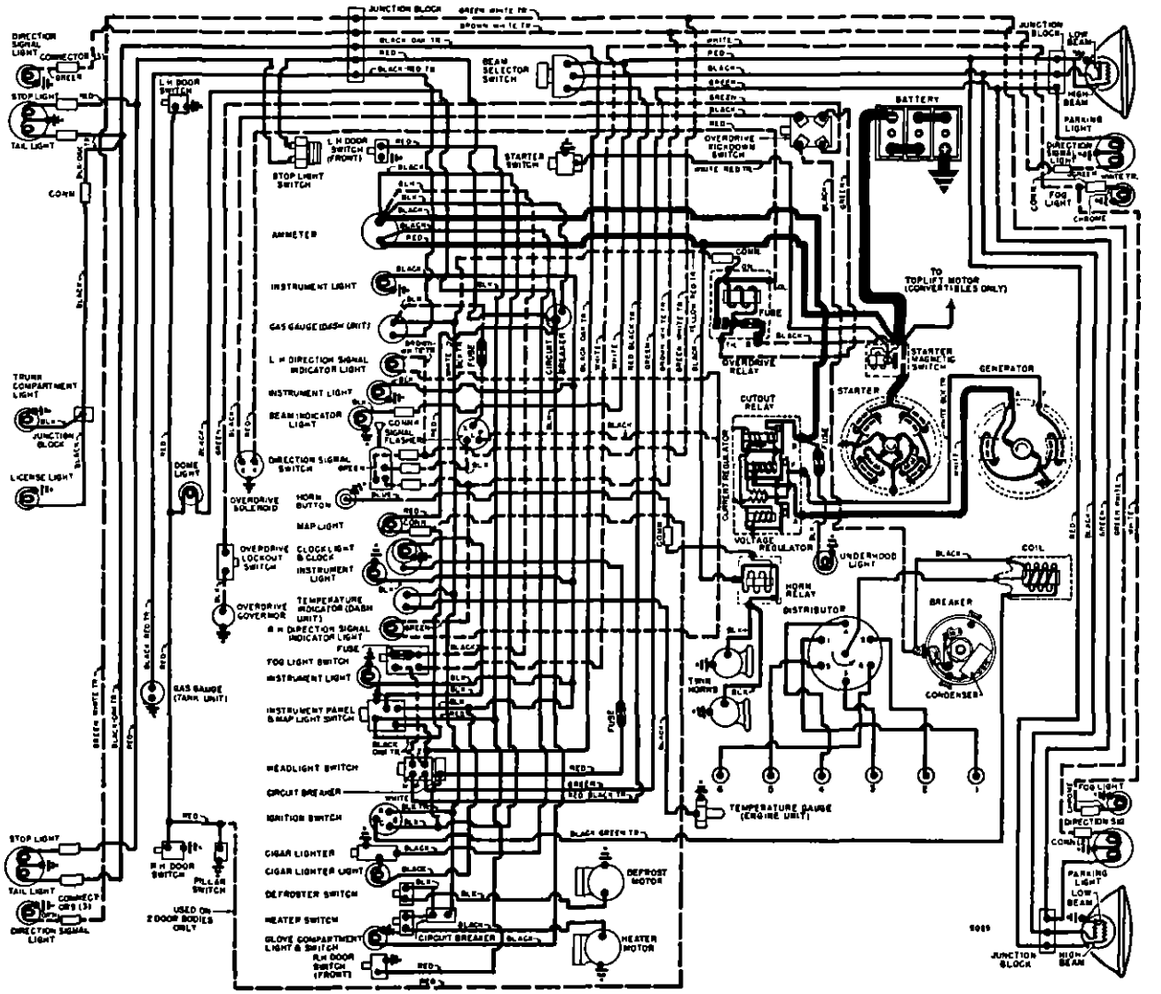
IGNITION

IGNITION SWITCH: Mitchellock. Studebaker No. 521955.
Ignition Lock—Yale & Towne.

COIL: Auto-Lite CE-6007 or CR-6007. On engine above distributor (under spark plug cable bracket).
Ignition Current—½-1½ amps. idling, 4-5 stopped.

CONDENSER: Auto-Lite No. IG-2671 (IGC-4805).
Capacity—.20-.25 microfarad.

DISTRIBUTOR: Auto-Lite No. (Early 1950) IGC-4805, (Late 1950) IAT-4001, (1951) IAT-4010. Full automatic advance type with vacuum spark control.



►*BREAKER PLATE BINDING CORRECTION (First "IAT" Distributors)—See "Auto-Lite "IAT" Distributors" in Electrical Equipment Section.*

►**"IAT" Distributor Note**—New "Pivoted Breaker Plate" type. *See Electrical Equipment Section for data.*

Breaker Gap—.020". Limits .018-.022".
Cam Angle—38° closed, 22° open.
Breaker Arm Spring Tension—17-20 ozs.
Rotation—Counter-clockwise viewed from above.

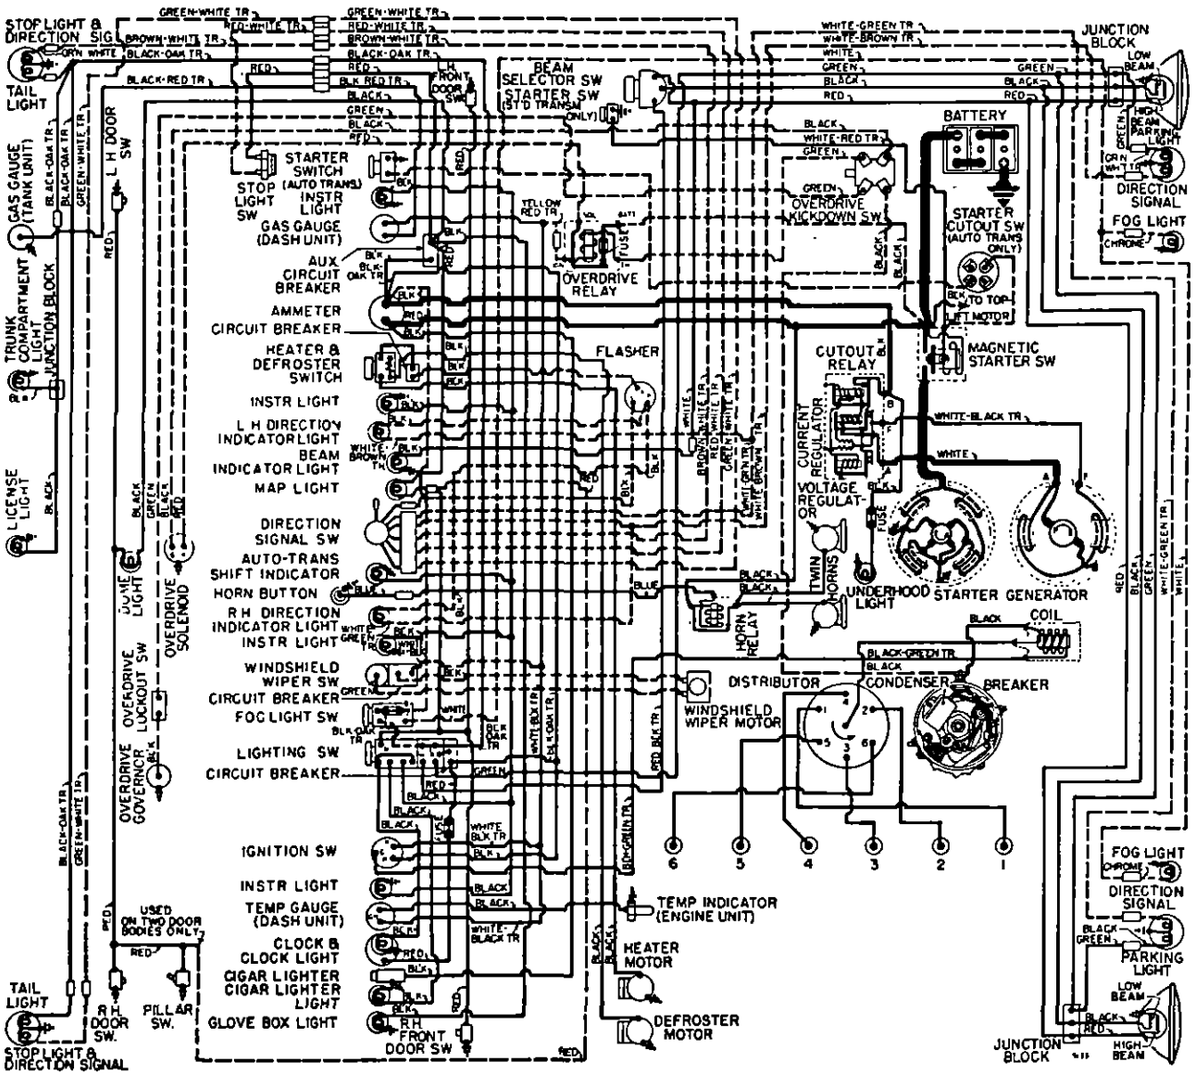
Distributor Automatic Advance		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	400	0	800
2	680	4	1360
4	975	8	1950
6	1265	12	2530
7	1400	14	2800

Vacuum Spark Control: (IGC-4805)—Auto-Lite Model VC-4011. Unit mounted on hold-down plate and linked to advance plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring in unit.
IAT-4001 & IAT-4010—Integral type vacuum spark control.

1950 MODELS

Vacuum Advance—IAT-4001 & 4101

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	4"
1°	2°	4⅞"
4°	8°	7½"
8°	16°	11⅛"
9°	18°	12"



Vacuum Advance—IGC-4805

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	4"
2°	4°	5½"
5°	10°	7¾"
7°	14°	11¼"
9°	18°	14¾"

Distributor Removal:—Mounted on left side of engine. To remove, disconnect vacuum line, take out bolt in clamp arm, lift distributor off.

Installation Note—When installing distributor, crank engine to firing position for #1 cylinder (dampener mark 'IGN' in line with pointer on the timing gear cover), sight down distributor shaft hole (distributor out) and see that distributor drive tongue in oil pump drive gear is parallel to and narrow half of offset toward camshaft, turn rotor to #1 segment, install distributor.

►*CAUTION*—On IGC-4805 Distr., insert .020" feeler between modifier arm and clamp arm when tightening clamp arm to prevent binding.

1951 MODELS

IGNITI N TIMING

Std. Setting	Flywheel Degrees	Piston Pos.
All Engines	2° BTDC	.0016" BTDC.

This setting correct for regular fuel (See Octane Selector Setting for service and fuel modification).

Timing (With Neon Timing Light)—Clip timing light lead in series with #1 spark plug, direct light on vibration dampener at front of engine. Loosen hold-down plate screw, center octane selector pointer on scale, tighten hold-down screw. Run engine at idle speed, loosen clamp arm, rotate distributor until "IGN/" mark on dampener appears in line with pointer on left side of timing gear cover, tighten clamp screw. Check Octane Selector setting.

►*CAUTION*—On IGC-4805 Distr., insert .020" feeler between modifier arm and clamp arm when tightening clamp arm.

Octane Selector Setting—After setting timing (above), loosen selector hold-down screw, advance timing by turning distributor clockwise (move pointer toward "A" end of scale) until engine "pings" when hot and pulling hard, then retard timing by turning distributor counter-clockwise (move pointer toward "R") until ping disappears.

CARBURET R

Carter WE-715S—1¼" single barrel, downdraft, with Carter Climatic Control.

Casting No. on Flange—620.

See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, & Accelerating Pump): ***See Tune-Up.***

Metering Rods & Jets—***See Carter Jet Table in Carburetor Section.***

Fast Idle: Carter Single Barrel Carburetor type.

Setting—.046" between throttle valve and bore of carburetor. To check, remove thermostatic coil housing, gasket and baffle plate. Crack throttle valve and hold choke valve closed. Close throttle. Adjust by bending connector rod at lower angle.

See Carburetion Equipment Section for data.

Automatic Choke: Carter Climatic Control (Single Carburetor type).

Setting—(Early Production Cover 170P-77S) Centered on index. (Late Production Cover 170U-61S) 1 point lean.

See Carburetion Equipment Section for data.

CARB. EQUIPMENT

Air Cleaner: AC No. 1543970 Oil-wetted type Std. Filter Element AC #1. Oil-bath Air Cleaner Optl.

Servicing (Oil-wetted type)—Clean and re-oil filter element at 1000 mile intervals.

Fuel Pump (Std.): AC #1539416, diaphram type.

Optl. (Fuel & Vacuum): AC #1539218.

Pressure—4-5 lbs. maximum.

See Carburetion Equipment Section for data.

Gasoline Gauge: Stewart-Warner Electric type.

Dash Unit—Studebaker No. 522177.

Tank Unit—Studebaker No. 525548.

See Carburetion Equipment Section for data.

BATTERY

Willard (1950) HW-1-100. (1951) HDW-1-100, 6 volt, 15 plate, 100 ampere hour capacity (20 hour rate).

Starting Capacity—120 amperes for 20 minutes.

Zero Capacity—300 amperes for 3.5 minutes. Five

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Second Voltage 4.3 volts.
Grounded Terminal—Positive (+) to cyl. head.
Dimensions—L. 9 3/64". W. 6 13/16". H. 8⅝".
Location—In engine compartment on left side.

STARTER

Auto-Lite—(Early 1950) Model MZ-4151. (Late 1950 & 1951) Model MZ-4157.
Armature No.—Auto-Lite No. MZ-2211.
Drive—Barrel type Bendix No. A1792 (MZ-4151).
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—42-53 ozs. (new brushes).
Cranking Engine—150 amperes, 5.2 volts, 150 RPM.

Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4300	5.5	70
.65 "	2500	5.5	100
2.55 "	1325	5.0	200
4.95 "	750	4.5	300
7.65 "	220	4.0	400
7.8 "	Lock	3.0	420
11.8 "	Lock	4.0	560

Starting Switch: Magnetic switch mounted on starter and controlled by manual switch.
Std. Trans. Cars—Auto-Lite SW-4016 (Studebaker 519829) mounted on toeboard under clutch pedal, operated by fully depressing pedal.
Automatic Trans. Cars: Studebaker No. 527553 pull switch on instrument panel and Delco-Remy No. 1997882 combination starter cut-out and backing light switch mounted on steering column. Starter operative only with transmission selector lever in "N" or "P" positions.

GENERATOR

Auto-Lite—(Early 1950) GDZ-4804A. (Late 1950 & 1951) GDZ-6001A.
Armature No. (GDZ-4804A)—GDZ-2006F.
Two brush type with current-voltage control.
Charging Rate Adjustment—None. See Regulator.
Maximum Charging Rate—35 amperes, 8.0 volts, 2250 Gen. RPM. (hot), at car speed of 21.2 MPH & above with load or discharged battery (regulator setting).

Cold		Performance Data	Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	925	0	6.4	1000
5	6.65	1060	5	6.65	1150

30	7.8	1760	30	7.8	1980
35①	8.0	1900	35	8.0	2250

①—Current Regulator setting. See Regulator data.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—35-53 ozs. (new brushes).
Field Current—1.6-1.8 amperes at 6.0 volts.
Motoring Current—4.2-4.6 amperes at 6.0 volts.
Removal: Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.
Belt Adjustment: Loosen pivot and clamp bolts, move generator out until ⅜-½" belt deflection midway between generator and fan pulleys is obtained.

REGULAT R

Auto-Lite Models—(Early 1950) VRP-4004F. (Late 1950) VRP-6001A. (1951) VRP-6005A.
Voltage & Current Typ. Consists of Cutout Relay and vibrating type Voltage & Current Regulators in case on dash.
See Electrical Equipment Section for complete data.
NOTE—Regulator case cover is sealed. Serviced on exchange basis if seals not broken (to remove cover).

Cutout Relay

Cuts In—6.4-7.0 volts (set to 6.4-6.6 volts), 10.4 MPH.
Cuts Out—4.1-4.8 volts (approx. 4-6 amps. disch.).
Contact Gap—.015" minimum.
Air Gap—.031-.034" with contacts open (check at hinge end of core).

Voltage Regulator

Setting—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.
Checking (without breaking seal) & Adjustment—*See Electrical Equipment Section.*
Contact Gap—.012" min. (armature against stop pin).
Air Gap—.048-.052" with contacts just opening.

Current Regulator

Setting—VRP-4004F & VRP-6001A, 34-36 amperes (marked '35' on cover). VRP-6005A, 39-41 amperes (marked '40' on cover).
Checking (without breaking seal) & Adjustment—*See Electrical Equipment Section.*
Contact Gap & Air Gap—Same as Voltage Regulator.

LIGHTING

Headlamps: Corcoran-Brown "Sealed Beam" type.
See Electrical Equipment Section for complete data.
Adjustment—Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.).
Beam Indicator—At center of speedomter dial. Lighted whenever Country (upper) beams in use.
Direction Signal: *See Electrical Equipment Section.*
Direction Signal Indicators—In face of Speedometer dial. Left or right indicator lighted when corresponding direction signal is in operation.

Switches

Lighting—Studebaker No. 526380 (1950). No. 530058 (1951).
Beam Selector—Delco-Remy No. 1997008, Studebaker No. 519246.
Stop Light—Studebaker No. 666858.
Direction Signal—Studebaker No. 520304.

MISC. ELECTRICAL

LIGHTING CIRCUIT BREAKER (On Light Switch): Studebaker No. 522014. 30-ampere thermostatic type. Protects Headlamps, Parking, Tail, & Instrument Lamps by vibrating to limit current.
Auxiliary Circuit Breaker (On Instrument Panel): 20-ampere thermostatic type. Protects Body & Stop Lamps by vibrating to limit current.
Convertible Top Circuit Breaker—30 ampere.
ACCESSORY CIRCUIT BREAKER: One 15-ampere type used on cars with Climatizer and Defroster.
FUSES: Clock—3 ampere. In clock lead.
Direction Signal—14 ampere. In Flasher lead.
Overdrive—20 ampere. On Overdrive Relay.
Glove Compt. Light—5 ampere. In lamp lead.
Under Hood Light—5 ampere. In lamp lead.
Fog Lights—20 ampere. On Fog Light Switch.
Radio—14 ampere.
HORNS: Sparton or Delco-Remy No. 1999656 (High Note), 1999655 (Low Note). Twin Airtone type horns operated by relay. Horn Current—12-15 amps. (each).
Canada Cars—Auto-Lite HW-4035A (High Note). HW-4036A (Low Note).
Horn Relay: Delco-Remy No. 1116775.
Contacts Close—2.75-4.0 volts.
Contact Gap—.025". **Air Gap**—.015" (closed).

ENGINE

ENGINE SPECIFICATIONS: Six cylinder, "L" Head.
Bore—3". **Stroke**—4".
Displacement—169.6 cu. ins. **Rated H.P.**—21.6.
Developed Horsepower—85 at 4000 RPM.
Compression Ratio—7.0-1 Std.
Compression & Vacuum Reading—*See Tune-up data.*
ENGINE & OIL PAN REMOVAL: *See Studebaker Special Data.*
►*Not necessary to remove engine for pan removal.*
ORIGINAL BORE & PISTONS: *See Studebaker Shop Notes.*
TIGHTENING TORQUES: *See Studebaker Shop Notes.*
CYLINDER HEAD INSTALLATION: *See Studebaker Shop Notes.*
PISTONS: Lynite aluminum alloy, Cam ground, T-slot, bearing-metal plated type. **Length**—2 29/32". **Weight**—8.48 ozs. (without rings or pin).
Clearance—Selective fit (see Fitting Pistons).
Removal—Pistons and rods removed from above.
Fitting New Pistons: Insert .002" feeler, 1" wide, between piston and cylinder wall on camshaft side (piston pin parallel to camshaft, slot away from camshaft). Pull required to withdraw feeler should be 11-16 lbs.
Replacement Pistons: *See Studebaker Shop Notes.*
Installing Pistons: T-slot away from camshaft.
PISTON RINGS: Two compression (Perfect Circle #200 Top, #70 —2nd), one Oil Control (#85).

Ring	Width	End Gap	Side Clearance
Compr. #1	3/32"	.007-.017"	.0015-.002"
Compr. #2	1/8"	.007-.017"	.0015-.002"
Oil Contr. (#3)	5/32"	.007-.017"	.0015-.002"

Installing Rings: Step up top ring, step down 2nd ring.
Replacement Rings: Sets furnished Std. size and .020", .030", .040" Oversize. Single rings Std. size and .010", .020", .030", .040" Oversize.
PISTON PIN: Diameter .7491-.7495". **Length** 2⅝". Pin is locked in rod by tapered pin and locknut.
Pin Fit in Piston—.0001-.0003" clearance or light finger-push fit at room temperature (70°F).
Pin Removal & Installation: *See Studebaker Special Data.*
Replacement Pins: Std. & .0025". .005" oversize. Use Hone No. PH-1 to obtain proper piston pin fit.
NOTE—Replacement pistons fitted with pins.
CONNECTING ROD: Length 6⅜". **Weight** 20.48 ozs.
Crankpin Journal Diameter—1.81175-1.81275".
Lower Bearing—Interchangeable steel-backed, micro-babbitt lined type. No shims.
Clearance—.0005-.002". **Sideplay**—.005-.009".
Bearing Adjustment: None (no shims). Replace bearings. Do not file rods or bearing caps.
NOTE—Make certain that small tongue on bearing shells engage grooves. Palnuts used on bolt nuts.
Replacement Bearings: Bearings furnished Std. Size and .001", .005", .010", .020" Undersize.
Installing Rods: Lower bearings "offset". Install rods with narrow portion of bearing toward front of engine (#1, 3, 5), toward rear (#2, 4, 6). Numbers on

EN INE

CONTINUED FROM PRECEDING PAGE

rods and bearing caps must be together and installed in same numbered cylinder with number and oil hole in lower end of rod toward camshaft side.

CRANKSHAFT: Four bearing type with integral counterweights. Vibration dampener on front end.
Vibration Dampener—*See Studebaker Shop Notes.*
Journal Diameters—2.4370-2.4375"-(All)-Std.
►*CAUTION—Journals are .005" Undersize on engines with letter "A" following Engine Number.*
Bearing Type—Removable type, steel-backed, micro-babbitt lined. No shims.
Clearance—.0005-.0025".
Rear Bearing Oil Seals—Consist of rubber ring on crankshaft; two rubber seal strips in grooves on top of bearing cap; and two specially treated wood strips in grooves on sides of bearing cap.
See "Crankshaft Oil Seals" in Studebaker Special Data.
►*CAUTION—Install new wood oil seals (above) each time rear main bearing cap removed and re-installed.*
Bearing Adjustment: None (no shims). Replace bearings. Do not file bearing caps.
NOTE—Front oil pan seal block may be removed for access to front main bearing cap by removing four lower timing gear cover retaining screws. Use only malleable iron type filler block on these cars.
►*CAUTION—Do not securely tighten timing gear cover-to-filler block screws until after oil pan screws tightened uniformly and securely.*
Replacement Bearings: Furnished as sets or single bearings Std. & .001", .005", .010", .020", .030" U. S.
End Thrust: Taken by thrust washer assembled between front main bearing and crankshaft gear. Controlled by shims between thrust washer and main bearing journal. Adjust by changing shims (.003", .005", .007" thick). **Endplay**—.003-.006".

CAMSHAFT: Four bearing type. Helical gear drive.
Journal Diameters—#1, 1.7475-1.7480"; #2, 1-7162-1.7170"; #3, 1.6857-1.6865"; #4, 1.6232-1.6240".
Bearings—Split, steel-backed, babbitted bushings.
Clearance—.0007-.0022" (#1), .0010-.0027" (others).
Bearing Adjustment: None. Replace bushings with camshaft removed. NOTE—Align bushing oil hole with oil hole in block.
Camshaft Removal: *See "Camshaft & Bearings" in Studebaker Shop Notes.*
End Thrust: Taken by thrust plate assembled on front face of engine block behind camshaft gear (spacer assembled on shaft behind gear hub).
Endplay—.003-.006". *See "Camshaft & Bearings" in Studebaker Special Data.*
Timing Gears: Crankshaft gear Cast Iron, Camshaft gear Celeron with steel hub.
Backlash—.001-.003".
Replacement Gears—Camshaft gear furnished in two sizes; Standard (marked "S"), High Limit (marked "H"), Crankshaft gear furnished Standard size only.
Timing Gear Removal & Installation—*See "Timing Gears" in Studebaker Shop Notes.*
Camshaft Setting: Mesh marked tooth of camshaft gear between two marked teeth of crankshaft gear.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 11/32"	5/16"	4 11/32"
Exhaust	1 9/32"	5/16"	4 11/32"

	Seat Angle	Lift	Stem Clearance
All Valves	45°	11/32"	.0015-.0035"

Valve Guides: Pressed in block from above with top of guide 1 3/16" below top of block. Finish ream guides to inside diameter of .312-.3125" Use Valve Stem Guide Remover and Replacer Tool J-2034. Replace worn guides if clearance greater than .0035".
Valve Springs: Install with closed coil end up. Replace springs if over 10% weaker than pressure listed.

	Spring Pressure	Length
Valve Open	93-103 lbs.	1 5/16"

NOTE—Install valve spring retainer with flange engaging flat surface on lower coil and tongue on inner diameter engaging groove in spring lock.
Valve Lifters: Mushroom type. Remove from below with camshaft out of engine. *For Camshaft Removal directions, refer to Studebaker Shop Notes.*
Valve Lifter Tension Spring—*See "Valve System" in Studebaker Special Data.*
Clearance—.0005-.00175".
Replacement Lifters—Furnished Std. size and .0005", .001" Oversize.

VALVE TIMING

Tappet Clearance: .016" All Valves, Engine cold.
NOTE—Self-locking tappet adjusting screws used. Tappet screw tension should be 25 in. lbs. minimum.
Valve Timing: See Camshaft Setting above.
Intake Valves—Open 15° BTDC. Close 49° ALDC.
Exhaust Valves—Open 54° BLDC. Close 10° ATDC.
Valve Timing Check—Set #1 intake valve to .020". Turning engine with #6 cylinder on compression stroke the intake valve should start to open when the mark "IN-OP 1-6" on front dampener lines up with pointer.

LUBRICATION

Lubrication System: Pressure to crankshaft, connecting rod, and camshaft bearings and to valve lifters. Timing gears lubricated by oil by-passed by pump.
Crankcase Capacity—5 qts. ("Add Oil" point on oil level indicator stick is 3 qt. level).
Normal Oil Pressure—20-40 lbs. at 40 MPH.
Oil Pressure Relief Valve—On lower right front corner of engine. Opens at 40 lbs. Adjustable by inserting shims between outer end of spring and plug.
Oil Pump: Helical gear type. Mounted externally on right hand side of crankcase.
Oil Pump Removal & Installation—*See "Oil Pump" in Studebaker Shop Notes.*
Oil Pressure Gauge: Stewart-Warner Bourden tube (not electric) type.
Crankcase Ventilation: Filter element in oil filler cap (air intake) and in breather pipe on left rear of engine (air outlet).
Servicing—Wash both filter elements in kerosene and re-oil at regular intervals. NOTE—filter in outlet pipe removed by taking out cotter pin.

COOLING

Cooling System: Positive circulation with water pump mounted on front of block with fan.
Capacity—10 quarts.
Water Pump: Packless, sealed ball bearing type.
See Water Pump Section for complete data.
Removal—Slack off drive belt, take out capscrews in the fan pulley hub & remove fan blades. Disconnect hose connection, take out mounting screws in pump body flange, withdraw pump from engine.
Belt Adjustment—*See Generator Belt Adjustment.*
Thermostat: Bishop & Babcock. In water outlet on cylinder head.
Setting—Starts to open at 151-155°F.
Temperature Gauge: Stewart-Warner electric type.
Dash Unit—Studebaker No. 530051.
Engine Unit—Studebaker No. 530127 (without adapter).

CLUTCH

Borg & Beck Model 8A7 with Borglite Driven Member. Single plate, dry disc type. NOTE—Clutch assembly marked by number 980 stamped on cover.
See Clutch Section for complete data.
►*CLUTCH CHATTER & RATTLE CORRECTION—See "Clutch Notes" in Studebaker Special Data.*
Facings—Moulded Metallic type, 2 required. I. D. 5⅜". O. D. 8". Thickness .125".
►*CAUTION—Special driven member used on cars with Overdrive. Identify each type by hub damper spring color as follows:*

	Damper Spring Color.
Cars with Conventional Trans.	2 Lavender, 2 Black
Cars with Overdrive Trans.	4 Lavender

Pedal Adjustment: *Pedal free travel ½" to 1".* To adjust, unhook pull-back spring on outside of frame rail, loosen locknut at adjusting clevis and remove clevis pin at inner end of pedal shaft, turn clevis on rear end of pedal shaft-to-operating shaft rod for correct clearance, reassemble linkage.
Hill-Holder Note—Check setting whenever clutch pedal adjusted and adjust Hill-holder to release just as clutch engages.
Clutch Housing Removal: Remove distributor and oil level gauge adapter, remove starter and tie up out of the way (not necessary to disconnect cables), remove front floor plate, take out upper clutch housing cap screws. Remove transmission (SEE TRANSMISSION). Disconnect clutch pedal rod at operating shaft-to-release shaft sleeve, pull operating shaft out and remove sleeve. Remove parking brake cable shield clip, unhook brake pedal pullback spring from cross-member, support engine weight on jack under rear end of oil pan (use block of wood on jack to prevent damage to pan), take out engine rear support bolts, remove lower support insulators. Remove cross-member (with clutch operating shaft support bracket). Loosen exhaust pipe flange nuts at manifold, remove exhaust pipe support bracket-to-clutch housing bolts, loosen clamp and swing bracket out of the way. Take out all clutch housing bolts, remove dowel bolts at right and left center, remove clutch housing.
►**Installation Caution**—Align clutch housing to rear engine plate with two tapered drifts, then install the dowel bolts. Draw the dowel bolts in place by tightening the nuts—**do not drive them in place.**
Clutch Removal: Remove clutch housing (above), remove six screws evenly to relieve spring pressure, lift off clutch assembly and driven member.

TRANSMISSION

Warner Model AS1-T96 (Std.), AS24-T96 with R10 type Overdrive (Opt.). All helical gear type. Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).
See Transmission Section for complete data.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Transmission Control: Remote control type with gearshift lever mounted on steering column.
See Transmission Section for complete data.

Removal: Drain transmission. Disconnect hand brake cable and move out of way for clearance. Disconnect front universal at transmission (wire caps or use clamp to prevent losing rollers). Take out center support bearing mounting bolts. Push front shaft and support to rear (will slide on splines on rear shaft). Disconnect shift rods from levers on case and speedometer cable (remove speedometer pinion). On Overdrive transmission disconnect all control wires and cable. Take out transmission to clutch housing capscrews, pull transmission straight back and remove from car.

VERDRIVE

Warner R10 Type (part of AS24-T96 Transmission). New Governor controlled type (no centrifugal pawls) with electrical solenoid operation and throttle controlled "kick-down."
NOTE—Overdrive is new "centered ring gear" type.
See Transmission Section for complete data.
Overdrive Solenoid—Warner Model No. 3AR10B-62, Studebaker No. 521429.
Overdrive Governor—Warner Model No. AR10B-72, Studebaker No. 520454.
Control Relay—Auto-Lite HRT-4001, Studebaker No. 523297.
Throttle Kick-down Switch—(1950) Studebaker No. 515667. (1951) Studebaker No. 529479.
Lock-out Switch—Studebaker No. 521436.
Fuse—20 ampere. On Overdrive Relay.

Removal: See Std. Transmission Removal data.

AUT MATIC TRANSMISSION

Torque converter and 3-speed automatic transmission with hydraulic control. Has mechanical parking lock and Anti-creep device which holds brakes applied when car standing and ignition "on."
See Transmission Section for complete data including Testing & Trouble Shooting.
Lubrication—Check oil level every 1000 miles and maintain oil level at "Full" mark on dip stick. Drain and refill every 15,000 miles. Use only premium type and refill every 15,000 miles. Use only Automatic Transmission Fluid Type "A".
Checking Oil Level—Oil must be warm (set parking brake, place selector lever in "L" position, idle engine until normal operating temperature reached). Remove inspection cover on front floor carpet over transmission case, clean all dirt from around inspection hole, check oil level with dip stick gauge. Add oil as required to bring level up to "Full" mark on dip stick (1 pint between "LOW" and "FULL").
CAUTION—Do not fill above "FULL" mark.
Draining and Refilling—*See "Studebaker Automatic Transmission" in Tranmission Section.*
Linkage Adjustment—*See "Studebaker Automatic Transmission" in Transmission Section.*

Removal: *See "Studebaker Automatic Transmission" in Transmission Section.*

UNIVERSALS

Spicer Model 1268-110X (Front & Rear), 1261-102X (intermediate). Needle bearing type. Three used with intermediate universal at propeller shaft support bearing on crossmember (see Propeller Shaft).

Propeller Shaft & Support Bearing: Two shafts used:
1) Front Shaft with intermediate universal yoke bolted on rear end (no slip-joint).
2) Rear Shaft with slip-joint on forward end at intermediate universal.
►**Propeller Shaft Checking** (For Vibration)—*See "Propeller Shaft" in Studebaker Special Data.*
Propeller Shaft & Support Bearing Removal & Servicing—*See "Propeller Shaft" in Studebaker Shop Notes.*

REAR AXLE

Spicer Salisbury Model 23. Semi-floating, Hypoid Gear type with Hotchkiss Drive.
See Rear Axle Section for complete data.
Ratio—4.1-1 Std. 4.56-1 Optl. (Std. with Overdrive). NOTE—Rear axle ratio stamped on plate attached to axle by cover capscrew and also on ring and pinion gears.
Backlash—.003-.006". Shim adjustment.

Removal: Remove hub caps, take out cotter pin from axle nut, loosen rear wheel nuts. Place car on stands on frame just ahead of rear springs. Remove wheels, hubs and drums. Disconnect hand brake cable. Take out backing plate bolts from backing plates, free hydraulic brake line from axle housing clips (do not disconnect brake line). Backing plates and adjusting shims can then be wired to frame (do not disconnect brake line from wheel cylinders). Disconnect rear universal (wire caps or use clamp to prevent losing rollers). Remove rear spring "U" bolts, disconnect lower shock absorber links, remove rear axle assembly from car.
Axle Shaft Removal—Remove wheel, remove wheel hub (use puller J-446-A). Take out backing plate retaining bolts, remove outer oil seal. Pull backing plate out over end of axle shaft and wire plate to frame (CAUTION—do not lose adjusting shims located between backing plate and axle housing flange), pull axle shaft with Puller HM-931.

Wheel Bearing Adjustment: Use dial indicator to check axle shaft endplay. Adjust by removing backing plate (see Axle Shaft Removal above), and adding or removing shims located between backing plate and axle housing flange (shims .003" .005", .010", .030" thick). **Endplay**—.001-.005".

SHOCK ABSORBERS

Houde (Houdaille) & Monroe—Direct acting, non-adjustable type. Front shocks are mounted within coil springs.
►*NOTE—Shock absorbers cannot be refilled or repaired.*
Front (All)—(1950) Studebaker No .524787 (Std.), Studebaker No. 527169 (Heavy Duty). (1951) Studebaker No. 527924 (Std.), Studebaker No. 530971 (Heavy Duty).
Rear (All)—(1950) Studebaker No. 524816 (Std.), Studebaker No. 527170 (Heavy Duty). (1951) Studebaker No. 530766 (Std.), Studebaker No. 530972 (Heavy Duty).

FRONT SUSPENSION

Front Suspension: Independent, Coil Spring Suspension with front Shock Absorbers located within coil springs.
See Front Suspension Section for complete data.
►**FRONT END CORRECTION (For Tire Wear, Shimmy, Vibration, etc.):** *See "Steering Notes" in Studebaker Special Data.*
Kingpin Inclination—5¼° crosswise.
Caster—Neg. 1° to Neg. 2½°. Eccentric pin adjustment.
►*NOTE*—Not more than ¾° variation between wheels.
Camber—0° to +1°. Eccentric pin adjustment.
►*NOTE*—½° more Camber favored on drivers side.
Toe-In—1/16-1/8". Adjust **right hand tie rod only** for toe-in after left hand tie rod has been adjusted for wheel straight-ahead position (with steering wheel centered) and center auxiliary tie rod has been adjusted so that steering gear arm and auxiliary steering arm parallel. **RHD Car Note**—Make toe-in adjustments on left hand tie rod.

STEERING GEAR

1950 Models—Ross Model T-12 Cam-and-Twin Lever type.
1951 Models—Saginaw. Worm & Roller type.
See Steering Gear Section for complete data.

BRAKES

Service: Lockheed (Wagner Electric) Hydraulic, Self-centering, Self-adjusting type. Brakes have automatic spring-loaded adjusting wedge controlled by contact plug projecting through hole in lining of forward shoe (plug contacts drum when brakes applied). Hand lever applies rear wheel service brakes.
See Brake Section for complete data.
Drums—Composite type. Diameter 9".
Clearance—If adjustment required, see "Lockheed (Wagner) Hydraulic Self-Adjusting Brakes" in Brake Section.
Lining—Moulded type (all shoes). Width 2". Thickness 3/16". Length per wheel 18½".
Braking Power—57% Front. 43% Rear.

Hand Brake: See Service Brake data (above).

Hill-Holder: Optional Equipment on all models.
See Brake Section for complete data.

►**Anti-Creep (for Auto. Trans. Cars)** *See Brake Section for complete data.*

MISC. MECHANICAL

CONVERTIBLE TOP CONTROL: Electric type with motor mounted on left hand lift assembly (right hand lift assembly driven through flexible drive).
See Miscellaneous Section for complete data.

Windshield Wipers: Vacuum Cable operated type.
See Miscellaneous Section for complete data.

M DEL IDENTIFICATION

SERIAL NUMBER: Stamped on plate on left front door lock pillar post.

	South Bend	Los Angeles
1950 Numbers	4398601 Up	4839001 Up

Body Symbol Letter—Used with model designation (and on body number plate) to indicate body type as follows: C, 5-Pass. Coupe; F, 2-Door Sedan; Q, 3-Pass. Coupe; S, Convertible; W, 4-Door Sedan; Y, Land Cruiser.

ENGINE NUMBER: Stamped on pad on upper front left corner of engine block.
1950 Numbers—H-370001 Up.

TUNE-UP

COMPRESSION PRESSURE: 120 lbs. at 150 RPM. cranking speed for Std. 7.0-1 Head.

VACUUM READING: Steady 18-20" idling at 8 MPH.

FIRING ORDER: 1-5-3-6-2-4. See diagram.

SPARK PLUG GAPS: .025" Limits .0225-.0275".
Plug Type—Champion Type J7, 14 mm.

DISTRIBUTOR: Breaker Gap—.022".
Cam Angle—Test limits with .022" gap—31-37°.
See "Delco-Remy Cam Angle" in Electrical Equipment Section.
Breaker Arm Spring Tension—17-21 ozs.
Automatic & Vacuum Advance—*See Ignition.*
Condenser Capacity—.18-.23 microfarad.

IGNITION TIMING: 2° BTDC.
Timing Procedure—*See Ignition Timing.*
Timing Mark—Vibration Dampener mark "IGN/" aligned with pointer on gear case cover.

CARBURETION:
Idle Setting (Stromberg)—Idle screw set for smooth idle. Turn screw out for richer mixture. **(Carter)**—½-1½ turns open. Turn screw out for richer mixture.
Idle Speed (Standard Trans.)—8-10 MPH. at normal operating temperature.
Idle Speed (Auto. Trans.)—500-550 RPM. with selector lever in "N". Adjust by turning idle adjusting screw switch in or out (switch replaces regular stopscrew).
Float Level (Stromberg)—Fuel level ⅝" below top edge of float bowl with engine idling.
(Carter)—7/16" from top of projection on bowl cover to top of soldered seam on free end of float with needle valve seated and cover assembly inverted.
Accelerating Pump (Stromberg)—Center hole (med. stroke) Normal all-season setting. Inner hole (min.)—Summer, Outer hole (max.)—Winter used for temperature extremes.
(Carter)—No seasonal adjustment.

Choke Setting: Centered (at index).

Fuel Pump Pressure: 4-5 lbs. maximum.

MANIFOLD HEAT CONTROL: Automatic thermostatic type operating in stainless steel bushings.
Setting—To test coil tension, free outer end of coil from bracket on manifold. With valve closed, hooked end of coil should be approx. 90° from bracket at 70°F. Replace coil if incorrect.
NOTE—To overcome sticking, lubricate valve shaft with kerosene and soda solution or Bendix Carburetor Cleaner. If necessary, shaft diameter can be reduced for .005" clearance in bushings.

VALVE TAPPET CLEARANCE: .016" All Valves, Cold.
NOTE—Self-locking tappet screws used.
Valve Timing Check—*See Valve Timing.*

STARTING: *See Battery, Starter, Generator, Regulator.*

IGNITION

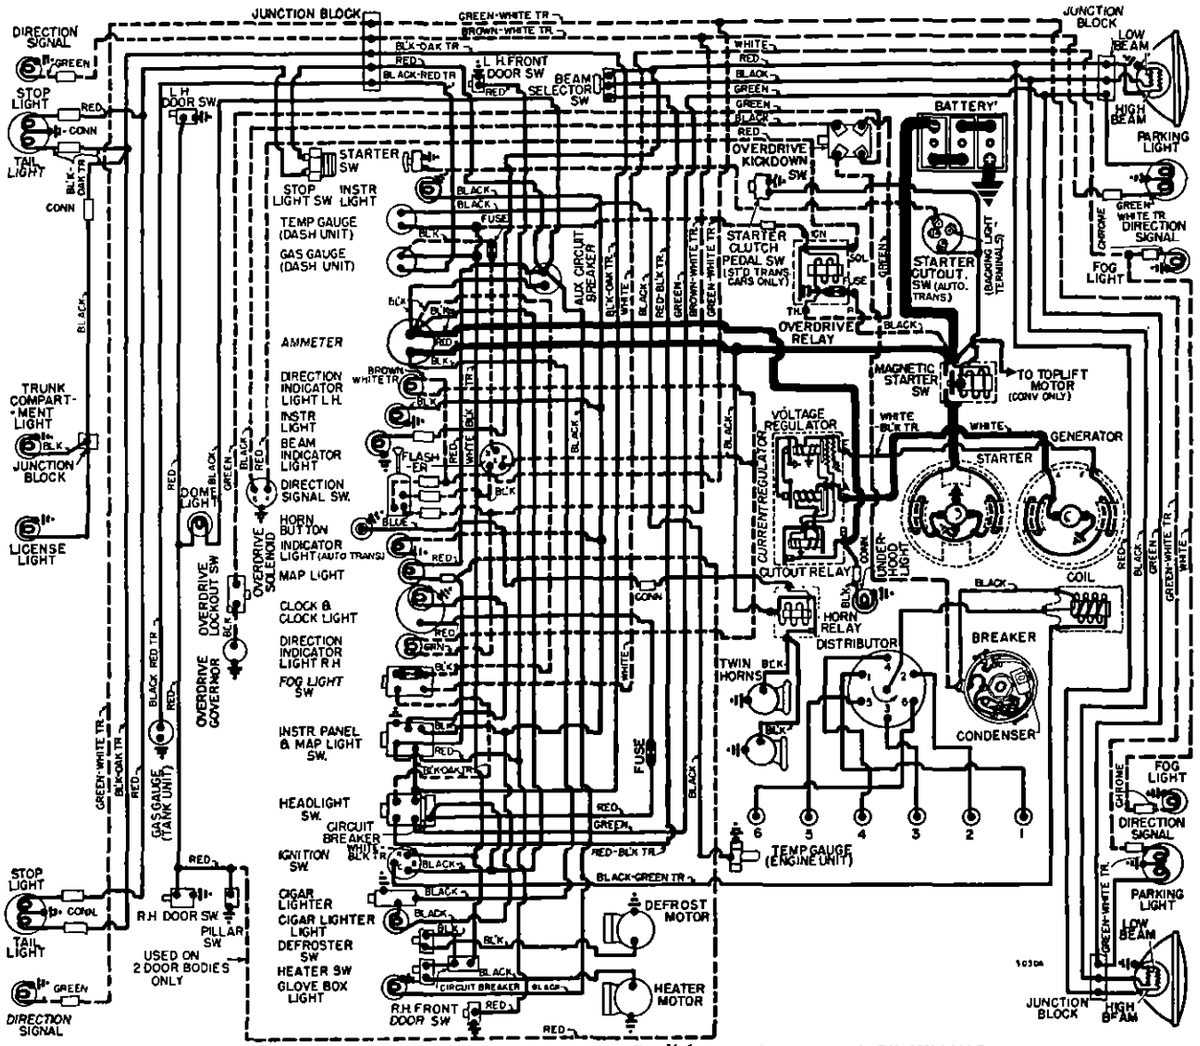
IGNITION SWITCH: Mitchellock. Studebaker No. 526396.
Ignition Lock—Yale & Towne.

COIL: Delco-Remy #1115380. On engine above distributor (under spark plug cable bracket).

CONDENSER: Delco-Remy Part No. 1869704.
Capacity—.18-.23 microfarad.

DISTRIBUTOR: Delco-Remy #1110220. Automatic and vacuum advance type with new "center-bearing" breaker plate.

►**Breaker Plate Bearing Assembly**—Plate rotates on 3 bakelite buttons on support plate with spring tension adjustment (shim washers) on underside of support plate. Pull required to move plate should be 8 ozs. min., 16 ozs. max. with breaker plate assembly out of housing.



See "Delco-Remy Center-Bearing Breaker Plate Distributor" in Electrical Equipment Section.
Breaker Gap—.022".
Cam Angle—Test limits with .022" gap—31-37°.
See "Delco-Remy Cam Angle" in Electrical Equipment Section.
Breaker Arm Spring Tension—17-21 ozs.
Rotation—Counter-clockwise viewed from above.

Automatic Advance

Degrees	Distr. R.P.M.	Degrees	Eng. R.P.M.
Start	400	2	800
11	1400	22	2800

Vacuum Spark Control: Delco-Remy No. 1116052 linked directly to breaker plate. Provides additional advance at speeds above idling except when engine

CONTINUED ON NEXT PAGE

SEE BRAKE SECTION FOR AUTOMATIC TRANSMISSION "ANTI-CREEP" WIRING

CONTINUED FROM PRECEDING PAGE

accelerated or operated with wide open throttle when spark retarded by return spring.
Plunger Travel—⅛" maximum.

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	3-5"
6°	12°	9-14"

Distributor Removal: Mounted on left side of engine. To remove, disconnect vacuum line, take out bolt in clamp arm, lift distributor off.
Installation Note—When installing distributor, crank engine to firing position for #1 cylinder ('IGN' on vibration dampener in line with pointer on timing gear cover), sight down distributor shaft hole (distributor out) and see that distributor drive tongue in oil pump drive gear is 30° from the horizontal and offset toward the top, turn rotor to #1 segment, install distributor, check timing.

IGNITION TIMING

Std. Setting	Flywheel Degrees
All Engines	2° BTDC.

Timing (with Neon Timing Light)—Neon Light No. 890 recommended. Clip Neon light lead in series with #1 spark plug, idle engine and direct light on vibration dampener (at pointer on timing gear cover). Loosen clamp arm, rotate distributor until 'IGN' mark on vibration dampener lines up with pointer on timing gear cover.
Timing (without Neon Timing Light)—Turn engine over to firing position for #1 piston with 'IGN' mark on vibration dampener in line with pointer on timing gear cover and distributor rotor opposite #1 segment in distributor cap. Adjust distributor.

CARBURETOR

STROMBERG

Stromberg Model BXOV-26. 1¼" Single Barrel, Downdraft, with Fast Idle & Automatic Choke.
Code No. (on bowl cover)—6-104.
See Carburetor Section for complete data.
Settings (Idle Setting, Float Level, & Accelerating Pump): *See Tune-Up data.*
Metering Jet—*Refer to Carburetor Index for Stromberg Downdraft Carburetor Jet Specification Table.*
Automatic Transmission Throttle Linkage Adjustment: *See Studebaker Automatic Transmission in Transmission Section.*
Fast Idle: Stromberg BXOV-26 carburetor type.
See Carburetion Equipment Section for data.
Fast Idle Setting—To check, hold stopscrew against lowest step of fast idle cam, move choke valve as far as possible toward closed position, check valve opening with 11/32" drill. Adjust by bending connector.
Automatic Choke: Stromberg BXOV-26 type.
See Carburetion Equipment Section for data.
Automatic Choke Setting—'R' mark on thermostat cover in line with highest projection on housing. Shift to 'M' if engine loads up or overchokes. Use 'H' setting only if highly volatile fuels used.

CARBURETOR

CARTER WE

Carter WE-627SA (On Cars between Eng. Nos. H-376, 298 and H-386,398), 1¼" Single Barrel, Downdraft with Carter Climatic Control.
See Carburetor Section for complete data.
Settings (Idle Setting, Float Level, & Accelerating Pump): *See Tune-Up data.*
Metering Rods & Jets—*See Carter Jet Table in Carburetor Section.*
Automatic Transmission Throttle Linkage Adjustment: *See Studebaker Automatic Transmission in Transmission Section.*
Fast Idle: Carter Single Barrel Carburetor type.
See Carburetion Equipment Section for data.
Setting—.054" throttle valve opening with choke valve closed. To check, open throttle wide to make certain fast idle cam drops into position, then with choke valve closed measure clearance between edge of throttle valve and carburetor wall on side opposite idle port (valve closed to fast idle position). To adjust, bend connector rod at lower angle.
Automatic Choke: Carter Climatic Control (Single Carburetor type).
See Carburetion Equipment Section for data.
Setting—Centered (cover centered on scale).

CARB. EQUIPMENT

Air Cleaner: AC. Oil-wetted type Std., Oil-bath Cleaner Optl.
Servicing (Oil-wetted Type)—Clean and re-oil filter element at 1000 mile intervals or as required.
Servicing (Oil-bath Type)—Clean filter element and oil reservoir, fill reservoir to indicated level mark with SAE No. 40 or 50 engine oil at intervals as required by operating conditions.
Fuel Pump (Std.): AC. Combination fuel-and-vacuum pump.
Pressure—4-5 lbs. maximum.
See Carburetion Equipment Section for data.
Gasoline Gauge: Stewart-Warner Electric type.
Dash Unit—Studebaker No. 522177.
Tank Unit—Studebaker No. 525548.
See Carburetion Equipment Section for data.

BATTERY

Willard Type HW-1-100. 6 volt, 15 plate, 100 Ampere Hour Capacity (20 hour rate).
Starting Capacity—120 amperes for 20 minutes.
Grounded Terminal—Positive (+) to cylinder head.
Location—In engine compartment on left side.

STARTER

Delco-Remy Model 1107084. Armature No. 1878077.
Drive—Bendix Barrel type No. A1792.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—24-28 ozs.

Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5000	5.7	65
12 "	Lock	3.4	525

Removal: Disconnect one cable from battery, and cables and wires from starter solenoid switch. Remove starter to clutch housing bolts, slip housing end of starter out of clutch housing and engine rear plate, and remove starter.
Starting Switch: Magnetic switch mounted on starter and controlled by manual switch.
Standard Trans. Cars—Switch mounted on toeboard under clutch pedal, operated by fully depressing pedal.
Automatic Trans. Cars—Pull switch under instrument panel. Starter operative only with transmission selector lever in "N" or "P" (Delco-Remy No. 1997870 Neutral Safety Switch mounted on steering column).

GENERATOR

Delco-Remy Model 1102728. Armature No. 1879002.
Two brush type with current-voltage control.
Charging Rate Adjustment—None. See Regulator.
Maximum Charging Rate—As given below.

Performance Data

	Amperes①	Volts	R.P.M.
Cold	30	8.0	1750

①—Not maximum output. See Current Regulator.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—25 ozs. each.
Field Current—1.75-1.9 amperes at 6.0 volts.
Removal: Pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.
Belt Adjustment: Loosen pivot and clamp bolts, move generator out until ⅜-½" belt deflection midway between generator and fan pulleys is obtained.

REGULATOR

Delco-Remy Models #1118380 and 1118369 (tropical export). Voltage and Current Regulators.
▷*NEW "1118300 SERIES"* regulators have screw adjustment for settings and single regulator springs.
See Electrical Equipment Section for complete data.
CAUTION—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

Cutout Relay

Cuts In—(1118380) 5.9-6.8 volts hot (set to 6.4 volts hot), (1118369) 5.7-6.6 volts hot (set to 6.2 volts hot).
Contact Gap—.020" (same for both sets).
Air Gap—.020" (with contacts just closed).

Voltage Regulator

Setting—(1118380) 7.0-7.5 volts hot (set to 7.2 volts hot), (1118369) 6.5-7.2 volts hot (set to 6.8 volts hot). Regulator is over-compensated for temperature. Should be checked with cover in place and hot.
Air Gap—.075" with armature pressed down to point where contacts are just touching.
Checking & Adjustment—*See Electrical Equipment Section.*

Current Regulator

Setting—(1118380) 32-40 amperes hot (set to 36 hot), (1118369) 30-38 amperes hot (set to 34 hot).
Air Gap—.075" with armature pressed down to point where contacts are just touching.
Checking & Adjustment—*See Electrical Equipment Section.*

LIGHTING

Headlamps: Corcoran-Brown "Sealed Beam" type.
See Electrical Equipment Section for complete data.
Adjustment—Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.).
Beam Indicator—At center of speedometer dial. Lighted whenever Country (upper) beams in use.
Direction Signal: *See Electrical Equipment Section.*
Direction Signal Indicators—In face of Speedometer dial. Left or right indicator lighted when corresponding direction signal is in operation.

Switches

Lighting—Studebaker No. 526350 (with circuit breaker).
Instrument—Studebaker No. 526351.
Beam Selector—Delco-Remy #1997008.
Direction Signal—Studebaker No. 526901P.

MISC. ELECTRICAL

LIGHTING CIRCUIT BREAKER (On Light Switch): Studebaker No. 522014.
30-Ampere thermostatic type. Protects Headlamps.

Parking, Tail, & Instrument Lamps by vibrating to limit current.
Auxiliary Circuit Breaker (On Instrument Panel): 20-ampere thermostatic type. Protects Body & Stop Lamps by vibrating to limit current.
Convertible Top Circuit Breaker—30 ampere.

ACCESSORY CIRCUIT BREAKER: One 15-ampere type used on cars with Climatizer and Defroster.

FUSES: Clock—3 ampere. In clock lead.
Direction Signal—14 ampere. In Flasher lead.
Overdrive—20 ampere. On Overdrive Relay.
Glove Compt. Light—5 ampere. In lamp lead.
Under Hood Light—5 ampere. In lamp lead.
Fog Lights—20 ampere. On Fog Light Switch.

HORNS: Sparton or Delco-Remy #1999656 (High Note), #1999655 (Low Note). Twin Airtone type horns operated by relay. **Horn Current**—12-15 amps
Horn Relay: Delco-Remy #1116775.
Contacts Close—2.75-4.0 volts.
Contact Gap—.025". **Air Gap** .015" (contacts closed).

ENGINE

ENGINE SPECIFICATIONS: Six cylinder, "L" Head.
Bore—3 5/16". **Stroke**—4 3/4".
Displacement—245.6 cu. ins. **Rated H.P.**—26.33.
Developed Horsepower—102 at 3200 RPM.
Compression Ratio—7.0-1 Std.
Compression & Vacuum Reading—*See Tune-Up data.*

ENGINE & OIL PAN REMOVAL: *See Studebaker Special Data.*
►*Not necessary to remove engine for pan removal.*

►**REPLACEMENT ENGINE CAUTION (for Automatic Transmission Cars):** *See Studebaker Automatic Transmission in Transmission Section.*

CYLINDER HEAD & TIGHTENING TORQUES: *See Studebaker Special Data.*

PISTONS: Lynite aluminum alloy, Cam-ground, T-slot, bearing-metal plated type. **Length** 3¾".
Original Bore & Pistons: *See Studebaker Special Data.*
Weight—14.4 ozs. (stripped).
Clearance—Selective Fit (see Fitting Pistons).
Removal—Pistons and rods removed from above.
NOTE—Car manufacturer recommends that cylinders out-of-round or tapered more than .002" be reconditioned.

Fitting New Pistons: Insert .002" feeler, 1" wide, between piston and cylinder wall on camshaft side (piston pin parallel to camshaft, slot away from camshaft). Pull required to withdraw feeler should be 14-19 lbs.
Replacement Pistons: *See Studebaker Special Data.*
Installing Pistons: T-slot away from camshaft.

PISTON RINGS: Two compression, one oil control ring per piston, all above pin. Oil drain holes provided in oil ring groove.

Ring	Width	End Gap	Side Clearance
Comp. (#1,2)	3/32"	.009-.014"	.0015-.002"
Oil Contr. (#3)	3/16"	.009-.014"	.0015-.002"

Installing Rings: Beveled side of compression rings (Sealed Power) up.
Replacement Rings: Sets furnished Std. size and .020", .030", .040" Oversize. Single rings Std. size and .010", .020", .030", .040" Oversize.

PISTON PIN: Diameter .8741-.8745". **Length** 2⅞". Pin is locked in rod by tapered pin and locknut.
Pin Fit in Piston—.0001-.0003" clearance or light finger push fit at room temperature (70°F.).
Pin Removal & Installation: *See Studebaker Special Data.*

Replacement Pins: Std. & .0025", .005" Oversize. Use Hone PH-1 to obtain proper piston pin fit.
NOTE—Replacement pistons fitted with pins.

CONNECTING ROD: Length 7 15/16". **Weight** 33.3 ozs.
Crankpin Journal Diameter—2.18675-2.18775".
Lower Bearing—Interchangeable steel-backed, micro-babbitt lined type. No shims.
Clearance—.0005-.002". **Sideplay**—.005-.009".
Bearing Adjustment: *None (no shims). Replace bearings. Do not file rods or caps.*
NOTE—Make certain that small tongue on bearing shells engage grooves. Palnuts used on bolt nuts.
Replacement Bearings: Bearings furnished Std. size and .001", .005", .010", .020" Undersize.
Installing Rods: Lower bearings "offset". Install rods with narrow portion of bearing toward front of engine (#1, 3, 5), toward rear (#2, 4, 6). Numbers on rods and bearing caps must be together and installed in same numbered cylinder with number *and oil hole in lower end of rod toward camshaft.*

CRANKSHAFT: 4 bearing, 5 integral counterweights. Vibration dampener mounted on forward end.
Vibration Dampener—*See Studebaker Special Data.*
Journal Diameters—2.8745-2.8750".
Bearings—Removable steel backed, babbitt-lined type. No shims.
Clearance—.0006-.0027".
Rear Bearing Oil Seals—*See "Crankshaft Oil Seals" in Studebaker Special Data.*
►*CAUTION—Install new wood oil seals (above) each time rear main bearing cap removed and re-installed.*
Bearing Adjustment: None (no shims). Replace bearings. Do not file bearing caps.
Replacement Bearings: Furnished as sets or single bearings in Std. Size and .001", .010", .020", .030" U.S.
End Thrust: Taken by thrust plate assembled between front main bearing and crankshaft gear. Controlled by shims between thrust plate and main bearing journal. Adjust by changing shims furnished .003", .005", .007" thick.
Endplay—.003-.006".

CAMSHAFT: Four bearing. Helical gear drive.
Journal Diameters—#1, 1.9975-1.9980"; #2, 1.9662-1.9670"; #3, 1.9357-1.9365"; #4, 1.1232-1.1240".
Bearings—Split steel-backed, babbitted bushings.
NOTE—Oil hole in bushings must be aligned with oil holes in engine block.
Clearance—.0007-.0022" (#1), .0010-.0027" (others).
Camshaft Removal: *See "Camshaft & Bearings" in Studebaker Special Data.*
End Thrust: Taken by thrust plate assembled on front face of engine behind camshaft gear (spacer assembled back of gear hub).
Endplay— 003-.006". *See "Camshaft & Bearings" in Studebaker Special Data.*

Timing Gears: Crankshaft gear Cast Iron. Camshaft gear Celeron with steel hub. **Backlash**—.001-.003".
Replacement Gears—Camshaft gear furnished in two sizes; Standard (marked "S"), High Limit (marked "H"). Crankshaft gear Std. size only.
Timing Gear Removal & Installation—*See "Timing Gears" in Studebaker Special Data.*
Camshaft Setting: Mesh marked tooth of camshaft gear between two marked teeth on crankshaft gear.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 15/32"	11/32"	5 7/32"
Exhaust	1 9/32"	11/32"	5 7/32"

	Seat Angle	Lift	Stem Clearance
All Valves	45°	11/32"	.0015-.0035"

Valve Guides: Pressed in block from above with upper end 1 5/32" below upper edge of valve seat and stepped end down. Ream guides to inside diameter of .3425-.3445". Replace worn guides when clearance exceeds .0035".

Valve Springs: Install with closed-coil end up. Replace springs if more than 10% weaker than test pressure listed.

	Spring Pressure	Length
Valve Open	125-145 lbs.	1 3/4"

NOTE—Dampeners used on top of all springs.

Valve Lifters: Mushroom type. Remove from below with camshaft out of engine. *For camshaft removal directions, see Studebaker Special Data.*
Valve Lifter Tension Spring—*See "Valve System" in Studebaker Special Data.*
►**Valve Chamber Baffles**—*See "Valve System" in Studebaker Special Data.*
Diameter—.624". **Clearance**—.0005-.00175".
Replacement Lifters—Std. & .0005", .001" O. S.

VALVE TIMING

Tappet Clearance: .016" All Valves, Engine Cold.
NOTE—Self-locking tappet adjusting screws used. Tappet screw tension should be 25 in. lbs. minimum.
Valve Timing: See Camshaft Setting above.
Intake Valves—Open 15° BTDC. Close 49° ALDC.
Exhaust Valves—Open 54° BLDC. Close 10° ATDC.
Valve Timing Check—Set #1 intake valve to .020". Turning engine with #6 cylinder on compression stroke the intake valve should start to open when the mark "IN-OP 1-6" on front dampener lines up with pointer.

LUBRICATION

Engine Oiling System: Pressure to crankshaft, connecting rod, and camshaft bearings, and to valve lifters. Timing gears lubricated by oil by-passed by pump. Oil pump mounted externally on right side.
Crankcase Capacity—6 quarts.
Normal Oil Pressure—20-40 lbs. at 40 MPH.
Oil Pressure Regulator—On lower right front corner of engine. Opens at 40 lbs. Adjustable by inserting shims between outer end of spring and plug.
Oil Pan Removal: *See Studebaker Special Data.*
Oil Pump: Helical gear type mounted externally on right side of engine.
Oil Pump Removal & Installation—*See "Oil Pump" in Studebaker Special Data.*
Oil Pressure Gauge: Stewart-Warner Bourden Tube (not electric) type.
Crankcase Ventilation: Filter element in oil filler cap (air intake) and in breather pipe on left rear of engine (air outlet).
Servicing—Wash both filter elements in kerosene and re-oil at regular intervals. NOTE—Filter in outlet pipe removed by taking out cotter pin.

COOLING

Cooling System: Positive circulation with water pump mounted on front of block with fan.
Capacity—13.5 qts. (15 qts. with Climatizer).
Water Pump: Packless type. No lubrication required. *See Water Pump Section for complete data.*
Removal—Slack off drive belt, take out capscrews in fan pulley hub and remove blades. Disconnect hose connection, take out mounting screws in pump.
Belt Adjustment—*See Generator Belt Adjustment.*
Thermostat: Fulton or Bishop & Babcock. In water outlet on cylinder head.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Setting—Opens at 151-155°F (Std.), 177°F (High).
Temperature Gauge: Stewart-Warner electric type.

CLUTCH

WITH STANDARD TRANSMISSION

Borg & Beck Model No. 9A7 with Borglite Driven Member. Single plate, dry disc type.
NOTE—Clutch Assembly marked by number 943
See Clutch Section for complete data.
▷*CLUTCH OPERATING SHAFT RATTLE CORRECTION: See "Clutch Notes" in Studebaker Special Data.*
Facings—Moulded-metallic, 2 required. I. D. 6". O. D. 9¼". Thickness ⅛".
Adjustment: Pedal free travel ½ to 1". To adjust, unhook pull-back spring on outside of frame rail, loosen locknut at adjusting clevis and remove clevis pin at inner end of pedal shaft, turn clevis on rear end of pedal shaft-to-operating shaft rod for correct clearance, reassemble linkage.
Hill-Holder Note—Check setting whenever clutch pedal adjusted and adjust Hill-holder to release just as clutch engages. Adjusting nut and locknut at end of Hill-holder operating rod
Clutch Housing Removal: Remove distributor, remove starter and tie up out of the way (not necessary to disconnect cables), remove front floor plate, take out upper clutch housing cap screws. Remove transmission (see Transmission). Take out clevis pin in clutch operating shaft-to-release shaft sleeve, pull operating shaft out and remove sleeve. Remove parking brake cable shield clip, unhook brake pedal pullback spring from cross-member, support engine weight on jack under rear end of oil pan (use block of wood on jack to prevent damage to pan), take out engine rear support bolts, remove lower support insulators. Take out clutch operating shaft support bracket bolts Remove cross-member. Loosen exhaust pipe flange nuts at manifold, remove exhaust pipe support bracket-to-clutch housing bolts, loosen clamp and swing bracket out of the way. Take out all clutch housing bolts, remove clutch housing.
▷**Installation Caution**—Align mounting holes of the cross-member and the frame and install the retaining bolts—do not tighten the bolts until the operating shaft support bracket bolts are installed.
Clutch Removal: Remove clutch housing (above), remove six screws evenly to relieve spring pressure, lift off clutch assembly and driven member.

TRANSMISSION

STANDARD

Warner Model AS1-T86E (Std.), AS32-T86E with R10B type Overdrive (Optl.). All helical gear type. Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).
See Transmission Section for complete data.
Transmission Control: Remote control type with gearshift lever mounted on steering column.
See Transmission Section for complete data.
Removal: Drain transmission. Disconnect hand brake cable and move out of way for clearance. Disconnect front universal at transmission (wire caps or use clamp to prevent losing rollers). Take out center support bearing mounting bolts. Push front shaft and support to rear (will slide on splines on rear shaft). Disconnect shift rods from levers on case and speedometer cable (remove speedometer pinion). On Overdrive transmission disconnect all control wires and cable. Take out transmission to clutch housing capscrews, pull transmission straight back and remove from car.

OVERDRIVE

OPTIONAL WITH STD. TRANS.

Warner R10 Type (part of AS32-T86E Transmission). New Governor controlled type (no centrifugal pawls) with electrical solenoid operation and throttle controlled "kick-down."
NOTE—Overdrive is new "centered ring gear" type.
See Transmission Section for complete data.
Overdrive Control Units—*Same as Champion. See Champion 9G (1950) page for data.*
Removal: See Std. Transmission Removal data.

AUTOMATIC TRANSMISSION

OPTIONAL

Torque Converter and 3-speed automatic transmission with hydraulic control. Has mechanical parking lock and Anti-Creep device which holds brakes applied when car standing and ignition "on."
See Transmission Section for complete data including Testing & Trouble Shooting.
Lubrication—Check oil level every 1000 miles and maintain oil level at "Full" mark on dip stick. Drain and refill every 15,000 miles. Use only Automatic Transmission Fluid Type "A".
Capacity—Approximately 11½ quarts.
Checking Oil Level—Oil must be warm (set parking brake, place selector lever in "L" position, idle engine until normal operating temperature reached). Remove inspection hole cover in front floor carpet over transmission case, clean all dirt from around inspection hole, check oil level with dip stick gauge. Add oil as required to bring level up to "FULL" mark on dipstick (1 pint between Low and Full).
▷*CAUTION—Do not fill above FULL mark.*
Draining & Refilling—*See "Studebaker Automatic Transmission" in Transmission Section.*
Linkage Adjustment—*See "Studebaker Automatic Transmission" in Transmission Section.*
Removal: *See "Studebaker Automatic Transmission" in Transmission Section.*

UNIVERSALS

Spicer Model 1268-111X (Front & Rear), 1261-102X (intermediate). Needle bearing type. Three used with intermediate universal at propeller shaft support bearing on crossmember (see Propeller Shaft).

Propeller Shaft & Support Bearing: Two shafts used: 1) Front Shaft with intermediate universal yoke. 2) Rear Shaft with slip-joint on forward end at intermediate universal.
Propeller Shaft & Support Bearing Removal & Servicing—*See Studebaker Special Data.*

REAR AXLE

Spicer Salisbury Model 41-2. Semi-floating, Hypoid Gear type with Hotchkiss Drive.
See Rear Axle Section for complete data.
Ratio—4.09-1 Std., 4.55-1 Optl. (Std. with Overdr.).
Ratio (with Automatic Trans.)—3.54-1
NOTE—Rear axle ratio stamped on plate attached to axle by cover capscrew and also on gears.
Backlash—.003-.006". Shim adjustment.
Removal: Remove hub caps, take out cotter pin from axle nut, loosen rear wheel nuts. Place car on stands on frame just ahead of rear springs. Remove wheels, hubs and drums. Disconnect hand brake cable. Take out backing plate bolts from backing plates, free hydraulic brake line from axle housing clips (do not disconnect brake line). Backing plates and adjusting shims can then be wired to frame (do not disconnect brake line from wheel cylinders). Disconnect rear universal (wire caps or use clamp to prevent losing rollers). Remove rear spring "U" bolts, disconnect lower shock absorber links, remove rear axle assembly from car.
Axle Shaft Removal—Remove wheel, remove wheel hub (use puller J-596-A). Take out backing plate retaining bolts, remove outer oil seal. Pull backing plate out over end of axle shaft and wire plate to frame (CAUTION—do not lose adjusting shims located between backing plate and axle housing flange). Pull axle shaft assembly (Puller HM-931).
Wheel Bearing Adjustment: Use dial indicator to check axle shaft endplay. Adjust by removing backing plate (see Axle Shaft Removal above), and adding or removing shims located between backing plate and axle housing flange (shims .003", .005", .010", .030" thick). **Endplay**—.001-.005".

SHOCK ABSORBERS

Houde (Houdaille)—Double acting, hydraulic type. Adjustable type with thermostatic control on rear.
Front—Studebaker No. 526092 (Right), 526093 (Left).
Rear—Studebaker No. 526148 (Right), 526149 (Left).
Refilling: Check at 5000 mile intervals. Fill to bottom of filler plug hole. CAUTION—Use only Houdaille Shock Absorber Fluid No. L-1404.

FRONT SUSPENSION

Independent type with coil springs.
See Front Suspension Section for complete data.
Kingpin Inclination—5¼° crosswise.
Caster——½° to —2½°. Eccentric pin adjustment.
▷*NOTE*—Not more than ¾° variation between wheels.
Camber—0° to +1°. Eccentric pin adjustment.
▷NOTE—½° more Camber favored on drivers side.
Toe In—1/16-1/8". Adjust **right hand tie rod only** for toe in after left hand tie rod has been adjusted for wheel straight-ahead position (with steering wheel centered) and center auxiliary tie rod has been adjusted so that steering gear arm and auxiliary steering arm parallel. **RHD Car Note**—Make toe-in adjustments on left hand tie rod.

STEERING GEAR

Ross Model T-14 Cam-and-Twin Lever type.
See Steering Gear Section for complete data.

BRAKES

Service: Lockheed (Wagner Electric) Hydraulic, Self-centering, Self-adjusting type.
See Brake Section for complete data.
Drums—Composite type. Diameter 11".
Clearance—If adjustment required, see "Lockheed (Wagner) Hydraulic Self-Adjusting Brakes" in Brake Section.
Lining—Molded type (all shoes). Width 2". Thickness 3/16". Length per wheel 22¼".
Braking Power—57% Front, 43% Rear.
Hand Brake: See Service Brake data (above).
Hill-Holder: Std. on Std. Trans. Cars. *See Brake Section*
▷**Anti-Creep (for Auto. Trans. Cars)**—*See Brake Section for complete data.*

MISC. MECHANICAL

CONVERTIBLE TOP CONTROL: Electric type with motor mounted on left hand lift assembly (right hand lift assembly driven through flexible drive).
See Miscellaneous Section for complete data.
Windshield Wipers: Vacuum Cable operated type.
See Miscellaneous Section for complete data.

MODEL IDENTIFICATION

SERIAL NUMBER: Stamped on plate on left front door lock post (1951 & Early 1952), hinge post (Late 1952).

Starting Serial Nos.	1951	1952
South Bend	8,110,001	8,217,001
Los-Angeles	8,800,001	8,816,001
Canada	8,952,001	8,954,001

***Model Symbol & Body Number Plate*—Located on** engine side of dash. Model designations as follows: (C) 5 Pass. Coupe, (F) Sedan 2-Door, (Q) 3 Pass. Coupe, (S) Conv., (W) Sedan 4-Door, (Y) Land Cruiser.

ENGINE NUMBER: Stamped on boss at the top side, rear end of cylinder block, next to distributor.

Starting Engine Nos.	1951	1952
South Bend & Los Angeles	V-101	V-123,001
Canada	VC-101	VC-2,036

TUNE-UP

►***CROSS-FIRING CORRECTION (1951 CARS BEFORE ENGINE No. V-114943):*** Cross-firing under heavy loads at low speed may be caused by arrangement of cables in LEFT cylinder bank conduit (#5 next to #7 and cross-firing). Rearrange cables from front to rear as follows: 1-5-3-7 (cross #3 and #5 as they leave conduit).

COMPRESSION PRESSURE: 120 to 140 lbs., at 150 RPM. (normal cranking speed). Not more than 10 lbs. variation between cylinders.

VACUUM READING: *Steady 18-20" Idling at 8 MPH.*

FIRING ORDER: 1-8-4-3-6-5-7-2. See Diagram.

SPARK PLUG GAPS: .0325"-.0375".
Plug Type—Champion Type H-8. 14 mm.

DISTRIBUTOR: Delco-Remy No. 1110822 (Early 1951); No. 1110826 (Late 1951 & 1952). Automatic and vacuum advance type with "Center-Bearing" breaker plate.
Cam Angle—28-34° (with .013" gap).
Breaker Arm Spring Tension—17 to 21 ozs.
Automatic & Vacuum Advance—*See Ignition Timing.*

COIL: Delco-Remy No. 1115380. On fire wall.
Ignition Current—2½ amperes idling, 4-5 amperes with engine stopped.

CONDENSER: Delco-Remy No. 1869704.
Condenser Capacity*—.18-.23 *microfarad.

IGNITION TIMING: 8° BTDC.
Timing Procedure—*See Ignition Timing.*
Timing Marks—Vibration Dampener mark "IGN/" aligned with pointer on gear case cover.

CARBURETION: Stromberg Model AAUVB-26 Code 6-107 & 6-107A (Early 1951); Code 6-111 (Late 1951 & 1952). Dual down-draft type with automatic choke.

►***EARLY 1951 CARBURETOR PRODUCTION CHANGE*** *—Rework Carburetor Code No. 6-107 to later type Code No. 6-107A when servicing. See "Stromberg AAUVB & AAVB Carburetors" in Carburetor Section.*

►***AUTOMATIC CHOKE HOT-AIR STOVE CHANGE FOR IMPROVED ACTION (Code 6-107 & 6-107A Carburetors)—See "Stromberg AAUVB & AAVB Carburetors" in Carburetor Section.***

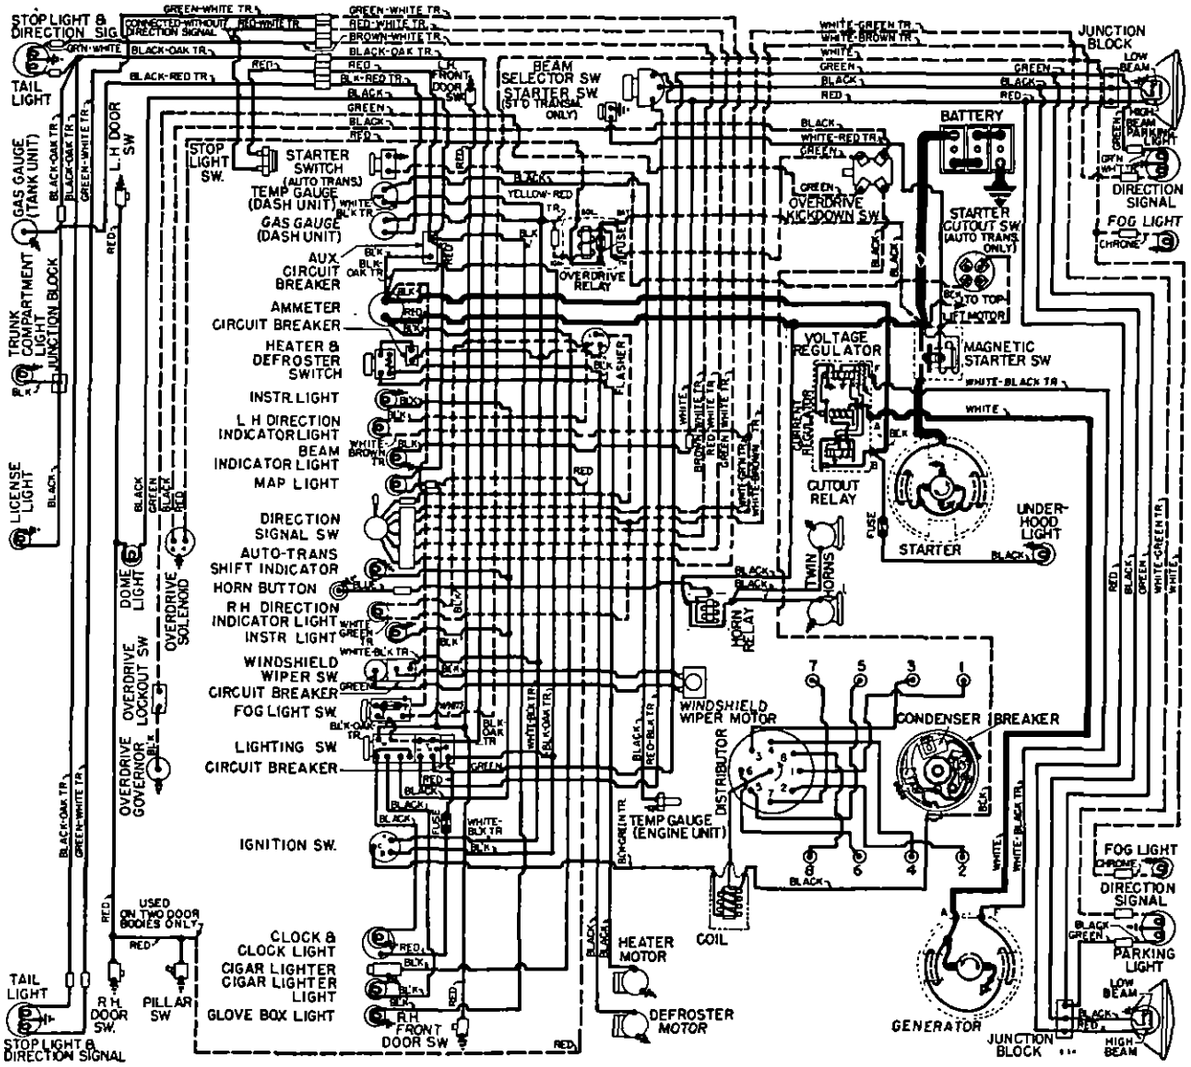
►***IMPROVED STARTING WITH HOT ENGINE CHANGE (Code 6-111 Carburetors)—See "Stromberg AAUVB & AAVB Carburetors" in Carburetor Section.***

►***ACCELERATION HESITATION (Code 6-111 Carburetors)—See "Stromberg AAUVB & AAVB Carburetors" in Carburetor Section.***

►***CHOKE BIND CORRECTION & CHANGES FOR IMPROVED ACTION (Code 6-111 Carburetors)—See "Stromberg AAUVB & AAVB Carburetors" in Carburetor Section.***

Idle Setting—Initial setting 1¾ turns open, final setting midway between missing & rolling points. Adjust both screws alike, turn screws in for leaner mixture.

Idle Speed (Std. Trans.)—550-600 RPM. Equivalent to 8 to 10 MPH.



Idle Speed (Auto. Trans.)—500-550 RPM., with selector lever in "N" position. Adjust by turning idle adjusting screw switch in or out (switch replaces regular stopscrew).

Float Setting—Use KMO No. T-24971, Float Gauge. Hold air horn in inverted position and place float gauge on gasket. Tops of float should be 5/64" ABOVE tops of vertical guides. This will give the approximate fuel level.

Fuel Level—21/32"-below-top-surface of-float chamber (without gasket) at 5 lbs. pressure.

Accelerating Pump—Normal setting, inner hole (nearest throttle shaft). For more fuel install rod in outer hole.

CONTINUED ON NEXT PAGE

1951 MODELS

CONTINUED FROM PRECEDING PAGE

Choke Adjustment: (Except Code 6-107A—See Special Instructions below)—Centered on index. Inverted "V" on cover in line with boss on housing.

►***CODE 6-107A NOTE—THREE DIFFERENT CHOKE SETTINGS USED. See "Stromberg AAUVB & AAVB Carburetors" in Carburetor Section.***

FUEL PUMP PRESSURE: 4-4¾ lbs.

MANIFOLD HEAT CONTROL: Automatic thermostatic type. Blocker type valve located in right bank exhaust pipe (diverts exhaust gas from right bank through hot spot to left side of engine when closed). **Setting**—To test coil spring tension, free outer end of coil spring from bracket on manifold. With valve closed, hooked end of coil should be approx. 90° from bracket at 70°F. Replace coil if incorrect.

►***NOTE***—To overcome sticking, lubricate valve shaft with kerosene and soda solution or Bendix Carburetor Cleaner. If necessary, shaft diameter can be reduced for .005" clearance in bushings.

VALVE TAPPET CLEARANCE: ***CAUTION—DIFFERENT SETTING REQUIRED FOR EACH TYPE CAMSHAFT (New Camshaft used beginning Engine No. V-164807) and FOR REPLACEMENT CAMSHAFT ON EARLIER ENGINES:***

►**1951 & 1952 Cars (before 1952 Engine No. V-164807)** ***WITH 1st TYPE CAMSHAFT (See Identification Note below):*** .012-.014" With engine hot & running, .014-.016" With engine cold & standing.

►**1952 Cars (After Engine No. V-164807) AND PREVIOUS CARS WITH NEW TYPE CAMSHAFT** ***(See Identification Note below):*** .021-.023" With engine hot & running. .023-.025" With engine cold & standing.

►***NEW CAMSHAFT IDENTIFICATION NOTE—All cars with new camshaft requiring different Tappet Clearance marked by Valve Clearance Adjustment Plate attached to two center rocker arm shaft support studs on EACH cylinder head.***

IGNITION

►***CROSS-FIRING CORRECTION (1951 CARS BEFORE ENGINE No. V-114943):*** Cross-firing under heavy loads at low speed may be caused by arrangement of cables in LEFT cylinder bank conduit (#5 next to #7 and cross-firing). Rearrange cables from front to rear as follows: 1-5-3-7 (cross #3 and #5 as they leave conduit)

Ignition Switch: Mitchellock. Studebaker No. 524637. **Ignition Lock**—Yale & Towne.

COIL: Delco-Remy No. 1115380. On fire wall. **Ignition Current**—2½ amperes idling, 4-5 amperes with engine stopped.

CONDENSER: Delco-Remy Part No. 1869704. Capacity—.18-.23 microfarad.

DISTRIBUTOR: Delco-Remy No. 1110822 (Early 1951); No. 1110826 (Late 1951 & 1952). Automatic and vacuum advance type with "Center-Bearing" breaker plate.

►***NOTE—See "Delco-Remy Center-Bearing Breaker Plate Distributor" in Electrical Equipment Section.***

Breaker Gap—.013-.018".

Cam Angle—28-34° (with .013" gap).

►***NOTE—See "Delco-Remy Cam Angle" in Electrical Equipment Section.***

Breaker Arm Spring Tension—17-21 ozs.

Rotation—Counter-clockwise viewed from above.

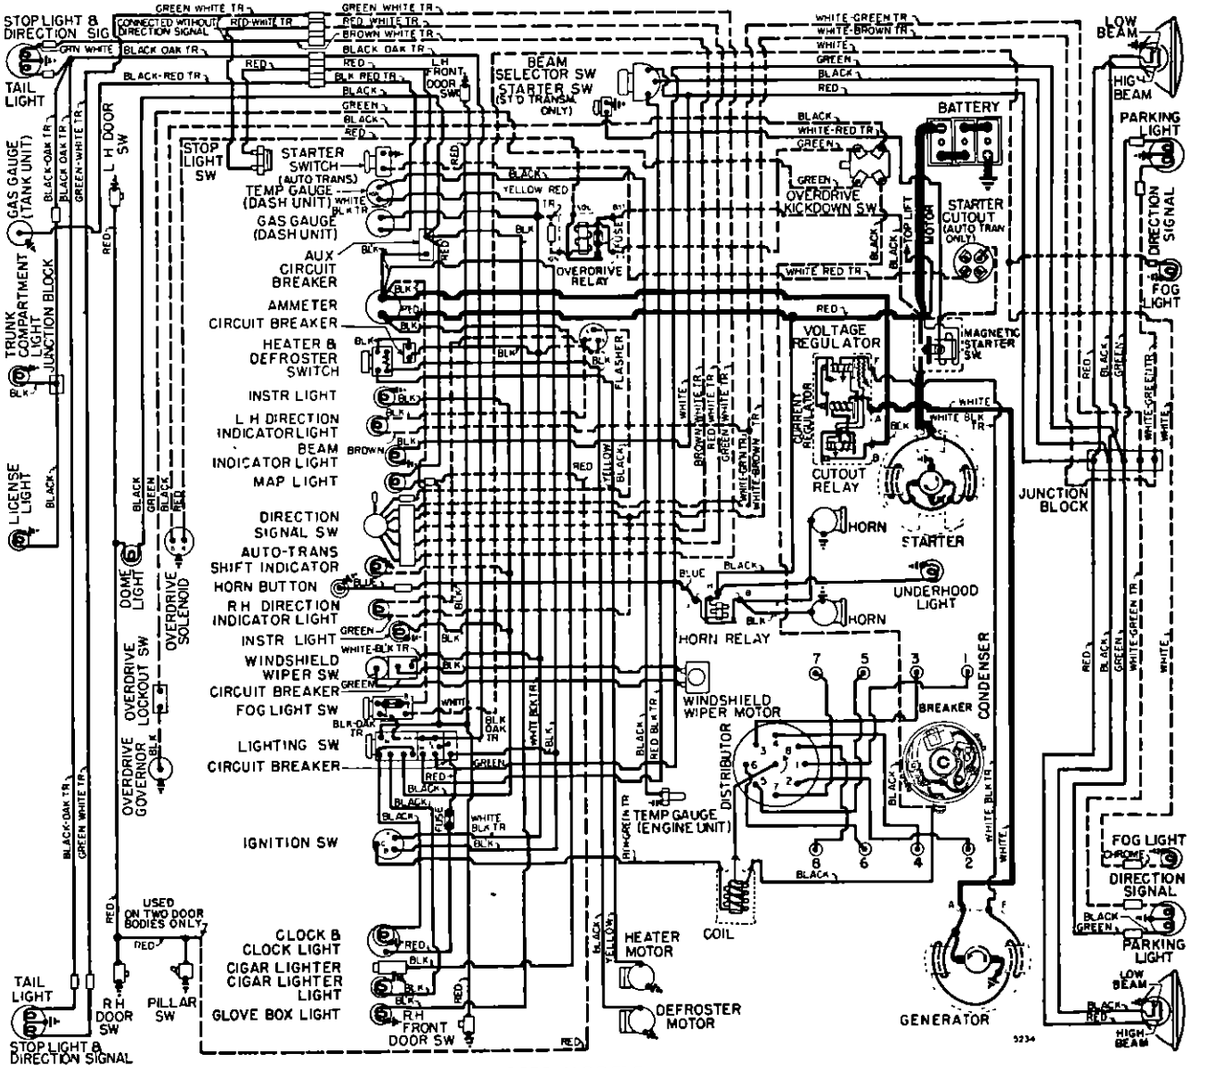
Automatic Advance—1110822

Degrees	Distr.	RPM	Degrees	Eng.	RPM
0-2		375	0-4		750
6-8		800	12-16		1600
13-15		1300	26-30		2600

Automatic Advance—1110826

Degrees	Distr.	RPM	Degrees	Eng.	RPM
0-2		400	0-4		800
5-7		800	10-14		1600
13-15		1450	26-30		2900

Vacuum Spark Control: Delco-Remy No. 1116058. Plunger Travel—11/64-3/16".



Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	4-6"
7-9°	14-18°	12½"

Distributor Removal: Mounted between cylinder banks at rear of engine. Disconnect vacuum advance pipe and take out bolt in clamp arm to remove from engine.

Installation Note—The tongue of the distributor coupling is tapered and offset and, therefore, can be installed in the mating coupling of the intermediate shaft in only one position.

►***CAUTION—If distributor drive shaft assembly is removed or disturbed, see "Distributor Drive Shaft Assembly" in Studebaker Special Data.***

1952 MODELS

IGNITION TIMING

Std. Setting—8° BTDC. Vibration dampener marked "IGN/" at point 8° before top dead center.

Timing (with Neon Timing Light)—Neon timing light No. 890 recommended. Clip Neon light lead in series with #1 spark plug, idle engine and direct light on vibration dampener in line with pointer (at pointer on timing gear cover). Loosen clamp arm, rotate distributor until "IGN" mark on vibration dampener lines up with pointer on timing gear cover.

Timing (without Neon Timing Light)—Turn engine over to firing position for #1 piston with "IGN" mark on vibration dampener in line with pointer on timing gear cover and distributor rotor opposite #1 segment in distributor cap. Adjust distributor.

CARBURETOR

Stromberg Models AAUVB-26 Code 6-107 & 6-107A (Early 1951); Code 6-111 (Late 1951 & 1952). Dual down-draft type with automatic choke.

►*AUTOMATIC CHOKE HOT-AIR STOVE CHANGE FOR IMPROVED ACTION (Code 6-107 & 6-107A Carburetors)—See "Stromberg AAUVB & AAVB Carburetors" in Carburetor Section for complete data.*

►*EARLY 1951 CARBURETOR PRODUCTION CHANGE—Rework Carburetor Code No. 6-107 to later type Code No. 6-107A when servicing. See "Stromberg AAUVB & AAVB Carburetors" in Carburetor Section.*

►*IMPROVED STARTING WITH HOT ENGINE CHANGE (Code 6-111 Carburetors)—See "Stromberg AAUVB & AAVB Carburetors" in Carburetor Section.*

►*ACCELERATION HESITATION (Code 6-111 Carburetors)—See "Stromberg AAUVB & AAVB Carburetors" in Carburetor Section.*

►*CHOKE BIND CORRECTION & CHANGES FOR IMPROVED ACTION (Code 6-111 Carburetors)—See "Stromberg AAUVB & AAVB Carburetors" in Carburetor Section.*

Settings (Idle Setting, Float Level, & Accelerating Pump): *See Tune-Up data.*

Automatic Transmission Throttle Linkage Adjustment—*See Studebaker Automatic Transmission in Transmission Section.*

Fast Idle: Stromberg, AAUVB Carburetor type.

Fast Idle Setting—With the stop screw on the lower step of the fast idle cam, check the fast idle adjustment by closing the choke valve until the edge of the next higher step contacts the screw. The narrow side of the choke valve should just contact a 11/32" drill held vertically against the inside surface of the air horn. To adjust the valve opening, bend the fast idle rod as required.

See Carburetion Equipment Section for complete data.

Automatic Choke: Stromberg, AAUVB Carburetor type.

Choke Adjustment: (Except Code 6-107A—See Special Instructions below)—Centered on index. Inverted "V" on cover in line with boss on housing.

►*CODE 6-107A NOTE—THREE DIFFERENT CHOKE SETTINGS USED. See "Stromberg AAUVB & AAVB Carburetors" in Carburetor Section.*

See Carburetion Equipment Section for complete data.

CARB. EQUIPMENT

Air Cleaner: AC. Oil-wetted type (Std.). Oil bath type (Optional).

Servicing (Oil-wetted type)—Clean and re-oil filter element at 1000 mile intervals or as required.

Servicing (Oil Bath type)—Clean filter element and oil reservoir, fill reservoir to indicated level mark with SAE No. 40 or 50 engine oil at intervals as required by operating conditions.

Fuel Pump: AC. Diaphragm type fuel pump.

Replacement Pump—AC. No. 9647.

Pressure—4-5 lbs.

►*FUEL-PUMP-SUPPORT-BRACKET-CHANGES-&-INSTALLATION CAUTION: See "Fuel System" in Studebaker Special Data.*

See Carburetion Equipment Section for complete data.

Gasoline Gauge: Stewart-Warner electric type.

Dash Unit—Studebaker No. 526738.

Tank Unit—Studebaker No. 525548.

See Carburetion Equipment Section for complete data.

BATTERY

Willard Type HDW-1-100. 6 volt, 15 plate, 100 ampere hour capacity (20 hour rate).

Starting Capacity—120 amperes for 20 minutes.

Grounded Terminal—Positive (+) to water pump attaching bolt.

Location—In engine compartment on left hand side.

STARTER

Delco-Remy. Delco-Remy Nos. as follows:

Model	Std. & O.D. Trans	Auto. Trans.
1951	1107089	1107095
1952	1107115	1107116

Armature No.—Delco-Remy No. 1878077 (all).

Drive—Bendix. (1951) No. A1792 Barrel type. (1952) No. A3281 "Folo-thru" type.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—24-28 ozs.

Performance Data—1107089, 1107095

Torque	RPM	Volts	Amperes
0 ft. lbs.	5000	5.67	65
12 ft. lbs.	Lock	3.37	525

Performance Data—1107115, 1107116

Torque	RPM	Volts	Amperes
0 ft. lbs.	5500	5.65	70
11 ft. lbs.	Lock	3.25	550

Starting Switch: Magnetic Switch, Delco-Remy No. 1494 (Studebaker 530039) mounted on dash and controlled by manual switch.

Std. Trans. Cars—Auto-Lite SW-4016 (Studebaker 519829) mounted on toeboard under clutch pedal, operated by fully depressing pedal.

Automatic Trans. Cars—Studebaker No. 527663 pull switch on instrument panel and Delco-Remy No. 1998882 combination starter cut-out and backing light switch mounted on steering column. Starter operative only with transmission selector lever in "N" or "P" positions.

GENERATOR

Delco-Remy No. 1102700 (1951); No. 1102778 (1952). Two brush type with current & voltage control.

Armature—Delco-Remy No. 1880550 (1102700 Gen.), No. 1921621 (1102778 Gen.).

Charging Rate Adjustment—See Regulator data.

Maximum Charging Rate—40 amperes (1951), 45 amperes (1952). Maximum rate controlled by regulator.

Performance Data—Cold

	Amperes①	Volts	RPM
1102700	40	8.0	2150
1102778	45	8.0	2450

①—Not maximum output. See Current Regulator.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—28 ozs. each.

Field Current—1.87-2.0 amperes at 6.0 volts.

Belt Adjustment: Hook spring type scale to the belt midway between generator and fan pulleys. Then adjust the tension on the belt so that a pull of 14 lbs. on the scale will lift the belt ½".

REGULAT R

Delco-Remy. Current & voltage regulator.

Model	Regulator No.	Use With Gen. No.
1951	1118392	1102700
1952	1118730	1102778

See Electrical Equipment Section for complete data.

CAUTION—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

Cutout Relay

Cuts In—5.9-6.7 volts hot (set to 6.4 volts hot).

Contact Gap—.020" (same for both sets).

Air Gap—.020" (with contacts just closed).

Voltage Regulator

Setting—7.2-7.6 volts hot (set to 7.4 volts hot). Regulator is over-compensated for temperature. Should be checked with cover in place and hot.

Air Gap—.068" with armature pressed down to point where contacts just touching.

Checking and Adjustment—*See Electrical Equipment Section.*

Current Regulator

Setting (1118392)—40-46 amps. hot (set to 42 hot).

Setting (1118730)—45-51 amps. hot (set to 27 hot).

Air Gap—.075" with armature pressed down to point where contacts just touching.

Checking and Adjustment—*See Electrical Equipment Section.*

LIGHTING

Headlamps: Corcoran-Brown "Sealed Beam" type.

See Electrical Equipment Section for complete data.

Adjustment—Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.).

Beam Indicator—At center of speedomter dial. Lighted whenever upper beam is in use.

Directional Signal: *See Electrical Equipment Section.*

Switches

Lighting and Instrument—Studebaker No. 530058 (with circuit breaker).

Beam Selector—Studebaker No. 519246.

Directional Signal—Studebaker No. 530468P.

MISC. ELECTRICAL

CIRCUIT BREAKERS: Lighting (On Light Switch). Studebaker No. 522014. 30 ampere thermostatic type. Protects head lamps, parking, tail, and instrument panel lamps by vibrating to limit current.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Auxiliary Circuit Breaker (On Instrument Panel). 20 ampere thermostatic type. Protects body and stop lamps by vibrating to limit current.

Convertible Top Circuit Breaker—30 ampere.

ACCESSORY CIRCUIT BREAKER: One 15 amp. type used on cars with Climatizer and Defroster.

FUSES: Clock—3 ampere. In clock lead.

Directional Signal—14 ampere. In Flasher lead.

Overdrive—20 ampere. On overdrive relay.

Glove Compartment Light—5 ampere. In lamp lead.

Under Hood Light—5 ampere. In lamp lead.

Fog Lights—20 ampere. On fog light switch.

HORNS: Sparton or Delco-Remy No. 1999655 (Low Note), 1999656 (High Note). Airtone twin horns with relay.

Canadian Cars—Auto-Lite HW-4035A (Low Note), HW-4036A (High Note).

Horn Current—12-15 amperes each.

Horn Relay: Delco-Remy No. 1116775.

Contacts Close—2.75-4.0 volts.

Contact Gap—.025". **Air Gap** .015" (contacts closed).

ENGINE

ENGINE SPECIFICATIONS: Own make 8 cylinder "V" type valve-in-head.

Bore—3⅜". **Stroke**—3¼".

Displacement—232.6 cu. in. **Rated HP**—36.4.

Developed Horsepower—120 at 4000 RPM.

Compression Ratio—7.0-1 (Std.), 7.5-1 (Optional).

Compression & Vacuum Reading—*See Tune-Up data.*

ENGINE REMOVAL: *See Studebaker Special Data.*

OIL PAN REMOVAL: *See "Oil Pan Removal" in Studebaker Special Data.*

▷*Not necessary to remove engine for oil pan removal.*

ORIGINAL BORE AND PISTONS: *See "Original Bore & Pistons" in Studebaker Special Data.*

TIGHTENING TORQUES: *See Studebaker Special Data.*

CYLINDER HEAD INSTALLATION: *See Studebaker Special Data.*

▷**Head Interchangeability**—Same cylinder head and head gasket used for right and left cylinder banks. *See "Cylinder Head" in Studebaker Special Data.*

PISTONS: Lynite aluminum alloy. Cam ground, tin plated, full skirt "T" slot.

Weight—13.66 ozs.

Clearance—Selective fit. (see Fitting Pistons).

Removal—Pistons and rods removed from above.

NOTE—Car manufacturer recommends that cylinders out of round or tapered more than .002" be reconditioned.

Fitting New Pistons: Insert .002" feeler gauge, 1" wide, between piston and cylinder wall on right side (piston T-slot toward left side of engine). Pull required to withdraw feeler should be 11-16 lbs.

Replacement Pistons: Furnished Std. .010", .020", .030", .040" Oversize. *See "Pistons" in Studebaker Special Data.*

Installing Pistons: Install piston on rod with slot on same side as nut on piston pin clampscrew (away from oil squirt hole in rod). Install piston in cylinder with slot toward left side of engine (all pistons). See Connecting Rod Installation.

PISTON RINGS: Two compression, one oil control rings per piston, all above pin. Oil drain holes provided in oil ring groove.

Ring	Width	End Gap	Side Clearance
Comp. (#1, 2)	5/64"	.008-.016"	.0015-.002"
Oil Contr. (#3)	3/16"	.008-.016"	.0015-.002"

Installing Rings: Beveled side of compression rings (Sealed Power) up. Expander used with oil ring.

Replacement Rings: Sets furnished; Std., .020", .030", .040", Oversize. Single rings also furnished in same sizes.

PISTON PIN: Diameter .8741-.8745". Pin is locked in rod with tapered pin and lock nut.

Pin Fit in Piston—.0001-.0003" clearance or light finger push fit at room temperature (70°F.).

Pin Removal and Installation: *See Studebaker Special Data.*

Replacement Pins: Std., .0025" & .005" Oversize. Use Hone PH-1 to obtain proper piston pin fit.

NOTE—Replacement pistons fitted with pins.

CONNECTING ROD: Length 6⅝". Weight—23.71 ozs.

Crankpin Journal Diameter—1.99925-2.00025".

Lower Bearing—Interchangeable steel-backed, micro-babbitt lined type. No shims.

Clearance—.00005-.00215". **Sideplay**—.007-.012".

Bearing Adjustment: None (no shims). Replace bearings. Do not file rods or caps.

NOTE—Make certain that small tongue on bearing shells engage grooves. Palnut used on bolt nuts.

Replacement Bearings: Bearings furnished; Std., .001", .005", .010", .020" Undersize.

Installing Rods: Number on rod and bearing cap must be on same side and rod installed in same numbered cylinder with nos. down toward oil pan (toward right on right bank rods, toward left on left bank rods) and oil squirt hole on all rods toward right of engine. Rods are offset with widest half of bearing toward rear (right bank), toward front (left bank).

▷**New (Unmarked) Rod Note**—Check right and left bank rods by holding rod up (piston pin end up, oil squirt hole toward you). Left bank rod offset (widest half of bearing) will be toward right, right bank rod offset will be toward left. Mark rods by stamping number on rod and cap on oil squirt hole side (right bank rod), opposite side (left bank rod).

CAUTION—Bearing cap must be assembled on rod with groove in cap and rod on same side.

CRANKSHAFT: 4 bearing, 5 integral counterweights. Vibration dampener mounted on forward end.

Vibration Dampener Removal & Installation: *See "Vibration Dampener" in Studebaker Special Data.*

Journal Diameters—2.4995-2.5000".

Bearings—Removable steel backed babbitt lined type. No shims.

Clearance—.0006-.0027".

Rear Bearing Oil Seals—Three seals are used. Cork between the cap and the block, Neoprene between the cap face and the block and the "Brummer" type seal used around the crankshaft journal.

See "Crankshaft Oil Seals" in Studebaker Special Data.

Bearing Adjustment: None (no shims). Replace bearings, do not file caps.

Replacement Bearings: Furnished as sets or single bearings in Std. Size and .001", .010", .020", .030" Undersize.

End Thrust: Taken by thrust plate assembled between front main bearing and crankshaft gear. Controlled by shims between thrust plate and face of main bearing journal.

End Play—.003-.006".

CAMSHAFT: Five bearing. Helical Drive gear.

▷*CAMSHAFT PRODUCTION CHANGE (Beginning Eng. No. V-164807): New camshaft (cams with smaller base circle) which requires new type Valve Lifters, Rocker Arm Adjusting Screws, and SPECIAL VALVE TAPPET CLEARANCE SETTING. See data below.*

▷*REPLACEMENT CAMSHAFT FOR ENGINES BEFORE NO. V-164807 (to correct cam lobe wear): See "Camshaft & Bearings" in Studebaker Special Data for Camshaft Kits (including other parts which must be installed with new Camshaft).*

Journal Diameters—#1, 1.86974-1.87075"; #2, 1.85375-1.85475"; #3, 1.83875-1.83975"; #4, 1.82275-1.82375"; #5, 1.24475-1.24575".

Bearings—Split steel-backed, babbitted bushings.

▷*NOTE—Oil hole in bushings must be aligned with oil holes in block.*

Clearance—.00075" to .00225" (#1), 0.001" to .00275" (all others).

Camshaft Removal & Installation: *See "Camshaft & Bearings" in Studebaker Special Data.*

End Thrust: Taken by a thrust plate located between the front camshaft bearing and the camshaft gear. **Endplay**—.005" to .007". *See "Camshaft & Bearings" in Studebaker Special Data.*

Timing Gears: Crankshaft gear, cast-iron. Camshaft gear, Celeron with steel hub. **Backlash**—.001-.003". **Replacement Gears**—Camshaft gear furnished in two sizes: Standard (marked "S"), High-Limit (marked "H"). Crankshaft gear Std. size only.

Timing Gear Removal and Installation—*See "Timing Gears" in Studebaker Special Data.*

Timing Gear Replacement—*See "Timing Gears" in Studebaker Special Data.*

Camshaft Setting: Mesh marked tooth of camshaft gear between two marked teeth on crankshaft gear. *Note—This is the position for #6 cylinder to fire.*

VALVES:	Head Diam.	Stem Diam.	Length
Intake	1 13/32"	11/32"	5 11/64"
Exhaust	1 9/32"	11/32"	5 11/64"

	Seat Angle	Lift	Stem Clearance
All Valves	45°	23/64"	.0015-.0035"

NOTE—Rubber seal rings installed on all valve stems (seated in groove on valve stem within spring retainer).

Valve Stem Seal Installation—*See valve spring installation data under "Valve System" in Studebaker Special Data.*

Valve Guides: Pressed in head from underside.

Guide Removal & Installation—*See "Valve System" in Studebaker Special Data.*

Valve Springs: *EXHAUST VALVE SPRING PRODUCTION CHANGE NOTE—Beginning with 1952 Engine No. V-203692, new type exhaust valve spring used. Later type springs can be used on earlier cars in complete sets only.*

EN INE

CONTINUED FROM PRECEDING PAGE

Valve Spring Specifications
Intake Valves (1951-52)
Exhaust Valves (1951 & Early 1952)

	Pressure	Length
Valve Closed	67-83 lbs.	2 1/32"
Valve Open	147-169 lbs.	1 43/64"

Exhaust Valves (Late 1952)

	Pressure	Length
Valve Closed	45-55 lbs.	2 1/32"
Valve Open	105-115 lbs.	1 43/64"

NOTE—Dampers used on bottom of all springs.

Spring Removal & Installation—*See "Valve System" in Studebaker Special Data.*

Rocker Arms: Arms are pressure-lubricated from hollow rocker arm shafts and have oil lead to drilled passage in adjusting screw for pushrod lubrication.

►*ROCKER ARM & ADJUSTING SCREW CAUTION: See Replacement Camshaft under "Camshaft & Bearings" in Studebaker Special Data for NEW TYPE ADJUSTING SCREWS required for use with NEW TYPE CAMSHAFT.*

Rocker Arm & Shaft Removal & Installation—*See "Valve System" in Studebaker Special Data.*

Valve Lifters: Straight barrel type. Remove from above (not necessary to remove camshaft).

►*VALVE LIFTER PRODUCTION CHANGES: See "Valve System" in Studebaker Special Data.*

►*VALVE LIFTER CAUTION: See Replacement Camshaft under "Camshaft & Bearings" in Studebaker Special Data for NEW TYPE LIFTER required for use with NEW TYPE CAMSHAFT.*

Valve Lifter Fitting & Installation—*See "Valve System" in Studebaker Special Data.*

Replacement Lifters—Std., & .0005", .001" Oversize. *CAUTION*—When lifters removed, make certain they are re-installed in original positions.

VALVE TIMING

VALVE TAPPET CLEARANCE: *CAUTION—DIFFERENT SETTING REQUIRED FOR EACH TYPE CAMSHAFT (New Camshaft used beginning Engine No. V-164807) and FOR REPLACEMENT CAMSHAFT ON EARLIER ENGINES:*

►**1951 & 1952 Cars (before 1952 Engine No. V-164807)** *WITH 1st TYPE CAMSHAFT (See Identification Note below):* .012-.014" With engine hot & running, .014-.016" With engine cold & standing.

►**1952 Cars (After Engine No. V-164807) AND PREVIOUS CARS WITH NEW TYPE CAMSHAFT** *(See Identification Note below):* .021-.023" With engine hot & running. .023-.025" With engine cold & standing.

►*NEW CAMSHAFT IDENTIFICATION NOTE—All cars with new camshaft requiring different Tappet Clearance marked by Valve Clearance Adjustment Plate attached to two center rocker arm shaft support studs on EACH cylinder head.*

Valve Timing: See Camshaft Setting above.
Intake Valves—Open 11° BTDC. Close 53° ALDC.
Exhaust Valves—Open 50° BLDC. Close 14° ATDC.
Valve Timing Check (ALL Engines)—Set tappet clearance of No. 1 intake valve at .020" (Eng. before No. V-164807 WITH 1ST OR 2ND TYPE CAMSHAFT) or at .030" (Eng. after No. V-164807 or EARLIER ENGINES WITH LATEST TYPE CAMSHAFT). Turn crankshaft until #6 piston is on compression stroke and vibration dampener mark "IN.OP. 1" is approaching pointer on timing gear cover, continue to turn crankshaft slowly while working #1 intake valve rocker arm up and down to determine point at which all clearance is taken up. At point where clearance entirely taken up, dampener mark "IN. OP. 1" should be directly under the pointer.

LUBRICATION

Engine Oiling System: Pressure to crankshaft, connecting rods, camshaft bearings and valve lifters. Timing gears lubricated by oil by-passed through a relief valve from the front main bearing. Oil pump mounted on rear main bearing cap.
Crankcase Capacity—6 quarts.
Normal Oil Pressure—40 lbs. at 28 MPH.
Oil Pressure Regulator—Located on the right side at the front of the cylinder block slightly above the crankcase flange. Opens at 40 lbs. Not adjustable. *If necessary to increase oil pressure, install new spring.*

Oil Pan Removal: *See Studebaker Special Data.*

Oil Pump: Helical gear type. Mounted on rear main bearing cap.
Oil Pump Removal & Installation—*See "Oil Pump" in Studebaker Special Data.*

Oil Pressure Gauge: Stewart-Warner Bourden Tube (not electric).

Crankcase Ventilation: Filter element in oil filler cap (air intake) and breather tube at right rear of engine (air outlet). Air enters crankcase through filler tube and passes out through hole at rear into valve lifter chamber, then forward and through hole in cover baffle plate, to rear through cover and out through breather pipe.
Servicing—Wash both filter elements in kerosene and re-oil at *1000 mile intervals or more often if* required by operating conditions.

►**Breather Tube Filter Note**—Remove filter element (retained in lower end of tube by cotter pin) for servicing.

COOLING

Cooling System: Positive circulation with pump mounted on front of block with fan.
Capacity—17.25 qts. (1951), 17.5 qts. (1952); 19 qts. (with Climatizer).
Pressure Valve—Radiator Filler Cap, Studebaker No. 516009 (1951), No. 531826 (1952). *NOTE*—1952 type stamped "7" and opens at 7 lbs.

Water Pump: Packless type. No lubrication required. *See Water Pump Section for complete data.*
Removal—Remove fan belt and fan and pulley assembly. *Remove all hoses from pump and take out* the 4 capscrews holding pump to block. Remove pump and 4 gaskets.
Belt Adjustment—*See Generator Belt Adjustment.*

Thermostat: Bellows type. Located in water outlet in pump body.
Setting—151°-155°.

Temperature Gauge: Stewart-Warner electric type.
Dash Unit—Studebaker No. 526739.
Engine Unit—Studebaker No. 530127 (with 529456 Adapter). Located at the rear of the left bank cylinder head in the water passage cover plate.

CLUTCH

Borg & Beck Model 9A7. Cover Assembly No. 926. Single plate dry disc type.
See Clutch Section for complete data.

Facings—Molded asbestos type, 2 required. I.D. 6", O.D. 9¼". Thickness .125".

Adjustment: Pedal free travel ½" to 1". To adjust, unhook pullback spring on outside of frame rail, loosen locknut at adjusting clevis and remove clevis pin at inner end of pedal shaft, turn clevis on rear end of pedal shaft-to-operating shaft rod for correct clearance, reassemble linkage.
Hill-Holder Note—Check setting whenever clutch pedal adjusted and adjust Hill-Holder-to-release just as clutch engages. Adjusting nut and locknut at end of Hill-Holder operating rod.

Clutch Housing Removal: Remove distributor, remove starter and tie up out of the way (not necessary to disconnect cables), remove front floor plate, take out upper clutch housing capscrews. Remove transmission (see Transmission). Take out clevis pin in clutch operating shaft-to-release shaft sleeve, pull operating shaft out and remove sleeve. Remove parking brake cable shield clip, unhook brake pedal pullback spring from cross-member, support engine weight on jack under rear end of oil pan (use block of wood on jack to prevent damage to pan), take out engine rear support bolts, remove lower support insulators. Take out clutch operating shaft support bracket bolts. Remove cross-member. Loosen exhaust pipe flange nuts at manifold, remove exhaust pipe support bracket-to-clutch housing bolts, loosen clamp and swing bracket out of the way. Take out all clutch housing bolts, remove clutch housing.

►**Installation Caution**—Align mounting holes of the cross-member and the frame and install the retaining bolts—do not tighten the bolts until the operating shaft support bracket bolts are installed.

Clutch Removal: Remove clutch housing (above), remove *six screws evenly to relieve pressure, lift off* clutch assembly and driven member.

TRANSMISSI N

Warner Model AS53-T86E (Std.), AS54-T86E with Model R10B type Overdrive (Optional). All helical gear type. Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).
See Transmission Section for complete data.

Transmission Control—Remote control type with gear shift lever mounted on steering column.
See Transmission Section for complete data.

Removal: Drain transmission. Disconnect hand brake cable and move out of way for clearance. Disconnect front universal at transmission (wire caps or use clamps to prevent losing rollers). Take out center support bearing mounting bolts. Push front shaft and support to rear (will slide on splines on rear shaft). Disconnect shift rods from levers on case and speedometer cable (remove speedometer pinion). On Overdrive transmission disconnect all control wires and cable. Take out transmission to clutch housing capscrews, pull transmission straight back and remove from car.

OVERDRIVE

Warner R10 Type (part of AS54-T86E Transmission). New governor controlled type (no centrifugal pawls) with electrical solenoid operation and throttle controlled kick-down.
NOTE—Overdrive is new "Centered Ring Gear" type.
See Transmission Section for complete data.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Overdrive Solenoid—Warner Model No. 3AR10B-62, Studebaker No. 521429.
Overdrive Governor—Warner Model No. AR10B-72, Studebaker No. 520454.
Control Relay—Auto-Lite HRT-4001, Studebaker No. 523297.
Throttle Kick-down Switch—Studebaker No. 529479.
Lock-out Switch—Studebaker No. 521436.
Fuse—20 ampere. On overdrive relay.

Removal: See Std. Transmission removal data.

AUTOMATIC TRANSMISSION

Torque converter and 3 speed automatic transmission with hydraulic control. Has mechanical parking lock and Anti-creep device which holds brakes applied when car standing and ignition "on."

▷*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Studebaker Automatic Transmission" in Transmission Section.*

▷*TESTING & TROUBLE SHOOTING: See "Studebaker Automatic Transmission" in Transmission Section.*

Lubrication—Check oil level every 1000 miles and maintain oil level at "Full" mark on dip stick. Drain and refill every 15,000 miles.
Recommended Lubricant—Automatic Transmission Fluid Type A (in container with "AQ-ATF" marking).
NOTE—Above fluid supersedes engine oil previously specified for these transmissions.
Capacity—11½ qts.
Checking Oil Level—Oil must be warm (set parking brake, place selector lever in "L" position, idle engine until normal operating temperature reached). Remove inspection cover on front floor carpet over transmission case, clean all dirt from around inspection hole, check oil level with dip stick gauge. Add oil as required to bring level up to "FULL" mark on dip stick (1 pint between "LOW" and "FULL").

▷*CAUTION—Do not fill above "FULL" mark.*

Draining and Refilling—*See "Studebaker Automatic Transmission" in Transmission Section.*
Linkage Adjustment—*CAUTION*—Two types of Linkage used. Adustments are different. *See "Studebaker Automatic Transmission" in Transmission Section.*

▷*OTHER AUTOMATIC TRANSMISSION SERVICE DATA: See "Studebaker Automatic Transmission" in Transmission Section.*

UNIVERSALS

Spicer Model 1268-111X (Front & Rear), 1261-102X (Intermediate). Needle type bearing. Three used with intermediate universal at propeller shaft support bearing on crossmember (see Propeller Shaft).

Propeller Shaft and Support Bearing: Two shafts used. Front shaft with intermediate universal yoke. Rear shaft with slip-joint on forward end at intermediate universal.

▷*1951-52 DRIVE LINE VIBRATION CORRECTIONS (Cars with Automatic Transmission)* May be noted as momentary shudder at 8-10 MPH (may appear at 18-25 MPH) while accelerating or in hill climbing. Correct as follows:
1) Relocation of Propeller Shaft Center Bearing (1951 Cars before Commander Serial No. 8216042, Land Cruiser No. 8215697): On these cars with support bearing mounting holes located in cross-member at horizontal center-line of support bearing hole, raise the support bearing mounting by drilling new holes ½" to ⅝" **above and directly in line with original holes** (CAUTION—Any deviation in alignment or in equality in height of holes may cause other drive line disturbances).
2) Realignment of Propeller Shaft Universal Joints (1951 Cars & 1952 Cars before Serial No. 8228649): Beginning with this serial number, universal joint on splined stub shaft was turned 90° out of phase with front propeller shaft universal joint yoke. This correction may be made on cars **before** above serial number by withdrawing splined shaft at center bearing and turning it four splines in either direction. Transmission shaft yoke, spline shaft yoke, and pinion shaft yoke should be on same plane.
Propeller Shaft & Support Bearing Removal & Servicing—*See Studebaker Special Data.*

REAR AXLE

Spicer Model 44-3. Semi-floating, Hypoid Gear, with Hotchkiss Drive.
See Rear Axle Section for complete data.

Axle Ratios

Std. Trans.	4.09-1
Overdrive	(1951) 4.56-1, (1952) 4.55-1
Auto. Trans.	3.54-1

NOTE—Rear Axle Ratio stamped on plate attached to axle by cover capscrew and also on gears.
Backlash—.003-.006". Shim adjustment.

Removal: Remove hub caps, take out cotter pin from axle shaft nut, loosen rear wheel nuts. Place car on stands on frame just ahead of rear springs. Remove wheels, hubs and drums. Disconnect hand brake cable. Take out backing plate bolts from backing plate, free hydraulic brake lines from axle housing clips (do not disconnect brake lines). Backing plates and shims can then be wired to frame (do not disconnect brake lines from wheel cylinders). Disconnect rear universal (wire caps or use clamps to prevent losing rollers). Remove rear spring "U" bolts, disconnect lower shock absorber links, remove rear axle assembly from car.

Axle Shaft Removal—Remove wheel, remove wheel hub (use puller J-596-A). Take out backing plate retaining bolts, remove outer oil seal. Pull backing plate out over end of axle shaft and wire plate to frame *(CAUTION—do not lose adjusting shims located between backing plate and axle housing flange).* Pull axle shaft assembly (Puller HM-931).

Wheel Bearing Adjustment: Use dial indicator to check axle shaft end-play. Adjust by removing backing plate (see Axle Shaft Removal above), and adding or removing shims located between backing plate and axle housing flange (shims .003", .005", .010", .030" thick).
Endplay—.001-.005".

SHOCK ABSORBERS

Houde & Monroe—Direct acting, hydraulic type.

	Front	Rear
U. S. Cars (Std.)	527924	530766
U. S. Cars (Hvy. Duty)	530971	530972
U. S. Cars (1952 Optl. Hvy. Duty)	531884	531885
Canadian Cars (Std.)	530507	530512
Canadian Cars (Hvy. Duty)	530508	530513

FRONT SUSPENSION

Independent type with coil springs and Direct Acting shock absorbers located within the springs.
See Front Suspension Section for complete data.

▷*1952 WHEEL BALANCING NOTE:* If wheel spinner does not rotate wheel at sufficiently high speed, floating reverse shoe can be moved away from drum by backing off bearing adjusting nut far enough to move wheel out ¼", then shake wheel and drum assembly to loosen reverse shoe. DO NOT apply service brakes until balancing operation completed.
Kingpin Inclination—5¼° crosswise.
Caster—Neg. 1° to Neg. 2½°. Not more than ¾° variation between wheels. Eccentric pin adjustment.
Camber—0° to Pos. 1° with ½° more camber favored on driver's side. Eccentric pin adjustment.
Toe-In—1/16" to 1/8". **Adjust right hand tie rod only** for toe-in after left hand tie rod has been adjusted for straight-ahead position (with steering wheel centered) and center auxiliary tie rod has been adjusted so the steering gear arm and auxiliary steering arm parallel. **RHD Car Note**—Make toe-in adjustments on left hand tie rod.
Toe-out on Turns—Inner wheel turned 23½° ± 1°, outer wheel turned 20°.

STEERING GEAR

1951—**Ross Model T-14.** Cam-and-Twin Lever type.
1952—**Saginaw.** Worm & Roller type.
See Steering Gear Section for complete data.

BRAKES

Service: Lockheed (Wagner Electric) Hydraulic, Self-centering, Self-adjusting type.
See Brake Section for complete data.

▷*1952 BRAKE NOTE*—Brake shoe return spring is NOT hooked to reverse (secondary shoe, but acts only on the forward (primary) shoe. Return spring is hooked to backing plate behind reverse shoe.

Drums—Composite type. Diameter 11".

Clearance—If adjustment required, *see "Lockheed (Wagner) Hydraulic Self-Adjusting Brakes" in Brake Section.*

▷*1952 ADJUSTING NOTE*—Reverse shoe eccentric must remain in "off" position at all times.

Lining—Molded type (all shoes). Width 2". Thickness 3/16". Length, (Front wheels) 22¼", (Rear wheels) 18½".

Braking Power—57% Front, 43% Rear.

Hand Brake: See Service Brake data above.

Hill-Holder: Std. on Std. Trans. Cars. *See Brake Section for complete data.*

Anti-Creep (for Automatic Transmission Cars)—*See Brake Section for complete data.*

MISC. MECHANICAL

CONVERTIBLE TOP CONTROL: Electric type with motor mounted on left hand lift assembly (right hand lift driven through flexible drive).
See Miscellaneous Section for complete data.

WINDSHIELD WIPER: Redmond. Electric type.
See Miscellaneous Section for complete data.

MODEL IDENTIFICATION

SERIAL NUMBER: Stamped on plate on left front door lock post (First 1952 Cars), hinge post (Later Cars).

Starting Serial Nos.—	1952	1953
South Bend	G-1115501	G-1197501
Los Angeles	G-907301	G-997701
Hamilton	G-735701	G-745101

ENGINE NUMBER: Stamped-on-pad-on-upper-front-left corner of engine block.

Starting Engine Nos.—	1952	1953
South Bend & Los Angeles	911501	1004001
Hamilton	C-36722	C-46501

►*NOTE—Letter "A" following engine number indicates crankshaft main bearing journals .005" Undersize.*

TUNE-UP

COMPRESSION PRESSURE: 120-140 lbs. at 150 RPM.

VACUUM READING: 17-18" idling at 8 MPH.

FIRING ORDER: 1-5-3-6-2-4.

SPARK PLUG GAPS: .030" (.028-.033").
Plugs—Champion J-7.

DISTRIBUTOR: Auto-Lite No. IAT-4010. Full automatic advance type with vacuum spark control.
Breaker Gap—.020". Limits .018-.022".
Cam Angle—39° ± 3°.
Breaker Arm Spring Tension—17-20 ozs.
Rotation—Counter-clockwise viewed from above.
Automatic & Vacuum Advance—*See Ignition.*

COIL: Auto-Lite No. CR-6007.
Ignition Current—½-1½ amps. idling, 4-5 stopped.

CONDENSER: Auto-Lite No. IAT-3076L.
Capacity—.21-.25 microfarad.

IGNITION TIMING: 2° BTDC (idling at 550 RPM.).
Timing Mark—On vibration dampener. "IGN" mark in line with pointer (left side of timing cover).
Octane Selector Setting—After setting timing (above), adjust Octane Selector until engine pings when hot and pulling hard, then retard timing by turning distributor counter-clockwise (move pointer toward "R") until ping disappears.
Timing Procedure—*See Ignition Timing.*

CARBURETION: Carter WE. 1¼" single barrel, down-draft type with automatic choke and fast idle.

Car Model	Carter WE No.
1952	715S
1953 (Early)	989S
1953 (Later)	989SA

►*ACCELERATION HESITATION OR STUMBLE (First 989S Carburetors): See "Carter WE" Carburetor in Carburetor Section.*

►*IMPROVED PART-THROTTLE ACCELERATION & OTHER CARBURETOR PRODUCTION CHANGES: See "Carter WE" Carburetors in Carburetor Section.*

Idle Setting—½-1½ turns open. Turn screw out for richer mixture.
Idle Speed—(Synchro-mesh Cars) 550-650 RPM. or 8-10 MPH. (Auto. Trans. Cars) 500-550 RPM. with selector lever in Neutral "N" position.
Float Level—⅜". Measured from top of projection on bowl cover to top of soldered seam on free end of float with needle valve seated and bowl cover assembly inverted.
Accelerating Pump—No seasonal adjustment.

Automatic Transmission Throttle Linkage Adjustment: *See "Studebaker Automatic Transmission" in Transmission Section for complete data.*

Fast Idle Setting: .046" throttle opening with choke valve in closed position. To check, crack throttle valve, close choke valve, move throttle valve toward closed position as far as possible. Measure remaining throttle valve opening on side opposite idle ports (.045" end of Gauge T109-158 can be used). Adjust by bending choke connector rod at lower angle.

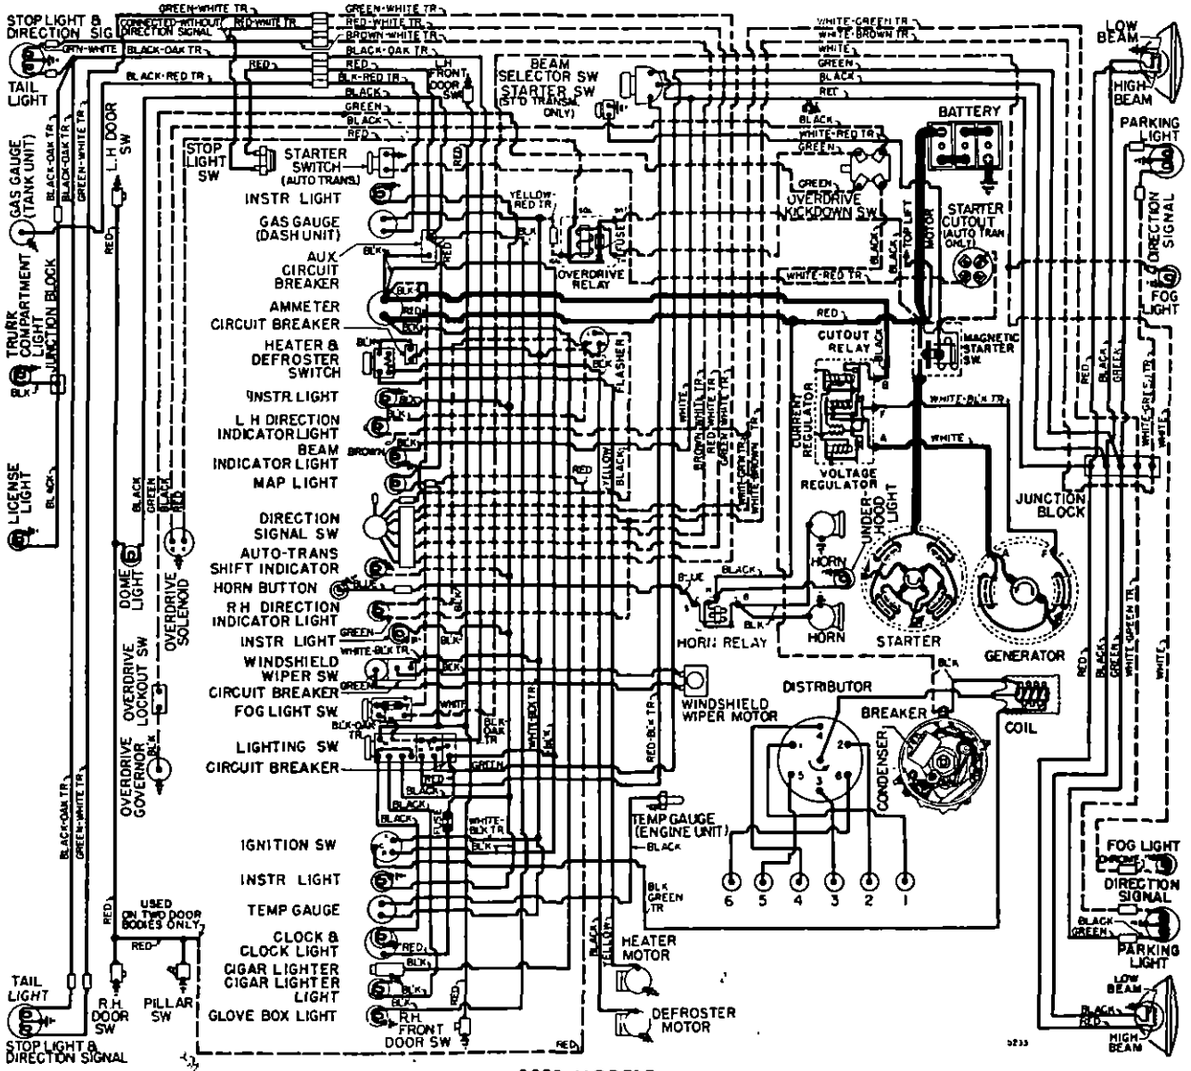
Choke Adjustment: 1 point lean.

Fuel Pump Pressure: 4-5 lbs. maximum.

MANIFOLD HEAT CONTROL: Automatic thermostatic type.
To Check—With outer end of coil free from anchor, and valve closed (counter-weight up), hooked end of coil should be 90° from anchor post at 70°F.

VALVE TAPPET CLEARANCE: .016" All valves, cold. Self-locking tappet screws used.

IGNITION



IGNITION SWITCH: Studebaker No. (1952) 521955, (1953) 532500.
Ignition Lock—Yale & Towne.

COIL: Auto-Lite CR-6007. On engine above distributor.
Ignition Current—½-1½ amps. idling, 4-5 stopped.

CONDENSER: Auto-Lite No. IAT-3076L.
Capacity—.21-.25 microfarad.

DISTRIBUTOR: Auto-Lite No. IAT-4010. Full automatic advance type with vacuum spark control. "Pivoted Breaker Plate" type.
Breaker Gap—.020". Limits .018-.022".

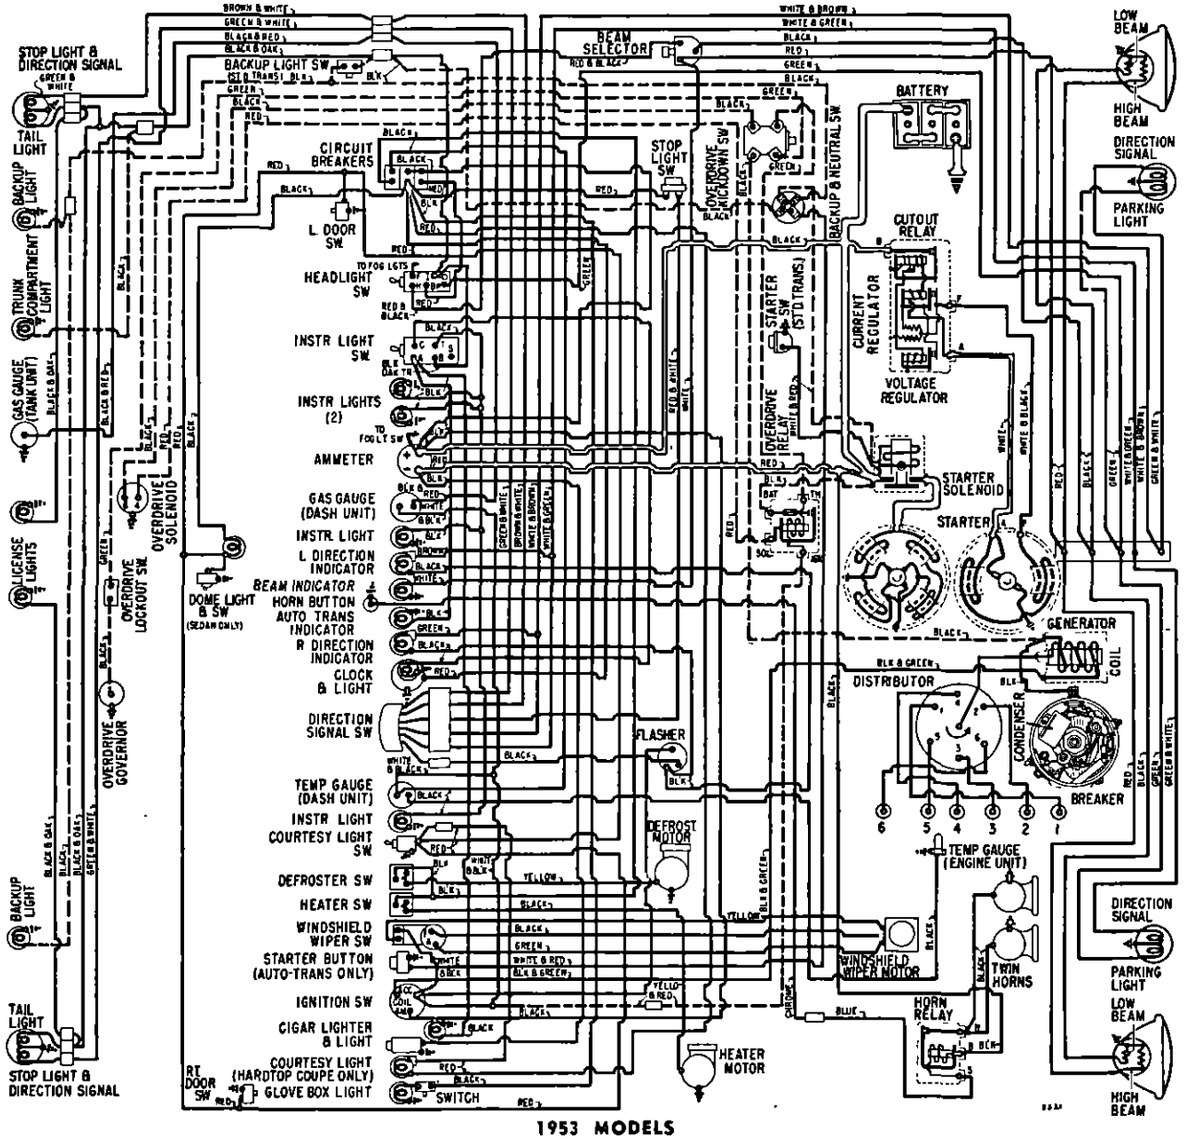
CONTINUED ON NEXT PAGE

1952 MODELS

CONTINUED FROM PRECEDING PAGE

Cam Angle—39° ± 3°.
Breaker Arm Spring Tension—17-20 ozs.
Rotation—Counter-clockwise viewed from above.
Octane Selector—Provides for minor changes in ignition timing at distributor. See Ignition Timing.

Automatic Advance



Distributor Degrees	R.P.M.	Engine Degrees	R.P.M.
Start	400	0°	800
2°	680	4°	1360
4°	975	8°	1950
6°	1265	12°	2530
7°	1400	14°	2800

Vacuum Spark Control: Integral type linked directly to breaker plate.

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	4"
1°	2°	4⅞"
4°	8°	7½"
8°	16°	11⅛"
9°	18°	12"

Distributor Installation Note: Crank engine to firing position for #1 cylinder (dampener mark 'IGN' at pointer on timing gear cover), sight down distributor shaft hole to check that distributor drive tongue is parallel to camshaft and that narrow half of offset is toward camshaft. Turn rotor to #1 segment, install distributor.

1953 MODELS

IGNITION TIMING

Std. Setting ..... 2° BTDC
Timing Mark—"IGN" mark on vibration dampener and pointer on left side of chain case cover.
Timing—Disconnect vacuum advance pipe at carburetor and plug hole in throttle body. Center octane selector. Idle engine, direct timing light at vibration damper and pointer, rotate distributor until 'IGN' mark aligns with pointer. Check Octane Selector (below):
Octane Selector Setting—After setting timing (above), loosen selector hold-down screw, advance by turning distributor clockwise (toward "A" mark on scale) until engine pings when wide-open between 10-30 MPH. Then retard until ping disappears.

CARBURETOR

Carter WE. 1¼" single barrel, downdraft type with automatic choke and fast idle.

Car Model	Carter WE No.
1952	715S
1953 (Early)	989S
1953 (Later)	989SA

▷*ACCELERATION HESITATION OR STUMBLE (First 989S Carburetors): See "Carter WE" Carburetor in Carburetor Section.*

▷*IMPROVED PART-THROTTLE ACCELERATION & OTHER CARBURETOR PRODUCTION CHANGES: See "Carter WE" Carburetors in Carburetor Section.*

Settings (Idle Setting, Float Level, & Accelerating Pump): *See Tune-Up.*
Metering Rods & Jets—*See Carter Jet Table in Carburetor Section.*

Automatic Transmission Throttle Linkage Adjustment: *See "Studebaker Automatic Transmission" in Transmission Section for complete data.*

Fast Idle: Carter Single Barrel Carburetor type.
Setting—.046" throttle opening with choke valve closed. To check, crack throttle valve, close choke valve, move throttle valve toward closed position as far as possible. Measure remaining throttle valve opening on side opposite idle ports (.045" end of Gauge T109-158 can be used). Adjust by bending choke connector rod at lower angle.
See Carburetion Equipment Section for complete data.

Automatic Choke: Carter Climatic Control (Single Carburetor type).
Setting—1 point lean.
See Carburetion Equipment Section for complete data.

CARB. EQUIPMENT

Air Cleaner: Oil-wetted type Std., Oil-bath type Optl.

Studebaker No.—	1952	1953
Dry (Oil-wetted type)	519861	533022
Wet (Oil-bath type)	531658	533103

Servicing (Dry Type)—Service every 1,000 miles (more often under dusty conditions) by taking off cover, removing filter element and SHAKING off dust (*CAUTION*—Do not use compressed air or solvent cleaners). Replace filter element every 6 months or 10,000 miles. Use Studebaker No. 533334 (for 533022 Cleaner), AC No. 1 (for 519861 Cleaner) replacement filter elements.
Servicing (Oil-bath Type)—Service weekly (or more often in dusty areas). Remove filtering ele-

ment, wash in solvent, drain thoroughly, clean out lower oil base and install 1 pint SAE. engine oil (to level of indicator mark). Use SAE No. 40 or 50 (above 32°F), No. 20 (below 32°F).

Fuel Pump: AC Diaphragm type (Std.), Combination fuel-and-vacuum pump (Optl.).

►***FUEL PUMP ROCKER ARM SHAFT OIL LEAKAGE:*** Install new rocker arm pin and plugs furnished in kit, Part No. 532462. ***DO NOT USE ON COMBINATION FUEL & VACUUM PUMPS.***

Replacement Pumps—AC 9817 (Std.), 9559 (Optl.).
Pressure—4-5 lbs. maximum.
See Carburetion Equipment Section for complete data.

Gasoline Gauge: Stewart-Warner Electric type.
Dash Unit—Studebaker No. (1952) 530048 for LHD Cars, 526717 for RHD Cars, (1953) 532593.
Tank Unit—Studebaker No. (1952) 525548, (1953 Exc. Coupe & Hardtop) 525548, (1953 Coupe & Hardtop) 532261.

►***TANK UNIT CAUTION—Above tank units NOT interchangeable (will give incorrect reading if installed on wrong models).***

See Carburetion Equipment Section for complete data.

BATTERY

Willard HDW-1-100, 6 volt, 15 plate, 100 ampere hour capacity (20 hour rate).
Starting Capacity—300 amperes for 3.5 minutes. Five Second Voltage 4.3 volts.
Grounded Terminal—Positive (+) to cylinder head.
Location—Left side of engine compartment.

STARTER

Auto-Lite Model MZ-4157.
Armature No.—Auto-Lite No. MZ-2211.
Drive—Barrel type Bendix Drive No. A1792.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—42-53 ozs. (new brushes).

Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4000	5.0	68
4.4 "	Lock	2.0	280

Starting Switch: Magnetic switch mounted on starter and controlled by manual switch.
Std. Trans. Cars—Auto-Lite SW-4016 (Studebaker No. 519829) mounted on toeboard under clutch pedal and operated by fully depressing pedal.
Automatic Trans. Cars—Studebaker No. 531716 pull switch on instrument panel and Delco-Remy No. (1952) 1997882, (1953 Power Steering) 1998041, combination starter cut-out and backing light switch, (1953 without Power Steering) 1998038 Neutral Safety Switch, mounted on steering column. Starter operative only with transmission selector lever in "N" or "P" positions.

GENERATOR

Auto-Lite GGW-4801-A (Early), GGW-4801-C (Later). Two brush, with voltage and current regulation.
Armature—Auto-Lite No. GGW-2006F.
Maximum Charging Rate—See table below.
Charging Rate Adjustment—None. See Regulator.

Performance Data

Amperes	Volts	Cold—R.P.M.—Hot	
0	6.4	870-970	950-1050
40	8.0	1800-2000	2150-2350
45	8.0	1925-2125	2350-2550

Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—35-53 ounces (new brushes).
Field Current—1.4-1.5 amperes at 5.0 volts.
Motoring Current—4.8-5.3 amperes at 5.0 volts.

Belt Adjustment: Move generator out until ⅜-½" belt deflection midway between generator and fan pulleys is obtained.

REGULATOR

Auto-Lite Model VBE-6101A. Voltage and current type with "Temperature Compensated" current regulator.
See Electrical Equipment Section for complete data.
NOTE—Regulator case cover sealed. Serviced on exchange basis if seals not broken.

Cutout Relay

Cuts In—6.3-6.8 volts.
Cuts Out—4.1-4.8 volts (approx. 4-6 amps. disch.).
Contact Gap—.015" minimum.
Air Gap—.031-.034" with contacts open (check at hinge end of core).

Voltage Regulator

Setting—7.2-7.5 volts ***after 15 minutes operation charging at ½ maximum rate.***
Air Gap—.048-.052" with contacts just opening.
Checking & Adjusting—***See Electrical Equip. Section.***

Current Regulator

SETTING CAUTION—"Temperature Compensated" type. Set to following specifications at 70°F.

Test A	Operating Amperes	Test B
52	45	(43-47)

Test A—After 15 minutes operation charging at ½ maximum rate.
Test B—After 15 minutes additional operation with current regulator operating (load applied to hold voltage to 6.7-6.9 volts).
Air Gap—.048-.052" with contacts just opening.
Checking & Adjusting—***See Electrical Equip. Section.***

LIGHTING

Headlamps: Sealed Beam. ***See Electrical Equip. Section.***
Directional Signal: ***See Electrical Equipment Section.***
Directional Signal Lamps—Separate bulbs for front lamps, integral with stop lights in rear.

Switches

Lighting—Studebaker No. (1952) 530058, (1953) 532134.
Instrument Light—Studebaker No. (1953) 532132.
Beam Selector—Studebaker No. 519246.
Direction Signal—Studebaker No. (1952) 530468P, (1953 Factory Installed) 533518, (1953 Field Installed) 533243.
See Electrical Equipment Section for complete data.

►***DIRECTIONAL SIGNAL NOTE—(Factory Installed) Switch Plate stamped "4HD-A". (Field Installed) Switch Plate stamped "4HD-B".***

MISC. ELECTRICAL

CIRCUIT BREAKERS: Four circuit breakers mounted as a unit behind instrument panel. Thermostatic type.
1) Lighting—30 ampere. Protects all Lighting Switch circuits.
2) Auxiliary—20 ampere. Protects Stop Light, Dome Light, Courtesy Light, Clock, Glove Box Light, and Underhood Light circuits.
3) Heater & Defroster—20 ampere. Protects Climatizer and Defroster circuits.
4) Convt. Top Motor—40 ampere.

FUSES: Clock—3 ampere. In clock lead.
Direction Signal—14 ampere. In Flasher lead.
Overdrive—20 ampere. On Overdrive Relay.
Fog Lights—20 ampere. On Fog Light Switch.
Radio—14 ampere.

HORNS: Delco-Remy No. 1999683 (Low Note), No. 1999684 (High Note). Airtone twin horns with relay.
Horn Current—12-15 amperes.

Horn Relay: Delco-Remy No. 1116775.
Contacts Close—2.75-4.0 volts.
Contact Gap—.025". **Air Gap**—.015" (closed).

ENGINE

ENGINE SPECIFICATIONS: Six cylinder, "L" head.
Bore—3". **Stroke**—4".
Displacement—169.6 cu. ins. **Rated H.P.**—21.6.
Developed Horsepower—85 at 4000 RPM.
Compression Ratio—7.0-1 (Synchro-mesh Trans. (Cars), 7.5-1 (Auto. Trans. Cars).
Compression & Vacuum Reading—***See Tune-Up.***

►***1952 ENGINE VIBRATION AT LOW SPEED CORRECTION: See "Engine Mountings" in Studebaker Special Data.***

ENGINE & OIL PAN REMOVAL: ***See Studebaker Special Data. NOTE—Not necessary to remove engine for pan removal.***

CYLINDER HEAD & TIGHTENING TORQUES: ***See Studebaker Special Data.***

PISTONS: Lynite aluminum alloy, cam ground, T-slot, bearing-metal plated type. **Length**—2 29/32".
Weight—9.14 ozs. (without rings or pin).
Clearance—Selective fit (see Fitting Pistons).
Removal—Pistons and rods removed from above.

Original Bore & Pistons: ***See Studebaker Special Data.***

Fitting New Pistons: With piston inverted, slotted side away from camshaft, and with bottom of piston about 1" below top of block, insert a 1" x .002" x 12" feeler gauge on camshaft side of piston. Pull to withdraw feeler should be 11 to 16 lbs.

Replacement Pistons: Furnished Standard and .010" .020", .030", .040" Oversize. ***See "Pistons" in Studebaker Special Data.***

Installing Pistons: T-slot away from camshaft.

PISTON RINGS: Two compression, one oil control ring per piston. All above pin.

Ring	Width	End Gap	Side Clearance
Comp. #1	3/32"	.007-.017"	.002-.006"
Comp. #2	1/8"	.007-.017"	.002-.006"
Oil #3	5/32"	.007-.017"	.0015-.006"

Installing Rings: Step up top ring, step down 2nd ring.
Replacement Rings: Sets furnished Std. size and .020", .030", .040" Oversize. Single rings Std. size and .010", .020", .030", .040" Oversize.

PISTON PIN: Diameter .7491-.7495". **Length** 2⅝". Pin is locked in rod by tapered pin and locknut.
Pin Fit in Piston—.0001-.0003" clearance or light finger-push fit at room temperature (70°F.).

Pin Removal & Installation: ***See Studebaker Special Data.***

Replacement Pins: Std. & .0025". .005" oversize. Use Hone No. PH-1 to obtain proper piston pin fit.
Note—Replacement pistons fitted with pins.

CONTINUED ON NEXT PAGE

ENGINE

CONTINUED FROM PRECEDING PAGE

CONNECTING ROD: Length 6⅜". **Weight** 20.48 ozs.

▷*CONNECTING ROD & CAP CAUTION—Two types of connecting rods and bolts used. Bolt head seat on rod not undercut on new type rod. DO NOT USE OLD TYPE BOLTS (Not chamfered on underside of head) ON NEW TYPE RODS. New type bolts (Part No. 533801) interchangeable on old type rods. Connecting rods are interchangeable providing correct bolts are used.*

Crankpin Journal Diameter—1.81175-1.81275".

Lower Bearing—Interchangeable steel-backed, micro-babbitt lined type. No shims.

Clearance—.00005-.00215". **Sideplay**—.005-.009".

Bearing Adjustment: None (no shims). Replace bearings. Do not file rods or bearing caps.

Replacement Bearings: Bearings furnished Std. Size and .001", .005", .010", .020" Undersize.

Installing Rods: Lower bearings "offset." Install rods with narrow portion of bearing toward nearest main bearing. Rods (#1, 3, 5) can not be interchanged with rods (#2, 4, 6). Numbers on rods and caps must be together and installed in same numbered cylinders, with oil hole in lower end toward camshaft side.

CRANKSHAFT: Four bearing type with integral counterweights. Vibration dampener on front end.

Vibration Dampener Removal & Installation: *See "Vibration Dampener" in Studebaker Special Data.*

Journal Diameters—2.4370-2.4375" (All) Std.

▷*CAUTION—Journals are .005" Undersize on engines with letter "A" following Engine Number.*

Clearance—.0005-.0025".

Rear Bearing Oil Seal—Two-piece rubber ring on crankshaft, neoprene strips in grooves on top of bearing cap; and two specially treated wood strips in grooves on sides of bearing cap.

See "Crankshaft Oil Seals" in Studebaker Special Data.

▷*CAUTION—Install new wood oil seals (above) each time rear main bearing cap removed and re-installed.*

Bearing Adjustment: None (no shims). Replace bearings. Do not file bearing caps.

NOTE—Front oil pan seal block may be removed for access to front main bearing cap by removing four lower timing gear cover retaining screws. Use only malleable iron type filler block on these cars.

▷*CAUTION—Do not securely tighten timing gear cover-to-filler block screws until after oil pan screws tightened uniformly and securely.*

Replacement Bearings: Furnished as sets or single bearings Std. & .001", .005", .010", .020", .030" U. S.

End Thrust: Taken by thrust washer assembled between front main bearing and crankshaft gear. Controlled by shims between thrust washer and main bearing journal. Adjust by changing shims (.003", .005", .007" thick). **Endplay**—.003-.006".

CAMSHAFT: Four-bearing type. Helical gear drive.

Journal Diameters—#1, 1.7475-1.7480"; #2, 1.7162-1.7170"; #3, 1.6857-1.6865"; #4, 1.6232-1.6240".

Bearings—Split, steel-backed, babbitted bushings.

Clearance—.0007-.0022" (#1), .0010-.0027" (others).

Bearing Adjustment: None. Replace bushings with camshaft removed. NOTE—Align bushing oil hole with oil hole in block.

Camshaft Removal & Installation: *See "Camshaft & Bearings" in Studebaker Special Data.*

End Thrust: Taken by thrust plate assembled on front face of engine block behind camshaft gear (spacer assembled on shaft behind gear hub).

Endplay—.003-.006". *See "Camshaft & Bearings" in Studebaker Special Data.*

Timing Gears: Crankshaft gear Cast Iron, Camshaft gear Celeron with steel hub.

Backlash—.001-.003".

Timing Gear Replacement—*See "Timing Gears" in Studebaker Special Data.*

Replacement Gears—Camshaft gear furnished in two sizes: Standard (marked "S"), High Limit (marked "H"), Crankshaft gear furnished Standard size only.

Camshaft Setting: Mesh marked tooth of camshaft gear between two marked teeth of crankshaft gear.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 11/32"	5/16"	4 11/32"
Exhaust	1 9/32"	5/16"	4 11/32"

	Seat Angle	Lift	Stem Clearance
All Valves	45°	11/32"	.0015-.0035"

Valve Seat Width—3/32".

Valve Guides: Pressed in block from above with top of guide 1 3/16" below top of block. Finish ream guides to inside diameter of .312-.3125". Use Valve Stem Guide Remover and Replacer Tool J-2034. Replace worn guides if clearance greater than .0035".

Valve Springs: Install with closed coil end up. Replace springs if over 10% weaker than pressure listed.

	Spring Pressure	Length
Valve Closed	49-54 lbs.	1 21/32"
Valve Open	93-103 lbs.	1 5/16"

NOTE—Install valve spring retainer with flange engaging flat surface on lower coil and tongue on inner diameter engaging groove in spring lock.

Valve Lifters: Mushroom type. Remove from below with camshaft out of the engine.

Valve Lifter Tension Spring—*See "Valve System" in Studebaker Special Data.*

Clearance—.0005-.00175".

Replacement Lifters—Furnished Std. size and .0005", .001" Oversize.

VALVE TIMING

Tappet Clearance: .016" All Valves, Engine cold.

NOTE—Self-locking tappet adjusting screws used. Tappet screw tension should be 25 in.lbs. minimum.

Valve Timing: See Camshaft Setting above.

Intake Valves—Open 15° BTDC. Close 49° ALDC.

Exhaust Valves—Open 54° BLDC. Close 10° ATDC.

Valve Timing Check—Set #1 intake valve to .020". Turning engine with #6 cylinder on compression stroke the intake valve should start to open when the mark "IN-OP 1-6" on front dampener lines up with pointer.

LUBRICATION

Lubrication System: Pressure to crankshaft, connecting rod, and camshaft bearings and to valve lifters. Timing gears lubricated by oil by-passed by pump.

Crankcase Capacity—5 qts. ("Add Oil" point on oil level indicator stick is 3 qt. level).

Normal Oil Pressure—20-40 lbs. at 40 MPH.

Oil Pressure Relief Valve—On lower right front corner of engine. Opens at 40 lbs. Adjustable by inserting shims between outer end of spring and plug.

Oil Pump: Helical gear type. Mounted externally on right hand side of crankcase.

Oil Pump Removal & Installation—*See "Oil Pump" in Studebaker Special Data.*

Oil Filter: Optl. Replace filter cartridge at 5000-6000 mile intervals (more often in dusty areas).

Crankcase Ventilation: Filter element in oil filler cap (air intake) and in breather pipe on left rear of engine (air outlet).

Servicing—Wash both filter elements in kerosene and re-oil at regular intervals. NOTE—filter in outlet pipe removed by taking out cotter pin.

Oil Pressure Gauge: Studebaker No. (1952) 530050, (1953) 532596. Not electric.

COOLING

Cooling System: Pressure type with relief valve in filler cap and water pump on front of block.

Capacity—10 qts. **With Heater**—11½ qts.

Pressure Valve—Studebaker No. 531826 (stamped "7"). Radiator Filler Cap. Opens at 7 lbs.

▷*CAUTION*—Cars with Pressure Cap must have Dole type thermostat (see below). Previous "bellows" type thermostat MUST NOT BE USED ON CARS WITH PRESSURE CAP (may cause higher-than-normal engine operating temperatures).

Water Pump: Packless, sealed ball bearing type.

See Water Pump Section for complete data.

Removal—Slack off drive belt, take out capscrews in the fan pulley hub & remove fan blades. Disconnect hose connection, take out mounting screws in pump body flange, withdraw pump from engine.

Belt Adjustment—See Generator Belt Adjustment Studebaker No. 531470 (Std.), No. 532017 (High Temp. for use with permanent type Anti-freeze).

▷*CAUTION—The above thermostats must be used on all cars with radiator pressure cap.*

Setting (Std.)—Starts to open 155°F.

Setting (High Temp.)—Starts to open 170°F.

Temperature Gauge: Stewart-Warner Electric type.

Dash Unit—Studebaker No. (1952) 530051, (1953) 532597.

Engine Unit—Studebaker No. 530127 (without adapter).

CLUTCH

Borg & Beck Model 8A7 with Borglite Driven Member. Single plate, dry disc type. NOTE—Clutch assembly marked by number 980 stamped on cover.

See Clutch Section for complete data.

Facings—Molded Metallic type, 2 required. I. D. 5⅜". O. D. 8". Thickness .125".

▷*CAUTION—Special driven member used on cars with Overdrive. Identify each type by hub damper spring color as follows:*

	Damper Spring Color
Cars with Conventional Trans.	2 Lavender, 2 Black
Cars with Overdrive Trans.	4 Lavender

Pedal Adjustment: Pedal free travel ½" to 1". To adjust, unhook pull-back spring on outside of frame rail, loosen locknut at adjusting clevis and remove clevis pin at inner end of pedal shaft, turn clevis on rear end of pedal shaft-to-operating shaft rod for correct clearance, reassemble linkage.

Hill-Holder Note—Check setting whenever clutch pedal adjusted and adjust Hill-holder to release just as clutch engages.

Clutch Housing Removal: Remove distributor and oil level gauge adapter, remove starter and tie up out of the way (not necessary to disconnect cables), remove front floor plate, take out upper clutch housing cap screws. Remove transmission (SEE TRANSMISSION). Disconnect clutch pedal rod at operating shaft-to-release shaft sleeve, pull operating shaft out and remove sleeve. Remove parking brake cable shield clip, unhook brake pedal pullback spring from cross-member, support engine weight on jack under rear end of oil pan (use block of wood on jack to prevent damage to pan), take out engine rear support bolts, remove lower support insulators. Remove cross-member (with clutch operating shaft support bracket). Loosen exhaust pipe flange nuts at manifold, remove exhaust pipe support bracket-to-clutch housing bolts, loosen clamp and swing bracket out of the way. Take out all clutch housing bolts, remove dowel bolts at right and left center, remove clutch housing.

►**Installation Caution**—Align clutch housing to rear engine plate with two tapered drifts, then install the dowel bolts. Draw the dowel bolts in place by tightening the nuts—**do not drive them in place.**

Clutch Removal: Remove clutch housing (above), remove six screws evenly to relieve spring pressure, lift off clutch assembly and driven member.

SYNCHRO-MESH TRANSMISSION

Warner Model AS1-T96 (Std.), AS24-T96 with R10 type Overdrive (Optl.). All helical gear type. Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).

See Transmission Section for complete data.

Transmission Control: Remote control type with gearshift lever mounted on steering column.

►**Gearshift Lever Adjustment (To Correct Hard Shifting)**—*See "Warner Transmission" in Transmission Section for complete data.*

►*SHIFT LEVER BINDING CORRECTION (SYNCHRO-MESH): See "Warner Transmission" in Transmission Section for complete data.*

See Transmission Section for complete data.

Removal: Drain transmission. Disconnect hand brake cable and move out of way for clearance. Disconnect front universal at transmission (wire caps or use clamp to prevent losing rollers). Take out center support bearing mounting bolts. Push front shaft and support to rear (will slide on splines on rear shaft). Disconnect shift rods from levers on case and speedometer cable (remove speedometer pinion). On Overdrive transmission disconnect all control wires and cable. Take out transmission to clutch housing capscrews, pull transmission straight back and remove from car.

OVERDRIVE

Warner R10 Type (part of AS24-T96 Transmission). Governor controlled, with electrical solenoid operation and throttle controlled "kick-down."

NOTE—Overdrive is "centered ring gear" type.

See Transmission Section for complete data.

Solenoid—Studebaker No. 521429.

Governor—Studebaker No. 520454.

Control Relay—Studebaker No. 523297.

Kick-down Switch—Studebaker No. (1952) 529479, (1953) 532896.

Lock-out Switch—Studebaker No. 521436.

Overdrive Fuse—20 ampere. On control relay.

Removal: See Std. Transmission Removal.

AUTOMATIC TRANSMISSION

Torque converter and 3-speed automatic transmission with hydraulic control. Has mechanical parking lock and Anti-creep device which holds brakes applied when car standing and ignition "on."

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Studebaker Automatic Transmission" in Transmission Section for complete data.*

►*TESTING & TROUBLE SHOOTING—See Transmission Section.*

Lubrication—Check oil level every 1000 miles and maintain oil level at "Full" mark on dipstick. Drain and refill every 15,000 miles.

Recommended Lubricant—Automatic Transmission Fluid Type A (in containers with "AQ-ATF" symbol). *NOTE*—Above fluid replaces engine oil previously specified for these transmissions.

Capacity—9½ qts.

Checking Oil Level—Oil must be warm (set parking brake, place selector lever in "L" position, idle engine until normal operating temperature reached). Remove inspection cover on front floor carpet over transmission case, clean all dirt from around inspection hole, check oil level with dipstick gauge. Add oil as required to bring level up to "Full" mark on dipstick (1 pint between "LOW" and "FULL").

►*OTHER AUTOMATIC TRANSMISSION SERVICE DATA: See "Studebaker Automatic Transmission" in Transmission Section.*

UNIVERSALS

Spicer Model 1268-110X (Front & Rear), 1261-102X (Intermediate). Needle bearing type. Three used with intermediate universal at propeller shaft support bearing on crossmember (see Propeller shaft).

Propeller Shaft & Support Bearing: Two shafts used:

1) Front shaft with intermediate universal yoke bolted on rear end (no slip-joint).

2) Rear shaft with slip-joint on forward end at intermediate universal.

►**Propeller Shaft Checking (For Vibration)**—*See "Propeller Shaft" in Studebaker Special Data.*

Propeller Shaft & Support Bearing Removal & Servicing—*See "Propeller Shaft" in Studebaker Special Data.*

REAR AXLE

Spicer Salisbury Model 23. Semi-floating, Hypoid Gear type with Hotchkiss Drive.

See Rear Axle Section for complete data.

Model	Axle Ratio
Standard Trans.	4.1-1
Overdrive	4.56-1
Overdrive Opt'l (1952)	4.88-1
Overdrive Opt'l (1952-53)	4.1-1
Automatic Trans. (1952-53)	4.1-1
Automatic Trans. Opt'l (1952)	3.54-1

NOTE—Rear axle ratio stamped on plate attached to axle by cover capscrew and also on ring and pinion gears.

Backlash—.003-.008". Shim adjustment.

Removal: Remove hub caps, take out cotter pin from axle nut, loosen rear wheel nuts. Place car on stands on frame just ahead of rear springs. Remove wheels, hubs and drums. Disconnect hand brake cable, take out backing plate bolts from backing plates, free hydraulic brake line from axle housing clips (do not disconnect brake line). Backing plates and adjusting shims can then be wired to frame (do not disconnect brake line from wheel cylinders). Disconnect rear universal (wire caps or use clamp to prevent losing rollers). Remove rear spring "U" bolts, disconnect lower shock absorber links, remove rear axle assembly from car.

Axle Shaft Removal—Remove wheel, remove wheel hub (use puller J-1644-B). Take out backing plate retaining bolts, remove outer oil seal. Pull backing plate out over end of axle shaft and wire plate to frame (CAUTION—do not lose adjusting shims located between backing plate and axle housing flange), pull axle shaft with Puller HM-931.

Wheel Bearing Adjustment: Use dial indicator to check axle shaft endplay. Adjust by removing backing plate (see Axle Shaft Removal above), and adding or removing shims located between backing plate and axle housing flange (shims .003", .005", .010", .030" thick). **Endplay**—.001-.005".

SHOCK ABS RBERS

Houde or Monroe—Direct acting hydraulic type.

Studebaker Shock Absorber Nos.

U.S. Cars	Front	Rear
Std. (1952)	527924	530766
Heavy Duty (1952 Houde)	530971	530972
Std. (exc. 1953 Coupe & Hardtop)	532736	532257
Std. (1953 Coupe & Hardtop)	533513	532257
Heavy Duty (1953 Houde)	532746	532747
Heavy Duty (1953 Monroe)	530508	532751
Canadian Cars		
Std. (1952)	530507	530512
Heavy Duty (1952)	530508	530513
Std. (exc. 1953 Coupe & Hardtop)	532742	532750
Std. (1953 Coupe & Hardtop)	532743	532750

FRONT SUSPENSI N

Front Suspension: Independent, coil spring suspension with front shock absorbers located within coil springs.

See Front Suspension Section for complete data.

►**WHEEL BALANCING NOTE**—If wheel spinner does not rotate wheel at a sufficiently high speed, floating reverse shoe can be moved away from drum by backing off the bearing adjusting nut far enough to move wheel out ¼", then shake wheel and drum assembly to break reverse shoe contact with drum. Do not apply service brakes until balancing operation is completed.

Kingpin Inclination—5¼° crosswise.

Caster—Neg. 1° to Neg. 2½°. Eccentric pin adjustment.

►*NOTE*—Not more than ¾° variation between wheels.

Camber—0° to + 1°. Eccentric pin adjustment.

►*NOTE*—½° more camber favored on driver side.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Toe-In—1/16-1/8". **Adjust right hand tie rod only** for toe-in after left-hand tie rod has been adjusted for wheel straight-ahead position (with steering wheel centered) and center auxiliary tie rod has been adjusted so that steering gear arm and auxiliary steering arm parallel. **RHD Car Note**—Make toe-in adjustments at left hand tie rod.

Toe-out on Turns—With inner wheel at 20°, outer wheel should be turned 17-18°.

STEERING GEAR

Standard: Ross Cam & Twin Lever or Saginaw Worm & Roller types.

See Steering Gear Section for complete data.

Power Steering (Optl. 1953): *TWO types used:*

First Cars—Studebaker Mechanical type. Power unit incorporated in steering gear and belt driven by power take-off on engine.

See "Studebaker Power Steering" in Steering Gear Section for complete data.

Later Cars—Saginaw Hydraulic type. Power unit and control valve assembly built-in steering gear, hydraulic power supplied by engine driven pump.

See "Saginaw (G.M.) Power Steering" in Steering Gear Section for complete data.

BRAKES

Service: Lockheed (Wagner Electric) Hydraulic, Self-centering, Self-adjusting type. Brakes have automatic spring-loaded adjusting wedge controlled by contact plug projecting through hole in lining of forward shoe (plug contacts drum when brakes applied). Hand lever applies rear wheel service brakes.

See Brake Section for complete data.

►*1952 BRAKE NOTE*—Brake shoe return spring is not hooked to reverse (secondary) shoe, but acts only on the forward (primary) shoe. Return spring is hooked to backing plate behind reverse shoe.

►*1953 BRAKE NOTE*—On front wheel brakes, brake shoe return spring is not hooked to reverse (secondary) shoe, but acts on forward (primary) shoe only. Return spring is hooked to backing plate behind reverse shoe. On rear wheel brakes return spring is hooked to both forward and reverse shoes.

Drums—Composite. Diameter 9".

Wheel Cyl. Diameter—1" (Front & Rear).

Lining—Molded type (all shoes). Width 2". Thickness 3/16". Length 10¼" (All Primary Shoes), 7¾" (All Secondary Shoes).

Braking Power—57% Front, 43% Rear.

Clearance—If adjustment required, see "Lockheed (Wagner) Hydraulic Self-adjusting Brakes" in Brake Section.

►*1952 ADJUSTING NOTE*—Reverse shoe eccentric must remain in "off" position at all times.

►*1953 ADJUSTING NOTE*—No adjustment required on reverse shoe of front wheel brakes since they are "floating" type. Eccentric should remain in "off" position at all times.

Hand Brake: See Service Brake data (above).

►**Hand Brake Cable Installation Caution (Hard-Top & 5 Pass. Coupe)**—*See Brake Section for complete data.*

►**Hill-Holder (for Synchro-mesh Trans. Cars):** *See Brake Section for complete data.*

►**Anti-Creep (for Auto. Trans. Cars)**—*See Brake Section for complete data.*

MISC. MECHANICAL

1952 CONVERTIBLE TOP CONTROL: Electric type with motor mounted on left hand lift assembly (right hand lift assembly driven through flexible drive).

See Miscellaneous Section for complete data.

Windshield Wipers: Vacuum operated or Electric type.

Vacuum Type—Trico. Link-and-crank type.

Electric Type—Redmond.

►*ELECTRIC WIPER CONTINUING TO RUN WHEN TURNED OFF (First Cars): See "Redmond Windshield Wiper" in Miscellaneous Section for complete data.*

See Miscellaneous Section for complete data.

MODEL IDENTIFICATION

Model	Series
1953 Commander	4H
1954 Commander	5H
1954 Land Cruiser	5HY

SERIAL NUMBER: Stamped on plate on left front door hinge post.

Starting Serial Numbers

Assembly Plant	1953	1954
South Bend	8290001	8354901
Los Angeles	8826801	8836801
Hamilton	8955401	8956741

ENGINE NUMBER: Stamped on cylinder block to left and front of fuel pump support.

Starting Engine Numbers

Assembly Plant	1953	1954
South Bend	V-207001	V-282501
Los Angeles		V-282501
Hamilton	VC-3501	V-282501

TUNE-UP

►*FUEL FILTER REPLACEMENT CAUTION:* On later cars with new type filter (see Fuel Pump), replace filter at 10,000 mile intervals or more often. Clogged filter will cause low top speed or carburetor leanness.

COMPRESSION PRESSURE: 120-140 lbs. at 150 RPM.

VACUUM READING: Steady 18-20" idling at 8 MPH.

VALVE TAPPET CLEARANCE: .021-.023" All valves (Engine hot). .023-.025" All valves (Engine cold). Self-locking tappet screws used. *NOTE*—Clearance setting instruction plates no longer used.

►*TAPPET ADJUSTMENT NOTE:* Manufacturer recommends use of "MAC" Tool No. S66 when adjusting tappet clearances.

MANIFOLD HEAT CONTROL: Automatic thermostatic type. Located on right bank exhaust pipe.

Checking Thermostatic Coil Spring—With outer end of coil free from anchor, and valve closed (counterweight up), hooked end of coil should be 90° from anchor at 70° F.

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2. See diagram.

SPARK PLUG GAP: .0325-.0375".

Plugs—Champion H-10 (1953), H-11 (1954).

COIL: Delco-Remy 1115392 (1953), 1115380 (1954).

Ignition Current—2½ amperes idling, 4-5 amps. stopped.

DISTRIBUTOR: Delco-Remy 1110839.

►*DISTRIBUTOR ROTOR PRODUCTION CHANGE (To Correct Erratic Ignition):* New type rotor, bearing same Part No. 533942, now being used in production. When erratic ignition encountered, check resistor, and if loose, replace with new type rotor. New rotor identified by a dash in front of Delco-Remy trade mark. Dash points toward tip of rotor.

Condenser—Delco-Remy 1809704. **Capacity** .18-.23 mfd.

Contact Point Set—Delco-Remy 1918148.

Breaker Gap—.013".

Cam Angle—28-34°.

Breaker Arm Spring Tension—17-21 ozs.

Rotation—Counter-clockwise viewed from above.

Automatic Advance

Degrees Distr.	R.P.M.	Degrees Eng.	R.P.M.
Start	350	1-5	700
2-4	400	4-8	800
10-12	1050	20-24	2100
15-17	1450	30-34	2900

Vacuum Spark Control: Delco-Remy 1116058.

Plunger Travel—11/64-3/16".

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum ("of HG)
Start	0	4-6
7-8	14-16	10.5-12.5

Removal & Installation: See *"Distributor" in Studebaker Special Data.*

IGNITION TIMING

Setting—4° BTDC (idling at 550 RPM).

Timing Mark—On vibration damper. "IGN" mark in line with pointer.

CARBURETOR

►*AIR CLEANER (WET TYPE) VENTING (To prevent damage to air cleaner caused by engine backfiring):* Drill four ¼" holes, equally spaced, about ¼" inward from the gasket surface inner ridge around outer edge of the silencer chamber.

►*1953 FUEL ECONOMY IMPROVEMENT & CARBURETOR PRODUCTION CHANGES: See "Stromberg WW (Studebaker)" Carburetor in Carburetor Section.*

►*1953-54 COMMANDER HESITATION OR LIGHT MISS AT 30-45 MPH. WITH CONSTANT THROTTLE (Cars with Stromberg Code 6-112 & 6-113 Carburetors):* If not corrected by careful tune-up of engine, this condition may be caused by a lean-limit carburetor and can be corrected by installing slightly richer Main Metering Jet. *See "1954 Stromberg WW (Studebaker)" in Carburetor Section.*

►*POROUS FUEL BOWL CAUTION:* Excessive cranking to start engine or indication of wetness of manifold or spark plugs may indicate a porous fuel bowl. *To check, see Stromberg "WW" Carburetor in Carburetor Section.*

►*ENGINE RACING WHEN BRAKES APPLIED CORRECTION: Adjust throttle linkage exactly as outlined below. This condition is caused by too tight setting of throttle linkage.*

►*1954 STATION WAGON THROTTLE LINKAGE RETURN SPRING INSTALLATION CORRECTION:* On a few station wagon models before Serial No. 8355631. throttle linkage return spring may have been incorrectly installed resulting in throttle not returning to idle position when accelerator released. Stronger of two springs (with opening close to spring's coil) should be attached to throttle shaft. Spring with 1" straight section between open end and spring coil should be connected to bellcrank at rear of engine block.

Throttle Linkage Adjustment (Synchro-mesh): Adjust throttle actuating spring (carburetor throttle-to-cross shaft connector) to provide 1/8-3/16" sag in spring with throttle valves closed.

Throttle Linkage Adjustment (Overdrive): Adjust idle speed to 550 RPM. Turn stop screw in bracket until actuating spring is taut and idle adjusting screw just starts to move away from choke cam. Then back off screw one complete turn. Secure screw with locknut. To adjust overdrive kick-down switch, open throttle to full open position, then turn adjusting screw until pad on adjusting screw contacts plunger of kickdown switch.

Throttle Linkage Adjustment (Automatic Transmission): Adjust engine idle speed to 500-550 RPM (with engine at normal operating temperature, choke valve in wide open position and fast idle inoperative).

►*1953 ACCELERATOR CROSS SHAFT-TO-CARBURETOR ACTUATING SPRING PRODUCTION CHANGE (To Correct Unintentional Engagement of Kickdown):* A new stiffer spring, Part No. 534230 (painted green) will be used in production, and can be used on earlier models to assure proper "feel" of accelerator pedal and prevent unintentional kickdown. New spring has a load of 9-11 lbs., at 9" length.

1) Place the idle adjusting screw on the fourth step of the fast idle cam (the lowest step being the first step). Adjust throttle check screw until it just contacts pad on throttle shaft lever.

2) Disconnect anti-creep release switch wire at switch. Remove anti-creep release switch from accelerator bellcrank bracket. Leave all three springs attached.

3) Loosen the two threaded locknuts (for adjusting throttle actuating spring tension) several turns. Hold cross shaft arm against bracket and at the same time tighten forward locknut on threaded rod until spring is taut. The idle adjusting screw will just start to break contact with lower step of fast idle cam. Back off forward threaded rod locknut just enough to let the idle adjusting screw lightly contact low step of fast idle cam.

4) Install anti-creep release switch in cross shaft bracket. Turn it in until idle adjusting screw just starts to break contact with low step of fast idle cam. Back off anti-creep switch **3 complete turns** and secure with locknut.

5) Back off the forward threaded rod locknut **3 complete turns.** This will allow approximately 1/8" to 3/16" sag in throttle actuating spring. Tighten the rear threaded rod locknut.

STROMBERG

Stromberg WWUVL-26. Dual downdraft with automatic choke.

Car Model	Stromberg Code No.
1953 (Late) Commander	6-112, 6-112-A
1953 (Late) & Early (1954) Commander	6-112-B
1954 (Late) Commander	6-112-C
1954 (Early) Landcruiser	6-112-B
1954 (Late) Landcruiser	6-113

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Idle Setting—Initial setting 1¾ turns open, final setting approximately midway between missing and rolling points. Set both screws alike, turn screws out for richer mixture.

Idle Speed—(Synchro-mesh Trans.) 550-600 RPM. (Automatic Trans.) 500-550 RPM. with selector lever in neutral "N" position.

Float Level—3/16" from top edge of bowl to top of float with needle valve seated. To check, remove air horn and bowl cover, remove gasket, place float level Gauge T-25569 (Studebaker No. J-5475) squarely on top edge of float bowl at center of float. If float not even with step on gauge, bend float lever lip next to float pin as required using bending tool T-24733 (Studebaker No. KMO-269-S5).

Accelerating Pump—Normal setting, center hole; for less fuel install rod in inner hole; for more fuel install rod in outer hole.

Fast Idle Setting: With choke valve fully closed and fast idle cam in fast idle position, one-half diameter of button at end of throttle stop screw should rest against step of fast idle cam. If contact between button and cam not as indicated, bend choke ear up or down as required.

Automatic Choke Setting: Centered (arrow on edge of cover aligned with boss on air cleaner end of housing).

Throttle Linkage Adjustment (All Models): *See "Carburetor" above.*

►*OTHER DATA: See "Stromberg WW (Studebaker)" in Carburetor Section.*

Fuel Pump Pressure: 4-5 lbs.

CARB. EQUIPMENT

Fuel Pump: AC No. 9647. Diaphragm type.
Pressure—4-5 lbs.
See "Fuel Pumps" in Carburetion Equipment Section.

►*FUEL PUMP FILTER PRODUCTION CHANGE:* Effective Eng. No. V-294128, NEW Filter No. 535702 was used (can be installed on earlier 1954 cars). *Filter should be replaced at 10,000 mile intervals.*

►*FUEL PUMP LUBRICATION NOTE:* Pump rocker arm is lubricated by oil line connection on side of pump body. *CAUTION*—Oil line connection must be tight to prevent leaks.

►*FUEL PUMP INSTALLATION CAUTION: See "Fuel System" in Studebaker Special Data.*

►**1953 FUEL PUMP ROCKER ARM SHAFT OIL LEAKAGE:** Correct by installing new rocker arm pin and plug furnished in Kit, Studebaker No. 532462.

Gasoline Gauge: Stewart-Warner Electric type.
Dash Unit—Studebaker No. 532593.
Tank Unit—Studebaker No. 525548 (exc. Coupe & Hardtop), No. 532261 (Coupe & Hardtop).
See "Fuel Gauges" in Carburetion Equipment Section.

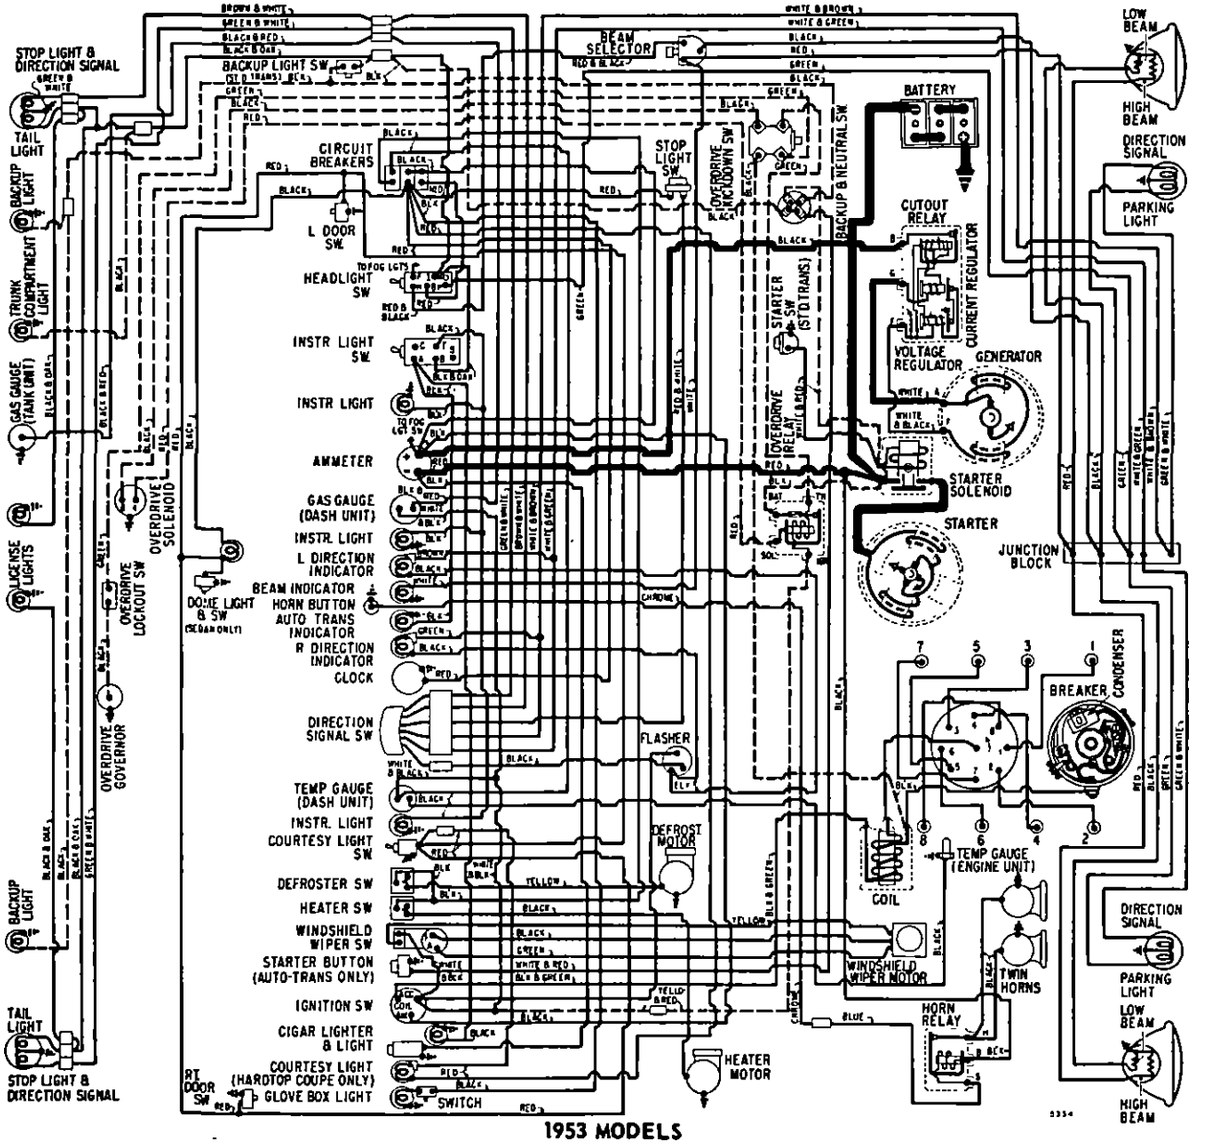
BATTERY

Willard HDW-1-100, 6 volt, 15 plate, 100 ampere hour capacity (20 hr. rate).
Battery Ground—Positive.
Engine Ground—Left front of engine.

STARTER

Transmission	Delco-Remy Starter No.	Armature No.
Standard	1107115	1878077
Automatic	1107116	1878077

Drive—Bendix "Folo-thru" type No. A3281.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—24-28 ozs.



Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5.65	70
11 ft. lbs.	Lock	3.25	550

Starting Switch: Magnetic Switch, Studebaker No. 532874 (exc. Coupe & Hardtop). No. 530039 (Coupe & Hardtop). Mounted on dash and controlled by manual switch.

Std. Trans. Cars—Auto-Lite SW-4016 (Studebaker 519829 mounted on toeboard under clutch pedal. Operated by fully depressing pedal.

CONTINUED ON NEXT PAGE

1953 MODELS

CONTINUED FROM PRECEDING PAGE

Automatic Trans. Cars—Studebaker No. 532135 switch on instrument panel and Delco-Remy 1998038 Neutral Safety Switch (without Power Steering), No. 1998059 (with Power Steering) mounted on steering column. Starter operative only with transmission selector lever in "N" or "P" position.

Neutral Safety Switch (Automatic Transmission Cars): Adjust switch so starter is operative only in "N" or "P" positions.

GENERATOR

Delco-Remy 1102778. Armature—No. 1921621.

Performance Data

	Amperes ①	Volts	R.P.M.
Cold	45	8.0	2450

①—Not maximum output. See Current Regulator.

Brush Spring Tension—28 ozs.

Field Current—1.87-2.0 amperes at 6.0 volts (80° F.)

Rotation—Counter-clockwise at commutator end.

Belt Adjustment: Hook spring type scale to belt midway between generator and fan pulleys. Adjust tension on belt so that pull of 14 lbs. on scale will lift belt 1/2".

REGULATOR

1953 Models—Delco-Remy 1118730. Current & voltage regulator.

See "Delco-Remy 1118700 Series Regulator" in Electrical Equipment Section.

1954 Models—Delco-Remy 1118828 (Early) 1118950 (Late). Current & voltage regulator.

►*1954 REGULATOR NOTE: Checking procedure is different than for 1953 regulators. See "Delco-Remy 1118825 Series Regulator" in Electrical Equipment Section. Specifications below are "Normal" settings for 1954 regulators.*

►*EARLY 1954 MODEL NOTE: If Delco-Remy 1118730 Regulator found on early cars, see "Delco-Remy 1118700 Series Regulator" in Electrical Equipment Section.*

Cutout Relay

Cuts In—5.9-6.7 volt (hot).

Contact Gap—.020" (same for both sets).

Air Gap—.020" (with contacts just closed).

Voltage Regulator

Setting—7.2-7.6 volts (hot).

Air Gap—.075" with armature pressed down to point where contacts just touching.

Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator

Setting—42-47 amperes (hot).

Air Gap—.075" with armature pressed down to point where contacts just touching.

Checking & Adjusting—*See Electrical Equip. Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Equip. Section.*

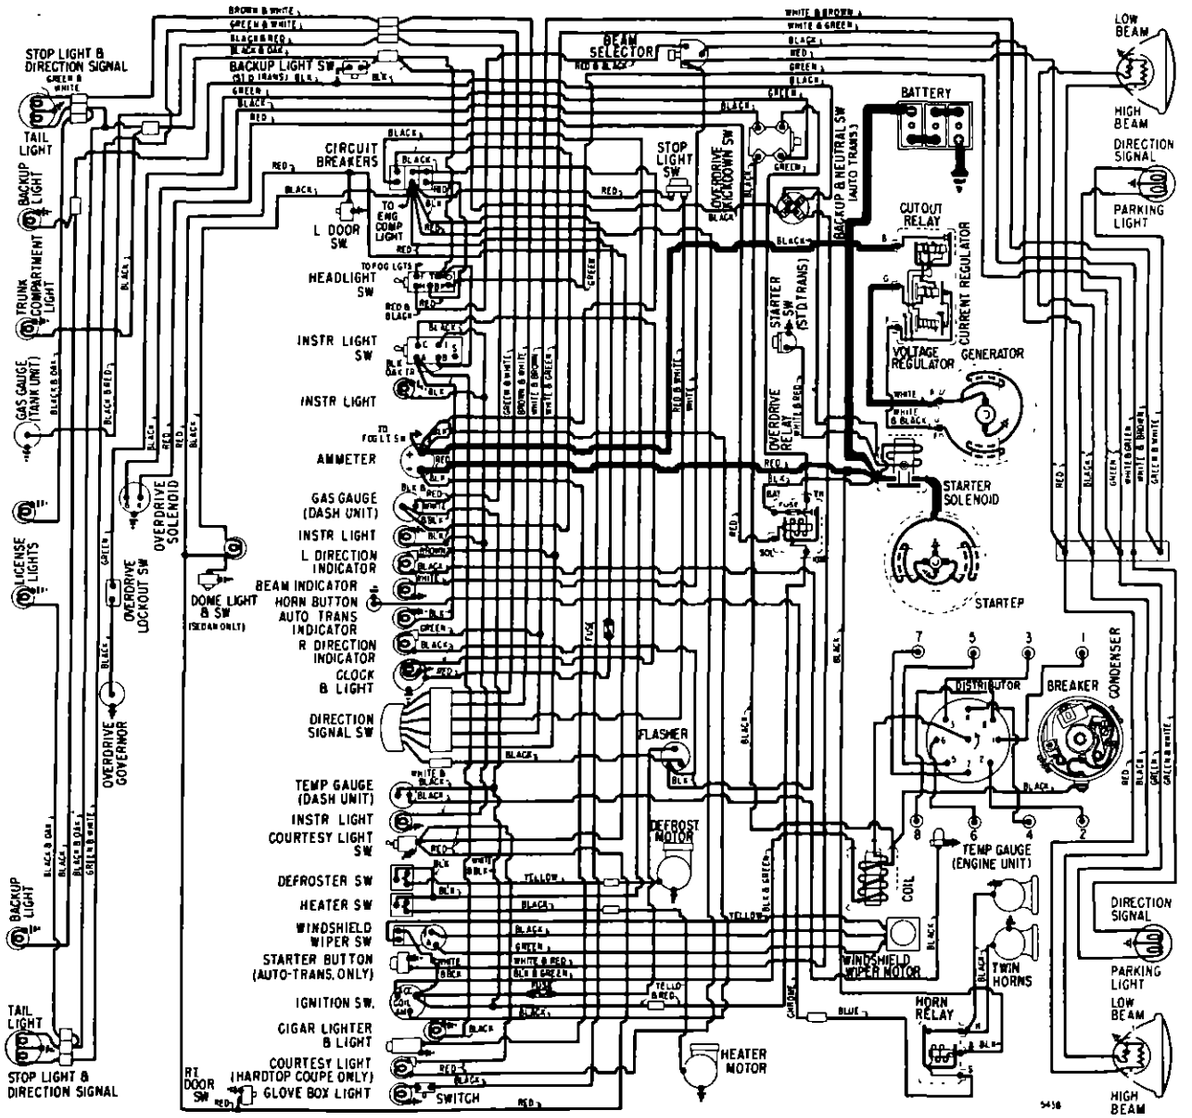
Direction Signal: *See Electrical Equip. Section.*

Lighting Switch Removal: Remove nut from toggle switch. Push switch through panel and remove from rear.

Stop Light Switch Location: On inner side of left frame rail just forward of the steering gear housing. *NOTE*—If stop light switch removed, it is necessary to bleed front brakes after re-installing switch.

►*STATION WAGON STOP LIGHT SWITCH SEATING CORRECTION (To Prevent Brake Fluid Leakage):* On some cars before Serial No. 8356126 it is possible that there is interference between switch and a corner of the T mounting bracket. To permit switch to seat properly, grind or cut off this corner at mounting bracket.

FUSES: Clock—3 ampere. In clock lead.



Overdrive—20 amperes. On overdrive relay.

Direction Signal—14 amperes. In flasher lead.

Radio—14 ampere.

Fog Lights—30 ampere. *Supersedes 20 ampere fuse previously prescribed.*

CONTINUED ON NEXT PAGE

1954 MODELS

CONTINUED FROM PRECEDING PAGE

CIRCUIT BREAKERS: Mounted as unit behind instrument panel. Thermostatic type.
1) Lighting—30 amperes. Protects head, parking, tail, and instrument lights.
2) Auxiliary—20 amperes. Protects body and stop lights.

3) Climatizer & Defroster—20 amperes. Protects climatizer and defroster circuits.

HORNS: Delco-Remy 1999683 (Low Note), 1999684 (High Note). Twin horns with relay.
Horn Current: 12-15 amperes.
Horn Relay: Delco-Remy 1116775.
Contacts Close—2.75-4.0 volts.
Contact Gap—.025". **Air Gap**—.015" (closed).

ENGINE

►*VALVE LIFTER REPLACEMENT CAUTION:* Different type valve lifters used with Cast Iron and Forged Steel Camshafts. Use Part Nos. 536508 (Std.), 536669 (.001" O.S.), 536638 (.005" O.S.) **with Cast Iron Camshaft.** Use Part Nos. 531696 (Std.), 531722 (.001" O.S.), 536637 (.005" O.S.) **with Forged Steel Camshaft.**

►*CAMSHAFT REPLACEMENT CAUTION: Make sure that the correct type valve lifters are used with the service replacement camshaft as this may be either Cast Iron or Forged Steel and different lifters are required for each type. See "Valve Lifter Caution" above.*

ENGINE SPECIFICATIONS: 90° V8, Valve-in-head.
Bore—3 3/8". **Stroke**—3 1/4".
Displacement—232.6 cu. ins. **Rated HP**—36.4.
Developed Horsepower—120 at 4000 RPM.

Compression Ratio—(1953) 7.0-1 (Std.), 7.5-1 (High Altitude). **(1954)** 7.5-1 (Std.).

Compression & Vacuum Reading—*See TUNE-UP.*

ENGINE & OIL PAN REMOVAL: *See Studebaker Special Data.*

CYLINDER HEAD & TIGHTENING TORQUES: *See Studebaker Special Data.*

PISTONS

Lynite aluminum alloy, cam ground, T-slot.
Weight—13.66 ozs. (without rings or pin).
Removal—Piston and rods removed from above.
NOTE—Car manufacturer recommends that cylinders out of round or tapered more than .002" be reconditioned.
Original Bore & Pistons: *See Studebaker Special Data.*
Fitting New Pistons: Clearance is selective fit. Clearance at top land is .018-.0205". With piston inverted, slotted side away from camshaft, and with bottom of piston about 1" below top of block, insert a 1"x.002" x 12" feeler on camshaft side of piston. Pull to withdraw feeler should be 11-16 lbs.
Replacement Pistons: Furnished Standard and .010", .020", .030", .040" Oversize.
Installing Pistons: Install piston on rod with slot on same side as nut on piston pin clampscrew (away from oil squirt hole in rod). Install piston in cylinder with slot toward left side of engine (all pistons). *See Connecting Rod Installation.*

PISTON PINS

Pin is locked in rod by tapered pin and locknut.
Diameter—.8741-.8745". **Length**— 2 7/8".
Clearance in Piston—.0001-.0003" or light finger push fit at room temperature (70 °F.).
Replacement Pins: Furnished Standard and .0025", .005" Oversize.
Removal & Installation—*See Studebaker Special Data.*

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr.(#1, 2)	5/64"	.008-.016"	.002-.006"
Oil (#3)	3/16"	.008-.016"	.0015-.006"

Replacement Rings: *See Studebaker Special Data.*
Installing Rings: Bevelled side of compression rings (Sealed Power) up. Expander used with oil ring.

CONNECTING RODS

Length (Center to Center)— 6 5/8". **Weight**—23.71 ozs.
Crankpin Journal Diameter—1.99925-2.00025".
Lower Bearing—Interchangeable. Steel-backed, micro-babbitt lined type. No shims.
Clearance—.00005-.00215". **Sideplay**—.007-.012".
Replacement Bearings: Furnished Standard and .001", .005", .010", .020" Undersize.

Installing Rods: Number on rod and bearing cap must be on same side and rod installed in same numbered cylinder with numbers down toward oil pan (toward right on right bank rods, toward left on left bank rods) and oil squirt hole on all rods toward right of engine. Rods are offset with widest half of bearing toward rear (right bank), toward front (left bank).

►*NEW (UNMARKED) ROD NOTE:* Hold rod upright with oil hole toward you. Narrow part of offset will be to right on rods for right bank, and to left for rods in left bank.

►*CAUTION:* Install piston and pin on rod so that T-slot of piston is on side opposite oil hole in bearing bore. Insert tapered end of clamp screw so it will be toward heavy boss. Be careful to align flat surface of screw with flat on piston pin. Bearing cap must be assembled on rod with groove in cap and rod on same side.

CRANKSHAFT

Journal Diameter—2.4995-2.5000". 5 Bearing.
Bearings—Removable, steel-backed, micro-babbitt lined. No shims.
Clearance—.0006-.0027".
Replacement Bearings: Furnished Standard and .001", .010", .020", .030" Undersize.
End Thrust: Taken by thrust plate assembled between front main bearing and crankshaft gear. Controlled by shims between thrust plate and face of main bearing journal.
Endplay—.003-.006".
Rear Bearing Oil Seals: *See "Crankshaft & Main Bearings" in Studebaker Special Data.*
►*VIBRATION DAMPER NOTE:* Vibration damper flywheel marked H-4 or 6H (underlined) are interchangeable. Those marked 6H are replacements for H-4 when supplies of latter are exhausted.

CAMSHAFT

►*CAMSHAFT REPLACEMENT CAUTION: Cast Iron and Forged Steel Camshafts furnished for service replacement. Different type valve lifters required for each type. See "Valve Lifters" below.*

Journal Diameters—(1) 1.86975-1.87075", **(2)** 1.85375-1.85475", **(3)** 1.83875-1.83975", **(4)** 1.82275-1.82375", **(5)** 1.24475-1.24575".
Bearings—Split, steel-backed, babbitted bushings.
Clearance—.00075-.00225" (#1) .001-.00275" (Others).
End Thrust: Taken by thrust plate located between the front camshaft bearing and the camshaft gear.
Endplay—.005-.007".
Timing Gears: Crankshaft gear, cast iron. Camshaft gear, Celeron with steel hub.
Backlash—.001-.003".
Replacement Gears—Camshaft gear furnished in two sizes: Standard (marked "S"), High-Limit (marked "H"). *Crankshaft gear Std. size only.*
Camshaft Setting: Mesh marked tooth of camshaft gear between two marked teeth on crankshaft gear.

VALVES

Tappet Clearance—.021-.023" All valves (Engine hot). .023-.025" All valves (Engine cold). Self-locking tappet screws used.

Valves	Head Diameter	Stem Diameter	Length
Intake	1 13/32"	11/32"	5 11/64"
Exhaust	1 9/32"	11/32"	5 11/64"

Valves	Seat Angle	Lift	Stem Clearance
Intake	45°	23/64"	.0015-.0035"
Exhaust	45°	23/64"	.0015-.0035"

Valve Seat Width—1/16".
►*NOTE:* Rubber seal rings installed on all valve stems (seated in groove on valve stem within spring retainer).
Valve Stem Seal Installation—*See valve spring installation data under "Valve System" in Studebaker Special Data.*
►*VALVE STEM SEAL TESTING: See "Valve System" in Studebaker Special Data.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Valve Springs: Single springs used. Install with closed coil end up. Replace springs if over 10% weaker than pressure listed.

Valve	Spring Pressure	Length
Closed	45-55 lbs	2 1/32"
Open	105-115 lbs	1 43/64"

Spring Installation—*See "Valve System" in Studebaker Special Data.*

►*NOTE:* Dampers used on bottom of all springs

Valve Guides: Pressed in head from underside.
Guide Removal & Installation: *See "Valve System" in Studebaker Special Data.*

Valve Lifters: Straight barrel type. Remove from above (not necessary to remove camshaft).

►*VALVE LIFTER REPLACEMENT CAUTION:* Different type valve lifters used with Cast Iron and Forged Steel Camshafts. "Step Type" lifters, Part Nos. 536508 (Std.), 536669 (.001" O.S.), 536638 (.005" O.S.) **used with Cast Iron Camshafts only.** "Plain Barrel" lifters, Part No. 531696 (Std.), 531722 (.001" O.S.), 536637 (.005" O.S.) **used with Forged Steel Camshafts only.**

Valve Lifter Installation & Fitting—*See "Valve System" in Studebaker Special Data.*
Replacement Lifters—Std. and .0005", .001" Oversize.

►*CAUTION:* When lifters removed, make certain they are installed in original positions.
Rocker Arms: *See "Valve System" in Studebaker Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

1953 Models

Intake Valves—Open 11° BTDC. Close 53° ALDC.
Exhaust Valve—Open 50° BLDC. Close 14° ATDC.

1954 Models

Intake Valves—Open 11° BTDC. Close 54° 36' ALDC.
Exhaust Valves—Open 51° 36' BLDC. Close 14° ATDC.

Valve Timing Check—Set tappet clearance of No. 1 intake valve at .030". Turn crankshaft until No. 6 piston is on compression stroke and vibration damper mark "IN.OP.1" is approaching pointer on timing gear cover, continue to turn crankshaft slowly while working No. 1 intake valve rocker arm up and down to determine point at which all clearance is taken up. Dampener mark "IN.OP.1" should be directly under pointer.

OILING SYSTEM

►*OIL LEAKAGE AT REAR MAIN BEARING CAP: See "Crankshaft & Main Bearings" in Studebaker Special Data.*
Crankcase Capacity: 6 quarts.
Normal Oil Pressure: 40 lbs. at 1400-1600 RPM.
Pressure Regulator Valve—Located on right side at front of cylinder block slightly above crankcase flange. Opens at 40 lbs. Not adjustable. If necessary to increase oil pressure, install new spring.
Oil Pressure Gauge: Studebaker No. 532596 (1953); No. 536932 (1954). Not electrical.
Oil Pump: Helical gear type. Mounted externally on right side of crankcase.
Pump Overhaul—*See Studebaker Special Data.*
Oil Filter: Partial flow. Replace filter cartridge at 5000-6000 mile intervals. Change more often in dusty areas.
Replacement Filter Element—AC No. P-209 or C-209.
Crankcase Ventilation: Filter element in oil filler cap (air intake) and breather tube at right rear of engine (air outlet).
►*BREATHER TUBE FILTER NOTE:* Remove filter element (retained in lower end of tube by cotter pin) for servicing.

COOLING

►*1954 FAN SHROUD REWORK—HARDTOP & COUPE (To prevent interference with radiator core): See "Radiator" in Studebaker Special Data.*

Water Capacity: 17¼ quarts (18¾ qts. with heater).
Pressure Valve: Studebaker No. 531826 (stamped "7"). Radiator filler cap. Opens at 7 lbs.
Thermostat: Choke type. Opens at 152-163°F.
Water Pump: Packless, sealed ball bearing type.
See "Studebaker" in Water Pump Section.
Pump Removal—Drain cooling system. Loosen generator, push it inward to relieve tension on fan belt, remove fan belt. Remove fan-to-hub screws and remove fan and pulley. Remove fan shroud. Disconnect radiator outlet hose and Climatizer hose (if so equipped). Remove generator adjusting arm from top stud, then remove water pump manifold screws. Remove water pump manifold and four gaskets from engine block.
Temperature Gauge: Stewart-Warner Electric Type.
Dash Unit—Studebaker No. 532597.
Engine Unit—Studebaker No. 532579. Located at the rear of left cylinder bank in water passage cover plate.
See "Temperature Gauges" in Miscellaneous Equip. Section.

CLUTCH

Borg & Beck Model 9A7. Assy. No. 926.
See "Borg & Beck" in Clutch Section.
Clutch Disc No. Borg & Beck 381663.
Pedal Adjustment: Free travel ½-1". To adjust, unhook pull-back spring on outside of frame rail, loosen locknut at adjusting clevis and remove clevis pin at inner end of pedal shaft, turn clevis on rear end of pedal shaft-to-operating shaft rod for correct clearance, reassemble linkage.

►*CLUTCH PEDAL REWORK (To Prevent Spring Breakage): See "Clutch Notes" in Studebaker Special Data.*
►*HILL-HOLDER NOTE:* Check setting whenever clutch pedal adjusted and adjust Hill-holder to release just as clutch engages. Make sure Hill-holder operating rod installed with rod to inside (toward center of car) of clutch release shaft lever.

Clutch Housing Removal: Remove starter. Remove floor plate and clutch housing top cap screws. Remove clutch operating shaft. Remove transmission (See SYNCHRO-MESH TRANSMISSION). Remove two bolts which hold engine rear support insulator cage to crossmember. Place a small hydraulic jack at rear of oil pan and insert a clock of wood between jack pad and oil pan to prevent damage to pan. Raise engine just enough to take weight of engine off crossmember. Remove support crossmember-to-frame bolts and remove crossmember. Remove the two clutch housing bolts which hold exhaust pipe support bracket. Loosen clamp bolt and swing support bracket out of way. Remove clutch housing cover plate. Remove remaining housing mounting bolts or cap screws and remove clutch housing.

Clutch Removal: Remove clutch housing (above), remove six screws evenly to relieve spring pressure, lift off clutch assembly and driven member.

SYNCHRO-MESH TRANSMISSION

Warner Model AS53-T86E (Std.), AS54-T86E with R10 type Overdrive.
See "Warner Synchro-mesh Transmission" in Transmission Section.

Transmission Controls: *See "Transmission Controls" in Transmission Section.*

►*1953 SYNCHRO-MESH TRANSMISSION SHIFT LEVER BINDING CORRECTION: See "Transmission Notes" in Studebaker Special Data.*

►*"HARD-SHIFTING" FROM LOW TO 2ND GEAR CORRECTION: See "Transmission Controls" in Transmission Section.*

Removal: Drain transmission case. Disconnect universal joint from transmission companion flange and remove propeller shaft support stud nuts and plain washer. Move front propeller shaft and support assembly rearward on slip yoke splines. Move end of shaft to one side as far as possible and tie it in position. Disconnect shift rods from shift levers and remove speedometer cable from transmission case. Remove speedometer pinion. Remove cap screws which hold transmission case to clutch housing. Remove clutch operating shaft, bracket, and bearing from the transmission case. Then more case rearward until main drive pinion clears clutch pressure plate and remove unit from car. *NOTE*—On Coupes and Hardtops, it will be necessary to remove additional frame crossmember before removing transmission.

OVERDRIVE

Warner R10 Type (part of AS54-T86E Transmission).
See "Warner R10" Overdrive in Transmission Section.

Overdrive Controls: *See "Overdrive Controls" in Transmission Section.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Removal: Same as for Synchro-mesh Transmission (above) after control wiring and cable have been disconnected.

AUTOMATIC TRANSMISSION

Torque converter and 3-speed automatic transmission with hydraulic control. Has mechanical parking lock and Anti-creep device which holds brakes applied when car standing and ignition "on".

See "Studebaker Automatic Transmission" in Transmission Section.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Studebaker Automatic Transmission in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Studebaker Automatic Transmission" in Transmission Section.*

Lubrication: Check oil level every 1000 miles and maintain oil level at "Full" mark on dipstick. Drain and refill every 15,000 miles.

Checking Fluid Level—Oil must be warm (set parking brake, place selector lever in "L" position, idle engine until normal operating temperature reached). Remove inspection cover on front floor carpet over transmission case, clean all dirt from around inspection hole, check oil level with dipstick gauge. Add oil to bring level up to "Full" mark on dipstick (1 pint between "LOW" and "FULL").

Capacity—9½ quarts. *Use Automatic Transmission Fluid Type A (in containers with "AQ-ATF" symbol).*

►*OTHER AUTOMATIC TRANSMISSION SERVICE DATA: See "Studebaker Automatic Transmission" in Transmission Section.*

UNIVERSALS

Spicer. Needle bearing cross type. Three used with intermediate universal at propeller shaft support bearing on crossmember.

Propeller Shaft & Support Bearings: Two shafts used:
1) Front shaft with intermediate universal yoke bolted to rear end (no slip-joint).
2) Rear shaft with slip-joint on forward end at intermediate universal.

Propeller Shaft & Support Bearing Removal & Servicing—*See "Propeller Shaft" in Studebaker Special Data.*

REAR AXLE

Spicer. Semi-floating, hypoid gear, with Hotchkiss Drive.
See "Spicer Hypoid" in Rear Axle Section.

Standard Axle Ratios

Model	Synchro-mesh	Overdrive	Automatic
All (Exc. Land Cruiser)	4.09-1	①4.27-1	②3.54-1
Land Cruiser	4.09-1	4.09-1	3.54-1

Optional Axle Ratios

Model	Synchro-mesh	Overdrive
All (Exc. Land Cruiser)	4.55-1	4.55-1
	4.27-1	4.09-1
Land Cruiser	4.55-1	4.27-1
	4.27-1	4.55-1

①—4.55-1 on Station Wagon. ②—4.09-1 Optl.

NOTE—Rear axle ratio stamped on plate attached to axle by cover cap screw and also on ring and pinion gears.

Backlash— 003-.006".

Axle Shaft Removal: Remove wheel and wheel hub (use puller J-1644-B). Take out backing plate retaining bolts, remove outer oil seal. Pull backing plate out over end of axle shaft and wire plate to frame (CAUTION—Do not lose adjusting shims located between backing plate and axle housing flange), pull axle shaft with puller HM-931.

Rear Axle Assembly Removal: Remove hub caps, take out cotter pin from axle nut, loosen rear wheel nuts. Place car on stands on frame just ahead of rear springs. Remove wheels, hubs, and drums. Disconnect hand brake cable, take out backing plate bolts from backing plates, free hydraulic brake lines from axle housing clips (do not disconnect brake lines from wheel cylinders). Disconnect rear universal (wire caps or use clamps to prevent losing rollers). Remove rear spring "U" bolts, disconnect lower shock absorber links, remove rear axle assembly from car.

Wheel Bearing Adjustment: Use dial indicator to check axle shaft endplay. Adjust by removing backing plate (see Axle Shaft Removal above), and adding or removing shims located between backing plate and axle housing flange (shims furnished .003", .005", .010", .030" thick). **Endplay**—.001-.005".

SHOCK ABSORBERS

Houde, Monroe, or Gabriel. Direct acting hydraulic type.

Studebaker Shock Absorber Nos.

1953 Models

U.S. Cars	Front	Rear
Std. (Exc. Coupe & Hardtop)	①532736	③532257
Std. (Exc. Coupe & Hardtop)	②534318	④534320
Std. (Coupe & Hardtop)	①533841	③533840
Std. (Coupe & Hardtop)	②534319	④534320
Heavy Duty	532746	532747
Canadian Cars		
Std. (Exc. Coupe & Hardtop)	532742	532750
Std. (Coupe & Hardtop)	533877	533880

1954 Models

U.S. Cars	Front	Rear
Standard	535318	534320
Heavy Duty	⑤536398	⑤536399
Candian Cars		
Std. (Exc. Coupe & Hardtop)	532742	532750
Std. (Coupe & Hardtop)	532743	532750
Heavy Duty	530508	532751

①—Used before Serial No. 8,322,372.
②—Used after Serial No. 8,322,372.
③—Used before Serial No. 8,316,764.
④—Used after Serial No. 8,316,764.
⑤—Service replacement for heavy duty shocks used in early 1954.

FRONT SUSPENSION

Independent. Coil spring suspension with front shock absorbers located within coil springs.
See "Studebaker" in Front Suspension System.
Kingpin Inclination—6° at 0° camber.
Caster—Neg. 1¾°±¼°. Not more than ¾° variation between wheels.
Camber—0° to Pos. 1°. ½° more camber favored on driver's side.
Toe-In—1/16-1/8". **Adjust right hand tie rod only** for toe-in after left-hand tie rod has been adjusted for wheel straight-ahead position (with steering wheel centered) and center auxiliary tie rod has been adjusted so that steering gear arm and auxiliary steering arm and auxiliary steering arm parallel. **RHD Car Note**—Make toe-in adjustments at left hand tie rod.
Toe-Out on Turns—With inner wheel at 20°, outer wheel should be turned 17-18°.

STEERING

Manual: Ross Cam & Twin Lever or Saginaw Worm & Roller Types.
See "Ross Cam & Twin Lever" or "Saginaw Worm & Roller" in Steering Section.
Power Steering: Saginaw. Integral type. Power unit and control valve assembly built into steering gear. Hydraulic power supplied by engine driven pump.
See "Saginaw (G.M.) Power Steering" in Steering Section.
Steering Linkage: *See "Steering Linkage" in Steering Section.*
Steering Wheel & Horn Button Removal: *See "Ross Cam & Twin Lever" or "Saginaw Worm & Roller" in Steering Section.*
Steering Gear Removal: *See "Ross Cam & Twin Lever" or "Saginaw Worm & Roller" in Steering Section.*

BRAKES

1953 MODELS

Lockheed (Wagner) Hydraulic Self-Adjusting. Self-centering. Hand brake applies rear wheel service brakes.
See "Lockheed (Wagner) Hydraulic Self-Adjusting" in Brake Section.

►*1953 BRAKE NOTE:* On Front wheel brakes, brake shoe return spring is not hooked to reverse (secondary) shoe but acts on forward (primary) shoe only. Return spring is hooked to backing plate behind reverse shoe. On rear brakes, return spring is hooked to both forward and reverse shoes.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*1953 BRAKE GRAB CORRECTION (Cars before Serial No. 8344934 South Bend or 8835196 Los Angeles):* If not corrected by complete and correct brake adjustment, new type lining can be installed on all forward shoes, (front and rear wheels). This new lining is Marshall-Eclipse 2201-H8 identified by green and red marks along lining edge and is furnished in Kit Part No. 534941.

►*ENGINE RACING WHEN BRAKES APPLIED:* See *CARBURETOR above.*

Drum Diameter–11" (Frt. Whl.). 9" (Rear Whl.).

Whl. Cyl. Diameter–1" (Front & Rear).

Lining–Molded type (all shoes). **Width**–2". **Thickness**–3/16".

Length Per Shoe	Primary	Secondary
Front Wheels	12½"	9 5/8"
Rear Wheels	10¼"	7¾"

Clearance–If adjustment required, see *"Lockheed (Wagner) Hydraulic Self-Adjusting" in Brake Section.*

►*ADJUSTING NOTE: No adjustment required on reverse shoe of front brakes since they are the "floating" type. Eccentric should remain in the full "off" position at all times.*

Braking Power–62% Front, 38% Rear.

Standard Master Cylinder: On frame left side rail at base of brake pedal.

Checking Fluid–Access hole in front floor pan at left corner of drivers seat. Fluid should be maintained ½" below top of filler opening.

Hill-Holder: Used on Synchro-mesh Trans. Cars. *See "Hill-Holder" in Brake Section.*

Anti-Creep: Used on Automatic Trans. Cars. *See "Anti-Creep" in Brake Section.*

1954 MODELS

Wagner Lockheed Hydraulic Self-centering (With Bendix type shoes). Parking lever applies rear wheel service brakes.

See "Wagner Lockheed Self-centering" in Brake Section.

►*1954 PARKING BRAKE LEVER CLIP (IN REAR WHEEL BRAKE ASSEMBLY) BREAKING OFF CORRECTION:* This is due to incorrect assembly of shoe return springs. The proper method is to assemble rear shoe return spring to shoe and its spring retainer first, then assemble the front shoe return spring.

►*LINING PRODUCTION CHANGE & REPLACEMENT CAUTION: See "Wagner Lockheed Self-centering" in Brake Section.*

Drums–Diameter (Front)11", (Rear) 10".

Wheel Cylinder Diameter–(Front) 1 1/16", (Rear)7/8".

Braking Power–62% Front, 38% Rear.

Lining–Width (Front) 2¼", (Rear) 2". Thickness 3/16". Length (Primary & Secondary–Front) 12", (Primary & Secondary–Rear) 10 29/32". *NOTE*–Lining lengths given supersede those originally prescribed.

Clearance–Lock shoes against drum, then turn adjusting screw back eight notches or more as required to free drum.

Standard Master Cylinder: On frame left side rail at base of brake pedal.

Checking Fluid–Access hole in front floor pan at left corner of driver's seat. Fluid should be maintained at level 1½" below top of filler opening.

Removal–Remove from beneath car. Disconnect clutch pedal pullback spring from master cylinder support strap. Remove brake pedal pullback spring by unhooking it first from its frame bracket and then from spring clip which is attached to master cylinder-to-pedal rod. Disconnect fluid line or lines at rear of master cylinder (*NOTE*–Hill-holder equipped cars have one line, Automatic Drive cars have two lines). Remove brake pedal clevis pin and disconnect brake pedal-to-master cylinder rod at brake pedal. Remove mounting nut bolts and washers, swing support strap down out of position, remove master cylinder. Insert forward mounting bolt to support hill-holder (or anti-creep solenoid valve) while master cylinder is off car.

Hill-Holder: Used on Synchro-mesh Trans. Cars. *See "Hill-holder" in Brake Section for data.*

Anti-Creep: Used on Automatic Trans. Cars. *See "Anti-creep" in Brake Section for data.*

MISC. MECHANICAL

Windshield Wipers: Redmond and Bosch electric types. *See "Redmond Windshield Wipers" in Miscellaneous Section for data on Redmond Wipers.*

►*1953 WINDSHIELD WIPER CONTINUING TO RUN AFTER BEING TURNED OFF (First Cars): "See Redmond Windshield Wiper" in Miscellaneous Section.*

MODEL IDENTIFICATION

Model	Model Designation
1954	15G
1955 Ⓒ	16G6

Ⓒ—Early & Later Series. *NOTE*—Late series cars are "Ultra-Vista" models except for Coupe & Hardtop.

SERIAL NUMBER: Located on left front door pillar post.

Starting Serial Numbers

Assembly Plant	1954	1955 Early	1955 Late
South Bend	G-1274001	G-1316501	G-1326201
Los Angeles	G-927401	G-932501	G-933601
Hamilton	G-753301	G-758201	G-759101

ENGINE NUMBER: Stamped on pad at upper front left corner of engine block.

Starting Engine Numbers

Assembly Plant	1954	1955
South Bend	1090001	1138001
Los Angeles	1090001	L-101
Hamilton		C-60501

►*1954 ENGINE NUMBER NOTE: Letter "A" following engine number indicates crankshaft main bearing journals are .005" Undersize.*

TUNE-UP

COMPRESSION PRESSURE: 130-150 lbs. at 150 RPM. *Variation limit between cylinders should not exceed* 10 lbs.

VACUUM READING: 17-18" at idle speed.

VALVE TAPPET CLEARANCE: .016" cold (Intake & Exhaust).

MANIFOLD HEAT CONTROL: Automatic thermostatic type.

Checking Thermostatic Coil Spring—With outer end of coil free from anchor, and valve closed (counterweight up), hook end of coil spring should be 90° clockwise from anchor post at 70°F.

IGNITION

FIRING ORDER: 1-5-3-6-2-4.

SPARK PLUG GAP: .030". Limits .028-.033".

Spark Plug—Champion J7. Tighten to 25-30 ft. lbs.

COIL: Auto-Lite CR-6007.

Ignition Current—1½-2½ Amps. idling, 5-6 stopped.

DISTRIBUTOR: Auto-Lite IAT-4010 (Early 1954), IAT-4201 (Late 1954 & 1955).

Condenser—IAT-3076L (IAT-4010), IAT-2015L (IAT-4201).

Capacity—.21-.25 mfd.

Contact Point Set-Auto-Lite IGW-3028AS.

Breaker Gap—.020".

Cam Angle—38-40°.

Breaker Arm Spring Tension—17-20 ozs.

Rotation—Counter-clockwise viewed from above.

►*DISTRIBUTOR SETTING & TIMING NOTE: See "Oil Pump Removal & Installation Change" under ENGINE below.*

Automatic Advance

Degrees	Distr.	RPM	Degrees	Eng.	RPM
Start		400	0		800
2		680	4		1360
4		975	8		1950
6		1265	12		2530
7		1400	14		2800

Vacuum Spark Control: Auto-Lite. Integral type.

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	4
1	2	4 7/8
4	8	7 1/2
8	16	11 1/8
9	18	12

IGNITION TIMING

Setting—2° BTDC.

Timing Mark—On vibration damper. "IGN" mark in line with pointer (left side of timing cover).

Timing—Disconnect vacuum advance pipe at carburetor. Install plug in carburetor. With engine at idling speed, timing light should show index mark nearest IGN mark, directly under pointer.

CARBURETOR

Throttle Linkage Adjustment (Automatic Transmission): Adjust engine idle speed to 500-550 RPM (with engine at normal operating temperature, choke valve in wide *open position and fast idle inoperative).*

1) Disconnect accelerator cross shaft-to-bellcrank rod by removing clevis pin at cross shaft end of rod. Disconnect wire at Anti-Creep Switch on cross shaft bracket.

2) Hold contact plate on cross shaft lever firmly against end of Anti-Creep Switch, measure distance between contact plate and cross shaft bracket. If this measurement not ¼", adjust switch by loosening locknut and turning switch in or out of bracket, tighten locknut after correct ¼" clearance secured.

►*NOTE:* If ¼" clearance cannot be secured by adjusting switch, disconnect accelerator cross shaft-to-transmission rod at transmission end and check push rod and cross shaft for interference. *Do not bend contact plate or cross shaft bracket to secure correct switch setting.*

3) Connect accelerator cross shaft-to-bellcrank rod by installing clevis pin but **do not** install cotter pin at this time. Make certain that carburetor throttle valve in fully closed position (stopscrew on low end of fast idle cam and choke valve wide open).

4) With accelerator control fully released and carburetor throttle in fully closed slow idle position, check position of spring-loaded swivel on accelerator bellcrank end of carburetor throttle rod. Swivel should be close to, **but not touching** the swivel sleeve on carburetor side of rod. If swivel position not correct, disconnect accelerator cross shaft-to-bellcrank rod clevis, adjust clevis on rod until carburetor rod swivel position is correct. Tighten clevis locknut, connect bellcrank rod and install clevis cotter pin.

5) Place selector lever in Park "P" position. Set adjusting tool J-4391 at maximum length, hook one end of tool over cross shaft lever to which the transmission rod is connected, hook opposite end of tool over upper right rear corner of battery box, (this will rotate lever and partially open carburetor throttle). Shorten tool length by turning the turnbuckle until carburetor throttle valve is just wide open (at this point further movement will compress spring on throttle rod without changing throttle position). Leave tool in place to hold throttle linkage in this position if "Accelerator-to-Governor Linkage" is going to be adjusted.

CARTER WE

Model	Carter No.
1954 (Early)	989SA
1954 (Late)Ⓒ	2108S
1954 (Late)②	2190S
1955 (All Models)	2108S

Ⓒ—Except 2-Door & 4-Door Custom Sedan, after approximately Feb. 15, 1954.

②—2-Door & 4-Door Custom Sedan after Feb. 15, 1954.

Idle Setting—½-1½ turns open. Turn screw out for richer mixture.

Idle Speed—550-600 RPM (Std. Trans. & Overdrive). 500-550 (Automatic Trans.).

Float Level—3/8" (Gauge T-109-80) measured from top of projection on bowl cover to top of soldered seam on free end of float with needle valve seated and bowl cover inverted.

Accelerating Pump—No seasonal adjustment.

Fast Idle: .046" throttle valve opening with choke closed. To check, crack throttle valve, hold choke closed, measure on side opposite idle ports using gauge T109-158. Adjust by bending connector rod.

Unloader Adjustment: After fast idle adjusted, hold throttle valve wide open and close choke valve as far as possible. Clearance between lower edge of choke valve and air horn wall should be 3/16" (Gauge T109-28). Adjust by bending arm on choke trip lever (use Tool T109-214).

Automatic Choke Setting: Set 1 point lean.

Throttle Linkage Adjustment (Automatic Trans.): *See "Carburetor" above.*

►*OTHER DATA: See "Carter WE Carburetor" in Carburetor Section.*

Fuel Pump Pressure: 4-5 lbs. (1954), 4-5½ lbs. (1955).

CARB. EQUIPMENT

Fuel Pump: AC No. 527 (1954), No. 4156 (1955). Fuel only.

Fuel Pump Pressure—4-5 lbs. (1954), 4-5½ lbs. (1955). *See "Fuel Pumps" in Carburetion Equipment Section.*

Gasoline Gauge: Stewart Warner Electric Type.

Dash Unit—Studebaker No. 532593 (1954), 536929 (1955).

Tank Unit—Studebaker No. 525548 (2-Dr. & 4-Dr., and Landcruiser). No. 532261 (Hardtop, 5-Pass. Coupe & Station Wagon).

See "Fuel Gauges" in Carburetion Equipment Section.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Air Cleaner: Dry Type or Oil Bath type.

►*DRY TYPE FILTER CAUTION:* Remove filter element every 1,000 miles and shake thoroughly to remove dirt. DO NOT WASH. Replace filter every six months or 10,000 miles.

BATTERY

Willard HDW-1-100, 6 volt, 15 plate, 100 ampere hour capacity (20 hr. rate).
Battery Ground–Positive.
Engine Ground–Left front of engine.

STARTER

Auto-Lite No. MZ-4157. Armature–MZ-2211.
***Drive**–Bendix A1792. Barrel type drive.*
Rotation–Counter-clockwise at commutator end.
Brush Spring Tension–42-53 ozs.

Performance Data

Torque	RPM	Volts	Amperes
0 ft lbs.	4000	5.0	68
4.4 ft. lbs	Lock	2.0	280

Starter Switch (1954): Magnetic switch, Studebaker No. 191939, mounted on starter and controlled as follows:
Synchro-mesh Transmission Cars–Auto-Lite SW-4016 (Studebaker No. 519829) mounted on toe-board under clutch pedal and operated by fully depressing clutch pedal.
Automatic Transmission Cars–Studebaker No. 513183 pull switch on instrument panel and Delco-Remy 1998038, Neutral Safety Switch (without Power Steering), No. 1998059 (with Power Steering) mounted on steering column. Starter is operative only with transmission selector lever in "N" or "P" position.
Starting Switch (1955): Magnetic Switch, Studebaker No. 536127, mounted on starter and controlled by combination Starter & Ignition Switch (Studebaker No. 536139. On cars with Automatic Transmission, Delco-Remy 1998038, Neutral Safety Switch (without Power Steering), No. 1998059 (with Power Steering) mounted on steering column. Starter is operative only with transmission selector lever in "N" or "P" position.
Neutral Safety Switch (Automatic Transmission Cars): Adjust switch so starter is operative only in "N" or "P" positions.

GENERATOR

Auto-Lite GGW-4801E. Armature GGW-2006F.

Performance Data

Amperes	Volts	Cold –RPM– Hot
0	6.4	870-970 950-1050
40	8.0	1800-2000 2150-2350
45	8.0	1925-2125 2350-2550

Brush Spring Tension–35-53 ozs. (new brushes).
Field Current–1.6-1.7 amperes at 5.0 volts.
Motoring Current–5.0-5.5 amperes at 5.0 volts.
Rotation–Counter-clockwise at commutator end.
Belt Adjustment–3/8-1/2" deflection midway between generator and fan pulleys.

REGULATOR

Auto-Lite VBE-6101A.

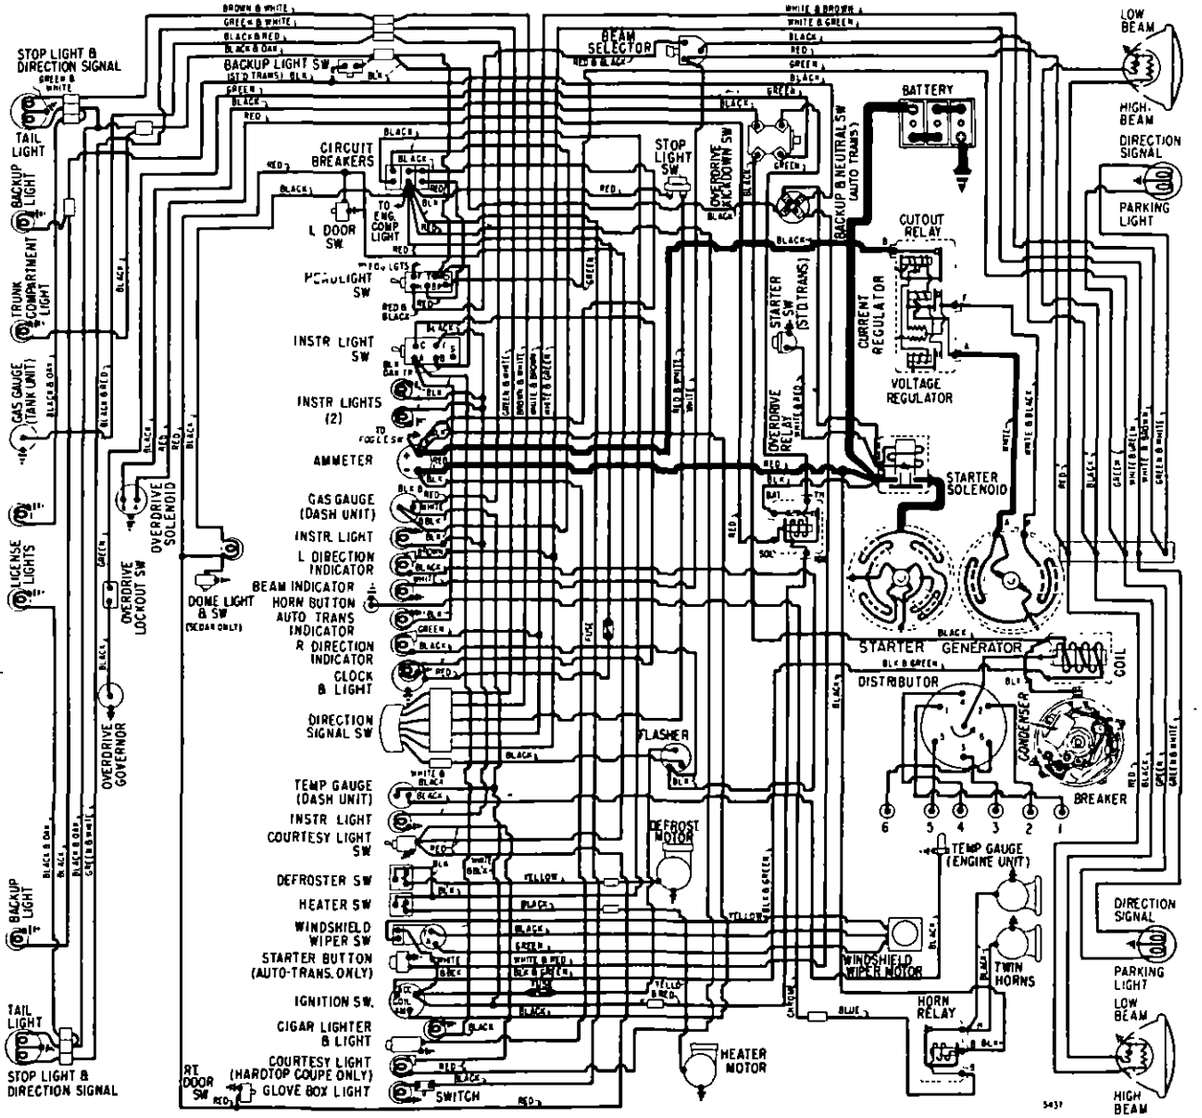
Cut-Out Relay

Cuts In–6.3-6.8 volts.
Cuts Out–4.1-4.8 volts (approx. 4-6 amps. disch.).
Contact Gap–.015" minimum.
Air Gap–.031-.034" with contacts open (check at hinge).

Voltage Regulator

Setting–7.35 volts *after 15 minutes operation charging at ½ maximum rate.*
Contact Gap–.015' (armature against stop pin)
Air Gap–.048-.052" with contacts just opening.

Checking & Adjusting–See Electrical Equip. Section.



Current Regulator

►*SETTING CAUTION: "Temperature Compensated" type. Set to following specifications at 70°F.*

Test A	Operating Amperes	Test B
52		45 (43-47)

Test A–After 15 minutes operation charging at ½ maximum rate.
Test B–After 15 minutes additional operation with current regulator operating (load applied to hold voltage 6.7-6.9 volts).

CONTINUED ON NEXT PAGE

1954 MODELS

CONTINUED FROM PRECEDING PAGE

Contact Gap—.015" minimum (armature against stop pin).
Air Gap—.048-.052" with contacts just touching.
Checking & Adjusting—See *Electrical Equip. Section.*

MISC. ELECTRICAL

Headlamps: Sealed beam. See *Electrical Equip. Section.*
Direction Signal: See *Electrical Equip. Section.*
Lighting Switch Removal: (Toggle type)—Remove retaining nut. Remove lower panel cover screws and covers. Slide toggle switch back through panel and disconnect wires. **(Knob type)**—Use stiff wire to remove spring from back side of switch knob and pull knob from shaft. Remove bezel nut and shove switch assembly back through panel and remove wires.
Stop Light Switch Location: Inner side of left frame rail just forward of steering gear housing, except on Power Brake equipped cars, where it is screwed into rear end of power unit, located under hood on left front fender apron.

FUSES: Overdrive—30 ampere on overdrive relay.
Fog Lights—30 ampere in feed wire.
Clock—2 ampere in feed wire.
Direction Signal—14 ampere in flasher feed wire.
Heater (Ultra-Vista Models)—20 amp. on heater switch.
Defroster (Ultra-Vista Models)—20 amp. on switch.

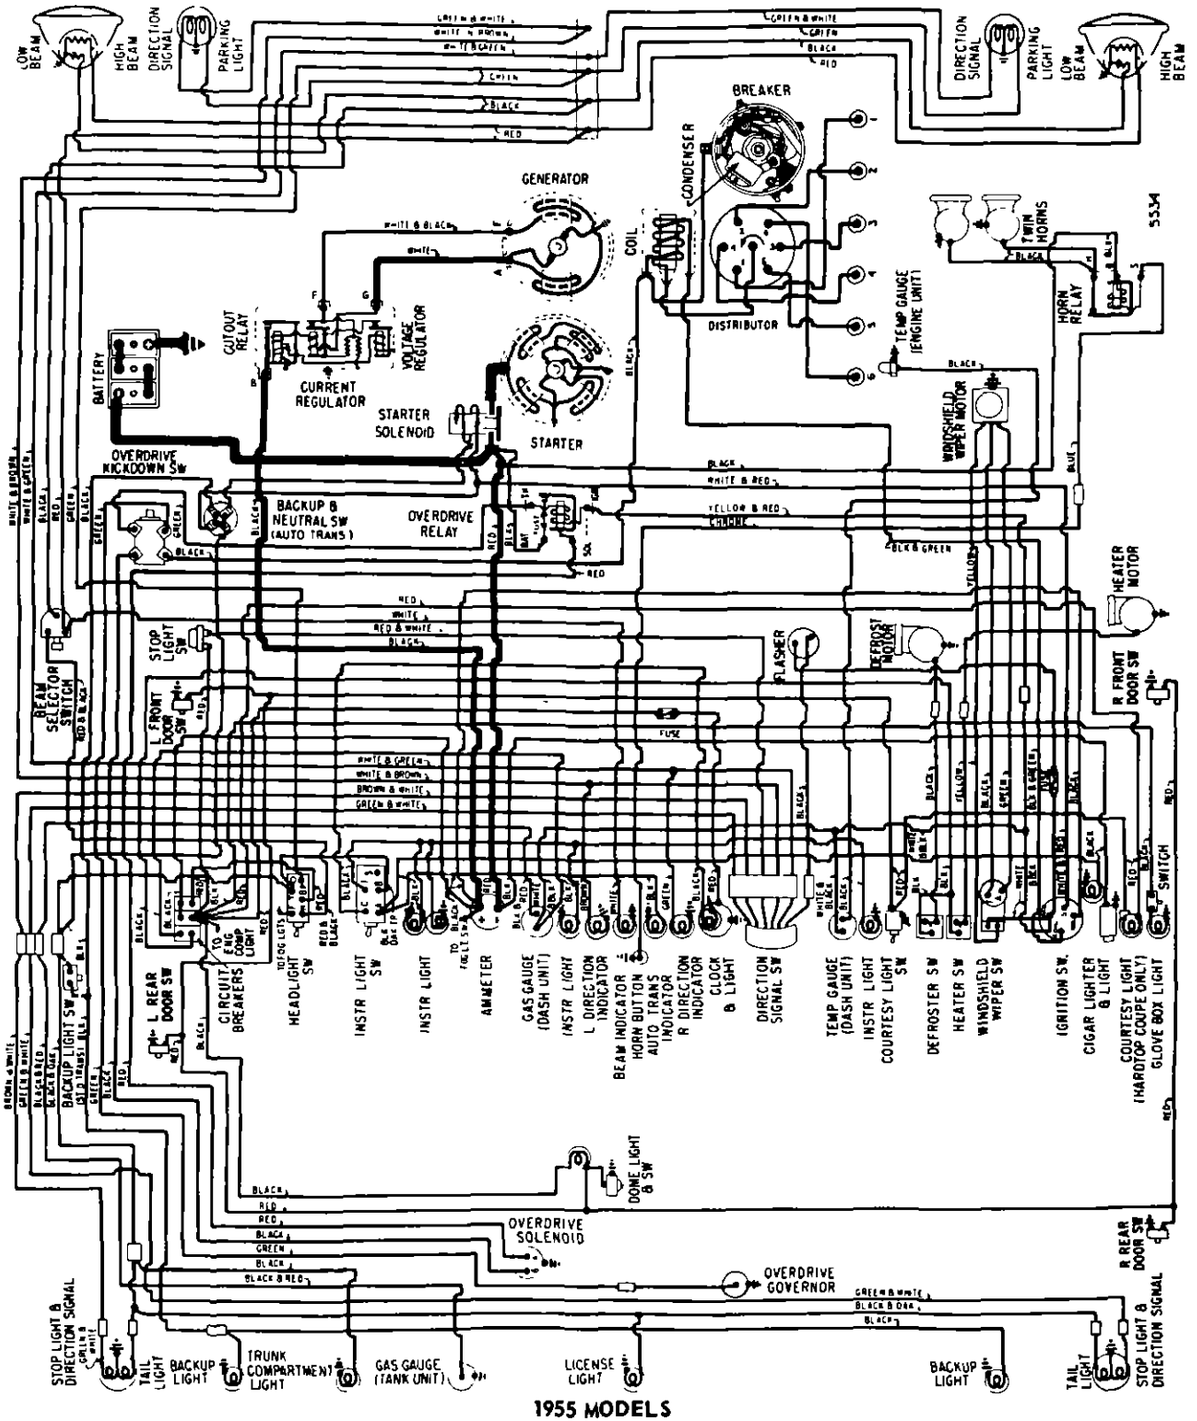
CIRCUIT BREAKER: Capacity and location as follows:
Lighting (Ultra-Vista Models)—30 amp. on main light switch.
Lighting (Except Ultra-Vista Models)—30 amp. on bracket attached to dash behind instrument panel.
Body & Stop Lights (Ultra Vista Models)—20 amp. on back side of instrument panel.
Body & Stop Lights (Except Ultra-Vista Models)—20 amp. on bracket attached to dash behind instrument panel.
Heater & Defroster (Except Ultra-Vista Models)—20 amp. on bracket attached to dash behind instrument panel.

HORNS: Sparton (Types A & B), Delco-Remy or Auto-Lite used. **Low Note** horn standard, **High Note** horn accessory.

	Low Note	High Note
Sparton (Studebaker Nos.) Type A	674005	674006
Sparton (Studebaker Nos.) Type B	536769	536768
Delco-Remy Nos.	1999683	1999684
Auto-Lite (Can.) Studebaker Nos.	530209	530208

Horn Relay: Delco-Remy 1116775.

ENGINE



ENGINE SPECIFICATIONS: Own. 6 cyl. "L" head.

Model	Bore	Stroke	Displacement
1954	3"	4"	169.6"
1955	3"	4 3/8"	185.6"

Model	Compr. Ratio	Rated HP	Developed HP
1954	7.5-1	21.6	85 at 4000 RPM
1955	7.5-1	21.6	101 at 4000 RPM

Compression & Vacuum Reading—See *TUNE-UP.*
ENGINE REMOVAL: See *"Engine" in Studebaker Special Data.*
OIL PAN REMOVAL: See *"Oiling System" in Studebaker Special Data.*

CONTINUED ON NEXT PAGE

1955 MODELS

CONTINUED FROM PRECEDING PAGE

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Studebaker Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Studebaker Special Data.*

PISTONS

Aluminum alloy, tin plated, cam ground and "T" slotted. Three ring type.

►*NOTE: 1955 pistons are 5/16" shorter than 1954 pistons and the side of the pistons have been cut away to provide clearance for the connecting rod and crankshaft. Do not use 1954 pistons in 1955 engines.*

Original Bore & Pistons—*See "Original Bore & Pistons" in Studebaker Special Data.*

Removal—Piston and rods removed from above.

Fitting New Pistons: Clearance—Selective feeler fit. Use feeler 1" wide, .002" thick, and 12" long inserted on camshaft side of cylinder bore. Insert inverted piston in bore with slotted side away from camshaft, and bottom edge 1" below top of cylinder bore. Pull required to remove feeler with properly fit piston should be 11 to 16 lbs.

Replacement Pistons: Std. .010", .020", .030" and .040" Oversize.

Installing Pistons: Install piston in cylinder bore with "T" slot away from camshaft side. *See Rod Installation.*

PISTON PINS

Pin is locked in rod by tapered pin and locknut.

►*PISTON PIN LOCKSCREW WASHER CHANGE: Early type washers were internal tooth, later production uses external tooth washer.*

Diameter—.7491-.7495". **Length** 2.625".

Clearance in Piston—.0001-.0003" (selective fit). Light thumb push fit at 70°F.

Piston Pin Removal & Installation—*See "Piston Pins" in Studebaker Special Data.*

Replacement Pins: Std. & .0025", .005" Oversize.

PISTON RINGS

1954 Models

Ring	Width	End Gap	Side Clearance
Compr. #1	3/32"	.007-.017"	.002-.006"
Compr. #2	1/8"	.007-.017"	.002-.006"
Oil	5/32"	.007-.017"	.0015-.006"

1955 Models

Ring	Width	End Gap	Side Clearance
Compr. #1	3/32"	.007-.017"	.002-.005"
Compr. #2	1/8"	.007-.017"	.002-.005"
Oil	5/32"	.007-.017"	.0015-.004"

Replacement Rings: Std., .020", .030", & .040" Oversize, in sets.

See "Piston Rings" in Studebaker Special Data.

Installing Rings: Top compression ring has step at the inside which must be installed up. Second compression ring has step at outside which must be installed down. Inner and outer oil ring end gaps must not come at the same point.

CONNECTING RODS

Length—(Center-to-center) 6 3/8". **Weight**—19.04 ozs.

Crankpin Journal Diameter—1.81175-1.81275"

Bearings—Steel backed, Microbabbitt lined, no shims.

Clearance—.0005-.002".

Side Play—.005-.009".

Replacement Bearings: Std., .001", .002", .005", .010" & .020" Undersize.

Installing Rods: Assemble piston and pin on rod so "T" slot of piston on side opposite oil hole in lower end of rod. Insert tapered end of clamp screw toward heavy boss on rod. With "T" slot of piston away from camshaft side, the narrow part of rod offset will be to right on odd numbered rods, to left on even numbered rods. Rods (#1, 3, 5) cannot be interchanged with rods (#2, 4, 6).

►*REPLACEMENT ROD NOTE:* (Unnumbered Rods)—With spit hole toward you, narrow part of offset will be to the right for odd numbered cylinders, and to the left for even numbered cylinders.

CRANKSHAFT

Journal Diameter—**(1954)** 2.4370-2.4375", **(1955)** 3.0623-3.0628". Four bearings.

►*1954 MAIN BEARING NOTE: Letter "A" following engine number indicates crankshaft main bearing journals are .005" Undersize.*

►*1955 FRONT MAIN BEARING CAP REMOVAL NOTE:* Remove engine front plate cork gasket and turn crankshaft until No. 1 rod journal is at 5 o'clock position or downward and toward camshaft. Separate bearing cap from block and swing end that is away from camshaft toward rear of engine, crossing the crankshaft cheek. Turn free end of bearing cap toward cylinder bore, and at the same time bring other end over crankshaft. Relieved bearing cap and crankshaft provide for this procedure.

►*MAIN BEARING CAPSCREW NOTE:* Lock wire not used with plain capscrew.

Clearance—.0005-.0025".

Replacement Bearings: Std., .001", .010", .020", and .030" Undersize.

End Thrust: Taken by thrust washer assembled between front main bearing and crankshaft gear. Controlled by shims between thrust washer and main bearing journal.

End Play—.003-.006".

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Studebaker Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Studebaker Special Data.*

CAMSHAFT

Journal Diameters—**(1)** 1.7475-1.7478", **(2)** 1.7162-1.7170", **(3)** 1.6857-1.6865", **(4)** 1.6232-1.6240".

Bearings—Steel backed babbitt lined bushings.

Clearance—No. 1—.0007-.0022", Nos. 2, 3, 4—.0010-.0027".

End Thrust: Taken by thrust plate assembled on front face of engine block behind camshaft gear (spacer assembled on shaft behind gear hub). Tighten capscrews alternately a few turns at a time to prevent distortion of plate.

End Play—.003-.006".

►*1954 TIMING GEAR COVER LEAK CORRECTION:* When replacing cover, use four screws, Part No. 1-0512 (1/8" shorter than standard screws) at top of cover to prevent bottoming of screws before cover is securely sealed.

Camshaft Removal & Installation: *See "Camshaft & Bearings" in Studebaker Special Data.*

Timing Gears: Crankshaft gear is Cast Iron, Camshaft gear is Celeron with steel hub.

Timing Gear Removal & Installation—*See "Timing Gears" in Studebaker Special Data.*

Backlash—.001-.003".

Replacement Gears—Camshaft gear furnished in two sizes: Standard & High limit. Crankshaft gear furnished standard size only.

Camshaft Setting: Mesh marked tooth on camshaft gear between two marked teeth of crankshaft gear.

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Studebaker Special Data.*

VALVES

Tappet Clearance: .016" cold. Intake & exhaust.

Valve	Head Diameter	Stem Diameter	Length
Intake	1 11/32"	5/16"	4 11/32"
Exhaust	1 9/32"	5/16"	4 11/32"

Valve	Seat Angle	Lift	Stem Clearance
Intake	45°	11/32"	.0015-.0035"
Exhaust	45°	11/32"	.0015-.0035"

Valve Seat Width—1/16-3/32".

►*1954 VALVE COMPARTMENT COVER PRODUCTION CHANGE:* Effective at Engine No. 1106516, new valve compartment covers, gaskets and screws are being used to prevent distortion that might result in oil leaks. New gaskets and screws can be used with original covers.

►*RECONDITIONING VALVE CAUTION:* If reconditioning results in knife edge at top of valve, valve must be replaced.

Valve Springs: Install springs so that flanged edge of retainer fits over flat surface of lower coil spring. Tongue on lower side of retainer must fit in groove in spring retainer lock.

Valve Spring Specifications—93-103 lbs. ± 10% when compressed to a length of 1 5/16".

Valve Guides: Use Tool No. J-2034 and drive old guide down and out from top of block into valve spring chamber. Use Collar J-2034-5, guide pilot J-2034-2 on driver J-2034-1 and drive new guide down until driver bottoms against spacing collar.

Valve Lifters: Mushroom type. Remove from below with camshaft out of engine.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Valve Lifter Installation & Fitting—See *"Valve System" in Studebaker Special Data.*

Replacement Lifters—Std., .001" & .005" Oversize.

►*OVERSIZE VALVE LIFTER INSTALLATION (.005" oversize lifters requiring reaming of lifter bore): See "Valve System" in Studebaker Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

Intake Valves—Open 15° BTDC. Closes 49° ALDC.

Exhaust Valves—Open 54° BLDC. Closes 10° ATDC.

Valve Timing Check—Adjust No. 1 Intake valve at .020" cold. Rotate engine until No. 6 piston is on compression stroke (the IN-OP 1-6 marking on dampener should be several inches from pointer), then while moving lifter up and down continue to rotate crankshaft. Valve timing will be correct if lifter stops moving as above marking is directly below pointer.

OILING SYSTEM

Crankcase Capacity: 5 qts. refill.

Normal Oil Pressure: 40 lbs. at 1400-1600 RPM (1954 & early 1955); 25-50 lbs. at 40 MPH (Late 1955). *See Production Change Note below.*

►*1955 OIL PUMP PRESSURE PRODUCTION CHANGE:* Beginning with Engine No. 1165924 (So. Bend), L-1550 (Los Angeles), C64038 (Canada), a heavier oil pump relief valve spring, Part No. 536670 entered production and was made available for service replacement on previous models. *See "Normal Oil Pressure" above.*

Pressure Regulator Valve: On lower right front corner of engine. For access, remove engine front cover bolt. If spring is weak replace it, do not stretch spring.

Oil Pressure Indicator—Studebaker No. 536923. Not electrical.

Oil Pump: Helical gear type. Mounted on right side of crankcase.

Pump Removal, Overhaul & Installation—*See "Oiling System" in Studebaker Special Data.*

Oil Filter: Partial Flow. Replace filter cartridge at 5000-6000 mile intervals. Change more often in dusty areas.

Replacement Filter Element—Studebaker No. 520829 (F3 Filter); No. 520830 (F4 Filter); No. 196646 (F4 Filter, Waste Type).

Crankcase Ventilation: Filter element in oil filler cap (air intake) and in breather pipe at left rear of engine (air outlet). Filter element in breather pipe replaceable.

COOLING

►*1954 FAN SHROUD REWORK ON HARDTOP & COUPE (To prevent interference with radiator core): See "Radiator" in Studebaker Special Data.*

Water Capacity: 10 qts. (11½ qts. with heater).

Pressure Valve: Radiator filler cap. (1954) Studebaker No. 531826 (stamped "7" opens at 7 lbs.). (1955) Studebaker No. 536502 (opens at 13 lbs.).

Thermostat: Studebaker No. 531470 (opens at 155°), No. 532017 (opens at 177°).

Water Pump: Packless, sealed ball bearing type. *See "Studebaker Champion" in Water Pump Section.*

Pump Removal—Remove shroud. *See "Cooling System" in Studebaker Special Data.* Loosen generator and remove belt. Remove fan-to-hub capscrews and remove fan blades and pulley. Disconnect Climatizer hose, and generator adjusting arm. Disconnect outlet hose and remove mounting capscrews.

Radiator & Fan Shroud Removal: *See "Cooling System" in Studebaker Special Data.*

Temperature Gauge: Electric type.

Dash Unit—(1954) Studebaker No. 532597; (1955) 536930.

Engine Unit—Studebaker No. 532579.

See "Temperature Gauges" in Miscellaneous Section.

CLUTCH

Borg & Beck 8A7. Assembly No. 980 (1954). 9A7. Assembly No. 1365 (1955). Single plate dry disc type.

Clutch Disc No.—Borg & Beck 382276.

►*1954 CLUTCH PEDAL REWORK (To prevent spring breakage): See "Clutch Notes" in Studebaker Special Data.*

Pedal Adjustment: Free Travel ½-1". To adjust, unhook pull-back spring on outside of frame rail, loosen locknut at adjusting clevis and remove clevis pin at inner end of pedal shaft, turn clevis on rear end of pedal shaft-to-operating shaft rod for correct clearance, reassemble linkage.

►*HILL-HOLDER NOTE:* Check setting whenever clutch pedal adjusted and adjust Hill-holder to release just as clutch engages. Make sure Hill-holder operating rod installed with rod to inside (toward center of car) of clutch release shaft lever.

Housing Removal: Remove oil level gauge and tube. Remove starter mounting screws (only) and tie starter and cables up out of the way. Remove floor plate and clutch housing top capscrews. Remove transmission. *See "Transmission Removal" under Transmission.* Disconnect pedal rod at operating shaft-to-release sleeve, pull operating shaft out, remove sleeve. Remove two bolts holding rear engine support insulator cage to crossmember. Support engine at rear of oil pan (use block of wood on jack to protect oil pan). Remove crossmember. Remove two clutch housing bolts releasing exhaust pipe support bracket. Loosen clamp bolt and swing bracket out of way. Remove remaining housing bolts and remove housing. *NOTE*—Remove dowel bolts first.

►*INSTALLATION CAUTION:* Align clutch housing to rear engine plate with two tapered drifts, then install the dowel bolts. Draw dowel bolts in place by tightening the nuts—**do not drive them into place.**

Clutch Removal: Remove clutch housing (above), remove six screws evenly to relieve spring pressure, lift off clutch assembly and driven member.

SYNCHRO-MESH TRANSMISSION

Warner Model AS1-T96 (Std.), AS24-T96 with R10 type Overdrive.

See "Warner Synchro-mesh Transmission" in Transmission Section.

Transmission Controls: *See "Transmission Controls" in Transmission Section.*

►*1954 HARD SHIFTING (FROM LOW TO 2ND GEAR) CORRECTION: See "Transmission Controls" in Transmission Section.*

Removal: Drain transmission case. Disconnect universal joint from transmission companion flange and remove propeller shaft support stud nuts and plain washer. Move front propeller shaft and support assembly rearward on slip yoke splines. Move end of shaft to one side as far as possible and tie it in position. Disconnect shift rods from shift levers and remove speedometer cable from transmission case. Remove speedometer pinion. Remove capscrews which hold transmission case to clutch housing. Remove clutch operating shaft, bracket, and bearing from the transmission case. Then move case rearward until main drive pinion clears clutch pressure plate and remove unit from car.

NOTE—On Coupes and Hardtops, it will be necessary to remove additional frame crossmember before removing transmission.

OVERDRIVE

Warner R10. Governor controlled, solenoid operation with throttle controlled "kick-down".

See "Warner R10 Overdrive" in Transmission Section.

►*OVERDRIVE PRODUCTION CHANGE:* Reverse lockout switch discontinued, affecting the shift rail, control shaft assembly and the use of different overdrive housing. Complete units are interchangeable

Overdrive Control: *See "Warner R10 Overdrive Control" in Transmission Section.*

Removal: Same as for Synchro-mesh Transmission (above) after control wiring and cable have been disconnected.

AUTOMATIC TRANSMISSION

Torque converter and 3-speed automatic transmission with hydraulic control. Has mechanical parking lock and Anti-creep device which holds brakes applied when car standing and ignition "on".

See "Studebaker Automatic Transmission" in Transmission Section.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Studebaker Automatic Transmission" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Studebaker Automatic Transmission" in Transmission Section.*

Lubrication: Check Oil Level every 1000 miles and maintain oil level at "Full" mark on dipstick. Drain and refill every 15,000 miles.

Checking Fluid Level—Oil must be warm (set parking brake, place selector lever in "L" position, idle engine until normal operating temperature reached). Remove inspection cover on front floor carpet over transmission case, clean all dirt from around inspection hole, check oil level with dipstick gauge. Add oil to bring level up to "Full" mark on dipstick

Capacity—9½ quarts. *Use Automatic Transmission Fluid Type A (in containers with "AQ-ATF" symbol).*

►*OTHER AUTOMATIC TRANSMISSION DATA: See "Studebaker Automatic Transmission" in Transmission Section.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

UNIVERSALS

Spicer. Needle bearing cross type. Three used with intermediate universal at propeller shaft support bearing on crossmember (see Propeller Shaft).

Propeller Shaft & Support Bearing: Two shafts used; 1) Front shaft with intermediate universal yoke bolted on rear end (no slip-joint). 2) Rear shaft with slip-joint on forward end at intermediate universal.

Propeller Shaft & Support Bearing Removal & Servicing—*See "Propeller Shaft" in Studebaker Special Data.*

REAR AXLE

Spicer. Semi-floating, hypoid gear, with Hotchkiss Drive.

See "Spicer Hypoid" in Rear Axle Section.

Axle Ratios

Transmission	Std. Ratio	Opt. Ratio
Syncho-mesh (1954-55)	4.10-1	4.56-1
Overdrive (1954)	①	4.56-1 ②
Overdrive (1955)	4.56-1	4.10-1, 4.88-1
Automatic	③	④

①—4.27-1 (1954 2 Dr. & 4 Dr. Custom). 4.88-1 (1954 Sta. Wgn.).

②—4.56-1, 4.10-1, 4.88-1 (2 Dr. & 4 Dr. Custom). 4.10-1, 4.27-1, 4.88-1 (Others except Sta. Wgn.).

③—4.10-1 (1954), 3.54-1 (1955).

④—3.54-1 (1954), 4.56-1 (1955).

NOTE—Rear axle ratio stamped on plate attached to axle by cover capscrew and also on gears.

Backlash—.003-.006". Shim adjustment.

Axle Shaft Removal: Remove wheel, remove wheel hub (use puller J-1644-B). Take out backing plate retaining bolts, remove outer oil seal. Pull backing plate out over end of axle shaft and wire plate to frame (*CAUTION*—Do not lose adjusting shims located between backing plate and axle housing flange), pull axle shaft with puller HM-931.

Rear Axle Assembly Removal: Remove hub caps, take out cotter pin from axle nut, loosen rear wheel nuts. Place car on stands on frame just ahead of rear springs, Remove wheels, hubs and drums. Disconnect hand brake cable, take out backing plate bolts from backing plates. free hydraulic brake line from axle housing clips (do not disconnect brake line from wheel cylinders). Disconnect rear universal Remove rear spring "U" bolts, disconnect lower shock absorber links, remove rear axle assembly from car.

Wheel Bearing Adjustment: Use dial indicator to check axle shaft endplay. Adjust by removing backing plate (see Axle Shaft Removal above), and adding or removing shims located between backing plate and axle housing flange (shims .003", .005", .010", .030" thick). **End Play**—.003-.006".

SHOCK ABSORBERS

Direct Acting type. See table below.

1954 Models

U.S. Cars	Front Studebaker Nos.	Rear
Standard	535318	534320
Heavy Duty (Houde)	532746	532747
Heavy Duty (Monroe)	530508	532751
Heavy Duty (Gabriel)	536398	536399
Canadian Cars	**Front**	**Rear**
Std. (Exc. Cpe. & Hardtop)	532742	532750
Std. (Cpe. & Hardtop)	532743	532750

1955 Models

U.S. Cars	Front	Rear
Standard	535403	534964
Heavy Duty (Houde)	532746	532747
Heavy Duty (Gabriel)	536398	536399
Canadian Cars	**Front**	**Rear**
Standard	535401	534965
Heavy Duty	530508	532751

FRONT SUSPENSION

Independent. Coil spring suspension with front shock absorbers located within coil springs.

See "Studebaker" in Front Suspension Section.

Kingpin Inclination—5¼°.

Caster—Neg. 1°—Neg. 2½°. Not more than ¾° variation between wheels.

Camber—0° to Pos. 1°. ½° more camber favored on drivers side.

Toe-In—1/16" to 1/8". **Adjust right hand tie rod only** for toe-in after left hand tie rod has been adjusted for wheel straight ahead position (with steering wheel centered) and center auxiliary tie rod has been adjusted so that steering gear arm and auxiliary steering arm are parallel. **RHD Car Note**—Make toe-in adjustment at left hand tie rod.

Toe-Out on Turns—With outer wheel at 20°, Inner wheel should be turned 22½-23½°.

►*FRONT END NOISE CORRECTION:* Install hardened washer, Studebaker No. 1539073 between inner shaft boss of lower control arm assembly and hug nuts, to prevent movement at this point. Late production cars have these washers installed.

STEERING

Manual: Ross Cam & Twin Lever or Saginaw Worm & Roller Types.

See "Ross Cam & Twin Lever" or "Saginaw Worm & Roller" in Steering Section.

Power Steering: Saginaw. Integral type.

See "Saginaw (G.M.) Power Steering" in Steering Section.

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Ross Cam & Twin Lever" or "Saginaw Worm & Roller" in Steering Section.*

Steering Gear Removal: *See "Ross Cam & Twin Lever" or "Saginaw Worm & Roller" in Steering Section.*

BRAKES

Wagner Lockheed Hydraulic Self-centering (With Bendix type shoes). Parking lever applies rear wheel brakes.

See "Wagner Lockheed Self-centering" in Brake Section.

Drums—Diameter (Front) 10", (Rear) 9".

Wheel Cylinder Diameter—1" (Front); 7/8" (Rear 1954); 13/16" (Rear 1955).

►*1954-55 PARKING BRAKE LEVER CLIP (IN REAR WHEEL BRAKE ASSEMBLY) BREAKING OFF CORRECTION:* This is due to incorrect assembly of shoe return springs. The proper method is to assemble rear shoe return spring to shoe and its spring retainer first, then assemble the front shoe return spring.

►*1955 FRONT WHEEL SECONDARY LINING NOTE:* Front wheel secondary lining is 1/4" thick, (3/16" on all other shoes), and is pre-ground off-center at the factory to eliminate brake squeal. This lining is applied the full length of the shoe and is marked "secondary" and "top" and should be installed as marked.

►*1955 PRIMARY REPLACEMENT CAUTION:* Early models may have either short or long primary lining installed. When relining, the primary lining must be the same length for both front wheels and for both rear wheels.

Lining Width & Length	Front Wheel	Rear Wheel
Primary Shoes	2" x 10 29/32"	2" x 9 27/32"
Secondary Shoes	2" x 10 29/33"	2" x 9 27/32"

Thickness—3/16" (except 1955 model front wheel secondary which is 1/4").

Clearance—Lock shoes against drum then turn adjusting screw back eight notches or more as required.

Hill Holder: Used on Synchro-mesh Trans. Cars. *See "Hill-holder" in Brake Section for data.*

Anti-Creep: Used on Automatic Trans. Cars. *See "Anti-creep" in Brake Section for data.*

Standard Master Cylinder: On frame left side rail at base of brake pedal.

Checking Fluid—Access hole in front floor pan at left corner of drivers' seat. Fluid should be maintained at level ½" below top of filler opening.

Removal—Remove from beneath car. Disconnect clutch pedal pullback spring from master cylinder support strap. Remove brake pedal pullback spring by unhooking it first from frame bracket and then from spring clip which is attached to master cylinder-to-pedal rod. Disconnect fluid line or lines at rear of master cylinder. (*NOTE—Hill-holder equipped cars have one line, Automatic* Drive cars have two lines). Remove brake pedal clevis pin and disconnect brake pedal-to-master cylinder rod at brake pedal. Remove mounting nut bolts and washers, swing support strap down out of position, remove master cylinder.

Power Brakes: (1955 Models)—Hydrovac Power unit used in conjunction with standard master cylinder and located under hood on left front fender apron.

See "Hydrovac Power Unit" in Brake Section.

Removal—Disconnect vacuum and brake lines, stop light wires, remove power unit-to-bracket bolts.

►*POWER BRAKE CONTROL CHANGE FOR SOFTER BRAKE ACTION (First Cars):* 7/16" control valve installed in production starting with Serial No. G-1334649 to give softer brake action. Conversion kit No. 537939 is available for use on early production cars that were equipped with 3/8" control valve. *NOTE—Use this conversion kit on factory installed power brake units ONLY. Not recommended for use with power brakes.*

MISC. MECHANICAL

Windshield Wipers: Trico. Vacuum link and crank type (Standard) **Auto-Lite or Redmond.** Electric (Optional).

See "Windshield Wipers" in Miscellaneous Section.

Power Window Regulators: Electrical, with reversible motors in each window. Individual switches at each door and master switch on left front door. *See "Power Window Regulators" in Miscellaneous Section.*

Power Seat Adjusters: Two-way electric type.

See "Power Seat Adjusters" in Miscellaneous Section.

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

MODEL IDENTIFICATION

Model ①	Model Identification
Commander	16G8
President	6H
President Speedster	6HK7

① –Early & Late Series. *NOTE–Late series cars are "Ultra-Vista" models, except for Coupe & Hardtop.*

SERIAL NUMBER: Stamped on plate on left front door hinge post.

Starting Serial Numbers (Commander)–

Assembly Plant	Early Series	Late Series
South Bend	8380601	8397201
Los Angeles	8841201	8843001
Hamilton, Ont.	8957601	8958101

Starting Serial Numbers (President)–

Assembly Plant	Early Series	Late Series
South Bend	7150001	7155401
Los Angeles	7805001	7805901
Hamilton, Ont.	7900001	7900201

ENGINE NUMBER: Stamped on cylinder block to left and in front of oil filler pipe.

Starting Engine Numbers

Model	South Bend	Los Angeles	Canada
Commander	① V-312701	② V-312701	③VC-5701
President	P-101	PL-101	PC-101

① –Second series engine number starts at V-331101.
② –Second series engine number starts at VL-101.
③ –Second series engine number starts at VC-6201.

TUNE-UP

COMPRESSION PRESSURE: 120-140 lbs. at 150 RPM.

VACUUM READING: Steady 18-20" idling at 8 MPH.

VALVE TAPPET CLEARANCE: .023-.025" engine hot and idling. .025-.027" engine cold.

MANIFOLD HEAT CONTROL: Automatic thermostatic type located on right bank exhaust manifold outlet.

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2.

Cylinders–RIGHT BANK 2-4-6-8, LEFT BANK 1-3-5-7.

SPARK PLUG GAP: .033-.038".

Spark Plug–Champion H-11, 14mm. Tighten to 25-30 ft. lbs.

COIL: Delco-Remy 1115392.

Ignition Current–2-1/2 amps. idling, 4-5 amps. stopped.

DISTRIBUTOR: Delco-Remy 1110839.

Condenser–Delco-Remy 1869704. **Capacity.**18-.23 mfd.

Contact Point Set–Delco-Remy 1918148.

Breaker Gap–.013".

Cam Angle–28-34° (with .013" gap).

Breaker Arm Spring Tension–19-23 ozs.

Rotation–Counter-clockwise viewed from above.

Automatic Advance

Degrees	Distr. RPM	Degrees	Eng. RPM
Start	350	1-5	700
2-4	400	4-8	800
10-12	1050	20-24	2100
15-17	1450	30-34	2900

Vacuum Spark Control: Delco-Remy 1116058. Integral type.

Plunger Travel–11/64–3/16".

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	4-6
7-8	14-16	10.5-12.5

Distributor Removal & Installation: *See "Ignition Notes" in Studebaker Special Data.*

IGNITION TIMING

Model	Setting
Early Series Commander	4° BTDC
Late Series Commander	8° BTDC
President	8° BTDC
Speedster	8° BTDC

Timing Mark–"IGN" mark on vibration dampener.

Timing–Line up "IGN" mark on vibration dampener with pointer at left side of engine front cover, *after vacuum advance pipe has been disconnected and plugged at carburetor connection.*

►*IGNITION TIMING CAUTION: The manufacturer recommends that no attempt be made to time the engine except with a suitable timing light and that the timing mark on vibration dampener be directly under the pointer. DO NOT SET TIMING BY THE "PING" METHOD.*

CARBURETOR

►*CARBURETOR APPLICATION: Stromberg 2-Barrel Carburetor used on Commander and Carter 4-Barrel Carburetor used on President Models. NOTE–A Carter 4-Barrel Carburetor is optional equipment on Commander models.*

THROTTLE LINKAGE ADJUSTMENT (SYNCHRO-MESH & OVERDRIVE MODELS): Loosen stop screw at throttle cross shaft bracket on firewall, then making sure that carburetor throttle adjusting screw is on low step of choke cam, turn throttle adjusting screw as required to obtain an idle speed of 550 RPM. Turn stop screw in bracket until throttle actuating spring is taut and the idle adjusting screw just starts to move away from choke cam, then back off screw **one full turn** and secure with locknut. To adjust kick down switch, open throttle to full open position and turn kick down adjusting screw until pad on adjusting screw contacts plunger of kickdown switch.

THROTTLE LINKAGE ADJUSTMENT (AUTOMATIC DRIVE MODELS): With throttle valve closed and idle adjusting screw on low step of fast idle cam, adjust engine idle speed to 550 RPM. Adjust anti-creep switch until actuating spring is taut and the idle adjusting screw just starts to move away from fast idle cam, then back off the anti-creep switch **3 or 4 turns.** Position fast idle cam so that the adjusting screw contacts fourth step on cam. Adjust throttle return check screw so it just contacts tab on throttle lever arm. *Use a wrench to hold shaft when turning throttle check screw.* Hold accelerator pedal in the full wide open position without extending actuating spring, and turn transmission governor control lever on side of transmission forward until resistance of detent is felt. Adjust ball joint until stud is properly aligned with hole in governor lever.

►**Throttle Actuating Spring Note:** Throttle actuating spring is preloaded and acts as a rod until 8-1/2 lbs., or more tension is applied. In all positions from closed to wide open throttle the spring remains solidly coiled. A bracket mounted under left rocker arm cover has four holes for spring adjustment.

STROMBERG WW

Stromberg Series WW, Code 6-112C, D, E, F. 6-115, 6-116. Throttle Return Check used on Automatic Transmission Cars.

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyl. 1-4-6-7, LEFT barrel 2-3-5-8.*

Idle Setting–Initial setting, 1-3/4 turns open, final setting approximately midway between missing and rolling points. Set both screws alike, turn screws out for richer mixture.

Idle Speed–550-600 RPM (with selector lever in neutral "N" position on Automatic Drive Cars).

Float Level–3/16" from top edge of bowl to top of float with needle valve seated. To check, remove air horn and bowl cover, remove gasket, place float level gauge T-25569 (Studebaker No. J-5475) squarely on top edge of float bowl at center of float. If float not even with step on gauge, bend float lever lip next to float pin as required using bending tool T-24733 (Studebaker No. KMO-269-S5).

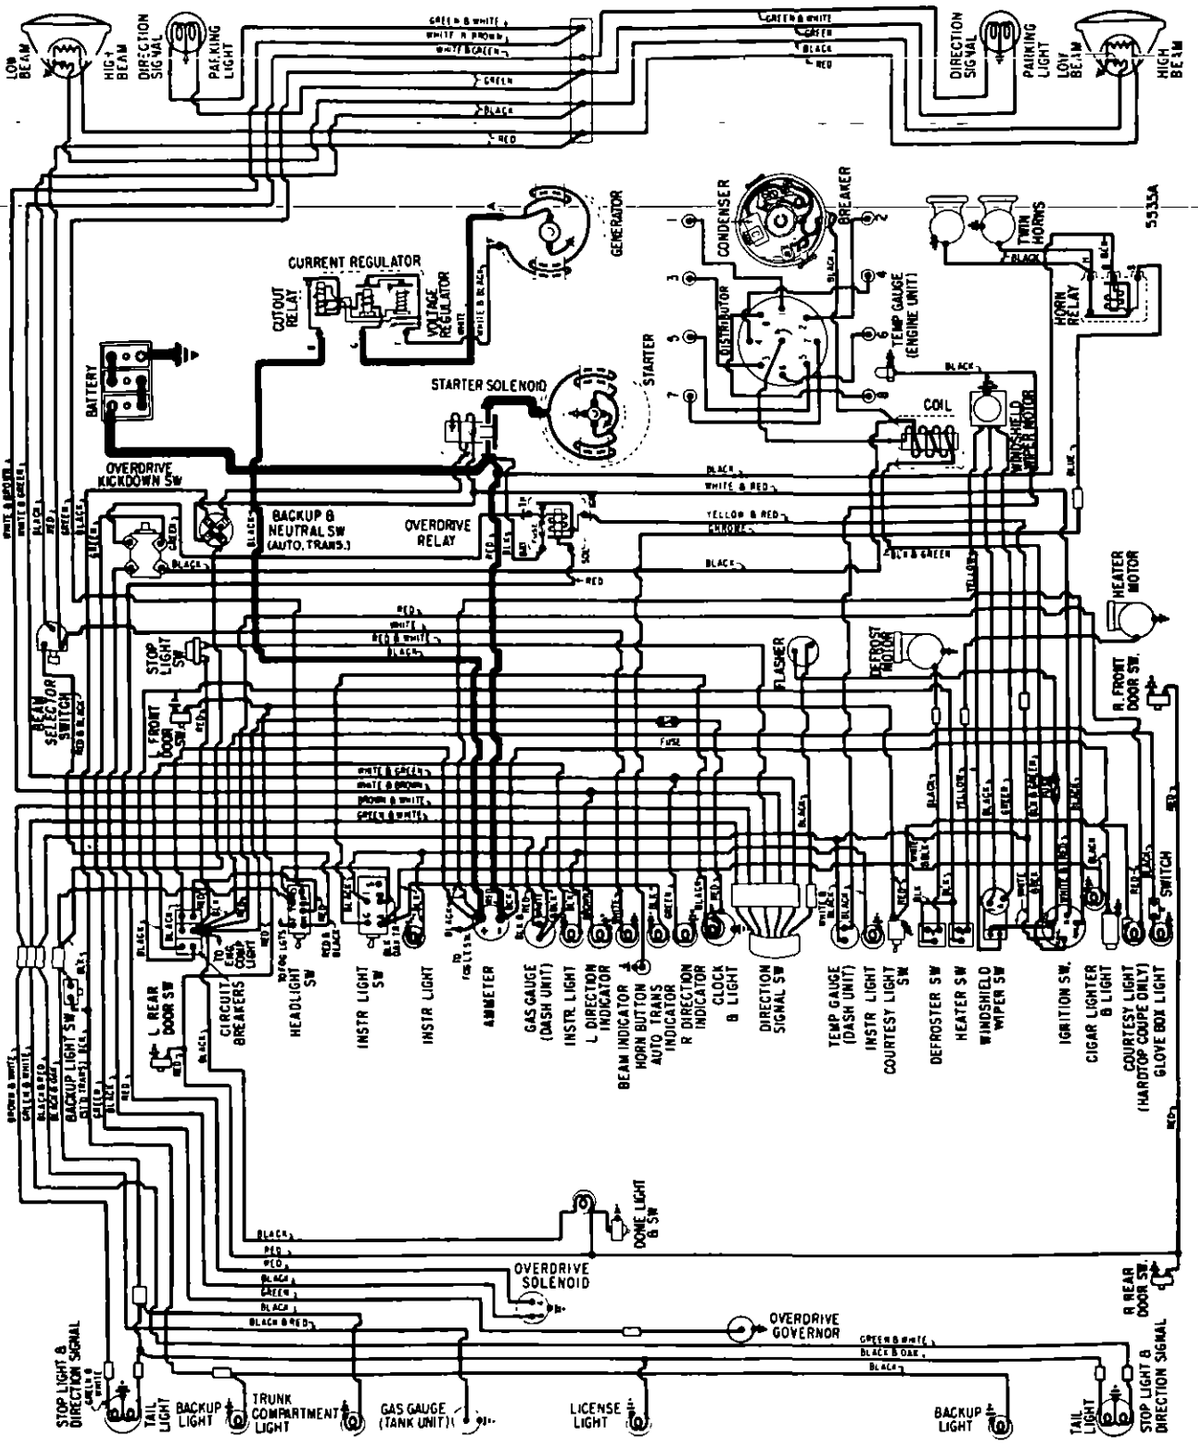
Accelerating Pump–Center hole–Normal Setting. For less fuel install rod in inner hole, for more fuel install rod in outer hole.

Fast Idle Setting: With choke valve fully closed and fast idle cam in fast idle position, one-half diameter of button at end of throttle stop screw should rest against step of fast idle cam. If contact between button and cam not as indicated, bend choke ear up or down as required.

Unloader Adjustment: With choke valve tightly closed, open throttle valves to point where throttle lever stop rests against stop on throttle body. The choke valve should open sufficiently to allow a No. 1 drill to be inserted between choke valve and inner wall of air horn. Adjust as necessary by bending throttle lever ear which contacts choke lever.

Automatic Choke Setting: Centered (arrow on edge of cover aligned with boss on air cleaner end of housing).

Throttle Linkage Adjustment: *See "Carburetor" above.*



►*OTHER DATA: See "Stromberg WW Carburetor" in Carburetor Section.*

Fuel Pump Pressure: 4-5 lbs.

CARTER WCFB

Model	Carter No.
Synchro-mesh	2219S, SA
Automatic Drive	2214S, SA
All Models	2330S

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►**Replacement Carburetor Note**—2219SA can be used to replace 2214S, SA, when used with Carter Unitized Pkg. 202-81U (Throttle Return Check Assembly).

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cy. 1-4-6-7, LEFT barrels 2-3-5-8.*

EXCESSIVE FUEL CONSUMPTION CORRECTION: May be caused by improperly installed air cleaner-to-carburetor gasket. See "Carter WCFB Carburetor" in Carburetor Section.

Idle Setting—1/2—1-1/2 turns open. Turn screws out for richer mixture.

Idle Speed—550-600 RPM (all models).

Throttle Linkage Adjustment: *See "Carburetor" above.*

Fuel Pump Pressure: 4-5 lbs.

►*OTHER DATA: See "Carter WCFB Carburetor" in Carburetor Section.*

CARB. EQUIPMENT

Fuel Pump: Carter No. 2211S. Diaphragm type.
Pressure—4—5-1/2 lbs.
See "Fuel Pumps" in Carburetion Equipment Section.

Gasoline Gauge: Stewart-Warner Electric type.
Dash Unit (Except Speedster)—Studebaker No. 536929.
Dash Unit (Speedster)—Studebaker No. 536838.
Tank Unit—Studebaker No. 425548 (2-Dr., 4-Dr., and Land Cruiser). No. 532261 (Hardtop, 5-Pass. Coupe & Sta. Wgn.).
See "Fuel Gauges" in Carburetion Equipment Section.

BATTERY

Willard HDW-1-100. 6 volt, 15 plate, 100 ampere hour capacity (20 hr. rate).
Battery Ground—Positive.
Engine Ground—Right front of engine.

STARTER

Delco-Remy 1107115 (Std. Trans.), 1107116 (Automatic Drive).
Armature—Delco-Remy 1878077.
Drive—Bendix "Folo-thru" type. No. A3281.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—24-28 ozs.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	5500	5.65	70
11 ft. lbs.	Lock	3.25	550

Starting Switch: Delco-Remy 1494, "internal grounded" magnetic type controlled by combination Ignition and Starting Switch. Turn key full right to start engine.

Automatic Transmission Neutral Safety Switch: Delco-Remy 1998038 (without Power Steering), No. 1998059 (with Power Steering). Mounted on lower end of steering column. Starter will operate only when selector lever is in neutral position.

Neutral Safety Switch Adjustment—*See "Studebaker Automatic Transmission" in Transmission Section.*

GENERATOR

Delco-Remy 1102778. Armature—No. 1921621.

Performance Data

	Amperes ①	Volts	RPM
Cold	45	8.0	2450

① —Not maximum output. See Current Regulator.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Brush Spring Tension–28 ozs.
Field Current–1.87-2.0 amperes at 6.0 volts (80°F).
Rotation–Counter-clockwise at commutator end.
Belt Adjustment: Hook spring scale to belt midway between generator and fan pulleys. Adjust tension on belt so that pull of 14 lbs. on scale will lift belt 1/2".

REGULATOR

Delco-Remy 1118950. *NOTE–Regulator is "1118825 Series". Specifications below are for "Normal" settings.*

Cutout Relay

Cuts In–5.9-6.7 volts (hot).
Contact Gap–.020".
Air Gap–.020" (with contacts just closed).

Voltage Regulator

Setting–6.9-7.4 volts (hot).
Air Gap–.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting–*See Electrical Equip. Section.*

Current Regulator

Setting–42-47 amperes (hot)
Air Gap–.075" with contacts pressed down to point where contacts just touching.
Checking & Adjusting–*See Electrical Equip. Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Equip. Section.*
Direction Signal: *See Electrical Equipment Section.*
Lighting Switch Removal: Toggle Type–Remove switch retaining nut. Push switch sleeve back into panel and disconnect wires from switch.
Push-pull Type–With a pointed tool, lift spring in back side of switch knob and remove knob from shaft. Remove bezel nut and bezel plate. Push switch out of instrument panel and remove wires.
Stop Light Switch Location: On inner side of left frame rail just forward of steering gear housing. *NOTE*–If stop light switch removed it is necessary to bleed front brakes after re-installing switch.
FUSES: Overdrive–30 amp. on overdrive relay.
Fog Lights–30 amp. in feed wire.
Radio–14 amp. in feed wire.
Clock–3 amp. in feed wire.
Direction Signal–14 amp. in flasher feed wire.
Heater (Ultra-Vista Models)–20 amp. on heater switch.
Defroster (Ultra-Vista Models)–20 amp. on defroster switch.
CIRCUIT BREAKERS: Capacity and location as follows:
Lighting (Ultra-Vista Models)–30 amp. on main light switch.
Lighting (Except Ultra-Vista Models)–30 amp. on bracket attached to dash behind instrument panel.
Body & Stop Lights (Ultra-Vista Models)–20 amp. on back side of instrument panel.
Body & Stop Lights (Except Ultra-Vista Models)–20 amp. on bracket attached to dash behind instrument panel.
Heater & Defroster (Except Ultra-Vista Models)–20 amp. on bracket attached to dash behind instrument panel.
HORNS: Three horns used on President Models, two horns used on Commander Models.

Make	Studebaker Part No. ① Low Tone	② High Tone
Sparton (Comm. & Pres.) ..	③ 674005	674006
Sparton (Comm. only)	536769	536768
Delco (Comm. only)	531757	531756
Auto-Lite (Comm. Canada) ..	530209	530208

① –Left Horn. ② –Right Horn.
③ –Sparton (Stude. No. 537015). Center horn on Pres. models.
Horn Relay: Delco-Remy 1116775.
Contacts Close–2.75-4.0 volts.
Contact Gap–.025". **Air Gap**–.015" (closed).

ENGINE

►*ENGINE PRODUCTION CHANGES: "Early" & "Late" Series cars have different engines as listed below.*
►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: Own V8, Valve-in-head.

Engine	Bore	Stroke	Displacement
Pacesetter ①	3-9/16"	2-13/16"	224.3 cu. ins.
Wildcat ②	3-9/16"	3-1/4"	259.2 cu. ins.
Bearcat ③	3-9/16"	3-1/4"	259.2 cu. ins.
Passmaster ④	3-9/16"	3-1/4"	259.2 cu. ins.

Engine	Compr. Ratio	Rated HP	Developed HP
Pacesetter ①	7.5-1	40.6	140 at 4500 RPM
Wildcat ②	7.5-1	40.6	175 at 4500 RPM
Bearcat ③	7.5-1 ⑤	40.6	162 at 4500 RPM
Passmaster ④	7.5-1 ⑤	40.6	185 at 4500 RPM

① –Early Series Commander. ② –Early Series Pres.
③ –Late Series Commander. ④ –Late Series President.
⑤ –8.0-1 Opti. Equipment.
Compression & Vacuum Reading: *See Tune-Up.*

ENGINE REMOVAL: *See "Engine" in Studebaker Special Data.*
OIL PAN REMOVAL: *See "Oil Pan" in Studebaker Special Data.*
CYLINDER HEAD: *See "Cylinder Head & Manifolds" in Studebaker Special Data.*
TIGHTENING TORQUES: *See "Tightening Specifications" in Studebaker Special Data.*

PISTONS

Aluminum alloy, cam ground, T-slot, three ring type. *See "Original Bore & Pistons" in Studebaker Special Data.*
►*PISTON REPLACEMENT CAUTION: "Early Series" Commander (short stroke engine) pistons are not interchangeable with other 1955 engines. These pistons are longer than used in other engines and would cause damage to engine.*
Removal–Pistons and rods removed from above.
Fitting New Pistons: Clearance is selective fit. With piston inverted, slotted side away from camshaft, and with bottom of piston about 1" below top of block, insert a .002" x 1" x 12" feeler on camshaft side of piston. Pull to withdraw feeler should be 8-13 lbs. *NOTE*–This supersedes previous fitting specification of 11-16 lbs. pull.
Replacement Pistons: Std. size, .010", .020", .030", .040" oversize.
Installing Pistons: Install piston on rod with slot on same side as nut on piston pin clampscrew (away from oil squirt hole in rod). Install piston in cylinder with slot toward left side of engine (all pistons). *See Rod Installation.*

PISTON PINS

Pin is locked in rod by tapered pin and locknut. *NOTE*–The internal tooth "shakeproof" lockwasher has been replaced in production with an external tooth lockwasher.
Diameter–.8741-.8745". **Length**–2-7/8".
Clearance in Piston–.0001-.0003" or light finger push fit at room temperature (70°F).
Replacement Pins: Std. size, .0025", .005" oversize.
Removal & Installation: *See "Piston Pins" in Studebaker Special Data.*

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compression	5/64"	.008-.016"	.0025-.006"
Oil	3/16"	.008-.016"	.002-.006"

Replacement Rings: *See Studebaker Special Data.*
Installing Rings: Install rings with chamfered side of compression rings upward.

CONNECTING RODS

Length (Center-to-Center)–6-5/8". **Weight**–23.71 ozs.
Crankpin Journal Diameter–1.99925-2.00025".
Lower Bearing–Interchangeable. Steel backed, micro-babbitt lined type. No shims.
Clearance–.0005-.002". **Sideplay**–.007-.012".
Replacement Bearings: Std. size, .001", .005", .010", .020" undersize.
Installing Rods: Number on rod and bearing cap must be on same side and rod installed in same numbered cylinder with numbers down toward oil pan (toward right on right bank rods, toward left on left bank rods) and oil squirt hole on all rods toward right of engine. Rods are offset with widest half of bearing toward rear (right bank), toward front (left bank).
►*NEW (UNMARKED) ROD NOTE: Hold rod upright with oil hole toward you. Narrow part of offset will be to right on rods for right bank, and to left for rods on left bank.*
►*CAUTION:* Install piston and pin on rod so that T-slot of piston is on side opposite oil hole in bearing bore. Insert tapered end of clamp screw so it will be toward heavy boss. Be careful to align flat surface of screw with flat on piston pin. Bearing cap must be assembled on rod with groove in cap and rod on same side.

CRANKSHAFT

►*MAIN BEARING CAPSCREW LOCKWIRE PRODUCTION CHANGE: The lockwire used in main bearing capscrews is not used in later production engine.*
Journal Diameter–2.4995-2.5000".
Clearance–.0005-.0025".
Replacement Bearings: Std. size, .001", .010", .020", .030" undersize.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

End Thrust: Taken by thrust plate assembled between front main bearing and crankshaft gear. Controlled by shims between thrust plate and face of main bearing journal.
Endplay—.003-.006".
Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Studebaker Special Data.*
Crankshaft Front Oil Seal: *See "Engine Front Cover" in Studebaker Special Data.*

CAMSHAFT

Journal Diameters—(1) 1.86975-1.87075", (2) 1.85375-1.85475", (3) 1.83875-1.83975", (4) 1.82275-1.82375", (5) 1.24475-1.24575".
Bearings—Precision type, steel backed babbitt lined.
Clearance — .00075-.00225" (No. 1), .001-.00275" (Others).
End Thrust: Taken by thrust plate located between front camshaft bearing and camshaft gear.
Endplay—.003-.006".
Camshaft Removal & Installation: *See "Camshaft & Bearings" in Studebaker Special Data.*
Timing Gears: Cast iron crankshaft gear and "Celeron" camshaft gear.
Timing Gear Removal & Installation—*See "Timing Gears" in Studebaker Special Data.*
Backlash—.001-.003".
Camshaft Setting: Mesh marked tooth of camshaft gear between two marked teeth of crankshaft gear.
Engine Front Cover Removal: *See "Engine Front Cover" in Studebaker Special Data.*
Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Studebaker Special Data.*

VALVES

Tappet Clearance—.023-.025" (Engine hot, running). .025-.027" (Engine cold, standing).

Valve	Head Diam.	Stem Diam.	Stem Clearance
Intake	1-21/32"	11/32"	.0015-.0035"
Exhaust	1-17/32"	11/32"	.0015-.0035"

Seat Angle—45° (all valves).
Lift—23/64" (all valves).
Valve Seat Width—1/16-3/32".

Valve Stem Oil Seal: Rubber seal rings installed on all valve stems (seated in groove in valve stem within spring retainer, with cupped side down).
Valve Stem Seal Testing—*See "Valve System" in Studebaker Special Data.*

Valve Springs: Single spring used. Replace spring if 10% weaker than pressure listed. *NOTE—dampener installed on lower end of all springs.*
Valve Spring Specifications—110 lbs., ± 5 lbs., when compressed to 1-43/64".

Valve Guides: Pressed in head from underside.
Guide Removal & Installation—*See "Valve System" in Studebaker Special Data.*
Valve Lifters: Straight barrel type. Remove from above. Not necessary to remove camshaft.

►*OVERSIZE VALVE LIFTER INSTALLATION (.005" oversize lifters requiring reaming of lifter bore): See "Valve System" in Studebaker Special Data.*
Valve Lifter Installation & Fitting—*See "Valve System" in Studebaker Special Data.*
Replacement Lifters—Std. size, .001", .005" oversize.

►*CAUTION—When lifters removed, make sure they are installed in original positions.*
Rocker Arms: *See "Valve System" in Studebaker Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

"Early Series" Commander

Intake Valves—Open 19° BTDC. Close 46°36' ALDC.
Exhaust Valve—Open 59°36' BLDC. Close 6° ATDC.

President & "Late Series" Commander

Intake Valves—Open 11° BTDC. Close 54°36' ALDC.
Exhaust Valves—Open 51°36' BLDC. Close 14° ATDC.

Valve Timing Check—Set tappet clearance of No. 1 intake valve at .030". Turn crankshaft until No. 6 piston is on compression stroke and vibration dampener mark "IN.OP.1" is approaching pointer on timing gear cover, continue to turn crankshaft slowly while working No. 1 intake rocker arm up and down to determine point at which all clearance is taken up. Dampener mark "IN.OP.1" should be directly under pointer.

OILING SYSTEM

Crankcase Capacity: 6 quarts (refill).
Normal Oil Pressure: (Early Cars) 40 lbs. at 1400-1600 RPM. (Later Cars) 25-50 lbs. at 40 MPH. See following production change note.

►*OIL PRESSURE RELIEF VALVE SPRING PRODUCTION CHANGE NOTE:* A new valve spring, Studebaker No. 536670 increases the normal oil pressure to 25-50 lbs. at 40 MPH. This change became effective in production at Commander Engine No. V348336 (South Bend), VL-3155 (Los Angeles), VC-7316 (Canada). At President Engine No. P-15929 (South Bend), PL-1576 (Los Angeles), PC-404 (Canada). The new spring can be used as a replacement on all prior models.
Pressure Regulator Valve—Located on right side at front of engine block slightly above crankcase flange.
Oil Pressure Indicator—Not electrical.
Oil Pump: Helical Gear type. Mounted on rear main bearing cap and driven by camshaft gear.

►*OIL FLOAT INSTALLATION CAUTION:* **The correct cotter pin to use when installing the float assembly is 1/8".** If a smaller cotter pin is used float can become disengaged from oil pump, causing damage to engine.
Pump Removal, Overhaul & Installation—*See "Oiling System" in Studebaker Special Data.*
Oil Filter: Partial flow. Replace filter cartridge at 5000-6000 mile intervals. Change more often in dusty areas.
Replacement Filter Element—Studebaker No. 520830 or 196646.
Crankcase Ventilation: Filter element in oil filler cap (air intake) and breather tube at rear of engine (air outlet).

►*BREATHER TUBE FILTER NOTE: Remove filter element (retained in lower end of tube by cotter pin) for servicing.*

COOLING

Water Capacity: 17-1/4 qts. (18-3/4 qts. with heater).
Pressure Valve: Radiator filler cap. Opens at 12-15 lbs.
Thermostat: Bellows type. Opens at 158-163° F.
Water Pump: Packless, Sealed-ball-bearing type. *See "Studebaker" in Water Pump Section.*
Pump Removal—Drain cooling system. Loosen generator, push it inward to relieve tension on fan belt, remove fan belt. Remove fan-to-hub screws and remove fan and pulley. Remove fan shroud. Disconnect radiator outlet hose and Climatizer hose (if so equipped). Remove generator adjusting arm from top stud, then remove water pump manifold screws. Remove water pump manifold and four gaskets from engine block.
Radiator & Fan Shroud Removal: *See "Cooling System" in Studebaker Special Data.*
Temperature Gauge: Stewart-Warner Electric type.
Dash Unit (Exc. Speedster)—Studebaker No. 53690.
Dash Unit (Speedster)—Studebaker No. 536832.
Engine Unit (All Models)—Studebaker No. 536837.
See "Temperature Gauges" in Miscellaneous Section.

CLUTCH

Borg & Beck Model 9A7. Assembly No. 926 (Early Commander). Model 10A7. Assembly No. 361371 (Late Commander and All President models).
Clutch Disc No. Borg & Beck 381662 (Early Commander). Borg & Beck No. 382315 (Late Commander and All President models).
Pedal Adjustment: Pedal free travel 1/2-1". To make adjustment, loosen locknut securing clevis to rod connecting release shaft lever to clutch operating shaft lever and remove the clevis pin. Turn clevis to shorten or lengthen rod as necessary for correct pedal free travel. *NOTE—If car is equipped with "Hill-Holder", adjust "Hill-Holder" operating rod as outlined in Brake Section.*
Clutch Housing Removal: Remove starter. Remove floor plate and clutch housing top capscrews. Remove clutch operating shaft. Remove transmission (see Synchro-mesh Transmission Removal below). Remove two bolts holding engine rear support insulator cage to crossmember. Place a small hydraulic jack at rear of oil pan and insert a block between jack pad and oil pan to prevent damage to pan. Raise engine just enough to take weight of engine off crossmember. Remove support crossmember-to-frame bolts and remove cross member. Remove the two clutch housing bolts retaining exhaust pipe support bracket. Loosen clamp bolt and swing support bracket out of way. Remove clutch housing cover plate. Remove remaining housing mounting bolts or capscrews and remove clutch housing.
Clutch Removal: Remove clutch housing (above), remove six screws evenly to release pressure, lift off clutch assembly and driven member.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

SYNCHRO-MESH TRANSMISSION

Warner Model AS53-T86E (Std.), AS54-T86E with R10 type Overdrive.
See "Warner Synchro-mesh Transmission" in Transmission Section.

Transmission Controls: *See "Transmission Controls" in Transmission Section.*

Removal: Drain transmission case. Disconnect universal joint from transmission companion flange and remove propeller shaft support stud nuts and plain washer. Move front propeller shaft and support assembly rearward on slip yoke splines. Move end of shaft to one side as far as possible and tie it in position. Disconnect shift rods from shift levers and remove speedometer cable from transmission case. Remove speedometer pinion. Remove capscrews which hold transmission case to clutch housing. Remove clutch operating shaft, bracket, and bearing from transmission case. *NOTE*–On Coupes and Hardtops, it will be necessary to remove additional frame crossmember before removing transmission.

OVERDRIVE

Warner R10 Type (part of AS54-T86E Transmission). Governor controlled, with electric solenoid operation and throttle controlled "kickdown".
See "Warner R10" Overdrive in Transmission Section.

►*OVERDRIVE REVERSE LOCKOUT SWITCH PRODUCTION CHANGE: Reverse lockout switch discontinued* in production. Later type overdrive units are interchangeable in complete assemblies with earlier type.

Overdrive Controls: *See "Overdrive Controls" in Transmission Section.*

Removal: Same as for Synchro-mesh Transmission (above) after control wiring and cable have been disconnected.

AUTOMATIC TRANSMISSION

Torque converter and three speed automatic transmission with hydraulic control, mechanical parking brake, and "Anti-Creep" device which holds brakes applied when car is standing and ignition "on".

NOTE–Early Commander transmission is different than Late Commander and President models. Service procedures are the same.

►*CONVERTER HOUSING SCREEN PRODUCTION CHANGE: Screen is not being installed in production and is not required to be replaced on earlier models in service.*

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Studebaker Automatic Transmission" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Studebaker Automatic Transmission" in Transmission Section.*

Lubrication: Check oil level every 1000 miles and maintain oil level at "Full" mark on dipstick. Drain and refill every 15,000 miles.

►*FLUID LEVEL CHECKING NOTE (To obtain accurate level reading): To prevent oil spray and torque converter drain back causing inaccurate dipstick reading, fluid level must be checked as indicated below, immediately after engine is stopped.*

Checking Fluid Level–*With car on a level floor, set* hand brake firmly. Place selector lever in "L" position and allow engine to warm up to normal operating temperature and then run engine at idle speed. Clean area around inspection hole and top of fluid level gauge. Remove gauge and wipe it dry. *Stop engine and immediately insert and withdraw gauge.* If any additional fluid is required, add it and then repeat the checking procedure. Use only Automatic Transmission Fluid Type "A", bearing an AQ-ATF symbol on the container.

Capacity–9-1/2 quarts, Automatic Transmission Fluid Type "A".

►*OTHER AUTOMATIC TRANSMISSION SERVICE DATA: See "Studebaker Automatic Transmission" in Transmission Section.*

UNIVERSALS

Spicer. Needle bearing cross type. Three used with intermediate universal at propeller shaft support bearing on crossmember.

Propeller Shaft & Support Bearings: Two shafts used.
1) Front shaft with intermediate universal yoke bolted to rear end (no slip-joint).
2) Rear shaft with slip-joint on forward end at intermediate universal.

Propeller Shaft & Support Bearing Removal: *See "Propeller Shaft Notes" in Studebaker Special Data.*

REAR AXLE

Spicer. Semi-floating, hypoid gear, with Hotchkiss Drive. *See "Spicer Hypoid" in Rear Axle Section.*

►*REAR AXLE RATIO PRODUCTION CHANGE NOTE: Axle ratios were changed on some models (as indicated below) at beginning of "Late Series" production.*

Rear Axle Ratios

⑬ –Except 4-Dr. Deluxe Ultra-Vista Models.
⑭ –3.73-1 & 3.92-1.

Rear Axle Ratio Identification: Rear axle ratio stamped on plate attached to axle by cover cap screw and also on ring and pinion gears.
Backlash–.003-.006".

Axle Shaft Removal: Remove wheel and wheel hub (use Puller J-1644-B). Take out backing plate retaining bolts, remove outer oil seal. Pull backing plate out over end of axle shaft and wire to frame out of the way (*CAUTION*–Do not lose adjusting shims located between backing plate and axle housing flange). Pull axle shaft with Puller HM-931.

Rear Axle Assembly Removal: Remove hub caps and axle shaft cotter pin. Loosen wheel nuts. Place car on stands (stands under frame just ahead of rear springs) and remove wheels, hubs, and drums. Disconnect hand brake cables, take out backing plate bolts and free hydraulic brake lines from axle housing clips (do not disconnect brake lines from wheel cylinders). Disconnect rear universal joint (wire caps or use clamps to prevent losing bearing rollers). Remove rear spring U-bolts, disconnect lower shock absorber links, remove rear axle assembly from car.

Wheel Bearing Adjustment: Use dial indicator to check axle shaft endplay. Adjust by removing backing plate (see Axle Shaft Removal above), and adding or removing shims located between backing plate and axle housing flange (shims furnished .003", .005", .010", .030" thick). **Endplay**–.001-.005".

SHOCK ABSORBERS

Houde, Monroe or Gabriel. Direct acting hydraulic.

Studebaker Shock Absorber Nos.

U.S. Cars	Front	Rear
Standard (Sedans)	535403	534964
Standard (Cpe. & Hardtop)	534319	534964
Heavy Duty (Houde)	532746	532747
Heavy Duty (Gabriel)	536398	536399
Canadian Cars	**Front**	**Rear**
Standard (Sedan)	535401	534965
Standard (Cpe. & Hardtop)	534329	534965
Heavy Duty (Monroe)	530508	532751

FRONT SUSPENSION

Independent. Coil spring suspension with front shock absorbers located within the springs. *See "Studebaker" in Front Suspension Section.*
